The author of the present article is believed to be the first to publish details of the geography and history of Shamdīnān, which he has been able to bring together during his sojourn at Urmiya and his expeditions to Kurdistan. Cf. also his publications, B. Nikitine and E. B. Soane, *The Tale of Suto and Tato: Kurdish text with translation and notes in Bull. of the School of Oriental Studies*, iii. 1 and *Les Kurdes et le Christianisme in R. H. R.*, 1922; *Les Kurdes racontés par eux-mêmes in As. Fr. B.*, No. 231, May 1925; *Vue d'ensemble sur le théâtre de la grande guerre dans le N. O. de la Perse*, *ibid.*, No. 224. (B. NIKITINE)

SHĀMIL, a popular leader in Daghestān, head of the dervish order of Naqshbandīya, the last and most successful leader of the rising against

Russian rule (cf. above, I, p. 890). Like his predecessors he belonged to the people of the Avars. Born in the last years of the xviiith century in the village of Gimri where the family estate was, he distinguished himself for the first time in 1830 in the unsuccessful attack on the fortress of Khānzik. After the murder of his predecessor Hama Beg (1834), he was chosen by the rebels as their leader. In 1837 he was defeated and forced to surrender; he was able to regain his power next year and extend his rule over a great part of Dāghestān and over the land of the Cēcentzen west of it. His institutions (*nizām*) were based on the religious law (*shariʿa*) so that his rule was later known in Dāghestān as the "period of the Shariʿa". His territory was divided into 32 districts, with a *nāib* at the head of each and a *mufi* for judicial matters under whom were four *kādīs* appointed by him. Shāmīl's armed force amounted to 60,000 men. The mountains of Dāghestān and the still less accessible forests of the Cēcentzen formed the bulwark of his rule; in it was the fortress of Wedeno, Shāmīl's residence from 1845 till the Russian conquest (April 13, 1859).

After several unsuccessful attempts to put down the rising by the superiority of military force, there began in 1845 a slow penetration of the mountains and clearings of the forests. Shāmīl's attempts, especially during the Crimean War, to get help from the Turks were unavailing. After the fall of Wedeno the struggle was decided. Shāmīl was forced to surrender in his last mountain fastness Ganib on Aug. 25 (Sept. 6) 1859. After being received by the Tsar Alexander II in St. Petersburg, the town of Kaluga was allotted to him and his immediate relations as a residence. There by his own request he and his sons in 1866, took the oath of allegiance to the Tsar. In Feb. 1869 he was allowed to go to Mecca; he died in Medina in March in 1871. Before his death his oldest son Ghāzi Muḥammad (local pronunciation in Russian transliteration = Kazī Maḡoma) received permission to visit his sick father; later he entered the Turkish service and took part in the war of 1877 and in the efforts to stir up the people of Dāghestān. He died in Mecca in 1903. Shāmīl's second son, Muḥammad Shafī, entered Russian service and ultimately settled in Kazan with the rank of Major-General.

Bibliography: A survey of the numerous Russian writers about Shāmīl is given by M. Minnarow: *Bibliographia Caucasica et Transcaucasica*, St. Petersburg 1874—1876, I, p. 798 sqq., No. 4781—4840. Notes on this by E. Kozubskiy, *Pamyatnaya Knizhka Dagestanskoi oblasti*, 1898 and especially *Dagestanskii Sbornik*, 1904, II, p. 209, 213—243. — Mirzā Hasan Efendi, *Alḥār-i Dāghistān* (cf. above, I, 928), p. 194 sq., 202 sqq. A work on Shāmīl and his imprisonment was written in Arabic by his nephew ʿAbd al-Raḡmān in Kaluga. The MS. is now in the Asiatic Museum in Leningrad. A Russian translation by A. Runowski appeared in Tiflis in 1862 (first in the newspaper *Kavkaz*, No. 72—76). Cf. also E. Weidenbaum, *Petrovskii po Kavkazu*, Tiflis 1888, p. 164—200.

AL-SHAMMĀKHĪ, ABU ʿL-ʿABDŪS AHMAD B. ABU ʿULMĀN SAʿID B. ʿABD AL-WĀḤID, a learned jurist and Abādī biographer, died in Jumādā 928 (= March 29—April 28—May 26,

1522) in one of the villages of the oasis of the Ifren of the Djabal Nafūsa, in Tripolitania. Among his pupils was Abū Yahyā Zakariyā b. Ibrāhīm al-Hawwārī.

He was the author of the following works: 1. A commentary on the *ʿAlida*, a short treatise on theology by Abū Ḥafṣ Omar b. Djamī al-Nafūsi; 2. A commentary on his synopsis of the *K. al-ʿadl wa ʿl-inzāf* on the sources of law by Abū Yaʿqūb Yūsuf b. Ibrāhīm al-Sadrānī; 3. *K. al-siyar*, a biographical collection, spiced with anecdotes and a few historical events, of the principal Abādī personages. A few extracts transl. into French have been published by Maqueray in his *Chronique d'Abou Zakaria*, Algiers 1879, p. 325 sqq.; the Arabic text was lithographed at Cairo in 1301.

Bibliography: Motylinski, *Bibliographie du Moud in Bull. de Correspond. afric.*, 1885, I, II, p. 47—70; do., *Le Djebel Nefouza*, Paris 1899, p. 90, note 1; al-Shammākhī, *K. al-siyar*, p. 362; Abū Ishāq Ibrāhīm al-Yūsuf Aḥṡayash al-Djāzārī, *al-Diʿāya ilā sabīl al-muʿminīn*, Cairo 1342/1923, p. 28, note 1.

(MOH. BEN CHENER)

AL-SHAMMĀKHĪ, ABU SĀKIN ʿAMIR B. ʿALĪ B. ʿAMIR B. ISHĀW, Abādī jurist, died at a great age in 792 (= December 20, 1389—December 8, 1390) in one of the villages of the Ifren of the Djabal Nafūsa, in Tripolitania.

After studying with Abū Mūsā ʿIsā b. ʿIsā al-Shammākhī, he attached himself to Abū ʿAzīz b. Ibrāhīm b. Abū Yahyā. On the conclusion of his studies, he settled at Metiwen where he devoted himself to teaching for thirteen years. He then settled in the oasis of Ifren in 756 (= January 16 1355—January 4, 1356).

His pupils were: his son Abū ʿImrān Mūsā, his grandson Sulaimān, Abū ʿIḥsām b. Ibrāhīm al-Barrānī, Abū Yaʿqūb Yūsuf b. Miḡbāh, etc.

He composed the following works: 1. a *Diwān*, which remained unfinished in four great volumes which has become the fundamental lawbook of the people of the Djabal Nafūsa; 2. *ʿAlida*, a theological treatise dedicated to Nūḥ b. Ḥāzim; 3. *Kāfiya fī ʿl-ʿasmina*.

Bibliography: al-Shammākhī, *K. al-siyar*, Cairo 1301, p. 559; Motylinski, *Bibliographie du Moud in Bull. de Correspond. afric.*, 1885, I, II, p. 44.

(MOH. BEN CHENER)

SHAMMAR, (a) the plateau containing the parallel ranges of Djabal ʿAdja and Djabal Salmā, "the two mountains of Tay". In extent it stretches southward from the Naḡd to the Wādī ʿl-Rumma and includes Imna, Mima, Huḡrān and Rumma which shelter Shammar tribesmen. Politically the term is inconstant. Thus, when the Amir of Ḥāʾil [q. v.] was at the height of his power Djaʿf and Riyāḍ were included to Shammar. Inasmuch as the tribe gave its name to the district, like its predecessors, the Tayʿi, it is best to confine the name to the Djabal where the tribe is paramount. The capital is cut off from the outside world by its mountain barriers, fair access only being possible from the direction of Taima by the Rīʿ al-Salf which pierces the mountain to the S. W. of Ḥāʾil and by a pass through the Djabal Salmā. Between the ranges water is plentiful; but outside the fertile fringe wells are few. The climate is bracing and healthy and epidemics like those recorded by Doughty (I, 296) are doubtless of external origin. In the

oases water is near the surface and cultivation correspondingly easy.

(b) The confederation of tribes in this region and in al-Djazīra. Local traditions as to the origin vary. It is claimed that the Shammar are of Northern stock in the lines of Rabī'a and Muḍar. Wallin (*J.R.G.S.*, xx, 331) reported that they differ considerably from Syrian Arabs in racial characteristics and resemble in features the Yamanis, and that their tradition is that they were the last to migrate from southern Arabia. The ruling clan, the Dja'far, is a sub-tribe of the 'Abda of 'Abida, descent from Kahtān, so that they may be Yamanis. They certainly hold that they displaced and in part absorbed the Tay'i. Ibn Duraid, *Kitāb al-luḡat*, ed. Wüstenfeld, p. 233, merely says that the Banū Shammar are *min Tay'i*. Doughty, ii, 41, reports that Naḍjīan opinion favours a mixed ancestry. There is no good clue as to the date of the Shammar irruption. At the beginning of Islām the Tay'i were in the Shammar lands and probably their expropriation was gradual. Al-Kalāshandī mentions the Shammar merely as Arabs inhabiting the Tay'i mountains. He does not connect them with any known stem.

Their hereditary foes are the 'Anaza; Beduwin war has gone on for at least a century and a half. About a hundred years ago, the 'Anaza succeeded in dividing the Shammar. They forced a large section of them to cross the Euphrates and occupied the intervening *dīra*. By this time the two groups of Shammar are politically distinct, the Mesopotamian section following Ibn Djerba. Nevertheless the blood tie is still honoured in that the pasture land of the Djabal is open to any of the Djerba Shammar. The Shammar *dīra* extends almost to Naḍjaf, though the assaults of the 'Anaza, the Dha'fir and recently the Amīr of Riyāḍ tend to confine them to the Naḍf.

The Dja'zira Shammar are practically all nomads, their range being between Tigris and Euphrates. They come as far south as Baghdad and Zubār. A *rendez-vous* is Dair al-Zūr and they move up the Khāhūr [q.v.] towards Niḥlīn. In the absence of an official estimate their numbers may be said to be 10,000.

The Amīr, who takes the name of his house and is known as Ibn Rashīd, is not only the paramount *shaykh* of the Shammar tribes; he is also the ruler of the settled population in the line of oases between the ranges of Adja' and Salma, and outlying settlements like Mastajidda. Hā'il [q.v.] and Fa'il (population about 1,000), Kafar, Akda, Muḥṣā and Samira deserve mention.

The renowned Tamīm still form a considerable proportion of the settled population, though they incline to Ibn Sa'ūd of Riyāḍ. The townspeople are regarded as superior to the Beduīn brethren in courage and military skill. They form the backbone of the army; each man is compelled to furnish his own camel or horse, weapons, ammunition and equipment, and afterwards a summons is sent to the nomads, who, though they turn out in great numbers, are merely regarded as auxiliaries. The great strength of the Shammar in the past has lain in their discipline and they may yet again assert their strength under a capable Amīr.

Wallin noted that apart from the Khāhūr and Kādī, men with any knowledge of Arabic literature were extremely rare; and the former knew little but the Qur'ān, the Hanbali traditions and the

specific tenets of the Wahhābī faith. The Shammar have been some of the most devoted champions of Wahhābī doctrines and they have done much to propagate it throughout western Arabia. Lately they have revolted against the excessive austerity of the sect, and tobacco and silk are not taboo as in Naḍj. Doubtless up-to-date information of the effect of Ibn Sa'ūd's régime in Hā'il would lead to a modification of some statements made above.

I refrain deliberately from noticing the work of William Gifford Palgrave, as Philby (ii, 117-156) has shown that he was a liar.

(A. GUILLAUME)

AL-SHAMS (A.), the sun. As in Greek astronomy, whose conception of the cosmos the Arabs had taken over, they made the sun go round the earth from east to west in a true (tropic) year. The centre of the sun's orbit (epicycle = *ḥalāq al-tadwīr*) did not coincide with the earth's centre but was eccentric to it (*al-khawāridj al-marḥūl*) to account for the inequality of the seasons which had already been established by Hipparchus. The sun itself was a ball-shaped solid body sunk into the so-called eccentric sphere of the sun (*ḥalāq al-shams*) in such a way that the ball of the sun nowhere protruded beyond the surface of the sphere. (A pictorial illustration of this idea is given in Rudloff and Hochheim, *Die Astronomie des Gazmāl*, Leipzig 1893, p. 13). If we put the radius of the sun's orbit at 60^h, then according to Hipparchus the distance of its centre from the centre of the earth = approximately 2^h 30' = $\frac{1}{4}$ of this radius, according to al-Battānī = 2^h 48', while the calculations of Muḥammad b. Mūsā al-Khwarizmi result in an eccentricity, the magnitude of which has been variously estimated from 2^h 10' to 2^h 20' (cf. H. Suter, *Die astronomischen Tafeln des Muḥ. b. Mūsā al-Khwarizmi*, Copenhagen 1914, p. 45). The two directions at which one looks at the sun from the two centres mentioned thus form an angle calculated by Hipparchus as = $\pm 2^{\circ} 13'$ as a maximum (by al-Ma'nūn's astronomers at $1^{\circ} 59'$, by Battānī at $1^{\circ} 58'$). This magnitude is called the equation (*al-dīl al-ḥaṣṣa wa 'l-marḥūl*). In consequence of the eccentric sun's orbit which (in modern language) is simply the elliptic path of the earth round the sun projected on the sphere of the heavens, there were two outstanding points for the motion of the sun; that at which it is nearest the earth (*perigee*, *perigaron*, *ḥafḍ*, *ḥuḍ afrāḍ*), and that of its greatest distance from

the earth (*apogee*, *apogäum*, *awḡḡ*, *būd ad-ad*). It is one of al-Battānī's most important contributions to knowledge, that he discovered the turning movement of the apogee which we can now prove to be a necessary result of the disturbance of the earth's path by the attraction of the moon (three body problem). Al-Battānī found it amounted to 21" in a year, according to the results of modern astronomy it is about 11" 50 (cf. e.g. Israel-Holtsch, *Die Elemente der theoretischen Astronomie*, I., Wiesbaden 1885, p. 17). This movement of the apogee has nothing to do with that which is produced by the precession of the equinoxes and is added in the same direction to the former. While Hipparchus and Ptolemy estimated its annual amount at 36", al-Battānī came much nearer with 54" — 55", while Naṣr al-Dīn al-Ṭūsī about 1260 calculated it at 51" which is practically correct. Whether now the introduction of trepidation into this movement of precession in the zodiacal circle, i.e. the assumption of an inequality in it in the form of a see-saw movement (*ḥarakat al-iḥḥāl wa 'l-idḥār*) is due to lack of agreement in calculations or, as S. Günther thinks, was learned by the Arabs from the Hindus (cf. his *Studien zur Geschichte der mathemat. und physikal. Geographie*, II., Halle 1877, p. 78), need not be discussed here. It will be sufficient to refer to the work of Thābit b. Qurra (826—901) which was translated into Latin by Gerard of Cremona with the title *Liber Thabit de motu accensionis et recessionis* (cf. H. Suter, *Die Mathematiker u. Astronomen der Araber und ihre Werke*, Leipzig 1900, p. 37). Both texts, Arabic and Latin, are in MSS. in the Bibliothèque Nationale. Delambre has investigated the Latin MS. He quotes it as *Thabit ben Qurrah: de motu octavarum sphaerarum* and finds that Thābit introduces a second movable ecliptic, which rises and falls alternately above and below the fixed ecliptic. The equinoctial points at the same time advance or retire as much as 10° 45" (cf. J. B. Delambre, *Histoire de l'Astronomie au moyen âge*, Paris 1819, p. 74).

The divisions of time are caused by two kinds of solar motion. The first is that which is completed within a tropic year along the eccentric solar sphere, during which time the sun traverses the twelve constellations of the zodiac (ecliptic = *ṣalāk al-burūj*) to return again to its starting point (beginning of spring = *naḥḥat al-ṣīdāl*). The duration of the tropic year was calculated by al-Battānī at 365^d 5^h 46' 24" (actually it is 365^d 5^h 48' 47"), i.e. much more accurately than by Ptolemy who puts it at 365^d 5^h 55' 12". Secondly, the sun as a result of the revolution of the globe of heaven around the earth performs its daily round in the heavens from east to west. The Arabs understood by natural day (*yawm*), the day of sunlight and night combined. Muslim religious ceremonies are closely connected with the different stages of daylight: Dawn and twilight (*ḥaḡḡ*, *ḥaḡḡ* q.v.) are periods for prayer and it was necessary to define them astronomically. In the meridian or at midday (*nisf al-naḥr*), the sun attains its greatest height (*ḡāyat al-irtifāʿ*) and then begins to sink (*anzāl*). The *ṣuḥr* is the period of prayer immediately after noon. The distance of the sun from the meridian is called *ṣaḡl al-dūr*. The position of the sun in the heavens was usually obtained from the length and direction of the shadow of the *miḡyās*. The Ḥakīmī

astronomer Ibn Yūnus (1009) called attention to the half-shadow which is a result of the flatness of the sun's disc. The shadow instruments of the Arabs i.e. their sundials were of varied kinds. At the moment when the afternoon shadow on the *ḡāḡḡ* (horizontal sundial) exceeded the midday shadow by the length of the *miḡyās* (*ḡāḡḡ*), the time of *ʿaṣr* began (afternoon prayer). The hours (*al-sāʿat* see *ṣāʿa*) were either equal (*al-sāʿat al-muʿadḍilla*) or unequal i.e. temporal (*al-sāʿat al-samāniya*). Later the equal hours were also marked on the sundial.

The procedure for ascertaining the beginning and magnitude of the eclipse of the sun (*ḡuṣūf al-shams*) among the Arabs is based on the *Almagest* of Ptolemy. As regards accuracy in calculating the beginning of and observing an eclipse of the sun, the same holds as for the moon (cf. *AL-KAMAR*). In such questions as solar parallaxes, apparent size of the sun, its distance from the earth etc., the Arabs also closely followed the Greeks. Ibn al-Haiṭham notes that in solar eclipses a similar reddish black is seen on the sun's disc as on the moon, at the time of its total eclipse. He recommends the observation of a solar eclipse in its reflection in a vessel filled with water, in view of the too fierce light, especially in partial eclipses.

Nallino, *al-Battānī visse Al-battānī Opus astronomicum*, Milan 1899—1907, I. 41, 43, 71, 104, 135, and the corresponding Adnotationes, Vol. II. with the plates of the sun; R. Wolf, *Geschichte der Astronomie*, Munich 1877, p. 47, 160, 173. On Ibn Yūnus's proof that the shadow (*al-ḡill*) of a *miḡyās* gives the height of the upper rim of the sun and not that of its centre, cf. C. Schoy, *Über eine arabische Methode, die geographische Breite aus der Höhe der Sonne im ersten Vertikal (Höhe ohne Azimut) zu bestimmen (Annalen d. Hydrographie u. maritimen Meteorologie, 1921, p. 131)*. On sundials, the division of the days and hours: C. Schoy, *Gnomonik der Araber*, Berlin 1923 and do., *Sonnenuhren der islamischen Astronomie*, Isis, vi., No. 18, 1924, p. 332—361. On the greatest declination of the sun or sphere of the ecliptic (*ḡāyat al-maʿl, al-maʿl al-ʿaṣam*), cf. the article *AL-SARATĀN*. Ibn al-Haiṭham's note on the observation of the eclipse of the sun is in his: *Fi Maʿyāt al-Aḥḡ al-ḡāḡḡ fī Wadīh al-Kamar* (Maḡlis baladiy in Alexandria). (C. SCHOY)

SHAMS AL-DAWLA, ABU TAḤIR B. FAKHR AL-DAWLA, a Ḥūyid. After the death of Fakhr al-Dawla [q.v.] the amirs proclaimed as his successor his four-year-old son Maḡdī al-Dawla under the guardianship of his mother Saiyida and gave the governorship of Hamadhān and Kirmānshāhān to Shams al-Dawla who was also a minor. When Maḡdī al-Dawla grew up, he sought to overthrow his mother and with this object made an arrangement with the vizier al-Khaṭir Abū 'Alī b. 'Alī b. al-Kāsim in 397 (1006/1007). But when they sought assistance from the Kurd chief Badr b. Hasanawāh, the latter set out for al-Raiy with Shams al-Dawla and took Maḡdī al-Dawla prisoner. The government was then given to Shams al-Dawla but as he was not so pliant as Maḡdī al-Dawla, the latter was released from his prison after a year and again proclaimed ruler, while Shams al-Dawla returned to Hamadhān. After Badr had been murdered by the soldiers in 405 (1014/1015), Shams al-Dawla

seized a portion of his territory and when the grandson of the dead man, Tahir b. Hilal b. Badr, wished to dispute the possession of it, he was defeated and thrown into prison. His father Hilal b. Badr had already been imprisoned by Sultan al-Dawla (q. v.); but the latter released him and sent him with an army to regain the lands occupied by Shams al-Dawla. In Dhū l-Qa'da 405 (April/May 1015), he came upon the enemy but the battle resulted in Hilal's defeat and death. After this victory Shams al-Dawla seized the town of al-Raiy; Majid al-Dawla and his mother took to flight, but when Shams al-Dawla wished to pursue them, his troops mutinied and forced him to return to Hamadhān, whereupon Majid al-Dawla and his mother returned to al-Raiy. In 411 (1020/1021) the Turks rose in Hamadhān; Shams al-Dawla appealed to Abū Dī'ār b. Kākawāh, governor of Isfahan, and with his help succeeded in driving the mutinous element out of the town. About 412 (1021/1022), Shams al-Dawla was succeeded by his son Sam' al-Dawla but within two years (414 = 1023/1024), Hamadhān fell into the hands of the Kākūyids (q. v.) (Kākawāhids).

SHAMS AL-DIN. [See DJUWAINI, i. 1070^a, IL-DEGIZ, ILTIMISH, FERLEWÂN, TIRIZI.]

SHAMS AL-DIN, Ibn 'Abd Allāh al-SAMATRA'NI (the *nisha* is variously given, as the pronunciation of the name of the country varies), = belonging to Samatra < Samudra, a district in North Sumatra which in those days formed a part of the kingdom of Pasei; cf. the art. SUMATRA), a Malay mystic author, who was born probably before 1575 and died in 1630 (Radjab 12, 1039 A. H., as we know from Nūr al-Din al-Rāniri's *Bustān al-Salāfin*; the part in question has been edited by G. K. Niemann, under the title *Hikāyat Nagari Atjeh*, in *Blommestein uit Maltische Geschiedenis*, the Hague 1907, ii. 127). On his personality al-Rāniri says: "This Shaikh was learned in all branches of learning; especially his knowledge in the field of the 'ilm *tasawwuf* was well known; a number of books have been written by him". He is often mentioned along with his contemporary Hamza al-Fanāuri (= belonging to Baros, on the West coast of Sumatra; cf. the art. HAMZA AL-FANĀURI in the Supplement), whose importance is, however, much greater. Whether Shams al-Din was Hamza's pupil, as H. Kraemer suggests (*Een Javaansche Primbon uit de Zestiende Eeuw*, diss. Leiden 1921, p. 28), seems to be not quite certain.

After the conquest of Malacca by the Portuguese (1511), the importance of Aceh as a centre of Muslim economic and religious life had increased. Especially during the reign of Iskandar Muda (= Maklūta 'Alam) (1607-1636), who extended his sway over parts of the Malay peninsula, religious life in Northern Sumatra was very intensive. Our sources speak of a struggle between the radical mysticism of Hamza and Shams al-Din and their

adherents, and the more orthodox Nūr al-Din al-Rāniri; as Shams al-Din was granted the favour of Iskandar Muda, al-Rāniri left Aceh for some time, but later on, during the reign of Iskandar II, he succeeded in securing the assistance of the public authorities and, by a *fatwā*, caused the books of his opponents to be burnt publicly (H. Kraemer, *op. cit.*, p. 30; *do.*, *Noord-Sumatraansche invloeden op de Javaansche mystiek*, in *Ojsam*, 1924, iv. 30; cf. also H. N. v. d. Tuuk, *Kort Verslag der Mal. Handchr. etc.*, in *B.T.L.V.*, 1866, Series 3, vol. i. 463, where Muqul Ma'jat Sjah is another name for Iskandar II).

Kraemer, *op. cit.*, p. 30 sqq., mentions the following works of Shams al-Din:

1) *Mir'at al-Mu'min*, "Mirror of the Believer", deals with dogmatics in an orthodox manner, written in 1009 (1601). Cod. Or. Leiden N^o. 1700 (H. H. Juyaboll, *Cat. Mal. . . . Handchr. Leidische Univ. Bibl.*, Leiden 1899, p. 256—257) and N^o. 1952 (Kraemer, p. 30) contain parts of it; the former is provided with a Dutch MS. translation by P. v. d. Vorm (d. 1731), and is therefore the same MS. as has already been described by G. H. Wernally; the complete work contained 211 questions and answers on religious subjects (G. H. Wernally, *Maltische Boektaal*, Amsterdam 1736, p. 354—355; the author also says that this work was very popular in his days and cites [Introduction, p. I—III] the beginning sentences, according to which Shams al-Din wrote this book for those who were not acquainted with the Arab and Persian languages).

2) *Mir'at al-Muḥaqqiqin*, "Mirror of those who have acquired a deep mystic knowledge", mentioned by al-Rāniri, seems to be lost. V. d. Tuuk's identification of this work with Cod. Or. Leiden N^o. 1332 is, according to Kraemer, p. 31, wrong. 3) *Sharḥ Ruk'at Hamzat al-Fanāuri* (written in 1611), perhaps a commentary on Hamza's *Ruk'at al-Muḥaqqiqin* (Kraemer, p. 29 and note 3), which has not survived to us. Juyaboll, *op. cit.*, p. 289, supposes that Cod. Or. Leiden, N^o. 1983 (2) contains this commentary.

Excerpts of works by Shams al-Din are mentioned by Kraemer on p. 31; on p. 32 we find a list of works which are only known by name (cf. also p. 30 above). As it is not always certain that Shams al-Din is the real author, and our knowledge of their contents is still very limited, it seems not to be necessary to enumerate them all here. Only scanty notice of Shams al-Din's teachings can be gathered from the fragments preserved in us; even Codex Leiden, coll. Su. H., N^o. 30, described by Prof. Ph. S. van Ronkel (*Suppl. Cat. Mal. . . . Handchr. Leidische Univ. Bibl.*, Leiden 1921, p. 145, N^o. 341) as a résumé of Shams al-Din's teachings, has only the character of a collection of annotations which presuppose a fuller account or oral explanation.

Al-Rāniri mentions Shams al-Din (Kraemer, p. 28) as a representative of the Wudūdīya (q. v.), and from the information on his teachings given by Kraemer (p. 46—48) we may conclude that there is no essential deviation from the general Muslim mystic conceptions of his days. On the other hand he has exercised a considerable influence on the peculiar Javanese mystic literature, which is, however, not yet fully investigated (cf. the art. *SURUK*). Continued researches will perhaps solve the question whether Indonesian elements, which are so well represented in Ja-

vastest mystic treatises, are already to be found in the literary inheritance of Shams al-Din and his contemporaries.

According to v. d. Tuuk (*op. cit.*, p. 463-464), al-Rānirī's [q. v.] *Nuḥḍa fī Da'wā al-Zill* and his *Tabyān fī Ma'rifat al-Adyan* are especially intended as polemics against Shams al-Din (cf. also Kraemer, p. 32-33).

SHAMS AL-MA'ĀLĪ. [See ʔANŪS.]

SHAMSIYA, order of derwishes called after Shams al-Din Abu 'l-Ḥanā' Ahmad b. Abi 'l-Barkāt Muḥammad Siwāsī or Siwāsī-rāde, also called Kara Shams al-Din and Shamsī (d. 1009 = 1600-1601). He is mentioned by the historians Na'imī (Constantinople 1281, I, 372) and Pečewī (Constantinople 1283, II, 290) among the saints of the reign of Muḥammad III, and they state (probably on the authority of this sovereign, whose letter is cited by von Hammer, *Geschichte der osmanischen Dichtkunst*, III, 286) that he fought at the taking of Erlau (1005 = 1596). He was the author of numerous works in Turkish, enumerated by Ḥādīdī Khalīfa, who, however, confuses him with other persons; of one called *Manāzil al-Arifin* there is a copy in the British Museum, and another called *Gulshanābād* is preserved in the Vienna Library. Notices of this order in European works are mainly derived from d'Ohaeson, who mentions it in his list (*Tableau*, IV, 625), whence von Hammer obtains his information in the *Geschichte des osmanischen Reiches*, IV, 236, adding that the founder lived and died at Medina in the odour of sanctity. In his later work on Ottoman Poetry, *loc. cit.*, he states that this person was head of the Khalwati order in Siwās; and in the *Kamūs al-A'fām* he is called the restorer of the Khalwati order. In a pedigree of orders made by a Naqshabandī and cited by Le Châtelier, *Conférences*, p. 50, the Shamsiya is represented as a branch of the Khalwatiya and appears to be confined to Siwās. It does not figure in the list of *tekke* at Siwās drawn up by Cuinet (*La Turquie d'Asie*, I, 666), whence it was probably a local name for the Khalwati order which speedily became obsolete. Le Châtelier, *loc. cit.*, p. 179, mentions an order of this name as a branch of the Badawiyah in Egypt.

(D. S. MARGOLIOUTH)

AL-SHANFARĀ was a poet of the time before Islam and is reckoned by the Arabs as one of the great rascals, along with others like Ta'abbata Sharran, and also as one of the ravens (*agribā*) on account of his black skin. The genealogists know his complete genealogy, but as the various sources consulted are not even unanimous as to his name and that of his immediate ancestors, it is hazardous to attach great credence to the chain of his forebears named. There is, however, perfect agreement that he belonged to

the South-Arabian clan of the Banu 'l-Iḥwā b. al-Ḥidjr b. al-Haww b. al-A'ed and consequently he is one of the very few South-Arabian pre-Islamic poets of whom poems are preserved. As a boy he was captured by the tribe Shabāba b. Fahm, a clan of Kaïs 'Ailan, and he remained a prisoner among them till he was exchanged for a man of the Banu Shabāba, whom the Banu Salamān b. Mufarrij, a clan of al-A'ed, had captured. He remained among the latter as one of their tribe till he began to make love with a girl of the Banu Salamān who resented his wooing, and when he was insulted by the father of the girl he ran away to his first captors. When he learned from them his real descent he swore that he would take vengeance upon the clan of Salamān by killing a hundred of their men. He succeeded in this in so far that he killed actually 99 of them. The small tribe of Fahm were noted robbers; associated with Ta'abbata Sharran he was for a long time a terror to tribes which often lived very long distances from the home of the clan of Fahm. It is reported that he, like his companion, made all his raids on foot, crossing large stretches of desert, through which he made his retreat sure by burying ostrich-eggs filled with water in the sand. As soon as he had made his murderous attack he would, upon being pursued, race back into the wilderness, where his pursuers were compelled to give up their chase for fear of dying of thirst.

When his murderous career against the Banu Salamān had assumed the dimensions indicated, three men of the clan Ghāmid waylaid him in the night when he was going to a lonely well at al-Nāṣif near Ahida and though he wounded two of them by shooting at them as he espied their form in the dark, they overpowered him and after cutting one of his hands off brought him to their camp, where they killed him. It is stated that on this occasion he uttered the defiant verses telling them not to bury his body but to leave it to the hyenas, which are found in the *Ḥamāra* of Abū Tammam and have several times been translated into European languages. Al-A'ini in his commentary on the verses of the *Alfiya* (IV, 596, 10) mentions his *Diwān* among the books which he has consulted, but this book is now probably lost.

We have, however, two celebrated poems of some length attributed to him, one found in the collection of ancient odes entitled *al-Mufaḍḍaliyyāt* (ed. Lyall, N° 20; ed. Thorbecke, N° 18) in which he celebrates his murder of Ḥarām b. Djabir, a man of the Banu Salamān, but the chief beauty of this poem lies perhaps in the *wasf* or amatory introduction. This poem is accessible to European readers in the excellent rendering of Lyall. Greater celebrity, however, is enjoyed by his other poem which is generally known under the title of the *Lamiyat al-'Araḍ*, a poem full of defiance and manliness, which since it was made accessible to Western readers by Sylvestre de Sacy has been acknowledged as one of the finest products of Arabic poetry. It has been translated into several Western languages, even Polish. It was also appreciated by Arabic scholars and we possess an early commentary which is attributed to the printed editions (Constantinople 1300 etc.) to al-Mubarrad; this is, however, an error as the commentator himself mentions that he derived his text from Abū 'l-'Abbās in more than one place and once

(p. 26) from Ahmad b. Yahyā i. e. the Kūfī grammarian Tha'lab who died in 291 (903). Printed with the same commentary is another commentary, more extensive, by al-Zamakhsharī who died in 538 (1143/1144).

While the poem in the *Mufaḍḍalliyāt* is considered the undisputed work of al-Shanfara, this is not the case with the *Lamiyat al-'Arab*. The earliest scholars appear to have no knowledge of the poem at all; it is not mentioned by Ibn Kutaiba in his book on poets, nor is there any reference to this poem in the fairly long account of the poet in the *Kitāb al-Aghānī* (xxi. 134-143). Though al-Kālī (died 358=969) quotes the poem at length in the appendix of his *Amālī* (lii. 208-212) he informs us in an earlier part of his work (i. 157) that the poem, though generally attributed to al-Shanfara, is in reality the work of Abū Muḥrīr i. e. the Bagrian philologist Khalaf al-Aḥmar. Al-Kālī, who derives about two thirds of his book from Ibn Duraid, has received this information also from him and probably from this source it is repeated in later literature. Ibn Duraid was well informed about the activities of the scholars of the Bagrian school and only two generations separated him from Khalaf al-Aḥmar, his information being as a rule derived from pupils of al-Aḥmar from Khalaf. We are consequently compelled to attach some weight to his statement, which is largely corroborated by the internal evidence of the poem itself. The entire lack of names of places and personal names, except such as cannot easily be identified, is so unusual in early poems that it must give rise to suspicion, for we have not a fragment, but a harmonious complete poem. To this must be added that in its diction occur words and phrases which cannot easily be confirmed from poems which are acknowledged as originating from poets who lived contemporary or near the time of al-Shanfara and we must come to the conclusion that Khalaf inspired by the fragment found in the *Hamāsa* composed his masterpiece, which truly represented the defiant nature of the wild robber and murderer.

Added to this comes the remarkable fact that another poem of equally wild nature and attributed in the *Hamāsa* to Ta'abbata Sharran, the companion of al-Shanfara, is also attributed to al-Shanfara, but by critics vindicated as a forgery of the same Khalaf al-Aḥmar (*Hamāsa*, ed. Freytag, p. 382 = ed. Büllā, II. 160). Besides these poems are quoted fragments of four other poems, which probably are not remnants of longer *ḥaṣīda's*.

Bibliography: The whole subject is most exhaustively dealt with by G. Jacob in his *Schanfara Studien*, Munich 1914-1915, from which it is evident that the poems of al-Shanfara have attracted greater attention in European literature than any other Arabic poet, and to the works cited there I can only add an édition-de-luxe of the *Lamiya* in German translation, Hanover 1923. Scattered verses by al-Shanfara are found in several other older works besides those used by Jacob, but they add nothing to our knowledge. (F. KRENKOW)

SHANT YAKUB (Yakū, in Abū 'I-Fidā'), Arab transcription of the Spanish Santiago, in French St. Jacques de Compostelle, is the most celebrated place of pilgrimage in Christian Spain, the former

capital of the kingdom of Galicia, situated 760 feet above sea-level, between Vigo and La Coruña, to the east of Cape Finisterre. It is there that according to the legend are the relics of the apostle St. James the Greater, the patron-saint of Spain, who landed on the coast near Santiago to convert the peninsula. There was, before the eleventh century, a celebrated church dedicated to St. James Compostelle, with which the Arab authors deal with full details. It was for the Christians, says the author of *al-Bayān al-Maghrib*, what the Ka'ba is for the Muslims.

In 387 (997), the ḥadīth al-Manṣūr Ibn Abī 'Amir directed an important expedition from Cordova against Santiago, of which Dozy has given a detailed account from the chronicler Ibn al-Iḍhārī. On Sha'bān 2 (10th August), the town, which had been deserted by the inhabitants, was taken by the Arab army and burned to the ground; only the tomb of the saint was respected. The king of Galicia, Bermudo II, recaptured Santiago from the Muslims at the end of the eleventh century and restored all its traditional splendour to the place of pilgrimage. The building of the present cathedral on the foundations of the sanctuary destroyed by al-Manṣūr, was undertaken in the reign of Alphonso VI in the last quarter of the eleventh century.

SHĀPŪR (r.), Arabic Šabūr (the form Šāshafūr in a verse of A'shā quoted in Tha'alibi, *Hist. des rois des Perses*, ed. Zotenberg, p. 493 is nearer the Pahlavi *Šāshpūr*), the name of several members of the Sāsānid dynasty. The three Persian kings of this name have associations with Muslim tradition.

SHĀPŪR I R. ARDASHĪR called Šabūr al-Djundī by the Arabs; the Sapor I of the classical historians (241-272 A.D.) who waged war with the Romans for the greater part of his reign, for he continued the offensive which had been begun by his father Artaxerxes. He succeeded in capturing important towns like Nisibis (which were however lost again after his defeat at Resaina in 243). Later (256?) he took Antioch and in 260 he even took the Emperor Valerian a prisoner. The Roman wars, waged with varying fortune, thus seemed to have ended in the definite victory of Sapor, when he discovered an enemy in the king of Palmyra, Odenathus, who forced him to evacuate the conquered territory. Odenathus remained the enemy of the Persians till his death; it was only his successor Zenobia that concluded a treaty with Sapor. On this and other historical facts which cannot be gone into here, see Pauly-Wissowa, II., *Realenzyklop.* col. 2325 sq.; here we are only concerned with the Muslim tradition based on an older Persian tradition, which can on the whole claim little real

historical value, although it will not be disputed that it has preserved many historical, important and valuable details, otherwise unknown. The facts of the legendary biography of Shāpur I as contained in Muslim sources are in the main as follows:

YOUTH. Ardāshīr, Shāpur's father, had married a daughter of the Arsakid Ardawān, whom he had dethroned and slain. The princess attempted to poison Ardāshīr but the plot was discovered and the king ordered a trusted court official to put her to death. When the latter saw that she was pregnant, he spared her life and when she gave birth to a boy, he called him *Shāpur*, i.e. "king's son". Shāpur grew up in concealment. Ardāshīr was lamenting that he would leave no heir to succeed him at his death; the courtier thereupon revealed the secret and brought the son to his delighted father.

This story is already found in the Pahlavi *Kārnāmak*. Muslim tradition agrees with it in the main, although all the sources do not have the same details. Firdawsi gives two details, which are lacking in the *Kārnāmak* but can be shown from the rest of the story to be old; in order not to run any danger should the fact of Shāpur's birth become known, the official entrusted with the execution of the Arsakid princess acts exactly like the Lycian Combabos; the second is that Shāpur is recognised as a real prince by the fact that he dares, while playing, to pick up the ball near Ardāshīr who is looking on, without showing any awe at the king. Al-Tabari knows this story also, but says nothing of a poison-plot. In his story Ardāshīr is bound by an oath to destroy all Arsakids but does not know that his wife belongs to this family; so also al-Dīnawari, only he makes the princess a niece of the Arsakid Farrukhān.

The legend next deals with the story of Shāpur's wooing and the birth of his son Hormizd; it is practically a repetition of the preceding. An Indian sage has predicted to Ardāshīr that the throne will be inherited by the family of the Mihrak dynasty overthrown by Ardāshīr, therefore the king has all the descendants of Mihrak put to death; only a daughter escapes; Shāpur meets her while out hunting and brings her home without Ardāshīr's knowledge. When her son, later Hormizd I, is grown up, Ardāshīr recognises royal blood in the boy, who is without fear in the presence of the king (the same motif as in the story of Shāpur); everything then ends happily. This is the story of the *Kārnāmak* and Firdawsi and al-Tabari agrees. The other sources do not give this story, but Hamza al-Isfahāni says (ed. Gottwaldt, p. 49) that there was a well-known story about the mother of Hormizd I, whom he calls Gurdād.

The legend preserved by Tabari tells that Shāpur, before his accession, took an active part in a fight between Ardāshīr and Ardawān; Shāpur killed the *dabir* of the Parthian king. Shāpur succeeded Ardāshīr on the latter's death; the statement in Mas'ūdi (*Murūj*, ii. 160) that Ardāshīr resigned the throne in favour of his son and henceforth devoted his life to religion, does not seem to belong to the old tradition.

HATRA. The conquest of Hatra is ascribed by al-Tabari and Tha'alibi to Shāpur I, by Ibn Kutaiba and Eutychius to Ardāshīr, and by Firdawsi and al-Dīnawari to Shāpur II. The story is as follows:

The Persian king was unsuccessful in taking the

stronghold of Hatra, the residence of the prince Sāfirūn (according to others: Dairan) until the latter's daughter Naḍīra fell in love with him and put the town in his hands by making her father and his soldiers intoxicated, or by betraying to the enemy the talisman on which the ownership of the fortress depended. The Persian king married Naḍīra as he had promised, but afterwards had her executed, in disgust at her ingratitude to her father.

Our authorities quote Arabic poems in this connection, which are, of course, of much later date and are of as little value as sources as the stories of the historians. They are evidence, however, that the Arabs also had the tradition that the warlike Sībūr once besieged Hatra. Whether the king who took Hatra was Ardāshīr or Shāpur I, cannot be certainly ascertained. We know from a really reliable source (Dio Cassius) of only one siege of Hatra by a Sāsānid, namely Ardāshīr, and this siege was unsuccessful. It is assumed by many, what is not in itself improbable, that either Ardāshīr himself after an unsuccessful attempt, or Shāpur I soon after his accession took Hatra. But we have no reliable historical information; what we have is a version of the widespread Scylla (Komaithō) story. There may be an echo of history in the name of the king Sāfirūn; he must have been a Syrian with an originally Parthian name (Sanatruk?). The name Dairan is an intrusion from another context (cf. Nöldeke, *Gesch. d. Perser und Araber*, p. 35). The version which places the taking of Hatra in the reign of Shāpur II, makes the Arab prince Dairan (in Firdawsi: Tā'ir) carry off a Persian princess; his daughter by her is the traitress (so in Firdawsi). Here we find the better known Shāpur II in this story in place of his earlier namesake and the treachery of the king's daughter at Hatra excused to some extent because she is of Sāsānid descent on her mother's side. Firdawsi further knows nothing of her execution, which al-Dīnawari inserts from another, apparently older, version of the story (cf. the article *HATRA* in Pauly-Wissowa, *Realenz.*², vii., col. 2516 *sqq.*).

WAR WITH THE ROMANS. Persian tradition preserves a memory of the capture of Valerian and the taking of Nisibis and other towns of the Roman empire. From the old, not quite coherent and often not quite clear tradition, it seems that Sapor I took Nisibis twice; according to the western accounts the Romans retook the town after the battle of Kessina and it was later taken by Odenathus from the Persians (Pauly-Wissowa, *Realenz.*², ii., Reihe I., col. 2328 and 2331; cf. also Nöldeke, *op. cit.*, p. 31, note 3). Firdawsi makes the Romans the attackers, because they hoped to profit from a possible weakness in the Persian empire as a result of the change of ruler (a similar idea is found in the history of Shāpur II). The Roman general Barzabūsh (a corrupt form which goes back to Valerianus) is defeated and taken prisoner. He only regains his freedom by planning the dam of Shēstār for Shāpur. Practically the same story is found in the other sources, only that al-Tabari more correctly calls Valerian a king (*malik*). The Persian version of al-Tabari (transl. Zotenberg, ii. 79 *sq.*) is somewhat fuller than the original text. There were also stories, as Tabari points out, according to which Shāpur had the Roman's nose cut off and even put him to death. Here we cannot tell how far we have to deal

with native tradition or a non-Persian version. Tha'alibi calls the Roman emperor in question Constantine. His source, therefore, does not seem to have contained the correct name. Eutychius, whose synchronisms between the Roman emperor and the Sāsānids are wrong, puts the capture and death of Valerian (who appears here as an unnamed son of Gallienus, while in reality their relationships were the reverse) in the reign of Bahrām II (Eutychius, ed. Cheikh, p. 113). That, according to al-Tabari, Valerian was besieged in Antioch by Shāpur is a reminiscence of the taking of this city by the Persians under Sapor I (the year is not certain; indeed Antioch seems to have been taken twice: Pauly-Wissowa, *op. cit.*, cols. 2327 and 2329). The name Cappadocia, which occurs several times in the Persian tradition (cf. Noldeke, *op. cit.*, p. 32, note 2) is likewise an echo of the events of 258 A.D. and the following years, namely the capture of the Cappadocian capital Caesarea by Sapor I (c. 260). There is a wonderful story associated with the fall of Nisibis. Shāpur is said to have invested the town in the eleventh year of his reign, then to have raised the siege because his presence was required in Khorāsān. Later he laid siege to the city a second time and succeeded in taking it because the walls split open by a miracle. The story is found in Tabari and more fully in Eutychius; the interruption of the siege and the splitting of the walls reflect events of the reign of Shāpur II. According to Tha'alibi Shāpur I also took Tarsus; there is also a historical basis for this in the taking of this city by one of Sapor's generals (c. 260 A.D., cf. Pauly-Wissowa, *op. cit.*, col. 2331 *supra*).

City-Foundations: Miscellaneous. The oriental writers ascribe to Shāpur I the foundation of the following cities: Shādh-Shāpur (in Kaghkar), Djundai-Shāpur (in Ahwāz) near Shūshār (with an absurd story that the king settled the Romans taken in Antioch here); Firdawst's Shāpurāgird is probably the same town; Hamza further mentions the towns of Bishāpur (in Fārs), Shāpur Khwāsh and Balāsh Shāpur which cannot be exactly located, and wrongly (they are foundations of Shāpur II) Nishāpur (also attributed to Shāpur I by Firdawst) and Firūz-Shāpur (al-Anbār). Ibn Kūṭaiha says that Shāpur settled his prisoners of war in three cities: Djundai-Shāpur, Sābūr in Fārs (probably Hamza's Bishāpur) and Tustar in Ahwāz (cf. also Tha'alibi, p. 494).

Some historians like Tabari and Dinawari, place the first appearance of Māni in the reign of Shāpur I; but the catastrophe did not occur till the reign of a later king (Hormizd I or Bahrām II). Firdawst, who wrongly places the event in the reign of Shāpur II, alone makes a continuous story of it: the painter Māni from Cīn appeared before Shāpur as a prophet and the founder of a sect, but he was refuted by the Mobeds and executed by the king's orders. Tha'alibi (p. 501) has a similar story: in the reign of Bahrām I, Māni had a disputation with the chief mobed, was worsted and slayed. According to Mas'ūdi (*Murūū*, ii, 164), Shāpur I was a Manichaeism for a time; this can hardly be historical; perhaps we have had a reminiscence of the later king Kawādī and his inclination to Mazdakism. Shāpur I died, according to the Muslim tradition, after a reign of thirty years, after giving the usual exhortations to his son and successor Hormizd.

SHĀPUR II R. HORMIZD, called Dhu 'l-Akīf (because he had the shoulders of Arab prisoners dislocated or pierced), is the Sapor II of history (310–379 A.D.), throughout whose long reign wars were waged with Rōme. Persian arms were not successful against Constantine and under Julian the Roman offensive threatened to be dangerous to the Sāsānid empire. The death of the gifted emperor (363) was the reason that the treaty of peace which his successor Jovian made with Sapor was as advantageous for Persia as it was shameful for Rome. In the reign of the Emperor Valens, also the war with Persia continued; within this period falls the capture of Arsakes of Armenia by Sapor and following this the intervention of Rome in favour of Pap, son and successor of Arsakes. These wars, which were interrupted from time to time by negotiations, dragged on and had not yet brought about any important decisions when Sapor died in 379. For all details and references to original sources see the Pauly-Wissowa, *op. cit.*, col. 2334 *seq.* Here we are only concerned with the oriental traditions. It must be remembered that in Persian tradition, although on the whole it has kept distinct the figures of Shāpur I and II, details originally referring to one have been transferred to the other. Incidents from the Julian story, which has of course nothing to do with Persian tradition, have penetrated some of the sources.

Youth and Arab wars: All sources agree that Shāpur was not yet born when his father Hormizd II died; but in case his mother should give birth to a son, the throne was set aside for the latter, so that Shāpur was born a king. All this must be legend; the older western sources suggest that Sapor II only ascended the throne as a young man (cf. Pauly-Wissowa, *op. cit.*, col. 2334; Noldeke, *Geogr. d. Perser*, p. 51, note 3). Adharnasur must also have reigned between Hormizd II and Sapor II.

During the time that Shāpur's youth rendered him incapable of ruling in person, the kingdom was attacked on all sides (say the oriental sources) by enemies, particularly by the Arabs. Among the tribes mentioned are the 'Abd al-Kais, the inhabitants of Bahrain and Kāzima (Tabari, Ibn Kūṭaiha), the Ghassānids (al-Dinawari, who also mentions Bahrain and Kāzima), and the Banū Iyād (Mas'ūdi, Tha'alibi). The young king early gave an indication of his foresight by ordering a second bridge to be built beside the bridge over the Tigris at Ctesiphon, so that traffic between the two banks of the river could develop unhindered. When sixteen years of age (according to some fifteen), Shāpur led an army against the Arabs. Here Firdawst and al-Dinawari place the Hatra episode which belongs to the reign of Shāpur I. The fairly full details of these Arab wars, probably in part at least, became incorporated in the old Persian tradition in the post-Sāsānid period. That the king dislocated or pierced the shoulders of the prisoners (in Eutychius, the captured kings) seems to be based on quite an early tradition: Hamza (ed. Gottwaldt, p. 51) gives the Persian equivalent of the epithet

Dhu 'l-Akīf as ذُو الْكَفِّ (1) *imnā*. On the whole the account of these wars is unhistorical. Shāpur certainly never advanced so far as some writers say. He is said to have not only conquered Bahrain and Yamāna, but even to have reached Medina. The story of Shāpur's encounter with 'Amr b.

Tamm b. Murra in Bahrain (Mas'udi, *Murūdj*, ii. 176-177; a connected story in *Tha'alibi*, ed. Zotenberg, p. 520-21) is an invention of Arab fancy. How far these stories reflect historical happenings, it is difficult to decide; nor can we say whether tradition has here kept Shāpur II and I quite distinct [of the latter a war of destruction against the Kuda's and the Banū Halwā is reported, cf. Noldeke, *Gesch. d. Perser*, p. 38. (The Kuda's here appear as allies of (Jaizan of Hatra)]. The Arabic verses quoted in Mas'udi (*Murūdj*, ii. 176-177) which are referred to Shāpur II's campaign against the Banū Iyād, are of course, of a much later date and seem to have had nothing at all to do with Sāsānid history. If the other verses quoted there (ii. 178) really date from the time of 'Alī b. Abī Tālib, this would be the oldest Arab reference to these events. But all these stories must have some historical background; it is known that Shāpur II had dealings with the Arabs; the Emperor Constantine negotiated in 338 with Arab tribes and urged them to conduct raids into Persian territory. Julian also had Saracen chiefs as allies in the war against Sapor II. That the Persian king took steps to protect his frontier against the Arabs is very probable (Noldeke, *op. cit.*, p. 57, note 1).

Shāpur and the Romans. In the tradition the account of the Roman wars is introduced by the well known motif of the king who visits an enemy country in disguise. This is found, for example, in the Greek Alexander romance (Pseudo-Callisthenes, ed. Müller, ii. 14-17, iii. 19-22; cf. Malalas, ed. Bonn, p. 194, 195) in Sāsānid legend a similar story is told of Bahrām Gūr. Firdawsī reports the story as follows: The astronomers prophesied misfortune to Shāpur; nevertheless he decided to risk entering the enemy land of Rūm in disguise. He appeared before the emperor as a Persian merchant, but was recognised by a Persian staying at the court, sewn up by the Emperor's orders in an ass's skin and put in prison. A young woman whose duty it was to keep the keys of his prison was herself of Persian descent and aided him to liberty by softening the ass's skin with hot milk. When a great feast was being celebrated and the imperial palace was empty, the two fled to Irān. On their way they stopped at the house of a gardener, who told the king, whom he did not know, that the Emperor of Rūm had invaded Persia and laid it waste in dreadful fashion in the absence of the legitimate king. Shāpur then ordered the man to take his (Shāpur's) signet-impression to the chief mobed. The latter saw that the king had returned. An army was soon collected with which the king attacked the Romans in the night, wrought great slaughter and took the emperor himself prisoner. The Romans found in the Persian empire were massacred everywhere. Shāpur levied a heavy indemnity on the Emperor, but did not release him; on the contrary he had him mutilated and put into prison. The Persian king then carried fire and sword into Rūm, defeated the Emperor's brother and slew many Christians. The Romans then chose a certain Bazānāsh as Emperor; the latter sought for peace which Shāpur granted on condition that the Roman Emperor rebuild the destroyed Persian towns, paid a yearly tribute of 600,000 dinārs and surrendered Nisibis. This was done, but the people of Nisibis resisted Shāpur as they would not serve a fire-worshipper. The king subdued them by force of

arms. He then rewarded the young woman who had liberated him and the gardener; he sent to Rūm the body of the previous emperor who had died in prison. He settled the Roman prisoners-of-war in towns specially built for the purpose (Khurramābād, Pirtūshāpur, Kunām-i Avrān).

This story is for the most part fictitious. The beginning (the prophecy of the astrologer) also forms the introduction to another story which develops differently, but is no doubt connected, and which is related in mediaeval oriental sources of Shāpur II b. Ardashir; the latter king is foretold that he is doomed to be unfortunate for some years. He therefore goes voluntarily into banishment (cf. P. Schwartz, *Iran im Mittelalter*, p. 544, note 6). We have already called attention to the occurrence of the motif of the unknown king, afterwards discovered. Shāpur's flight with the young woman recalls the story of Ardashir's flight before Ardawān, which is already in the *Ārnā-mak*. It is quite in the style of Irānian story-telling that the Emperor of Rūm in his request for peace mentions incidents like Minūcihr's revenge for Irān. It should further be observed that the representation of military events agrees in some respects better with the deeds of Shāpur I; the capture of the emperor (which here appears as a kind of revenge for Shāpur's imprisonment in Rūm) and his death without regaining his liberty, recall the historical facts of Sapor's war with Valerian. Even the name Bazānāsh occurs again although in a somewhat different connection. The imposition of indemnities was also found in the story of Shāpur I. On the other hand, as we saw above, the account of the (historically true) capture of Nisibis by Shāpur I, has features which belong to the vain siege of this town by the historical Sapor II in 350 (fall of a part of the wall, withdrawal of the king as a result of an invasion of Persia by nomads). The following elements in Firdawsī's narrative may be considered historical: Shāpur's hostility to the Christians (Sapor II began a great persecution of Christians in 339 A.D.); the ravaging by the Romans of the Persian kingdom (Julian plundered and burned a great part of it) (cf. Pauly-Wissowa, *op. cit.*, col. 2347); the cession of Nisibis (by the peace of 363 ceded by Jovian to the Persians) and the disinclination of the Nisibenes for Persian rule (Pauly-Wissowa, *op. cit.*, col. 2351).

The other sources (apart from the fact that Tabari and Dinawari also contain elements of the Julian romance with which we are not concerned here) differ mainly in the fact that they make the Emperor take Shāpur with him sewn up in a skin on his campaign. At the siege of Djundā-Shāpur the king is released by Persian prisoners of war and taken into the town by the garrison. This causes the defeat and capture of the emperor who has to make good the damage done and is sent back mutilated to his kingdom. This version of the story is also found in the poem quoted by Mas'udi, *Murūdj*, ii. 185, echoes of the phraseology of which seem to be found in *Tha'alibi* (cf. *Tha'alibi*, p. 525: *farātanakun Sāpur* with Mas'udi *op. cit.*: *farātanā 'l-Furū*; *Tha'alibi*, p. 527: *waghra makāna kullī nahklatin fāp'takū wāh-natan* with Mas'udi *op. cit.*: *iqā yaghrišūna min al-zaitūni mā 'aḡarū min al-nahklat*).

City-Foundations and Miscellaneous. Shāpur II, according to tradition renewed the walls of the city of Djundā-Shāpur. According to Ḥamza,

p. 52, he lived in this city till his thirtieth year and then moved to Ctesiphon, a statement which does not agree with the story of his building the bridge while still young. The new foundations are: Buzurg-Shāpūr (Ukbarā), Firrāz-Shāpūr (Anbār), Irān-Khurra-Shāpūr, with which Sās is mentioned; he probably restored the latter town under the name Irān-Khurra-Shāpūr (cf. Noldeke, *Geogr. d. Pers.*, p. 58, note 1). Roman prisoners were settled there. Nishāpūr also was one of this king's foundations; Tabari also mentions a town which must be accurately identified with a fire-temple Sarūsh-Adharān. The rebuilding of Djundai-Shāpūr formed part of the reparations the Emperor had to make; besides in the stories of these feats, there are confusions between Shāpūr I and Shāpūr II (Noldeke, *op. cit.*, p. 66, note 2). The king is said to have sent for an Indian physician and given him a dwelling in Sās; from him the people of Sās learned the art of healing, in which they afterwards excelled all other Persians. Hamza says finally that Ādhurbād (quite well known from Pahlavi literature) lived under Shāpūr II. There are no legends associated with Shāpūr's death.

SHĀPŪR III, the historical Sapor III (probably 383–387 A.D.). On the historical events of his reign, his relations with Armenia and Rome, see Pauly-Wissowa, *op. cit.*, col. 2355. Oriental tradition deals chiefly with his accession and his death. Shāpūr III was a son of Shāpūr II. According to Firdawsi, the latter at the end of his reign handed on the government to his brother Artashir, who had to bind himself to give it to the young Shāpūr when he came of age. This he did as promised. More in keeping with historical truth, Tabari says that Shāpūr III followed his predecessor Artashir when the latter was overthrown by the nobles. Al-Dinawari quite wrongly makes Shāpūr III succeed Shāpūr II directly. Mas'ūdi knows of a war of Shāpūr III against the Banū Iyād and other Arab tribes. The death of this king is ascribed to the collapse of his tent, caused by a storm, (Firdawsi, *Tha'ālihi*) or by a plot of the nobles (Tabari); the latter is probably nearer the truth. That Eutychius makes this king wage war on Julian is due to the fact that his synchronisms between the Sāsānids and the Roman Emperor are wrong.

Bibliography: See the article SĀSĀNIDS.

(V. F. BOCHNER)

SHĀPŪR (1) Name of the river of the district of Shāpūr Khūra in Fārs; also called Bishāwūr (in Thevenot: Suite du Voyage de Levant, Paris 1674, p. 295; Bouschavir; p. 296; Bouschavir), and river of Tawwadj. It must be identical with the antique Granis, mentioned by Arrian, *Indica*, 39; Pliny: *Nat. Hist.*, vi, 99. The lower course, the proper river of Tawwadj, is formed by the junction of two streams, the Shāpūr and the Dalaki-Rūd, rising both on the S. W. border-mountains of the Irān-plateau, which extend along the Persian Gulf. The upper course is called by the Arab geographers Nahr Rātin: this name is, very likely, found in Pliny, *Nat. Hist.*, vi, 121, where *Dratinus* (with v.l. *Ratinus*) must, however, mean the river down to its mouth. (This statement must be due to another source than Iuba, on whose authority the Granis was mentioned in vi, 99). In his *Nushat al-Kutub*, Mustawfi al-Kāsimi seems to indicate, that the Rātin, whose source is, according to him as well as to al-Istakhri, in the Upper Humāyidiān (Istakhri:

Humāyidiān) district, is a tributary to the Shāpūr Rūd (Gibb Mem.-Ser. xxiii, il. 217: "It is a great stream, and it flows into the Shāpūr river, its length, till it joins the Shāpūr river being to leagues"). By this way of putting things, he can but mean, that the river of Tawwadj originates from two different streams, one of which is the Rātin. This, then, must be the older name for either the Shāpūr or the Dalaki-Rūd. Al-Istakhri (ed. de Goeje, p. 120) represents these facts in the same manner; there is said, that the Rātin flows through the district of al-Ziriyān (with v.l.) before joining the Shāpūr.

The other rivers of the system are the Djirra (or Djarshik), which joins the Shāpūr on the left, below Khisht, and the Ikshahin. The name of the latter (it signifies "blue") can have originated from the colouring property of its waters, mentioned by the medieval geographers. Djarshik is the older name of the Djirra river, although in the *Nushat al-Djarshik* and Djirra are erroneously described as two different streams. The account which the latter work gives of the Djirra is for the most part copied from Ibn al-Balkhi's *Fārināma*. This states (Gibb Mem. Ser., New Series, I, 151) that the Nahr Djirra, rising in the Māzaram-district, waters the lands of Musdjan and Djirra, and part of Ghandidjan, after which it joins the Shāpūr. In addition, al-Istakhri mentions the bridge of Sabik, under which the river Djarshik flows before entering the *rustak* of Khurra (Ibn al-Balkhi's Djirra; on the reading *Kāurra* in the text of al-Istakhri, cf. P. Schwarz: *Iran im Mittelalter*, p. 35, ann. 4); after Khurra the stream passes into Dāhūn, where it unites with the Ikshahin. The *Nushat* makes the Djirra join the Shāpūr and the Djarshik the Ikshahin: as its author erroneously splits up the one river Djarshik-Djirra into two, his account is here worthless.

The Ikshahin, according to al-Istakhri and Mustawfi, rises in the Dāhūn-hills, and unites with the Shāpūr at al-Djundān. The *Nushat* calls it a great stream; now at day, it is identified with a little water course to the S. W. of the lake of Kazerūn. There appears, then, to be a difference as to the question, whether the Djarshik and the Ikshahin first join each other, and then unite with the river of Tawwadj, or flow into that stream each apart.

Concerning the Shāpūr itself, the *Fārināma* (p. 152) says, that it rises in the mountain region (*Kuhistān*) of the Bishāpūr district, which it waters, as also Khisht and Dih Malik. It flows in the sea (Persian Gulf) between Djanābi and Māndistān. This account is repeated in the *Nushat*, which only adds: "its length is 9 leagues". In *Fārināma*, p. 142, the Bishāpūr district is said to have its water from "a great river, called Rūd-i Bishāpūr". Owing to rice-plantations being there, its water is unwholesome (*naḥshim u nāḡawūr*). A short description of the river in modern times is given in J. Morier's *Second Journey through Persia... between the years 1810 and 1816*, London 1818, p. 49: "a river which... having pierced into the plain of the Dashtistan, at length falls into the sea at Rohilla. It takes its source near the site of Shapour, and when it begins to flow is fresh. But when it reaches the mountains it passes through a salt soil, and then its waters... become brackish. A lesser stream of the same river branches off before it reaches the salt soil, and flows pure to the sea".

The mouth of the river is at a short distance to the North of Bushir, near the frontier of the district Arradjan. Opposite to it lies the island Khārik, in the shipping-route from Bagra to India. The name Māndistān in the Persian geographers is connected by Tomaschek (**Topographische Erläuterung der Küstenfahrt Neiriki*) in *S.D. Ak. Wien*, cxli. 65) with the *Devimontani* in Pliny, *Nat. Hist.*, vi. 99 (The edition of Jan-Mayhoff reads *Dexi montani*, in two words). According to Pliny, the river (Granis) is navigable for small vessels. Now at day, the principal mouth presents difficulties to navigation because of its shallows: two minor mouths can be navigated up to some distance. On the present conditions, the delta, and the bitumen wells on the left bank of the river, S. of Dalaki, Tomaschek, *op. cit.*, may be compared.

In antiquity, there was on the Granis a royal residence, Taske, 200 stadia from the sea. This must be the same as the medieval Tawwadj (or Tawwaz), from which place the Shāpūr is named river of Tawwadj. In early Muhammadan times it was an important trade-city, which also had a considerable textile industry: the stuffs named *tawwaziya* were well-known. This town belonged to the district of Ardashir Khūra (Ibn al-Balkhī, *Fārmāna*, p. 114). During the viith/xiith century, the place had already declined; in Mustawfi al-Kāzini's time (viiith/xivth century) it was totally ruined. Its site can not exactly be determined; nowadays the coast-district of the Shāpūr river is called Tawwadj. Le Strange (Gibb Mem. Ser. xxiii, ii. 115, ann. 2) thinks, that the site of the town may be identified with the present Dih Kuhna, "the chief town of the (modern) Shabānkāra sub-district of the Dashtistān district".

On another Shāpūr (Shāwūr), a tributary of the Dāfūr-Rūd, comp. the article KĀRUM (ii. 833).

(2) Name of the ancient capital of the district Shāpūr Khūra of Fārs; according to Muḥaddasī, it was also called Shahrastān; its older name is Bishāpūr (from Pahlavi *Wih-Sāpūr*). A naive etymology is found in the *Nuzhat*, whose author, Mustawfi, says, that the word Bishāpūr is a contraction of binā-i Shāpūr, building of Shāpūr. Ibn al-Balkhī on the other hand states, that the first syllable of the original Bishāpūr (with a long i) may disappear by way of *tahfif*.

Shāpūr-Khūra, the area, watered by the system of the Shāpūr-Ratn, the smallest of the five provinces of Fārs, contained besides the town of Shāpūr some other important localities, e.g. Kāzerūn [q. v.], which was regarded as its chief town after Shāpūr had fallen into ruins, moreover Nubandājan and Djirra.

The old town of Shāpūr was situated on the Shāpūr Rūd, at the road from Shirāz to the sea, to the north of Kāzerūn. Mustawfi gives its situation as long. 86° 15', lat. 20°. Its climate belongs to the *garmīr*, but its atmosphere was considered not to be healthy, because the territory of the city was shut up by the mountains from the northern side. The environs were fruitful; they produced, besides many kinds of fruits and flowers also silk, the mulberry-tree being frequent in that region. Honey and wax also came from its territory. The town was founded by the Sāsānian king Shāpūr I. It was one of the three cities, where he colonized his captives of war. It has been supposed, with much reason, that the king made use

of the skill of these Roman captives in the construction of his buildings, and also in the execution of his famous reliefs, that have been found in the ruins. These reliefs relate to the campaigns of Shāpūr against the Romans. Three later kings, Bahram II, Narsai and Khusrāw II have also added each a relief of themselves.

These works of art, who are already described in detail by Morier, have also been noticed by the Oriental geographers of the Middle-ages: at least, they mention a great statue, standing in a cavern, which European travellers could identify.

The Orientals have excogitated a mythical history of the city from before the times of its Sāsānian founder. It was, according to these traditions, originally built by Tahmūrath, at a time, when there existed in Fārs no other town besides Ištākhr. Later on, it was laid waste by Alexander, to be only renovated by Shāpūr I. The name of Tahmūrath's foundation had been دین دلا (Ibn al-Balkhī, *Fārmāna*, p. 63, 142).

The Muslims subdued Shāpūr Khūra in 16 (637), after the conquest of Tawwadj and the battle of Rishahr. Bishāpūr is mentioned on the occasion of the disturbances which ensued at the beginning of the khalifate of 'Uthmān b. 'Affān; the insurrection in Fārs (25 = 645/646) against the Arabs seems to have been directed for some time from Bishāpūr by a brother of Shahrak, the governor of Fārs, who had fallen in the battle of Rishahr. After the submission of the rebels, the inhabitants of Bishāpūr once more broke the treaty; in consequence thereof it was reduced by Abu 'L-Mūsā al-Ash'ari and 'Uthmān b. Abi 'L-'As.

In the time of the geographer Muḥaddasī (end of the ivth/xth century), the town of Shahrastān or Shāpūr was already decaying, its outskirts being ruined; the environs however were well cultivated. He notices the four city-gates and the ditch, also the *masjid al-djāmi'*, outside of the city. Perhaps this may be the *masjid-i djāmi'* mentioned by Ibn al-Balkhī, whose words seem to imply, that it still existed when he wrote (beginning of the viith/xiith century). In the end of the Buyid rule, the Shabānkāra chieftain Abū Sa'd b. Muḥammad b. Mamā destroyed Shāpūr, but, as Ibn al-Balkhī remarks, in his time the (Seldjūq) government tried to restore the damage. These endeavours may have had effect as regards the district as a whole, but the city of Shāpūr never has been raised from its ruins. As Morier visited the site (1809), he found only a poor village, Daris, in the neighbourhood of the remains. The opinion of this traveller, that the town may have existed till the xvth century of the Christian aera, because its name occurs in a table of latitudes and longitudes in the *Am-i Akbari*, carries no weight, for such a table may have been composed from older sources.

On the other foundations of Shāpūr I, which were called after his name, comp. the article on that king, in addition to which it may be remarked, that the town of Shāpūr Khwast, according to the *Fārmāna* (p. 63), was situated in Khūristān, near al-Ashkar.

SHAR'. [See SHĀRĀNĪ.]

SHARĀB (A., plur. *Ashriba*), beverage. The collections of traditions deal with two subjects in the chapter on *Ashriba*: beverages and the laws to be observed in drinking. Here we only deal with the latter as the former has been dealt with in the article **KHĀMR**.

Blessings should be uttered before and after drinking (Abū Dā'ūd, *Ashriba*, bāb 21; Dārimī, *Aḥim*, bāb 3; Ibn Ḥanbal i. 225, 284; iii. 100, 117). The cup should be held in the right, not the left hand. The Prophet of God said: "When one of you eats, let him eat with the right hand and if he drinks, he should drink with the right for Satan eats and drinks with the left hand" (Muslim, *Ashriba*, trad. 105; cf. 106).

Opinions differ on the question whether it is permitted to drink standing. On the one hand there are a large number of utterances which represent this attitude in drinking as forbidden (e.g. Muslim, *Ashriba*, trad. 112—116).

On the other hand Ibn 'Abbās says that he gave the Prophet Zemmam water and that he drank it standing (Muslim, *Ashriba*, trad. 117—120). 'Alī abolished any misgivings on this point by saying that he had seen Muḥammad drink standing (e.g. Ibn Ḥanbal, i. 101 sq.).

It is further considered forbidden to drink out of the mouth of the water-skin (cf. Abū Dā'ūd, *Ashriba*, bāb 14) or to bend the latter inwards to drink (Ibn Mādjā, *Ashriba*, bāb 20); but this is also allowed (Tirmidhī, *Ashriba*, bāb 18).

In drinking one should not lap like a dog (Ibn Mādjā, *Ashriba*, bāb 25) or blow or snort on the drink (Muslim, *Ashriba*, trad. 121; Abū Dā'ūd, *Ashriba*, bāb 16, 20); on the other hand one should inhale and exhale the breath (Abū Dā'ūd, *Ashriba*, bāb 10; Ibn Sa'd, *Ṭabaqāt*, ed. Sachau, i/ii. 103) and not drink the whole at one draught (Abū Dā'ūd, *Ṭabaqāt*, bāb 18). If one is drinking in company the cup should be passed to the right (Bukhārī, *Sharḥ*, bāb 1).

The knowledge of these matters distinguishes the believer from the infidel. The latter "drinks in seven stomachs, the former in one" (Mālik, *Muwatta'*, *Sifat al-Nabi*, bāb 10).

(A. J. WENIGCK)

SHARAF AL-DĪN, 'ALĪ YAZDĪ, Persian poet and historian, born at Yazd, was the companion of Shāh Rukh and more particularly of his son, Mirzā Isḥāq Sultān (d. 838 = 1434/1435). In 846 (1442) Mirzā Sultān Muḥammad, appointed governor of Irāk 'Adjami, summoned him to Ḥumam and treated him as one of his councillors. This prince having rebelled in 850 (1446—1447), Sharaf al-Dīn, suspected of being involved in the plot, was saved from execution, ordered by Shāh Rukh, through the intervention of Mirzā 'Abd al-Latif, son of Ulugh Beg, who brought

him to Samarqand. Sultān Muḥammad, who became lord of Khurāsān after the death of Shāh Rukh, allowed him to return to Yazd (853 = 1449—1450), where he died in 858 (1454). He was buried in the Sharafiya madrasa, which he had built in the village of Taft.

In 828 (1424/1425) he wrote the history of Timūr under the title *Zafar-Nāma*, in a vigorous style, on materials apparently taken from an unpublished work with the same title written by Nizām al-Dīn Shāmi by Timūr's orders in 804—806 (1401—1403), of which there is a unique M.S. in the British Museum. This history was translated into French by Pétis de la Croix (1722) and from French into English by J. Darby (1723). The text has been published without the preface in the *Bibliotheca Indica* (Calcutta, 1887—1888). He also composed under the *taḥalluq* of Sharab a treatise on enigmas, another on magic squares, a commentary on the *burda* of Būshīrī and various poems.

Bibliography: Khondemir, *Ḥabīb al-Siyar* iii/iii, 148; Dawlat Shāh, *Tadhkira*, ed. Browne, p. 378—381; J. von Hammer, *Geschichte d. schön. Redik. Pers.*, p. 284; Rieu, *Pers. Catal. Brit. Mus.*, p. 173—175; E. G. Browne, *Hist. of Pers. Liter. under Tartar dominion*, p. 183, 362—365. (CL. HUARY)

AL-SHĀRĀNĪ, a *nisba* by which several individuals are known; it is usually derived from *shār* "hair" and is applied to any one with a strong growth of hair or with long hair (cf. al-Sam'ānī, *Kitāb al-Anṣāb*, G.M.S., fol. 334^b, s; Wright, *Arabic Grammar* 2, i. 164^c); in the case of the best known bearer of the name, it is a *nisba* from a place like the form also found, indeed more frequently, **AL-SHĀRĀNĪ** (which has however a different origin: Vollers, *Z.D.M.G.*, 1890, p. 390 sq.) but came to be interpreted as above.

1. **ABU 'L-MAWĀHIB** (ideal *ḥunayn*, also **ABD 'ABD AL-RAḤMĀN** from his son; his family still existed in modern times) **'ARDALWAḤIDH** R. **AḤMAD** (d. 907) R. **ALĪ R. AḤMAD R. MUḤAMMAD R. MUḤ R. MAWLĀY R. 'ABD-ALLĀH AL-ZUGHĀLĪ** (Sultān of Tilmūsā) R. **'ALĪ AL-ANṢARĪ AL-SHĀRĀNĪ AL-MIZRĪ**: a famous Ṣūfī, born 897, lived in Cairo from his early youth and died there in 973 (other dates given are wrong). Since 1188 his favourite mosque beside which he is buried, has borne his name. He earned his living as a weaver. He belonged to the *ṭarīqa* founded by 'Alī al-Shādhilī (d. 656; Brockelmann, *G.A.L.*, i. 449, N^o 29, and the article **AL-SHĀDHILĪ**) and himself founded *al-ṭarīqa al-Shādhiliya* (cf. Lane, *Manners and Customs of the Modern Egyptians*, 1899, p. 252; but not mentioned in Kahle, *Islam*, vi., p. 154). Among his Ṣūfī teachers the most important was 'Alī al-Khawwāṣ (d. after 941), whose *maḥfāl* he attended for ten years. A number of other teachers are mentioned by him in various works, e.g. in *al-Baḥr al-mawrūd*, *al-Djawhar al-maḥmūd wa 'l-Sirr al-marḥūm* and in the *Laf'if al-Minan*; a full list of the shāḥiks whom he knew and whose lectures he had attended is given at the end of his *Ṭabaqāt*. Like many Ṣūfis he had to endure persecution but was successfully in overcoming all hostility.

His literary activity was mainly concerned with mysticism, but he also dealt with learning, generally Kuranic sciences, dogmatics, fikh, grammar, and medicine; further we may mention his *Ṭabaqāt* of the Ṣūfis and an autobiography (*Laf'if al-*

Minan). A list of his writings is given in Brockelmann, ii. 336 *sqq.* (and supplement, p. 711); on that list the following corrections and additions are now made: 7a and b) *al-Miṣn al-Sha'rānīya* and *al-Miṣn al-kubrā* are identical, also printed Cairo 1276, while *al-Miṣn al-Khidriya* is a synopsis of the other work; 8) in the title also *fi Muḥṭaṭar al-Futūḥāt al-makkiya*, a synopsis of this entitled: *Muḥṭaṭar Lawā'ih al-Anwār*, prepared in 1166 by Ḥasan b. Ṣāliḥ b. Muḥammad al-Padghūridjawi (Berlin, N^o. 3046); 11) printed Cairo 1306 on the margin of 2); 12) full title *Tandih al-Mugharrin fi 'l-Karn al-āḥir 'alā mā khālaf fih Salafahum al-āḥir*; 13) in the title also *Mārifat* in place of *Bayān*, add Berlin, N^o. 3101; 14) read *al-Anwār al-kudsiya*, in place of *Lawā'ih al-Anwār al-kudsiya* fi [*Bayān*] *al-Uḥūd al-Muḥammadiya*, printed Cairo 1311 on the margin of 44); 18) also a *Wird al-Raiḥ*, Berlin, N^o. 3780; 21) also printed Cairo 1332; 22) in the title in place of *al-Fatāwā* also *fi Manāḥiḥ*, the marginal edition Cairo 1304 rather has 23); 35) read *fi 'Ilm Kitāb Allāh*; 37) read *al-Talabhuṣ*, printed Cairo 1279; 40) lithographed Cairo 1276; 43) in the title also *al-Sādāt al-Aḥyār*, also called *al-Tabaḥḥūt al-Kubrā*, also printed Cairo 1299, while the marginal edition Cairo 1311 rather has 14); 44) also printed Cairo 1321; 47) *Waḥy al-ʿArifin* (cf. Berlin, N^o. 3183); 48) *Mufakḥḥim al-Aḥdād fi Bayān Mawāḍiʿ al-ʿIjtihād*; 49) *Lawā'ih al-Khādhiḥ 'alā tull man lam ya'mal bi 'l-Kurʿān*; 50) *Ḥadd al-Ḥutūm 'alā man awḥab al-Aḥdād bi 'l-Ḥām*; 51) *al-Tabaḥḥūt wa 'l-Faḥḥ 'alā Ḥukm al-Ḥām* (cf. *Khāṭ al-Naḥḥ*); 52) *al-Burūḥ al-Ḥawāṭif* fi 'l-Baqar fi 'Amal al-Hawāṭif; 53) *Tandih al-Aghbiyā 'alā Kaṭra min Baḥr 'Ulūm al-Aḥyār*; 54) *al-Durr al-naẓim fi 'Ulūm al-Kurʿān al-naẓim*; 55) *al-Manḥad al-mubīn fi Bayān Adillat al-Muḥṭaḥidīn*, supplement to 21); 56) *Kitāb al-Iḥṣār fi 'Ilm al-Kiyās*; 57) *Muḥṭaṭar Kaṭā'id al-Zarkashī*, extract from the work of al-Zarkashī (d. 794) quoted in Brockelmann, ii. 91, N^o. 18, 2; 58) *Minḥad al-Waḥd al-ʿUlūm al-ʿUlūl*, a compilation from the Commentary of al-Mahallī (d. 791; Brockelmann, ii. 114, N^o. 23) on the *Uḥūd al-Djāwāz* fi 'l-ʿUlūl of al-Sabkī (d. 771; Brockelmann, ii. 89, N^o. 14, 1 and c) and the glosses of Kamāl al-Dīn b. ʿAlī Sharīf (d. 906; *ibid.* a) on this commentary.

Al-Sha'rānī was a comprehensive and honest scholar of wide education but uncritical and highly superstitious. His tremendous exaggeration of his own value is an unpleasant feature in him; he usually boasts of his own works that they were pioneers and nothing similar existed on the particular subject. In his autobiography (no. 44), which he significantly calls *Manāḥiḥ nafsihi*, under a pretence of being humbly grateful to God for having endowed him with wonderful gifts of mind and holiness, he tells us the most remarkable things about his wonderful qualities, his intercourse with God, the angels and the prophets, his ability to work miracles, to ascertain the secrets of the world, etc. But the honesty, uprightness and enthusiasm of his character, his championship of justice, humanity and toleration, his sincerity and the frankness with which he holds up the modesty of the Christians and Jews as a pattern for the 'Ulamā', and finally his high respect for the dignity of womanhood all make an exceedingly favourable impression.

Besides his intellectual importance, which must not however be over-estimated, he owes his far-reaching influence on the Muslim world to his extremely prolific pen, writing in an easily intelligible form, which has contributed to the popularity of his works. His books were already popular in his life-time and are still very highly esteemed as may be seen from their numerous reprints. In spite of his insistence to the contrary there is hardly any originality in them; in mysticism especially he simply repeats the ideas of Ibn al-ʿArabī [q. v.]. N^o. 8, for example, is a synopsis of his *al-Futūḥāt al-makkiya*, N^o. 11 a synopsis of 8, with reference to passages from the *Futūḥāt* itself, N^o. 9 an explanation of the verses of the *Futūḥāt*, N^o. 10 a defence of Ibn al-ʿArabī; he tells us for example in N^o. 2, that he has used the terms used by Ibn al-ʿArabī and not those of other Sūfis. Al-Sha'rānī endeavoured to bring about a synthesis of Sūfism and Fiqh in his person and was therefore in no wise hostile to the *Sharʿa*. Several of his writings show this, notably, N^o. 7, 21, 28, 48—51, 55—58.

Cf. Brockelmann, ii. 335 *sqq.* (where further literature is given) and Ḥajī Khalīf, ed. Flügel, Index (Vol. vii.), p. 1145, N^o. 5446. Massignon, *Al-Hallaj*, p. 393, N^o. 19); brief synopsis of N^o. 44) by Flügel in *Z.D.M.G.*, 1867, p. 271 *sqq.* Biography in the *Tarāḥim* of his pupil ʿAbd al-Karīm b. Tāḍ al-ʿArīf al-Munāwī (d. 1031; Brockelmann, ii. 306, N^o. 13).

2) ABU MUHAMMAD AL-FAḌL b. MUHAMMAD b. AL-MUSAḌYID b. ZUHAYR b. VAZID b. KAḌḌAN b. BAḌḌAN (the Persian governor in Yaman in the time of Muḥammad): a traditionalist who travelled widely to collect traditions; he also studied with the Kūfa grammarian Ibn al-Aʿrābī (d. 231; Brockelmann, i. 116, N^o. 6); learned Kūfī reading with Khalaf (d. 229; Nöldeke, *Geschichte des Qurʿāns*, p. 291, N^o. 9; Ibn Saʿd, *Tabaqāt*, vii/ii. 87; al-Samʿānī, fol. 77b, 30) and heard the lectures of Aḥmad b. Ḥanbal (d. 241; q. v.); he did not however obtain general recognition and died in 282. His epithet which he received from his habit of wearing his hair long, was transferred to his descendants, his son ABU BAKR MUHAMMAD AL-BAḌḌAN and his sons ABU ʿL-ḤASAN ISMʿĀIL (d. 347) and ABU ʿL-ḤASAN MUHAMMAD AL-ḌUL. Al-Samʿānī, fol. 334b, 12 and 101b, 12.

3) ABU ʿL-ARḌĀSH AḤMAD b. DJAFAR b. MUHAMMAD b. MARZUK b. BUSTĀN (this should perhaps be the reading of a meaningless word in al-Samʿānī; cf. Justi, *Iranisches Namenbuch*, p. 74) b. FAHRUKH AL-AZIM AL-DJURJĀNĪ: Traditionalist, who studied under Shuʿaib b. al-Ḥabbāb (died before the middle of 11th/11th century; Ibn Saʿd, vii/ii. 18) and others. Al-Samʿānī, fol. 334b, 14—16.

4) Thirteen further individuals with the same *nisba* will be found dealt with in the following passages: *Kitāb al-Fihrist*, ed. Flügel, p. 7, 10; al-Samʿānī, fol. 334b, 10 *sq.*; *Fihrist*, p. 314, 23; al-Samʿānī, fol. 334b, 15 *sq.*; cf. Ibn Saʿd, vii/ii. 51, 78; *ibid.* 28 *sq.*; Massignon, *Al-Hallaj*, p. 80, 755; *ibid.* p. 333; al-Samʿānī, fol. 334b, 17—23; *ibid.* 23—28 (read 371 for 372); *ibid.* 10 *sq.*; (cf. Brockelmann, i. 334); al-Ḍijānī (cf. i., p. 1055), *Nafahāt al-Uḥūd*, N^o. 298 (Calcutta 1859, p. 205; Turkish

Constantinople 1270, p. 181; Ahlwardt, *Verzeichniss der arabischen Handschriften Berlin*, 2, s. v. al-Shar'īn. (J. SCHLACHT)

AL-SHARĀT, from the Latin *terra* through the Spanish *sierra*, is the term applied by certain geographers of Muslim Spain to the mountains which stretch from the east to west in the centre of the Iberian Peninsula. The best definition is given by Ibn Faḍl Allāh al-Umari. According to this author, the mountain range called al-Sharāt stretches from the country behind Madinat Salim (Medinaceli) to Coimbra. This term therefore describes the mountains now known under the names of Sierra de Guadarrama (Ar. Wādī 'l-rānā?), Sierra de Gredos and Sierra de Gata in Spain and Serra de Estrela in Portugal. In the time of al-Idrisi, however, it was applied only to the Sierra de Guadarrama, to the north of Madrid. The geographer Abu 'l-Fidā', quoting Ibn Sa'īd, described the mountain system of the centre of al-Andalus under the name of Djabal al-Shārā. According to him, it divided the peninsula into two well marked divisions, the north and the south.

Al-Idrisi, in his description of al-Andalus, gives the name of al-Sharāt to one of the twenty-six climes of this country, the twenty-second in his classification; this region, which embraced all the Sierra de Guadarrama, included the towns of Talavera de la Reina, Toledo, Madrid, al-Fahmīn, Guadalajara, Ucles and Huete.

SHARDJA, name of three places in Arabia: 1. Shardj al-Karī, a port on the coast of the Yaman, where there were storehouses for the *durra* which was shipped to Aden; the native town of Sirāḍ al-Yūn 'Abd al-Latif al-Zabidi, the famous grammarian who taught in Cairo and died in 802 A.H. (1399—1400).

2. A place near Meḥka.

3. A port on the Pirate Coast, on the Persian Gulf between 'Omān and Bahrain.

Bibliography: Ibn Hawqal, *B.G.A.*, II, 19; al-Makaddasī, *B.G.A.*, III, 53, 69, 86, 92; Ibn Khurdaḍbeh, *B.G.A.*, VI, 145; al-Ya'qūbī, *B.G.A.*, VII, 317, 319; Yāqūt, *Mu'djam*, ed. Wüstenfeld, s. v.; *Taḥṣīm al-arṣ*, s. v. (G. S. COLIN)

SHARḤ (A.), opening, commentary; *sharḥ* means to enlarge, expand, open, then to explain, comment upon; *taḥṣīṭ*, dissection of bodies, anatomy.

1. The word *sharḥ* was taken as the title of Sūra xciv. of the Qur'ān, as the first verse is: "Have we not opened, expanded your heart?" A legend has grown up round this verse. Muhammad, while still in the arms of his nurse, had his chest opened by two angels, who took out his heart and replaced it after washing it. This is why it is called the "opening of the heart".

2. *Sharḥ*, commentary on a work which is being studied in different branches of knowledge; next

come the glosses, *hāshiya*. The greater part of the famous treatises or poems in Arabic and Persian literature have had commentaries written on them; e.g. commentary on the *Alf al-lakān* (Arabic poetry); on the *Mathnawī* (Persian poetry); on the *Mawṣiṭa* (law); on the *Alfiya* (grammar); on Hāriri, philology; on astronomical treatises; the great, middle, and little commentaries on Aristotle by Averroes. For the commentaries on the Qur'ān, a special word is used, *tafsīr* (q.v.). (CARRA DE VACK)

SHARĀ' (A.) also SHAR' (originally infinitive), the road to the watering place, the clear path to be followed, the path which the believer has to tread, the religion of Islam, as a technical term, the canon law of Islam, the totality of Allāh's commandments (also used as the term for a single commandment = *ḥukm*, the plural *ḥukm* = *ahkām*, which is also used as identical with *shar'a*), *shar'a*, which was also used for custom and later became obsolete, is synonymous. *Shar'* is also used as a technical term for the Prophet as the preacher of the *shar'a*, but more frequently it is applied to Allāh as the law-giver. *Maḥṣūṭ* is what is laid down in the *shar'a*. Anything connected with the canon law, or anything in keeping with it, or legal is called *shar'i*. *Shar'* is also used in opposition to *ḥisā* ("purely sensible"); the former means the outward perceptible actions, which come under the cognizance of the law; the latter, all those in which this is not the case and so they have no significance in the *shar'a* (offer and acceptance are, for example, in concluding a bargain, *shar'i* in other circumstances *ḥisā*). Similarly *shar'* and *ḥukm* are in contrast to *ḥaqq*, the actual relations, from which those created by the law may be divergent.

The technical use goes back to some passages in the Qur'ān: xiv. 17 (of the last Meccan period) on the dating cf. Noldeke-Schwally, *Geschichte des Qur'ān*, I, 58 sqq., and Grimme, *Mohammed*, II, 24 sqq.: "Then we gave them a *shar'a* (a path to be followed) in religion; follow it and not the wishes of those who have no knowledge"; xlii. 11 (the same period, perhaps somewhat later): "To you he hath prescribed the religion (*shar'a*), which"; etc.; ibid. 20: "... gods, who have prescribed a religion for them (*shar'a*), which Allāh hath not approved"; v. 52 (Medina, perhaps of the first Medina period): "To every one (people) of you, we have given a *shir'a* (a path to be followed) and a *minhādī* (a clear path)". Here *shar'a* and *shir'a* are not yet technical terms.

An old definition of *shar'a* is given by Tuhari on Qur'ān, xiv. 17: the *shar'a* comprises the law of inheritance (*farā'id*), the *ḥadd*-punishments, commandments and prohibitions. In the latter system by *shar'a* and *shar'* are understood Allāh's commandments relating to the activities of man, of which those that relate to ethics are taken out and classed together as *adab* (cf. ADAB, AETHLX). *Fikḥ* (along with the sciences of *tafsīr* and *ḥadīth* and the ancillary sciences) is the science of the *shar'a* or the *shar'ī* (cf. FIKH) and can sometimes be used as synonymous with it, and the *uṣūl al-fikḥ* are also called *uṣūl al-shar'*. According to the orthodox view, the *shar'a* is the basis (*maḥṣūṭ*) for the judgment of actions as good or bad, which accordingly can only come from Allāh, while according to the Mu'tazila (q.v.), it only confirms the verdict of the intelligence which has preceded it.

The *shar'ā* (as *forma exterranea*) regulates only the external relations of the subject to Allāh and his fellow-men and entirely ignores his inner consciousness, his attitude to the *forma internum*. Even the *niya* (intention) which is required, for example in many religious exercises, implies no impulse from the heart. The *shar'ā* demands and is only concerned with the fulfilment of the prescribed outward forms. The *shar'ā*, the legal judgment of actions based on it (*ḥukm*) and the judicial verdict (*ḥaḍḥ*) which is only concerned with the external circumstances, are in contrast to the conscience and religious feeling of responsibility (*ḍiyāna, tanazzuh*) of the individual and his inner relation to Allāh (*waḍ ḍalīqah mahkūm* [Allāh]). Religious minds like al-Ghazālī therefore protested against the over-estimation of the legal point of view and the *faqih's* themselves say that it is not sufficient simply to fulfil all the commandments of the *shar'ā*. With this is connected the position of the *shar'ā* among the Sufis [q.v.], for which cf. I. Goldziher, *Vorlesungen über den Islam* 2, 165 sq. and R. Hartmann, *al-Kuchairi's Darstellung des Sūfismus*, 72, 101 sq. The law is a starting-point on the path of the Sufi; on the one hand, it can serve as an indispensable basis for the further religious life, while the fulfilment of the law has to intensify (*shar'ā = amr bi'l-islām al-nūbiyya* = "commands to follow the path of recognition", and *ḥabībā = muḥababat al-nūbiyya*, "direct vision of the divine" form a correlated pair); on the other hand, only as a symbolical parable and allegory, finally even as superfluous and even dangerous forms which one has to cast off entirely (cf. MALĀMATIYA).

The knowledge of the *shar'ā* was originally obtained directly from the Kor'an and Tradition (hence, as already mentioned, the sciences of *tafsīr* and *ḥadīth* belong to the *Fiqh*); but later among the Sunnis (in contrast to some Hanbalis, the Wahhābīs and the Shī'īs) no one was considered qualified to investigate these sources independently (cf. IDRISSA, TAGHID). The knowledge of the *Shari'a* is authoritatively communicated to later generations through the system of *Fiqh*, which has been worked out to the most trifling details, and the authority of which is ultimately based on the infallible *ijmā'*. No orthodox Muslim can escape it, while for example the Mahdī Muḥammad Aḥmad did so (cf. *Islam*, xiv, 271, 275) and modernism does (cf. e.g. for Turkey: A. Fischer, *Übersetzung und Texte aus der neuarabischen Literatur*; do., *Aus der religiösen Reformbewegung in der Türkei*; A. Mahiddin, *Die Kulturbewegung im modernen Turkenum*; for Egypt: 'Alī 'Abd al-Raḥī, *al-Islām wa-Uḥūl al-Ruḥn*, Cairo 1344; for India: Syed Ameer Ali, *The Life and Teachings of Mohammed*; do., *The Spirit of Islam*; M. Barakatullah, *The Khilafat*).

A result of the development of the *Fiqh* has been that there is no codification of the law in the modern sense nor can there ever be one (cf. especially: Snouck Hurgronje, *Verspreide Geschriften*, IV/ii, 260 sq.). At the same time the *Fiqh* books, especially those of later date and recognised as authoritative in wide circles (by *ijmā'*), are practically "law books" for the orthodox Muslim; in them he finds Allāh's *shar'ā* expounded in the way in which it is binding on him, and according to the particular *madhhab* which he follows while the Kor'an and Ḥadīth may have no more value

for him than edifying literature. But it is not everyone who is able himself to ascertain from the *ḥk* books with sufficient technical knowledge how the law affects particular cases; the laity rather require instruction from experts. This is done through *fatwā's* (legal opinions) and a scholar who gives *fatwā's* is therefore called *mufti*.

Allāh's law is not to be completely grasped by the intelligence, it is *as'abbadī*, i.e. man has to accept it without criticism, with its contradictions and its incomprehensible decrees, as wisdom into which it is impossible to enquire. We must not look in it for causes in our sense, nor for principles; it is based on the will of Allāh which is bound by no principles, therefore evasions are considered as a permissible use of means put at one's disposal by Allāh himself. Muslim law which has come into being in the course of time through the interworking of many factors, which can hardly be exactly appreciated (cf. Bergsträsser, *Islam*, xiv, 76, 277), has always been presented to its followers as something elevated, high above human wisdom, and with justice in so far as human logic or systematic has little share in it. A modest enquiry into the meaning of the divine laws so far as Allāh himself has indicated the path of enquiry is also not prohibited. There is therefore frequent reference to the deeper meaning and suitability (*ḥikma*) of a law. But one must always guard against placing too much stress on such theoretical considerations.

For this very reason the *shar'ā* is not "law" in the modern sense of the word any more than it is an account of its subject matter. It comprises as an infallible doctrine of ethics the whole religious, political, social, domestic and private life of those who profess Islam, to the fullest extent without limitation and that of the tolerated members of other faiths in so far as their activities are not inimical to Islam. Only one who has attained years of discretion (*baligh*) and is in full possession of his mental powers (*aqil*) is bound to obey the ritual law (*muṭallaḥ*). The prescriptions of the *shar'ā* may be classed in two main groups according to their subject: (1) Regulations relating to worship and ritual duties; (2) regulations of a juridical and political nature. These are absolutely similar from the Muslim point of view (although it is of course felt that the former, the so-called *ṣūḥūf*, are more closely connected with Allāh), and this is also true of the numerous regulations scattered everywhere through the *Fiqh* books regarding the most varied matters, which can hardly be brought under the heads of the two main groups, e.g. permitted and forbidden musical instruments, the use of gold and silver vessels, the relations of the sexes, racing and shooting for wagers, the copying of living things, clothing and ornaments for men and women, etc. The fundamental tendency in the growth of the *Shari'a* was the religious evaluation of all affairs of life and legal considerations were only secondary (cf. Bergsträsser, l.c.). A systematic division of the *Shari'a* was never reached. The Sunnis sometimes classify it quite formally into *ṣūḥūf* (obligations regarding worship), *mu'āmalāt* (civil and legal matters) and *uḥūdāt* (punishments), without any special stress being laid on this. We find more systematically worked out among the Shī'ī Twelver Imāms an equally formal division and one not logically carried through to its con-

clusion into *'ibādāt*, *'ahād* (legal matters affecting two parties), *ḥikāṣ* (legal matters affecting one party), *ahkām* (the remaining laws).

Among the early generations of Muslims, no unanimity prevailed as to what were the main duties of Muslims. Muhammad himself had laid special weight on the *ṣalāt* (ritual worship), *ṣakāt* (charity) and *ṣawm* (fasting). Many further regarded participation in the *jihād* (war for the faith) as one of the first duties of a Muslim, a view still held among the Khāridjīs. The Mahdī Muhammad Aḥmad also adopted the *jihād* as one of the main duties as revised by him (cf. *Islam*, xiv. 285). [The Shī'īs regard recognition of the imāmat as one of the main duties]. But according to the view that has come to prevail among the Sunnīs, *islām* is based on five pillars (*arkān*, sg. *rukn*): *shahādā* (the profession of faith), *ṣalāt*, *ṣakāt*, *ḥajj* (pilgrimage to Mecca), *ṣawm* (fasting in the month of Ramaḥān). The profession of faith is not dealt with in the Fiqh books. Questions connected with the creed were so numerous that the teaching of the first pillar soon became a special branch of study, the science of *kalām*. The other four *arkān* are sometimes classed together with *ṣaḥāra* (ritual purification) as the five *'ibādāt*. In the traditional arrangement of the Fiqh books, which is already the basis of the oldest books that have survived to us, but regarding whose origin, which must be earlier than the formation of the modern *madhhab*'s and probably belong to the second century, nothing is definitely known, the first five chapters are always devoted to these five *'ibādāt*, usually followed by the following subjects in succession: contracts, inheritance, marriage and family law, criminal law, war against unbelievers and attitude to unbelievers generally, laws regarding food, sacrifice and killing of animals, oaths and vows, judicial procedure and evidence, liberation of slaves.

All the prescriptions of the *shar'ā* are not to be taken as absolute commands or prohibitions. In many cases it is regarded, from the religious point of view, only as desirable or undesirable to do or permit something. Finally the law also regulates actions which it neither recommends nor condemns, but regards with indifference. In keeping with this, the following five legal categories (*al-ahkām al-khamsa*) are distinguished: (1) "duty" (*fard*) or "necessary" (*wājib*; cf. below), i.e. prescribed actions, the performance of which is obligatory, whose performance is rewarded and omission punished; of the further divisions of *fard* (*wājib*), the most important is that into *fard 'ain* and *fard kifāya* (cf. FARQ), a similar division being made in the following category; (2) meritorious (*mandūb* "recommended", *sunna* "ordained custom"; *sunna* in this meaning is not to be confounded with the "sunna of the Prophet", one of the *uṣūl al-fiqh*, although these two senses are connected; sometimes, however, the meaning of *sunna* as quality of an action did not remain uninfluenced by the other one), *mustahabb* "desirable", *nafī* or *nafiya* "voluntary meritorious action"; the performance of such is called *tafarruṭ*, i.e. actions the neglect of which is not punished, but the performance of which is rewarded; (3) permitted or indifferent (*mubāḥ*; rarely *ḥālī*; cf. below), i.e. actions the performance or neglect of which the law leaves quite open and for which neither reward nor punishment is to be expected; (4) reprehensible (*makrūh*), i.e. actions which although not punish-

able are disapproved of from the legal point of view; the later Shāfi'īs further distinguish a milder form of *makrūh*, the *ḥikāf al-awḥā*, "diverging from the path that is nearest"; correspondingly there is also an *awḥā*, that which lies nearer" which lies between what is permitted and what is meritorious; (5) forbidden (*ḥarām*, also *maḥḥūr*), i.e. actions punishable by Allah. Something the law approves of is called *maṭṭūb*; this may be *fard*, *sunna* or *awḥā*; the term is sometimes used for "permitted", so as to include "the irreprehensible", i.e. what is not definitely forbidden. There are still further subdivisions and grades in the categories mentioned (cf. Snouck Hurgronje, *Verspreide Geschied.*, Register, s.v. *Kategorien*; T. de Boer, *De Wetsgeerte in den Islam*, Haarlem 1921, 33 ff. and the works on the *Uṣūl*, cf. the art. UṢŪL).

The reasons which lead to an action being classed under one of these categories may be of the most varied kind and here there is a wide field for difference of opinion (*ikhtilāf*) among jurists. What one party considers absolutely forbidden or an absolute duty, the others often regard as reprehensible or meritorious or even indifferent. Here, however, the catholic tendency of *islām* makes itself felt. Thus it may happen that something is considered *sunna* by one *madhhab* simply because the latter is unwilling to differ too much from the view of another school of Fiqh, which considers it a duty. That the same action according to circumstances can be sometimes forbidden, sometimes reprehensible, sometimes permitted, sometimes meritorious, sometimes a duty is generally recognised.

At the same time actions from the point of view of their legal significance in civil life are classed as: *ṣāḥḥ*, "valid, right", opposite *ḥāṣil*, "invalid", and *ṣāḥḥ*, "wrong"; *ḥālī*, "valid, permitted" (to be strictly distinguished from the meaning of *ḥālī* given above); but both meanings have the same root and the former is the older; cf. Bergsträsser, *loc. cit.*, opposite *ḥāṣil* *ḥālī*, "invalid, not permitted"; *māḥḥ* "legally valid", opposite *ḥāṣil* *māḥḥ*; *ḥāṣil*, *māḥḥ* "binding" (also in *wājib* the two meanings are to be distinguished; as to the sense, the above mentioned is more original; whether this is the same case in the application of the word as *terminus technicus* may be doubtful), opposite *ḥāṣil* *ḥāṣil*, or *māḥḥ*, etc., divisions which are not mutually exclusive and whose historical relations and the relations of the concepts behind them to one another and to the five categories still require explanation.

In the first thirty years of *islām* the same individuals may be said to have possessed the knowledge of the legal prescriptions to be enforced and authority in the guidance of the community, namely the companions of Muhammad; there was therefore little danger of utterly impractical ideas forcing their way in. After the coming of the Omayyads, however, the representatives of the religious and juridical ideals lost their position of authority, and this continued to be the case — the early 'Abbāsids being to some extent an exception. They then began — being no longer so bound by realities — to take a pleasure in developing their doctrine of duties in an ideal direction in a way which became more and more irreconcilable with practical life. They were particularly averse in constitutional law against any abuses, without

regard to persons; but they also showed a rabbinical turn for dialectic in continual new deductions and in stating cases. Thus a more learned body developed the school out of the council of the first Caliphs. It was only after many fruitless attempts to regain power that the pious became resigned and concluded a kind of truce with the temporal powers, a truce which is not laid down in any document, the terms of which are nowhere expressly formulated, but which was observed by both sides under the pressure of circumstances; they obeyed it in practice, retaining full liberty to censure theoretically, and thus we find everywhere laments about "the present age" and warnings against "the princes of this world". The latter in their turn recognised the law in theory and did not claim for themselves the right of legislation in the field of *shar'ā*, but when they thought fit, put the latter practically out of action by regulations in a contrary sense (*ḥukūm*, cf. below). This did not prevent them when they wished to be considered particularly pious, from sometimes — usually at some one else's expense — enforcing one or another regulation of the *shar'ā*, especially penal laws, but without themselves fulfilling the demands of the *shar'ā* or being able to do so. One must not imagine too sharp a line drawn between the influence of the schools and the power of the state. This is particularly evident in the office of *qāḍī*, the religious judge who is at the same time a state official (cf. e.g. Amedroz, *J. R. A.S.*, 1909, p. 1138; 1910, p. 761; 1911, p. 635; 1913, p. 823; Bergsträsser, *Z. D. M. G.*, 1914, p. 395; Margolouth, *J. R. A.S.*, 1910, p. 307). Finally there was only left to him public worship, the law of marriage, family and inheritance, vows, in part also pious foundations (*waḥf*), all fields which in the popular mind are more or less closely connected with religion, and in which the *shar'ā* always prevailed. So far as circumstances permitted, sins in the proper sense did not so much come under his consideration, as for example, invalidity of contracts, yet the religious character of the separate sections of the *shar'ā* was variously emphasised from the first (cf. Bergsträsser, *Islam*, loc. cit.). In the field of commercial law, practice therefore went its course unencumbered; only the *shar'ā* never really prevailed. Constitutional and criminal law, law relating to war and taxation and all the more important suits regarding property were more and more appropriated by the temporal power and cases were settled by a mixture of arbitrariness, local custom (*ʿūda*; cf. below) and a feeling of equity, and latterly also according to laws on the European model. Thus everywhere in Islam, quite independent of western influence, a twofold legal practice has grown up, which may be called the religious and the temporal. It is true that with the coming of the Ottomans a new wave of appreciation of the *shar'ā* even in practice sets in, which found expression, for example, in the office of *Shaykh al-Islām* [q.v.] and ultimately in the codification of the *madḥallā* [q.v.]; but even here we do not have an actual enforcement of the *shar'ā*; according to the *shar'ā* even the *madḥallā* is illegal and the temporal jurisdiction continued to exist in this case also. This period is not only long past (cf. the words quoted above on Turkish modernism), but an attempt is being made to drive the *shar'ā* entirely out of public life even out of the spheres

reserved to it hitherto and European codes have been bodily adopted (cf. the articles in the *Orient Modern* and in the *Revue du Monde Musulman*).

Of the impossibility of enforcing the *shar'ā* under prevailing conditions the *fuqahā* themselves were quite aware under the pressure of the facts. Even their truce with the temporal power was based on a recognition of this. To brand almost all Muslims as sinners or heretics, because they had continually to break the law, if they were not prepared to withdraw from the world entirely, was not feasible; on the contrary, these things had rather to be taken as arranged and even willed by Allāh. Thus the *shar'ā* was rendered actually powerless in so far as it could not be enforced in practice; the way was even pointed out to evade its rules; appeal was made to the principle that necessity breaks the laws; it was emphasised that one does not become an infidel by breaking the law, but only by doubting its eternal validity. The conviction that the Muslim community would steadily become corrupted till the coming of the Mahdī and that the breaches of Allāh's commands, which had been deduced in the course of development, would still increase, were expressed in traditions which were invented and even put in the mouth of the Prophet as prophecies; these conditions were thus sanctioned as a fulfilment of his prophecy. To sum up, the law in the convinced opinion of the *fuqahā* themselves is intended only for the ideal community of the early decades of Islam and for the time of the Mahdī; this was a confession of the impotence of the pious in face of the circumstances of the age. The *shar'ā*, essentially academic in character, has at the same time always been a considerable educational force and is still ardently studied; in spite of al-Ghazālī's advice to the contrary, it is still regarded in wide circles of Islam as the only subject of true learning. But as it was held up as an unattainable ideal and became the doctrine of the infallibility of the *ijmāʿ* together with the conviction of cessation of the *isṭiḥād* forbade any divergence from what had been formerly customary, it has become quite rigid: the jurists are opponents of all progress; even yet many prescriptions are still emphasised which only referred to the early Arabs and can have no longer any practical significance even for the most orthodox Muslim of to-day.

The heads of the law which are of practical importance for the Muslim (not regarding the later developments in Turkey) have already been mentioned; the following notes are now added and it should always be remembered that there may be considerable differences in detail in different periods and countries and that strictness and slackness in following the prescriptions of the *shar'ā* have nothing to do with the degree of intolerance. Even in ritual and the religious duties in the narrower sense, which mean most to Muslims, ignorance and gross neglect is never general, but nevertheless throughout the whole Muslim world there is perceptible a striving to perform some at least of the main obligations as closely as possible. The usages especially, by which Muslims are externally distinguished from members of other creeds, are in general very closely observed and considered very important even if they are not quite in accordance with the letter of the law, while, on the other hand, many religious obligations imperative

in theory are generally quite neglected. In the law relating to marriage, families and inheritance, which usually can be quite closely followed in practice, we have already the limitations enforced by *ʿāda* [q. v.] or *urf*, the local customary law that has existed from time immemorial in the different Muslim lands. The other parts of the law have no practical significance although everywhere and in every period we find conscientious, pious men who endeavour to take account as far as possible of the teaching of the *sharīʿa* even in commercial affairs; but here the *ʿāda* everywhere outweighs the rules of the *sharīʿa*, although according to the fifth books the former only has binding force in cases where the law definitely refers to it. But this low estimation is not quite in keeping with the position which the *ʿāda* had in the history of the *sharīʿa*. Muhammad himself allowed the Arab *ʿāda*'s to remain, so long as no uniform regulation was necessary or the *ʿāda*'s did not conflict with his principles. He only laid down a few rules and the *ʿāda* was to be in no wise deposed, although of course he did not lay down this as a principle. Islam then married the Arab *ʿāda*'s into foreign lands and even foreign *ʿāda*'s were at first partially recognised to a far-reaching extent; later this doctrine was given up in theory, although the *ʿāda* always retained great influence, as the *faṭḥ*'s have continually lamented; even the recognition of the *ʿāda* as the fifth of the *uṣūl al-fikḥ* was rejected. But public opinion knows only the *ʿāda*; even the obligations of the law, which are actually observed, are observed simply because they belong to use and wont, and in the Dutch East Indies, for example (apart from the theologians proper), the *ʿāda* is recognised among authoritative Muslim circles as being even in theory equal in every way to the *sharīʿa*.

The position of the *ḥanūn* [q. v.] with regard to the *sharīʿa* is similar to that of the *ʿāda*. The word is sometimes used in the sense of *ʿāda*; generally, however, it is applied to the (in part based on the *ʿāda*) regulations laid down by temporal princes of Islam; in this way *ḥanūn* is the opposite of *sharīʿa*. The best known are the *ḥanūn-nāma*'s of the Ottoman Sultans (cf. *ẖanūn-nāma*, KAT. at the end; to the literature given there add: *Özeride-i aṭṭīye*, N^o. 156, p. 463 sq.; N^o. 158, p. 669 sq.; N^o. 163—167, p. 1196 sq.).

The collections of *fatwa*'s from the Fikḥ literature along with other sources for *ʿāda* and *ḥanūn* are important for ascertaining the actual practice; from the questions of those who seek *fatwa*'s we see in what parts of the law the people of a country are most interested, what heresies and shisms are most prevalent and what conditions arouse indignations regarding their legality among pious laymen. At the same time the *hiyal* (stratagem) literature has to be considered, which describes evasions of the law (cf. above) and deals fully with the actual practice; finally the documents, original documents as well as collections of forms and precedents (*Sharīf* books, cf. SHARĪF), because in them more notice is taken than elsewhere of actual practice.

(JOSEPH SCHACHT)

SHARĪF (A.) (plur. *ashraf*, *sharafa*) "noble, exalted", the root of which expresses the idea of elevation and prominence, means primarily a freeman, who can claim a distinguished position because of his descent from illustrious ancestors (cf. *Lis. Ar.*, xi. 70 sq.). It is of course assumed here that the meritorious qualities of the fathers are transmitted to their descendants. The possession of several illustrious ancestors is the requisite condition for a *sharīf* (also *sharāh*) *dahīm*, a "solid" nobility. (Goldziher, *Mus. Stud.*, Halle a. S., 1898—1900, i. 41 sq.; Laumens, *Le Berceau de l'Islam*, Rome 1914, p. 289 sq.). Although in Islam the doctrine — based on *Qurʾān* xlix, 13 "Verily the noblest among you in the eyes of God is he that fears God most" — of the equality of all Arabs and ultimately of all believers grew up (Goldziher, *op. cit.*, i. 50 sq., 69 sq.), it never quite displaced the old reverence for a distinguished genealogy.

The *ashraf* were the heads of the prominent families, to whom were entrusted the administration of the affairs of the tribe or alliance of towns; cf. Ibn Hishām, *Stras.*, ed. Wüstenfeld, p. 237 l. 2; 295, 17; al-Tabari, *Akhbār al-Baṭn al-Madīna*, ed. Leiden, i. 1191; the *Ashraf* of al-Ḥira, *ibid.*, i. 2017; the *Ashraf* of *Qasr al-Nabī*, *ibid.*, ii. 541, 17; the *Ashraf* in Kufa, *ibid.*, ii. 631 sq. passing; the *Ashraf* of Khorāsān, *ibid.*, iii. 714, 1; the *Ashraf* of *al-Aḥqām*, *ibid.*, iv. 176, 4. The *ashraf* regarded themselves as the aristocrats (*Ahl al-faḥḥ*) with whom were contrasted the rude and uneducated masses (*ʿarāḍiyyūn*, *rafahā*, *akhlāṣ*) (al-Tabari, ii. 631, 1). *Sharīf* also means a person of importance in contrast to one of low social status (*qasf*, *waff*, al-Bukhārī, *Badʾ al-Waḥy* b. 6, *al-Hudūd*, b. 11, 12). In this sense the word is frequently found in the older literature of Islam, e.g. in the very title of al-Balādhurī's history, *Ansab al-Ashraf* and in chapter-headings, for example in Ibn Kutaiba, *Afʿāl min Afʿāl al-Salā wal-Ashraf* (*Uyūn al-Akhbār*, i. Cairo 1343, p. 332), in Ibn ʿAbd Rabbihi (*al-ʿIḍ al-farid*, Hüllä 1293, ii. 29; *Marāthiʿ al-Ashraf*, 207; *Ashraf Kuttāb al-Nabī*, iii. 311; *Nawāḥ al-Ashraf*, iii. 406; *man ḥadda min al-Ashraf*) and in al-Ḥaṣṣīn (*Sināʾat al-Ashraf*, *Lafḥ al-Maʿarīf*, ed. de Joze, Leiden 1867, p. 77); cf. also L. Massignon, *La Passion d'al-Hallaj*, Paris 1922, i. 230, note 6.

In Islam under the influence of Shīʿa views and the increasing veneration for the Prophet, membership of the house of Muhammad became a mark of special distinction. The expression *Ahl*

al-Bait comes from Qur'an xxxiii. 33: "God will remove the stains from you, O people of the house and purify you completely" which the Shi'is applied to 'Ali and Fāṭima and their sons (cf. already al-Kumait *al-Haḡimiyāt*, ed. Horowitz, Leiden 1904, text, p. 38, verse 30, cf. p. 92, verse 67) by interpreting it through the well known tradition of the mantle (*ḡalīl al-ḡalīl*, *ḡ. al-abbā*) also adopted in orthodox tradition. The explanation of the phrase as referring to the "women", which is more in keeping with the context, said to have been put forward by Ibn 'Abbās and 'Ikrima is found in some versions of this tradition, in which Umm Salama is recognised by the Prophet as belonging to the *Ahl al-Bait*. The current orthodox view is based on the harmonising opinion, according to which the term *Ahl al-Bait* includes the *Ahl al-ḡalīl*, i.e. the Prophet, 'Ali, Fāṭima, al-ḡasan and al-ḡusain as well as the women of the Prophet. But even the 'Abbāsids relied on the verse of purification and therefore we have the counterpart of the *ḡalīl al-ḡalīl* which includes al-'Abbās and his sons in the *Ahl al-Bait*.

Ahl al-Bait is given a still wider interpretation in a version of the so-called *ḡalīl al-ḡalīl*, where the term is referred to those to whom the sharing in *Sadaqa* is forbidden; among such are definitely mentioned the *Al* 'Ali, the *Al* 'Aḡl, the *Al* Dīfār and the *Al* al-'Abbās. According to this, the *Ahl al-Bait* includes the Ṭālibids and 'Abbāsids, historically the most important families of the Banū ḡashim. Cf. the article *AHL AL-BAIT* and on the traditions just mentioned al-Makrizi, *Ma'rifa*, I. 103^b 199; al-Sabbān, *ḡaf*, p. 96 199; al-Nahhānī, *Sharaf*, 6 199; Lammens, *Fāṭima*, Rome 1912, p. 95 199; Ströthmann, *Das Staatsrecht der Zaiditen*, Straßburg 1912, p. 19 19; van Armanlonk, *De Opkomst van het Zaiditische Imamaat in Yemen*, Leyden, p. 65 199; see also the articles *AL* and *IKRA*.

The clan of the Banū ḡashim was put in the forefront by the editors of the *Sira* of the Prophet. God's deliberate choice after a gradual process of elimination of families finally selected the ḡashim as the family to produce the Prophet. A tradition which occurs in several versions runs as follows: The Prophet of Allāh said: "Allāh chose Ismā'il from the sons of Ibrāhīm and from the sons of Ismā'il the Banū Kināna and from the Banū Kināna the Quraysh and from the Quraysh the Banū ḡashim" (Ibn Sa'd, *Tabaḡāt*, ed. Sachau, I. 1, 2). One of these versions concludes with the words: "consequently I (i.e. Maḡammad) am the best of you as regards family and the best of you as regards genealogy" (Ibn 'Abd Rabbih, *op. cit.*, II. 247). Cf. also al-Khaḡḡlī, *Nasim al-Riyāḡ fī Sharḡ Shifā' al-ḡaḡīl* (1944, Cairo 1325-1327, I. 429 199, chap. on the *Sharaf* of the Prophet; al-Nahhānī, p. 37-39).

To al-Kumait who lauded the noble blood of the Prophet in exuberant language (*op. cit.*, text, p. 14, I. 45 199) the Banū ḡashim are "the peaks of splendid nobility" (*ibid.*, p. 5, I. 14), who are granted "a pre-eminence over all men" (p. 38, I. 87). To be able to show kinship with the Prophet was thus an important claim to *ḡharaf* (cf. also al-Balḡhāḡ, *al-Maḡḡim wa 'l-Maḡḡim*, ed. Schwally, Giessen 1902, p. 95 199); al-ḡasan and al-ḡusain were regarded as the noblest by birth (al-Tha'libī, *op. cit.*, p. 51 199).

This special position of the Banū ḡashim, among whom the Ṭālibids are already celebrated by al-Kumait as *ḡharaf* and *abbā* (*op. cit.*, text, p. 10, I. 29, p. 56, I. 80), led in the later 'Abbāsid period (about the 10th/11th century) to a limitation of the title of honour *al-ḡharif*, which is also said to have been a *laḡab* of 'Ali (Maḡḡib al-ḡim al-Ṭabari, *al-Riyāḡ al-naḡira*, Cairo, 1327, II. 155, 18) to the descendants of al-'Abbās and Abū Ṭālib. al-Ṭabari (III. 635, 8) also mentions the *ḡharif* as a special group alongside of the Banū ḡashim.

In al-Miwardī (*al-Aḡḡam al-sulḡaniya*, ed. Enger, Bonn 1853, p. 165, 2) the *ḡharif* are divided into Ṭālibiyyūn and 'Abbāsiyyūn. From the literary history of the second half of the 10th (11th) century we know of the two brothers al-Sharīf al-Rida and al-Sharīf al-Murtada (cf. Brockelmann, *G. A. L.*, I. 82). According to al-Suyūṭī, *Ris. al-Sulḡa al-Zainabiya*, I. 40 19. (= al-Sabbān, p. 112 19.) the name al-Sharīf was used in the earlier period (*al-ḡadr al-awwal*) of all who belonged to the *Ahl al-Bait*, whether a ḡasani, ḡusaini or 'Alawi, i.e. a descendant of Maḡammad b. al-ḡanafiya or of another of 'Ali's sons, or a Dīfāri, Aḡlī or 'Abbāsi. He points out that in the chronicle of al-Dḡahabī (q.v.) we often meet with titles like *al-Sharīf al-'Abbāsi*, *al-Sharīf al-'Aḡlī*, *al-Sharīf al-Dīfāri*, *al-Sharīf al-Zainabī*, which however proves very little for the older period. The Fāṭimids however, as he observes, restricted the name *al-Sharīf* to the descendants of al-ḡasan and al-ḡusain and this had remained the custom in Egypt down to his time. Although this does not seem quite to agree with the very brief note that he quotes from the *Kitāb al-Aḡḡā* of Ibn ḡadḡar (al-'Asḡalānī) according to which *al-ḡharif* was used in Baghdad as a *laḡab* of every 'Abbāsi and in Egypt of every 'Alawi, we may assume that the word *al-ḡharif* in the strict sense was at that time applied only to a ḡasani or ḡusaini. For, as al-Suyūṭī notes in another connection (p. 60/8, al-Sabbān, p. 190 19., similarly Ibn ḡadḡar al-Haitamī, *al-Fatāwā al-ḡadḡhiya*, p. 124 199.), a *waḡf* or a testamentary deposition in favour of the *ḡharif* is only awarded to the descendants of al-ḡasan and al-ḡusain for such depositions are decided by local usage (*urf*) and according to the usage in Egypt, dating from the Fāṭimid period, this term was applied only to the ḡasani and ḡusaini. In conclusion al-Suyūṭī observes that according to the linguistic usage of Egypt the noble blood (*ḡharaf*) was divided into different classes, namely a grade which included the whole of the *Ahl al-Bait*, another which contained only the *ḡharifiya*, i.e. the descendants of 'Ali which included the Zainabīs, the descendants of Zainab bint 'Ali and also all sons of 'Ali's daughters, and finally a still smaller class this *ḡharaf al-niḡba* which only admitted the descendants of al-ḡasan and al-ḡusain.

Among the historians the title *ḡharif* is first used for the 'Alids in the period of the dissolution of the 'Abbāsid empire, when the 'Alids were rebelling everywhere and attaining power in Tabaristān and Arabia (Snouck Hurgronje, *Meḡāsa*, I. 56 19.).

The case of *ḡarīf* was similar to that of *ḡharif*. *ḡarīf* means the master in contrast to the slave (cf. e.g. al-Balḡhāḡ, *al-Aḡḡam*, b. 1, etc.; al-Tirmidḡī, *al-Birr*, b. 531, and the husband as opposed to the wife (e.g. Qur'an, xii. 25). *ḡarīf* was also the usual name for the head of a tribe or clan (cf. Qur'an xxxiii. 67; Ibn ḡashim, p.

195, 17), whose authority was based mainly on personal qualities like discretion (*hilm*), liberality and command of language (cf. Ibn Kutaiba, *Uyūn al-Akhbār*, i. 223 sqq.; G. Jacob, *Altarab. Studien*, 2 ed., Berlin 1897, p. 223 sq.; Lammen, *Le Brevet de l'Islam*, p. 206 sqq.). Certain physical qualities are also said to mark a man as a *saiyid* (Ibn Kutaiba, *loc. cit.*; Mez, *Die Renaissance des Islams*, p. 144). The Qur'an praises the prophet Yahyā as a *saiyid* (lii. 34). *Saiyid* may have become particularly used as a title for 'Alids and Tālibids at about the same time as *sharīf*. This development was probably not unaffected by traditions which describe al-Hasan and al-Husain and their parents as *saiyid(a)*. The Prophet is recorded to have said of al-Hasan, "this my son is a *saiyid* and perhaps Allah will bring about reconciliation between the two parties of Muslims through him" (al-Bukhārī, *al-Fitan*, b. 20, No. 2, *Faḍl al-Saḥāba*, ii. 22; al-Tirmidhī, *Munāḥid al-Hasan wa 'l-Husain*, b. 30). Al-Husain appears in the Hadith as *Saiyid Shuhūd Ahl al-Djanna*, "lord of young men among the inhabitants of Paradise" (al-Nabḥānī, p. 64, 19 sqq.) and along with his brother he is celebrated as *Saiyidā Shāhid* etc. "the two lords of the young men" etc. (al-Tirmidhī, *op. cit.*; al-Nasā'ī, *Khaṣṣa' al-Amir al-Mu'minin 'Ali b. Abi Tālib*, Cairo 1308, p. 24, 26), while their mother Fāṭima is lauded by the Prophet as "mistress of the women of my (this) community" or "mistress of the women of the worlds", "mistress of the women of the dwellers in Paradise" (*Saiyidat Nisā' Ummah*, and *hāḥikhi 'Umma*, S. N. al-Adami, S. N. al-Djanna, cf. Ibn Sa'd, *Tabaqāt*, viii. 17, 2 sqq.; al-Bukhārī, *Faḍl al-Saḥāba*, b. 29; al-Nasā'ī, *op. cit.*, 23 sq.; al-Nabḥānī, p. 54, 3 sqq.). The Prophet is said to have called 'Ali *Saiyid al-'Arab* and *Saiyid al-Muslīmīn* and to have once said to him "Thou art a *saiyid* in this world and a *saiyid* in the next" (Maḥibb al-Iḥn al-Tabarī, *op. cit.*, ii. 177). In a verse in al-Baiḥaqī, *op. cit.*, p. 90, 10, 'Ali is described as *saiyid al-nās*, but as a rule such expressions are only applied to the Prophet (*Saiyid Walad Adam*, Ibn Sa'd, *op. cit.*, li. 1 and 3, 15; *Saiyid al-Bayḥar*, Ibn 'Abd Rabbihī, *op. cit.*, ii. 246, 17).

In the beginning the term *saiyid* may have been first applied to those who possessed some authority in their own sphere. In the genealogical work of the Hasanid Ibn Maḥannā, *Umdat al-Tālib fī Anṣab al-Ahlī Tālib*, individual 'Alids are often described as *saiyid* (Bombay edition 1318, e.g. p. 51, 16, 52, 12, 54, 10, 59, 12, 61, 10, 65, 15, 17, 117 ult., 142, 7, 149, 9). Al-Dhahabī, *Tarīḥ al-Islām*, MS. Leyden, 1721, i. 65^o gives this title to the Twelve Imām 'Ali b. Muḥammad. We also find the combination al-*Saiyid al-Sharīf* or vice versa (al-Nuwayrī, *Nihāyat al-'Arab*, Cairo 1342, ii. p. 277, 12; al-Kharrāzī, *al-Uḥūd al-Lu'lu'iyū*, i. Gihb Mem. Ser., iii. 4, Leyden—London 1913, p. 314, 11). The word *saiyid*, also came to be applied to Ṣūfī authorities, saints and notable theologians, e.g. al-Sada (al-Sufīyū), al-Sādāt al-Awḥāḍ (al-Sharīf), *Tabaqāt al-Khawāṣṣ*, Cairo 1321, p. 2, 9, 3, 1, 195, 3; al-Sada al-'Alam (Ibn Ḥafṣ al-Haitamī, al-Faṣayḥ al-hadithiyyū, p. 124, 1, 2). The term *Saiyid* or *Sidi* (frequently in al-Sharīf, *Lawaḥiḥ al-Anṣab fī Tabaqāt al-Aḥyār*, Cairo 1315), became very popular for persons regarded as holy, and is the expression used by the slave in addressing his master.

Like al-*sharīf*, al-*saiyid* came in many Muslim lands to be applied only to Hasanids and Husainids. Thus in Hadramawt their usual title is *saiyid* (Snouck Hurgronje, *Versep. Geogr.*, iii. 163). To judge from al-Kharrāzī (*op. cit.*, i. 315 sqq. *passim*) *sharīf* was in his day the usual name for them, now according to Amin al-Rajhānī (*Muṣṣa al-'Arab*, Beirut 1924, i. 92, note 1) it is *saiyid*. In the Hijāz it was the custom to call *sharīf* only those Hasanids whose ancestors had lived in Mecca and to give the name *saiyid* only to the Husainids. But the Meccan talks of the Grand Sharīf as *saiyidawā* and the latter gives the members of his family the title *saiyid* (Snouck Hurgronje, *Mekka*, i. 57; do., *Versep. Geogr.*, iii. 163, v. 31, 40; al-Nabḥānī, p. 41). The names *saiyid* and *amir* (*amir*) used in Persia were also current in Turkey and India (Chardin, *Feyyag*, ed. Laugel, Paris 1811, v. 290; d'Ohason, *Tolbeau de l'empire ottoman*, Paris 1786—1820, i. 70; J. von Hammer, *Des osmanischen Reichs Staatsverfassung u. Staatsverwaltung*, Vienna 1815, i. 398; Ja'far Sharīf-Herklots, *Islam in India or the Qanun-i-Islām*, new ed. by W. Crooke, London 1921, p. 26—28). Along with the title *saiyid* usual in the Malay Archipelago we also find in Atjeh the honorific *habib* (beloved) also used in Arabia (Snouck Hurgronje, *The Achehnese*, i. 155).

In the 'Abbasid period, the *Aghraf*, 'Abbasids and Tālibids, were usually under the authority of a *naḥīb* "marshal of nobility" chosen by them. The history of this office has so far been little investigated. That it already existed under the Umayyads as von Kremer (*Culturegeschichte d. Orient unter den Chalifen*, Vienna 1873, i. 449, note 1) supposes from Ibn Khallikān, *al-'Iṣṣar*, Bāḥḥ 1284, ii. 134, 3 from below, is very doubtful as the passage quoted is probably corrupt (cf. al-Tabarī, ii. 16, ult., 17, 1). The two branches of the Banū Hāshim were from the first probably under a marshal as was the case about 301 (913/914). ('Arīb, ed. de Goeje, p. 47, 10). Yet we find mentioned in al-Tabarī (iii. 1516, 4) in the year 250 (864) as administrator of the affairs of the Tālibids (*yatawalla amr al-'T*). Umar b. Furaḍl (al-Rokh-khādī) who apparently was not a Hāshimī. The 'Alid 'Ali b. Muḥammad b. Dja'far al-Himḥanī who died in 260 (873/874) was *naḥīb* in Kufa (al-Mas'ūdī, *Murūḥ al-Dhahab*, Paris 1861—1875, vii. 338). Perhaps at this date there were in the larger towns as at a later date, marshals of the nobles, who were under a grand marshal (*naḥīb al-nuḥabā*). In general theory it was the duty of the *naḥīb* who had to possess a good knowledge of genealogical matters, to keep a register of nobility, enter births and deaths in it and to examine the validity of alleged 'Alid genealogies (cf. thereon, 'Arīb, p. 49 sq., 167). He had to keep a watch on the behaviour of the *sharīf*, to restrain them from excesses, to remind them to do their duty and avoid anything which might injure their prestige. He had also to urge their claims, especially those on the treasury, to endeavour to prevent the women of noble blood from making mésalliances and to see that the waḳfs of the *naḥīb* were properly administered. The chief *naḥīb* had other special duties, including certain judicial powers. Cf. al-Mawardi, *op. cit.*, p. 164 sqq.; von Kremer, *op. cit.*, i. 448 sq.; Mez, *op. cit.*, p. 145, see also the article *NAḤīb*.

The green turban which became usual as a mark of the *ashraf*, especially in Egypt, owes its origin to an edict of Sulṭān al-Ashraf Sha'bān (764-778 = 1363-1376) who ordered in 773 (1371/1372) that the *Ashraf* should wear a green badge (*ḥuṭṭa*) fastened to their turbans to distinguish them from other people and as an honour for their rank (Ibn Iyās, *Badā'ī al-Zuhūr*, Cairo 1311, I, 227; 'Alī Dede, *Muḥḍarāt al-Awā'id wa-Muḥḍarāt al-Awā'id*, Bulāq 1300, p. 85; Dory, *Dict. des noms des vêtements chez les Arabes*, Amsterdam 1845, p. 308; Mez, *op. cit.*, p. 59). This edict which is commemorated by the poets of the time recalls that of al-Ma'mūn which replaced in Ramaḍān 201 (817) the black colour of his house by green, when he designated the Husaynid 'Alī b. Mūsā al-Ridā as his successor (al-Tabarī, III, 1012 sq.). The Husaynid Muḥammad b. Iḥṣān al-Kaṭṭānī in his treatise on the turban (*al-Ḍaḥmā li-mu'rīfat al-kānūn min al-inṣān*, Damascus 1342, p. 97 sq.) supposes that the descendants of 'Alī and Fāṭima henceforth retained green as their colour, but confined themselves in practice to wearing a piece of green material on the turban. This, he thinks, fell into disuse in time, until Sulṭān Sha'bān revived it by his edict. According to the work *Durār al-afḍāl* which is quoted by al-Kaṭṭānī, the wearing of an entirely green turban dates from an edict of the Pasha of Egypt al-Sayyid Muḥammad al-Sharīf (cf. in al-Iḥṣān, *Al-ḥabār al-Uṣṭāl fi-man taṭarrafā fi Miṣr min Ar-Ras al-Dumal*, Cairo 1311, p. 164 infra) of the year 1004 (1596): when he had the *kīmā* for the Ka'ba exhibited, he ordered the *ashraf* to come before him, every one wearing a green turban. Al-Suyūṭī observes that the wearing of this badge is a permissible innovation (*bid'a muḥibba*) which no one, whether a *sharif* or not a *sharif* can be prevented from following, if he wishes to do so, and which cannot be forced upon any one who wishes to omit it, as it cannot be deduced from the law. At most it can be said that the badge was introduced as a distinction for the *ashraf*: it is therefore equally permissible to limit it to the Husaynids and Husaynids or to allow it to the Zaynabiyas also and to the still wider circle of the remaining 'Alids and the Ṭalibids. An endeavour is made to connect this custom with Kor. II, xxiii, 59 in which some scholars see a suggestion that learned men should be distinguished by their dress, for example, by wearing long sleeves or by the winding of the *qalām*, so that they may be readily recognised and honoured for the sake of learning (al-Suyūṭī, I, 54-55, complete in al-Sabḥān, p. 189 sq., abbreviated in Ibn Hajar al-Haitamī, *al-Fatāwā al-ḥadīṭhiyya*, p. 124 and al-Nabḥānī, p. 41 sq.). With regard to the Kor'anic verse above mentioned, it should, according to al-Sabḥān (p. 191), be held that the wearing of the green badge or green turban is recommended for the *ashraf*, and blameworthy for others than they, because the latter by wearing it would put themselves into another than their real genealogical category, which is not permitted. On this account according to al-Kaṭṭānī, even the Maliki authorities considered the wearing of a green turban as forbidden to a non-*sharif*. With regard to a tradition transmitted by Ibn Hanbal, according to which the Prophet on the day of resurrection is clothed by his Lord with a green turban, Sha'bān's teachers are said to incline to the view that this headgear

is desirable for the *ashraf* (al-Kaṭṭānī, p. 98 below, cf. 95). Other authorities like to insist that green is the colour of the garments of the dwellers in Paradise (cf. *Kur'ān* xviii, 30, lxxvi, 21), and that it was the Prophet's favourite colour (al-Kaṭṭānī p. 95 sq., with references to Ḥadīth).

The green turban did not become the general headgear of the *Ashraf* throughout the Muslim world. In Arabia they rarely wear other than white turbans (Snoeck Hurgonje, *Verspr. Geogr.*, IV, 63). The green colour was preferred in Persia (Chardin, *Voyages*, loc. cit.); according to P. M. Sykes, *Ten Thousand Miles in Persia*, London 1902, p. 24, note 1, the *sayyid* is distinguished there by a blue turban and a green loin-cloth. In India *sayyids* wear green; they are therefore occasionally called: *sayyid*; "green-robed" (Ja'far Sharīf-Herklotz, *op. cit.*, p. 103). According to al-Nabḥānī (p. 42 sq.) the green turban is not a mark of noble blood in Constantinople. It is worn there not only by learned men and students but also by artisans and street merchants, especially in winter as it does not show dirt so quickly. On this account many *ashraf* are said to avoid the colour green.

Those of the Prophet's blood are also distinguished in other ways according to orthodox views. For example the sharing in the *ṣadaqa* (*ṣadāq*, q. v.) is forbidden them. The Prophet is recorded to have frequently said of the *ṣadaqa*: "It is the filth of men (cf. *Kur'ān*, ix, 104) and permitted neither to Muḥammad or the family (al) of Muḥammad". The legal authorities differ on the question whether this rule applies not only to the Banū Hāshim but also to the Banū 'l-Muṭṭalib and the clients of these families, and whether also free-will offerings (*ṣadaqāt al-naṣl*, cf. *al-Ṣafawāt*) are included under it (al-Nabḥānī, p. 33 sq.).

The sons of Fāṭima have the privilege of being called "sons of the Prophet of God" and thus having their descent traced directly to the Prophet. They are therefore frequently addressed as *Ibn Rasūl Allāh*. From the work of al-Tabarānī sayings of the Prophet are quoted in justification such as: "All the sons of one mother trace themselves back to an agnate, except the sons of Fāṭima, for I am their nearest relative and their agnate" (*Waliyahum wa'Aqabatuhum*. Cf. Ibn Hajar al-Haitamī, *al-Fatāwā al-ḥadīṭhiyya*, p. 123, 24 sq.; al-Nabḥānī, p. 48 sq.).

From the fact that the *Ahl al-Bait* are the noblest in descent it results that the female members of the family have no one of equal birth to them (*ḥuṭṭa*). According to al-Suyūṭī (I, 30 sq., cf. al-Sabḥān, p. 188; cf. Ibn Hajar al-Haitamī, *op. cit.*, p. 123, 31) it is a very old opinion that the son of the marriage of a *sharif* woman with a man who is not a *sharif*, is not a *sharif*. As al-Sabḥān, p. 192, points out there are many however who consider him a *sharif*. In practice however marriages of a *sayyid*'s daughter with men not their equals are extremely rare (Snoeck Hurgonje, *The Achehnese*, Leyden 1906, I, 158; do., *Verspr. Geogr.*, IV, 297 sq.; Mrs. Meer Hasan Ali, *Observations on the Muhammadans of India*, with notes by W. Crooke, London 1917, p. 4 sq.); al-Sharānī (in al-Nabḥānī, p. 89 sq.) does not consider it seemly to marry the divorced wife or widow of a *sharif*: one may only enter into matrimony with a *sharif* woman, if he knows

he is in a position to afford her all that is due to her, will obey her pleasure and consider himself her slave.

The following saying of the Prophet refers particularly to the *Ahl al-Bait*: "Every bond of relationship and consanguinity (*rahb wa-nasab*) will be severed on the day of resurrection except mine". They are therefore the only ones whose relationship can avail them (al-Nabhanī, p. 22, 30, 39 sq., 47).

A weak tradition makes the Prophet say: "The stars are a security (*amūn*) for the dwellers in the heavens and my *Ahl al-Bait* are a security for the dwellers on earth" (or "for my community"). According to the commentators by the *Ahl al-Bait* are here meant the descendants of Fāṭima. Their existence on the earth is a security for its inhabitants in general and for the community of the Prophet in particular against punishment or against overwhelming by "temptations" (*fitan*). It is not the pious among them that are specially meant here; this distinction is solely based on their descent from the Prophet (*al-'unṣur al-nabawī*) apart from any qualities, meritorious or otherwise, which they happen to possess as individuals. An allusion to this opinion is also sought in Qur'an viii. 33 (al-Nabhanī, p. 28 sq., 30 and 47; cf. al-Ṣabbānī, p. 119 sq.; Ibn Ḥajar al-Haitamī, *al-Sawā'iq*, p. 144; *al-Fatāwā al-hadithiyya*, p. 122, 11 sq.).

None of the *Ahl al-Bait* will suffer the punishment of Hell (al-Makrīzī, f. 100b; al-Nabhanī, p. 21, 27 sq., 33, 5 sq., 45) and 'Alī, al-Ḥasan, and al-Ḥusain with their families will be the first to enter Paradise along with the Prophet (al-Nabhanī, p. 48, 11 sq.).

The "sons of the Prophet of God" may be certain of divine forgiveness and any wrong inflicted by them must be accepted like a dispensation of Allāh, if possible with gratitude. Ibn al-'Arabī, who takes the verse of purification in connection with Qur'an xlviii. 2, in which the Prophet is promised pardon for his sin, observes, *inter alia*: "It behoves every Muslim, who believes in Allāh and in what he has revealed to recognise the truth of the word of Allāh: 'Allāh will remove the stain from you, O people of the house and purify you completely', so that he may be convinced with respect to everything done by the *Ahl al-Bait* that Allāh has given them pardon for it. It is therefore not fitting for a Muslim to criticise them, neither for what is not in keeping with the honour of those of whom God has testified that he has purified them and removed the stain from them nor for pious works performed by them, nor for good deeds which they have performed, but always to remember God's watching care over them (*al-Futūḥāt al-Makkiyya*, Cairo 1329, Chap. 29, i. 196, 17-198, 25, esp. 196, 21 sq., cf. 197, 11 sq.; in al-Makrīzī, f. 108b, 13 sq.; in al-Nabhanī, p. 11-13, 76-79).

A *sharif* who has received *hadd* punishment for incontinence, taking intoxicating liquor or theft may be compared with an *amir* or *sultān* whose feet have become soiled but are wiped clean by one of his servants. He is also likened to a refractory son, who is however not deprived of his inheritance (Ibn Ḥajar al-Haitamī, *op. cit.*, p. 122, 20 sq.; al-Nabhanī, p. 46).

The duty of love for the *Ahl al-Bait* is based on Qur'an xlii. 22, where *ḥarbā* is referred to

relationship with the Prophet (Ibn Bīrīq al-Hillī, *Khawāṣṣ Waḥy al-Muḥsin*, p. 51 sq.; do., *al-Uṣūl*, p. 23 sq.; al-Makrīzī, f. 112*, 16 sq.; Ibn Ḥajar al-Haitamī, *al-Sawā'iq*, p. 104 sq.; al-Shabrāwī, p. 4 sq.; al-Ṣabbānī, p. 96 and sq.; al-Nabhanī, p. 72 sq.). It is further pointed out that the conclusion of the *taḥḥād* [q. v.] contains a prayer for the Al Muḥammad (Ibn Ḥajar al-Haitamī, *al-Sawā'iq*, p. 143; al-Nabhanī, p. 75 below). A saying attributed to al-Shāfi' [q. v.] is as follows: "O ye members of the house of the Prophet, love for you is a duty to God, which he has revealed in the Qur'an". It is a great honour for you that any one who does not say the *ḥaṭiya* [q. v.] over you has not performed the *ḥaṭiya* (*op. cit.*, p. 88). There are further a large number of traditions, which urge this affection, represent it as a proof of belief, and promise in return for it the *ḥaṭiya* of the Prophet on the day of the resurrection and a heavenly reward, forbid signs of hatred and even describe the latter as infidelity (Ibn Ḥajar al-Haitamī, *al-Sawā'iq*, p. 141 sq.; al-Shabrāwī, p. 3 sq.; al-Nabhanī, p. 81 sq.).

Reverence and respect ought therefore always to be shown to the *sharīf*, especially to the pious and learned among them; this is a natural result of reverence for the Prophet. One should be humble in their presence; the man who injures them should be an object of hatred. Unjust treatment from them should be patiently borne, their evil returned with good; they should be assisted when necessary; one should refrain from mentioning their faults, on the other hand their virtues should be lauded abroad; one should try to come nearer to God and his Prophet through the prayers of the devout among them (al-Shabrāwī, 7, 17, sq.). According to al-Shāfi'ānī, one should treat a *sharif* with the same distinction as a governor or a *ḥāfi al-askar*. One should not take a seat if a *sharif* is without one. Special reverence should be paid to the *sharif*; one hardly dare look at them. Any one who really loves the sons of the Prophet will present them with anything they wish to buy. Whoever has a daughter or sister to give in marriage with a rich dowry, should not refuse her hand to a *sharif* even if he has no more than the bridal gift for her and can only live from hand to mouth. If one meets a *sharif* or *sharif* on the street, who asks for a gift, one should give him what one can (al-Nabhanī, p. 89 sq.).

One should not refuse marks of respect even to a *sharif* whose conduct is contrary to the law (*ḥaṭ*), because one knows his sin will be forgiven him. This high esteem is his due on account of his pure origin (*al-'unṣur al-nabawī*) and *ḥaṭ* does not affect his genealogy (al-Nabhanī, p. 45). If it is doubtful whether a man is a *sharif* but there is nothing to object to in his genealogy from the legal point of view he should be treated with the proper respect. Even if his pedigree is not legally established, one should not assume he is lying without being absolutely certain on the point (Ibn Ḥajar al-Haitamī, *al-Fatāwā al-hadithiyya*, p. 122, 27 sq.; al-Nabhanī, p. 46). There are a number of anecdotes in which an individual who has been neglectful of respect to a *sharif* or who has irritated one has been corrected in a dream by the Prophet or by Fāṭima (al-Makrīzī, f. 144*, 11 sq.; Ibn Ḥajar al-Haitamī, *al-Sawā'iq*, p. 148; al-Nabhanī, p. 45, 95 sq.).

The numerous *saiyids* and *sharifs* are represented throughout the whole Muslim world. Several families have attained ruling power for longer or shorter periods, e.g. in Tabaristān and Dailam, in western Arabia, Yemen and Morocco. Other families have exercised local influence but by far the great majority lived and live in poor circumstances. The genuineness of an 'Alid pedigree has for long not been unassailable. The genealogical tradition has survived in its greatest purity in western Arabia and Hadramawt. The family of 'Alawi's in Hadramawt, which has produced many notable jurists, theologians and mystics, regard only the west Arabian *sharifs* as their equals in birth.

The *saiyid*, who distinguishes himself by a pious life, readily becomes revered as a saint. His blessing is expected to bring good fortune, while his wrath brings misfortune. By vows and gifts it is hoped to secure his auspicious intercession and his tomb becomes a place of pilgrimage. On the much visited tombs of *saiyids* and *saiyidas* in Cairo cf. al-Shablandj's work cited below.

In the Yemen as in Hadramawt, the *saiyid* who is to be distinguished there from the armed *sharif* carrying a staff (*'uḥḥār*) and rosary, acts as intermediary between two disputing parties. He also drives away the locusts and his prayer puts an end to infertility while his curse makes it continue. Many *saiyids* are also visited for their healing powers. Reverence for the *saiyid* frequently finds expression in presenting him with lands (H. Jacob, *Parfumes of Araby*, London 1915, p. 45, 173, 199.).

For a fuller description of the *sharifs* and *saiyids* and the reverence paid to them see Snouck Hargronje, *Mekka*, i. 32 199., 70 199.; on the *saiyids* of Hadramawt, who are also strongly represented in the Malay Archipelago and to whom belong the founders of the sultanates of Siak and Pontianak, cf. do., *Verspre. Geschr.* iii. 162 199., and *The Atchehmes*, i. 153 199.

For the history of the *sharifs* who ruled in Mekka and the Hijāz from the 14th (15th) century till 1924, see Snouck Hargronje, *Mekka*, i. and the article MEKKA (history); cf. also the sketch in al-Batānūnī, *al-Rihla al-Hijāziyya*?, Cairo 1329, p. 73 199. — Information on the families of *sharifs* in Arabia is given in *A Handbook of Arabia*, i., comp. by the Geogr. Sect. of the Naval Intelligence Division, London n.d., Ind. and *Aghraf*.

On the *sharifs* of Morocco cf. the art. HANANĪ, GURAINĪ, GHURFĀ; on the *Saiyids* of India cf. art. INDIA (Brit.) II.

The genealogy of the *Talibids* is discussed in Ahmad b. 'Alī... Ibn Muḥannā al-Da'ūdī al-Ḥasanī, *'Umdat al-Talib fi Anṣab Al Abi Talib*, Bombay 1318.

AL-SHARIF AL-RADI, ABU 'L-ḤASAN MUHAMMAD b. ABĪ ṬĀHIR AL-ḤUSAIN b. MUḤA descended from al-Ḥusain b. 'Alī through MUSA al-Kārim on account of which he and his brother 'Alī al-Murtadā [q.v.] were given the family name al-Musawī. His father who was born in the year 307 (919/920) was under Būyid rule in Baghdad *Naḥb* of the *Talibis*, an office resembling that of a heralds-college for the descendants of the Prophet through 'Alī's wife Fātima. al-Rādī was born in Baghdad in the year 359 (970) and appears to have been very precocious; we are told by Tha'alibi, his contemporary, that he composed his first verses when he had hardly passed the age of ten years. The earliest dated poem in his *Divān* was composed in the year 374, when he was 15 years old. Tha'alibi, and the authors who copy him, assert that al-Rādī was undoubtedly the greatest poet of the *Talibis*, perhaps even the greatest poet of the tribe of Kuraysh had produced. If we take the measure of so much inferior poetry composed at that time, for the times were prolific in poets, Tha'alibi may be right, and we cannot but admit that some of his elegies upon friends have a touch of genuine feeling. The quantity of poetry composed by him in his short life is also remarkable, as his *Divān* filled originally four volumes. al-Rādī must have been of feeble constitution and he tells us himself in one of his poems that he began to show grey hair at the early age of 21 years. Several other poems tell us of his recovery from serious illness. Perhaps the anxiety for his father who for a long time was imprisoned in Shirāz for some offence which I have been unable to elucidate, and the agitation in Baghdad due to the marked preference given by the Būyid amirs to the Shī'a and the consequent rancour of the Sunnis, may have contributed to undermine his health. His father had retired from the office of *Naḥb* and al-Rādī was honoured with the appointment to this important office. Tha'alibi, and other biographers who copy him, state that he received this post in the year 388, but the introduction to the poem which he sent to Bahā' al-Dawla thanking him for his favour tells us that the diploma was sent to him from al-Basra, together with the command to serve as leader of the pilgrim-caravan, and arrived in Baghdad on the 1st of Dhu'l-Ḥijja 1 of the year 397. The following year Bahā' al-Dawla honoured him further by conferring upon him the title of al-Rādī by which name he is generally known. Three years later in the month Dhu 'l-Ḥijja 401, he received from the same amir the further title of al-Sharīf. Bahā' al-Dawla continued to confer other honours upon him and on Friday the 16th of Muḥarram 403, he was appointed *Naḥb* over the

descendants of the Prophet in the whole dominions of the amir, but in Djamādī I of the same year he felt so seriously ill, that his life was despaired of. However two months later in the month Rajab he had so far recovered that he was able to send another poem to Sulṭān al-Dawla who was then in Arradjan, where Bahā' al-Dawla died in Djamādī II. His last poem composed in praise of any prince was a poem he addressed to Sulṭān al-Dawla in the month Safar 404 and the last dated poem in his Diwan is an elegy upon the poet Aḥmad b. 'Alī al-Battī who died in the month Shabān 405. He himself died on Sunday morning the 6th of Muḥarram 406 (26th of June 1016). His brother 'Alī al-Murtaḍā was so overcome with grief that he could not stay in Baghdād to attend his funeral and the waṣīr Fakhr al-Mulk said the prayers over his grave. He was buried in his house in the quarter of the Anḥārīn in the suburb al-Karḥ of Baghdād. In the time of Ibn Khallikān the house as well as the grave had been demolished. From occasional references to al-Raqī found scattered, we can form the opinion that he was of an amiable character and broad-minded as is proved by his friendship with al-Sābi, whom he honoured with two elegies though he was not a Muslim, and even the reproaches of his brother on account of the first of these did not deter him from composing a second one in which he pronounces his grief even more. His poems as already stated are very numerous and were collected by several friends; manuscripts are not rare and we actually have two printed editions (Bombay 1889 in one volume and Bairūt 1890/1892 in two volumes). Both these editions are in alphabetical order; this is also the case in the two MSS. in the British museum (Add. 19419 and Add. 25750) consulted, except that in one manuscript the Elegies are separated from the other poems. It is of value that both in the MSS. and the printed editions many of the poems are precisely dated and these dates have furnished some of the details of the biography, but as many poems are elegies upon eminent persons who died in Baghdād, these dates have additional historical value. There are poems for every year from 374 to 405 and a full analysis would require too much space. In addition to his poems al-Raqī is credited with two works dealing with the exegesis of the Qur'ān entitled *Ma'āni 'l-Qur'ān* (obscurities of the Qur'ān) and *Maḥāṣil al-Qur'ān* (Metaphors in the Qur'ān), these works have not come down to us. In his Catalogue of the manuscripts in the library of the Escorial, Dérenbourg describes under No. 348 a manuscript of a work entitled *Taif al-Khayāl* as being by al-Raqī. Whether the error is due to Dérenbourg or to the scribe who wrote the codex, there can be no doubt that this is a mistake. The brother of al-Raqī, 'Alī al-Murtaḍā, certainly wrote a book of this title and another 'Alid author, Hibat Allāh b. al-Shaḥārī quotes in his *Ḥamāṣa* (Paris, MS. Arabe, No. 9257, fol. 96 recto) from the *Taif al-Khayāl* of al-Murtaḍā; further in the introduction of the Escorial MS. the author mentions that he had previously written a book on "grey hair" (*fi 'l-Shayb*). This latter book we possess in a printed edition (Constantinople 1302) and it certainly is by al-Murtaḍā, who tells us at the end that he finished it in the year 421, or fifteen years after the death of his brother al-Raqī. We cannot possibly admit that the two brothers wrote two books with exactly the

same titles and the same, or similar contents, and we consequently have to attribute the work in the Escorial MS. to al-Murtaḍā.

Bibliography: Tha'alibī, *Yafīna*, Damascus, ii. 297—315, with many extracts of his poems; Ibn Khallikān, ed. Wüstenfeld, p. 639, Cairo ed., ii. 2; Yāfī, *Min 'at al-Qizān*, iii. 18—20; Brockelmann, *G.A.L.*, i. 82. — Poems by al-Raqī are found in nearly every anthology.

(F. KERNKOW)

SHARIF PASHA, an Egyptian statesman in the reigns of the Khedives Ismā'īl and Tawfīk. He was of Turkish origin and was born in 1823 in Cairo where his father was then acting as kādī 'l-ḥudūd sent by the Sulṭān. When some ten years later the family was again temporarily in Cairo, Muḥammad 'Alī had the boy sent to the military school recently founded by him. Henceforth his whole career was to be spent in the Egyptian service. Sharif was a member of the "Egyptian mission" sent to Paris for higher education (cf. the article *КЕНОТЫ*) which included the future Khedives Sa'id Pasha, Ismā'īl Pasha and 'Alī Muḥarak Pasha. He then took a military course at St. Cyr (1843—1845) and served for some time in the French army until the mission was recalled by 'Abdās I in 1849. For the next four years he acted as secretary to Prince Halim, then took up military duties again in 1853 and attained the rank of general under Sa'id Pasha. During this period he was much associated with the commander-in-chief of the Egyptian army, Sulaimān Pasha (de Séves), whose daughter he married.

In 1857 Sharif Pasha began his political career as Minister of Foreign Affairs and he acted as deputy for the Khedive Ismā'īl when the latter went to Constantinople in 1865. He later filled in succession all the high offices of state. It was he who in 1866 drew up the plans for the new *Majlis Niyāzi*.

After the inauguration of constitutional government in Egypt in 1878, three cabinets were formed by Sharif Pasha. When in February 1879 Nāḥūr Pasha's cabinet (which included two Europeans) had been overthrown by the nationalist parliament, a constitutionalist movement was begun under Sharif Pasha, the leader of which in Parliament was 'Abd al-Salām al-Muwaililī. This party drew up a plan of financial reforms, which was laid before the Khedive who in April 1879 entrusted Sharif Pasha with the formation of a cabinet composed of purely Egyptian elements. This new cabinet (see the list of members in Sabry, p. 153, note) instituted a Conseil d'État and had a new organic law passed by the Chamber (promulgated on June 14, 1879). After the accession of the Khedive Tawfīk Pasha, Sharif Pasha's cabinet was remodelled, but the new government was not so national as the preceding. In August of the same year the new Khedive refused to approve the constitution drawn up by the Prime Minister and on the 18th of the same month Sharif Pasha resigned and was succeeded by Riyāḍ Pasha. Sharif then took part in the formation of the "National Party" at Hulwān, which published a manifesto against Riyāḍ Pasha on November 4. Two years later after the nationalist military revolution of Sept. 9, 1881, Sharif Pasha was the only statesman in whom the military party had sufficient confidence to entrust with the formation of a new cabinet

(Sept. 15). Sharif then called together an assembly of notables intended to counterbalance the influence of the military. This assembly met on Dec. 26, but the nationalists in it soon combined with the military against the Khedive and his cabinet, who were thought to be too much under the influence of the political and financial control by the Great Powers. Sharif Pasha was unwilling to co-operate with the Majlis in the modification of the rules on the budget vote and he resigned in January 1882. His successor was Mahmūd Pasha Sāmī. On Aug. 10 of the same year, after the Khedive had taken up a definitely anti-Arabi attitude, Sharif Pasha again became Prime Minister (Aug. 18, 1882). He held this office after the defeat of 'Arabi and the English occupation but in the end came into conflict with the English cabinet and its representative, when they demanded the evacuation of the Sūdān. Sharif Pasha thought the evacuation a political and economic danger to Egypt but he had to yield to English pressure (Jan. 1884). He then retired from politics and died three years later at Graz, to which he had gone on account of a malady of the liver. He was buried in Cairo in April 1887.

By birth Sharif Pasha belonged to the Egyptian-Turkish class and was bound to be Khedivalist rather than nationalist. The nationalists, however, never doubted his sincerity. He sincerely endeavoured to make Egypt a constitutional state under the Khedival dynasty; as a political figure he occupies a position intermediate between the tendencies represented by 'Arabi, Nūbār and Riyāḍ.

(J. H. KRAMERS)

SHARISH (adjective: *Sharīshī*) was the Arabic name for the modern Jerez de la Frontera, an important town in Spain, in the province of Cadiz, a little north of this town. It has to be distinguished from Jerez de los Caballeros, the *Sharīshā*, of the Muslim period (cf. al-Idrīsī, *Deser. de l'Esp.*, pp. 175, 186, 211, 226), a little town in the province of Badajoz, south of this capital and west of Zafra. Jerez de la Frontera, from its position in a country blessed with remarkable fertility, was while under Muslim rule as at the present day a rich and prosperous city. According to some geographers it formed part of the province of al-Buhaira (Lago de la Janda), according to others of Shadhāna (Sídona). Its vineyards were already renowned in the middle ages, like its olive-groves. A speciality of the town was the making of *muffabbanāt* (a kind of cheese-pastry).

Muslim Jerez never rose to be a capital. It was too near its great neighbour Seville, whose political fate it usually shared. It used to be thought that it was in the district of *Sharīsh*, on the banks of the Guadalete, that the first encounter between Christians and Muslims took place at the time of the conquest of Spain but we now know that this battlefield should be located in the valley of the Rio Salade farther east. The town plays little part in subsequent history and not even the names of its governors have been preserved. After the fall

of the Umayyad Caliphate, it formed part of the kingdom of Abbadids [q.v.] and in 650 (1233) it submitted to the Nasrid rulers of Granada after having successively rejected Almoravid and Almohad suzerainty. Jerez was taken by the Christians for the first time in 1251 three years after Seville, but in the years that followed, it was twice retaken by the Muslims in spite of the efforts of the Castilian leaders Garci Gomez Carrillo and Fortūn de Torre. In the end it was definitely retaken by Alfonso the Wise on Oct. 9, 1264. The Marinid Sultān then tried in vain to recapture it, notably Abū Yūsuf Ya'qūb b. 'Abd al-Hakīm, who made it and Seville his main objectives on his various campaigns in Andalusia and several times laid waste the whole district.

Among celebrated Muslims born in Sharīsh, we may mention, besides the commentator on the *Maḥāmāt* of al-Harīrī (see the next article) the jurist Djamāl al-Dīn Abū Bakr Muḥammad b. Aḥmad al-Bakrī al-Sharīshī born in 601 (1204/1205) and died in Syria in 685 (1286) after declining the post of Maliki Kādī 'l-kuḍāt of Damascus.

AL-SHARISHI, ABU 'L-'ABEAS AHMAD b. 'ABD AL-MU'MIN (or 'Abd al-Mu'min, according to al-Suyūṭī, followed by Brockelmann) b. Mūsā b. 'Isā b. 'ABD AL-MU'MIN AL-KASHI KAMAL AL-DIN, Arab author of Spain, a native of Sharīsh [q.v.], where he died in 619 (1222). He wrote a commentary on the *al-Iḡāḥ* of al-Fārīsī and another on the *al-Djurnal* of al-Zaghjādī and wrote a treatise on prosody. He also compiled an anthology of ancient Arabic poems and made a synopsis of the *Nawādir* of al-Kālī; but he is best known as a commentator on the *Maḥāmāt* of al-Harīrī. He wrote three commentaries on the *Assemblies*, a large one, literary, a medium, philological and a small one, a résumé. The first was published at Bulāḡ in 1284, 1300 and in Cairo in 1306; the second is in the Library at Leiden, N^o. 415.

SHARĀWA, or **SHERĀWA**, the common ethnic of a Marabout body in Central Morocco, belonging to the Shadhālī-Djazzālī brotherhood through the intermediary of the mystic Abū Fāris 'Abd al-'Azīz al-Tabbā [q.v.]. The singular is *Sharḥāwī*, synonym of *sharḥī* (*sharḥī*, pl. *sharḥā*), a geographical ethnic (cf. on the other hand *ṣādīlī*, ethnic from Tādā confined to the *shurḥā* of this name, while the geographical ethnic is *Tādāwī*). The principal *Zāwiya* of the *Sharḥāwa* is in the town of Abū 'l-Djā'd (modern spelling:

Boujad), in the Tādila, between the Middle Atlas and the Atlantic coast. It attained importance at the end of the xviith century and henceforth became one of the most frequented sanctuaries in Morocco.

Among the more notable of this Marabout family may be mentioned: 1. the founder of the Zāwiya of Abū 'I-Djād, MAHAMMAD (with initial *m* vocalised in *a*) b. Abī 'L-Kāsim al-Sharkī al-Sumaiḳī al-Zā'ī al-Djāwī, d. 1st Muharram 1010/1012 (July 1601); a monograph was devoted to him by one of his descendants, Abū Muhammad 'Abd al-Khālīq b. Muḥammad al-'Arūḥ al-Tādili al-Sharkī, entitled *al-Murāḥḥī fī dhikr ḥaḍ manāḥib al-kutb tayyidat M. al-Sharkī*; 2. the latter's son, MUHAMMAD al-Mu'ṭā, d. Rabī' II 1092/April–May 1681; 3. his son MUHAMMAD al-Sāliḥ, who was the patron of the historian al-Ifrānī (or al-Wafīnī, q.v.): a monograph entitled *al-Rawḍ al-yānī al-fā'ih fī manāḥib al-shaikh Abī 'Abd Allāh M. al-S.* was devoted to him by a scholar of Fās who was ḥādī of Meknes (Miknās al-zā'itūn) in the reign of the 'Alawid Sulṭān Mawlay Ismā'īl, Abū 'Alī al-Ḥasan b. Raḥḥāl al-Ma'dānī al-Tādili, d. 1140/1728; 4. the son of the preceding, MUHAMMAD al-Mu'ṭā, who restored the Zāwiya and wrote a collection of prayers in no fewer than 40 volumes entitled *Dhakhīrat al-ghāni wa 'l-muḥṭadī fī ṣāhib al-lawā' wa 'l-taḍfī* (there is one volume in the Bibliothèque Générale of Rabat, No. 100, cf. E. Lévi-Provençal, *Les Manuscrits Arabes de Rabat*, I, p. 36); he died in Muharram 1180/June 1766. A monograph has been devoted to him by his secretary Muḥammad b. 'Abd al-Karīm al-'Abdūnī, d. 1189/1775–1776, entitled *Yatimat al-'uḥūd al-zawīa fī manāḥib al-shaikh al-Mu'ṭā*.

(E. LÉVI-PROVENÇAL)

SHARKĪ, the name of a dynasty which reigned at Djawnpūr, so called from the title of Malik al-Shark (Lord of the East) conferred upon its founder, the eunuch Malik Sarwar, Khwādja Dīshān [q.v.], who, having in March, 1393, placed Nāṣir al-Dīn Maḥmūd of the Tughlak dynasty on the throne of Dihli, suppressed the Hindū rebellions in the Gangetic Doāb and Awadh, and assumed independence in Djawnpūr. He died in 1399, leaving his dominions to his adopted son, Malik Karamūl, who assumed the title of Mubārak Shāh. Maḥmūd Shāh of Dihli made two abortive attempts to recover Awadh, and Mubārak Shāh died in 1402, and was succeeded by his younger brother, who assumed the title of Shams al-Dīn Ibrāhīm Shāh. Ibrāhīm was a patron of learning and art, and it was during his reign that Djawnpūr was adorned with most of those buildings the remains of which excite our admiration to-day. He annexed

some districts in Kātehr which had belonged to Dihli, invaded Bengal, where he protected the Muslims from persecution, made an unsuccessful attempt to annex Kālpī, and was succeeded, on his death, in 1436, by his son Maḥmūd. Maḥmūd Sharkī quarrelled with Maḥmūd Khaldjī I of Malwa over Kālpī, and an indecisive campaign was closed in 1445 by a peace not altogether honourable to Djawnpūr. In 1452 he unsuccessfully attacked Dihli, then held by Bahlōl Lodi, and in 1457 he died just as he was about to meet Bahlōl Lodi in the field, and was succeeded by his son Bḥkan, who styled himself Muḥammad Shāh. His tyranny was so galling that his nobles, even while confronted in the field by Bahlōl Lodi, dethroned him and proclaimed Husain, his younger brother. Husain concluded peace with Bahlōl and then led a successful expedition against the Hindus of Uṛas. In 1466 he failed to take Gwāliyar but compelled the Rājās to pay tribute and do homage. In 1473 he invaded the dominions of Dihli and during the next three years strove to subdue it. He was often on the threshold of success, but as often failed owing to carelessness or excess of confidence, and in 1476 Bahlōl Lodi occupied Djawnpūr, and with Husain's flight to Bengal the Sharkī dynasty came to an end. Husain lived for twenty-four years after his fall, and although he made no serious attempt to recover his kingdom, lost no opportunity of fomenting disension and rebellion in the south-eastern provinces of the kingdom of Dihli. He died in 1500.

SHARKĪ. As opposed to the Turkish popular ballad which has arisen among the people and is composed on the national system, syllabic (*parmaḥ* *hikā*) not metric and is found in various forms notably the *türkü* and also as *türkmanī*, *warzagh*, *haghma*, *ḥaya*, *haghī*, *manī* and *twyagh* (on the latter cf. Samoilowicz in *Musulmanshiy Mir*, Petrograd 1917, I, No. 1, p. 1 199), the Sharkī is a poem regularly composed by a poet on literary lines in more or less accurate agreement with the laws of Persian and Arabic prosody, following the quantitative system of metre: the sharkī is the *türkī* adapted to literature.

While the popular song as regards matter, imagery and phraseology is quite free from restrictions, the sharkī is usually a gay love-song and follows the model of the traditional love-lyric in metre, language and contents.

It is distinguished from the *ghazal*, which is intended only for recitation and reading, by the fact that it is intended to be sung. In contrast to the double verse system of the *ghazal* with the monorhyme running through it, the stanza form, taken from the folk-song, is peculiar to the sharkī. The separate stanzas, of which the third (*miyāza-khāne*) is traditionally meant to be the most impressive, are linked together by a refrain of one — sometimes two — line (called *naḥwāl*, chorus) which recalls the rhyme of the *ghazal*. The rhyme scheme is usually as follows *aabb* (and more frequently *abab*); *cccb*; *dddb* or *aaaa*, *bbba*, *ccca*, in the case of a two line refrain, *aaaaa*, *bbbaa*, *cccaa*.

The language is elevated in the *sharqi*, free from dialectic forms; the rhyme is more strictly observed than in the *turkū*. But although it is free from extravagant language, it is nevertheless much too literary to be at once intelligible to the common people.

The link between the *turkū* and *sharqi* was probably formed by the popular poets and mystics, notably the *ʿaṭṭā*, the successors of the *isās* and dervish poets, who very early recognised this intermediate form, the ballad with a literary flavour suitable for singing, as a form of literature admirably suited for dissemination, which could also be to some extent used as a chant to accompany the exercises of the *ṣūfī*. But it was long before the *sharqi* won itself an official position in the traditional "regular" *Diwāns* of the classical poets. The fact that the *Diwāns* of poets of the people so rarely contain *sharqi* is amply explained from the literary intolerance with which non-classical forms of verse were rejected.

The first poet in whose *Diwān* we find *sharqi*'s seems to be Naṣīm (d. 1107 = 1695). The *sharqi* is the characteristic poem of the period of transition which begins with Sulṭān Aḥmad III (1703–1730) and marks a concession to popular taste and a reaction from Persian influence. Nedīm (d. 1143 = 1730) and Enderūnī ʿOṭmān Wāṣif (d. 1240 = 1824/1825) are the most famous of *sharqi* writers.

The many printed and lithographed collections of *sharqi*'s are evidence that they are still very popular.

AL-SHARQIYA, name of a *kūra* and of a province (formerly *ʿamal*, now *mudiriya*) in Egypt.

1. The *kūra* of al-Sharqiya, which replaced the Byzantine pagarchy of Aphroditopolis, was one of the few districts which received an Arabic name; the latter is explained by its situation on the eastern bank of the Nile.

It is difficult to estimate the extent of its territory, which lay immediately south of the capital of the country, Fuṣṭāṭ. The first capital of the *kūra*, situated on the right bank of the river, was Anṣinā (Antinoë), but the small number (17) of villages in the *kūra* of al-Sharqiya allows us to suppose that the next *kūra*, Dālīs (Nilo-polis) or at least al-Kais (Kynopolis) lay on both sides of the Nile. The capital of the *kūra* was very probably Aṭṭīḥ since one of the censuses quoted by Makrīzī gives it in addition the name of Aṭṭīḥiyya. It should, however, be noted that Dimashqī, very late for information of this kind, distinguishes a *kūra* of al-Sharqiya and a *kūra* which, lying beyond the district of Aṭṭīḥ, included also that of Wāṣm to the north-west of Fuṣṭāṭ, which is exceedingly improbable.

In the Fāṭimid division into provinces, there was a province of al-Aṭṭīḥiyya, larger than the old *kūra* (50 villages at the time of Ibn al-Djān), which now forms a district (*marka*) of the *mudiriya* of al-Djiza. The capital is now al-Ṣaff, a few miles to the north of Aṭṭīḥ.

In the time of the governors of the Caliphs,

the *kūra* of al-Sharqiya enjoyed at times a certain prosperity. On account of an epidemic of plague, Abd al-Azīz b. Marwān transferred the government offices to Hulwān; a little later and for the same reason another governor transferred them to Askur (or Sakur) towards the south. To the north of the *kūra* lie the quarries of Turā.

Bibliography: cf. the art. Aṭṭīḥ; Kindi, ed. Guest, *Index*, p. 643; J. Maspero and G. Wiet, *Matériaux pour servir à la géogr. de l'Égypte*, M.I.F.A.O., xxvi, p. 22, 112, 173, 175, 177, 180–182, 184, 185; Makrīzī, *Khitaṭ*, ed. M.I.F.A.O., iv, p. 18; v, ch. xi, § 2.

2. The Eastern province of the Delta of Egypt, situated to the east of the province of al-Dakahlīya and bordered towards its south-west point by that of Kaḥyūbiya. Now it has 749,130 inhabitants (in 1897), 393 towns, villages and hamlets, and is divided into 6 districts (*mudiriya*) which are as follows: (1) Bilbais, (2) Fāḥiḥ, (3) Hithiyya, (4) Kafr Ṣakhr, (5) Minā al-Kamh, (6) Zaḥārik. The capital is Zaḥārik (41,741 inhabitants in 1917, against 35,700 in 1897).

The present area of the *mudiriya* of al-Sharqiya corresponds roughly to the following pagarchies of the Byzantine epoch, divisions retained by the Arabs under the name of *kūra*: Buhaste (Baḡṭa), Arabia (Farūbiya) and Pharbaithos (Farbait). The Delta was at this time divided into three large divisions not administrative in character, which are mentioned by the historians: the Hawf Ḥarbi, situated to the west of the Rosetta arm, the Baḡṭa al-Rif applied to the territory lying between this arm and that of Damietta. All the land which extended to the east of the latter district was called the Hawf Sharqi and it is probably this name which gave rise to that of al-Sharqiya. The Hawf Sharqi followed the two Augustamnica. It included 11 or 12 *kūra*'s and 529 villages.

At the time of the division into provinces under the Fāṭimids the Hawf Sharqi included those of al-Sharqiya, of al-Murtāhiya, of al-Dakahlīya and of al-Abwāniya. Thus delimited, the province of al-Sharqiya, which extended farther than at the present time in the direction of Cairo, still included 452 towns and villages (the three other provinces together accounted for 165). It brought annually to the Treasury 694,121 dinars. The southern part of al-Sharqiya was separated from it in 715 (1315) at the time of the survey of Malik Nāḡir Muḥammad, and received the name of al-Kalyūbiya. From this time the province of Sharqiya must have shown little variation. Thus reduced it contained, according to Ibn al-Djān, 380 towns and villages and the taxes were valued at 1,411,875 dinars. The capital was Bilbais in the Middle Ages and it was also in this town that the Turkish *Kāhif* resides. It was only during the nineteenth century that Zaḥārik supplanted Bilbais.

This eastern region of lower Egypt plays a considerable rôle in the history of Muslim Egypt, for if we except the Fāṭimid conquest, which came from the north of Africa, the Crusaders' attack on Damietta and in modern times the French occupation by Bonaparte, all the invaders of Egypt entered the country by this route. The anonymous military memoir called the *Devise des chemins de Babiloine*, which is simply an exposition of the different plans of attack upon

Cairo, shows in the first place the itinerary of an army setting out from Ghazza with the object of marching on the capital through the province of al-Sharḥiya (Sassarquile).

This region offered the difficulty to the owners of Egypt for the time being that it had no natural defences. The Byzantines had made up for this by stationing several garrisons in the Augustamnica, the sites of which we know from references in the accounts of the Arab conquest. The Arabs, avoiding the fortresses in the neighbourhood of Rhinocolura (al-'Arish), advanced on Pelusa (al-Faramā), near which they were held up for two months. The defences of the region of Phasbalthos (Farhaiṭ) and Bubaste (Baṣṣa) did not inconvenience the conquerors, who, turning their route southwards and following the valley of the Wādī Tannīlāt, attacked Phelbes (Bilbais), which only held out for a month.

If we review the military events of which the province of al-Sharḥiya was the scene, it will be seen that the main resistance was offered by the successive defenders of Egypt round the towns of Bilbais. As early as the end of the period of conquest, we find — in obedience to some instinct for security — the Djūdhām in the army of 'Amr b. al-'Āṣ, given some towns in this district, notably Farhaiṭ and Baṣṣa, as fiefs (*ḥiṣṣ*). A century later portions of the tribe of Kaïs were settled in Bilbais, then sparsely populated, who had also the task of organising the caravans for Kūlaum intended to provision the Hijāz. We further know that Bilbais was in time provided with another chain of fortresses (Maḥṣat, *Khifāt*, publ. in *M. I.F.A.O.*, iii, p. 188; *Sulūk*, transl. Blochet, p. 258).

It was by this route that Marwān I came from Aila to Fustāt to regain Egypt, which had been stirred into rebellion by the partisans of Ibn al-Zuhair. At a later date Ḥawf Sharḥī was the scene of the Coptic rebellions, which soaked the Delta in blood in the second century A.H., especially towards its end: — in 107 (725) at Natī, Tumaiy, Farhaiṭ and Tannīthiya; — in 178 (794) in 186 (802) and on this occasion the tribe of Kaïs joined the Copts, who were overcome at Djubb 'Umaira, halfway between Fustāt and Bilbais. In 191—192 (807—808) a new rising was put down; in 214 (829) a series of rebellions began which lasted with varying success till the arrival of the Caliph Ma'mūn in 217 (832). In 469 (1076) the Salḡūḡ Emir Atīz, who had reached the outskirts of Cairo, suffered a disastrous defeat at the hands of Badr al-Djannālī; the chronicles do not give the exact site of the battle. In 558 (1163) the Franks under Amāsur I occupied Bilbais; next year near this town Shāwar, coming from Syria, defeated Dīrghām and later Shīrkūh was besieged in Bilbais by Shāwar, helped by the Franks. In the course of Salāḍīn's wars with the Crusaders, the latter, on at least one occasion, attempted a diversion on Fāḡūs. The Sultān of Egypt, who did not fear an attack by the north of al-Sharḥiya, but was more anxious about the Franks of the principality of Montréal, placed advanced lines of defence at Kūlaum and at al-Sawās (Suez) and even farther to the east at Sadr, where his fortress had just been identified (Barthaux and Wiet, *Découverte d'une forteresse de Salāḍīn*, Syria, iii, 44—65, 145—152). We also know from official documents that Kaḥat Sadr was administered by the governor of al-Sharḥiya. When in 591 (1195) Malik

'Āḍīl and Malik Afḡāl resolved to dethrone Malik 'Āḍī, the plot was begun with a siege of Bilbais. It was in the same region that the last serious rising of the Arabs in Egypt ended (651 = 1253). Their leader, Hīṣū al-Dīn Tha'lab, was taken at Bilbais and gallows were erected from here to Cairo. Lastly it was by this, the natural route of invasion from the east, that the Ottoman army reached Cairo in 923 (1517).

This province was of course traversed by the post route which connected the capital with Ghazza. The following are the stages in Egypt as given by Ibn Khordādbeh:

Fustāt-Bilbais	24 miles
Bilbais-Masḡidd Kuḡḡ'a	21 "
Masḡidd Kuḡḡ'a-Kāṣira (var. Ghāḡira, at any rate taken from Fāḡūs	18 "
Kāṣira-Djardīr	24 "
Djardīr-Faramā	30 "

In the Mamlūk period, the post stages for the same stretch were: Siryākūs (which took the place of al-'Uḡḡah, which was too far from Cairo), Bīr al-Baldā', Bilbais, al-Sa'ūdiyya, al-Khazrūba, al-Khaṭāra, Kaḥr al-Wā'illī, al-Sālihiyya, Bīr 'Aḡr (or Bīr Ghazī), Halwa, al-Ghurābi and Kaṭyā (cf. also *Devisé des chemins de Babiloine* and the analysis in Schefer, in *Arch. Or. lat.*, ii, 94—95).

It may be also mentioned that there were doves-cotes for carrier-pigeons at Bilbais, al-Sālihiyya and Kaṭyā (Gaudesroy-Demonbynes, *La Syrie*, p. 253).

The pilgrim route also passed through this province, in the south of it; it was only abandoned for about two centuries between 450 and 660 A.H. Some stages are difficult to determine, for the names have become much corrupted by the copyists of manuscripts; the known points are Bīrkat al-Djubb (= Djubb 'Umaira mentioned above), 'Adḡrād and Kūlzūm (cf. the article in *Syria*, iii, 148—149).

In conclusion we may mention that Trajan's canal passed through the province of Sharḥiyya; it was renovated by order of the Caliph 'Umar, whence its name of Canal of the Commander of the Faithful; the Caliph Maḡḡūr had it partly filled in.

AL-SHARRĀṬ (the manufacturer of string from palm-fibre, *sharrif*). **ABD ALLĀH MUḤAMMAD B. MUḤAMMAD B. 'AḤMAD**, son of a *muḡḡāḡid*, slain in battle with the Spaniards at al-Ma'mūra (al-Mahdiyya = San Miguel de Ultramar) was born at Fās in 1035 (1625/1626) and died there in 1109 (1697) after having adopted Sūfism. He is credited with the authorship of a hagiographical collection, but this has sometimes been disputed by his compatriots; it is entitled: *al-Rawḍ al-'Afīr al-Anḡūr bi-Aḥḡār al-Sāliḡīn min Aḡl Fās*. According to al-Kaṭṭānī it was really the work of Muḡḡammad al-'Arāḡī al-Kāḡīrī. In it among the biographies are a synopsis of the *manāḡib* of 99

saints of Fās dating for the most part from the 17th and 18th centuries. They are all included again in the *Salwat al-Anfās*. There is a manuscript of this work dated 1203/1788 in the Bibliothèque Générale de Rabat, No. 389.

Bibliography: al-Kādirī, *Nashr al-Mathānī*, lith. Fās, 1310 A. H., II, p. 161; al-Kattānī, *Salwat al-Anfās*, lith. Fās, 1316 A. H., I, p. 8 and II, p. 347; René Basset, *Recherches bibliographiques*, . . . , p. 32, No. 86; E. Lévi-Provençal, *Les Historiens des Chorfā*, Paris 1922, p. 280—283. (E. LÉVI-PROVENÇAL.)

SHARṬ (A. pl. *sharṭ*, *sharṭ*), condition. It is defined in different ways. Al-Uhazālī for example says (*K. al-Mustafī*, Bulāq, 1325, II, 180) *sharṭ* is that with the non-existence of which the conditional (*maḥrūf*) does not exist, with the existence of which however the conditional must not exist also, in contrast to the cause (*illa*) the existence of which demands the existence of the caused. The non-existence of the condition (*sharṭ*) demands the non-existence of the conditional (*maḥrūf*), but its existence does not demand the existence of the conditional (e. g. place and life). — As a term in the *Uṣūl* the Hanafīs define *sharṭ* as that upon which a matter is based, but which is neither within it (in contrast to *rukn*) nor leaves a trace in it (in contrast to the *illa*). Thus for example in theft the minimum value of the object stolen is a *sharṭ*, on the other hand the removal of the object from its place of keeping is a *rukn* (cf. *Ḥanāfi*).

In the *Furū* the word has a more specialised meaning: condition = reservation in an agreement. Thus for example certain conditions make a contract to purchase invalid. On this question see the section on the *bayʿ* in the *Fikḥ*-books. Of special importance among these is the right to withdraw (*ḥayʿ al-sharṭ*) within an agreed period after the conclusion of the purchase (usually three days; cf. van den Berg, *De contractu "de ut des"*, Leiden, Jur. Diss. 1868).

From the use of the word *sharṭ* for reservation in an agreement, it came to be applied to the document itself. At quite an early date a special branch of study the *ilm al-sharṭ* was formed which dealt with the correct drafting of documents. There are many works on the subject of the third century entitled *Kitāb al-Sharṭ* or *Kitāb al-Waḥḍ*. The oldest representatives of the subject are al-Shāfiʿī, al-Muzani, al-Khassāf, al-Tahāwī (cf. *Fihrist*, p. 206 sqq., Goldziher, *Mus. Studien*, II, 233). One such work is printed in al-Sarakhsī. *K. al-Mahṣūf*, Miṣr 1331, xxx, 167—208.

In grammar *sharṭ* means the conditional sentence, *ḥawāḍ al-sharṭ* the apodosis, and *ḥarf al-sharṭ* the conditional conjunction.

Bibliography: Besides the works above mentioned see the various dictionaries and works on *Uṣūl* such as Sadr al-Dīn, *Tawḍīḥ*, ed. Taḥṣīn, Kasan 1883, p. 375 sq., 398 sqq.; also: *Dictionary of the technical terms* II, 752 sqq.; Djurdjani, *Dictionnaire*, ed. Flügel, Leipzig 1845, p. 131; J. Obermann, *Der philosophische und religiöse Subjektivismus Ghazālī*, Wien 1921, p. 68 sqq. (HYEVENING)

[It is worth mentioning that *Sharṭ* among the Arabic speaking population of the Western Maghrib has acquired the sense of legal agreement between the head of a village and the schoolmaster. *Mahṣūf* means the schoolmaster]. [EDITORIAL]

SHASH. [See *TASHKENT*].

SHATĀ, a place celebrated in the Middle Ages, situated a few miles from Damietta, on the Western shore of the Lake of Tinnīs, now called Lake Manzala.

This town existed before the Arab period, since it is mentioned as the see of the bishop (Sāra). There is no reason for giving credence to the romantic story of the pseudo-Wazīdī, which gives as the founder of this town a certain Shatā b. al-Hāmuk (var. al-Hāmīrak), a relative of the famous Muḥawwīs. This Shatā is presented to us as a deserter from the garrison of Damietta who helped to secure the possession of Burullus, Damira and Ashmūn Tanḥ for the Muslim army and who was killed at the capture of Tinnīs, on Shaʿbān 15, 21. Every year at this date, it is the custom to celebrate the anniversary of his death and to this origin the writers attribute the pilgrimage which still took place at Shatā in the time of Ibn Baṭṭūṭa.

To guard against the maritime attacks of the Greeks the Arabs stationed regiments of troops on certain parts on the coast, and Shatā was amongst the number. This port became in the Middle Ages a very active industrial centre, in this region sharing with Damietta, Dabīk and Tinnīs, the manufacture of valuable materials. Each of these towns probably manufactured a special article since the materials which they exported bore a name indicative of their place of origin. Travellers and geographers never tire of praising the goods of Shatā called *shafawī*. Very probably there was at this place in addition to the private industry a government workshop, a *Dār al-Ṭirāz*, analogous to those of Alexandria and Tinnīs. The historian of Mecca, Fākihī, has preserved the text of an inscription embroidered on a cover intended for the Kaʿba. It was the Caliph Ḥārūn al-Rashīd who ordered it to be made in the year 191 at the ṭirāz of Shatā.

We do not know the part which Shatā played in the two occupations of Damietta by the Franks. Certain writers have tried to place at the spot the site of the encampment of Jean de Brienne, but this view has been disputed. Between the two crusades, Tinnīs had been razed to the ground by order of Malik Kāmil in the year 624, and as military reasons had probably induced this destruction, Shatā perhaps suffered the same fate.

But while the ruins of the former have survived under the name of Tell Tinnīs, a miserable hamlet of fishers now bears the name of Shaikh Shatā. Their huts surround the mosque in which the relics of the hero of the Arab conquest, who became the Shaikh Shatā, are venerated. But the town is no longer a port on Lake Manzala; the waters have receded to a distance of 5 or 6 hundred yards. The depth of the lake in this district is insignificant, and the inhabitants use flat-bottomed boats for navigation.

Bibliography: Bakrī, *Muʿjam*, II, 811; *Lisān al-ʿArab*, xix, 162; the bibliography, given in J. Maspero and G. Wiet, *Matériaux, M. I. F. A. O.*, xxxvi, 112—113; Makrīn, *Ḥifāṭ*, in *M. I. F. A. O.*, IV, 80—82. (G. WIET)

SHATĪ (A. pl. *shatāṭ* or *shatāṭ*) *shatāṭ* a technical term in mysticism, signifying an "ecstatic phrase", or more exactly a "divinely inspired utterance".

Etymology: This term, which was probably a Syrian loan-word (*shatāṭ* = expands) is derived

from the root *ḡ-ṣ-ḡ* in Arabic: "disturb, agitate" (*miḡṣṣa* = place where flour is ground). Adopted in the tenth century A. D. by the Sūfīs it is applied to the perturbation of the consciousness, into which divine grace suddenly penetrates, then to the "divinely inspired utterance" which this supernatural commotion extracts from the subject.

The Muslim mystics are unanimous in seeing in the *ḡṣṣ*, following preparatory anagogic graces (*ḡhaṣarāt*, *ṣawā'id*, *muḡāṣ*), the sign of a perfect purification reaching the soul of the mystic. But the majority of theorists — at first from scruples of orthodoxy, later from monistic conviction — consider that this state is transitory and is only a stage before the definitive annihilation of personality in the divine silence. Some, notably Muḡaibī and Ḥallādj [q. v.], on the other hand consider that these divine touches transfigure the faltering voice of the lover, give him an intermittent divine investiture, which will make him consent for ever to the dialogue of love (*muḡāḍaṭha*) "between Thee and me".

The first "ecstatic sayings" were incorporated by tradition in the classical collections of *Ḥadīth*, not as utterances of the mystics but as "words of God" (*Ḥadīth ʿūdī*, q. v.).

From the third century A. D. Muslim orthodoxy excluded this source of traditions and the *ḡṣṣ* circulate under the names of those responsible for uttering them. Here we give the most famous, arranged according to two tendencies, the one class referring rather to an immediate psychological commotion, the other which betrays a scholarly reconstruction, or at least a retrospection influenced by the prejudices of the school, sometimes showing an insolent and cynical familiarity.

a. Abū Yazīd al-Bisṭāmī (d. 261 = 875): "Praise be to Me! (*Subḡāni*). My intercession is greater than that of Muḡammad! Thou obeyest me no longer than I obey Thee. Adam sold his God for a mouthful. Thy Paradise is only a children's game". — Ḥallādj (d. 309 = 922): "I am the Truth (*an-nā-ḡaṣṣ*). It is Thou, or it is I! That would make two gods. Ah! for mercy's sake take away this *an-nā* ('it is I') from between us two! I do not desire thee for my joy but for my hurt. Pardon them and do not pardon me. Prayer for the perfect lover becomes impiety". — Abū Bakr Naṣṣādj Ṭūsī (d. 487 = 1094): "Guide of those who have gone astray, lead me still further astray". — Aḥmad Ghazālī (d. 517 = 1123): "God alone understands God. There is no master more persuasive than Desire! The call for the union is the essence of the beloved; the call for separation is the essence of the lover whether We torture him with desire, whether We kill him by severing him from contemplation".

Ibn Sahl Ṭasṭanī (d. 283 = 896): "I am the Proof of God, in face of the saints of my time. Divine omnipotence has a secret; if it is revealed there is an end of the prophetic mission." — Al-Wāsiṭī (d. 320 = 932): "Ritual acts are only impurities." — Al-Shihīdī (d. 334 = 945): "I am the diacritical point under the letter *ḡā*! In Paradise there is no person except God. Mysticism is only polytheism, since it is engaged in purifying the heart of that which is not God, when God alone is." — Khorkānī (d. 426 = 1034): "I am only two years younger than God. God is my instant (my unity of psychological time)". — Ibn Abī 'l-Khaṣīr (d. 440 = 1048): "Under my robe there is only God". — Ghazālī, the elder (d. 505 = 1111): "There is

nothing more in the possible than in the created". — Ibn 'Arabi (d. 638 = 1240): "The slave is the lord and the Lord is the slave; ah! how can one tell which of the two is the debtor?" — 'Alī Ḥarīrī (d. 645 = 1247): "The perfect poor man has no longer a heart, nor a lord." — Ibn Saḥīn (d. 668 = 1269): "There is nothing but God" (*lā ilā ḡāṣṣ*, the *ḡṣṣ* of his order). — 'Alī al-Tiḡmānī (d. 690 = 1291): "The whole *ḡurṣ* is simply polytheism."

Whole monographs have been devoted to elucidating, criticising or justifying one or other of these ecstatic utterances. Dürī and Sarraḡj were the first to perceive their theological importance, and we possess in three books by Rūḡabāḡn Baklī (d. 606 = 1209) a full treatise on the question.

Bibliography: Sarraḡj, *Lumā'*, ed. Nicholson, London 1914, p. 375—409 (with an extract from the commentary of Dūnāid on the *ḡṣṣ* of Bisṭāmī, probably from Dürī); Kharghabī, *Tahḡīb*, MS. Berlin, Sprenger 832, f. 230^a; Sulamī, *ḡhalasāt*, MS. Cairo vii. 228; Baklī, *ḡṣṣ*, MS. Shabīb 'Alī Pasha 1342 (extr. in Ḥallādj, *Kiṣāḡ al-Tawṣīṭ*, ed. Massignon, Paris 1913); Kawrānī, *Maṣlak ḡṣṣ* *fi ḡṣṣ* *ḡṣṣ al-walī*, MS. Stambul, Walī al-Dīn 1815 (cf. MS. 1821 § ix. of the same library); Dürī Shikḡī, *ḡṣṣ* (alias: *ḡṣṣ al-ḡṣṣ*), written in 1062 (1652), lith. in India; L. Massignon, "Anā' ḡṣṣ" (in "Der Islam", 1912, lii. 248—257); do. "Passion d'al ḡṣṣ", Paris 1922, p. 713, 935.

On the *Ḥadīth ʿūdī* cf. Rāḡhib paṣṡā, *Safina*, Cairo 1282, p. 162; L. Massignon, *Essai sur les origines de la mystique musulmane*, Paris 1922, p. 100—108; and S. Zwemer, in *Moslem World*, 1922, p. 263—275. (L. MASSIGNON)

SHĀṬIBA (adjective *ḡṣṣ*), the Arab name of Játiva, the *Sutabis* of the Romans, a town in the East of Spain, in the province of Valencia, 35 miles to the South West of this last town, at an altitude of 500 feet. Játiva, which has at the present time about 12,000 inhabitants is built on a splendid site at the foot of Mount Bernisa on whose steep slopes the Muslim city was built. The latter was celebrated in the middle ages for its manufacture of paper which was sent not only throughout the whole of Spain but also as far as Egypt. This paper can still be recognised in old Arab manuscripts, on account of the watermarks bearing the name of its place of origin and in Morocco the name *ḡṣṣ* "Játiva paper" is still given to a kind of coarse grained paper. There still remained at Játiva at the time of the Muslim occupation remains of the Roman occupation. Al-Maḡḡarī quotes the verses of a poet called Abū 'Umar al-Buryānī about an ancient statue which was to be seen in his day in the town. On account of its strategic position of the first order, Játiva was one of the most important fortresses of the whole of Andalusia; from the height of its rock it dominated and guarded the whole of the very rich and fertile plain which stretched below it. There still exists at the present time remains of the wall and of the *ḡṣṣ* of the Muslim Játiva of very great archaeological interest, in spite of alterations and unfortunate restorations to which it has been subjected since the "reconquista". Abū 'l-Fidā' has preserved the names of three pleasure resorts near Játiva: al-Baḡḡā', al-Ghaḡḡir and al-'Ain al-Kaḡḡra.

Játiva is too near to Valencia not to have shared the latter's political history. In the Muslim period it was the second town in the district of Valencia, and its population was without doubt larger in those days than at the present time. Mention is hardly made of it during the Umayyad caliphate of Spain, and its history commences, when, with Valencia, it formed a part of the independent principality founded at the end of the 10th century A.D. by the grandson of the celebrated *Ḥaǧǧī* al-Manǧar Ibn Abī 'Amir, 'Abd al-'Azīz, after the reign of the two "Slavs" (see article *ṢAḤĀLIR*) Muḥdarak and Muǧaffar. When the king of Toledo, al-Kādir, with the help of the Christian sovereign of Castile, took possession of the kingdom of Valencia, Ibn Maǧǧar, who was at that time governor of Játiva, refused to come in person to Valencia to pay homage to his new master. An expedition was therefore decided upon against the town. But it miscarried; the Hūdīd prince al-Mundhir b. al-Muṣṭafī who reigned over Lerida, Denia and Tortosa, came to the rescue of Ibn Maǧǧar and took possession of Játiva for some time. The town was also taken by the troops of the Almoravid Sultān Yūsuf b. Tāshīn at the time of the expedition, which was crowned by the victory of Zallāǧa; Játiva was finally conquered in 1239—1240 by the king of Aragon Jaime I and the last Muslims were driven out of the town at the end of the year 1247.

AL-ŠAṬĪBĪ, ABU MUḤAMMAD AL-ḲĀSIM B. FARRUK B. KHALAF B. AHMAD AL-RU'AINĪ, generally called Abu 'l-Ḳāsim al-Šaṭībī, was born towards the end of the year 538 A.H. (1144 A.D.) in Xativa (Šaṭība; q. v.). In his native town he studied under Abū 'Alī al-Ḥaǧǧī Muḥammad b. 'Alī b. Muḥammad al-Nafasī, known as Ibn al-Layūh (Leo) and according to Ibn Khallikān he was actually preacher in the mosque of his native town in spite of his youth. Later he removed to Valencia, where he studied under Abū 'l-Ḥasan 'Alī b. Muḥammad b. Hudhail and others enumerated by his biographers the reading of the Qur'ān and Tradition. On his way to perform the pilgrimage to Mecca he availed himself in Alexandria of the opportunity of hearing the teaching of Abū Tahir Ahmad b. Muḥammad al-Silafī and upon his return from the pilgrimage in 572 (1175) he found a patron in the Ḳāǧī 'l-Faǧǧī, who appointed him head-teacher in the Faǧǧīya Madrasa which he had founded. In 589 (1193) he visited Sultān Salāḥ al-Dīn (Saladin) in Jerusalem after the conquest of the city from the Christians. He returned to his post in the Faǧǧīya Madrasa and taught there till the time of his death which occurred on Sunday the 28th of Djuḥada II, 590 (June 10, 1194) at the age of 52 years. He was buried the following day in the smaller Ḳarafa cemetery in the

part which the Ḳāǧī 'l-Faǧǧī had given; and Ibn Khallikān tells us that he had visited the grave of al-Šaṭībī several times. He was a man of very humble and devout character and during his last illness, when he was suffering very much, he always replied in answer to enquiries that he was recovering. He was renowned for his extensive learning in the sciences concerned with the reading and interpretation of the Qur'ān and his reputation as an author rests upon his two didactic poems, or better rhymed prose, dealing with these matters: 1) A poem rhyming upon the letter *l* consisting of 1173 verses, which the author entitled *Ḥīr al-ʿAmān ma-Waǧǧh al-Tahānī*, but which is generally known by the name of *al-Šaṭībīya* after its author. It is a verification of the work on the same subject by 'Uṣmān b. Sa'īd Abū 'Amr al-Dānī (born 371, died 441 A.H.) entitled *al-Tawīr*. As Yāqūt in the *ṭahīd* says that the verses of al-Šaṭībī are awkward and difficult to understand, it is no wonder that they are not easy for us and that the poem has been the subject of numerous commentaries. The author after the introduction begins with the explanation of the correct way of reading the letters when unvocalised, when to read a word *mahrūr* or *mamḍūl*, how to pronounce the Hamza especially if two should occur in one word; then follow chapters on *Tamwīn*, *Imāla* etc., till at last he comes to the chapters of the Qur'ān indicating the various readings of the seven "Readers". To understand the seemingly endless rhyming is only possible with a commentary, or by comparison with books in prose dealing with the same subject. The great popularity of the book is undoubtedly due to two reasons, first a student according to the old method could more easily learn the whole thing by heart, whether he understood it or not; but here the second reason for its popularity came in, as this gave the teacher ample scope for displaying his own learning in commenting on the obscure verses. The poem is found in many manuscripts in most libraries of Arabic literature and there exists a printed edition (Cairo 1328 A.H.) which contains also the second poem of al-Šaṭībī. As regards the commentaries, these are very numerous, the best is said to be that by Burḥān al-Dīn Ibrāhīm b. 'Umar al-Djāhart who died in 732 (1332) and who finished his work in 691 A.H.; this commentary was amplified by Shams al-Dīn Ahmad b. Ismā'īl al-Kawrānī who died 893 A.H. Another commentary is by a pupil of al-Šaṭībī, Abū 'l-Ḥasan 'Alī b. Muḥammad al-Sakhāwī, who died in 643 A.H. This was the first commentary written upon the poem and has the title *al-Faḥ al-Waǧǧh fī Šarḥ al-Ḳāǧī*; a third commentary is by Abū Shāma 'Abd al-Rahmān b. Ismā'īl who died 665 and called his commentary *Ḥīr al-Ma'ān min Ḥīr al-ʿAmān*, of which manuscripts are in several libraries. To enumerate more commentaries would take quite a page, but the existence of such an abundant literature shows that the poem was after the taste of the following generations. 2) A poem rhyming upon the letter *r* in about 300 verses which has the title *ʿAṭat Aṭrāḥ al-Ḳaṭāʿ fī Amā al-Maǧāʿid*, also on the reading of the Qur'ān, but this poem is more concerned with reading the holy writ elegantly than with the variants as was the case with the poem rhyming upon *l*. It is, like the other poem, not an original work, but a verification of a book on the same subject by al-Dānī (see above) which

has the title *al-Mukāṣṣa*. This poem is composed in the same obscure language as the *ḥīc al-ḥādī* and has found numerous commentators for the same reasons and the earliest commentators are the same as for the other poem, namely al-Ḥāḥḥ and al-Sakḥāwī; the first called his commentary *Ḥijāzīlāt* *Asāḥ al-Murāḡī*, while the second named his work: *al-Waṣṭā ilā Kaṣṣ al-Aḥḥa*. Both these poems have in the eyes of the pious another merit i.e. that they are claims against all kinds of evil influences. 3) A poem of about 500 verses rhyming upon the letter *m*, which is a verification of the work *al-Tamhīd* by Ibn 'Abd al-Barr Abū 'Umar Yūsuf b. 'Abd Allāh al-Kurṭubī on the law (*Fikḥ*) as found in the Traditions. This poem I have not seen, but according to Yāqūt it is also very obscure. Fragments of other religious poems of al-Shāṭibī are occasionally cited in anthologies, but all are of little literary value. — The name of al-Shāṭibī's father is explained as meaning in Spanish "iron" and we must read *Ferro*, because at that time the word was pronounced so and not *ferro* as in modern Spanish. There are rather many errors in all biographies of the author consulted as regards the proper names, but I hope I have been able to correct them.

(F. KERNKOW)

SHAṬRANDĪ, the game of chess. The game of chess was known in Greek antiquity when Palamedes was said to have invented it. From there it spread through various countries. The Muslims say they got it from India, but the stories on this subject are legendary, and it is more probable that it came to them from ancient Persia.

In the middle ages there were several games in the East played with a board, notably *ward* (trick-track, backgammon) and chess (*shaṭrandī*); the pieces and the rules of the game have varied in course of time. The words *shaṭrandī* and *trick-track* seem to be Indian (Sanskrit) in origin; as to the word chess itself, it has been derived from the Persian *šāh* *shāh*, 'O king', said when the king is threatened; but this etymology is not very satisfactory.

The legends relating to the origin of chess have a Pythagorean character. According to Mas'ūdī, learned kings of India invented the arts and discovered the principles of the sciences. The first was Brahman, the second Bāhūd under whom *ward* was invented, the third Dāḥabīl who is connected with the book of *Kāṭil wa-Dinnah*, the fourth Rāḥī and it is in his reign that chess was invented, even at this time there was a treatise on the game entitled *Tarāḥ al-ḡiyāḥ* which has remained popular among the Hindus. The pieces were figures of men and animals and were thought to be representations of the signs of the zodiac. The game was not yet fixed in the time of Mas'ūdī (10th century). He knows six main forms of the game: two squares with 64 or 100 squares, one oblong, two round, one attributed to the Byzantines and the other called *sūdāṭī*; the latter invented in the time of the author had twelve

pieces played with six on each side and representing the different organs of the human body. Even then there were treatises on chess and celebrated players.

Al-Bīrūnī became acquainted with the several forms of this game in India. That which he describes as the commonest is a regular game of chance and played with dice. It is the dice that settle the movements of the pieces and not the skill of the player. Thus 1 and 3 move the king or the pawn, 2 moves the *ruḥ*; 3 the knight whose move is already what it now is, the 6 and 4 move the elephant which goes in straight lines and which among the Arabs had already been replaced by the castle. The pieces had values which were counted up and the total decided the victory.

Firdawsī has written charming pages on chess and describes a game in poetical language. He puts the king in the centre with the vizier who plays the part of our queen; on either side of them are two elephants, next dromedaries, then knights and lastly two *ruḥ*. This *ruḥ* is an animal; it is the same as the fabulous bird mentioned in the *Arabian Nights* and it is from it we got the term 'rook'. Another variety, mentioned by the same poet, is still nearer our modern game; this board has 64 squares; in the middle is the king with his minister, on either side are elephants, horses and *ruḥ*, in front are the foot-soldiers, our pawns.

The game of chess has an interest in arithmetic, in which it has given rise to a question of some importance that of the summation of the successive powers of 2. The story is well known in which an inventor asked a king as his reward, a grain of wheat on the first square, 2 on the second, 4 on the third and so on, doubling each time. The result is a number in 20 figures beyond possibility of fulfilment. This legend is given by al-Safadi; al-Bīrūnī in trying to shorten the calculation was led to interesting observations.

Chess was a noble game in the middle ages both in east and west. During the Crusades it was played in both camps. Hārūn al-Rāḥīd sent a chess-board as a present to Charlemagne. The Old Man of the Mountains presented a very handsome one to St. Louis. 'Umar al-Khoṣṣān has taken a beautiful image of fatalism from the game:

"Tis all a Chequer-board of Nights and Days,
Where Destiny with Men for Pawns plays.
Hither and thither moves and mates and slays,
And one by one back in the Closet lays".

(H. CARRÉ DE VAUX)

to fight but fled to Syria in the course of the month of Ramaḍān (August).

He went to Damascus to the court of Nūr al-Dīn and was given an army by him to help him to return to power: Shāwar in his turn promised to hand over one third of the revenues of Egypt, to pay the expenses of maintaining the army. The troops sent by Nūr al-Dīn, who had entrusted the command to Asad al-Dīn Shīrkūh marched on Cairo and inflicted a serious defeat near Tell Baḡa on the unreliable soldiers that Dirghām had been able to collect. On entering the capital in Jumādā II, 559 (May, 1164), Shāwar resumed the vicariate. Difficulties immediately broke out between Shīrkūh and Shāwar: some accuse the former of treachery while others accuse Shāwar of not fulfilling his engagements to Nūr al-Dīn. In any case after some skirmishes which jeopardised his authority, Shāwar appealed for help to Amaury, pointing out to the Franks the danger of allowing their enemy Nūr al-Dīn to establish himself in Egypt. The Franks, whom Shāwar had promised to indemnify, accepted the terms offered with pleasure in the hope of conquering Egypt for themselves. Shīrkūh, besieged in Billaia, when his provisions were almost exhausted, accepted the terms offered him to return to Syria. The Franks on their side, impressed by Nūr al-Dīn's capture of Hama were not long in leaving the country.

In 562 (1167) Egypt was again invaded by Shīrkūh, who defeated Shāwar, again allied with the Franks at Bābāla in Middle Egypt near Ashmūnān (Jumādā II 25, 562 = April 18, 1167). This defeat did not lead to a definite decision and Shāwar was able to rally his troops and besiege Shīrkūh in Alexandria. On capturing this town he succeeded in getting Shīrkūh to leave the country once more. But the treaty with the Franks was onerous for the Fātimids, who besides paying an annual tribute, had to allow certain points in Cairo to be occupied by troops and to have a kind of High Commissioner (*shihna*) quartered there.

In 564 (1168) Shīrkūh was sent into Egypt for the third time by Nūr al-Dīn with the avowed object of driving out the Franks, whose demands had provoked a rupture with Shāwar. Besieged by them in the two towns of Cairo and Fustāt, Shāwar set fire to this area which he could no longer defend. He got out of his difficulty once more by negotiation and purchased the departure of the Franks. But his own position was becoming precarious, the policy of balancing between the Franks and Syrians being no longer possible; besides, the Caliph al-'Adīl had in the meanwhile made a personal appeal to Nūr al-Dīn. Shīrkūh began by calling upon Shāwar to fulfil the terms of the treaty concluded between them and, in view of his shuffling, his death was decided upon by Shīrkūh's entourage notably by his nephew Salāḍīn. Shāwar was drawn into an ambush near the tomb of the Imām al-Shāfi' and assassinated by Salāḍīn and the officers of his suite on Rabi' II 17, 564 (Jan. 18, 1169).

He was, strictly speaking, the last statesman of the Fātimid dynasty, the decline of which was signalled by the rise of Shīrkūh. Shāwar, although praised by the poet 'Umāra of Yemen, has left the reputation of being crafty and cruel; a Christian writer sums him up as very able, experienced in wars, tricks, plots and stratagems.

(G. WIEB)

AL-SHAWBAK, a fortress of the Crusaders east of the Arabs in the mountains of al-Sharā. It was built in 509 (1115) by Baldwin I of Jerusalem in 18 days in Syria *Saba* and was called *Mont Regalis* (Montreal, also *le Crac de Montréal* to distinguish it from *Crac des Moabites*, i. e. Kerak [q. v.] and *Crac des Chevaliers*, i. e. Hama al-Akrād [q. v.]) by the Franks. The site of the fortress was, as William of Tyre (XI. 26; Migne, *Patrol. Lat.*, ccl., col. 514 *seqq.*) points out, very suitable for the building of an impregnable fortress. It is therefore not improbable that, as Yāqūt (III. 332) indicates, there had already been a settlement here in ancient times (according to R. Hartmann, *Z.D.P.F.*, 1913, 188, sub A 28 the ancient *Samay*). The fortress commanded the desert road from Damascus to the Hijāz and Egypt; its possession was therefore of extraordinary importance for both Arabs and Crusaders. The town and the gardens west of it were supplied with water from two springs; its apricots were famous and were exported to Egypt (Abū 'I-Fidā', p. 247) and its groves of sugar-cane were also noted (de Mas Latrie, *Arch. Venet.*, xxv. 479).

Romanus de Podio (*Romain du Puy*) is the first dominus regionis illius quae est trans Jordanem mentioned. He lost his fief in 1132, which consisted of the land of Moab and al-Shawbak, and instead the former royal cup-bearer received *Paganus* (*Pagen*), which is already called *Paganus Montis Regalis* in a document of 1126 (Rohricht, *Regesta regni Hierosolym.*, p. 28, N^o 115), the *terra trans Jordanem*. In 1142 he built the fortress of al-Karak which henceforth was the capital of this feudal state. He was succeeded by his nephew Mauricius (to whom we have references in 1152 and 1153); then came Philippe de Milly who received those lands in exchange for Nābulus (1161) but when he later became Grand Master of the Templars (1169) gave them up in favour of his daughter Stephanie. After losing her two first husbands, Humphrey of Toron and Milo de Plancy, while still young (1174), the latter married the valiant Reynald de Chatillon, who by his vigorous character seemed particularly fitted to defend from the south the kingdom of Jerusalem, then seriously threatened by the attacks of Salāḥ al-Dīn. But his challenging and faithless attitude to the Muslims irritated the Sultān and brought about the downfall of the kingdom. How anxious Salāḥ al-Dīn was to gain the two fortresses of al-Karak and al-Shawbak is evident from his frequent campaigns against them (in

1171, 1172/1173, 1182, 1183 and 1184) on which however he had to be content with laying waste the country round them, as he was not able to take them. Indeed Raynald even had the boldness to take a fleet and make an advance on Mecca and Medina. Even the eastern frontier of Egypt was threatened by his raids and to defend it Salāh al-Dīn fortified Kāṣim, al-Sawā (Suez) and the citadel of Sadr (Kālāt Khudī) in the Dimi desert (Barthoux and Wiet in *Syrie*, 1922, iii. 44–63, 145–152). It was only after Raynald had been taken prisoner in the battle of Hattin (1189) and executed by Salāh al-Dīn that al-Shawbak surrendered to the Arabs. The Franks, however, did not thereupon abandon their claims to *Montreal* so that Salāh al-Dīn only liberated Humphrey IV of Toron, the captured son of Stephanie de Milly, after the conquest of the fortress. In 1190 the latter calls himself *Hemfridus Montis Regalis* (Rohricht, *op. cit.*, p. 186, No. 696); after his death (1195) his sister Isabella of Toron and then her daughter Alice of Armenia inherited these claims. After the treaty of Frederick II with Egypt (1229) these lands came in part back to the Franks; but al-Shawbak is not mentioned in this connection. Afterwards the claim to *Montreal* passed to Alice's younger daughter Maria of Armenia, then to her son Rapiin and finally to his daughter Maria of Antioch.

Actually the fortress seems to have been lost for ever to the Franks in 1189; the majority of the inhabitants like those of al-Karak, remained Christians however (Abu 'l-Fida', *op. cit.*). Among the Emirs, who besieged 'Akkā along with Salāh al-Dīn in 1189 is mentioned a certain Haimdinnarsel (Ibn al-Dīn Arillān?) of al-Karak and al-Shawbak (Radulfus de Diceto, ii. 81). After Salāh al-Dīn's death in 1193, his brother Malik al-Adil became lord of these two fortresses, which had previously been granted to him as a fief. Shortly before his death in 615 (1218) he transferred them to his son al-Malik al-Mu'azzam 'Isā.

In the peace negotiations of Dimyāṭ (1219), the question of the ownership of the two fortresses played a decisive part (Rohricht, *Geich. d. Künig. Friedrichs*, p. 738, 4, 754). Towards the end of his reign (about 1226), al-Mu'azzam seems to have ordered the fortresses of Sāfād, Tibnā and al-Shawbak to be raised to the ground (Ibn Furfur in Rohricht, *op. cit.*, p. 768). But he extended and fortified the town according to 'Umārī (*Musallāh al-Adīr* in Gaudelroy-Demombynes, *La Syrie*, p. 133) to such an extent that it is said to have rivalled Damascus. His son al-Nāṣir Dā'ūd received in exchange for Damascus, which he had to cede to his uncle, Sulṭān Malik al-Nāṣir, the rule over al-Karak, al-Shawbak, al-Baḥrā, al-Salt and the Ghawr territory. The last Ayyūbid ruler of al-Karak, al-Mughthī 'Umār, who fell into the hands of the Mamlūk Baḥars through treachery in 1263, had previously lost al-Shawbak to him, for we have an inscription of Baḥars in a building there of as early as 646 (1248). His successor Kālā'ūs took the town in 1279 (Maḥṣnī, *Hist. des Sult. Maml.*, transl. Quatremère, ii. 77). In 697 (1297/1298) Lādīn had the fortress restored, according to several inscriptions under the supervision of the prince 'Alā al-Dīn Kibritī(?) al-Maḥṣnī. In the Mamlūk period al-Shawbak formed an office (*amāl*) of the province (*mamlaka*) of al-Karak; the names of the governors of al-Karak

and al-Shawbak are known from inscriptions of Qjāfar at Mūsā of the years 717 (1327) and 752 (1353) (de Laynes, *Voyage*, p. 206, No. 21 et.; Brūnow and Domaszewski, *Provincia Arabia*, i. 105). About 1340 'Umārī says of al-Shawbak: "its citadel is now emptied of men, its gate is closed" (R. Hartmann, in *ibid.*, ii. 138). In the country round at this time the Banī 'Ukba, who now dwell around al-Karak, lived in tents (*op. cit.*, p. 137).

The present al-Shubak (Masill also writes al-Shubak) whose greyish walls still surround gardens and terraces which were formerly covered with vines, is a miserable village. In the castle are ruins of baths and other buildings, also (according to Socin-Baedeker) an underground passage, which leads by 375 steps down to a well. The threefold line of defences of the Crusaders' castle mentioned by William of Tyre and Thietmar no longer exist; the existing remains rather date exclusively from the time of Baḥars and Lādīn, to whom belong the foundation inscription running along the outside of the enclosing wall.

(E. HONIGMANN)

AL-SHAWI (*nisha* from Shāwīya; q. v.) ABU 'L-ANBĀS AHMAD MUHAMMAD, one of the most popular saints (*ṣāliḥ*) of Fās, died there on Muharram 26, 1014 = June 15, 1605 and was buried in the *Zāwīya* which still bears his name, in the al-Siyādī (el-Siāḥ) quarter. Many notices of him are given by the Moroccan hagiographers, and a collection of his *manāḥiḥ* was made by the famous Abū Muḥammad 'Abd al-Salām al-Kādīrī (1058–1110/1648–1698), entitled *Muṭamad al-amān fi manāḥiḥ walī al-ah al-ṣāliḥ al-Shawī*.

Bibliography: al-Ifrānī, *Safwat man in-shāḥ*, lith. Fas, p. 36; al-Kādīrī, *Nashr al-Manāḥiḥ*, lith. Fas, 1310 A.H., i. p. 96; al-Kādīrī, *Safwat al-Anfās*, lith. Lévi-Provençal, *Les Historiens des Chérifs*, Paris 1922, p. 278.

SHAWIYA (plur. of *shawī*, "sheep-breeder") a name, originally applied in contempt, which has become the general designation of several groups in the Maghrib, of which the most important are in Morocco, the Shāwīya of Tāmasnā

and in Algeria, the Shāwiya of the Awrās. E. Doutté (*Marrākech*, p. 4-5) mentions several other groups of less importance. An endeavour has also been made to connect Choa, the name of a district in Abyssinia, with Shāwiya.

Wherever it is found, the term is applied to Berbers of the Zanāta and Hawwāra, more or less arabicised, mixed with purely Arab elements; almost always, moreover, these ethnic groups seem to have schismatic tendencies.

[The massif of the Awrās, occupied by the Shāwiya of the department of Constantine, was in the eighth century the centre of resistance of the Abādī [q.v.] Khāridjīs as the Mātib still is at the present day. Now among the Shāwiya of Morocco, the successors to the heretical Baraghwāta [q.v.] we find a tribe of Mātib and the memory of "judaising" ancestors. On the other hand, Ibn Khaldūn tells us that at the beginning of the Marinid dynasty in eastern Morocco, a group of Shāwiya lived in contact with the Zakkāra, whose heterodox practices have been studied by A. Mouliérac].

According to Ibn Khaldūn (*Hist. des Berb.*, i. 176-182, transl. i. 271-282) the original home of the Hawwāra (vulgo Hawwāra [q.v.]) was the province of Tripoli and the adjacent part of the territory of Barka; conquered and oppressed by the Arabs, they had scattered through the whole of the Maghrib where, crushed by taxation and having lost that pride and independence which once characterised them, they devoted themselves to sheep-breeding, whence the name ultimately given them. As to the Zanāta, they were nomadic Berbers, like the Arabs, living in tents on the produce of their flocks and spending the summer in the Tell and the winter in the desert (Ibn Khaldūn, *Hist. des Berbères*, ii. 1; transl. iii. 179-180).

The name of Shāwiya seems to be first found in Ibn Khaldūn (*Prolegomenes*, i. 226, 16, transl. i. 256, *Hist. des Berb.*, i. 179, 10; transl. i. 278; ii. 245, 1; transl. iv. 31; the Shāwiya mentioned in this last passage do not seem to correspond to those of Tāmasnā but to some people of Eastern Morocco, neighbours of the tribes of Hawwāra and Zakkāra).

Next, Leo Africanus (i. 83-84) who calls them *Sawra* tells us that they are African (i.e. Berber) tribes who have adopted the Arab way of living. The majority live at the foot of the Atlas or in the mountain range itself, living by cattle- and sheep-breeding. Wherever they dwell they are always subject to the local dynast or to Arabs. This author already knows two main groups: one in Morocco, in Tāmasnā, the other on the borders of the kingdom of Tunis and the "land of Dates" (*بلاد الدجاجة*).

It will be readily understood that in the Arab world, the term "sheep-breeders" would have a contemptuous significance. As M. W. Marçais observes "in ancient Arabia a certain disgrace seems to have been attached to the breeding of the smaller domestic stock. North African opinion has retained a prejudice against the rearers of sheep. The great camel-rearing nomads have nothing but contempt for them. In the middle ages the feeling may have been strengthened by racial antagonism, real or imaginary. But in general at this period, to abandon the camel and adopt the sheep was an avowal of a terrible downfall for a tribe. It

meant renouncing the long free travels, the secure refuge of the desert, and independence, to submit to local rulers, endure their blows and tolerate their fiscal exactions".

2. Shāwiya of Tāmasnā. They occupy in the N. E. the lower course of the Umm al-Rūd, vast fertile plains which extend to the latitude of the little harbour of Fedjāla. They are descended, according to Leo Africanus (ii. 9) from the Zanāta, and Hawwāra whom the Marinid sovereigns settled there and who mixed with the remnants of the Baraghwāta [q.v.], the ancient heretical inhabitants of the region, as well as with the Arabs brought from Ifrikiya by the Almoravid Sultān Ya'qūb al-Manṣūr. These Shāwiya now speak Arabic; the modern tribes which seem to be of Berber origin are the Zūta, Medyāna, Mātib, Mellila, Zyāda, and the Ulād Bu-Ziri.

3. Shāwiya of the Awrās. They occupy this mountain mass, in the south of the department of Constantine, between Haïna and Biakra. Ibn Khaldūn (*Hist. des Berb.*, ii. 1; transl. iii. 179-180) already mentions sections of the Zanāta settled in the Awrās alongside of Hillālī Arabs who had conquered them. It is no doubt to their living in a mountainous country that these Shāwiya have preserved a Berber dialect to the present day.

Bibliography: 1. Shāwiya in general: Leo Africanus, *Description de l'Afrique*, ed. Schefer, i. 83; Ibn Khaldūn, *Prolegomenes*, i. 222, transl. i. 256-257; E. (GEORGES S. COLIN)

SHAWWĀL, name of the tenth month of the lunar year. In the Qur'ān (Sūra ix. 2) four months are mentioned during which, in the year 9 A.H., the Arabs could move in their country without exposing themselves to attacks (cf. "the sacred months" in verse 3). These four months were, according to the commentaries, Shawwāl, Dhū l-Ka'da, Dhū l-Hijja and Muharram. In *Hadith* Shawwāl is therefore among "the months of pilgrimage mentioned in Allah's Book" (al-Bukhārī, *Hadith*, bāb 33, 37).

In pre-Islamic times Shawwāl was considered ill-omened for the conclusion of marriages (*Lisān*

al-'Arab, c. v.). In order to prove this opinion baseless, 'Alīshā emphasised the fact that Muhammad had married her in this month (Tirmidhi, *Nikāh*, bāb 10). In the modern Muslim world there is difference of opinion concerning this point. Among the Muslim Tigre tribes Shawwāl is one of the months suitable for celebrating marriages; in 'Uman, on the other hand, it is considered ill-omened in this respect.

The law recommends fasting during six days following the 'id al-fitr ([q.v.]; cf. Tirmidhi, *Sawm*, bāb 52: Whosoever fasts the month of Ramadān as well as six days of Shawwāl, has reached the *ḡawm al-ḡāḡ*; cf. also Muslim, *Sawm*, trad. 203). Nevertheless these days usually partake of the solemn character of the 'lesser festival'. For the same reason Shawwāl bears not only the epithet of *al-mukarram* ('the venerated'), but also such names as *safer ḡadām* (Tigre), *hıram* (Turkey), *safer 'awāl* ('Uman), *urē rays* (Acheh).

(A. J. WENSINCK)

SHA'YĀ, Isaiah, son of Amos, a prophet sent to the Israelites in the reign of Sedecias (Sedecias, by confusion with Heczekiah), took part in the siege of Jerusalem under Sennacherib, announced to the king that his death had been postponed for fifteen years; the besiegers all perished except their king and five of his secretaries who took refuge in a cave. For 66 days the king of Judah made the prisoners walk round Jerusalem, giving them two loaves of barley each day as their food. According to Muhammad b. Ishāq, Isaiah fleeing from the Israelites who had turned against him on account of his prophecies, came in the course of his flight to a tree which bent down and he took refuge in it. Satan having caught the hem of his garment which remained visible, betrayed him by this means and the Israelites sawed the tree through the middle. Tahrī gives as his authority Wahb b. Munabbih, an echo of the Talmud (*Jerish Emzlop.*, vi. 636) which places the event in the reign of Manasseh. The book of Isaiah is quoted by Mutahhar b. Tahrī al-Maḡdisi, *Libre de la Création*, ed. and transl. Huart, i. 183; ii. 172.

SHEB-I BARĀT. [See SHA'BĀN.]

SHEBEK. [See SHARAK.]

SHEBISTARĪ, SA'D AL-DIN MAHMUD b. 'ABD AL-KARIM b. VAHVA, author of the Persian mystical *mathnawī* entitled *Gulshān-i Rās*, was born circa 650 at Shabistar (Cahistar), a village near Tabriz, and died in 720. He composed the *Gulshān-i Rās* in 717 in answer to fifteen questions which had been sent to him by an eminent Ṣūfī of Khurāsān, whom Dīlāmī (*Nafāḡāt*, p. 705) identifies with the celebrated Mīr Fakhr al-Safāt ḡusānī of Ghūr. These questions, written in rhymed verse, form part of the *mathnawī*, each one standing at the head of a separate section. The popularity of the poem is attested by the large number of commentaries upon it (Eihé, *India Office Lib. Cat.*, 996,

Nº. 1816). Within the compass of little more than a thousand verses Shabistari explains concisely and in simple language the doctrine of *wahdat al-wuḡūd*, the descent and ascent of the 'perfect man' (see *Inshā al-Kāmil* and H. H. Schaeder, *Die islamische Lehre vom vollkommenen Menschen*, *Z. D. M. G.*, 1925, p. 253, sqq.), and other leading ideas of the later Persian mystical poetry — which was deeply influenced by Ibn al-'Arabī — as well as the terms used in the erotic symbolism 'whereby the Ṣafīs express their conceptions of God and the universe and their ecstatic experiences'. The author refers to his want of practice in verification, but though some traces of this are apparent, he shows himself to be a true poet. Besides the *Gulshān-i Rās* he has left three prose treatises on Ṣafism, namely: (1) *Ḥaḡḡ al-ṣāḡim fī Ma'rifa-i Rabb al-'Ālamīn*; (2) *Salūdat-nūma*; (3) *Risāla-i Shakk*.

(R. A. NICHOLSON)

SHEFIK MEHMED EFENDI, called Maḡarrif-āde, Ottoman imperial historian and stylist. Not much is known of his life. He was born in Stambul, received an appointment as clerk in the *Dıvān* (*dıvān kâtlibi*), later became one of the *ḡawāḡdārān* i.e. head of one of the 28 chanceries (cf. J. von Hammer, *G. O. R.*, viii. 431), was next appointed chief of the smaller audit office (*muhāsibet-i küllīye*) of the pious foundations (*evkāf*), and ultimately was appointed imperial historian (*wakfa nūwīs*). He seems to have died not long after his appointment to the office, the date of his death is given as 1127 (1715/1716). Mehmed Shefik Efendi is not prominent on the roll of official imperial historians as the work of the *wakfa nūwīs* Muḡaffā Na'mā (q.v.) who died in the Morea in 1128 (1716) was immediately continued by Mehmed Rāḡhīd, the former dealing with the years 1000-1070 and the latter with 1071-1134. Mehmed Shefik Efendi only described — by command of Sultan Ahmad III — the important events of the year 1115 (1703), that is practically the fall of Muḡaffā II and accession of Ahmad III, under the title *22'rikhi 'Abdallāh* (by which he meant himself). There is a good manuscript of this short work (c. 75 folios) in the Vienna National Library; cf. G. Flügel's *Katalog*, ii. 278 sq. Mehmed Shefik also describes the same revolution in a work entitled *Shefik-nāma*, which has become famous on account of its involved allegorical style; the difference between the two works is that, as it was not advisable in the former work to discuss quite openly the secret workings of the rising and its course, in the latter he used a secret, allegorical style and at the same time gave his political and historical creed (cf. Flügel, *op. cit.*, ii. 279; according to J. von Hammer, *G. O. R.*, ix. 207, Nº. 92). The *Shefik-nāma* has been several times printed [Stambul 1282 (1865), small 8º, p. 112; Stambul 1289 (1874), p. 154;

small 89, with a commentary (*Şerîhü'l-ma'ârif*) by İzzetî ed-Din Mahmud Paşa *Kandak al-kâmilin* under this title also published separately 1289, p. 312, 8^a, [Sтамбул] and several times annotated; beside the above commentary mention may be made of that by 'Abdallâh Mehmed b. Ahmad (original MSS. in the Yefî Dîmî Library in Sтамбул, cf. Brunsli Mehmed Tahir, *'Othmânî Müvâzîferi*, II, 426, Hâdîdî Khalîfa, *Kaşf al-Zamân*, vi, 600, N^o. 14822). A French translation planned by Arthur Alric does not seem to have been printed.

Bibliography: *Sijill-i 'othmânî*, III, 152, (brief); İzzetî ed-Din, *'Othmânî Târîkî ve Mu'arrifleri*, Sтамбул 1314, p. 50 ap.; Sâlim, *Tadâbir*, Sтамбул 1315, 385 27 (where he is wrongly called: Ahmad); Brunsli Mehmed Tahir, *'Othmânî Müvâzîferi*, III, 75.

(FRANZ BÄDINGER)

SHEHR. [See **SHAHIL**.]

SHEHR-I SEBZ. [See **KASHI**.]

SHEHRIZÜR (Shahrizür, in the *Şerîf-nâme*: Shahrizûr), a district in Kurdistan. Shehrizür, strictly speaking, is a beautiful and fertile plain (36 × 25 miles) situated to the west of the chain of Awrâmân (cf. **SENGE**). To the south-east it adjoins the Persian district of Awrâmân-i lubûn. On the south the river Sirwân is the boundary of the district; on the south-west Shehrizür extends as far as the pass of Darhând-i Khân by which the Sirwân (Diyâla) makes its way to the south. On the west Shehrizür is bounded by Arbet which belongs to Sulaimâniya. To the north a buttress of the Awrâmân (Karrâ-Kallâw) separates it from the district of Kara-Çowlân (Shahr-i bâr). The plain is watered by the tributaries of the Tâdjerdî (Tâdjerdî) which coming from Sulaimâniya flows into the Sirwân; the chief of these tributaries is the river Zalm, which in its turn receives the Cowân from the North.

The mountains Nâdîr and Balambô rising on the right bank of the Sirwân separate the plain from the right bank of this river (the district of Shâk-mâidân). The district of Shamirân situated on the left bank in the bend of the Sirwân is also considered a dependency of Shehrizür. The old centre situated where the river Zalm enters the plain, is Gul'anbar, whose real name seems to be Ghulâm (Khulâm)-bar, to which the Kurd name Khurnâl corresponds phonetically. The present chief town is Alabâ (Alabâ Halabca), a township of 500 houses, 25 being Jewish and there are a few Christian families.

The plain belongs to the Dîjî Kurds. In the time of Rich (I. 107) there were Afghan colonies in the province of Shehrizür; these were the remains of the troops of Arâk-khân, who during his struggle against Kartîr Khân Zand [q. v.] besieged Seme (in 1168).

To the south-east of Shehrizür, in the two parallel gorges formed by the spurs of the Awrâmân amongst vineyards and woods are situated the villages of Beyra and Tawûla belonging to Naksh-bandi Shaikhs. Numbers of pilgrims come there from all parts, even from Russia and India. At Tawûla there is a beautiful mosque built by Shaikh 'Omar, who is himself buried at Beyra. The two villages form enclaves in Awrâmân-i lubûn and the Awrâmân dialect is spoken in the north. It is said to extend even as far as Pâdîjwin.

The district of Shehrizür is closely associated

with the beliefs of the Ahl-i Haqq (v. 'AG-ILAN); the initiates of the sect await the last judgment which is to take place in the plain of Shehrizür; "in the threshing-floor of Shehrizür (*Shahrizûrân* *sharmânâda*) all the faithful will receive their due".

In the wide sense of the word, Shehrizür served to denote the eyalet of Kerkûk whence, as one can see, there resulted a considerable amount of confusion in geographical terms.

History. For the epoch of the Assyrians, Billerbeck places at Shehrizür the centre of the Zamus country, inhabited at the time of Assur-usharpal by the Lullu people. Streck seems to agree with this localisation of Zamus (*Z. A.*, xv, 1900 p. 284). The Arabs (Ibn Muhalhil) associated with Shehrizür (more precisely Durdân) the biblical legends concerning Saul (Talât) and David, which suggests the presence in these districts of strong Jewish colonies.

The numerous tumuli in the plain of Shehrizür confirm the testimony — of Theophanes as well as of Mu'ir b. Muhallil — regarding the number of settlements in this region. The most important town bore the name of Nim-az-rûi (Nim-rûi) i.e. "half-way" between Ctesiphon and the great fire-altar of Shîr [q. v.] (Takht-i Sulaimân in Adharbâidjân). Çirikov and Herzfeld (on his map) identify Nim-rûi with Gul'anbar, and this corresponds with the indication of Mi'ar (in Vâkûf) regarding the proximity of the town to the mountains of Shâ'ân and Zalm. The most persistent tradition (Ibn al-Fakîh, p. 199; Mustawfî, p. 107) attributes its construction to the Sassânid Kawâdh, the son of Pêrôz (488—531). The ruins of a Sassânid bridge on the Sirwân protected by the fort of Shamirân (Çirikov, 438) indicate the line of communications of Nim-rûi with Kâr-i Shîrîm. At this latter point the route coming from Ctesiphon forked to run towards Hamadân and towards Shehrizür (Ibn Rusta, p. 164; Edrisî, ed. Jaubert, p. 156). On the other hand, according to Rawlinson (*J. R. A. S.*, 1868, p. 296—300), the monument of Pâi-kull on the right bank of the Sirwân not far from the ford of Bânkheûla marked a station on the road from Nim-rûi, which the great explorer thought was to be found at Vâsin-tâpa to the North-West of the plain of Shehrizür. As the monument dates back to the epoch of the first Sassânids, the road, before the construction of Nim-rûi, might well have followed another direction in the plain. According to Ibn Khurdâdhbih (p. 120) the Sassânids, after their accession to the throne, made a pilgrimage on foot to Shîr. The monument of Pâi-kull may mark the road. Herzfeld promises to publish separately the geographical part of his new explorations in this district. Finally, the Kurds told Rich (I. 269) that "the ancient town of Shehrizür" was at Kîzâl'a to the south-east of Arbet (cf. Haussknecht's map).

Shehrizür, forming part of the diocese of Bêth Garmal (Bâ-Djarmak) is often mentioned in the history of the Nestorian Church. The *Synodicon Orientale* (ed. Chabot, 1902, p. 266) gives the names of its bishops between 554 and 605.

During his third Persian campaign the Emperor Heraclius spent the month of February in 628 in Shehrizür "laying waste the district and towns by fire" (*Theophanes Chronographia*, ed. de Boor, p. 345; cf. *rév. Zâ'arôp*; *Chronicon Paschale*, ed. Dindorf, I, 730; *rév. rev. Zâ'arôp* — the two graphs indicate the pronunciation -zûr and not -zûr).

The Arabs had reached Shehrizūr even in Sassanian times (Ibn al-Fakih, p. 130). The remote situation of Shehrizūr frequently attracted rebels and schismatics to it (Kharridjī, Khurramī). The district is often mentioned along with Dimaghān and Lārdān (Kurdāna, p. 232) the exact sites of which are unknown. In the time of Ibn Muḥallih (330/942) there were in Shehrizūr 60,000 (?) tents of Kurds; Djalāl (Rich, i. 280, Ghellālī?), Hāllān, Hākāmī, and Sālī (Shūhūr).

The same author (in Yāqūt) counts Shīs (perhaps a misreading of Hoffmann, p. 251) among the towns of Shehrizūr and mentions a little town Dardān (?) between Nim-rān and Shiz. The other names of places in the region of Shehrizūr were Tūmshāh (Ibn al-Athīr), Kīnā (?) and Dailamastān (Yāqūt). Between 400 and 434, scions of the Kurl dynasty of the Ḥasanwaidhids ruled at Shehrizūr. In the sixth (sixth) century the Turkomans and the Zangid Atābegs held the district. In the time of Yāqūt, Muḥammad al-Dīn Kōkbōrī, Atābeg of Arbīl had settled himself there. In 623 (1226) an earthquake ruined the district. According to al-Umārī (d. 749 = 1348) Shehrizūr "before its depopulation" was inhabited by Kūsa Kurds (Rich, i. 281) notes a few remnants of them in this region; cf. also place-names like Kosa-madīna, Māmenū-Kosa. After the capture of Baghdad by Hūllūg these Kurds migrated to Egypt and Syria and their place was taken by the Ḥwama (?) who "are not true Kurds". The reference is perhaps to the mountaineers of Avramān, who still occupy the western slope of the mountains. On the other hand, a Kūsa whom A. von Le Coq met in 1901 at Damascus spoke the *mes* dialect [q. v.] which is not a proper Kurd one.

Tīmūr crossed Shehrizūr in 803 (1411) on his way from Baghdad to Tabriz (Zafar-nāma, ii. 370; cf. *al-Shihāzī* and *al-Zāḥirī*).

Shehrizūr played an important part in the Turco-Persian wars. According to the *Sharaf-nāma*, the Ardilān family (cf. SENNA) had been at first settled in Shehrizūr. The local history of Senna even claims that the fort of Zalm was built by Bābā Ardilān in 564 (1158). Sulḥān Salāmān about 944 (1537) sent the governor of Amādiya to conquer Shehrizūr but although a fortress was built at Gul-anbar, the Ardilān re-established their authority in the region (*Sharaf-nāma*, 84). Shāh 'Abbās dismantled this fortress but it was restored during the Persian campaign of Khosrow-paḥā [q. v.] in 1630. The treaty of 1049 (1639) allotted to Turkey the western slope of the Avramān with the fort of Zalm. Changes, however, must have taken place slowly, for Tavernier on his journey in 1644, seems to place the Turco-Persian frontier much further west. The representative of Sulaimān-Khān, Wālī of Ardilān, maintained a garrison in a "large town", the situation of which corresponds to that of Gul-anbar. We may note here that Tavernier seems to mention the town of Altun-köprü (?) under the name "Shehrizūr".

The Ardilān being finally removed from Shehrizūr, the district was governed by local hereditary chiefs who received their investiture from Constantinople. At the beginning of the sixteenth century the governor of the 'Irāk, Ḥasan-Paḥā, was allowed by the Porte to have southern Kurdistan placed under his control. The eyālet of Shehrizūr was then formed containing the sandjaks of Kerūk, Arbīl, Kōi-sandjak, Kara-colin (Shāra-bāzār),

Rawānduz and Harir, the mutasallims of which were appointed from Baghdad (Khurridjī Efendi, p. 199—202). But soon the Bāhān chiefs (cf. SALAMANIYA) attained to power and Shehrizūr was placed under them. After the administrative reforms of 1867 and the creation of the wilāyet of Mawālī the name of Shehrizūr was given to the sandjak of Kerūk (the *kaḥ* were: Kerūk, Arbīl, Kāmiya, Rawānduz, Kōi and Salāhiya) but to complete the confusion the plain of Shehrizūr proper was included in the sandjak of Salāmāniya (v. Caillet, *La Turquie en Asie*, ii. 764).

From the sixteenth century a branch of the tribe of Dīl (cf. SENNA) had been established on Turkish territory. The plain of Shehrizūr, as well as many villages in Kīst, Pandjwin, etc., belonged before the world war to the powerful Dīl chiefs, Othmān Paḥā and Mahḥūd Paḥā. This family exercised administrative functions of which the Porte gradually tried to deprive them. For a considerable time the effective administration of Shehrizūr was in the hands of the widow of Othmān Paḥā, the energetic 'Adila-Khānum, a native of Senna. Sonne has given an interesting description of her little court at Alabā.

Archaeology. Among the half score of tumuli on the plain of Shehrizūr (Hassknecht's map) the most important are: Bakrāwa (Čirikov: 120 feet high, diameter 450 feet, remains of walls, ditch 60 feet broad) and Yāsintapa (F. Jones: square in shape 90 feet high, surface sloping from N. to S. 320 feet). Important ruins exist at Gul-anbar (Čirikov: walls of trimmed stone, towers and an ancient aqueduct). In the ravine of the river Zalm above Gul-anbar lies the fort of Zalm. Kāwint (*Āthār al-Bilād*, ii. 266) explains that *zalm* is a seed (*ḥabb*) possessing aphrodisiacal qualities and not found elsewhere. Tavernier mentions lilies between Shehrizūr and Sonne having similar properties. The *Djibān-namī* (p. 442) gives the gorge at Zalm the epithets, "habitation of the blue sorcerer" (*ustūḥ-ghān*) and "cave of the confusion of speech" (*ḥabīḥ-ḥāḍim*). He mentions the local sights: the fort of 'Alī Zalm (apparently for Zalm), another ruined fort of Yeḍdellird and a cave (natural) with a staircase and windows carved out of the rock. We may recall in this connection the Christian tradition of the monk Sabrīḥ who had built a cell in the mountain of Shā'ra (Labourt, *Le Christianisme dans l'Empire Persan*, Paris 1904, p. 210). The number of fortifications on the river Zalm show the importance of the place. Their object was to protect Shehrizūr from invasion from the east. The usual routes of communication with Adharbāidjān were however by the more convenient passes more to the north (Čaghān Gāzān, Nawkhūwān, the passes of Bāna).

(V. MINORSKY)

SHEKER BAIRAMI [See 'UL-FIR.]

SHEKKI, a district in Eastern Transcaucasia. In Armenia it is called Shakkē, in Georgian Shakhā (and Shakhik?), the Arabs write Shakkā = Shakk (Ibn Khurshid, p. 223, 124, 131, p. 183, Balādhuri, p. 206), Shakkī (Yāqūt, iii, 311), Shakkān (Ibn al-Fakih, p. 293, Balādhuri, p. 194), Shakk (Ma'sadi, *Musād.*, ii, 68).

The usual boundaries of Shekki were: on the east, the Gök-ei which separates it from Shirvān (q. v.); proper, on the west, the Alan (Turk. Kank?) and its left tributary the Kakhk-ei, which separates Shekki from Georgia (Kakhetia) and the Georgian cantons later occupied by the Daghistanis (El-mu, now Zakar 'Alī); in the north the southern slopes of the Caucasus (Salawat-Daghl), the passes of which, however, are within the confines of Daghistan; to the south the Kura (Kur). Shekki is watered by the tributary of the Alan, Agri-ei ("river running diagonally" i. e. from east to west) and the river Abjigan (Ghan) and Türiyān which run towards the Kura. Shekki consists of three regions, one of high valleys covered with forests and orchards; a central one, a treeless and desert plateau; lastly a fertile plain declining to the Kura.

The variety of the factors that have influenced this remote region is responsible for the remarkable character of its local history in which we see pass before us in succession, the Albanians (Aghewans), Armenians, Georgians, the people of Daghistan, Persians, Turks and Russians.

In ancient time it formed part of Caucasian Albania (cf. *ALBAN*) which was a confederation of 26 tribes speaking different languages (Strabo, xi, 4). The remnants of one of these tribes are believed to survive in the Udi, who are still to be found at Shekki (Balādhuri, p. 203; Udi). From their name they must have originally come from the region of Gti (Strabo, xi, 7; *Odrysia*, Pliny, vi, 13; Otene) lying on the right bank of the Kura (the modern Gendja, Shankur, Tāsh); it at first belonged to Armenia Major but was later occupied by the Albanians (cf. "the Armenian geography" of the 5th century translated into Russian by Pal-

kanov, 1877, p. 51). The present language of the Udi is related to the S.-E. group of languages of Daghistan (Khmalugh, Hudugh etc.) and has been subjected to very heterogeneous influences, especially Turkish (Marquart, *Ostereuropäische Sprachg.*, p. 49). The Albanians were very early converted by the Armenians and according to the Armenian legend the church of Gish (now Kish) was built by Elshē, a disciple of the Apostle Thaddäus.

Among the places mentioned in Albania by Ptolemy *Xabāsa* and al 'Aḥḥaw wāḥa occupying the same position, long. 80°, lat. 47°, must correspond to Kabala and to the passes which above it give access to the valley of Samur (Khosmat and Kutahen roads). The ruins of Kabala lie near the confluence of the two branches of the Türiyān-ei "Orax" (long. 77° 30', lat. 44° 45') may correspond to the town of Shekki which has now disappeared (Yanovskii places it S. W. of Nakh, near the village of Shekki). The other identification (Nōya = Nū) has still to be examined carefully. The present capital Nūkhā or Nūkh (on the river Kish) is said to have taken its name from a village more to the east (Sulāim-Nūkhā near Nū); its name is only found from the xviii century onwards, unless it is connected with lekhi (name of an Albanian canton according to the Armenian geographers).

When the Arabs talk of towns of Arrān built by the Sāsānians they probably only refer to the rebuilding of ancient sites; thus Kabālā b. Fāris (488-531) is credited with the building of Kabala (Ibn al-Fakih, p. 288; Yāqūt, iv, 32) and his son Khustaw Anshirwan (531-579) with Abwāl-Shakkān, Kamitān (Kamitān, Khambān in Kakhetia) and Abwāl al-Imdāniya (Balādhuri, p. 194).

Under the Caliph 'Uthman, Salama b. Kabā, having crossed the Kura conquered Kabala not confined himself to concluding a treaty of peace with the chiefs of Shakkān and Kamitān. Later Ghazāl b. 'Abd Allah al-Hakami halted at Shekki on his return from the Daghistan campaign.

The Christians of Shekki remained for a long time in the majority. According to Ma'sadi (ii, 68) the principality of Shakkān, adjoining that of Samur (Ptolemy, v, 9; *Edessa*, Dinar in the valley of the river Samur), was inhabited by Christians and the Muslims who worked as merchants and artisans. The king was called Adarnas b. Humām. The next district on the east was Kabala, "a haunt of robbers and bad characters", the town of which had a Muslim population while the environs were inhabited by Christians. The king (*Malik*) of Kabala was called 'Adarnas al-A'war (the "one-eyed"). The identity of these is still uncertain. Towards the end of the 6th century Georgian and Armenian sources mention a mysterious Adarnas the Blind (Brosset, i, 1, 249); in the 15th century the name of Adarnas was fairly common in the family of Milarakān (Albanian princes of Sāsānian origin, Brosset, i, 2, 480). According to Mukaddasi, p. 51, Kabala and Shekki were little towns.

Shekki later belonged to the Shirvānshāhs, with whom, however, the Georgians disputed its possession. In 1117 King David conquered Gish (Kish above Nakh) on one of the tributaries of the Agri-ei. This little town was the residence of the governors (*erishans*) of Tankabeh (district N.E. of Alan), and of the bishop whose diocese comprised

Turks and 18% Armenians). Among the villages of Nukha may be mentioned the two last refuges of the Udi: Wartashen (majority Jewish; the Udi half Armenian-Gregorians and Orthodox) and Niz or Net (3000 Udi, Armenian-Gregorians). The village of Dyalid (Yāshī, iii. 311) still exists west of Wartashen. The district of Nukha produces raw silk, fruits and wine. The district of Aresh covers 1000 square miles, has 125 villages and 52,371 inhabitants, of whom 37,577 are Turks, 12,278 Armenians and a few Gregorians, Kurds and gipsies. The district consists of steppes and flat lands where rice is grown. Many of the inhabitants are semi-nomads.

Since the Russian revolution the old khānate has formed part of the Agharhaidjan republic (at first affiliated to the Transcaucasian federation, later independent and finally, since 1920, Soviet).

(V. MINORSKY)

SHELLA, in the texts of the middle ages, *Shella*, necropolis of the Marīnid Sultāns of Morocco, S. E. of the Almohad fortress of Ribāṭ al-Fath (Kasbi), 300 yards below the gate now called Bab al-Fath. It occupies the site of an ancient Phoenician settlement, later the Roman *Sala Colonia*

(cf. *KASAT*), some distance above the mouth of the Wādī Bū-ragrag. With Salā (Sale) on the other side of the river and the Almohad Ribāṭ al-Fath, it formed from quite early times a centre of mobilization for the holy war.

At the end of the xiiith century, the Marīnid princes decided to use this site for their dynastic necropolis. The first member of the family to be buried there was the princess Umm al-'Izz (d. 683 = 1284); she was the wife of Sultān Abū Yūsuf Ya'qūb b. 'Abd al-Hakīm and the mother of Sultān Abū Ya'qūb Yūsuf. On his death which took place at Algiers in 685 (1286), Sultān Abū Yūsuf Ya'qūb was taken to Shella to be buried; 706 (1307) his son Abū Ya'qūb Yūsuf after his assassination at Tlemcen and in 708 (1308) Sultān Thābit 'Amir who was poisoned at Tangier were likewise buried there.

Down to this time the necropolis seems to have been a simple sanctuary of modest size. It was the Sultān Abū 'I-Hasan 'Alī who gave it the appearance which it has retained to the present day. He enclosed the original sanctuary within a vast enclosure of cement, with three gates, one of them monumental. The work was finished, as the inscription testifies, at the end of 739 (July 1339). Within the necropolis, various restorations, extensions and decorations were undertaken at the same time. A new mosque was built with a splendid funeral chamber. In the lifetime of the Sultān, his son Abū Malik (d. 740 = 1340) and his wife Shams al-Duḥā (d. 750 = 1349) were buried at Shella. On his death in 752 (1361) on the mountain of the Himmata in the Great Atlas, the Sultān's body was brought here for burial by order of his son Abū 'Inān.

No Marīnid Sultān was buried here after Abū 'I-Hasan; the enclosure however continued to receive the remains of members of the royal family. It was for some time a splendid sanctuary, some idea of which may be gathered, not only from what remains of the present day, but also from the enthusiastic descriptions written in the sixteenth century by the celebrated Andalusian writer Lūlū al-Dīn Ibn al-Khaṭīb. With the fall of the Marīnid dynasty, the necropolis of Shella began to fall into ruins as it was no longer cared for. Since the French occupation, the remains that still exist are preserved against any further injury.

An historical, epigraphical, monumental and folk-lore study, with numerous illustrations has been devoted to Shella by Henry Basset and E. Lévi-Provençal, entitled *Shella: Une Necropole Mérinide*, collection *Hespéris*, vol. i., Paris 1925. The bibliography — rather limited — of the subject is collected there.

SHEMĀKHA. [See *SHIRWĀN*.]

SHENDI, *SHUNDI*, 18° 1' N, 33° 59' E., a town on the right bank of the Nile, about 104 miles north of Khartūm, on the old caravan-route between Egypt and Sennar. It also gives its name to a district in the Berber Province. Nowadays it is an important station on the Wādī-Halfa-Khartūm Railway, with many locomotive and leather and iron works. Although still a thriving city, in the olden times it was one of the outstanding marts in the whole of the Eastern Sudan with over 50,000 inhabitants. In the course of history it has suffered at the hands of ruthless invaders and merciless marauders. The

result has been that it has shrunk from its former greatness. It is the centre of a district that has been noted for its tall, beautiful women, and it is significant that this region in past ages was ruled by a succession of queens. A vague relic of that period lingers in an eighteenth century traveller's tale of his meeting a "Queen" of Shendi in 1772 (Bruce, *Travels*, vi. 448). Until modern times the town was a busy market for slave-traders and other traffickers. The neighbourhood, north and south, contains many remnants of ancient splendour, ruins of Meroë and its crumbling pyramids. In 1882 a dreadful catastrophe befell the town. The native Governor, who is called the *Muk*, and given the sobriquet of *Nimr* or Panther, invited Isma'il, the son of Muhammad 'Ali, who had been sent by his father to quell the rebellious tribes and punish the fugitive Mamlūk Beys, to a splendid banquet. When the Egyptians were in a drunken stupor the building was set on fire and Isma'il and his suite perished in the flames. In retaliation the place was bombarded by Muhammad Bey the *Defdar*, and thousands of the inhabitants massacred in a most revolting fashion. In 1884 the Gordon Relief Expedition passed by Shendi. Ever since the Anglo-Egyptian occupation in 1898 the town has developed to a great extent.

SHERSHEL (French *CHERCHEL*), a town in Algeria, 60 miles W. of Algeria; long. L. 10° E. Long. 36° 37' N. lat. — Population: 5500 of whom 1400 are Europeans. — The town is built on a plateau 1000 yards broad lying between the sea on the north and wooded hills, the outer buttresses of the massif of the Paul Menager, in the south. The calcareous rocks of the plateau provide excellent building materials, the fertility of the soil and humidity of the climate are conducive to the growth of all kinds of produce. The country round is covered with gardens and vineyards. The harbour, sheltered from the west winds by the little island of Joinville and from the east winds by Cape Tizrine is small but safe. Its annual trade is about 30,000 tons and it exports the agricultural produce of the region.

History. The advantages of the site of Cherchel were remarked in very early times. The Phoenicians had a trading station here called Iol, which later passed to the Carthaginians. After the Second Punic War, Iol became the capital of the King of Mauretania, Bocchus, and his successors. Placed on the throne of Mauretania in 25 B.C. by Augustus, king Juba II gave the town the name of Caesarea and adorned it with monuments and works of art. When, after the death of Ptolemy, successor of Juba, Mauretania had been annexed to the empire the town was raised to the rank of a Roman colony (*Colonia Claudia Caesarea*) and was the capital of the province of Mauretania. It was considerably extended and in the second century A.D. had about 150,000 inhabitants. Its walls were about 5 miles round. The ruins of baths, theatres, the amphitheatre, statues and mosaics discovered since the French occupation attest its wealth. Having previously lost its importance by the par-

titution of the two Mauretaniae in the time of Diocletian, it was burned during the rebellion of Firmus (371) and at the beginning of the next century was sacked by the Vandals. The Byzantines reoccupied it in 585 but never restored to it its past prosperity; at a date which is not accurately known, but probably in the early years of the eighth century A.D., Caesarea fell into the hands of the Arabs who completed its ruin. It was perhaps not completely abandoned. The harbour in any case still existed in the time of Ibn Hawkal (*Description de l'Afrique*, transl. de Slane, *J. A.*, 1842, p. 184). In the time of al-Bakri (*Musill*, transl. de Slane, Algiers 1915, p. 165) it was in ruins. According to this author there was nothing left at Shershel but an anchorage commanded by an enormous town of ancient buildings and still inhabited. Bakri, however, mentions the existence of several "ribat" where a large crowd of people assembled every year. Idrisi describes Shershel as a town of small extent but well populated (transl. de Goetze, p. 103). The country round was occupied by Beduin families who devoted themselves to cattle-rearing, to growing vines and figs and they harvested more wheat and barley than they could consume. These circumstances explain the descent made on the town by the Normans of Sicily in 1144. According to Leo Africanus, *Description de l'Afrique*, Bk. iv., ed. Schefer, iii. 52 the town was continuously inhabited during the five centuries that followed the Arab conquest. During this period Shershel was held in turn by the various dynasties which disputed the possession of Central Maghrib. After the disruption of the Almohad empire, it fell to the 'Abd al-Wadids of Tlemcen, was taken from them by the Marinids in 1309 A.D., became a part of the ephemeral kingdom founded about 1350 by the Ulad Mendil and ultimately recognised the authority of the Ziyānids in the reign of Abū Tabet. In the xvth century fugitive Moors from Spain settled here in large numbers and built 2000 houses (according to Leo Africanus, *op. cit.*). The newcomers devoted themselves to agriculture and industry, especially to silk growing, and commerce but also to piracy. In the first years of the xvth century A.D. a Turkish corsair named Kara Hasan settled at Shershel but was put to death by Arūd [q.v.] who made himself master of the town and placed a garrison in it. Temporarily liberated from the authority of the Turks as a result of the defeat of Khair al-Din [q.v.] by the Kabyla, the people of Shershel had again to recognise the Turkish government and this time finally in 1528. An attempt made by the Spanish to seize the town and make it a base of operations against Algiers failed in 1531. Andrea Doria had to recumb after losing 600 men. During the Turkish period, Shershel simply stagnated. The population never exceeded 2500—3000 men occupying a limited part of the old town. The depredations wrought by the corsairs who sallied out from it, led to its bombardment by Duquesnes in 1682. Turkish authority was represented by a *kaid*, aided in the administration of local affairs by a council of six notables and supported by a garrison established some distance south on the al-Hashim. The mainstay of Turkish power, however, was the Marabout family of Ghobrin, whose ancestors had come from Morocco at the end of the xvth century and who had acquired considerable influence throughout this region. At

the beginning of the sixth century, the Turks quarrelled with them. Al-Hādīd b. Awda al-Ghobrinī was put to death by order of the Dey and his relatives had to take refuge in al-Dahra.

The disappearance of Turkish government in 1830 enabled the Ghobrinī to return to Shershel and become masters of the province. But they found their influence assailed by that of another Marabout family, that of the Brakna who lived among the Bani Menasser. Finally 'Abd al-Kādir who had established a *shaykh* at Mīhana forced the people of Shershel to submit to him. He tried to use the harbour of Shershel for an attempt to revive piracy. An attack by a Shershel corsair on a French warship decided the governor-general Valée to occupy the town in 1840 and to establish there a colony of a 100 European families. The new settlement prospered rapidly and by 1850 had over a thousand inhabitants. They began the development of the country round and this has been steadily continued. An attack on it in July 1871 by the Bani Menasser who besieged it for a fortnight is the only incident that has occurred since the occupation.

SHI'Ā, the general name for a large group of very different Muslim sects, the starting point of all of which is the recognition of 'Alī as the legitimate caliph after the death of the Prophet.

THE MOTIVES OF THE SHI'Ā AND THE EARLIER PERIOD

Islam is a religious and a political phenomenon as its founder was a prophet and statesman. The development of the community of Islam into separate sectional groups was therefore a natural result of the different possible relations which the political constitution and religious belief might bear to one another. Three main schools may be distinguished. The middle line was taken by the Sunnis. Their leading principle that the "imamate belongs to the Kurashī" is a simple expression of recognition of the historical fact that the world of Islam in the early centuries was ruled by Meccan families. The intelligible demand that the rulers who represented the state which was founded upon religion should be really religious personalities very early led among the Sunnis also to the un-historical glorification of the first "four pious caliphs" and further faced them with the problem of finding formulae to explain that it was also a religious duty to owe obedience to caliphs of little worth and even to foreign Sultans, so long as the exercise of religion and the maintenance of order was afforded by them. How little, however, such principles arose out of pleased approval is best shown by the constant warnings, not only from pious circles, to be careful in dealing with secular, though Sunni rulers. If we have here on the Sunni side less a clear theory than rather the attempt to reconcile a religious ideal with political reality, on the other hand on the two flanks of Islam we find two fundamental theories. The one demands clearest separation of the constitutional question from the religious one, the other has interwoven the two. The former question, although

already in existence, only obtained greater publicity in the first civil war among the Khāridjīs [q. v.] for whose salvation the question of the person of the caliph was a matter of such indifference that he might "even be an Abyssinian slave". The Shi'as on the other hand lay religious value on the question of the imamate and their dogmatic books contain a special section, the leading idea of which is the traditional principle "whosoever dies without knowing the true Imām of his time dies the death of an unbeliever".

There was a political Shi'ā, more accurately a *Shi'at 'Alī* i.e. a party of 'Alī [q. v.] at the very latest immediately after the death of the Prophet. If we may believe the Shi'ā stories the original Shi'ā consisted of three men: Salmān al-Fārisī, 'Abū Dharr and al-Miqdād b. al-Awwad al-Kindī. They were the only ones — some stories give a few more names — who championed 'Alī's succession on the death of the Prophet and therefore did not falter from their faith. For the other companions of the Prophet are credited by the majority of the Shi'as with *ridā* [q. v.] for paying homage to 'Abū Bakr. But the stories, especially about Salmān al-Fārisī — if he ever really existed (cf. Horowitz in *Islam*, xii. 178, 199) — are quite legendary. A large number of the later Shi'ā traditions and many prophecies regarding the future of 'Alī's are associated with his name.

The desire that the imamate in Islam should be kept for the 'Alids [q. v.] as the family of the house (of the Prophet) (*Āl al-Bayt*) has not been fulfilled. The brief reign of 'Alī from 35–40 (656–661) was only a strongly contested partial caliphate while his son Hasan [q. v.] can hardly be seriously considered to have been caliph. The first 'Alid independent principality was founded in 172 (789) in Morocco by the Hasanid Idrīs I b. 'Abd Allāh [q. v.]. But his territory was entirely Sunni, that is to say we have not here a Shi'ā state but simply an 'Alid kingdom. At the present day there still exist a few small states with 'Alid chiefs, all more or less under European Christian powers, of whom however the Imām of Ṣan'ā in Yemen alone is Shi'ā and indeed a Zaidī (see below).

As the energies of the Shi'ā forces met with too much resistance in the political field they devoted themselves to the religions. The political experiences of the Shi'ā had been particularly suitable to further this development. The martyr's death of one 'Alid succeeded that of another. Much more than the blood of 'Alī who was murdered by a casual Khāridjī, it was the blood of Husain [q. v.] who perished under the swords of the government troops that was the seed of the Shi'ā church. The passion motive was thus restored to religion again among the Shi'as; it had been lost to official Islam since the turn of fortune which after the Hijra set the Prophet's career on the path of worldly prosperity and excluded all possibility of it by a peaceful death, devoid of any tragedy that might have borne fruit in this direction. The insistence on the idea of a passion has so thoroughly penetrated the Shi'ā that it has formed legends full of difficult historical problems, which make even the lives of 'Alids, who never attained any prominence, end in martyrdom, usually through poison at the instigation of the caliphs, as in the case of Hasan I, Dī'far al-Ṣādīq, 'Alī al-Riḍā, etc.

That this feeling of passion, which can remain

worldly and among the Zaidīs who are closest to the Sunnīs, has remained very worldly, was transformed to something completely religious in the majority of Shī'as, i.e. that to the Shī'as the death of Husain paved the way to Paradise, is a result of the fact that another religious idea came into play, which is, as the history of religions shows, often associated with the passion motive, namely the idea of the manifestation of the divine in man (epiphany). It was not strange to Muḥammad, indeed to him for example Jesus was "a word of God" (Kor'ān III. 40). But he had not placed the intermediation between God and man in a person and certainly not in his own (Kor'ān, xviii. 110; ii. 5; xvii. 95) but in a revelation, the Kor'ān. From this point of view the characteristic of the Shī'as can be thus defined: — to the First Article: "I believe in God the One" — and the Second Article "I believe in the revelation of the Kor'ān which is uncreated from all eternity" — is added a Third Article: — "I believe that the Imām especially chosen by God as the bearer of a part of the divine being is the leader to salvation". But if such an Imām possesses in the eyes of his believers any quality or more frequently a substance of divine origin, then when faced with his decease, they do not console themselves with the thought of his living on in paradise, which he only shares, although in a higher degree, with all believers, but to them the death of an Imām is rendered void by the idea of *ruḡ'a* [q. v.], belief in "concealment" and parousia. The Imām becomes Mahdī [q. v.]. Many indeed abandon the earthly part of the Imām but make his divine element pass into the next Imām, after the manner of the doctrine of transmigration. The mutual interaction of the idea of passion and epiphany again shows that the expectation of parousia arising from the latter, which, as the example of the hidden Mahdī, Muḥammad b. al-Hanafīya shows, can also arise independently of a martyrdom, was increased by martyrdom.

The state of our sources does not enable us to have a reliable insight into the confluence of the various Shī'as motives. It must for example remain an open question how far the Shī'as ideas of epiphany and the intercession of the Imām are the direct continuation of the similar ideas which, according to Ibn Ishāq, certain singers of primitive Islam already associated with the person of Muḥammad: i.e. the question arises how far these religious ideas of the Shī'as were within Islam before the year 11 (632). Under 'Alī, however they appear as important dogmas of religion. If the tradition through 'Abd Allāh b. Saḥā [q. v.] is still obscure, we find it somewhat clearer in the many poems of Shī'as mentality. One Abu 'Awwad al-Du'ālī [q. v.] who fought by the side of 'Alī at Ṣiffīn praised him with more than the ordinary infatuation: "When I looked into the face of Abu 'Alī-Husain, I saw the full moon, which filled the spectators with reverent wonder. The Kurānīth now know, wherever they may be, that thou art their noblest in merit and religion". His attitude to 'Alī is therefore already religious. In accordance with traditions referring to him, therefore already current (see below), he calls him "our fore and waṣī", Phrases like "I seek God and waṣī" and *waṣī*. Phrases like "I seek God and waṣī" are the future state through my love to 'Alī" are frequently found. Kuthāyir [q. v.], d. 105 (723),

expects the *ruḡ'a* of Muḥammad b. al-Hanafīya; Kumāṭī [q. v.], d. 126 (743), sings of the light emanating through Adam through Muḥammad to the holy family. In the 'Abbasid period political disillusionment for the first time exceeds this religious devotion. Salyid al-Himḡārī [q. v.], devotes his poems to it. In Dī'bil [q. v.], the "panegyrist of the holy house" the coarse attacks on the ruling family, in which "one sinner inherits the caliphate after another" are explained by his belief in the unique claim of 'Alī Riḍā to the intimate at the time. In a poem on the death of Husain, often previously celebrated by him, he looks for the *ruḡ'a* [q. v.]. "If it were not for what I hope for to-day or to-morrow, my heart would break for woe: the "passing" of an Imām, who will without doubt pass, who will appear in the name of God and with all blessings".

The 'Alids at this time as a rule had not the leadership in the political field in their own hands. They were urged on by their followers, just as Husain and Zaid b. 'Alī had been used for political purposes and as Muḥammad b. al-Hanafīya had been a pawn in the hands of al-Mukhtar and Muḥammad b. Tabāṭabā and Muḥammad b. Muḥammad b. Zaid in the hands of Abu 'I-Saraya. It was the same in the sphere of religion. Religious fanatics gathered round every prominent 'Alid. Of those around 'Alī we may mention his client Kanbar, who is said to have recognised the "tongue of the word of God" in his master. That this was considered mild language is seen from the legend in which Kanbar himself figures as opposing these extravagant Shī'as who had attributed *rubūḡiyya* (divinity) to 'Alī and who are therefore condemned to fire by the two.

Djābir b. 'Abd Allāh al-Anṣārī attached himself to Husain's son Zain al-'Abidin and his son Muḥammad al-Bāqir; the former had paid homage to the Prophet in the first battle of Akaba along with the first Medinese to do so. He opposed the young 'Alid as the preserver of the continuity of Shī'as belief, and had intercession assured him by Muḥammad al-Bāqir on the last day. With Bāqir and his successors Djāfar al-Sādiq and Mūsā al-Kāzim were found theologians like Djābir b. Vazīd al-Djū'fī, Hishām b. Salīm al-Djū'fī b. al-Hakam, a former prisoner of war and Yūnus b. 'Abd al-Rahmān, a client of 'Alī b. Yaḥyā b. Mūsā. Yūnus also belonged to the great circle of 'Alī Riḍā. The fundamental principles of their theology are of course of the Muslim type.

Tradition. The Shī'as are to a much greater degree "Sunnīs" than the so-called Sunnīs. We must not place the origin of their *hadīth*s too late, since some are as early as Du'ālī. The late, since some are as early as Du'ālī. The most celebrated are: 'Alī is Aaron; 'Alī is the most celebrated are: 'Alī is designated by the Prophet and *waṣī* who is designated by the Prophet and *waṣī*. He is the *Mamā* (see also GHAFAR AL-ALLAH). The holy family is the ark of Noah; KHUMM). The holy family and the Kur'ān are the two treasures of the earth; Muḥammad, 'Alī, Fātima, Husain and Husain are the five companions of the cloak. Similar principles also underlie their exegesis of the Kur'ān, which regards a vast number of verses (e.g. xxxiii. 33; lvii. 26; xi. 76; xxiv. 35) as evidence for the Shī'as claims.

The particular character of the Shī'as offered so much incentive to dogmatic speculation and religious fantasy that it never, like the Sunna, attained any far-reaching uniformity. Three main

forms may be distinguished within the Shī'a: The Zaidī [q.v.] who are nearest akin to the Sunnīs, limit the manifestation of God in the Imām quite rationally to mere divine "right guidance" and deny the miraculous influx of the divine portion of light into a definite 'Alid individual. The martyrdom of the Imāms finds expression among them mainly in the political field in constant endeavours to attain with the sword of man and help of God the goal of 'Alid supremacy. They have successfully resisted various chiliastic expectations of the Mahdī that have appeared among them. On the other wing, the epiphany becomes completely inherent, absolute *ḥulūl* [q.v.]; the mortal in the Imām is entirely swallowed up; in the end God himself has no place beside him. The representatives of this school are ardently fought by the Zaidīs and Imāmīs, the representatives of the middle school, as people who have brought the Shī'a into discredit and have fallen away from Islām — they call them *Ghulāt* (sg. *ghālī*, q.v.). To the Imāmīs the Imām remains mortal but a divine light-substance is inherent in him by partial *ḥulūl*. The death of the Imām, which among the *Ghulāt* e.g. the Druses, is simply the withdrawal of the deified, becomes with them the religious force which makes it a joy to die. Its voluntariness is emphasised with dogmatic intention. In the battle of Kerbelā? God sent the angel of victory to Husayn; but he preferred "to approach to God".

In the course of history each of the three divisions had perforce to divide into many subdivisions, simply on account of the specifically Shī'a ideas of each. Thus, as a result of the Zaidī agitations, small principalities arose in Ṭabaristān and Dailām from 250 (864) and in Yenmen from 288 (901) which from the distance between them could not form a unity nor even possess uniformity. The Zaidīs of the Irāq, who never attained independence in a kingdom of their own, but were often able to make up for this by exerting considerable influence in the Caliph's empire, had to adapt themselves to conditions there by a greater use of the *ṭafīya* [q.v.] or the *ḥimān*. The school of the *Ghulāt*, who went furthest beyond Muḥammad's inheritance and gave the greatest play to individual initiative, found very varied expression in the Ḳarmatīan groups, the Ismā'īlīs and the Druses and ultimately in the Nuṣayrīs and 'Alī Ilāhī [q.v.]. These groups also to a great degree cut themselves away from the members of the holy family. This is already seen in the Kaistāniya [q.v.] whose Imām, Muḥammad b. al-Ḥanaṭīya, is not a descendant of the Prophet; this is also expressed in a tradition: "Salmūn al-Fārisī belongs to the family of the house". It led for example in the 12th (12th) century among the Hurūfī [q.v.] to the exclusion of the 'Alid Imāms in favour of the deity incarnate in Faḍl Allāh al-Astarabādī. But the very principle of the Imāmīya had the seeds of dissension within it. For the contact between God and man is not at a point of intersection but in a continuous line, not in a single individual but in an uninterrupted series of Imāms, among whom the divinely inspired father appoints the son on each occasion or — according to others — the divine element is transmitted directly to the eldest son, whose mother also comes from the holy family. But religious adherence to an Imām might become so fervent that one could not abandon

him even after his death; or the successor might be a person of very doubtful character; or he might be quite defective. Thus arose the subordinate groups of the *Wāḥidīya* and *Kiṭṭīya* or *Kaṭīya*. The former "hesitate" regarding the death of the Imām, therefore "stand" by him and see in him the Mahdī; the latter regard the death of the Imām as "destined" and therefore continue the line. There are a whole series of such *Wāḥidīya*, like the *Djā'fariya* with *Djā'far al-Ṣādiq*, the *Mūsawīya*, the *Riḍāwīya* etc.; in the narrower sense the term applies only to the *Djā'fariya*. For the reasons mentioned, however, the line could not be continued endlessly even among the *Kiṭṭīya*. It is very doubtful whether the eleventh Imām Ḥasan al-Khalīs left a child at all at his death in 260 (873), but the belief has prevailed among the Imāmīs in the existence, the mysterious disappearance and the Mahdī character of a son Muḥammad Ḥudjdāt Allāh. Thus the Imāmīs become "Twelvers", *litham 'Ashariya* [q.v.], although it was for a period still disputed whether there was not a thirteenth Imām.

If we thus see among the Shī'a denominations, simply in so far as they are Shī'a, a range which corresponds to that in the Christian church history which separates the Theopaschites from the Socinians, we must remember we are only considering one of the principles that have gone to form it. For the Shī'a belongs to Islām and is therefore faced with all the problems that agitate Islām generally. But Islām does not look at the world from the point of view of religion only, but has its cultural, economic, and social and through the question of the *ḥaḥīfa* its political problems also. The results for the Shī'a can only be briefly indicated here. In dogmatics we find besides the Mu'tazilīs, [q.v.] predestinarians like the Zaidī Sulaimān b. Djarrar and anthropomorphists like the already mentioned Imāmī Hishām b. Salīm al-Djauallīkī; and how much the dispute common to all Islām regarding the nature of the *Ḳorān* was also a disintegrating danger for the Shī'a is shown by the tradition attributed to *Djā'far al-Ṣādiq*, said to have been uttered to the above mentioned Yūsuf b. 'Abd al-Rahmān, a saying which suggests a provisional formula: "The *Ḳorān* is neither creator nor created; it is the word of a creator". In relation to philosophy both attraction and repulsion were considerably stronger than among the Sunnīs. For on the one hand their richer theological speculation required to a greater extent the categories of philosophy and its dialectic for dogmatic stabilisation, on the other hand the Shī'a was here particularly sensitive, indeed vulnerable, like every religious community, which sets out from pure metaphysical postulates, as it does with the belief in the Imāmāte. Apart from epistemological antagonistic principles which philosophy, called in to its aid, introduced into the Shī'a, the latter had also to settle well known disputed points within Islām on the fundamentals, the *Uṣūl al-Dīn* and the *Uṣūl al-Fiqh*, for example on the binding force of a single tradition or on *ḥiyāṣ* [q.v.]. In the same way there were in Shī'a law disputed points from the *Zāhirs* to the *Ḥanafīs*. In worship there was in all groups a strong impulse to satisfy the tendency towards adoration by the reverencing of Imāms and places of pilgrimage at the graves of their martyrs, which was in conflict with the conservative tendency still to remain Muslims.

The dividing line between the Shīʿa and domestic politics (i.e. nationalism) is very intricate and much broken. It is not simply that the conquered people like the Persians from the first had sided with the Shīʿa opposition. The oldest of the principal leaders were genuine Arabs, of the south, it is true. Among those around Rīdā for example, Yūnus and Hishām al-Djūwālīkī were clients; but Dīʿāl a race-proud South Arabian and an opponent of the Northern Arabs. Two hundred years later we still find Mufīd (see below) priding himself on his South Arabian descent "from Yaqtān, the first man to speak Arabic". Social disputes were brought into the Shīʿa as early as al-Mukhtār when he mobilised his clients and slaves. Among some Ghulāt, like the Karmāṭians, socialistic demands increased to communism, which however here in view of the authoritative attachment to an Imām or his representative was only a mask for a despotic oligarchy.

A more obvious aristocracy was formed by the circles of higher administrative officials at the ʿAbbasid court, who, for the most part Iranians, were bound together by ardent devotion to the Imāmate, among these, for example were the family of the Nawbakht. As regards women also the Shīʿa had to deal with all aspects of the problem. Some of the Karmāṭians are accused — at least — of having community of women; the Imāmits allow temporary marriages (see *MUTʿA*); the Zaidīs confine themselves to polygamy as defined by the Sunna; the ʿAlī lāhīs decided on monogamy.

As the numbers of possibilities in the fields of dogma, epistemology, law, worship, politics and social sciences are not additional to but multipliers of the figures of possibilities in the question of the Imāms, the result is that, although we do not have in practice all the possible combinations, we have a number of Shīʿa subdivisions, which far exceeds the well known 72 sects. At the same time this possibility of variation explains the many discrepancies in the usual Muslim books on the various sects, as the latter, as can easily be understood, divide one and the same community into several groups according to the special feature they emphasise.

In view of the elemental force with which the Shīʿa creed, in itself full of problems, made its appearance in the world of Islam which was already full of its own problems, we can understand that the personalities who are considered heads of schools in the present Shīʿa communities were less creators than circumscribers, but we can also see that the consensus each time became limited to a smaller circle. In the language of the Shīʿa, the *iqbāl* affects only the individual ecclesiastical, which alone will be blessed. In dogmatics this limitation has never attained very great success: Zaidīs, as well Imāmits, finally joined the Muʿtazilīs. This is not mere accident, as the example of the Kūfān already shows: of the above mentioned articles of belief, the third was bound to drive out the second. The *kennesis* of an uncreated Kūfān had in the long run no place beside an Imām as a guarantor of the true faith. It is also logical that the Imāmiyya for the purpose of its classification among the beliefs of the Imāmate undertook an allegorical explanation and that on the extreme wings the Ghulāt fought it, made interpolations or even rejected parts and became themselves *Baṭīnīs* (cf. *BĀṬINĪYA*). The Muʿtazilīs was not

simply the first step; but through these borrowings from philosophy, primarily only seeking the formal, it penetrated into the space left vacant by the supernatural belief in revelation; theology thus became theosophy and gnosis.

The origin of the Shīʿa motives is not explained if we again emphasize the fact in itself illuminating after what has been said above that Gnostic Neo-Platonic, Manichaean and old Iranian ideas have intermingled. But in the present state of our knowledge, we cannot go far beyond this statement, as the literary modes of approach have not yet been indicated. With the echoes of Christianity also, one must for the time be content with the general remark that Islam spread over countries formerly Christian and made many converts whose forefathers had been Christians. Still more general but not less important is the observation that motives so fertile from the religious point of view like passion and divine epiphany need not be lost at the foundation of a new religion like Islam.

THE LATER PERIOD

The consolidation of the separate groups begins in the second half of the third (ixth) century. Signs of this process were earliest noticeable among the Zaidīs. Al-Kāsim b. Ibrāhīm b. Ṭabāṭabā al-Rassi (d. 246 = 860) selected the dogmatic and legal foundations for an ecclesiastical state, which his grandson Yahyā b. al-Husain carried into effect in Yemen in 288 (901). His teaching also found recognition in the territory of the older Zaidī state which had been founded in 250 (864) on the Caspian Sea. In 297 (909) the kingdom of Ismaʿīlī Fāṭimids arose in Africa and at the same time bodies of Karmāṭians held small tracts in N.E. and S. Arabia. Here we may refer the reader to the special articles for the lateral branches but we shall consider the main branch somewhat more fully, the Imāmits or "Twelvers". It is of them one usually thinks when using the term Shīʿa generally. They form also numerically by far the majority of Shīʿa, with their 4—5 million Persian followers and in addition to sporadic groups also considerable bodies in India and in the Irāq. Their literature, which is still the most easily accessible of all Shīʿa, also forms the best approach to Shīʿi problems, on account of intermediate position of the Imāmiyya.

Even the old ʿAlids like Dīʿfār al-Sādīq, ʿAlī al-Rīdā had not themselves been the real leaders. Envoys and plenipotentiaries (*nafīr* and *wakīl*, plur. *nafīrā* and *wakīlā*) acted on their behalf — or alleged behalf. The office of *wakīl* became still more important when the Imām had disappeared. He claimed to be the only one who knew the concealed Imām. Four men have succeeded since 260 (873) in establishing this claim for themselves. When the fourth, ʿAlī b. Muḥammad al-Samarī died in 334 (939) the so-called "Little Ghāṭib" was at an end and has been succeeded to the present day by the "Great Ghāṭib", in which for example the Friday service dependent on the cooperation of the Imām is in abeyance. A clerical aristocracy took over the leadership, many representatives of which claimed to base their teachings on miraculous meetings with the hidden "Lord or the Age". It is true that the modern Persian theologian can still be a *Muḥṭashid* (q.v. and below); but in all essentials he still remains like the Sunnī, bound by what that aristocracy has made canonical. The literary deposit of the process of forming a

cannot, in the usual Muslim way, produced a large number of books on the criticism of the authorities and theological authors. They formed a kind of clerical censorship, long before the Safawids instituted a *Shāikh al-Islām* for the state church.

Political aspirations were opened up to the Shi'is by the rise of the tolerant Samānids, — not themselves Shi'is however — especially after the conquest of Khorāsān by Ismā'īl in 290 (903) and by the rise of Shi'i Hamdanids of Mōsil from 317 (929). When the Būyid Aḥmad Mu'izz al-Dawla entered Baghdad in 334 (945), a great period began for the Shi'is who had for long been in the capital, occupying, for example, the whole Karkh quarter. To this external consolidation corresponded an inner one. The canonical collections of traditions arose, the so-called "Four Books": 1. *al-Kaṣf* (pr. Teherān, 1312—1318) of Kulīnī, d. 328 or 329 (929); of over 16,000 ḥadīths on the *Uṣūl* and *Furū'* chapters, 5072 are considered "sound" by later authorities, 140 "good" and 1118 as "established", 302 as "strong" and 9488 as "weak"; a popular commentary is *al-Sāfī* of Khallīl b. Ghāṣi al-Kāẓirī begun at Mecca in 1057 (1647) and also published by him in Persia with the title *al-Sāfī*. Smaller in extent than *al-Kaṣf* is 2. *Man la yaḥḍurahu 'l-Faḥḥ* (pr. Teherān 1324) by Ibn Bābūya the younger (d. 381 = 991). Of about 6,000 ḥadīths some 4,000 have a complete *isnād*; in recent times a commentary was written on the collection by Muḥammad Taḥṣī al-Madḥīlī, father of the author of the *Biḥār al-Anwār* (see below) in two editions, Arabic (*Rawḍat al-Mutaḥḥin*) and Persian (*Lawā'ih-i Šāhid Kīrān*), while the commentary *Man la yaḥḍurahu 'l-Naḥḥ* of 'Abd Allāh b. Sāliḥ al-Samānīdī (d. 1155 = 1722) was never finished; 3. *al-Iṭṭihār fīma khatūfa min al-Akhbār* (Lucknow, n. d.) and the more comprehensive 4. *Taḥḍīb al-Aḥkām* (Teherān 1314) are both by the celebrated author of the Shi'i *Fihrist* (see *Bibl.*) Abū Dī'far Muḥammad b. al-Ḥasan al-Ṭūsī and were originally intended as commentaries on the *Muḥṣaṣa fī 'l-Fiḥḥ* of Muḥṣī (d. 413 = 1022). In both the attempt is made to sort out the huge mass of material that has been handed down, of course not in a critical fashion but according to the degree of agreement with the doctrines that have come to prevail. This *Taḥḍīb* is not to be confused with the lawbook *Taḥḍīb al-Shi'a* of Muḥammad b. Aḥmad b. al-Dīnāid al-Iḥṣānī (d. 381 = 990) which has fallen into neglect because he goes too far in the application of *ḥijāb*. Only very rarely do we find the larger collection of Ibn Bābūya, *Madīnat al-Im* recognised as the "Fifth Book".

Among the Shi'i-Imāmī leaders of the fourth and fifth centuries may be mentioned Kulīnī Muḥammad b. Ya'qūb al-Rāzi. He is celebrated as the "renovator" at the beginning of the fourth century just as year 100 was made sacred by the fifth Imām Muḥammad Bāqir, 200 by the eighth Imām 'Alī al-Riḍā and later 400 by the *Shāikh* Murtaḍā, while for 500 there is no one of equal importance to place alongside of al-Ghazālī who is also esteemed by many Shi'is. A maternal uncle of Kulīnī, 'Allān, had been one of the leading Shi'is of Ray, Teherān. He himself worked in Baghdad where his grave enjoyed the reverence paid to that of an Imām. Ibn Bābūya Muḥammad b. 'Alī, called al-*Shāikh* al-Ṣādīq, claimed to have been born to his father on the intercession of the hidden twelfth Imām.

He was *Shāikh* of the Shi'is in Kumm, which already was strongly 'Alid in sentiment in the second century but down to late in the fourth century was still exceptional in Persia which was mainly Sunnī. Of his works the *Riḍā fī 'l-Shurāf* to his son was used by the latter in his *Man la yaḥḍurahu 'l-Faḥḥ*. In Baghdad the son became associated with the Būyid Rukn al-Dawla, who was able to make good use of his teaching of the imāmīte for political purposes. Among the many pupils of the younger Ibn Bābūya was the father of Nadjāshī (see *Bibl.*). Ray is mentioned as the place of his death, but the tomb now honoured in Teherān was only discovered in 1238 (1821) by the members of the court of Fath 'Alī Shāh after an alleged miracle. There was a necessity for graves of saints in Persia proper, besides those in Meshhed Teš and Kumm especially at Nadjaf, Kerbelā, and the great Shi'i cemeteries of al-Kāzīmīn of Baghdad lay in foreign lands under Turkish rule. The tomb of the father in Kumm beside the tomb of the saint Fāṭima the second sister of the eighth Imām al-Riḍā, was, we know, very much visited even in ancient times. Of the some 300 writings of the son a considerable number has been printed, e.g. the *Hijāl* on good and bad qualities (Teherān 1302), the *Ilal al-Shurāf* and the book on the concealment of the Mahdī *Kamāl al-Dīn wa-Tanāwī al-Ni'ma* (ibid. 1301) (on the latter cf. E. Möller, *Beiträge zur Mahdīlehre des Islams*, Heidelberg 1901). His *Maḡāzī* are very popular, notably his *Uyūn Akhbār al-Riḍā* (Berlin MS. 9663 etc.). While these already contain beside theological, legendary, edifying and polemical matter, many questions of law, a special comprehensive *Fiḥḥ al-Riḍā* (2 vols., Tabriz 1274) was first compiled by Muḥṣī Muḥammad b. Muḥammad al-Nu'mān b. 'Abd al-Salām al-Ukbarī al-'Arabī. His conscious pride in his Arab descent did not prevent his close association with the Būyid 'Aḥmad al-Dawla. His funeral service was conducted by the Sharīf Murtaḍā 'Alam al-Hudā Abū 'I-Kāsim 'Alī b. al-Ḥusayn. In him the Shi'is in Baghdad reached its zenith. A direct descendant of the seventh Imām Mūsā al-Kāzīm, he was, as official naḥḥ, the recognised representative of the 'Alids and also held the offices of chief secretary and leader of the pilgrim-caravan. His authority gave his lectures and his participation in the business of the court great theological and political importance. He conducted a vigorous correspondence with the faithful in Mōsil, Ḥallam, Ḥīrdjān, and as far away as Syria in Halab and Tripolis, the latter of which was wholly Shi'i according to the testimony of the contemporary Nāṣirī Khawrazmī (*Safar-Nāma*, ed. Schefer, 12 ult.). The discourses held at the halting-places with his pupils on a journey to Mecca, *Ghurur al-Farā'id wa-Durar al-Kalā'id* were printed at Teherān in 1312; the *Intiqāḥ* dedicated to the visitor 'Amīd al-Dīn, ibid. 1315; the *Amān* also at Cairo in 1325. On the fundamental question of the Shi'a he published his attack on the three first caliphs in *al-Shāfi'i* (Teherān 1301). Al-Nadjāshī had died before Murtaḍā and was laid to rest in the burial-place of his ancestors in al-Kāzīmīn. For another 28 years the pupil of Murtaḍā and of Muḥṣī, al-Ṭasī Abū Dī'far Muḥammad b. Ḥasan, called the "Shāikh" or the "Shāikh of the (Shi'a) people (Shāikh al-Tā'ifa)", worked in Baghdad alongside of Murtaḍā, who lived to be over 50. When the Saldjūq Toghrīl

Beg entered Baghdad (447 = 1055), the position of the Shī'ā became more difficult. This and the desire of being buried in the holy Mashhad 'Alī induced ʿAlī to move to Najaf, where he died between 458 and 460 (1065—1068).

The enormous Shī'ī literature of the fourth and fifth centuries, of which only a few authors and books can be mentioned here, seems at the first glance to be very one-sided. The same traditional themes crop up again and again: the Imāmate; the estimation from the theological and legal point of view of the earliest caliphs and of the opponents in the battles of the "camel" and of Siffin; the *ghulāt* and all that is connected with the concealment of Imām; then along with Fiqh in general, special Imāmī subjects like the *mu'ta* marriage or the *mu'atā*, i.e. the *mu'ta* marriage and the *tanattū* on the pilgrimage; besides complete exegeses of the Korān, special interpretations of favourite Shī'ā passages like Sūra xlii, 22 and xxxiii, 33 and notably the "light-verse" xxiv, 34; finally continuously recurring polemics against opponents within the Shī'ā. But a development cannot be denied, as a reference to the main problem may show. Ibn Bābiyya the younger had still granted the possibility in Prophets and Imāms of *islah* ("neglect") in secondary matters and even described the opposite view as the first step to *ghulūm* (heretical exaggeration). Against him for example Muḥid had urged in a special pamphlet their absolute infallibility (*ʿiṣma*), although later the position is still often discussed. But that on the other hand the gates were not at once closed against extremes is shown by the estimation in which the principal book of the Imānīs, the *Da'awim al-ʿilām* long continued to be held. The author, Nu'mān b. Muḥammad b. Manṣūr Ibn Hāṭiyān (d. 363 = 974), the "Abū Hanīfa of the Shī'ā" mentions no later authorities than the sixth Imām Dja'far al-Sādiq. That there were none later might be judged from an alleged *ṣūfiya* of this Fātimid Kāfi of Cairo as the special Imām of the Seveners was also left out. But Ibn Shahrāshūb al-Māzandarāni (d. 588 = 1192) (see *Bibl.*) says simply "he is not an Imām" and he is followed by later writers like Tafrīshi (see *Bibl.*).

In the centuries following arose for example the great commentary on the Korān (printed in Teherān) by Abū 'Alī al-Faḍl al-Tabarī died between 548 and 552 (1153—1158), *Mafīd al-Bayān* and *Qiyām al-Djāwān* which is still in use along with the quite concise *Tuḥfat* of al-Ḳāsimī 'Alī b. Ibrāhīm b. Ḥāshim (Teherān 1301), which dates from the time of Kulīnī and gives the special Shī'ā features in moderate compass. Al-Faḍl, who belonged to a family with literary traditions was in Tūs the centre of a learned Shī'ā circle which included for example Ibn Shahrāshūb and Abū Faḍl Shādhān b. Djabrīl, author of one of the many Shī'ī *K. al-Faḍlī* wa 'l-Manāḥiṣ (Tabriz 1304). By moving to Sabrawā al-Faḍl contributed to the spread and consolidation of the Shī'ā in Persia; but he is buried in the sanctuary of Rīdā in Tūs. A leading personality in the next century was Dja'far b. al-Ḥasan b. Ya'qūb b. Sa'īd al-Hillī, called al-Muḥaḥḥik (d. 676 = 1277). His influence in Baghdad extended to the immediate entourage of the last Abbāsīd al-Musta'ṣim. His circle included several members of the Saiyid family of the Banū Tā'is, also distinguished for its literary activity. To this family also belonged the then *naḥḥ* Abū

'l-Ḳāsim 'Alī b. Muḥ al-Tā'ist, the author of the still very popular little books of prayers, passion, guides for pilgrims and amulets, like the *al-Muḥḥim min al-Da'ā* (Bombay 1317) and *al-Ḳāḥ* (Teherān 1314). To Dja'far al-Hillī also the modern Shī'ā owes one of its most popular handbooks, the *Shorūḥ al-ʿilām* which has been continuously commented on in Persian and Arabic (Calcutta 1839, Teherān 1274, part I, ed. and transl. by Kāsembeḡ, St. Petersburg 1862). While Dja'far al-Hillī secured permanent importance for his work on *Furūḥ*, his countryman Ḥasan b. Yūsuf Ibn al-Muḥaḥḥar al-Hillī, called al-'Alīnā for short, is regarded as the great authority on *Uṣūl*. His father before him had been represented as such in the presence of Dja'far to the philosopher, mathematician, astronomer and ardent Shī'ī Nāṣir al-Dīn al-Tūsī (d. 672 = 1273) when this confidant of Hūllāḡ went to Hilla near Babel, which had long been strongly Shī'ī; Nāṣir al-Dīn himself, the "Khawāḍja", is not exactly renowned for his theological writings although these are still studied among the Shī'īs in spite of the fact that they are not easy to understand; but he is one of the most daring figures in Shī'ā politics. He assisted in winning the Assassins strongholds of Alamūt and Maimandis for the Mongol Khān, entered Baghdad with the latter's army and induced this pagan to execute the last caliph. He thus still has in the eyes of the Shī'ā the merit of having destroyed two of its worst enemies, the *ghulāt* and the "wicked" 'Abbāsīds, the betrayers of the holy family. His constructive work for the Shī'ā was taken over by Ibn al-Muḥaḥḥar, who was brought by him into contact with the family of the Khān and later attached himself to Khān Uldjaitū as leader of the Shī'īs. He disputed before the latter with the Ash'arīs, "sophists", and wrote pamphlets against them and against the Sunnī law-schools, and converted to the Imāmiya the Khān himself who had been baptised when a prince, later became a Hanbalī, then a Shāfi'ī. Some twenty of the works of Ibn Muḥaḥḥar are still in use, for example the *Nahḥ al-Mustarjīḥ* on theological principles (Bombay 1305) with the commentary of al-Mikdād b. 'Abd Allāh al-Suyūṭī, who was trained in philosophy; the *Kāḥ al-Fawā'id* (Teherān 1305) is a commentary on the *Kāḥ al-ʿAlī* of Nāṣir al-Dīn al-Tūsī who was his teacher. For the fuller understanding of the middle school of Shī'ā his two volumes *Muḥḥatāḥ al-Shī'ā* (Teherān 1314) are most important.

Ibn al-Muḥaḥḥar was neither the first nor the last to thrust the fundamental doctrines into the foreground. They generally play a more essential part among the Shī'īs than among the Sunnīs for the gate of *ʿiṣmā* is not closed to the former. The learned *ṣāḥib* in Persia claims the title of a *muḥḥatāḥ* who gives his *fatwā*s and bases his teaching on the material basis of the Korān and Sunna through the formal factors of analogy, the search for connections and approval, and by recognition of the above mentioned consensus of the spiritual aristocracy. There is thus at all times a kind of invigorating unrest in the Imāmī theology and jurisprudence, the matter of which otherwise has a tendency to rigidity. Ibn al-Muḥaḥḥar had given his doctrines formulation in the disputes which he waged, especially against a daughter's son of the old Shaikh al-Tūsī, Muḥammad b.

Ahmad Ibn Idrīs al-Hillī al-⁵Idjlī, who appeared to him to destroy the idjlīhāh arbitrarily. In the xth (xvth) century a reaction came from the opposite side through the Mullā Muḥammad Amin al-Astarābādī (d. 1033 = 1623), whose views are still much disputed. As he only allows the Shī'ī Sunna as a source of law beside the Kor'ān, although he also worked on commentaries to the "Four Books", he and his followers are called Akhbārī in opposition to the Uṣūlī who favour the *Idjlīhād*. In his polemics which he conducted from Mecca he was very severe. He refuses to rate the *Idjlīm* higher than the consensus of the Jews, Christians or philosophers. His activities however enlivened the discussion on *ḥyāt*, *istighnā*, *istighṣā* and on the legal force of a unique tradition in the same way as the attacks of Ibn Ḥanbal or Dā'ūd al-Zāhiri had done among the Sunnīs. The matter of the disputed principles among the Shī'īs is of course put in the foreground in keeping with the system; as is the recognition which he demands of the authority of the dead, *taḥlīd al-mayyit*, the subjection to the principles of the holy Imāms laid down in the Sunna.

The conception of the passion has always remained alive in the Shī'a. Out of the multitude of Shī'ī learned men special honour is therefore given to the one who combines the fame of an author with the glory of martyr. Four martyrs are particularly famous. The first *shahīd* is Muḥammad b. Makki al-⁶Amīl al-Djazlī, the author of the Fiqh book *al-Luma' al-Dimaḡhiyya*. Betrayed by seceders, he was imprisoned in Damascus and executed with the sword on the fatwā of the Shāfi'ī and notably also of the Mālikī *kādī*, impaled and burned, according to most authorities in 786 (1384). The second *shahīd* is Zain al-Dīn b. 'Alī b. Ahmad b. Taḳī al-⁷Amīl al-Shāmi. After fruitful activity in Damascus, Basilik and Haleh and after much travelling, he was put to death about 966 (1557) in Constantinople on the way there for delivering a Shī'ī legal opinion. In addition to several legal eschatological and edifying writings his *Commentary on the Luma'* (2 vols.) has been printed (Tabriz 1287). The third *shahīd* is usually held to be Saiyid Nūr Allāh, also (Nūr al-Dīn) b. Sharīf al-Dīn al-Mar'āṣī al-Shuḡrānī. His well known biographies, the Persian *Moḡallīn al-Mu'mīnīn* (Teherān 1268 etc.), have been used by Ethé and Horn for the *Grundriss der iranischen Philologie* (vol. II, 214, 252). His *Ḥikāṣṣ al-Hakī* (Teherān 1273) was destined to be fatal for him, on account of its polemics or more accurately apologetics directed against Sunnī writings like *al-Sawā'ih al-Muḥriḡa 'alā Ahl al-Rafḍ wa 'l-Zanādika* (Cairo 1307, 1308) of the Shāfi'ī Ibn Ḥadjar al-Hattānī. The fanatical Emperor Dīshāqir had him whipped to death in 1019 (1610) (cf. also Horowitz in *Isl. III*, 63); his co-religionists used quite recently to visit his tomb in Akbarīdād (Agra). The honour of being the fourth *shahīd* is given to Muḥammad Mahdī b. Hidayat Allāh al-Isfahānī but he is surpassed in importance by his pupil Saiyid Dīlḍār 'Alī b. Mu'īn al-Nāshirādī, d. 1325 (1819), who expounded his theology in *Imād al-Ilām* (printed in India in 1319). In more recent times Mullā Muḥammad Taḳī al-Kāzwīnī, attained martyrdom, as opponent of Shaikh Ahmad al-Aḥsā'ī (see below) and of the *Ḥabīb*, from among whom came his murderer in 1263 (1847).

The first two *shahīds* were Syrians, the third lived in India. But Persia had become the centre of the Shī'a under the Safawids from 907 (1502). The temporary persecutions under the Aghās from 1135—1142 (1722—1729) and under Nadir (1148—1160 = 1736—1747) made no difference to this. A man whose family had the same native place and the same Shī'ī tendencies as the ancestor of the new ruling house, Husain b. 'Abd al-Hakī al-Ardabīlī al-⁸Ilāhī (the theologian) immediately adopted Persian culture as such and wrote his tracts and commentaries in Persian. In the still mainly Sunnī country he was often forced to lead the life of a *muhājir* (wanderer) between Tabriz, Shirāz, Herāt etc. The necessary vitality was imported into the Persian Shī'a from outside which is also important for the problem: Persia and the Shī'a. Those concerned were mainly Shī'īs from the Southern Syrian mountains of 'Amīl (Mukaddasī, p. 161, 10, 162, 3; 184, 2 always writes: 'Amīl). The last Serbedār 'Alī Mu'ayyid of Sabzawār is said to have offered an asylum to an 'Amīl, the First Shahīd. These rustic scholars came into the Safawid kingdom in increasing numbers. They settled there and receiving continual accessions to their numbers retained the traditions of their home. Further Shī'īs came from Bahrain. This is why we find so frequently in the nisbas of Persian Shī'īs, 'Amīlī or Baharī, or names showing the origin more definitely like Karakī in the one and Aḥsā'ī in the other. We can mention very few names for this later period here. Muḥammad b. Hasan Ibn al-Hurr al-⁹Amīlī al-Mashgharī had a great success with his first book *al-Djawāhir al-Saniya* (Teherān 1302) because in it he collected, for the first time it is said, the Shī'ī "ḥadīth kudat" (utterances of God not in the Kor'ān). But later the extravagance, volume and speed of his literary output, brought upon him sharp criticism even from theologians used to wholesale production; his 6 volume *Tafḥīl Wāḥid al-Shī'a līl Mar'āṣī al-Shar'a* (Teherān 1288) with a special index *man fā yafḥuruhu 'l-Imām* is still however of value on account of the great mass of tradition he has worked into it and the fact that he gives the authors. Ibn al-Hurr only migrated at the age of 40; after long pilgrimages he settled in Tūs and Isfahān. Among natives the leading family in its day was the Madhīlī. Their most notable representative Muḥammad Bakīr b. Muḥammad Taḳī, d. 1110 or 1111 (1698—1700), was appointed Shaikh al-Islām by Shāh Sulaimān I. He aimed at reaching the people and wrote about half his works in Persian; he also translated edifying writings in Arabic by Abu 'l-Kāsim al-Ta'nī. His own largest work is called *Bīḡar al-Anwār*, a great encyclopaedia of law and theology in 25 volumes, which has been printed in Tabriz and Teherān. Several were translated into Persian, for example the thirteenth on the Mahdī, by order of Shāh Nāṣir al-Dīn.

The attitude to those Shī'īs, who do not require an Imām as mediator, and to whom the spiritual union with God attainable by every believing lover is something at the opposite pole from the inheritance of the "divine post" in the chosen Imām, is naturally a hostile one, and also the reverencing of saints in the two schools is of course very different in origin and aim. The most notable encounter between the two was the active part taken by the

Imām Abū Saḥl al-Nawbakhtī (d. 311 = 923) in the destruction of Hallāj, who indeed had severely injured the Shī'is by his claims to be the wakīl of the hidden lord of the age (see the article *ḤALLĀJ*) and L. Massignon, *al-Hallaj, martyr mystique de l'Islam*, Paris 1922, i. 138 *sqq.* The attitude of the philosophers is at least one of suspicion, since, as the case of the *Ḡhūfī* warned the Imāmiya, scholasticism might undermine them. But there are many offshoots, mystics and philosophers who profess to be conscientious Shī'is and are not to be disposed of simply by the usual polemics. All the centuries therefore show examples of a fundamental reunion together with those of mutual attraction. Khwārdjā Nāṣir al-Dīn himself the author of the mildly Shī'ī work *Anṣaf al-Aḥraf* (Tehran 1320) is in spite of the verdict of Ibn Bābiyya, Muḥid, Shaikh Tūst and Ibn al-Muṭahhar, an admirer of Hallāj; Rāḍi al-b. Muḥammad al-Ḥāfi al-Bursī is, it is true, censured as the "renewer of Sūnism" since he built up his system on "deceitful fanciful interpretations" and ultra-Shī'ī "exaggerations", but his books like *Mashārīf al-Awṣaf* written about 800 (1397) were used even by such an enemy of the Sūfis as Majlisī, although with caution, for the *Biḥār*; and the fair-minded concede to Mullā Ṣadrā i.e. Muḥammad b. Ibrāhīm al-Shīrāzī, d. between 1040 and 1050 (1630—1641), that in the "Explanation of the Throne-Verse" (Sūra ii. 256) he has kept himself free from Shī'ī fancies; his commentary on the *Uṣūl al-Kāf* of Kulmī, the *Mafāhīḥ al-Ḡhūf* (Tehran, n.d.) is also used and his version of the fourfold ascent to God in *al-Aṣfār al-arḥā'ia* or *al-Ḥikma al-mutā'aliya* (Tehran 1282) is tolerated, but it is always objected to him that his commentary on the *Ḥikmat al-Iḥrār* of the mystic Suhrawardī has too much of the language and sentiments of the mystics. His pupil Muḥammad b. Murād al-Kāshānī, called Muḥsin-i Faḥd, author of the Shī'ī commentary on the *Ḥurūf al-Sāfi* (Tehran 1276) vigorously defended himself against similar reproaches in *Inṣāf fī Bayān Ṭarīq al-Ilm li-Aṣṣar al-Dīn* (in the collected *Rasā'il*, Tehran 1301) and as a matter of fact he is cited by his pupil Sūfiyid Nī'mat Allāh al-Djāzīrī against the Sūfis. There is a better foundation for the orthodoxy of the two teachers of Mullā Ṣadrā, the two friends at the court of 'Abbās I, Muḥammad b. Husayn Bahā'ī al-Dīn or Bahā'ī al-ʿAmilī (d. 1030 = 1621) and Muḥammad Bakīr al-Astarābādī (d. 1041 = 1631) called Mīr Dāmād, as son of the "son-in-law" of 'Alī b. Abd al-ʿAlī al-Karaki, i.e. also an 'Amilī and one of the many commentators on the *Sharḥ al-Lilām*. In spite of his many sided interests, Bahā'ī, who was also Shaikh al-Islām, as a true Shī'ī revived a very old Shī'ī feature, the ritual interdiction of meat killed by the "people of a book" in the *Risāla fī Tahrim dhawā'ib al-Kilāb*, his *Djāmi' al-Aḥkām* (Tabriz 1309, Bombay 1319) contains decisions in the vernacular on all heads of the law relating to worship. Mīr Dāmād although he also revered Hallāj showed himself a good Shī'ī in his *al-Rawḍat al-ṣanā'iya fī Sharḥ al-Aḥādith al-Imāmiya* (pr. 1311), and in *al-Kāshānī* (Tehran 1314) he reconciled his philosophy with orthodoxy, acknowledging that God had existed from all times and is eternal and that the world is transitory. Philosophical discussions were further enlivened by the fact that they were

interwoven with specifically theological problems. There were therefore both Uṣūlīs and Aḥbārīs among the scholastic Mutakallimūn. The conflict occasionally became so fierce, as recently as last century, that, for example in Kerbelā, books were only handled in a wrapper of cloth lest a member of another school might have used them. One of the chief leaders in the feud was Shaikh Ahmad b. Zayn al-Dīn al-Aḥsā'ī, a Bahā'ī as his name shows. A theologian, poet, astronomer, and mathematician he fought against Sūfis and philosophers and especially for *idjtiḥād* and *iḥfād* against the Aḥbārīs (cf. his *Ziyārat al-Kalām* or *Ḥayāt al-Nafs*, Tabriz 1276). A much too philosophical belief in the resurrection which to the rightly orthodox seemed ill founded, brought him on and his school, the Shaikhīya (cf. *SHAIKHĪ*), the reproach of sectarianism, and as was later the case with Rāḍi (see above) the responsibility for the heresy of the Bahā'īs. They themselves like their offshoot, the Bahā'īs, saw to it that even in quite recent times, the feud was vigorously maintained by deed and pen. Nor was there a lack of other polemics. Majlisī was not the last to write against the Jews. War was waged on Christianity after the arrival of missionaries beginning with H. Martyn in 1195 (1781) and later C. G. Pfander's missionary pamphlet *Maḥmūd al-Ḥaḥḥ* and in recent years the activities of the societies for distributing the Bible.

Popular expression of the Shī'ā creed is found in the legends of martyrs, *maḥṣūl*, and passion-plays, *ta'ziyat*. The apocrypha are also numerous; the frequently printed songs and sayings of 'Alī (cf. Fleischer, *Ali's 100 Sprüche*, Leipzig 1837); the collection of his utterances in the *Nahj al-Balāgha* of Muḥammad al-Ridā, a brother of Shaikh Murādī; also many little books of prayers like the *Ṣaḥifa* of 'Alī, those of the fourth Imām 'Alī Zayn al-ʿAbidin and those of the eighth Imām 'Alī al-Ridā; also the *Ḥadīth ḥadīṣ* of 'Alī collected by Bahā'ī al-ʿAmilī and finally commentaries on the *Ḥurūf*, which are attributed to the sixth Imām Dja'far Ṣādiq or the seventh like the *Tafīr al-Aḥkām* (Tehran 1315), which the younger Ibn Bābiyya still used freely, though many later authorities express doubts as to their authenticity.

Bibliography: There is no thorough account of the Shī'ā. Besides the works here quoted and those mentioned in the articles referred to, the catalogues of Arabic and Persian manuscripts should be consulted (cf. also Brockelmann, *Gesch. d. Arab. Litt.*); E. G. Browne, *A History of Persian Literature in modern Times*, 1924, p. 353 *sqq.*, where also Shī'ī biographies and bibliographies are utilised; Goldziher, *Vorlesungen* 2, ed. Babiinger, Heidelberg 1925, p. 196 *sqq.*; Gobineau, *Les religions et les philosophies dans l'Asie Centrale* 2, Paris 1866, p. 63 *sqq.*; Mez, *Die Renaissance des Islams*, Heidelberg 1922, p. 55 *sqq.*; Babiinger in *Z. D. M. G.*, lxxvi. 126 *sqq.*; Nöldeke in *Idl.* xiii. 70 *sqq.*; Andrae, *Die Person Muhammads in Lehre und Glauben seiner Gemeinde*, 1918, see Index; Buhl, *Altderne Stilling al de Shī'itische Bewegungen unter Umajjadene* (Kgl. Danske Vidensk. Selskabs Forhandlinger, 1910, No. 5). — As a systematic introduction the following are recommended in addition to sources mentioned in the text: Muḥ. b. 'Omar al-Kāshānī, *Ma'rifat Aḥbār al-Ridā*, Bombay 1317; al-Nadīshī, d. 450 = 1058, *Ma'rifat 'Ilm al-Ridā*, Bombay 1317;

al-Tust, *Amā* al-Riḡāl, Teheran 127; and *Fihrist Kutub al-Shi'ā* (ed. by Sprenger and Mawlawi 'Abd al-Haqq, Calcutta 1853—1855); Ibn Shahrāshub, d. 588 = 1192, *Ma'ālim al-Ulamā*, MS. Berl. 10047 incomplete; Ibn al-Muḥallab al-Hillī, *Khawāṣṣ al-Maḥāl* (also called *K. al-Riḡāl*), Teheran 1310; Muḥ. b. 'Alī al-Akhḥārī, al-Astarābādī (d. 1208 = 1819) *Manḥaj al-Maḥāl*, Teheran 1307; Ibn al-Hurr al-'Amīl, *Amal al-'Amīl fī Dhikr 'Ulamā' Djabal 'Amīl*, ibid. 1307; Khwāndamīr, *Ḥabīb al-Siyar* (Pers.), written 929 = 1523, Bombay 1273 etc.; al-Tafrighī, *Nahd al-Riḡāl* (written 1015 = 1606, Teheran 1318); Yūsuf b. Aḥmad al-Baḥrānī, d. 1187 = 1773, *Lū'lu'at al-Baḥrānī* (Teheran 1269; Bombay n.d.); Muḥ. Bakīr al-Kh̄wāmārī, *Rawḍat al-Djannāt* (written 1287 = 1870, Teheran 1306); Muḥammad b. Sādīq b. Mahdī, *al-Nuḡm al-Samā'* (Pers.; Lucknow 1313); Tāj al-Husayn al-Kantūrī, d. 1286 = 1870, *Kaṣṣ al-Hudūd* wa '*I-Aṣṭar* (ed. by Hidayet Husayn and Denison Ross, Calcutta 1330). — On the Imāms: Abu 'l-Faraj al-Iṣbahānī, *Maḥzar al-Tahkīm* (Teheran 1307; first half also on the margin of Fakhr al-Dīn Aḥmad b. 'Alī al-Najāshī, *al-Muntahab fī 'I-Mawāḥib wa 'I-Khawāṣṣ*, Bombay 1314); Aḥmad b. 'Alī b. Muḥanna, d. 818 = 1415, *Umdat al-Talīb fī Anṣāb Al Abī Talīb*, Bombay 1318; 'Abd Allāh b. Nūr Allāh (wrote in 1240 = 1824 etc.), *Maḥtal al-'Awālim*, 1295. — Traditions: Yahyā b. al-Ḥasan b. al-Bīṭrīq, d. 600 = 1284, *Khaṣṣat Waḥy al-Mulūk fī Manāḥib Amir al-Mu'minin*, 1311; do., *al-Umda fī 'Uṣūl Shīkh al-Akhḥār*, Bombay 1309. — Recent works on the doctrine of Nūr: Al-Husayn b. Murtaḍā al-Vazīr al-Jabātābī, *al-Raḥḥ al-Manḥūr wa-Lawām' al-Zuhūr*, Bombay 1303. — Sunnī polemics with reference to internal disputes; Mahmūd Shukrī al-Allūṣ, d. 1270 = 1853, *Mukhtasar al-Tuhfa al-ithnā 'ashariya*, 1301.

(R. STROTHMANN)

SHIBĀM, the name of several towns in South Arabia.

1. **Shibām Harāz**. A mountain two days' journey W. of Ṣan'ā' and S.W. of Menākhā, according to E. Glaser 8700 feet and to A. Desfiers 8050 feet high. The lofty peak of the mountain commands the town of Menākhā, the Gibraltar of the Yemen. The little town of Shibām lies close under it built up against the cliffs; it is a fortified place with massive stone houses, which was taken by the Turks in 1871 and with Menākhā was the strongest bulwark of their power in the Yemen. The country round the little eyry is well cultivated and cereals and coffee grow well on the terraced fields; from the summit of the Djebel Shibām, a splendid view is obtained over the whole massif of the Harāz.

2. **Shibām al-Kaṣṣa** in the Djawf. This is perhaps the **Ḍaw** mentioned in the South Arabian inscription, Halévy, 344. 20 (from al-Baṣṣa' in the Djawf) and 444. 2 (from Barāḥish).

3. **Shibām Kawkabān**. The town lies at the foot of a small spur of the Djebel Sirwāh (a part of the Djebel Dūlā) called Lubākhā. On this little ridge N.W. of Shibām lies the fortress of the town of Shibām, of which there only remain the surrounding wall and a few other ruins at the present day. West of Shibām there is another old building called Dufān, higher than Lubākhā but

also on the eastern slope of the Djebel Dūlā close against the rocky wall.

The town is separated by the Wādī Nabḥān into a southern and northern part and according to Desfiers is 8800 feet above sea-level. It is surrounded by a wall and has 2500 inhabitants but it is said to have been much larger formerly. The inhabitants told Glaser that several places which now lie outside the town were once within its limits and had been markets, namely 'Erret Shukrī (the poultry-market), 500 yards from the town in the direction of Ṣan'ā'. 'Erret al-Baṣṣa' (oil-market) on the road to 'Aylā Sūḥ in the north, two red mounds which are supposed to have been ancient palaces of the Himyars, and al-Mallāḥ (salt-market) on the road to 'Amṣān, ed-Daf'a (butter-market) between the modern Jewish quarter, which lies on the north slope of the Lubākhā, ed-Djā'sert (joined to ed-Daf'a but a little higher and built against the Djebel Dūlā), el-'Āder (pottery-market), consisting of a temple with a poorly housed school and mud-houses. The town is said to have had at one time four gates (Bāb el-Fedjēr, Bāb el-Ahḡīr, Bāb el-Shukrī, Bāb el-Methā'). The chief mosque is a splendid old square building which in Glaser's opinion is as old as the Sabaean period. The tower is now much decayed and crooked but marvellously hewn black blocks 18 inches by 15 are used for the mosque which the natives say was a palace of the Himyars. The other mosques are also said to be ancient. Glaser mentions Kabḥat Shemal on the road to Kawkabān. Mesḡid el-Ghāl, Mesḡid Vā'es near the Jewish village with old walled cisterns, Mesḡid Meshhed, Mesḡid el-Ziyād, Mesḡid Ḥafet Khallake, Mesḡid el-Ma'beri. The three gates of the town are Bāb el-Hādīd and two smaller ones called Bāb el-Mugharr. On the southern slope of Lubākhā are numerous chamberlike caverns of sandstone, reached by breakneck narrow steps along the cliff. They lie in tiers above one another, are of different sizes, some large, some small, and are hewn out of the sandstone, quadrangular in shape. The entrance is formed by a hole 3 feet by 2 and the floor of the chamber is 3 feet below the entrance. In one of these chambers Glaser found a grave so that they were probably used for burials. Shibām is connected with Kawkabān by an old artificial path formed of steps. The country round the town is very fertile. Cereals, — barley, maize and durra, — beans, mustard, clover, and the better kinds of fruit grow very well here and a mine here still yields the famous Yemen carnelian, amethyst and alum.

The settlement is undoubtedly very old. The ancient south Arabian inscription Glaser, 110. 2, 27. speaks of the Akyān of Shibām and the later name Shibām Bait Akyān mentioned also by al-Ḥamdānī and others is no doubt connected with this. The town is also mentioned in the great inscription of Sirwāh (Glaser 1000 A. 15). The citadel of Shibām was the original centre of the Dhī al-Rumḥān. The town is said to have been originally called Yabḥis and then to have been called after Shibām b. 'Abd Allāh b. As'ad b. Dīshām b. Ḥāshid, who lived there. The Sukḥaim at a later date lived there who were descended from Yashum b. Bida' b. Dhī Khawāṣṣ. From them the town gets its epithet of Sukḥaim. Al-Ḥamdānī was still able to see in the town splendid columns of ancient date which supported a throne. The fortress was still considered impregnable after his time.

Ya'fur b. 'Abd al-Rahmān al-Hijālī was besieged in it in vain by the generals of al-Mu'tasim al-Wathik and al-Mutawakkil. Ibn Rosta's statement that the district then contained 300 palaces and at least 40 villages is of course an exaggeration. A silver mine was also worked here at this time. When Ḥasan Paşa ruled in the Yemen, the castle was in ruins. He built the village of Ghirda from the masonry of the ruins.

4. Shibām in the Wādī al-Kaṣr in Ḥaḍramūt, one of the largest towns in the country, which is now under the Sultan of Mukallā. Th. Bent estimates the number of inhabitants at 6,000. Wrede at 20,000 but the latter figure is certainly much too high. The town lies in the lowest part of the valley, on an eminence which has arisen out of the ruins of a series of earlier settlements, the brick buildings of which have supplied the material for its formation. The eminence commands the whole surrounding country and forms one of the best strategic points for miles around. In the south lies the plain of Suhel el-Bilād which is enclosed by the Djebel Khibbe which runs in a west-southwesterly direction right across in front of the town. The southern half of Suhel el-Bilād is well covered with palm-trees but at an earlier date the palm-groves were still more extensive. Cereals grow in the fields and excellent fruit and vegetables are grown while indigo is also much cultivated. The town contains not less than 30 mosques and 2 palaces. The one built by the grandfather of Sultan Munassar of Mukallā is a large well preserved building and the gateway is a masterpiece of the mason's art. The pillars in the lofty rooms are splendidly executed and the vast doors are covered with fine carving. The windows are artistically proportioned; bolts, doors and window-frames are finely carved. The palace of the Djem'adī 'Abd Allāh is also beautifully decorated and makes a pleasing impression. A high clay wall about 20 feet high runs from the two palaces around the whole town. Outside the town lie brickworks, oil-presses, indigo factories and limekilns, in which the business energy of the population finds its outlet. Many houses — there are 600 — and a number of mosques are however now in ruins.

The settlement of Shibām undoubtedly goes back to a very ancient date. The name of the town **شِبَام** appears on a fine ancient South Arabian inscription which Bent brought back from Ḥaḍramūt which came from Sa'ūn and on an inscription of the third century A.D. A number of graffiti scratched in the rocks about 2 hours' journey from Shibām are further evidence that the town was inhabited in ancient times. A cave with South Arabian inscription, probably a tomb, is said to exist in the neighbourhood. Shibām is said to have been founded by the people of Shabwa, who abandoned the latter and settled in Ḥaḍramūt (cf. SHABWA). Al-Bakri knows the town by the name al-Djarima "the large", as the most favoured town in Ḥaḍramūt. Its inhabitants however did not have a very good reputation. If we may believe Ibn al-Mudjawir, in the wars which the Banū Kinda waged in Ḥaḍramūt, Shibām suffered a good deal and a considerable part of its mosques were destroyed. Idṛisi and Abu 'l-Fida' have confused Shibām in Ḥaḍramūt with Shibām Kawkabān, as C. Niebuhr long ago pointed out.

(ADOLPH GROHMANN)

SHIBARGHĀN, called by the Arab geographers ShaburkĀn and SabūrĀn, is a town of northern Afghanistan, situated in 36° 35' N., and 65° 45' E. It was formerly one of the three chief towns of the district of Jūrdjān, the others being Yāhūdīya and Fāryāb. The oldest form of the name is Asapuragān, from which it has been conjectured that it was an ancient seat of the Asa, or Asargarti. 'Azzi describes it as the capital of Jūrdjān, but this position is usually accorded to Yāhūdīya. It lay on the old high road from Balkh, from which it is distant nineteen parasangs, or sixty-five miles, to Marw al-Rūd and Herāt, and is frequently mentioned in the *Zafar Nāma* and other historical works. According to Mustawfi its climate was temperate and grain was sold cheap in its market, but he adds, somewhat disparagingly, that some little corn and fruit were grown there. Marco Polo, on the other hand, says: "It has great plenty of everything, but especially of the very best melons in the world. They preserve them by paring them round and round into strips and drying them in the sun. There is also abundance of game here, both of birds and beasts". The dried melons of Shibarghān were exported not only to Herāt, but also to India and China, where they were famous. The town and its neighbourhood are watered by underground channels (*kanāt*) from the mountains. Early in the nineteenth century, when Afghanistan was in disorder, Shibarghān was the capital of a small Uzbek state, but it long since lost its independence and is now a mere district of the kingdom of Afghanistan. It contains some 12,000 inhabitants, and the land about the town is richly cultivated, though it is on the verge of the desert.

(T. W. HAIG)

SHIBL AL-DAWLA NAJR B. ŠĀLIH B. MIRDĀS of the family of Mirdāsids (see the account of them in the article on the history of Aleppo [HALAB, II., p. 230] and also the article MIRDĀS B. ŠĀLIH), inherited the town of Aleppo after the death of his father Šālih in the battle of Ukkhūwāna on the Jordan in 420 (1029) while his brother Thimāl received the citadel. Najr has won a place in history by his victories over the Byzantines in the defence of the northern marches. After Šālih's death the Byzantine governor Spondil (not Niketas as the Arabic historians say) of Antioch thought the moment had come, by destroying the two Mirdāsīd rulers to free the northern province of the Byzantine empire from the continued attacks, the so-called summer campaigns (*qasf*) to which the Arabs felt themselves bound in fulfilment of the Holy War ordered by the Koran. Spondil who in spite of his incapacity held the important post of governor of Antioch was completely defeated by the brothers Najr and Thimāl in the same year (420). In this year the Emperor

Basil died and his ambitious successor the Emperor Romanos III hoped to gain glory from a campaign against these two princes and set out for Syria with a huge army which included Bulgarian and Russian auxiliaries. In the meanwhile Najr who wished sole control of Aleppo had taken advantage of the absence of his brother to seize the citadel. Thimāl, thoroughly roused at this act of violence, won the Arab tribes over to himself and advanced on Aleppo. Thus threatened Najr sent his nephew as an envoy to the Emperor in Antioch and asked him for assistance, promising to recognise him as suzerain and to pay him tribute. But it did not come to fighting between the two brothers, as the tribes, who saw the necessity of uniting in face of the danger threatening from the Emperor, negotiated a peace between them. Najr remained, as was only right from the political and military point of view, sole lord of Aleppo, and Thimāl was given Rahba and Bālis in compensation. Strengthened by the help of the Arabs, Najr withdrew his allegiance to the Emperor. The latter therefore (421 = 1030) advanced on Aleppo via Antioch and pitched his camp north of the town in Tabbāl. A body of cavalry which he sent out to reconnoitre was wiped out by the Arabs. Thus encouraged, the Beduins began to harass the camp itself, to intercept the men sent to bring provisions and water, so that the Emperor was ultimately so hard pressed that he had to retire hurriedly and leave vast booty to the Arabs. He is said to have been in such danger on the flight that he put off his tiara to avoid recognition. The victory of the Arabs brought no great results. The new governor of Antioch was, it is true, also defeated but Najr preferred to make terms with the Emperor. He sent an envoy to Constantinople, who was well received and sent back with rich presents for Najr. The latter bound himself to pay the Emperor tribute of 500,000 dirhems. Peace reigned henceforth between the two rulers. Najr was also able later to gain the favour of the Fatimid Caliph al-Zahir and his successor, or of his vizier, in 427 (1035) by rich presents from the Byzantine booty so that he was confirmed in the possession of Aleppo and could rest in peace and security. Only the old enemy of the Mirdāsids, Anushtikin al-Dibiri, intrigued against Najr and succeeded in gaining a promise of the Emperor's neutrality in a war against Najr; Anushtikin again succeeded in uniting the Arab tribes of Tay, Kalb and Kilāb. Thus reinforced he took the field against Najr. In the battle of Latmin Najr was killed, his head brought to Anushtikin, who is said to have deeply lamented his death. Anushtikin became lord of Aleppo and it was not till four years later, after his defeat and death that Thimāl regained it for the Mirdāsids.

AL-SHIBLI, ABU BAKR DULAF B. DHĀMAR, a Sūnnī mystic. Born in Baghdad (of a family which came from Transoxiana) in 247 (861)

he died there in 334 (945). At first an official (and wali or deputy-governor of Dimašq) at the age of 40 he became a convert to asceticism under the influence of Khair Nasabī, a friend of Dīmānī; he brought into mystic circles in Baghdad the enthusiasm, at times cynical, of a dilettante, bolder in words than deeds. The tragic end of the trial of his friend al-Hallāj [q. v.] frightened him; he denied him before the vizier and went, it is said, to accuse him at the foot of the scaffold (309 = 922); in the end whether deliberately (through remorse or to avoid possible persecution) or unconsciously (through an excess of asceticism) Shibli affected a bizarre mode of life, cultivating eccentricities of speech and action which caused his internment in the lunatic asylum in Baghdad; there he used to discourse readily on mysticism in presence of distinguished visitors.

He has left no works, but his sayings (or 'al-luḥūn' [ḥikāḥ]) figure in the classical collections on *Shayḥ* [q. v.] as do his deliberate eccentricities, his ridiculous penances, humiliating or painful, such as putting salt in his eyes to prevent himself from sleeping. In the legend of al-Hallāj the part attributed to Shibli is very important. He seems to have revered him in secret after denying him in public. In dogma, his ideas are those of Dīmānī; in law he followed the Mālikī school, which saved him in his lifetime and caused him to be canonised after his death in legal circles, as a rule very hostile to Sūfism. In the classical transmission of *ḥikāḥ* (cf. Ṭaṣṭi) Shibli figures as a link in the chain, between Dīmānī and Naṣrābādī, the latter indeed was his pupil.

His tomb is still venerated at the A'zamiya in Baghdad, beside the *maṣṣan* of Abū Ḥanīfa.

AL-SHIBLI (from *al-Shibliya*, a village in Ushrukhān in Transoxania): STRĀDJ AL-DIN ABŪ ḤAFṢ 'UMAR B. ISHĀK B. AHMED AL-GHAZNAWĪ AL-DIWLĀTĀVĀDĪ AL-HINDĪ AL-HANAFĪ, celebrated *Faṭḥ*. He was born about 714 (the date 704 must be wrong). He studied *Fikḥ* with Wadīh al-Dīn al-Dihlāwī al-Rāḥī, Shams al-Dīn al-Dīlī al-Khāṭib, Sirāj al-Dīn al-Thakāfi al-Dihlāwī, Rukn al-Dīn al-Badrūnī, pupils of Abū 'l-Kasīm al-Tanūkhī (d. 670), *Ḥadīth* with Aḥmad b. Manṣūr al-Dīwānī and others. In 740 he came to Egypt and became deputy for Dīmānī al-Dīn al-Turkumānī as *ḥākim*; through the influence of Yilboghā he was then appointed *Kāḍī* 'l-*Aḥkām*; after the death of Turkumānī in Sha'bān 769 he became chief *Kāḍī* (Kāḍī 'l-*Ḥudūd*) of Egypt and held the office till his death on Rajab 7, 773. He had also Sūfī tendencies; in Mecca he associated with Khīr and he was later a follower of Ibn al-Fārīd (cf. below).

His best known works are: 1. *al-Tamwīḥ*, a commentary on the *al-Hidāya* of al-Marghīnānī (cf. Brockelmann, i. 376, No. 24); 2. a second commentary on the *al-Hidāya* in syllogistic form;

3. *al-Sūmil* ḥ 'l-*Fikḥ*, dealing with *furū'*; 4. *Zuhd* al-*Aḥkām* ḥ 'l-*Khiṭāb* al-*A'imma* al-*A'im*; 5. a commentary on the *Baṭl al-Niḥān* ḥ 'l-*Uḥl* al-*Fikḥ* of al-Sūfī (cf. Brockelmann, i. 383, No. 49, 2); 6. a commentary on the *al-Mughāḥ* ḥ 'l-*Uḥl* of al-Khabbāṭ (cf. Brockelmann, i. 382, No. 48); 7. *al-Ghurra* (this seems to be the correct form of the title) *al-munīfa* ḥ 'l-*Tarḥīḥ* *Maḥḥ* *Abū Ḥanīfa*; 8. *Kiṭāb* ḥ 'l-*Fikḥ* al-*Khiṭāb*; 9. a commentary on the *al-Ziyādāt* of al-Shahānī (cf. Brockelmann, i. 172, No. 2); 10. an unfinished commentary on his *al-Dīwān* *al-khiṭāb* (identical with the *Mukhtasar al-Talḥīṭ*, ibid., No. 3 preserved in his autograph; the work is said to have originally included also *al-Dīwān* *al-yaghīr*); 11. a commentary on the *al-Tāyis* of Ibn al-Fārīd (cf. Brockelmann, i. 262, No. 8); 12. a work on *Taḥawwuf*; 13. a commentary on *al-Manār* ḥ 'l-*Uḥl* of al-Nasafī (cf. Brockelmann, ii. 196, No. 1, 1); 14. a commentary on the *al-Mukhtār* ḥ 'l-*Faṭḥ* of al-Bulḥājī (cf. Brockelmann, i. 382, No. 47, 1); 15. *Lawāḥ* al-*Anwār* ḥ 'l-*Radd* 'alā *man anḥar* 'alā 'l-*Avīṣṣ* *Lafṣ* al-*Arār*; 16. *Uddat al-Nāṭik* ḥ 'l-*Manārik*; 17. a commentary on the *Alīda* of al-Ṭabāwī (cf. Brockelmann, i. 174, No. 7, 7; where on MS. is quoted); 18. *al-Lawāḥ* ḥ 'l-*Sharḥ* *Dīwān* al-*Dīwān* (of al-Sukki; cf. Brockelmann, ii. 89, No. 1); 19. finally gives a collection of his *farā'id*. On manuscripts of the surviving works cf. Brockelmann, ii. 80, No. 9.

Bibliography: Brockelmann, *G.A.L.*, loc. cit., where further references are given; al-Laknawī, *al-Faṭḥ* al-*baḥṭiyya* ḥ 'l-*Tarḥīḥ* al-*Ḥanafīyya*, 1324, 145 sq. On other individuals called al-Shibli, including the famous mystic [q. v.], cf. al-Sam'ānī, *Kiṭāb al-Anṣāb*, 329^a, 9 sqq.; Vāḥidī, *Muḥḥam*, ed. Wüstenfeld, iii. 256; Brockelmann, i. 199, No. 6; Massignon, *al-Hallaj*, passim (cf. Index); *Isl.*, xv., 121.

(JOSEPH SCHACHT)

SHIBLI NU'MĀNĪ, MUHAMMAD, Urdū writer and historian, was born during the Indian Mutiny of 1857, in a village, 8 miles away from A'zamgarh, U. P., in which his ancestors had been living as *zamindār's* for about 300 years. His father, Shaikh Ḥabībullah, was a *wakil* at A'zamgarh with a good legal practice. Shibli, after having been educated in Islamic sciences at home, under the famous scholar Muhammad Fārūk of Citaliyākot, made a further study of *fiqh* under Mawlāwī Iḥṣān Ḥusain at Rāmpūr; in 1859 (1872) he went to Lāhōr, where he specialised in Arabic literature under the eminent Arabist, Professor Faiḍ al-Ḥasan. After his return from Lāhōr, he specialised in *ḥadīth* under Mawlāwī Aḥmad 'Alī of Sahāranpūr, and then went to Dēoband, where he learnt *Farā'id* in about 6 weeks.

In 1880 he passed the *wakil's* examination, practised law at A'zamgarh and Basti but for a few months, acted as copyist and *amīn* in the A'zamgarh district for a short time, and took to indigo trade; but nothing suited him. While staying with his younger brother who was being educated at 'Alighar, Shibli was introduced to Sir Saiyid Ahmad who made him a teacher in the College School and soon after appointed him as one of the professors of Arabic and Persian (February 1, 1882). His coming in contact with Sir Saiyid had a very healthy influence on the young man's literary activities, and he very soon learnt to utilize the store of knowledge he had gathered

during the past years of his life. In 1892 he undertook a journey to the Near East to get acquainted with the literary and educational conditions there, and visited Constantinople, Beirut, Jerusalem, Cairo and other places. He was given a literary pension by the Nizam of Hyderabad in 1314 (1896) and resigned his Professorship in 1898; was Director of the Department of 'Ulum-u Fannūn, Hyderabad (April 1901—January 1905), Hon. Secretary of the Dār al-'Ulūm of the Nadwat al-'Ulūm, Lakhna'ū (1905—1913); was also, for sometime, Hon. Secretary of the *Andhman-i Taraqqi-i Urdū*. He died in 1914, and, just after, his pupils established, in his memory, the Dār al-Mu'annifin at Azamgarh, with a library and a publishing house, and with the monthly journal 'Ma'arif' as its organ. Shibli's works are: Urdū: *Musalmānān ki qur'ānī Ta'lim*, Agra 1887; *al-Ma'mūn*, a biography of the Khalīfah, Agra 1887; *Strat al-Nu'mān*, a biography of Abū Ḥanīfa, Agra 1891; *al-Dīziya*, on the origin of the word, Agra 1891 (Engl. translation, 'Aligarh); *Kutubkhāna-i Ishkandariya*, Agra 1891 (Engl. translation, Hyderabad); *Safar-nāma*, Agra 1893; *al-Farūq*, 'Umar's biography, Kanpur 1899; *al-Ghasālī*, the Imām's biography, Kanpur 1903; *Ilm al-Kalam*, 'Aligarh 1903; *al-Kalam*, Kanpur 1903; *Sawānīḥ-i Mawlānā Rām*, Lakhna'ū 1902; *Mawāzino-i Anis-u Dabir*, a criticism of two Urdū poets, Agra 1906; *Shīr al-'Adām* i—iv., 'Aligarh 1909—1912, v. (unfinished), Azamgarh 1919; *Strat al-Nabī*, i—ii., Kanpur 1919—1920, iii. (unfinished), Azamgarh; *Kulliyāt-i Urdū* (Poems); *Rasūl-i Shīblī*; *Makalat-i Shīblī*; *Makātib-i Shīblī*, 2 vols. (all published lately, Azamgarh). Persian: *Kulliyāt* (Poems), Azamgarh. Arabic: *al-Dīziya*, 'Aligarh; *al-Intihād 'ala 'l-Tamaddun al-Islāmī li Dīwānī Zaidān*, Lakhna'ū.

SHIGHNĀN. [See SHUGHNĀN.]

SHIHAB AL-DAWLĀ. [See MAWĀDID.]

SHIHAB AL-DĪN. [See MUHAMMAD B. SĀNĪ.]

SHIHAB AL-DĪN AHMAD B. MAJID, an Arab navigator of the xvth century, author of sailing instructions for the Indian Ocean, the Red Sea, the Persian Gulf, the western China Sea and the waters of the Malay Archipelago.

When Vasco da Gama had reached Malindi on the east coast of Africa in 1498, he was able to get a pilot there who took him direct to Calicut. The incident is briefly recorded by one of the sailors in the expedition (*Retiro da viagem de Vasco da Gama em MCCCXCVII*, 2nd ed., ed. by A. Herculano and Castello de Paiva, Lisbon 1861, p. 49); and in greater detail by the Portuguese historians of the xvth century, notably by Damiao

de Goes (*Chronica do verissimo Rei D. Manuel*, Coimbra 1790, i., Ch. xxxviii., p. 87), Castanheda (*Historia do descobrimento e conquista da India pelos Portuguezes*, 1833, Bk. i., end. of chap. xii and beginning of ch. xiii., p. 41) and Barros (*Da Asia*, Decade I., Bk. iv., ch. vi., p. 319—320 of the little edition of 1778) who give the name of this pilot as: *Malemo Canaga* in Castanheda and Goes, *Malemo Cana* in Barros, i. e. *mu'allim kanaka* or 'master of astrological navigation'.

This story is confirmed by an Arabic text: *al-Barq al-yamānī fī 'l-fath al-'Oṭhmānī* (MSS. nos. 1644—1650 and 5927, Arabic collection of the Bibl. Nat. [1]) by Ḳuṭb al-Dīn al-Nahrawī (1511—1582, cf. above), but the pilot there is called Ahmad b. Majid. Ḳuṭb al-Dīn records that, after several unsuccessful attempts, a Portuguese caravel arrived in the Indian Ocean: '[Before they reached the west coast of India and while they were on the east coast of Africa] the Portuguese continually sought information regarding this sea [of Western India] until a skilful sailor named Ahmad b. Majid put himself at their disposal; the leader of the Franks called *Almūdānī* (= Portuguese *Almirante* = 'Admiral') had become friendly with him and he used to become intoxicated with the Portuguese Admiral. This sailor being intoxicated showed the route to the Admiral, saying to the Portuguese: "Do not approach the coast in this part [of the east coast of Africa north of Malindi], steer straight for the open sea; you will then reach the coast [of India] and be sheltered from the waves". When they followed these directions, a large number of Portuguese ships avoided shipwreck and many ships reached the sea of western India" (MS. 1644, fol. 56, l. 9 sq.).

The story of the intoxication seems to be a complete invention; it seems that it was a pious fiction intended to excuse an action which the Muslims of Mecca where Ḳuṭb al-Dīn lived must have regarded as treachery. On the contrary it is more likely that the Arab *mu'allim* agreed to pilot the flagship of the Portuguese squadron on the promise of a handsome reward for his services. The Portuguese reports, which had no reason to conceal the fact, give quite a different story to this Arabic text.

Barros, who gives the most detailed account of the event, says that while Vasco da Gama was at Malindi some banyans from the kingdom of Cambay in Gujarat came to visit the Admiral. These Hindus, who paid homage to an image of the Virgin (taking her for a Hindu goddess) were thought by him to be members of one of the Christian communities which existed in India in the time of St. Thomas. With them came a Moor (= Muslim) of Gujarat (sic!) called *Malemo* (= *mu'allim*) *Cana* (= *Kanaka*). The latter as much for the pleasure he took in the company of our men as to please the king (of Malindi) who was looking for a pilot for the Portuguese, agreed to set out with them (to show them the route to India). After discoursing with him, Vasco da Gama was very satisfied with his knowledge, especially when the Moor had shown him a map of the whole coast of India arranged as those of the Moors are with meridians and parallels (= degrees of latitude and longitude) in great detail without indicating the rhumbs of the winds. As the squares (formed by the intersection) of these meridians and parallels were very small (the direction of) the coast by

the two rhumbs N. S. + E. W. was very exact without the map being overloaded with the quantity (of signs indicating the direction) of the winds and the needle, as on our Portuguese map which served as a basis for the others. Vasco da Gama showed the Moor the great wooden astrolabe which he had with him and other astrolabes in metal, with which the altitude of the sun was taken. The Moor displayed no astonishment at seeing such instruments. He said the (Arab) pilots of the Red Sea used instruments of brass, triangular in form and quadrants to take the height of the sun, and of the (pole-)star which they used most in their navigation. But, he added, he and the sailors of Cambray and the whole of India sailed with (the help of) certain stars, southern as well as northern, and other notable stars which crossed the centre of the heavens from east to west. They did not take their altitude with instruments like those (that Vasco da Gama showed him) but with another which he used himself, and he brought it at once to show him (on this instrument cf. Reinoud, *Introduction Générale à la Géographie des Orientaux in Géogr. d'Abenlida*, I, p. clix. 199); it was an instrument made of three plates. As we are dealing with the shape and method of using this instrument in our *Géographie universelle*, a work unfortunately now lost, in the chapter devoted to instruments of navigation, it is sufficient to mention here that the instrument in question is used by the Moors for the operation for which we use in Portugal the instrument called by the sailors *astrolabille*, which is also dealt with, along with its inventors in the chapter just mentioned (of the *Géographie Universelle*). After this discourse and others which they had with this pilot, Vasco da Gama had the feeling that he had found a great treasure (*parvata-ter nullo dum grão thesouro*). In order not to lose him, he put to sea as soon as possible and sailed for India on April 24, 1498" (*Da Asia*, Decade I, Bk. iv, Ch. vi, p. 318-321, of the edition of 1778).

According to Goes and Castanheda (*loc. cit.*) the pilot in question was "a Gujarat pilot", according to Barros "a Muslim of Gujarat", the description of him by the two Portuguese historians is a bilingual expression: — *mulemo* = Arabic *mu'allim*, in nautical language — "master of navigation" and *Canagwa* = *Kanaka*, the Tamil form of the Sanskrit *ganaka* = "astrologer" (cf. *The Book of Duarte Barbosa*, ed. M. Longworth Dames, Hakl. Soc., 1921, ii. 61/62 with v. Ronkel's correction in *Museum*, 1925, No. 1, p. 18). On the other hand this *mulemo canagwa* is undoubtedly the same person as Ahmad b. Mājid of the *al-Bahr al-yamūni*; and we know from himself that the celebrated *mu'allim* was an Arab of Arab descent, and born at Djulfar. The mistake made by Goes, Castanheda and Barros or rather by their sources is obvious but I am not able to explain it.

We know Ibn Mājid from other sources also. In the preface to his collection of sailing instructions entitled *al-Muḥīṭ*, the Turkish Admiral Sidi 'Alī says: "During a stay of five months which I made at Basra (in 1554) which lasted till the beginning of the monsoon, and during my three months' voyage from Basra to India, from the beginning of the month of Shāhān to the end of the month of Shawwāl (July 2 = Sept. 27, 1554), during these eight months I never missed an opportunity of talking day and night on nautical matters with the pilots of the coast

and the sailors (of the country) who were on board my ship. Thus I learned how the old pilots of Hormuz and Hindustān: Laith b. Kahlān, Muḥammad b. Shāhān and Sahl b. Abūn used to sail in the Indian Ocean. I also collected the books that had been written by modern (pilots), like Ahmad b. Mājid of Djulfar in the province of 'Omān and Sulaimān b. Ahmad (cf. the article *SULAIMAN AL-MAHRĪ*), a native of a town called Shīhr in the land of Djuz (Southern Arabia), as well as the books entitled: *Fawā'id*, *Hāwiya* (by Ibn Mājid, see below), *Takfāt al-fuḥūl*, *Min-hādī*, *Ḥilālata l-ḥumūsi* (by Sulaimān al-Mahrī); and I studied each one thoroughly. For as a matter of fact it was exceedingly difficult to navigate the Indian ocean without these works. The (foreign) Captains, Commanders and sailors do not know how to sail here and a pilot is always indispensable for them because they have not the necessary knowledge. I therefore have thought it at least a duty to write down all that is best in these books and to translate it into Turkish and then to write a good book so that those who consult it may attain their goal without needing a pilot and not have to seek advice from a pilot. My translation from these Arabic documents was finished in a short time with the help of the Powerful King (Allāh). As my books contain all the extraordinary things about navigation it has been entitled *al-Muḥīṭ*, "what surrounds our coasts, what includes all in itself" (*Die topographischen Capital des Indischen Seespiegels Muḥīṭ*, transl. M. Bittner, with preface and 30 maps by W. Tomaschek, Vienna 1897, p. 55). Sidi 'Alī mentions Ibn Mājid later (p. 51) and speaks highly of him; he calls him the "reliable among the sailors, the *mu'allim* of the sea of India, most worthy of belief among modern (writers of sailing instructions)".

So far as one can judge from the published extracts, the *Muḥīṭ* of Sidi 'Alī is only the Turkish version, often mediocre, of a part of the route-book and sailing instructions of Ibn Mājid and of Sulaimān al-Mahrī. Neither Maximilian Bittner nor his predecessor, von Hammer, endeavoured to trace the Arabic texts, the titles of which are briefly given by the Turkish admiral and their authors. No literary history mentions them but they appear in the *Catalogue des Manuscrits Arabes de la Bibl. Nat.* under 2292 and 2559 (the former was acquired by the Bibliothèque in 1860, the latter according to a note made by the Syrian priest Joseph Ascari was already in the Arabic collection in 1732); these two valuable manuscripts contain all the works used by Sidi 'Alī and other texts which he does not appear to have known.

The MS. 2292 which is a copy of the original is in 181 folios of 270 × 180 mm, 19 lines to the page and contains 19 route books and nautical treatises by Ibn Mājid copied in the following order by a scribe who troubled little about chronology:

1. *Kitāb al-fawā'id fī nūṭ al-bahr wa l-fawā'id*, folio 1-88* (it is the text called *Fawā'id* by Sidi 'Alī). This work in prose, divided into xii. chapters, is dated 895 (1489/1490). The early pages deal with the legendary origins of navigation and of the magnetic needle. Ibn Mājid then deals with the 28 lunar mansions; the stars corresponding to the 32 rhumbs (*ḥann*, plur. *ahān*) of the compass; of the sea-routes of the Indian Ocean; the latitudes of a number of harbours in the Ocean and Western China Sea;

the landmarks (*'alāma, iḥḥāra*) formed by birds and the outline of the coast; the landfalls (*ṣawāḥiḥ, ʿāṣā*, *Ar. madāḥiḥ*) of the west coast of India; the ten famous large islands (Arabian Peninsula, island of Komr or Madagascar, Sumatra, Java, al-Ḡhūr or Formosa, Ceylon, Zanzibar, Bahrain, Ibn Ḡāwīn in the Persian Gulf and Socotora); monsoons favourable for the voyage with the date in the Persian computation of each monsoon. This treatise concludes with a description of the Red Sea which gives in detail its anchorages, shallows, banks and reefs. "The style of the work", says de Slane (*Catal.*, p. 401), "is very prolix and full of technical terms the meaning of which was only known to those who sailed the Indian Ocean". This is only partly true. The texts of MSS. 2292 and 2559 have been certainly prepared by sailors and for sailors. Technical terms abound in them, as might be expected, and the nautical vocabulary which they have yielded to me will be an important addition to the Arabic dictionaries (2).

II. *Hāwiya al-ibḥār fī ṣifl ilim al-ibḥār* (this is the text mentioned by Sidi 'Alī under the title *Hāwiya*) occupies ff. 88b-117a. The text in *rafiʿa* verse is divided into 11 sections (*ṣafḥ*). After a brief prose introduction of 20 lines the first section begins, dealing with signs of the proximity of land which pilots ought to know. The second section deals with the lunar mansions and rhumbs, the third with the knowledge of the years, Arabic, Coptic, Byzantine and Persian, the fourth with the knowledge of the *ḥāḍi* or correction to be made in the position of certain stars, the monsoons (*riʿ*) of the *ḥāḍi*, the months in which the stars appear, the fixed character of their latitudes, and their disappearance, the dates being represented in the Persian way; the fifth, the sea-routes on the coasts of Arabia, of the Hijāz, of Siam (i.e. in the language of Ibn Mājjid, the west coast of the Malay Peninsula which in those days all belonged to Siam), of the extremity of the land of the negroes (lit.: of the negro coast); the sixth, the sea routes on the coast of Western India, down to the countries situated below the wind (i.e. according to Ibn Mājjid, east of Cape Comorin), like the island of Billiton on the east coast of Sumatra, [the land of the] Maharāḍja = Sumatra (cf. ff. 101b-103b) and China, Formosa; the seventh, the sea-routes along the coast of the eastern islands, Sumatra, the Fil or Laccadines, Madagascar, Yemen, Abyssinia, the land of the Somāla, of al-Aḥwā in southern Arabia, and of Makrān; the eighth, the distance of the sea-ports of the Arabian coast from those of Western India; the ninth, the latitudes of the harbours of "the Surrounding Sea (*ḥaḥr al-muḥiṭ*) which runs deeply into the north, i.e. of the sea of Western India"; the tenth, on navigation in the strict sense of the word, on the knowledge of currents of deep seas and of "the Surrounding Sea which runs far in between the coasts of the land of the negroes, India and China", i.e. the Indian Ocean of our maps; the eleventh deals with nautical astronomy.

The *Hāwiya*, which is frequently cited in the preceding treatise (I) is thus dated on folio 116b: "this poem was finished in the month of the pilgrimage at Djulfār (in the S. W. of the Persian Gulf), the native land of the Lion of the Sea (surname of Ibn Mājjid), among countries on the day of the Ditch (*yamm al-Ḥadīr*) (2), the finest of days which is specially consecrated to good

works and to fasting, and it was, my friend, in the year 866 A. H.", i.e. 18 Dhū 'l-Hijja 866 = Sept. 13, 1462.

Folios 117b-123a are blank.

III. An *urfiyya* on the navigation of the Gulf of Berbera, the Gulf of Aden of our maps, from folio 123b-127a; it is dated 890 (=1485).

IV. A treatise in verse preceded by an introduction of 33 lines in prose entitled: "Book on the *ḥiḥla* of Islām for the whole world". This poem, says the author, has been prepared "especially for those towns which are near the sea and for towns frequented by travellers". It is dated 893 = 1488 and occupies ff. 128a-137a.

V. An *urfiyya* on navigation along the Arabian coast of the Persian Gulf, fol. 137b-139b; n.d.

VI. An *urfiyya* on the Banāt *naḥḥ* (αβγδεζη of the Great and Little Bear), ff. 139b-145b; dated 900 = 1494-1495.

VII. An *urfiyya* entitled "The treasure of the *muḥallim* or masters of navigation and treasures of the science of unknown things about the sea, the stars, the planets, their names and their poles". This is not dated but from the context is before 1489, fol. 145b-147b.

VIII. An *urfiyya* dealing with the landfalls (1) on the west coast of India and the coast of Arabia from 25° N. to 60° N.; n.d.; ff. 147b-154b.

IX. An *urfiyya* rhymed in *m*, n.d., dealing with certain northern stars, ff. 154b-156b inclusive.

X. *Urfiyya muḥkammas* dealing with certain northern stars; n.d.; ff. 156b-157b.

XI. Poem in 13 lines rhymed in *n* on the Byzantine months; n.d. (before 1489).

XII. *Urfiyya* entitled *Ḥaribata 'l-dar'ib*, "The obligation of obligations" dealing with its utilisation of certain stars for navigation; n.d.; ff. 158a-163a.

XIII. *Urfiyya* entitled "Urfiyya attributed to the Commander of the Faithful 'Alī b. Abī Ṭālib, dealing with the knowledge of lunar mansions, their exact position in the heavens, their form, their number; a complete description"; before 1489; ff. 163a-165b.

XIV. Rhymed poem in *r* entitled "The Meccan poem" dealing with sea routes from Djedda to Cape Partak (South Arabia), Kalikut, Dābul, the Konkan, Gujarat (Western India); to al-Aḥwā, Hormuz...; n.d.; ff. 164b-169b.

XV. Rhymed *urfiyya* in *r* entitled *Nadīratu 'l-abbāl* "The Rarity of the Generous" or *al-Wāḥiḥ, Dhubbān* and *al-'Uyūḥ*; ff. 169b-171a (before 1489).

XVI. Poem rhymed in *k* entitled "The Golden Poem", ff. 171a-176a; before 1489. It deals with "the investigation of reefs, great depths and what one should do there and shallows; signs indicating land like birds and winds, land-falls on capes during the monsoon from the South-West, landfalls in wind from the West". It is mentioned folio 40², l. 10 and dated from the reign of the Mamlūk Sultan Ashraf Saif al-Din Ḳā'it Bey (873-901 = 1468-1495).

XVII. *Urfiyya* dealing with the observation of *al-Dafda*, "the Frog" = α of the Southern Pisces or β of the Whale according as it is the first or second Frog. This poem rhymes in *n*, and is called *al-Fa'ika*; it occupies ff. 176a-178a and was written before 1489.

XVIII. *Urfiyya* rhyming in *ḥ*, called *al-Balīḥa* "The eloquent", dealing with the observation of the stars Canopus and Arcturus; it occupies ff. 178a-179b, — n.d.

XIX. Nine brief sections (*fuṣūḥ*) in prose, not dated, dealing with soundings in different parts of the Indian Ocean; ff. 179^b–181^b and last.

The second MS. in the Arabic collection in the Bibliothèque Nationale, N^o 2559, is a small 4^o of 215 × 150 cm., 187 folios of 15 lines to a page; it contains the following treatise by Ibn Mājid:

XX. *Urḡūṣa* entitled *al-Saḥīḥa* (divided into seven sections) because it deals with seven branches of nautical lore; ff. 93^a–103^b; dated 888 (1483). At the end it is referred to as "the great *Urḡūṣa*". "The Golden poem" (cf. XVI above) is reproduced on ff. 103^b–109.

XXI. A *ḥaṣṣa* rhyming in *ḥ* dealing with astronomy; ff. 109^b–111^a; before 1489.

XXII. *Ḥaṣṣa* entitled "... .." (*sic*) observations regarding it and the stars which are useful for landfalls and the description of the landfall points and of the coasts from Dīn to Dābul; ff. 111^a–116^a. The proper title of this nautical poem is given on f. 116^a in the following verse: "I have called this *ḥaṣṣa* 'The good path of the *mu'allim* because it is faultless'. At the end he says: "End of the *ḥaṣṣa* called *al-Haṣṣa* (which directs into the good path)"; before 1489.

The first nautical treatise in prose (I) contains also quotations of verses taken from ten other treatises by Ibn Mājid which have not come down to us (XXIII–XXXII).

Chronologically these thirty two treatises may be thus classified:

- (a) 1462. *Hāṣiyya* (II).
- (b) 1483. *al-Saḥīḥa* (XX).
- (c) 1485. The poem on the Gulf of Aden (III).
- (d) 1488. The poem on the Kibla of Islām (IV).
- (e) 1489–1490. The Book of Useful Information (I).
- (f) 1494–1505. The *urḡūṣa* (VI).

The texts VI, XI, XIII, XVII, XXI–XXX are quoted in *z* and *a* which places them in the period before 1462. XV is earlier than XVI and XIV which refer to it. IX is earlier than XV and XVI and XII than XIV. VIII, X, XVIII and XIX contain no hint to enable one to date them, even approximately.

The period during which Ibn Mājid published his thirty nautical texts lies between an uncertain date before 1462 and 1489/90. The most important work of the celebrated *mu'allim*, for size as well as its practical nature is undoubtedly his Book of Useful Information (I). It contains 178 pages (folio 1^b–88^a with 48 bis) of 19 lines to the page, i.e. 3382 lines, to which are to be added marginal notes of one or several lines on 27 pages. Concluded in 1489/90 this book seems to be a compendium of the known knowledge of theoretical and practical navigation. It is therefore more and better than the result of personal experience and labour; we must regard it as a kind of synthesis of nautical science of the latter years of the middle ages. Ibn Mājid is at the same time the earliest of modern writers of nautical guides. His work is admirable. The description of the Red Sea, for example, has never been surpassed or even equalled, neglecting the inevitable errors in latitude, by any of the writers of nautical guides for sailing boats. The information given on the monsoons, local winds, routes and latitudes for crossing the whole Indian Ocean are as precise and detailed as could be expected at this period.

Indonesia is less well known to him than the continent and islands of the Indian Ocean. By an error, which is inexplicable, Java is placed lying north to south, contrary to its real orientation; and this same error appears again in the nautical texts of Sulaimān al-Mahri (MS. 2559) who lived in the first half of the xvth century, from which it passed into the Turkish translation of Sidi 'Alī. It is the only important rectification necessary.

MS. 2292 incidentally contains some biographical information about Ibn Mājid and his family. He was called Shihāb al-Dīn Aḥmad b. Mājid b. Muḥammad b. 'Amr b. Faḍl b. Buwāḥ b. Yūsuf b. Ḥasan b. Ḥusain b. Abi Ma'laḥ al-Sa'ādī b. Abi 'I-Rak'ib al-Nadīdī (f. 2^b, infra). He gives himself the title of "poet of the two Kibla's (Mecca and Jerusalem), who has performed the pilgrimage to the two noble sanctuaries, the descendant of the Lions" (f. 137^a, 65^a, 145^b and 147^b); "the Lion (*asad*) of the sea in fury (f. 88^a)." He also says on f. 117^a: "I, Aḥmad b. Mājid, am the Arab *mu'allim*".

According to certain passages in MS. 2292 the father and grandfather of Ibn Mājid were *mu'allim*, authors of nautical treatises and their son and grandson continued their work. "He who sails in the southern Red Sea on the route of the pilgrims to Mecca", he says on p. 78^a. "My grandfather knew it with accuracy and in detail; he yielded to no one in this respect. My father added the results of his revised personal experiences. His knowledge surpassed the knowledge of his father. When our hour came and when we had in our turn gone through these experiences for nearly 40 years, when we had corrected the scientific work of these two exceptional men, when we had put into writing the results of our own experience and our written observations, we saw appear facts and principles which no one had combined in our time and which are only found scattered through different writers".

My father, he tells us on p. 78^b, was called by the pilots, "the pilot of the two coasts" (of the Red Sea). He prepared the famous *urḡūṣa* called *al-Haṣṣa* containing over 1000 verses. We have corrected the errors we found in it and have completed it methodically". There is another reference to this poem on f. 81^a.

Regarding a reef on the eastern coast of the Red Sea, adjoining the island of Marmā which lies to the south of the 20° Lat., Ibn Mājid says (f. 87^a) that most people call it "Mājid's reef" because his father had moored his ship to it. This is evidence of his fame among seafaring people of his day.

On several occasions Ibn Mājid shows full confidence in statements made by his father, differing with the usual practice of the pilots of the xvth century. "I have owed my safety," he says on f. 84^a, "to the information given me by my father rather than to that of the pilots". Further on he shows by an actual incident that his confidence in his father's knowledge was justified. "When we were moored there (between Asmā and Masnad, two islands on the Arabian Coast of the Red Sea to the south of the 17°) in 890 A. H. (= 1485), he says on p. 84^b, the *ṣaḥāba* and the pilot were agreed upon passing between the islands of Asmā and Masnad, but I did not agree with their opinion because I had read in a poem compiled by my father that "there is no

passage in the neighbourhood of these islands; therefore (he advised) keep away, avoid these islands, there are only reefs there and there is only one passage two fathoms deep". We discussed the question with one another, Ibn Mājid continues, after quoting this from his father's book and I said to them "The best thing to do in my opinion is to send the *sunbūh* (a kind of skiff) to go a day in front of us". The *sunbūh* set out with the sounding lead and found two fathoms of water. The *sunbūh* confirmed what I had said and returned passing between Masnad and Sāṣīb. It found the passage and came back to us at the end of the day. And (the statements made in) my father's poem proved to be, in this place, the best part of my inheritance".

Regarding the legendary origins of navigation, the needle, the compass, the astrolabe, Ibn Mājid says: "The first to build a ship (f. 2 v. infra of MS. 2292) was Noah. He built it on the advice of the Angel Gabriel, who had been sent to instruct him by the Almighty Creator. The ark was built in the shape of the figure formed by the five (*sic*) stars of the Great Bear; the stern of the ark corresponds to the third star (f. 3^a), the keel to the fourth, fifth and sixth stars and the stern to the seventh. Even now [1489] the people of Zang (eastern coast of equatorial Africa), of Komr (Madagascar), of Mima (the African coast opposite Zanzibar) and of the land of Sofala call the fifth and sixth stars of the Great Bear *al-ḥirāb*, 'the keel of the ship'".

These two stars are observed for the determination of latitudes, at the moment of the culmination of *al-Ṣarfa* (β of Leo), in the absence of the *ṣarḥid* (β and γ of the Little Bear) because they have the form of the keel of the Ark of Noah. Traditionists differ as to the length and breadth of the Ark. It is said to have been 400 cubits long, 100 cubits broad and 100 cubits deep, not including the height of the masts. It had two oars (in the stern to act as rudder). When the ark was finished and the flood came, Noah embarked with those who were to accompany him. It carried them and saved them from the deluge and shipwreck. The Ark is said to have sailed seven times round the site where the Ka'ba of Mecca was later to stand. This place was then a region of red sand where nothing was built. The deluge did not reach it."

"When (f. 3^b) the Ark was built and men had learnt the art of navigating along the shores of the sea in all the climes [of the earth] which Allah divided among the children [of Noah]: Japhet, Sem and Ham [Son of Noah], who is the second Adam, each began to build ships in the maritime countries, the gulfs and shores of the sea surrounding the earth until the world reached the epoch of the 'Abbāsids (132 = 750) which dynasty had Baghdad as its capital in 'Irāq 'Arabi. All Khorāsān belonged to them. The road from Khorāsān to Baghdad is three or four months' journey in length."

"At this time (i.e. under the Abbāsids) there lived three famous men: Muhammad b. Shādhān, Sahl b. Abān and Laith b. Kahlān (not Ibn Kahlān). I have seen that written in a work [by Ima'ūn b. Huzayn b. Sahl b. Abān], the grandson [of Sahl], in a *rahmānī* (or *rahmānīy*, Pahlavi *rahmānīy* 'book of the route') (f. dated 580 A.H. (1184/1185)). They exerted all their efforts in composing this *rahmānī* which begins 'We have expounded to

these that...'. None of it is in verse and the subjects dealt with are not linked together, which is not the case with a well composed work. Their book has neither finality or authority. It can be added to or have parts cut out of it. These men were compilers and not original authors. They only sailed on the Red Sea from Sirāf to the coast of Makrān (f. 4^a). They went from Sirāf to Makrān in seven days, from Makrān to Khorāsān in 2 months. They shortened the way, for before their time, it was a journey of three months from Baghdad. They set themselves to enquire on every coast of the people of these coasts and they have left a narrative [of their voyage]".

"In their time among the celebrated *Mu'allim* were Ibn 'Abd al-'Azīz b. Ahmad al-Maghribi, Mūsā al-Kandārūnī, Maimūn b. Khalīl and, a thousand before them (*sic*), Ahmad b. Tabrīza [who had written nautical books]. They borrowed from the works of the latter and from those of the *Mu'allim* Khawāshir b. Yūsuf b. Sālḥ al-Afriki who had travelled in the year 400 (1009/1010) and the years adjacent to this date (and who had written a narrative) of what he had seen in travelling on the ship of Dabawkara the Indian. Among the famous *Nāḥiyyas* of their time were Ahmad b. Maḥammad b. 'Abd al-Rahmān b. Abū 'l-Faḥl b. Abī 'l-Mughairi (or Mughiri). Their principal knowledge lay in the description of their coasts and their extent. The majority of the countries described formed part of the lands situated under the wind (i.e. lands east of Cape Comorin) and on the coast of China. Now these ports and towns (which they described) have disappeared. Even their names no longer exist. The indications given by them are no longer of any use for our period (xvth century), lacking as they do the solid basis of our modern knowledge and experience and our discoveries which are recorded in this book. For it is a book in which everything has been checked and verified by experience and there is nothing superior to experience. The point reached by the predecessors should be that from which their successors start and here we are increasing considerably their knowledge and their works. We have paid tribute to their work in saying 'I am the Fourth after the Three'. Sometimes in the work we have produced in what concerns the sea, there is a single leaf which contains more perfection, accuracy, utility, valuable advice than [all] they have composed" (f. 4^b).

"The Three borrowed their good points and their ability from the above mentioned individuals and others also. They took from each his knowledge of the coast and sea with which he was familiar; they made a story of it but they are compilers and not writers recording their own experiences, and I know no Fourth (who could be mentioned alongside of them) except myself. I honour them when I say: 'I am the Fourth [after these three famous authors]'. I have honoured them by taking into account the fact that they are before me in the era of the Hijra. Certainly after my death another will come and [there will be] men who will put each of us in our place. When I studied the work of my predecessors and found it feeble without reality or certainty, without order, I adopted what was worth keeping and recorded the discoveries I had made, my corrections and the results of my experience, year by year in the verses of the (nautical) poems and in this book [which has been published or finished] in the year 880 A.H. =

1475/1476 (?). Men experienced in nautical science have approved my work, used it and taken it as a basis to solve the difficulties presented to them, such as for example, the aspect of mountains, astronomical observations, names and knowledge of the stars, and the way to steer by them. The people of my time know very little more than what the ancients had handed down to them regarding, for example, the proper sea-routes, the *du fat* (co-efficient indicating the length of the route to be traversed to a given cape to obtain the same displacement in latitude as in the route to the north) and the *ruhūl*. As to distances they did not know them. We have already spoken of this in the commentary on the nautical poem entitled *al-Dhahbiya* (8) and we shall refer to them again."

"In reality, the people of the early ages had plenty of courage in their hearts, but they only sailed with the help of the sailors of the coasts who were endowed with considerable energy, while the others feared the sea and had an aversion for it. The sailors equipped their boats excellently; they never allowed [the favourable period of] the monsoon to pass; they did not load their ships above what was usually done. We however know more and have had more experience than they. Every improvement in seafaring matters had an inventor. The maker of the Ark was, as we have said, Noh. As to the lodestone to which one trusts oneself, the art of navigation was not complete without it. It was David who invented it; it is the stone with which he killed Goliath. As to the lunar mansions and the signs of the Zodiac, the prophet Daniel wrote on this a book which was completed by [Nasir al-Din] al-Tusi (d. 1261). But let us come back to our first subject, the stars [to which correspond] the thumbs of the compass. Their names are found in an old book earlier than the work of the Lions, our predecessors. But these thumbs and these *āḥ* (= 3 hours sailing) are not absolutely exact data (i.e. the direction of the courses which they give and their duration expressed in *āḥ* are only approximations and not certainties). As to the description of the comets (f. 5b) which we know from experience, we have written it with care and we only give it after repeated personal experience. Our description of the comet is better than that of our predecessors...."

"As to the making of the house of the needle with the lodestone (i.e. the compass) it is said that Daniel was its inventor for he knew how to make use of iron and the properties of this metal. Others say that it was al-Khidr (cf. AL-KHADR) who invented the compass, when he set out to look for the well of life, when he penetrated into the land of darkness and the sea of darkness and when he travelled to one of the poles up to the place where he no longer saw the sun. It is said he found his directions with the lodestone. Others say that he found his direction with the help of light. The lodestone (f. 6a) is a stone which attracts iron. This is the only thing that it attracts. It is said that the seven heavens and the earth are held in suspension by the lodestone and the omnipotence of Allah. Many other things are said on this subject."

"The first inventor of the *Kiṭāb* (or astronomical observation) with the astrolabe", Ibn Mājid goes on (f. 14a, l. 3 *infra*), "was Idris [q.v.]. He was the inventor of the astrolabe with degrees. [The ancients] changed these degrees into *ihū* (finger).

They have recorded it in the story of the City of Copper (9) and the astrolabe was included among instruments of navigation by others than the Three, Muhammad b. Shādhān and his (two) companions; for the ships sailed the ocean by steering by astronomical observation (with the astrolabe) in the time of the Prophets — on whom be peace! —. Our Three (predecessors) only lived in the time of the 'Abbāsids. Such is the story given in histories written by their hands."

Ibn Mājid pays a tribute to his predecessors, by saying on several occasions that he is the "fourth after the Three" or "the fourth of the Lions" but he does not fail to warn sailors against the gaps and errors in their works, with which he contrasts the extensive documentation of his own *Nautical Instructions*. "Canopus, he says (f. 31^b of MS. 2292), rises far from the south pole on the 22nd day of *Nirūz* at dawn and sets on the 40th day of *Nirūz*. If you ask a sailor, he will never know that; unless he has studied this book, he will not be able to answer the question, even if he had read for a hundred years the works of Muhammad b. Shādhān and his two companions". It seems from a passage in MS. 2559 (f. 126^b, l. 5 *app.*) that the works of the Ancients, i.e. of the Three, were still consulted in the first half of the xvth century.

According to the text of Ibn Mājid, the Three, Muhammad b. Shādhān, Sahl b. Abān and Laith b. Kahlān, were neither *mu'allim* nor masters of navigation nor sailors, but only learned authors of route-books and nautical instructions who had used for their works the stories of sea-voyages. The passage in question in the *Book of Useful Information* (1), besides, gives two definite statements. — The Three or at least Sahl b. Abān lived in the first half of the xiiith century A.D. and the above mentioned records of voyages contained more particularly the descriptions of the countries under the wind (East of Cape Comorin and of China). We can imagine that the works of the Three were based on records of travels in India, Transgangeitic India, Indonesia and China, like that of the merchant Sulaimān, published in 851 which was revised and expanded by Abū Zaid Ḥasan about 916 (10). An amateur of geographical science, the latter lived in Baghdad and there collected all the information he could find in manuscripts or gathered from the sailors of his time, and it seems that this is what the Three did, whose continuer Ibn Mājid calls himself, for he expressly points out that he differed from the others in writing of seafaring matters from a long personal experience.

According to Ibn Mājid, the works of the Three mentioned towns and seaports which had disappeared in the xvth century. This reference is to ancient place-names which would have been of great use to us in identifying the geographical names preserved in Chinese text and in Ptolemy's lists. But we have now lost this source of information it is nevertheless important to know that it once existed. Anything is possible in the east, — even the chance discovery of a manuscript of the Three, of Ahmad b. Tabrīz, or Khawāshir b. Yūsuf b. Salāh al-Afrīkī. The acquisition by the Bibliothèque Nationale of the MSS. 2292 and 2559 is a lucky chance which one can always hope may repeat itself.

The *Kiṭāb al-Fatāwā* (1), the importance of which can be seen from the résumé and extracts given

above seem to be the work of Ibn Mājid's ripe experience. We do not know the date of his birth. If he was 25 or 30 in 1462 when he wrote the *Hāriya* (II) he would be 52 or 57 when the *Book of Useful Information* appeared (I) and 53 or 63 at the time when he finished the poem (VI) which is dated 1494–1495. Three or four years later, in April 1498, Vasco da Gama arrived at Malindi where Ibn Mājid embarked as his pilot. We do not know the date of the mu'allim's death.

According to James Prinsep, the memory of Ibn Mājid was still alive in India and the Maldives in the first half of the sixteenth century.

"I endeavoured therefore, says Prinsep to procure an Arabic compass, but not one could be met with in all the vessels — at length my friend Saiyid Husain Stidi found a drawing of it in one of the practical works on navigation — called the *Mājid kitāb*, 'Book of Mājid' or, as my Maldivian friend facetiously expressed it, the '*John Hamilton kitāb of the Arabs*' — in possession of a nakhoda, and without ceremony tore out the leaf to show it to me, as the captain was afraid of parting with the volume, without which doubtless he would have been greatly at a loss on his return voyage" (*Note on the Nautical Instruments of the Arabs*, in *J.A.S.B.*, 1836, II, p. 788). The reference here is evidently to a nautical work analogous to MSS. 2292 and 2559, with the addition of plates showing the instruments used in navigation and perhaps charts; or perhaps it was even a copy of MS. 2292, whence it would have its name of *Mājid kitāb* or 'Book of Mājid'.

In his *First Steps in East Africa or an Exploration of Harar* (London 1856, p. 3–4), R. F. Burton says: On Sunday, the 29th October, 1854, our manifold impediments were pronounced complete. Friend S. threw the slipper of blessing at my back, and about 4 p.m. embarking from Maala Bunder (the part of the port of Aden reserved for native boats), we shook out our 'muslin', and sailed down the fiery harbour. Passing the guard-boat, we delivered our permit; before venturing into the open sea we repeated the Fatihah-prayer in honour of the Shaykh Majid (*sic*), inventor of the mariners' compass, and evening saw us dancing on the bright clear tide. . . . Burton adds in a note: "It would be wonderful if Orientals omitted to romance about the origin of such an invention as the Dayrah, or compass. Shaykh Majid is said to have been a Syrian saint, to whom Allāh gave the power of looking upon earth, as though it were a ball in his hand. Most Moslems agree in assigning this origin to the Dayrah, and the Fatihah in honor of the holy man, is still repeated by the pious mariner". There is every reason to believe that Shaykh Mājid is not a saint belonging to Syria but simply the mu'allim Ibn Mājid who has found a place in Muslim hagiography for the eminent services which his nautical works have rendered to navigators since the xvth century. The process is obvious and many similar cases are known.

In 1913 my regretted colleague and friend Paul Ottavi who lived for some fifteen years at Zanzibar and Mascot, had a search made in these seafaring centres for nautical texts by Ibn Mājid and Sulaimān al-Mahri, but the very names of these two mu'allims were unknown to the Arab sailors there.

Bittner, *Zum Indischen Ocean des Sidi 'Ali*, *W.Z.K.M.*, x; M. Gaudelroy-Demombynes, *Les sources arabes du Muhit turc*, *J.A.*, x^e série, xx, 1912, p. 547–550; G. Ferrand, *Relations de voyages et textes géographiques arabes, persans et turcs relatifs à l'Extrême-Orient du VIII^e au XVIII^e siècles*, II, Paris, 1914, p. 484–541; do., *Le pilote arabe de Vasco de Gama et les instructions nautiques des Arabes au XV^e siècle*, dans *Annales de géographie*, Paris, 1922, p. 300–307; do., *Instructions nautiques et venturiers arabes et portugais des XV^e et XVI^e siècles*, I, *Le pilote des mers de l'Inde, de la Chine et de l'Indonésie par Shihab ad-din Ahmad bin Majid*, text Arabic, Paris 1933 (following the text of Sulaimān al-Mahri and the volumes of translation); do., *L'élément persan dans les textes nautiques arabes des XV^e et XVI^e siècles*, *J.A.*, 1924, 193–257.

Notes: 1. There are numerous copies in Europe and in the East.

2. A second copy of MS. 2292 has just been accidentally discovered in Damascus and has found a home in the Arabic Academy; cf. *Revue de l'Académie Arabe*, Feb. 1921, Damascus, p. 33–35. Another copy but incomplete of MS. 2559 was found at Djeddah where our colleague Ahmad Zeki Pacha had kindly had enquiries made on my behalf.

3. The use of this specifically Shi'a expression in place of the ordinary Arabic word seems to show that the author was himself a Shi'i or at least had an inclination towards the partisans of 'Ali.

4. Land-fall is here to be taken in the special sense of reconnaissance of a cape or land to enable one to ascertain the route.

5. Play of words on the name of his predecessor, Laith b. Kahalān (*laith* = lion in Arabic).

6. On this very important term, cf. *J.A.*, 1924, 209–215.

7. The book in question is however dated in all cases 895 A.H.

8. This commentary has not come down to us.

9. On the legendary City of Copper, cf. M. Gaudelroy-Demombynes, *Les cent et un rois*, Paris 1911, p. 284–348 and the authors quoted.

10. Cf. *Relation des voyages faits par les Arabes et les Persans dans l'Inde et à la Chine dans le IX^e siècle de l'ère chrétienne*, arabic text by Langlès, transl. and notes by Reinand, 1845. I have published a new translation entitled *Voyage du marchand arabe Sulaymān en Inde et en Chine rédigé en 851, suivi de remarques par Abū Zayd Harun (vers 916)*, Paris 1922.

(GABRIEL FERRAND)

AL-SHIHR, the name of a town and district on the coast of South Arabia, which is still known as the Shehrat coast. The learned Nāṣirī gives also al-Shahr as the dialectic pronunciation for al-Shīr, which latter he calls the correct form. This form is of interest because it recalls SARA, first suggested by A. Sprenger as the basis of the corrupt SARA in Theophrastus and Pliny; when the latter says the word means *myrrineus*, this recalls Ibn al-Muḍīḥ's derivation of the name Sahrā, which is applied to the Mahra people, from *shir* "magic". That SARA is the coast district now called al-Shīr, which classical and Arab authors know as the land where the frankincense tree flourishes, is in any case certain. The name Xagr and Xair given by the Portuguese to this region, recalls the apparently older pronunciation Shahr, which means "coast". To the Arab geographers the name al-Shahr is synonymous with Mahra, the strip of South Arabian coast, which, according to Ibn Hawḳal, is 400 parasangs long and about 5 broad, the eastern end of which is 200 parasangs from Maskat, while the western end is the same distance from 'Aden. Al-Ashghā and Samīm are given as old names of this territory, which was not reckoned a part of Ḥaḍramūt proper, and the names al-Ashghār and al-Ashghāf are also of frequent occurrence. That the inhabitants, as is still the case, spoke a peculiar, unintelligible dialect, was already known to the Arab geographers. The South Arabian expedition of the Vienna Akademie der Wissenschaften in 1899 studied this language thoroughly, and the comprehensive works of D. H. Müller and M. Bittner, also of W. Hein, A. Jahn and N. Rhodokanakis give as a complete survey of this peculiar idiom.

The coast of al-Shīr with its hinterland, has passed through various vicissitudes. At the beginning of the tenth century A.D., it was taken by Badr b. Tuwrik al-Kaḥḥīrī from the Ghassanid 'Amir b. 'Abd al-Wahhāb, then later by the Portuguese who occupied the whole coast from 'Aden to Maskat. After holding this stretch of country for thirty-five years, the Portuguese were driven out by the Banī Kaḥḥān and all attempts to re-establish themselves failed. A fleet of twenty ships, sent to reconquer the lost territory, was sunk with every man on board, in a fearful hurricane. The Kaḥḥān ruled the country for fifty-five years, and then the coast was conquered by Muḥammad b. Ahmad b. 'Amir b. 'Abd al-Wahhāb al-Himyari. Various owners held the much disputed coast in succession until in 1866 Sulṭān 'Uṭayb b. Muḥsin al-Kaḥḥīrī seized al-Shīr, but lost it the very next year to the Ka'ānī, who gradually won the whole coast.

The town of al-Shīr, which lies in the centre of a sandy desert, is surrounded by a clay wall, with square watch-towers and round forts. Formerly one of the most important ports of Ḥaḍramūt, from which were exported the precious frankincense and the amber known as 'anbar shāhī, and which conducted a busy trade with Mokhā, 'Aden, Maskat and al-Baḥra, it is now completely overshadowed by the much more favourably situated port of Makallā, as it only has an open roadstead for shipping. Remains of ancient civilisation and former prosperity are still to be found. The houses, now much ruined, as nothing is ever renovated, frequently show beautifully carved stonework in the doors and windows. The mosque has a very

picturesque situation, but has been much neglected; the minaret has a decided inclination to one side. The population is about 6000—10,000, and is mainly industrial. Dyed cottons are woven on primitive looms and loin-cloths, with gay and and pretty patterns. White cottons imported from India are dyed here with indigo and madder. Smiths make all kinds of weapons, notably strong knives, which have a particularly good reputation. Silversmiths, of whom there are many, find plenty of employment in decorating these arms with silver, according to the local custom, and making the ornaments beloved by the women. More elaborate articles are imported from India, notably valuable sword hilts. The bazaar of the town is quite insignificant. Coloured cottons and other goods of European origin like soap, candles, ironmongery, Indian cottons and silks, petroleum, matches, dried dates, rice, durra, wheat, coarse wheaten flour, imported from India, coffee and tobacco are also dealt in here. As the flesh of goats and sheep is relatively dear, the main food is the small sardine-like 'aid fish, which is also used as manure and to make oil. Al-Mukaddas, long ago emphasised the wealth of al-Shīr in fish, and he reports that fish in his time were exported to 'Omān, 'Aden and even al-Baḥra and the lands of Yemen. The 'aid fish is probably identical with the little fish called *merk*, which according to Ibn Hawḳal was the principal food of the inhabitants, and according to Idrīsī was dried and given to the camels as food, which Th. Bent also saw done in Ḥaḍramūt. At the present day, salted and dried shark is an esteemed article of export into the interior. The guild of merchants, however, has few wealthy members, and the foreign connections are mostly with India (Malabar), Central Africa and al-Baḥra. Gum-arabic and resin, especially frankincense are brought to the market by the Beduins and exported from here. The trade in these articles is, however, now quite insignificant, compared with what it was in antiquity.

In conclusion we may note that al-Aḥṣā' in al-Bakrī mentions a palace named al-Shīr in Ḥaḍramūt; how far this is correct cannot be ascertained. There is probably a confusion with the town on the coast, which however, as noted above, never belonged to Ḥaḍramūt proper.

(ADOLF GROHMANN)

SHIKĀRI, a word formed from the Persian word *shikār* ('sport', in the sense of hunting or shooting) and meaning a hunter. There are many castes in India whose occupation is the snaring, trapping, tracking, or pursuit of birds and beasts, but the caste which has adopted or received the word *Shikāri* as its tribal name is found chiefly in Sind. A writer in 1822 said: "Shecarries are generally Hindoos of low caste, who gain their livelihood entirely by catching birds, hares, and all sorts of animals", but the *Shikāris* of Sind seem to have abandoned the occupation from which they take their name. They are described as outcast immigrants from Rājaputāna, found from Bangāl to the Panjāb, the origin of whose honourable appellation is unexplained, though they probably possessed, like other aboriginal races, a knowledge of wild animals and skill in tracking and were employed by the Musalmān nobility in quest of sport. They are now engaged in making baskets, and as sweepers and scavengers, and appear to correspond, in most points, to the *Bhangis* of Bangāl and Hindūstān. They eat carrion, and even when professing Islām, are considered unclean, and not allowed to enter a mosque, unless they undergo a ceremony of purification by fire, after which they are classed as *Micchīs*. Those whose occupation is the taking of life are naturally held in small esteem in a land which has been permeated by the principles of Buddhism, Jainism, and Brahmanism, but the purification ceremony demanded by Muslims before admitting *Shikāris* to their worship is an example of the extent to which Islām in India has been infected by the prejudices of Hinduism.

Bibliography: E. H. Aitken, *Gazetteer of the Province of Sind*, Karachi 1907; H. Yule and A. C. Burnell, *Hobson-Jobson*, new ed. by Wm. Crooke, London 1903; *Census Reports of the Government of India*, (T. W. HAIG)

SHIKĀRPŪR, a town of Sind, situated in 27° 57' N. and 68° 40' E., was founded in the seventeenth century by the Dādūputras, a tribe of warriors and weavers, who established their supremacy in Upper Sind and made their new town their capital. In 1701 it was captured by Yār Muḥammad Khān, the founder of the Kalhora dynasty, with the aid of the Sirāi or Tālpūr tribe of the Balūṭ, and became, in turn, his capital, but the district in which the town is situated remained in the hands of the Dādūputras until it was conquered in 1719 by Nūr Muḥammad, the son and successor of Yār Muḥammad.

In 1739 Thātha and Shikārpūr, with all that part of Sind lying to the west of the Indus, were ceded by Muḥammad Shāh of Dillī to Nādir Shāh, who in 1740 invaded Sind to punish Nūr Muḥammad Kalhora for concluding with Muḥammad Shāh's governor of the province an agreement which

infringed his sovereign rights. Nūr Muḥammad was obliged to surrender and to relinquish his possession of Shikārpūr and Sibi, which Nādir Shāh handed over to the Dādūputras, but in 1754 Muḥammad Murād Yār Khān was recognized as governor of the whole of Sind by Ahmad Shāh Durānī, to whom the province was tributary, and remained thereafter in the hands of the rulers of the province.

Shikārpūr has long been famous, both under British and under native rule, for the enterprise of its merchants, who carry on an extensive trade not only with other parts of India, but also with Persia and Central Asia, where many of them reside for long periods. The import trade of the Kirmān province of Persia, in tea, sugar, and other commodities is almost entirely in the hands of Shikārpūr merchants, who have taken advantage of the situation of the town on one of the great routes from Sind to Khurāsān via the Bolān Pass, but since the middle of the nineteenth century, it has lost much of its importance owing to the construction of the North-Western Railway and its extension to Khetta (Quetta). It is still, however, a considerable entrepôt. Its great covered bazar is famous throughout Asia, and is continued by a modern structure, the Stewartgandj market.

SHIKESTE. (See I, 391b.)

SHIKK 1. *Shikk* is the name of two diviners who lived shortly before the rise of Islām. According to the *Synopsis of Marvels*, *Shikk* the elder was the first diviner among the Arabs of 'Ariba. He is quite a fabulous personage. Like the Cyclops, he had only one eye in the middle of his forehead or a fire which split his forehead into two (*shakkā* to split). He is also mixed up with Dajjāl, Antichrist, or at least Dajjāl is of his family. He is said to have lived chained to a rock on an island where volcanic phenomena occurred. The second *Shikk* called al-Yashkari was the most famous of his time along with Sāṭib; he expounded a vision of Rabī'a son of Naṣr the Lakhmid prince of Yemen, foretelling the conquest of Yemen by the Abyssinians, its liberation by Ibn Uthi Yazzan and the coming of the Prophet.

2. According to Kaẓwini the *Shikk* are a kind of *Shaitān* forming part of the group of *Mutashayyina*; they are in the shape of half a man with one arm and one leg. The *Nasās*, other halves of men, are produced from *Shikk*s and whole men. These *Shaitāns* appear to travellers. It is said that 'Alqama b. Saḥwān b. Omayya met one of them one night near Hawmān and after an exchange of high words, the man and the *djinn* killed one another.

Barbier de Meynard and Pavet de Courteille, III, 364 and 395; al-Kazwini, *Adja'ib al-Makhluqāt*, ed. F. Wüstenfeld, Göttingen, 1848-9, I, 371. — On the *Kāhīn* in general cf. *Chronique de Tadmor* (Be'ṣān), transl. H. Zotenberg, Paris 1867, II, 169. (B. CARRA DE VAUX)

SHILLUH (in Berber: masc. sg. *shilḥa*), the name given to the Berber speaking peoples of Sūs, of the High and Anti-Atlas (South of Morocco). This is the name they give themselves; the word is widely used in Morocco; it

is often used by Europeans as a synonym of Berber-speaking, and is applied by them to people of the Middle Atlas also, and among them it is taking the place of *amazigh*.

The language called *tashelhit*, like the Berber language generally, is found in the form of many local dialects closely connected with one another, none of which has risen to the level of a language of culture. These dialects are among the most conservative of the Berber dialects; in phonetics they are occlusive, with however a tendency in the dental to affrication (e.g. *lā gūnidi*); in morphology they show many clear traces of archaism (cf. the verbs of quality in particular). M. Lévi-Provençal has recently discovered an Arabic manuscript 800 years old containing a number of Berber expressions from this region. This valuable manuscript, in view of the scarcity of old Berber texts, gives confirmation of the stable character of these dialects.

This district, especially Sūs, is one of the most striking in Barbary from the literary point of view. The poets there are particularly renowned and one of them, who may however be quite a legendary individual, Sidi Hammu, has so to speak become the symbol of poetry and all the popular verses are attributed to him. This literature is mainly oral; there are however a few Berber manuscripts in the Arabic alphabet; this is one of the few districts in Barbary in which they are found.

This region has had no unity from the point of view of historical continuity. A few places are known from the part they have played at particular periods, e.g. Tinnel, Tazerwalt (cf. the separate articles).

Bibliography: a. Study of the language: there are a certain number of books all practically of the same period by H. Stumme. The chief one is *Handbuch des Schilphischen von Tazerwalt*, Leipzig 1899. M. Destaing has undertaken a study of the dialects of the Ida u Semlal in five volumes, one of the best enquiries into the Berber language — only the first volume has so far appeared: *Tashelhit du Soud, I, vocabulaire Français-Berber*, Paris 1920; E. Lévi-Provençal, *Documents d'Histoire Algérienne* (in the press).

b. Literature: Henri Basset, *Essai sur la littérature des Berbères*, Algiers 1920 (esp. p. 349 sqq.). (ANDRÉ BASPÉ)

SHĪN, thirteenth letter of the Arabic alphabet, whose numerical value is 300. It is distinguished from *sin* by three diacritical points, cf. I, 381 sqq. For linguistic particulars see *slN*.

SHINĀSĪ (derived from the Persian *shinās*, the verbal stem of *shināshān* 'to know'), poetical name or *takhalluṣ* of a number of Turkish poets (five in Hammer). See Index to Gibb, *A History of Ottoman Poetry* and to Hammer, *Geschichte der osmanischen Dichtkunst*; cf. Rieu, *Catal. British Museum*, p. 101.

The best known of the writers bearing this name is İBRAHİM SHINĀSĪ EFENDİ, who is according to some the father and according to others one of the first pioneers of modern Turkish literature (given new life as a result of the *Tanzimat*). The son of an artillery captain, a native of Bolu, Shināsī was born at Constantinople in 1242 (1826—1827) and soon afterwards lost his father, who was killed in the Russo-Turkish war of 1828—1829. His mother who became an invalid had

him admitted as a clerk in the General Artillery Office (*Topkâna-i 'Amire*), where he attracted the attention of his superiors by his poems, *kasidas* in honour of the grand vizier Rashid Pasha and other statesmen and his chronograms (*ârifkâ*), more or less complicated (*âmm, müderrisler* and *müllemeler*), for tombstones, for fountains and other monuments. A French officer, the Count of Châteauneuf, who was later to become a Muslim under the name of Nûri Bey, taught him the elements of the French language. The young civil servant poet thus found himself chosen among the first students who were sent to France. In his petition addressed to Marshall Fathi Pasha (*Topkâna müdürü*) Shināsī asked to be sent to Paris in order to perfect himself in the study of the French language (*âdâb-ı 'asâb-ı ul-brâyân-ı frânsuvis*), and asked for a pension to be paid to his mother during his absence. The decision of the Council of Ministers (*meclis-i vukûlâ*), approved by Rashid Pasha, which gave him 5,000 piastres for his travelling expenses and a pension of 300 piastres monthly for his mother, is dated the end of the month Rabi' al-awwal 1265 (January 1849) but may have appeared after a certain delay. Tradition has it that Shināsī took an active part in the Revolution of 1848, hanging the Republican flag on the Pantheon, and that he associated with scholars and men of letters such as Silvestre de Sacy, Renan and Lamartine. He stayed abroad for five years.

On his return to Constantinople, Shināsī was appointed a member of the first Council of Public Instruction, created in accordance with the plan which he had brought back from Paris. He worked also on the Finance Commissions with the object of elaborating certain administrative reforms, but having lost his protector Mustafa Rashid Pasha (who died in 1274) and being in bad odour with the bureaucrats, who even reproached him for not wearing a beard, he quitted the government service and took up journalism.

He began by collaborating in the *Terâkümân-ı aḥwâl*, the first non-official Turkish newspaper, founded on the 6 Rabi' al-akhir, 1277 (October 22, 1860) by Agâh Efendi, *muhtasarî* of İsmîl. Shināsī was the chief editor of this organ. But soon afterwards he was able to found a journal under his own name, the *Taḥwîr-i Efkâr*, which, thanks to the energy of Shināsī's successors, Abu'l-Ziya Tawfîk and his son, was to survive with slight changes of title (*Taḥwîr-i efkâr, temhid-i efkâr*) until its recent suppression by the government of Angora (March 6, 1925). Shināsī's paper which, according to its sub-title, was an organ for information and public instruction appeared at first in a very modest and impersonal form; the first number alone contained a preface of several lines, signed by the author. Appearing twice weekly and printed on four pages, in a much reduced 'format' the *Taḥwîr-i efkâr* had four rubrics: Home news (*hâvâssîl-i dâkhiliye*) mostly official appointments, foreign news (*âkshârîye*), advertisements (*fânâr*) and a feuilleton (*tefrîfâ*). In these feuilletons were published the works of Subhî Bey (one of which is on numismatics), lectures by Ahmad Wafîk on the philosophy of history, and older works such as the *Mûmîn ul-hakik* of Kâzîb Çelebi. They also contained translations from Buffon, by Abu'l-Ghâzî (*Sâḡir-i tûrkî*). The *Taḥwîr* supported the

Courrier d'Orient (edited in French) by Pietri against the *Niswâne*, the supplement of the *Djerride-i şavvâs* in which Sa'îd Bey (the future grand-vizier Kâzım Sa'îd Paşa) wrote. Begun à propos of a sale of coal to the Admiralty the polemic took a literary character on the subject of an Arabic barbarism committed by Sa'îd Bey who had employed the expression *meclâ-i mîşâne 'anâ* (instead of *mîşâs 'anâ*) "the affair in question". It required the intervention of the Syrian Ahmad Fârî Shidyâk, the editor of the Arabic newspaper *Al-Djowâ'iz* to cause Shinâsî to triumph before the public.

Shinâsî also collaborated in the *Djerride-i askariya* "Journal Militaire" founded by the minister of War Fu'âd Paşa, and in the "Courrier d'Orient", whose editor Pietri he had got to know through the offices of a friend of his Paris days, the Albanian Sa'îd Sermedî Bey. After Sermedî had been arrested and exiled to St. Jean d'Acre because his ideas were thought to be too advanced, Shinâsî took fright and fled with the aid of Pietri, on board a French ship, in order to take refuge in Paris. He did not return to Turkey until after the death of the grand-vizier, who was hostile to him. He himself died in September 1871 in the prime of life.

Apart from his journalistic activity the literary activity of Shinâsî is not very extensive. Consisting mainly of scattered articles, it has not been collected into *kütübât* (complete works).

In 1859 he published a pamphlet entitled *Extraits de poésies et de prose traduits en vers du français en turc*, Constantinople, Eastern Press, 11 pages of French text and as many of Turkish text in 16° (contains short extracts and isolated verses of Racine, Lamartine, La Fontaine, Gilbert and Fencelon) — 2nd edition, press of the *Ta'vâr-i Esh'âr*, 1287 (1871/1872). — This small work is important because it was the first translation into Turkish of literary works of the West (practically all French works).

The poetical works of Shinâsî were published 1287 (1871/1872) in another little book entitled: *Müntekhabât-ı ekâr*, "Selection of Poems", by Abu 'l-Ziyâ Tawfîk (*Ta'vâr. Esh. Press*).

This selection of poems combined with the "Extracts" just mentioned above was reprinted by the same editor under the title of *Divân-ı Shinâsî* on the 14 Muharram 1303 (October 10, 1885), with the authority of Shinâsî's son and again later in 1310 (1892/1893), 118 pages in 16mo.

The poetical works of Shinâsî do not contain anything revolutionary nor do they give evidence of great poetical talent; they are panegyrics, chronograms, ghazels, satires, hymns (*ilâhî*) etc. But they include two or three rhymed fables and a bold innovation, confined however to two verses only; this is an attempt to write a poem with Turkish words only (*Sâs Türkçe*). Here is the meagre result of this attempt:

Gövi-mi erdi bağışın yer yüzüne gıdâm-ı se?
Var-ol baş bendiğilerin şifâ-i dâhîkân himet!

"Having come on this earth has my intellect soared to heaven?"

"Does there exist a man whose star is as ill-omened as mine?"

(It should be noted that the metre which has been adopted [*remet*] is still borrowed from the old prosody).

In dramatic art Shinâsî was also a pioneer writing the first comedy or rather the first Turkish vaudeville, under the title *Sâ'ir evlenme* "A Poet's Marriage". Feeble in itself, this work has independently of the merit of novelty, that of criticizing the old-fashioned matrimonial customs it deals with a fraudulent attempt to substitute in the place of a veiled bride, an uglier sister. It has been translated into German by Vambéry.

Shinâsî, besides, collected in 1268 (1851/1852) about 2,000 Turkish proverbs to which he added some Arabic, Persian and French equivalents. This collection appeared under the title of *Qurûb-ı emâli-i şimşirîye*, at the Ta'vâr. Esh. press in 1280 (1863) and in 1287 (1870—1871). Finally in 1301 (1883/1884) Abu 'l-Ziyâ brought out a third edition, which he enlarged by bringing it up to 4004 proverbs (cf. *J. A.*, 1863, II. 269, 143 and 1871, II. 147, 22).

The influence which Shinâsî exerted on the development of Turkish literary movements cannot be compared to that of his young rival and protégé Nâmîk Kemâl, but his part was considerable in the restoration of the language itself. He contributed a great deal to simplifying the language by bringing it nearer the spoken language and by combatting scholastic influence of Arabic and Persian so as to make Turkish a language adapted to the requirements of modern civilisation.

In the field of syntax, this reform consisted in writing shorter sentences. Kâzım Sa'îd Paşa (then President of the Senate) said in his *Gavâdî-i Lisân* (*Sabâh*, 1327 [1913], 144 pp. in 16mo) that the credit of having first used short sentences was not due to Shinâsî and that Raghib Paşa had done so in his youth, when he was *ameddâfî* "referendar", but afterwards came back to the old turgid style. The real initiative is said to have come from the *Furûd* or Greeks of the Phanar employed in the civil service by the Turks and this movement is said to have begun as early as 1245 (1829/1830). Sa'îd Paşa adds that this need not lessen the real credit of Shinâsî who was able to rid the Turkish language of obsolete lumber and rejuvenate it by contact with Western literature (*op. cit.*, p. 106—107).

A letter written by Shinâsî to his mother from Paris, dated 30th *Rûmân-ı sâni* 1269 (1853), is regarded as a model of the modernised style (reproduced by Abu 'l-Ziyâ Tawfîk in his *Nûmân-ı idbîyyât*).

'Abd al-Halîm Mamdûh also thought that Kemâl Bey and Abu 'l-Ziyâ had exaggerated the scope of the literary influence of Shinâsî. He thinks that he was not only surpassed by his immediate successors but was also preceded by important reformers like 'Akîf and Pertev Paşa. Shinâsî is nevertheless the founder of literary criticism in Turkey.

The writer of this article has sought in vain for traces of Shinâsî's stay in Paris. A lucky chance may one day make his researches more fruitful. An examination should also be made of the Turkish dictionary in thirteen volumes which Shinâsî is said to have left in manuscript — part in the National Library of Budapest and part in the Library at Vienna (cf. also 'Abd al-Halîm Mamdûh).

Bibliography. The best documentary study on Shinâsî is that of Vladimir Gordlevski, *Ölüm ve hayatı emînîye* (*Littérature*), Moscow 1912 (Russian); *Travaux de l'Institut Lazarev*, fascicule xxxix., 146 pages gr. in 8°. Cf. also

(J. DENVY)

SHINTARA (or Shantara), Arabic name of the modern Cintra, a little town in Portugal, at a height of 700 feet above sea-level, 16 miles N.W. of Lisbon. It was quite prosperous under Muslim rule and the Arab geographers remark on the fertility of the country round; its apples were universally famous. Cintra always shared the destinies of its great neighbour Lisbon as long as it was in the hands of the Muslims; it was reconquered in 1147 by Alfonso Henriques, king of Portugal. After it had become Christian again, it was the favourite residence of the Portuguese kings; it was in the palace of Cintra that Dom Sebastian decided in 1578 upon the expedition against Morocco which ended disastrously on the banks of the Wādī 'I-Makhāzin near al-Kaṣr al-Kabir.

The modern Cintra is dominated by the ruins of an old stronghold of the Muslim period. Of this fortress now called *Castello dos Mouros* built at a height of 1430 feet, there only remain two masses of masonry with the remains of a chapel and baths.

(LÉVI-PROVENÇAL)

SHIR. [See ARAB.]

SHIR (أ), poetry. The earliest literature of the Arabs is poetical but the most ancient poems are not older than 500 A.D. We know nothing about its origin. We are told the name of the man who made the first *ḥamīda*, but in matters historical the Arabs abhorred a vacuum. Throughout the pre-Islamic period poetry is governed by the same set of conventions, the stereotyped beginning, conventional epithets, stock similes, a limited and arbitrary choice of subjects. These suggest a long previous history. Indeed one poet complains that his predecessors have left him nothing to say. On the other hand, the words: "Let us weep as Abū Ḥumayr wept", suggest that the poet was following a new fashion in his art. It is obvious that poetry is closely connected with the rhymed prose (*saḥb*) of impassioned speech and it is probable that some of its measures had their origin in the song of the camel-driver or horseman. There was something uncanny about poetry, as the name shows. The poet was *shā'ir*, the man of extraordinary knowledge, who knew things hid from common men, was in the council of unseen powers, had a familiar

spirit. This comes out most clearly in the branch of the art called *siḥf*, commonly but badly translated satire. This was in origin a spiritual attack on one's enemies, supplementing the material assault of sword and lance, an attempt to destroy them by the use of supernatural powers. The declamation of such verse was accompanied by symbolic actions. This is another link with *saḥb*, the speech of soothsayers and wizards. Though in historical times the belief in the magical power of poetry was largely lost, yet verses that seem to us pointless had a shattering effect on those at whom they were directed.

Formally, Arabic poetry consists of metre and rhyme. With one exception, *radf*, all metres consist of a double line with the rhyme at the end only. Metre is quantitative and considerable freedom is allowed in the substitution of long for short syllables and *vice versa*. Indeed it is better to say that certain syllables are fixed long or short and the others are allowed to vary. In two metres the classic rule that two short syllables equal one long is followed. Pre-Islamic poets used 15 metres and another was added later. They did not use the *radf* for long poems. There was a feeling that it was doggerel not rising to the dignity of poetry and it was chiefly used in *extempore* verse. In addition to these, poets sometimes experimented with other metres but they did not find favour and are treated as irregularities. The rhyme may include as many as three syllables. Throughout a poem all the double lines have the same rhyme and the opening line has it also in the single line. Only one poetic form was known, the *ḥamīda*; a poem with one rhyme and one metre, from 30 to 120 lines long. No satisfactory explanation of this name is known. Many fragments of *ḥamīda* exist and it is probable that they were never more than fragments. At first the *ḥamīda* had no fixed plan save that it nearly always began in a deserted camping ground which the poet recognized as the scene of a passage of love with some fair one (the *maṭb*). On this may follow a description of his camel of a journey — preferably by night — through the desert, an antelope hunt or indeed almost anything the poet chooses. His own warlike prowess or that of his tribe is a common theme. Often it is hard to say that the poem has any purpose. The poet speaks because he must. Later the *ḥamīda* was bound by fixed rules. The regular sequence of subjects was the amatory prelude, the description of a camel, the journey and finally the main subject; usually the praise of some great man with a view to touching his pocket. Two aspects of life are shown. A frivolous side where men drink, gamble away their goods and give presents to the girl who fills the wine-cup and sings, thus upholding the fame of their tribe for generosity, and a serious side where the chief spends his substance in feeding the needy and all are ready to rush to arms to defend their honour. Although an Arab was always ready to fight, he was not necessarily in a hurry to be killed, and said so without shame. The poets were fond of commonplace moralizings on the uncertainty of life and the certainty of death. Arab theory recognised the elegy (*ruḥḥ*) as a special branch of the art but without sufficient reason. The form was the same but for the omission of the erotic introduction which was felt to be unsuitable. While but for the lamentation over the dead and the call

to vengeance (if he had died a violent death), the subject-matter is very like that of other poems. Very often women composed elegies; some poetesses were famous. It seems that religion had very little place in the life of the Arabs. A mild fatalism is the limit of their experience.

Each line of verse had to be complete in itself. So Arab poetry is essentially atomic; a string of isolated statements which might be accumulated but could not be combined. Sustained narrative and speculation are both alien to it. It is descriptive but the description is a thumbnail sketch; it is thoughtful but the result is aphoristic. The poet looks on the world through a microscope. Minute peculiarities of places and animals catch his attention and make his poetry versified geology and anatomy; untranslatable and dull. Forceful speech is his aim and the result is — to Western minds — often grotesque or even repulsive. The comparison of women's fingers to the twigs of a tree, or to caterpillars, are examples. There is little connexion between the lines or parts of a poem. The only bond of union is the personality of the poet. Indeed it is the poet rather than the poetry who is admired. A freeman among his peers, he enjoys life to the full, often coldly calculating, yet, when his narrow code of honour calls, ready to risk all for a friend or the stranger who has claimed his protection. Behind all is the constant shadow of starvation and death; but they cast no permanent gloom on the picture. Most of the poets so described were Bedouin but there were others known as town-dwellers. As a class they differed from the Bedouin type. They show signs of acquaintance with books, prefer other metres to the favourites of the Bedouin and their subject-matter includes fables and historical tradition. Their language, too, inclined more to prose; a sentence might run into two or even three lines of verse. The men of Medina were held to be the best of these poets. Both Jews and Christians were poets and their verses are often indistinguishable from the work of the pagans. The homes of the various Arab kingdoms — especially Hira — were centres of poetic activity. Thither came the Bedouins eager to get something from the patrons of literature. They also met at the several fairs where matches of rival poets took place.

Bedouin poetry was preserved by oral tradition. The poet declaimed his own verses and was followed by a professional reciter (*rāwī*) who learned and declaimed them. Many a poet began as *rāwī* of another. This raises the question of the genuineness of Arab poetry. It is generally assumed that it was not written down till one hundred years A.D. In that time the natural infirmity of human memory and the peculiar character of Arabic make great changes probable. The lack of connections inside a poem help. Often different versions of a poem exist and it is impossible to tell which is the original. We cannot be certain what were the exact words of a poem, all we can say is that the philologists who collected the remains of pre-Islamic literature during the second century read a certain text. We know too that there was at least some forgery. The conclusion is that the great mass of the poems are genuine or at least ancient, though it may not be possible to prove this conclusively for any one poem. (It has recently been argued that writing was much more common than is generally believed, that the poets were acquainted

with that art and that some variant readings can only be explained on the hypothesis of written copies.) A few dialectal variations are preserved but for the most part poets used one language throughout the peninsula. Possibly the wealth of vocabulary is due to the inclusion of words from the many dialects; though their origin is now forgotten. There are some signs that the language of everyday was dropping the inflections used in poetry; had begun the series of changes that produced the vernaculars of to-day. When scholars began to take an interest in poetry for its own sake they gathered the remnants into diwans "collected works" of individuals or tribes or in anthologies some of which contained complete poems and others fragments.

Islam made a great change; partly due to religion, for poetry was the devil's *Kur'ān*; but chiefly through the change of circumstances. The centre of interest had moved outside Arabia and desert life had not the same appeal. It is almost impossible for one who does not live the life of the desert to appreciate its poetry. Some kept up the old tradition, finishing their poems with praise of the caliph or some other great man whose patronage was desired. Some kept the satirical prelude and then went straight to the business in hand. Others broke from tradition and composed fragments (*ḥiṣ'a*, q. v.) treating of one subject only, it might be love, religion or philosophy. In some of the later poets we can admire the verbal skill that fills a volume with extravagant and sometimes blasphemous adulation, with scarcely a repetition; but the utter emptiness and lack of ideas is revolting. The rule of one poem one rhyme is still observed, no new form is invented. A mystical poem contains over 700 lines with the same rhyme. It took several centuries for these changes to be made. Another innovation was that the despised *rajaz* metre was used for long poems; the authors using all their skill in the handling of words to counterbalance the simplicity of the metre, with the result that they are often unintelligible. Tradition says that in the time of Hārūn a slave girl started the fashion of making verse (pedants did not consider it poetry) in the language of the people. This style was called *lāhī*. In Spain it was raised to literary rank in the *cajial*, a short poem in stanzas. A variety of this but in fully inflected speech was the *muwaththah*. At first this was a poem in four or five line stanzas the last line uniting the stanzas by a common rhyme. Each stanza had its own rhyme and one metre was used throughout. The next step was the use of more than one rhyme and metre in each stanza. Sometimes the bonding line was in *lāhī*. For the most part however Spanish poets followed the older custom; though they tried various experiments in rhyme. In subject-matter they broke away from tradition and their work is much more congenial to Europeans than that of the poets of Arabia. Perhaps the most interesting features are a conception of love that suggests the romances of chivalry and an almost modern sensibility to natural beauty.

The early poets knew nothing of the theory of metre. This was discovered by Khalīl b. Ahmad (q. v.). It is said that the idea came to him as he heard a smith working with his hammer. The critics hardly thought of a poem as a whole; for them it was a string of detached beauties. It is true

that poets were praised for their skill in certain branches of their art e.g. for the description of the ostrich; but as a rule criticism dealt with details and words only. It tended to be finicking. One is praised for his skill in managing the transition from the *nasīb* to the description of the camel and another is blamed for putting words of ill omen in the opening verse of a poem. In other ways also criticism ran wild. Some held that the pre-Islamic poets were — by that fact alone — raised high above all others. It was men of this type who denied to Mutanabbi and others the title of poet because they did not observe the early conventions. With no critical principles to guide and a tendency to imitate the old, modern Arabic poetry is not inviting; especially as it is written in what is essentially a dead language.

It would be absurd to attempt even an outline history of Persian poetry in the space available. The utmost possible is a description of the forms of verse. The Persians borrowed their metres from the Arabs though they have other favourites. They also borrowed the *qasida* and *ghazal*, about which it is not necessary to say more. The *ghazal* is really a *hifa* of a dozen lines or so with complete freedom in the choice and treatment of subject. It has less continuity and a looser connection of ideas than the *hifa*, though it is usually a love poem. Of native forms the chief are the *mathnawī* and *rubāʿī* or *du-bāit*. The former consists of two long lines in the metre named *ramal* trimeter catalectic rhyming at the end of the double verse, a sort of heroic couplet. It is the form used for long poems whatever their subject may be. The *du-bāit* is two long lines with the first second and fourth half-lines rhyming and occasionally the third. The metre used is one of the many variants of the *hazaj*. A *du-bāit* is always independent, they are never combined into a longer poem.

The same desire as was felt in the west produced variants of the monorhymed poem which are all classed as *masnawī*. These consist of stanzas of anything from four to ten lines in the same metre, each stanza having its own rhyme. Some forms have a refrain with a separate rhyme. The earliest Persian poetry dates from shortly after 900 A.D. and since then the language and the forms of verse have changed very little. Fashions have changed, now simplicity has been in vogue and now fantastic conceits, but the outward form remains the same.

Turkish and Urdu poetry are little more than imitations of the Persian. Urdu, however, does show some signs of Indian influence both in form and subject-matter; to a small extent in earlier times and to a much larger extent during the last few years.

(A. S. TRITTON)

SHIR 'ALĪ, BĀKAZĀI, Amir of Afghanistan, was the third son of the Amir Dūst Muhammad and succeeded his father, in accordance with his will, on June 9, 1863. His overtures to the Government of India on his accession were, unfortunately, coldly received. The Amir found it necessary to march, almost immediately, into the Kurram district to compel his brother 'Azim Khān to swear allegiance to him and early in the following year both 'Azim Khān in Kurram and Afzal Khān, the eldest brother, in Balkh, rebelled. Muhammad Rafiq, the Amir's most able officer, defeated the former and compelled him to flee to India, and the latter submitted to Shir 'Alī and was pardoned and restored to his post, but his son, 'Abd al-Rahmān, fled to Bukhārā, whereupon Shir 'Alī imprisoned Afzal Khān. Early in 1865 Sharif Khān and Amin Khān, two other brothers, rose in rebellion at Kandahār and 'Azim Khān returned from India to Kurram. Muhammad Rafiq again expelled him and Shir 'Alī marched towards Kandahār. He met and defeated the rebels near Kalāt-i Ghilzai, but was stupefied with grief at the loss of his eldest son, Muhammad 'Alī, slain by Amin, who was also killed. He pardoned Sharif and was roused from his lethargy by the news that 'Abd al-Rahmān had returned from Bukhārā, corrupted the state officials in Balkh and Muhammad Rafiq, and, having been joined by 'Azim, entered Kabul on March 2, 1865. Shir 'Alī marched against him, but was defeated, and fled with no more than 500 horse. The governor of Ghazni refused to admit him, and released Afzal Khān, who joined his son and was proclaimed Amir in Kabul. The Government of India recognized him as ruler of Kabul, but he died almost immediately and was succeeded by his brother, 'Azim Khān. In January 1868, however, Shir 'Alī returned from Afghan Turkistan, entered Herāt, and in June was received as a deliverer in Kandahār. His army marched on Kabul and compelled 'Azim to flee once more to India, where he died in exile. In January, 1869, 'Abd al-Rahmān was defeated and expelled, and Shir 'Alī re-established himself as Amir of Afghanistan. In 1869 he met the Viceroy, Lord Mayo, at Ambāla, but received little beyond vague expressions of goodwill, instead of the offensive and defensive alliance which he sought. Again in 1873, alarmed by the Russian conquest of Khiva, he sought an alliance from the Viceroy, Lord Northbrook, and on receiving another rebuff rejected proffered subsidies and entered secretly into relations with Russia. In 1876 Lord Lytton was authorized to offer Shir 'Alī the alliance which he had sought, but the offer came too late. The Amir ostentatiously received a Russian envoy and, though warned that war would be the result, turned Sir Neville Chamberlain, who was accredited as British envoy, back from his frontier. On November 20, 1878, the British Government, after vainly awaiting an apology, declared war, and on February 21, 1879, Shir 'Alī

died, and was succeeded by his son, Ya'qūb Khān.

Bibliography: G. B. Malleson, *History of Afghanistan*, London 1878; *The Second Afghan War, 1878—1880, Abridged Official Account*, London 1908; *The Imperial Gazetteer of India*, 1908. (T. W. HAYO)

SHIR SHAH, FARID AL-DIN, founder of the Śūr dynasty of Dihli, was the son of Hasan Khān, of the Śūr tribe of Afghāns [q. v.] who received from Sikandar Lodi the ſel of Sahsāram in Bihār. Shīr Khān pursued his studies assiduously at Džawnpūr, and afterwards, in the administration of his father's ſiefs, obtained a minute knowledge of all the details of revenue administration. He was presented to Bābur, but, alarmed by the instinctive dislike which the emperor conceived for him, fled from his court. His successes against the Sulṭān of Bengal rendered him virtually independent in Bihār, and though Humāyūn invaded Bihār and Bengal and seemed to have established his authority there, Shīr Khān was secure in Rohtās, and when Humāyūn was recalled from Bengal by the rebellion of his brother Hīndāl, followed him, and on June 26, 1539, inflicted a severe defeat on him at Čawsa, on the Ganges. Shīr Khān assumed the royal title in Bengal, and in the following year marched on Agra. Humāyūn met him at Kanawdī on May 17, 1540, but was again defeated, and, after a short stay in Agra, fled towards Lāhor, pursued by Shīr Khān, now Shīr Shāh. Humāyūn fled into Sind and his brother Kāmran to Kābul, and Shīr Shāh remained master of northern and eastern India. He secured his northern frontier by building in the Nandana hills a fortress which he named Rohtās, after his stronghold in Bihār, and then, marching into Bengal, distributed that province among petty ſef-holders, his own career having proved the danger of entrusting it to one powerful governor. In 1542 he established his authority in Mālwa and, leaving Shudjāt Khān there as governor, returned to Agra in 1543. In 1544 he attacked the Rājā of Jodhpūr, and defeated him, but by so narrow a margin that he remarked, alluding to the poverty of the soil, "that he had nearly lost the empire of India for a handful of millet". In 1545 he besieged a Hīndū chieftain in the strong fortress of Kāllindjar, and on May 22, as he was watching the effect of the bombardment, a live shell or grenade fell into the powder magazine by which he was standing and he was terribly scorched by the explosion. He lay in great agony, directing the assault in his intervals of consciousness, until he was informed that the fortress had fallen; and then died. He was succeeded by his son, Islām Shāh.

The sycophantic chroniclers of the Timurids have done scant justice to "Shīr Khān" as they call him, one of India's greatest rulers, and his fame is overshadowed by that of Akbar, to whom he was superior in some respects and inferior in few. On 1800 Indian leagues of road, from Sonārgāon to the Indus and from Agra to Māndū, he built 1800 caravanserais, each with a mosque and full establishment. Cooked and uncooked food were provided for Muslims and Hīndūs, post-horses were in readiness and fruit-trees planted beside the roads refreshed the traveller. Such was the order maintained by him "that an old woman with a basket of gold might sleep securely at night in the open plain without a guard". The historian Budḡoni thanks God that he was born

in the reign of so just a king, and to his subjects, as to himself, it was matter for regret "that he did not obtain his kingdom until the time of evening prayer".

SHIRĀ, Sīrīus, Greek Σείριος, i.e. the brilliant, the brightest star in the constellation of Canis Major (*al-Kalb al-akbar*) known as a *Canis Majoris*. It shines with a white light and surpasses with magnitude 1.6 all other fixed stars in brightness. That the Arabic word Shīrā comes from the Greek Σείριος, has been proved by I. I. Hess (cf. I. I. Hess, *Über das präfigierte und infigierte ε im Arabischen*, in *Z. S.*, 1924) as *r* in a foreign word gives *ε* in Arabic. As further evidence that Shīrā is a foreign word in Arabic, Hess calls attention to the fact that this name of Sīrīus is unknown in the interior of Arabia; Beduins and settled Arabs alike call it *al-Mīrsam*, which is found in the Bihārī language as *Mīrdām*.

As might be expected, so striking a star plays an important part in Muslim astrology, and the possibilities of prophecy from the course of Sīrīus are exceedingly numerous. Its rising at the same time as the moon has always been a favourite conjunction with the astrologer. The moon may rise in any of the twelve zodiacal circles, but not so Sīrīus, on account of its fixed position with regard to the fixed stars. But its ascension may coincide in time with the risings of the moon just mentioned. We possess an astronomical writing by the celebrated Hīkīmī astronomer, Ibn Yūnus (d. 1009) entitled *Fi Aḥṣām al-Shīrā jamā'iyah* (Gotha, a., 1459).

[Hermes, the wise one says, "When the rising of the moon coincides with that of Sīrīus in the Ram, the changing fortunes of men will be good at the beginning of the year; they will be hale and healthy and free from bodily ills, but only until the fifth day before the entry (of the joint rising), then illnesses will come again; in that year all quadrupeds with young will miscarry, the dismissals and deposition of governors will be frequent and the King of Romans will die quite suddenly in that year on the 3rd of the month (H)atūr".]

(C. SCHVOY)

SHIRAZ, a town in Persia, capital of the province of Fārs in a vast plain to the south of Ispahān. It was conquered by Abū Mūsā al-Ash'arī and 'Uthmān b. Abī 'I'āṣ at the end of the caliphate of 'Omar; it was rebuilt by Muḥammad b. al-Kāsim b. Muḥammad b. al-Hakam b. Abī 'Aḳīl al-Thakafī, cousin and lieutenant of al-Baḡdādī in the reign of the Caliph Walīd b. 'Abd al-Mallik on the ruins of an ancient city which belonged to the province of Andasht-Khurra, the capital of which was Gūr (Djūr), the modern Firūzābād. Its walls were built by the Bāyid Abū Kāḡdār Sulṭān al-Dawla, from 436 to 440 (1044—1048), who gave it twelve gates (Makdāssat, p. 430 only gives eight, with their names);

these walls were repaired in the middle of the ninth (tenth) century by Mahmūd Shāh Iḥṣān, the rival of the Muḥaffarids. In 795 (1393) Tīmūr arrived in front of the town and was attacked by Shāh Maṣṣūr the Muḥaffarid, who lost his life there. It was taken by the Afghāns in 1137 (1724). Kāsim Khān Zand [q. v.] made it his capital surrounded it with walls and ditches, paved its streets and erected fine buildings there, notably the great bazaar. It was laid in ruins by the earthquakes of 1813 and 1824. It had at one time an ancient citadel called Shāh-Mubādī (Iṣṭakhri, p. 116). In the early centuries of Islām it still retained two Zoroastrian fire-altars, one called Kārniyān and the other Hormuz; there was also a third outside its gates called Masbūn in the village of Bārkaṭ (Iṣṭakhri, p. 119).

The wine of Shirāz is famous; it comes from the village of Khullār or Khullār, also noted for its honey and its millstones. Water is brought to it by the Ruknābād canal, dug by Hāfiṣ and built by Rukn al-Dawla the Būyid, father of 'Aḍad al-Dawla and by the canal from the tomb of Sa'di. The city has three principal mosques: 1. Dāmi 'Atiq, built by 'Amr b. Laith in the second half of the third (ninth) century; 2. the new Mosque built by the Salghurid Atābeg Sa'd b. Zangī, in the second half of the fifth (eleventh) century; 3. Masjid Šonkor, built by the first Atābeg of the Salghurids. There are also many saints' tombs which have earned for this city the name of Burdj al-Awliya "citadel of the saints", notably that of the 'Alid Aḥmad b. Muḥammad b. Mūsā al-Kāsim, and those of the mystic poets Sa'di and Hāfiṣ, to the north of the city. There are the gardens of Dilgūshā and Haftān. The city manufactures medicines called *ḥāṭam-kārī*, dress materials, gauze, brocades, silk-ross. It was the birthplace of the poets Athir called Shāfi'a, Ahlī, Boshāq (Abū Ishāq Hallāj), Hāfiṣ, Sa'di, 'Urfī, Bābā Fighānī, Mīnā, Majid al-Dīn Hamgar, and of the religious reformer 'Alī Muḥammad called the Rāb.

There is also a village of the same name north of Samarkand 4 parasangs, about 16 miles from it (Quatremère, *N. E.*, xiv. 490; *J. A.*, Jan. 1852, p. 83; Burnes, *Voyage à Boukhara*, iii. 207).

AL-SHIRAZI, ABU IḤSĀN IMRĀN B. 'ALĪ B. YUSUF AL-FIRAKHĀDĪ, a Shāfi'i jurist, born in Firākhād in 393 (1003). To study Fiqh he went to Shirāz in 410, then to Bāzra and in Shawwāl 415 (Dec. 1024) reached Baghdad, where he completed his studies in the *Uṣūl* with Abū Ḥatīm al-Kawwāl (d. 440) and in the *Furū'* with Abū 'I-Ṭayyib al-Ṭabari (d. 450). In 430 (1038/1039) he began to teach in Baghdad (Subki,

iii. 177); the fame of his learning soon became so great that students sat at his feet from all over the Muslim world. Many of his pupils held office as *Kādīs* and preachers in the east of the Caliph's empire. In 459 (1067) the vizier Niḥām al-Mulk appointed him to open the first public Madrese founded by him in Baghdad, the Niḥāmiye. But as Shirāz did not appear, it was opened by Ibn al-Sabbāḥ; when his pupils threatened to go over to the latter, he finally accepted the chair. Here he taught till his death (Ibn al-Sabī' in Ibn Khallikān, i. 304). When the dispute between Abū Naṣr b. al-Kushairī (d. 514) and the Hanbalis in Baghdad on the teachings of al-Ash'arī came to such a pitch that blood was shed, Shirāz energetically took the side of the Ash'arīs and persuaded the vizier to incarcerate the Hanbali Shāikh (Ibn al-Athīr, x. 71; Subki, iii. 98 sq.; iv. 251). His journey to Nishāpūr on a mission from the caliph in Dhū 'l-Hijja 475 (May 1083) is evidence of his great prestige; it was like a triumphal procession. At Nishāpūr the Imām al-Haramain came out to receive him and carried his cloak. He held disputations with him, in which the Imām al-Haramain recognised the superiority of his opponent. Shirāz died soon after his return to Baghdad on Jumādā II, 21, 476 (Nov. 5, 1083) and was buried in the cemetery at the Bāb Abraz with great honour — the caliph pronounced the burial prayer. The Niḥāmiya was closed for a whole year by its founder's command, as a sign of mourning. The vizier Tādī al-Mulk (d. 486) had a *tūrke* built and a madrasa near it (Ibn al-Athīr, x. 147).

His principal writings are: 1) *Kitāb al-Tawāṭiḥ fī 'l-Fiqh*, written in the year 452/453, ed. Juynboll, Leiden 1879, a legal compendium on which commentaries have been frequently written; 2) the comprehensive *Kitāb al-muḥḍarāt fī 'l-Madḥab*, composed in 455—469, still unpublished, cf. Yāqūt, *Mu'djam*, iii. 214; 3) *Kitāb Tadhkirat al-Ma'ālīm*, an *ikhtilāf*-work in several volumes on the teachings of the Hanafīs and Shāfi'īs which has apparently not survived, Hādidi Khalifa, No. 2848; 4) *Tabaqāt al-Fuḥalā*, short biographies of jurists of the first two centuries and of the four Madḥabīs down to his own day, a work often cited by the later biographers, e.g. al-Nawawī, al-Subki, Ibn Khallikān, al-Ḥarashī, as well as many times copied without mentioning the source (I am preparing an edition).

Bibliography: al-Sam'ānī, *Kitāb al-Ansāb G. M. S.*, xx. fol. 435v; Yāqūt, *Mu'djam*, ed. Wüstenfeld, iii. 349; Ibn al-Athīr, *Kūnūs*, x. 38, 71, 81 sq., 85; al-Nawawī, *Biograph. dictionary*, p. 646—649; Ibn Khallikān, *Wasayt*, i. 5 sq.; al-Subki, *Tabaqāt al-shāfi'ya al-kubrā*, Cairo 1324, iii. 88—111, 275—280; Wüstenfeld, *Schah'siten*, No. 452 (= *Abh. Gött. Ges. Wiss.*, xxxvii. [1891]); Brockelmann, *G. A. L.*, i. 387, cf. also i. 324, No. 2. (HEFFENING)

AL-SHIRAZI, ABU 'L-HUSAIN 'ABD AL-MALIK B. MUHAMMAD, a mathematician, who flourished about the middle of the twelfth century. He studied Greek mathematics and astronomy. In his time there was already available a good Arabic version of the *Conic Sections* (*ṣawwāḥ*) of Apollonius of Perga by Hilāl b. Abī Hilāl al-Himṣī (d. 883/884) and Thābit b. Kurra al-Harrānī (826—901). With the help of this he prepared a synopsis of the contents of the *ṣawwāḥ*, the Arabic version of which

is in Oxford (Bodl. 913, 987, 988). There is also attributed to him a compendious version (*Mahāṭṭar*) of the *Almagest* of Ptolemy, from which Ḳaṭib al-Dīn al-Shīrāzī (1236–1311) [q.v.] prepared a Persian translation of the *Maḍīfī*. The Arabic versions of the *Conic Sections* of Apollonius are of great value for the history of mathematics because the three last of the seven books of this important work only survive in Arabic, while the eighth book of the *ḥawāṣṣ* (Arab. *Mahāvūṣūṭ*) had already disappeared from knowledge by the time of the Arab translator.

Ludwig Nix, *Das fünfte Buch der Conica des Apollonius von Perga in der arabischen Übersetzung des Thābit ibn Qurrah*, Leipzig 1889, p. 3–7 (not free from typographical errors). (C. SCHÖY)

AL-SHIRAZI, ŠADR AL-DIN (d. 1640) is one of the great unknown men in the history of human thought. Holding a humble and poorly paid post as a teacher he found time and energy to build up his own philosophy, ordering and shaping the whole knowledge of his time from new points of view. The great problems, which the older philosophy handed down to his period were solved by him in his own way. His world-system is a theory of being. The real things of the world around us are "individuals of being", similarly limited sections of an endless primordial being, emanating from God as the primordial light like individual rays. From this fundamental principle, Shīrāzī thinks out the whole arrangement of reality in a new fashion: what we take for "entity" in things is the separation of the individual rays of the "being" and what we take for "existence" in them is the presence of this ray. This gives a new solution of the age-long great problem of being and existence, each being a different aspect and side of the same metaphysical reality.

The idea of the transmigration of souls was still quite alive in his time. He transformed it according to his own metaphysics of existence; according to its spirituality the soul of man attains to a higher stage of existence, likeness to God and union with God. The principle of this evolution is according to him gnosis, the higher form of knowledge which by the creation of its content in man supplies the defects and wants of his being and thus makes for perfection. The cognition of our mind is an act which is influenced by the active intelligence and possesses relationship in essence with the creative activity of God. God is not only the primordial being but also the centre of values. The reflection of these primordial values are the things of creation. If we therefore find in the world and its confusing multiplicity reflections of truth, goodness, beauty and loveliness, these are the reflection of God, which shines upon us and points the way to God. The path to ethical perfection is thus at the same time indicated.

The three great intellectual aspects of Islam converge in Shīrāzī for he is at once theologian, philosopher and mystic, taking up and equating the ideas of these movements. His special tendency however is the typical Persian mysticism of "illumination" (*ishrāq*) as Suhrawardī developed it, which he based on Aristotelian proofs through Ibn Sīnā and al-Fārābī; he developed the system further (in the doctrine of entities whose immu-

tability he disputes). The objections of the Indian monistic type of Muslim mysticism, he also overcomes by his thesis of the emanations of being. That philosophy did not die out in Islam after 1100 but still flourished at a late period is proved by the existence of Shīrāzī. He gathered together the higher culture of the brilliant epoch of Shāh 'Abbās into a synthesis planned on a large scale.

Bibliography: Horten, *Die Gottesbeweise bei Shīrāzī*, Bonn 1912; do., *Das philosophische System des Shīrāzī*, Strassburg 1913; do., *Die Philosophie des Islām*, Munich 1924, p. 93 sq., 124–126 et passim. (M. HORTEN)

AL-SHIRBĪNĪ, YUSUF b. MUHAMMAD b. 'ABD AL-DJAWAD b. KHUḌĀ, an Egyptian writer of the xivth (xvth) century and author of a work entitled *Ḥam al-Kuḥūf bi-Sharḥ ḥayāt Abi Shādūf*: "The tossing of heads in the commentary of the poem of Abū Shādūf". No biographer deserves a notice to him. Al-Shīrbīnī tells us incidentally that in 1075 (1664/1665) he was on the road from the Nile (Sa'īd) to al-Ḳuṣair (al-Ḳoṣēr) on the Red Sea (cf. the commentary on verse 13, *ya dandīf*, Bulāq, 1308, p. 152).

Among his teachers he mentions Shihāb al-Dīn Aḥmad b. Aḥmad b. Salāma al-Kalyūbī (d. end of Shawwāl 1069/1069) and Aḥmad b. 'Alī al-Sandūbī, who is said to have engaged him to compose the poem and to write a commentary on it afterwards (cf. p. 215).

In the first which is a kind of introduction, the author describes the *fallaḥ* (peasants) of the Nile valley and gives anecdotes in which he records their coarse customs, speaks of their food which no man to any degree civilised can smell or touch, describes the marriage ceremony among them etc. The first part ends in an *urjūn* in literary language in which he sums up the various customs of the *fallaḥ* which he has just described.

The second part is a poem of 47 verses (and not 42 or 52) in the Egyptian dialect attributed to an imaginary Abū Shādūf in which each verse is followed by a full commentary in the classical language, spiced with facetious digressions sometimes fairly long, anecdotes very often sarcastic, quotations in verse and prose of which those in the spoken language are more numerous than those in the literary language.

Al-Shīrbīnī, a moralist in his own way and a highly educated man as well as a poet (cf. his *Mawāḥib*, p. 193), describes from careful observation the customs, especially the bad ones, and particularly the vices not only of the peasants of the Nile valley but of his contemporaries in the cities; his gauloises suggest a comparison with Brantôme. His book has been lithographed in Cairo without indication of place and date and at Alexandria in 1289 and printed at Bulāq in 1274 and 1308 and Cairo in 1322.

Bibliography: Van Dyck, *Iḥṣā' al-ḥanūf*, Cairo 1313, p. 294; Vollers in *Z.D.M.G.*, 1887, li. 370 sq.; Brockelmann, *G. A. L.*, li. 278; C. Nallino, *L'Arabe parlato in Egitto*, Milan 1913, p. 482. (M. BEN CHENED)

SHIRK (also *ishrāk*, A.), association, especially associating a companion to God — honouring another besides God, polytheism. In the oldest *śūras* of the *Kur'ān*, during the so-called first Meccan period, the conceptions *ishrāk* and *mushrikūn* do not occur. Muḥammad was probably at first exclusively concerned with his own fate, being

completely under the ban of the imminent Last Judgment, and only with the increasing hostility on the part of the unbelievers did he begin to take an interest in them. In the latter parts of the *Qur'an* they are often mentioned, and regular disputations with the *Mushrikūn* sometimes occur; in particular they are continually threatened with the Last Judgment; the *mushrikūn* will then receive their punishment (*Sūra*, xxviii. 62 *sq.*). They think their idols will intercede for them with Allāh, but these cannot do this (*Sūra*, vi. 94; x. 19; xxx. 12; xxxix. 4 and 39); quite the contrary, for they will accuse their worshippers on the Last Day (*Sūra*, xix. 84 *sq.*; x. 29 *sq.*) and they will become fuel for hell with them (*Sūra*, xxi. 98 *sq.*). The *mushrikūn* are not grateful to God for saving them from the perils of the sea (*Sūra*, xxix. 65). The believers are to keep away from them and not to marry the *mushrikāt* (*Sūra*, ii. 220) but they are not to revile the unbelievers but endure them unless the latter in their turn attack Allāh (*Sūra*, vi. 108). In the year 9, however, Muhammad finally casts off the *mushrikūn* (*Sūra*, ix. 3, cf. however earlier *Sūra*, xv. 94 *sq.*); the *mushrikūn* are unclean (*Sūra*, ix. 28). The believers are not to pray for them, even if they are their nearest relatives (*Sūra*, ix. 114 *sq.*). Muhammad had already earlier expressly declared *shirk* to be the sin for which God has no forgiveness (*Sūra*, vi. 51, 116; xxxi. 12) and rejected it as absurd (*Sūra*, xxi. 22).

This development is very similar to that of the conception of the *kāfir* (q. v.) in the *Qur'an*. *Kāfir* is the most usual term for the unbelievers, and comprises both *mushrikūn* and the "people of a book". Thus *Sūra* xcii. 5, says "those who are unbelievers, the possessors of a scripture as well as the servants of idols will dwell eternally in Hell-fire". The commentators on this passage differ in their views. Some hold the view that the people of a book are to be included among the *mushrikūn* and that here we have the narrower term used first, and then the more comprehensive one. Other commentators have distinguished the people of a book from the idolaters in the narrower sense and this corresponds to the use of the phrase which later became predominant. But everywhere in the *Qur'an* *shirk* is used in direct contrast to the profession of the oneness of God, which has been given its most pregnant expression in *Sūra* cxlii. (*Sūrat al-Tawhīd* or *Sūrat al-Iḥdīd*) and according to one but rather artificial explanation, a definite variety of *shirk* is made impossible by each single verse of this *sūra*.

In the *Hadīth* literature, *shirk* has usually the same meaning of "an external obscuring the belief in the oneness of God". The *mushrikūn* are — as in the above mentioned *Qur'anic* passage — ungrateful to God and say in their vain boasting, "if we had not our dogs we would be robbed", and so on.

For the rest, the hostile feeling against the *mushrikūn* in the period of the great conquests is reflected in the rest of the *Hadīth* literature. Before the battle the *mushrikūn* received the demand to adopt Islam; on one occasion Muhammad even prays to God for right guidance for them; on another he curses them and calls down fire on their houses and tombs, and wishes for subsidences and earthquakes. According to one *hadīth* the believer very rarely falls before

the *shirk*, and the Prophet says, full of confidence, "Shirk is in my community more difficult to find than a black seed on a hard rock in the darkest night" — or he says to Abū Bakr, "I will tell a word to thee, the utterance of which protects thee against any *shirk*: O, God, I take refuge with Thee, lest I wittingly give thee a companion, and beseech Thy pardon if I have done it unwittingly".

In the *Fikh* books, *mushrik* is the proper legal term for unbeliever, although *kāfir* is often also found. The unbeliever according to the *Fikh* is in general regarded as an outlaw and of little value. Unbelievers, especially if hostile, can be killed without punishment, while on no account can a believer be put to death for the sake of an unbeliever. On this point in general, cf. the article *KAFIR* and on special points *ḤIMM* and *DAR AL-ḤAYAT* for the laws of warfare, and the articles *ḤIMMA*, *KHARĀJ* and *ḤIZYA* for the constitutional law. On some points the unbelievers are allowed to make legal arrangements among themselves, as for example in the law of marriage: — Unbelievers are at liberty to arrange the marriage of their children as they please; unbelievers can be witnesses at a marriage between believers; unbelieving husband and wife must be divorced if one of the two adopts Islam. Law of inheritance: — Bequests from one unbeliever to another, even of different religions are quite as valid as in the case when either the testator or legatee is a Muslim; but in no case can anything be bequeathed to an enemy unbeliever. The *Kāfi* has to prevent the appointment of an unbeliever as executor to a will. On the law of slaves cf. the articles *ABD* and *MUKĀTABA*; and the article *TAḤIYA* on the cases of urgent necessity in which a believer is permitted to conceal his faith.

The broadening of the Muslim outlook in the wars of conquest had naturally quite early brought about a recognition of the fact that all *mushrikūn* are not the same and are not to be treated alike. In the books on *Milal wa-Niḥal* we find more or less full accounts of the different foreign religious systems, which term includes also the philosophers, star-worshippers and atheists, and in the apologetic literature, we occasionally find systematic expositions of the various foreign religions. Attempts are not wanting which explain psychologically the origin of idolatry. From such considerations the conception of *shirk* came to be divided into many varieties, with which we cannot deal here. But these researches had a practical legal significance inasmuch as through them the oath came to be formulated, by which members of strange religions were sworn, to get a binding promise from them, especially in the case of recognition of the authority of Muslim State. An interesting collection of such formulas for oaths for the Mamlūk period is given by Kalkaschandi, *Subḥ al-Aḥdā*, xlii. 200 *sq.*

In the course of the dogmatic development of Islam the conception of *shirk* received a considerable extension through the circumstance that the adherents of many sects had no compunction about reproaching their Muslim opponents with *shirk*, as soon as they saw in them any obscuring of monotheism, although only in some particular respect specially emphasised by themselves, and in the later systematised dogmatic works, which, as a rule in connection with *tawḥīd*, go into its

opposite shirk, one can trace in almost any sentence what sectarian view is referred to or refuted, and then trace the path by which the present formulation has come about. Shirk nowadays is no longer simply a term for the unbelief prevailing outside of Islam, but has become a reproach hurled by one Muslim against another inside of Islam.

The Mu'tazilites, for example, called their opponents mushrikūn in as much as they, by adopting eternal attributes of the Deity, postulated their existence as eternal existence beside God. The attributes rather, they say, do not exist for themselves, but are inseparably one with God and not different from Him, and expressions like "God is all-knowing", "God is mighty", "God is living", simply mean "God is".

Quite in the same spirit, the Almohads, whose special programme was the *tawhīd*, accused their opponents of shirk, because they held the doctrine of the non-creation of the Qur'ān and their *tawhīd* includes the demand to recognise its oneness; only in this way is it possible to exclude the Qur'ān from being a second eternal being besides God. Mushrikūn to them also are the anthropomorphists who make God possess physical human qualities and thus affect his *maḥdūtiyya*. According to their strict view, they alone are professors of the oneness of God (*mu'ahhidūn*) in the true sense, the whole of the rest of the Muslim world is *mushrikūn* to them and the Christians *Ahl al-Kufr*. (The Ismā'īliya also were fond of calling themselves *mu'ahhidūn* but this was not a distinctive name for them; for them every one who associates another with his Imām, is like one who associates another with God or the Prophet, i. e. is unclean).

The shirk theory of the Wahhābīs went to the greatest extreme. Their hostility is directed against shirk which in their view infects the whole of orthodox Islam in the form of the cult of prophets, saints, and tombs. Besides, there have not been wanting in orthodox and elsewhere (cf. e. g. Goldziher, *Zakirten*, p. 189; cf. Strothmann, *Kultus der Zaiditen*, p. 67 sq.) those who condemn the cult of saints for reasons of *tawhīd*, and at bottom it is only tolerated as a concession to the overwhelming practice of the people. The Wahhābīs also consider themselves the only *mu'ahhidūn*, all other Muslims are mushrikūn and they alone are called to the *ḥay' al-sunna*. The old sunna and the picture of the character of the Prophet and therefore the very heart of Islam has indeed been falsified by the worship of saints. Therefore they attack the very holiest places of Islam of the Sunnis and Shī'īs, because these in their eyes are regular strongholds of idolatry.

According to the theorists of the Wahhābīs, they directed their opposition in detail against 1. *shirk al-ilm*: prophets and saints have no "ilm al-ghāib" except when it is revealed to them by God, who alone possesses it. It is shirk to credit or ascribe knowledge to them or to soothsayers, astrologers and interpreters of dreams. 2. *shirk al-ta'arruf* is the assumption that any one except God has power. Whoever then regards a saint as an intervener with God commits shirk, even if it only, he thinks, serves to bring him nearer to God. Any kind of intervention (*shaf'a*, q. v.) is therefore rejected on the authority of Sūra xxxix. 45; the Prophet himself will only receive from God permission to intervene on the Last Day and

not before. 3. *shirk al-'ikāda*: the reverencing of any created thing, the grave of the Prophet, the tomb of a saint, by prostration, circumambulation, giving of money, vows, fasting, pilgrimage, mentioning the name of a saint, praying at his grave, kissing certain stones, etc. 4. *shirk al-'ada*: superstitious customs like *isṭihāra*, belief in omens, in good or bad days, etc., in personal names like 'Abd al-Naḥī, asking soothsayers for advice, etc. 5. *shirk al-'adab*: swearing in the name of the Prophet, of 'Alī, of the Imāma, or Pirs.

Shirk has a special meaning in Muslim ethics, notably in al-Ghazālī. To the refined ethical conscience "every kind of worship of God which is not absolutely disinterested" is shirk. Thus the hypocritical practice of religion which is performed for the sake of reward, i. e. to gain the admiration or applause of men, is shirk, because it associates consideration for men with the thought of God. Similarly arrogance and egoism are a kind of shirk. Numerous grades of this shirk are further distinguished, and it is called also *shirk ṣaghīr* or *shirk aṭṭhar* in contrast to crude and obvious polytheism, *shirk 'aṭīm*; the ethical value of an action is based on the degree of admixture or omission that clouds the pure intention, *ihkāt* (q. v.).

Just as the term *ihkāt* for the Sūfīs now has the meaning "exclusive devotion to God", so shirk has for them come to have the meaning "being prevented by something from exclusive devotion to Him". For example the mere illusion of the soul (*nafs*) that it has something good in it and has a certain worth is a secret idolatry (*shirk ḥaṣṭī*). It is the same with the assertion "I know God", because here we have an admission of the duality between the subject, which knows and the object of knowledge. For the Sūfī seeking union with the deity, difference of rites and religions loses all significance, and this does not exclude Islam, and the following bold saying is ascribed to Tilim-shān, a pupil of Ibn 'Arabi, that "the Qur'ān is absolute shirk; profession of oneness is found only in our (i. e. Sūfī) speech" (Goldziher, *Vorlesungen*, p. 171).

SHIRKA (or SHARINA; the former is according to al-Fāyūmī, *Miḥab* and the more usual form in the Turkish legal language). Shirka originally implied simply that a thing belonged to several

persons in common in such a way that each one had ownership in every smallest part of it in proportion to the share allotted to him. This idea seems to be a general Semitic one. It is found similarly in the Talmudic *מְצֻקָּה*, cf. L. Auerbach, *Jüd. Obligationenrecht*, § 45. Like this conception *shirka* was also later transferred to the different forms of trading companies. The jurists therefore understand primarily by *shirka* common property (*shirkat al-amlik*) which arises for example through inheritance, gift or indissoluble combination. One joint owner can only deal with his share with the approval of the others; the second kind of *shirka* is the company which is based on contract i.e. on offer and acceptance (*shirkat al-'uqud*).

The conditions for its foundation are ability to give and undertake a commission (*wakāla*) or money or goods representing it. The *shirka* is a trading company; the profits are divided either into equal parts or in proportion to the shares. The relation of companies to one another is a relation of confidence (*amāna*). The company is dissolved (1) by the declaration of the wish of a member (renuntiatio), (2) by secession from Islam or departure into the *Dār al-Harb* (cf. capitula diminutio) and (3) through death or mental disease (cf. Dig. 17, 2, 4; 17, 2, 63, 10; Basil., xii. 1, 4). The heir can only continue the company through a new contract of association (cf. Dig. 17, 2, 35, 36, 37 = Basil., xii. 1, 35, 36, 37).

The Hanafis know four kinds of companies: (1) *Shirkat al-Mufawafa*, when the shareholders are equal in respect of capital, right to disposal, shares in profit and loss, if every shareholder is not only "authorised agent" of the others but is also "surety" for them. *Mufawafa* with slaves and unbelievers is not permitted. The Malikis do not recognise this form; by *mufawafa* they understand a company in which the shareholders are only general agents for each other: profit and loss are divided among them in proportion to the amount of their shares. (2) *Shirkat al-'Inān*, capital and profits in indefinite shares; the quota of profit may be greater than the quota of capital in recompense for the work of management. Each member is responsible for his own transactions only and has only the right to demand from the other shareholders their share. This corresponds to what the Malikis call *mufawafa*, while by *'inān* they mean a company in which the right of the shareholders to dispose of the capital is limited. (3) *Shirkat al-Sanā'at* (or *Sh. al-'Abdān* or *Sh. al-Takābul*) when artisans combine on a common task. All the members are bound to carry out the work. Even if only one works, the others yet have a share in the profits. Among the Malikis however illness of some duration makes their contract invalid. (4) *Shirkat al-Wuḡūk* (or *Sh. al-Dhīmān* or *Sh. al-Mafā'ila*) only permitted among the Hanafis. The members work without capital and sell on credit.

The Shāfi'is only recognise the *Sh. al-'Inān* but they only allow this company in the case of indissolubly combined things (e.g. money, cereals) and allow the distribution of profit and loss only in proportion to the shares in the company. Historically it is probable that this *Sh. al-'Inān* is the older form; there is evidence of it in the pagan period from the poet al-Nābigha al-Dī'ālī. On the other hand the *Sh. al-Mufawafa* (societas

quaestus) seems to have been taken over from Roman-Byzantine law. It is vigorously condemned by al-Shāfi'ī (*Umm*, iv. 206) and disowned by Abū Hanīfa also; on the other hand it is recognised by Ibn Abī Lailā, al-Shābānī, and Abū Yūsuf. Sufyān al-Thawri (in Sarakhsi, *Madrīs*, xi. 153) is unique in making even a legacy to one of the shareholders become the property of the company (*lucrum ex fortuna*) which suggests the *societas omnium bonorum* (cf. Dig. 17, 2, 3, 1; Basil., xii. 1, 3, 1). The classification and doctrine of the Hanafis have been bodily adopted in the Turkish civil law (*Meşhure*, art. 1045, 1060 *app.*; 1329 *app.*).

On the other forms of companies see the separate articles: *MUḤARRABA*, *MUḤARRA'A*, *MUSAKKAT*.

(HEFFNER)

SHIRKŪH, ABU 'L-HĀRITH ASAD AL-DĪN, son of Shādhī, and brother of Aiyūb b. Shādhī, the father of Saladin. At first a general of Nūr al-Dīn, prince of Aleppo and of Damascus, he became vizier of the last Fātimid Caliph al-'Adil, and in the last capacity bore the honorary title of Malik Maṣṣūr.

We first meet with Shirkūh at Takrit, where his brother Aiyūb was governor in the name of the Abbāsid Caliph, and it was after a murder committed by Shirkūh that the whole family had to abandon the town, and offer its services to the prince of Aleppo, Zankī, who accepted them. Shirkūh remained at the court of the son of Zankī, Nūr al-Dīn Maḥmūd, and at his command, went to take Damascus which his brother Aiyūb was defending in the name of the Burid princes. The matter was arranged without a blow being struck; Aiyūb kept Damascus, but on behalf of Nūr al-Dīn who gave the territory of Hims to Shirkūh as an appanage. Such was the origin of the Aiyūbid principality of Hims, which later passed to his descendants.

When in the year 558 (1163) Nūr al-Dīn was asked by Shāwar [q.v.] to assist him in gaining the vizierate, Shirkūh was put at the head of the Syrian expeditionary force. With an army very inferior in number to the forces gathered by the vizier Dirghām, Shāwar and Shirkūh obtained a brilliant victory near Tell Baṣṣa. Whatever may have been at first the designs of Shirkūh with respect to Shāwar, this battle marks an important point in the relations of the two men; Shirkūh seemed afraid of the spirit of intrigue which animated Shāwar. The assurance, verified in the result, which was given by Shāwar that he had means of information in the army of Dirghām was disturbing. With the installation of Shāwar in the vizierate the quarrel broke out openly; Shirkūh was unwilling to quit Egypt before the execution of the agreement concluded with Nūr al-Dīn. Fighting resulted on several occasions and the different encounters which took place in the suburbs of Cairo, went against Shirkūh, who appealed for help to the Franks. Shirkūh, besieged in Bilbais, had to capitulate. Before the end of the year 559 (Nov. 1164) he returned to Damascus.

In the year 562 (1167) Shirküh again invaded Egypt to fight Shāwar for a second time; the latter was still allied with the Franks. He won the battle of Būhain, which had been forced upon him by his adversaries. This very bloody victory did not lead to any final decision. Shirküh found a base at Alexandria which he occupied with ease and where he installed his nephew Saladin as governor. This whole effort proved useless, because Shāwar succeeded in recapturing the town after a long siege and brought about the departure of Shirküh.

He had to be recalled two years later by the Caliph al-ʿAdīd when the Franks besieged Cairo; the third invasion was to prove decisive. After the departure of the Franks, Shirküh threw in his lot with Egypt and refused to yield to the pressing appeals of Nūr al-Dīn, who was unwilling to be deprived of his services. After the assassination of Shāwar, he accepted the office of visier to the caliph al-ʿAdīd, but it is not known if in his heart he was considering a dynasty of his own. The contrary can be believed, and it may be supposed that the idea of it came to Nūr al-Dīn, who determined to strike a double blow, to bring back his officers to his allegiance and whilst bringing them back to the Sunna, to reign in Egypt, which he would annex to his Syrian kingdom. Because of his relationship with Saladin, the question ought to be raised in an article on Shirküh but there is nothing to indicate a definite attitude on the part of the latter.

His attainment of power coincided with a rising of the populace of Cairo, who pillaged even the offices of the visierate. Shirküh, who according to the account of William of Tyre was "viciis, patib de cors et mont gras" joined his nephew Saladin. Historians praise his ability; although a Sunni, he wisely allowed the Egyptians, to remain faithful to their own religious opinions. His power was, moreover, of too short a duration to give a new political system to the Empire. Shirküh died very suddenly after being visier for a little more than two months, on the 22 Djumādī II, 564 (March 23, 1169). He died, the victim of his violent appetite, which was the cause of frequent indigestion accompanied by suffocation; as is generally the case in the East, poison was also spoken of. In accordance with his expressed desire his remains were transported to Medina, but not until sixteen years later.

His successors included a certain number of Mamlūks, who were known at the beginning of the Aiyūbid régime under the name of *Asadiya*. The same *nishā* was used to name the madrasas which he had built at Aleppo and at Damascus.

(G. WIET)

SHIRWÂN, also written Shirwān and Sharwān (e.g. in Yāqūt, iii. 282, according to al-Samʿānī, ed. Margoliouth, i. 333), a district on the western shore of the Caspian Sea, east of the Kura, originally a part of the ancient Albania or the Arrān [q. v.] of the early middle ages. According to Iṣṭakhri, p. 192 = Yāqūt, iii. 317, the road from Bardhaʿa [q. v.] led via Shirwān and Shamākhīya (in Yāqūt: Shamākh) to Derbend [q. v.]. The distance between Shamākhīya and "Sharwān", according to Iṣṭakhri, was three days' journey; in some MSS. and in Yāqūt we have "Shāberān" for "Sharwān"; in the anonymous *Hudūd al-ʿĀlam*, i. 33⁴, Shāberān (there written Shāwerān) is described as the capital (*ḥaṣa*) of Shirwān. This road as well as the towns on it did not lose their importance until the Transcaucasian railway had been built. Shāberān is still mentioned as a town as late as 1578 in the report of Turkish conquests of that year (v. Hammer, *G.O.R.*, ii. 485). In the seventeenth century a new town Kuba or Kūba appears as the capital of the Khān of this region, about fifteen miles N. W. of Shāberān; by 1770 Gmelin only found "miserable" ruins in Shāberān of the old, now completely deserted town (S. G. Gmelin, *Reise durch Russland zur Untersuchung der dry Naturkräfte*, iii. 36); its importance as a trade centre had passed to Kuba. As late as 1851, the governor of Derbend, Wotontsow, travelled to Tiflis via Kuba, Shemakha and Gandia (*Arkhiv Knyazya Wotontsowa*, xi. 405).

Shamākhī, Russian Shemakha, the later capital of Shirwān, is said to have been founded in the Muslim period and to have taken its name (Balādhuri, p. 210) from Shamākh b. Shudīf, king of Shirwān, during the governorship of Saʿīd b. Salm (the contemporary of the Caliph Harūn al-Rashīd, cf. Yāqūt, *Taʾrikh*, ii. 517, 199, and al-Tabari, iii. 648). As the territory of the Shirwānshāh (see below) Shirwān included the lands from the Kura to Derbend; the same frontiers are given in the Mongol period for Shirwān (in Hamd Allāh Kāwint, *Nuzhat al-Kulūb*, ed. Le Strange, p. 92, 7). The capital Shemakha was then as later of importance, especially as a centre of silk manufacture and of the silk trade.

After the abolition of the Shirwānshāhs by the Safawis, Shirwān formed a province of Persia and was usually governed by a Khān, who is often called Beylerbey or Emīr al-Umarāʾ. The inhabitants several times rebelled against the Shīʿi dynasty and as Sunnis appealed for help to the Sultān of Turkey. With other Caucasian lands Shirwān was taken by the Turks in 1578, held after a series of battles with varying results, and finally ceded to the Sultān by the peace of 1590. Under Turkish rule Shirwān was divided into fourteen sandjaks; it included Shakt in the north-west and Baku in the south-east, i.e. practically the whole of mediaeval Shirwān. Derbend, which had long been separated from Shirwān, formed a separate governorship. Persian rule was not definitive restored till 1607. In the seventeenth century, Kuba and Salyān were given as a separate principality to the Kaitak, who had migrated southwards (cf. i., p. 989, 29). In 1722 the Khān of Kuba, Hussain 'Ali, submitted to Peter the Great and was confirmed in his dignity. By the treaty between Russia

and Turkey of the year 1724, the coast territory with Baku, now occupied by the Russians, was for the first time politically separated from the rest of Shirwân, which was left to the Turks with Shemâkha as capital. This division was retained as regards administration even after both parts were reunited to Persia. By the treaties of 1732 the coast lands north of Kura still remained to the Russians and the other parts of Shirwân and Daghestân to the Turks; it was only after Nâdir Shâh had taken their conquests from the Turks by force of arms (capture of Shemâkha, Oct. 22, 1734) that the coast lands were ceded to him voluntarily by the Russians (treaty of Gandja, March 10/21, 1735). After the death of Nâdir Shâh, Persian rule could no longer be enforced in these regions; several independent principalities arose; the name Shirwân was now limited to the territory of the Khân of Shemâkha, which was later under Russian rule divided into three administrative districts (Shemâkha, Göktaï and Djawâd). Fath 'Alî Khân of Kuba (1758—1789) succeeded in bringing Derbend as well as Shemâkha under his sway, so that, as Dorn observes, "a true Shirwânshâh arose in him". During the last years of his reign, Fath 'Alî flattered himself with the idea of bringing Persia itself under his sway and ascending the throne of the rulers of Irân. When the Kâdjârs had succeeded in restoring the unity of Persia, the sons of the Khân were no more able to maintain their independence than the other Caucasian chiefs and had to choose between Russia and Persia. General Zubow, who had been despatched by Catherine II, had already reached the Kura below Djawâd (1796) when he and his army were recalled by the Emperor Paul. The Khân of Shirwân (Shemâkha), Mustafâ, who had already entered into negotiations with Zubow, submitted to the Russians in 1805, who occupied Derbend and Baku next year (1806), but soon afterwards he made overtures to the Persians and sought help from them. By the peace of Gullistan (October 12/24, 1813), Persia gave up all claim to Derbend, Kuba, Shirwân and Baku. Nevertheless Mustafâ continued to have secret dealings with Persia. It was not till 1820 that his territory was occupied by Russian troops; the Khân fled to Persia and Shemâkha was incorporated in Russian territory. The outbreak of hostilities again in 1826 was taken advantage of by Mustafâ and by an earlier Khân of Baku, Husain, for an attempt to stir up their subjects against Russia, but without success. Since 1840 the former territory of the Khân of Shirwân has been united with Kuba and Baku to form one administrative area (at first the "Caspian territory"; from 1846 the "government of Shemâkha"; from 1859, after the destruction of Shemâkha by one of the earthquakes frequent there, the "government of Baku"). At present the ancient Shirwân forms a part of the Soviet republic of Aذربâidjân with the capital Baku; the division into "governments" is abolished, but that into "circles" retained. The old capital of Shirwân, as late as the middle of the nineteenth century, had a larger population than Baku; according to Ritter's *Geographisch-Statistisches Lexikon*, 1864—1865, Shemâkha had 21,550 and Baku 10,600 inhabitants. In the eighties the relationship was reversed (E. Weidenbaum, *Putnam's* *go Kawkazu*, Tiflis 1888, p. 342 and 396; Baku 45,679, Shemâkha 28,545); Shemâkha is now quite a small town compared with

Baku (1917: Baku 231,000; Shemâkha 27,800).

Bibliography: See especially B. Dorn, *Geschichte Shirwân unter den Statthaltern und Chanen von 1538—1820* (Beiträge zur Geschichte der kaukasischen Länder und Völker, II. = *Mém. de l'Acad.*, etc., Ser. 6, *Science politique*, etc., v. 317—433). (W. BARTHOLO)

SHIRWÂNSHAH, a title of the rulers of Shirwân, probably dating from the pre-Muhammadan period (Balâdjuri, p. 196 *infra*). In the history of the conquest this ruler is called simply king (*malik*) or lord (*shâh*) of Shirwân (ibid., 204 and 209). Yazid b. Usaid al-Salamî, governor of Armenia under the Caliph Manûr, took possession of the naphtha-wells (*naffâfa*) and saltworks of Shirwân (*malîfâh*); the eastern part of the land was therefore at that date of greater importance than the western (cf. what is said above on Shâburân as the capital of Shirwân). The title Shirwânshâh is said to have been afterwards assumed by the descendants of the Arab governor Yazid b. Mazyad al-Shaibânî. Yazid himself died in 85 (801—802); when and why his descendants moved their residence to Shirwân is not known; according to a later source (Shahrîzâde, *Mata al-Tawârikh*, written in 1173 [1759], quoted in Dorn, *Shirwan-schahs*, p. 544, cf. now Brockelmann, II. 429) one of them, Haitham b. Khâlid, declared himself independent during the troubles that followed the death of the Caliph Mutawwakil in 247 (861) and assumed the title of Shirwânshâh. His dynasty (usually called Mazyadîd) is said by the same source to have ruled till 460 (1067/1068). Contrary to this, Mas'ûdî (*Murûf*, II. 69) says that in his time, i. e. shortly before 332 (943—944) after the death of the Shirwânshâh 'Alî b. Haitham, the Irânshâh (according to Marquart, *Erânshâh*, p. 119, this is the reading, i. e. "lord of Arrân in the narrow sense"; the manuscripts usually have Irânshâh) Muhammad b. Yazid, a descendant of the Sāsānids, seized the land of Shirwân and assumed the title of Shirwânshâh; he is said to have also held Derbend (*Murûf*, II. 5) and thus united the whole of the ancient Albania into a political unit once more. Contrary to what was stated above, i. p. 460 *sq.*, that Mas'ûdî's statements are confirmed by no other source, we can now quote the *Hudud al-'Alam* (written in 372 = 982—983), f. 33a, according to which the three lands Shirwân, Khurân and Irân were at that time under the rule of one sovereign who had the titles of Shirwânshâh, Khurânshâh (in Balâdjuri, p. 196 *infra*, called Djurânshâh, as king of the Laks, i. e. of the Lesgians, cf. above I. p. 887 *sq.*) and Irânshâh. His capital was the camp of his armies (*tegherhâ*), 1 farsakh from Shemâkha. The dynasty of the Kessrânids was probably founded by Muhammad b. Yazid (Banû Kessrân) and the centre of the principality transferred to Shemâkha, which later always appears as the capital of the Shirwânshâh. The rule of this house was perhaps interrupted for a short time by the Muhammad b. Ahmad al-Andî mentioned as Shirwânshâh by Ibn Hawkal (p. 250, 2 and 254, 12); in no other literary sources is this name mentioned, but it is found on undated coins which from the epigraphy must belong to the fourth (tenth) century.

The next historical references to the Kessrânids refer to their relations with the Seldjûk Sultâns (Houtsma, *Raoul des textes relatifs à l'histoire des Seldjoudes*, II. 139 *sqq.*) In the reign of

Malikshāh (465—485 = 1072—1092) Fariburz is mentioned as king, lord of Shirwān (*al-Malik Sahib Sharmān*), and we still have coins struck by him. When Malikshāh was in Arrān, Fariburz after some resistance paid homage to him and pledged himself to pay a tribute of 70,000 dinārs; by later negotiations this tribute was reduced to 40,000 dinārs (the tribute which the above-mentioned Muhammad b. Ahmad al-Azdi had to pay the ruler of Adharbāydjān Marzbān b. Muhammad b. Musfir was a million dirhams). Under Sultān Mahmūd (511—525 = 1118—1131) Shirwān was occupied by the Sultān's troops; the Sultān was asked by the leaders to come there himself; after his arrival the Shirwānshāh (his name is not known) went to him and hoped to obtain justice from him but was imprisoned. The people of Shirwān with whom the prince was very popular tried to procure his release, but without success. This state of affairs encouraged the Georgians to invade Shirwān but they were driven out by Mahmūd. The population suffered very much from the occupation of their country and these events became known as the "devastation" (*takhrīb*) of Shirwān. The campaign took place in the first and last years of office of the vizier Shams al-Mulk, who was put to death by the Sultān's orders in Rabi' I, 517 (April 29—May 28, 1123) in Ballakān (probably on the way back to Persia from Shirwān).

The same campaign appears in quite another light in Ibn al-Athir, x. 433 *et seq.* (cf. above i., p. 943). The campaign is said to have been caused by the invasions of the Georgians and the complaints of the people, especially of the town of Derbend. Soon after the arrival of the Sultān in Shamākh a large Georgian army appeared before the town, which terrified the Sultān; soon afterwards however a quarrel broke out between the Georgians and their allies, the Kipčaks, as a result of which the enemy had to retire "as if defeated" (*dhābha 'amushimān*); they had therefore not actually been defeated. The Sultān remained for some time in Shirwān and returned in Djumādā II, 517 (July 27—Aug. 24, 1123) to Hamadān.

Neither the Muslim nor the Georgian sources (in Brosset, *Histoire de la Géorgie*, I. 368) nor the coins give us definite information regarding the name of the Shirwānshāh concerned. According to Fariburz, the name of his son Manūčahr still appears on the coins under the Caliph Mustashir, i.e. before 512 (1118); the next ruler Afrīdūn, probably a brother of his predecessor (no coins of his are known), is said by Georgian sources to have fallen about 1120 in a war between Shirwān and Derbend; he is referred to as a "martyr" (*shāhid*) by the poet Khākāni. His son Manūčahr II was according to his coins a contemporary of the Caliph Muṭtafi (530—555 = 1136—1160) and is said by Khākāni (in Khanikow, *ML. Asiat.*, III. 122) to have reigned for thirty years, so that he cannot have been de throne in 517 (1123).

The dynasty's greatest period was under Manūčahr II and his successors. Manūčahr took the title not only of Shirwānshāh but also "Great Khākān" (*Khākān-i Kabir*); from this title is taken the *taḡhalluṣ* of his panegyrist Khākāni. But the Shirwānshāh continues to appear on his coins simply as a vassal of the Seldjūk of the 'Irāq; it is only after the death of the last of this dynasty (Toghrol b. Arslān, d. 590 = 1194) that we find on coins and inscriptions only the name of the

Caliph as suzerain mentioned in addition to the name of the Shirwānshāh (usually with high-sounding titles). Shirwān at that time was actually completely dependent on the Georgian kings, who took the title Shirwānshāh themselves. Matrimonial alliances were several times concluded between the Ksarids and the Georgian royal house. The son and successor of Manūčahr II, Akhūstān, no doubt owed to his powerful relative, ally and suzerain, king Georgius III, his victory over a Russian fleet at Bākū and the reconquest of Shirwān and Derbend [q. v.]. On the other hand the lands of Shakkī, Kābala and Mūkān, were later taken from the Shirwānshāh by the Georgians (Nasawi, *Sirat Sultān Djalāl al-Dīn*, ed. Houdas, p. 146 and 174). Political conditions in the first half of the thirteenth century are not quite clear; neither the Shirwānshāh Rashīd mentioned by Ibn al-Athir under the year 619 (xli. 264 *et seq.*) nor the Shirwānshāh Afrīdūn b. Fariburz mentioned by Nasawi (p. 175), under 622 A. H., are known from coins; in place of these we find on coins as contemporary of the Caliph Nāṣir (575—622 = 1180—1225) Fariburz b. Afrīdūn b. Manūčahr, and following him under the same Caliph Farrukhshāh b. Manūčahr and Garshasp b. Farrukhshāh. In contradiction to the above accounts Nasawi says that the Shirwānshāh paid Sultān Malikshāh a tribute of 100,000 dinārs; the Khwārizmshāh Djalāl al-Dīn therefore demanded the same sum from the Shirwānshāh when he appeared in Adharbāydjān. According to Nasawi, the reply given him was that conditions were no longer the same as before, as a large part of the country was now in the possession of the Georgians. It was agreed to pay 50,000 dinārs, but even of this 20,000 were remitted. Shortly before the Khwārizmshāh had driven the officers of the Shirwānshāh out of the land of Gushkīstī at the junction of the Kura and Aras and farmed out this territory for 200,000 dinārs; on the other hand he restored to prince Sultān-Shāh, Mūkān, which had been ceded by his father to the Georgians (on the occasion of the marriage of the prince with a Georgian princess, daughter of Queen Rusudan, 1223—1227). After the subjection of Shirwān by the Mongols, coins were struck in the name of the Mongol Great Khān; the name of the Shirwānshāh also appears, but without a title. Under the rule of the Ilkhāns [q. v.] no coins were struck in Shirwān; the country belonged sometimes to their empire and sometimes to that of the Golden Horde; as a province in the empire of the Ilkhāns Shirwān brought the state treasury 11 *tūmāns* (the *tūmān* was 10,000 dinārs) and 3,000 dinārs (the *dīnār* was not now a gold coin but a silver coin of 3, later 2 *mishkal*); cf. W. Barthold, *Persische Münzen aus der Zeit der Anisakol und der Manut*, St. Petersburg 1911, p. 18 *et seq.* Gushkīstī had remained separate and paid 118,500 dinārs. The Ksarid dynasty remained in existence; under the successors of the Ilkhāns, the Shirwānshāh Kai Kāhād and his son Kāwus were again able to play the part of independent rulers (their coins were anonymous like the coins of several dynasties of this period); but soon afterwards Kāwus had to submit to the Qajarids [q. v.] and strike coins in their name. Kāwus is said to have died according to Faḡhī (in Dorn, p. 560) in 774 (1372—1373); his son Hūshang was murdered by his subjects after reigning ten years and with his death the dynasty of the

Kentāids came to an end. The rule passed to a remote connection of the dynasty, Shāhkh Ibrāhīm (1383—1417) of Derbend; in 1386 he had to submit to Tīmūr, after whose death he reigned as an independent ruler. The long reign of his successor Khālī Allāh (1417—1462) and Farrukh Yāsir (1462—1501) was a period of peace and prosperity for Shirwān. Great buildings arose in Shamākh and Bākū. Farrukh Yāsir was defeated and killed by Shāh Ismā'il, the founder of the modern kingdom of Persia. After this there reigned as vassals of the Persian Shāhs, Ibrāhīm II (1502—1524), Khālī Allāh (1524—1536), and Shāhrukh (1536—1538), after whom Shirwān was incorporated into Persia. A son of Khālī Allāh II, Burhān 'Alī Salṭān and his son Abū Bakr afterwards made an attempt to regain this kingdom with Turkish help, but without any lasting success.

(W. BARTHOLD)

SHITH (Hebr. *שֵׁת*), Seth, the third son of Adam and Eve (*Gen.*, iv. 25, 26 and v. 3—8) was born when his father was 130 years of age, five years after the murder of Abel. When Adam died, he made him his heir and executor of his will. He taught him the hours of the day and of the night, told him of the Flood to come and taught him to worship the divinity in retirement at each hour of the day.

It is to him that we trace the genealogy of mankind, since Abel did not leave any heirs and Cain's heirs were lost in the Flood. It is said that he lived at Mecca performing the rites of pilgrimage until his death; that he collected the leaves revealed to Adam and to himself (numbering fifty) and regulated his conduct by them; that he built the Ka'ba of stone and clay. On his death he left as his successor his son Anūsh (Enoch); he was buried beside his parents in the cavern of Mount Abū-Kubais; he had attained the age of 912 years. According to Ibn Ishāq he married his sister Hadrat.

Later Traditions. Adam having fallen ill, desired to have olives and oil from Paradise; he sent Shith to Mount Sinai to ask God for them, and God told him to hold out his wooden bowl; it was filled in a moment, with what his father had asked for, and he rubbed his body with the oil, ate a few olives and was cured. Adam was beardless; Shith was the first to have a beard. He is also called the first *ariya* (a Syriac word signifying "teacher" [cf. Hebr. *רִי* "light, teaching"]). He was exactly like his father physically as well as morally. He was the favourite child. He spent the greater part of his life in Syria, where one tradition says that he was born. From his time man was divided into two categories; those who obeyed him and the others who followed the children of Cain. As a result of his counsels, a few of the latter entered into the right path, but the others persisted in their rebellion.

Maxims which are said to have been left by him are quoted (Mirkhond, *Ravdat al-Safa*, Bombay 1271, i. 12 sqq.).

Tабари, *Annales*, writes Shath and Shath (i. 153) and says that Shith is a Syriac form (*shirith*). The name signifies "in place of, gift of God" because he was given in place of Abel (*Gen.*, iv. 26).

Al-Mukanna' [q. v.] holds that the spirit of God was transferred from Adam to Seth (Mutahhar b. Tahir al-Makdisi, *Livre de la Création*, vi. 96). This idea comes from a Gnostic sect, the Sethites who were found in Egypt from the fourth century, and who possessed a "Paraphrase of Seth", to be more precise, seven books by this patriarch and seven others by his children, whom they called the "Strangers" (Epiphane, *Haer.*, xxxix. 5). The Gnostics possessed the books of Jaldabaoth, the Demiurge, attributed to Seth (Epiphane, *op. cit.*, xxvi. 8). The Sabi'an of Harran had several writings attributed to Seth, and the latter was associated with Adam by the Manichaeans (Prosper Alfaric, *Les Ecritures manichéennes*, Paris 1918, p. 6, 9, 10). Seth is always associated with Adam by the Druzes (Philipp Wolff, *Druzen*, Leipzig 1845, p. 151, 193, 372 sqq.).

(CL. HUART)

SHIZ, the name of a very old Persian fire-temple, a place or district S.E. of Lake Urmia in Adharbāidjān, said to be the native place of Zoroaster. According to A. V. W. Jackson the name is said to be derived from the Avestan name of Lake Urmia, *Čačasta*; according to Yāqūt it is an Arabic corruption of *Djann* or *Gann* i. e. *Kanaka* or *Ganaka* of the classical writers or *Ganjak* of the Pehlevi texts. The older geographers consider the two names distinct. A comparison of the description given by Yāqūt from Mis'ar b. Mūhalhil (about 940) with the ruins which are now called *Takht-i Salāmān* shows the two places to be identical. According to Mis'ar the town lay among hills in which gold, quicksilver, lead, silver, arsenic and amethyst were found. Within the walled town was a pond of unfathomable depth, the water of which turned everything to stone. There was also a large ancient fire-temple there, which was held in great honour from which all the sacred fires in Persia were lit. The fire had already burned 700 years without leaving ashes. The Persian kings used to bestow gifts on the temple, so that it collected vast treasures. Mis'ar b. Mūhalhil went there specially to find hidden treasure. H. Rawlinson's photographs of *Takht-i Salāmān* show the pond in the centre of the walls and the ruins of the temple.

(J. KUSKA)

SHORFĀ. This is the dialectic plural form used throughout the Maghrib in place of the classical *shurafā'*; the singular is *sharif* (class.

Sharif descended from Muhammad and the descendant of a celebrated *marabout* who was not necessarily himself a *sharif*. The *shorfa'* in spite of their numbers all enjoy the respect and the consideration of their compatriots. They do not all have sufficient means of livelihood; for the most part they engage in some manual labour in the towns, cultivate the soil in the country and there is nothing in their dress to distinguish them from the other inhabitants of the country.

All the *Shorfa'* of Morocco with the exception of two branches are of Hasanid nobility. They actually claim to be descended from al-Hasan, son of 'Ali, through the latter's grandson 'Abd Allāh al-Kāmil. This group of Hasanid branches comprises three main groups: — the Idrisids, the Kādīrids and the descendants of Muhammad al-Nafs al-Zakiya (Filāli and Sa'dian *Shorfa'*).

I. Idrisid branch. — Its principal ramifications are indicated in the genealogical table given opposite. It is the most important branch of the Hasanid group and therefore of all the *Shorfa'* of Morocco. The following are their main subdivisions.

a. *Shorfa' Dūtiyyūn*. Under this name are included all the descendants of al-Kāsim, son of Idris II. This al-Kāsim being dispossessed by his brother 'Umar had founded a monastery (*ribāṭ*) on the shores of the Atlantic near Arcila (Azila) and at his death left a son, Yahyā, who established himself in the town of Dūta in the Gharb on the Wādī Sahā. His descendants adopted his ethnic name which is still used by them as a surname. Among them are distinguished the Sh. 'Imrānīyyūn, the Sh. Talibīyyūn and Ghālibīyyūn, the Sh. Tashīriyyūn, and the Sh. Shābihiyyūn. After the decline of the little town of Dūta, al-Kāsim's descendants settled in various parts of Morocco, notably at Fās, in Mīknās and in the Djabal al-'Alam. Of all the subdivisions of the Dūtiyyūn the most important is that of the 'Imrānīyyūn which played an important part in politics in the second half of the ninth century, A. H. (xvth A. D.) in attempting to overthrow the Marinid dynasty in Fās. The Sultāns drove them out of Morocco and they took refuge in Tunis whence they returned to Morocco a few years later.

b. *Shorfa' Hammūdīyyūn*. These are the descendants of Idris through 'Umar. They lived at first in the Djabal al-'Alam, then settled in the region of Tlemcen.

c. *Shorfa' Dabbāḥīyyūn*. They are descended from 'Isā son of Idris. This group emigrated in the 14th century A. H. to Spain with al-Hasan b. Gannūn and settled in the region of Cordova. At the time of the Christian "reconquista" they returned to Morocco and settled first at Salé and later at Fās.

d. *Shorfa' Amghāriyyūn*. They are descended from 'Abd Allāh son of Idris. Settled first in the north of Morocco, they later went to the Atlantic coast, to the south of Azammūr where they established themselves.

e. *Shorfa' Kattānīyyūn*, the descendants of Idris II by his grandson Yahyā b. Muhammad. They lived in Mīknās down to the middle of the tenth century A. H. (xvth A. D.) and then settled in Fās where they were sometimes also called *Shorfa'* of the 'Akāshat Ibn Sawwāl from the name of the street in which they lived on their arrival in the town.

f. Descendants of 'Ali b. Muhammad b. Idris. They are divided into branches which are found throughout the northern part of Morocco; among them we may mention the Sh. Shaf-shawāntīyyūn whose ancestor 'Ali b. Rashīd founded the town of Shafshāwan (q.v.); the Sh. Liyā-nīyyūn and the *Shorfa' Warrānīyyūn* (on the activities of this important branch cf. the article WARRAN); the Sh. Raissūniyyūn and the Sh. Rahmānīyyūn.

II. Kādīrid branch. The Kādīrids of Morocco claim descent from Mūsā al-Djawn, son of 'Abd Allāh al-Kāmil through the intermediary of the celebrated 'Abd al-Kādir al-Djilānī. Their settlement in Morocco only dates from the end of the middle ages when they had to abandon Spain where they had hitherto lived. They finally settled in Fās at the end of the ninth century A. H. (xvth A. D.) and since then have been one of the most important Sharifi groups of the Moroccan capital.

III. Sa'dian and Filāli branches. These two branches each succeeded to power in Morocco after the fall of the old Berber dynasties. Both claim direct descent from Muhammad al-Nafs al-Zakiya son of 'Abd Allāh al-Kāmil. They had a common ancestry down to the thirteenth descendant of Muhammad al-Nafs al-Zakiya as may be seen from the following table:

For the circumstances of their accession to power see the article MOROCCO, History.

Hasanid Groups. Two Sharifi groups of Morocco, of much diminished importance claim descent from al-Hasan b. 'Ali through Mūsā b. Dja'far al-Sādiq b. Muhammad b. 'Ali b. Zayn al-'Abidin b. al-Husain. They are the *Shorfa' Saḥillīyyūn* (for *Sikillīyyūn* = Sicilians), who are descended from 'Ali al-Raḍī b. Mūsā al-Kāsim, and the *Shorfa' Trākiyyūn* who are descended from his brother Ibrāhīm al-Murjādā. They are found principally in Fās and some of them in the last century went and settled in Cairo.

If one realises the special importance of the Sharifi groups in the Maghrib, one will not be surprised to find that it has resulted in a special

literature dealing with genealogy and biography. The first notable works on these subjects were undertaken by a Kādīrid, Sharif of Fās, Abū Muḥammad 'Abd al-Salām b. al-Taiyib al-Kādīrid, born in 1058/1648 and died in 1110/1698 (cf. the writer's *Histoire des Chorfā*, p. 276—399). In addition to three monographs on hagiology he wrote several works dealing with the Sharifi groups of Morocco, first a general study of Sharifism in the Moroccan capital, *al-Durr al-ṣanī fī ba'd man bi-Fās min ahl al-naṣab al-baṣanī*, which, in spite of its title, also includes the Husainid branches; on account of the period in which he was writing, he deliberately left out the Sa'diān, who in any case were to disappear very quickly for lack of descendants. This work was lithographed at Fās in 1303 and 1308 A.H. Al-Kādīrid's other treatises deal with a. the Kādīrid Shorfa' (*al-Urf al-ṣāfir fī man bi-Fās min ahl al-ḥaḥḥ* 'Abd al-Kādīrid'), and b. the Shorfa' Irākiyūn (*Maṭla' al-ḥarūf fī al-ḥarūf al-wāridin min al-Irāk*).

At the end of the 11th century and beginning of the 12th A.H. two other treatises on Sharifi genealogy were compiled in Morocco; one devoted to the 'Alawid Shorfa' of Sijilmāsa was written by Abū 'l-Abbās Aḥmad b. 'Abd al-Malik al-Sharifi al-Sijilmāsi, and entitled *al-Amwār al-nawī fī naṣbat man bi-Sijilmāsa min al-ḥarūf al-muḥammadiyya*; the other, entitled *Shuḥūr al-dhahab fī ḥair naṣab*, was the work of a sharif of the Djabal al-'Alam, al-Tihānt b. Muḥammad b. Aḥmad Ibn Rajmūn, who composed it in 1105/1603—1604.

In 1127/1715 a descendant of the marabout family of the aṣwīya of Dila', Abū 'Abd Allāh Muḥammad al-Masnāwī b. Aḥmad al-Dila'i (d. 1136/1721), composed a new treatise on the sharifism of the Kādīrids, *Natījat al-taḥḥīq fī ba'd ahl al-ḥarūf al-waṭānī* (publ. at Tunis in 1296 and Fās 1309, partially transl. by Weir, *The first part of the Natījat al-Tahqiq*, Edinburgh, 1903).

A monograph was a little later devoted to the Shorfa' Sīkīllīyūn of Fās by a Kādīrid, grandson of the author of the *al-Durr al-ṣanī*, Muḥammad b. al-Taiyib al-Kādīrid, d. 1187/1773; this is the *Lamḥat al-baḥḥat al-'āliya fī ba'd furū' al-ḥaḥḥ al-baṣaniyya al-sīkīllīya*. The Shorfa' of Wāṣṣān had also several historians in the xviii century; we may mention the *Tuḥfat al-ikḥwān bi-ba'd munāṣib ḥurafā' Wāṣṣān*, by Ḥamdūn al-Tāhīri al-Djūnī (d. 1191/1777), lithographed at Fās in 1324 A.H.

The composition of the *Kitāb al-taḥḥīq fī 'l-naṣab al-waṭānī*, which the genealogists of Fās consider apocryphal and attribute to Aḥmad b. Muḥammad 'Aḥmāwī al-Makki, also dates from the end of the xviii century: this work which deals only with the Sharifi branches that settled in Algeria was translated in 1906 by Père Giacobetti.

A specialist in Sharifi genealogy was Abū 'l-Raḥī Sulaimān b. Muḥammad al-Shaḥāwānī al-Hawwāt, borne 1160/1747, d. at Fās in 1231/1816. He left among other works a monograph on the Shorfa' Dabbāghīyūn, called also from their quarter in Fās Shorfa' al-'Uyūn; *Kurraṭ al-nyūn fī 'l-ḥurafā' al-ḥāṭimīn bi-'l-'Uyūn*, and a monograph on the Kādīrid Shorfa': *al-Sirr al-sāḥir*.

The Shorfa' Irākiyūn had their historiographer, 'Abd Allāh al-Walīd b. al-'Arabī al-Irākī, d. in 1263/1849; this work, published in Fās, is called *al-Durr al-naṣī fī man bi-Fās min banī Muḥammad b. Naṣī*.

Finally we may mention of modern works, in addition to the information collected in the valuable *Sahat al-Anfās* of Muḥammad b. Dja'far al-Katānī [see AL-KATTĀNĪ], two works relating to the Sharifi branches of Morocco. The first is the work of Muḥammad b. al-Ḥādīd al-Madani Caennā, died in 1302/1885, entitled *al-Durar al-maḥmūda fī 'naṣbat al-ḥarūf al-maḥmūda*; the other, more important, is entitled *al-Durar al-baḥḥa wa 'l-djowāḥir al-nabawiyya fī 'l-furū' al-baṣaniyya wa 'l-ḥusayniyya*, lithographed at Fās in 1314. This book which is the work of Abū 'l-'Alā Idrīs b. Aḥmad al-Fuḍāilī, died in 1316/1898—1899, is an excellent collection with much unpublished information, clearly presented.

(E. LÉVI-PROVENÇAL)

SHOTT, Arabic **SHATṬ** [q. v.]. The principal Shott are, on the high plateaus, the Tigrī Shott in Moroccan territory; the Shott Gharbi formed by two basins, the Shott of the Hamyan to the East and the Shott of Mahān to the West, and the Shott Sherki situated to the South of Saïda. In the central district between the Tell Atlas and the mountains of the Uled Na'il, the Zahr al-Sherki and the Zahr al-Gharbi; more to the East the Shott of the Hodna occupies the centre of the depression of the same name; other small Shotts form the bottom of the basin of El-Beida and of el-Tarf. Lastly to the South of the Sahara Atlas a string of Shotts runs from West to East from the meridian of Diskra as far as the Gulf of Gabes over a stretch of about 230 miles: Shott Melghir, entirely in Algerian territory; Shott Gharsa, on both sides of the Algerian-Tunis frontier; Shott el-Djerid, the largest of all those which is a continuation towards the East of the Shott el-Fedjodj. The two Shotts further West lie 70—100 feet below the level of the Mediterranean. This peculiarity which was believed to be common to the most eastern Shotts, had suggested about the year 1880, the idea that it might be possible to create to the South of Algeria and Tunisia an inland sea by piercing the shore of Gabes with the object of diverting into the Shott the waters of the Mediterranean. Further investigation showed that this project could not be realised and it was abandoned.

Bibliography: See the *Bibliography* to the article **SHARIFA**.

(G. YVER)

SHUAIB, a prophet mentioned in the Korān who, according to Sūra xi, 91, came later than Hūd, Ṣāliḥ and Lot; according to Sūra xxvi, 176—189, which belongs to the middle Meccan period he was sent to the "people of the thicket" (*al-Aika*) who are again mentioned in I, 13; xv, 78; xxviii, 12. In the later Meccan Sūras, xi, 85—98; xxix, 35 sq.; vii, 83—91, he appears

among the inhabitants of Madyan [q. v.] as their hunter. Only later commentators identify him with the unnamed father-in-law of Moses the Old Testament Jethro who lived in Madyan mentioned in xxviii, 21 sqq. (cf. v. 45), but there is no foundation for this in the *Karām*. From the passages mentioned, it is evident that Muhammad had no very clear conception of Shu'āib and it is not worth while enquiring whence he got the name, which does not occur elsewhere. What Muhammad tells of him follows the stereotyped scheme in his stories of the prophets and reflects his own experiences and struggles. Besides preaching monotheism he urges his countrymen mainly to honesty in weights and measures, and warns them against destroying the order restored in the land and against driving the believers who follow him from the path of Allah. But the notables among the people reject him and threaten to expel him and his followers; he had no prestige among them and if they had not had consideration for his family they would have stoned him (xi, 93). An earthquake overtakes them as a punishment, so that they are all found dead in their dwellings.

That much later tradition moves Shu'āib's grave to Ġarn Ĥatīn (see ĤATĪN) is perhaps to be explained by the confusion of the adjacent Khirbet Midyān, the ancient Madon with Madyan.

SHUBĀṬ, the fifth month of the Syriac year. Its name is taken from the eleventh Jewish month, Shēbāt, with which it roughly coincides. It begins on Jan. 31 of the Roman calendar and has 28 days with an intercalated day every four years. In Shubāt the moon stations 10 and 11 set and 24 and 25 rise; the days on which one sets and the one a fortnight later rises are according to al-Bīrūnī the 6th and 16th or 4th and 17th according to al-Kāzwinī the 12th and 25th.

Bibliography: al-Bīrūnī, *al-Āṭhar al-Aḥḍar*, ed. Sachau, 1878, p. 60, 70, 347-350; al-Kāzwinī, *ʿAḡḡib al-Maḥḥūḍāt*, ed. Wüstenfeld, i. 45 sq., 50, 76 sq. (German translation by Ethé, 95 sq., 103 sq., 156 sqq.); Ginzler, *Handbuch der math. u. techn. Chronologie*, i. 1906, p. 263 sq. (M. Plessner).

AL-SHUDJĀ', the (water-)snake, Arabic name of the long constellation of the *Hydra*, which lies in the southern heavens near the ecliptic, between the constellations of the Scales, Virgin, Lion and Crab on the one side and runs from the Centaur to Procyon on the other. According to al-Kāzwinī 25 stars belong to the figure and two lie outside it. The head of the water-snake is on the southern pincers of the Crab between Procyon (*al-Shī'rā al-ḡunmatā'*, "Sirius the bear-eyed") and Regulus (*Kalb al-Aṣad*, "heart of the Lion"). The snake twists a little southwards from these two stars and then turns to the southeast. On its neck is a prominent star which the Arabs call *al-Fard*, the isolated (Alphard in our star-maps). It is also called *'Unḡ al-Shudjā'*, neck of the snake, *Faḡar al-Shudjā'*, backbone of the snake etc.

SHUGHNĀN (SHUGHNĀN), a district on the upper Oxus (Pamir); the part on the left bank now belongs to Afghan Badakhshān [q. v.] and that on the right to the Russian Pamir. The districts of Ghārān and Rōshān, the one above and the other below Shughnān, are also divided into two by the political frontier. Afghan Shughnān has fifteen villages with four hundred houses and six thousand inhabitants, its administrative centre is at Yāward in the little valley of Udyar. Russian Shughnān consists mainly of the valley of Ghund and Shakh-dara on the western face of the Pamir. The Ghund rises in Lake Vezhul-kul but the territory of Shughnān only begins at the village of Sardim (below the junction of the Ghund and its left bank tributary the Tokur-bulak). The Shughnān range (with a pass 14,000 feet high) separates the valley of Ghund from its more southern tributary, Shakh-dara, which in its turn is separated from the Wakhān [q. v.] by another chain.

The cultivated lands of the Tadjiks begin near Sardim, at a height of about 10,500 feet. The lowest points in Shughnān (on the Pamir) are not below 6,000 feet. The population is industrious but remains poor and scattered. About 1896 it was not over 512 houses with 3,400 inhabitants, but the Afghan statistics of 1923 give 359 houses to Ghund and 340 to Shakh-dara. The administrative centre of Russian Shughnān is at Khārāgh (Khorog) near the confluence of the Ghund and Pamir.

The Iranian hillmen (Tadjiks) of Shughnān speak the Shighni dialect which belongs to the group of Iranian dialects of the Pamir and is more closely connected with the dialects of Rōshān, Yāghulām and Sarī-kol (Sarikol). This last valley is in China and on the sources of the Yarkand-daryā to the east of the Pamir. According to the traditions of the Sarī-kols collected in 1873 by the Forsyth mission (*Report on a Mission to Yarkand*, Calcutta 1875, p. 33, 223), their ancestors in the seventh generation had come from Shughnān, the territory of which seems to have been larger in the past. Like the majority of the Tadjiks of the Pamir, the people of Shughnān profess Shī' Ismā'īlī doctrines. Their *pirs* under whom are *khālifas* recognise H. H. the Aghā-Khān [q. v.] of Bombay as their head (cf. i. p. 180 and ii. p. 551). One of the striking features of the popular religion of the Ismā'īlīs of the Pamir is their belief in metempsychosis, including the passage of the soul into animals. A large number of Ismā'īlī manuscripts coming mainly from Shughnān are preserved in the Asiatic Museum in Leningrad (including *Umm al-Kitāb*, *Wadhī-i Dīn*, *Kalām-i Pir*, etc.). It is curious to note that the *Dabīstān* [q. v.] speaks of the 'Alī-Ilāhīs (Ismā'īlīs) living in the eastern mountains (*kūkhīstān-i mawrīd*) in proximity to (*mu-ḡāran*) the savage Umawīya or Yazīdīya Sunnis whose town is Shkwna. This name must correspond to Shughnān.

The Chinese writers call Shughnān She-k'i-ni or (E. Chavannes, *Documents sur les Tou-kiue occidentaux*, St. Petersburg 1903, p. 152) "the kingdom of the five She-ni (gorges)" which seems to refer to all the region of the Pamir ("the five rivers"). According to Hiuen-Tsang (630-644) the kingdom of She-k'i-ni was 2,000 li in circumference (about 20 days' journey) while the circumference of the capital (K'ou-han?) was 5-6 li. The inhabitants were rough looking. The writing

resembled that of the Tokhārīs but "their spoken language was different". In 646 envoys from the She-k'i-ni visited the court of China. In 718 the brother of the king (yabghu) of Tokhāristān informed the Chinese that the suzerainty of the yabghu extended over, amongst others, the king of Shughnān who had 50,000 men at his command. In 747 the general Kao-sien-te crossed the land of She-ni, the inhabitants of which lived scattered among the gorges.

The Arab geographers refer to Shughnān by the names Shikīnān, Shikīnān, Shikīna and Shikīna. Ibn Khurdādhbih, p. 37, and Ya'qūbī, p. 292, make Shughnān dependent on Tokhāristān, for in enumerating the revenues of this last district they say that Shikīnān paid 40,000 (24,000) dirhams in taxes and Wakhān 20,000 (10,000). This may explain an obscure passage in Ibn Khurdādhbih, p. 178, where he speaks of a ford on the Dīshūn by which the merchants of Khuttalān (a district between the Pandj and the Wakhāhāh) entered "the land of the Turks (sic) which is called Shikīna". As the writer places the mouth of the Akshwa (the river of Kulāh, Kēi-Surkhāh?) below this ford, the Shikīna must have lived on the left bank of the Pandj above the Afghan Darwāz (cf. above i., p. 842). On the other hand according to Ya'qūbī (p. 292) Shikīnān and Badakhshān (lying between Khuttal and upper Tokhāristān) were separated by a large valley (that of the Pandj). The Arabs (Ibn Khurdādhbih, p. 173, Ibn Rusta, p. 89) further make the Indus (Mīhrān) rise in the mountain of Shikīnān. Al-Bīrūnī (ed. Sachau, p. 101) puts to the west of Kashmir, first the lands of the Bolor-shāh and then (those of) the Shikīnān-shāh (sic) and of the Wakhān-shāh which stretch to the frontier of Badakhshān. This order of enumeration suggests a direct contact between Shughnān and the lands of the upper Indus.

According to Ya'qūbī, p. 304, in the time of Harūn al-Rashīd the Barmecide Faḍl conquered Shikīnān. Al-Istakhrī however (p. 297) asserts that the people of this district as well as those of Karrān (Darwāz?) were non-Muslims.

Marco Polo (Yule and Cordier, I. 151) mentions the mountain of Syghīnān which produces "baies" rubies, but the ancient mines now abandoned are in the adjoining district of Ghānān.

The local historian of Shughnān begins with Chinese rule of which he quotes several memorials, for example a black stone in the valley Ghund bearing a Persian inscription *ba farman-i Khākān-i Ān*. Such monuments must certainly relate to later expeditions (cf. *Ta'rikh-i Rashīdī*, ed. Elias and Ross, 1895, p. 94, Yule in his preface to Wood, *Travels*, p. xxxix, mentions the Chinese expedition of 1759 to Badakhshān).

After the Chinese, the infidel "fire-worshippers" ruled over Shughnān. The inhabitants appear to identify these infidels with the "Siyāhpōsh" of Kāfristān [q. v.] to whom are attributed numerous buildings, especially at Wakhān (Olufsen, *Through the Unknown Pamir*, London 1904, p. 172-174). Sir Aurel Stein however (*Geogr. Journ.*, Aug.-Sept., 1916) does not believe that the Siyāhpōsh were capable of building these monuments and attributes their origin to the Indo-Scythic or Sāsānian period. It is probable that the "infidels" were simply local non-Muslims (cf. Grierson, *Jahāghnān, Dīshī and Yāghlāmī*, London 1920, p. 7). The principal centre of these "infidels" was

Wiyar on the left bank of the Pandj and their best known chief was Farhād Kāw.

He was overthrown by a certain Sayyid Shāh Malang sent from Khorāssān by the Grand-Master of the Ismā'īlīs. Shāh Malang was followed by another missionary Shāh Khāmūsh from Shīrāz. Forsyth puts his date at 665 = 1266. The descendants of these pirs governed Shughnān as hereditary mīras. Shāh Amir Beg has left an inscription at Khārāgh dated 1193 (1779). His son Shāh Wāndī Khān expelled all the non-Islāmīsts out of Shughnān and the "fire-worshippers" had to leave for Yarkand. According to Kuzhalki, p. 181, this prince had extended his sway up to Badakhshān and Cetrā. The son of Wāndī Khān, Kubād Khān, persecuted the Ismā'īlīs but was driven out by his brother, Yūsuf. 'Alī Shāh grandson of Kubād, ruled both banks of the Pandj but the Amir of Afghanistan, Shīr 'Alī Khān also tried to bring this area under his sway. In the reign of 'Abd al-Rahmān Khān the Afghāns, objecting to the hospitality given to the Russian traveller Regel by Yūsuf 'Alī, deported the latter to Kābul (c. 1300 = 1882) and established their rule over Shughnān (Kuzhalki, p. 182-186). The inhabitants sent envoys to Bukhārā and to the Russian authorities in Turkestan. After long pourparlers and an encounter between a Russian force under Colonel Ionow with the Afghāns near Yeshīl-Kul (in 1892), an exchange of views between the Russian and British governments took place in London on March 11, 1895. The Afghāns had to evacuate the right bank of the Pandj and the Amir of Bukhārā to give up his possessions on the left bank (Darwāz).

Eastern Shughnān was restored to Bukhārā but its administration gradually passed into the hands of the Russian authorities of the Pamir (the station of Khārāgh was created at Shughnān in 1895). In 1918-1920 the waves of Russian revolution reached even Shughnān. In November 1920 the Soviet forces re-occupied the Pamir and re-established all the military posts. (The following additions are due to the kindness of Mr. A. Semenow. The inhabitants of Shughnān call themselves Khughnōn. — Shughnān belongs at present to the soviet Republic of Tadzhikistan, which possesses self-government. The tomb of Shāh Khāmūsh is at Kālā-i Barpanjī (cf. Trotter in *Geogr. Magazine*, II, 1875, No. 10). Shāh Wāndī Khān died in 1214/1799. Yūsuf 'Alī Shāh's government was tyrannical, which was the cause of the conspiracy instigated by the Afghāns. The *Wāgh-i Dīn* has been published at Berlin (Kawiani-office, 1343), cf. Semenow, *K dogmatike pamirskogo ismailizma* (Tashkent 1926) where the latest works of the author are mentioned).

(V. MINORSKY)

SHUL. 1. A country in China: According to Kādāma (ed. de Goeje, p. 264) Alexander the Great conquered it and built there two towns, Shul and Khumān. This latter has been identified (de Goeje, Tomashchek, Yule) with Si-ngan-fu. In Shul Marquart [*Osteuropäische Streifzüge* (Leipzig 1903) p. 90, and *Erwählr* (Berlin 1901) p. 316] sees the Turkish word *öl* which he translates by "sand" (desert?), seeing in it a translation of the Chinese *Sha-shu*, "sandy district". According to Bretschneider (*Medieval Researches*, II, 18) Sha-shu was founded in "sand-city" (Marco Polo: Sachin) was founded in 622 A.D. As an alternative, Marquart admits a misreading *Shul* instead of *Suk* = *Suk-ku* (Su-ku).

It remains to be ascertained if this Shul does not rather refer to some colony of the Sogdians (cf. the Sogdian *Šūlūk* from **Sughlūk*, Tibetan *Shūlūk*, R. Gauthiot, *Grammaire Sogdienne*, 1923, p. vi).

2. A tribe in Persia, see **SHULISTĀN**.

SHULISTĀN, "Country of the Shul", a district (*shulūk*) in the province of Fārs.

Three epochs must be distinguished in the history of the district: one before the arrival of the Shul, the period of their rule (from the viii/xiii centuries), and the period of its occupation by the Mamassani Lārs about the beginning of the xiii/xviii century.

During the Sāsānid period the district was included in the *kūra* of Shāpūr-khāra. The founding of its capital Nawbandān (Nawbandjān) is attributed to Shāpūr I. This important town situated on the road from Fārs to Khūzistān was taken by 'Uthmān b. Abi 'Alā in 23/643 (Ibn al-Athīr, III, 31); it is often mentioned by Arabic historians

and geographers. The district is watered by the river system which finally forms the river Zohra, which flows through Zaidūn and Hindiyān. In the old *Fārs-nāma* (p. 131) the river of Nawbandjān bears the name Khābādān. The river system is described in detail in *Fārs-nāma-yi Nādiri*, II, 326. The principal water-course comes from the direction of Ardakān and is now called Ab-i Fahliyan or Ab-i Shūr. The valley of Shūb-i Bawwān situated about ten miles to the north of Nawbandjān, is considered by the Muslims, on account of its climate and the richness of its vegetation, to be among the four earthly paradises (*Fārs-nāma*, p. 147; Bode, I, 233). Another notable feature of the district is the fortress Kal'a-i Safid, occupying (like Kālā-i Nādiri [q.v.] in Khūzistān) the extensive terrace (four miles in circumference) on the summit of an almost inaccessible mountain; the Persians identify the place with the Safid-diz mentioned in the *Sāsān-nāma* (Mohl, II, 92; Vullers, I, 448); it was taken by Timūr in 795 (1393).

Sometimes the district of Nawbandjān bears the name of Anburān, but the *Nushat al-Kulūk* makes the town of Anburān a dependency of Nawbandjān. Nawbandjān flourished until the interregnum which followed the fall of the Būyids [q.v.] when Abū Sa'd, the leader of a section of the Shābānkāra [q.v.], destroyed the town. It revived under the Atābeg Čā'ālī (died in 510) who governed Fārs on behalf of the Seldjūqs, but finally fell into ruins.

The description of Fārs (*Fārs-nāma*) composed in the life-time of Čā'ālī does not yet know the expression, *Shulistān*, that is to say "the country of the Shul". This last tribe at first inhabited Lūristān, of which the half was under its rule about 300 (912). The great chief (*pirān*) of the Shul was Saif al-Din Mākan Rūzbihān, whose ancestors had governed the district from the time of the Sāsānids. We may here mention that the Rūzbihān figure among the Lūr tribes. At the same time as this *pirān*, Hāmd Allāh Mustawfī mentions a governor (*hākīm*) of the *wilāyat* of the Shul, who was called Naḍīm al-Din. From the year 300 (1106) the Kurd tribes and others from Djabal al-Sammāk (in Syria) began to move into Lūristān. From these Kurds the dynasty of the Atābegs of the Great Lūr is sprung. Under the Atābeg Hadrūsp (600—650 = 1203—1252) the new comers drove the Shul back into Fārs.

Towards the end of the thirteenth century, Marco Polo (Yule-Cordier, I, 83—85) mentions amongst the eight "kingdoms" of Persia, *Suilestan*, which may refer to the new territory around Nawbandjān occupied by the Shul. The old Chinese map studied by Bretschneider (*Medieval Researches*, II, 127) marks a *Sho-la-tu* between Shīrān and Kāzrūn, which must correspond to Shulistān. Although the Muslim historians were ignorant of the Shul dynasty, the tribe in the time of Mustawfī had hereditary governors, the descendants (*nasabshāh*) of Naḍīm al-Din Akbar. A new administrative centre replaces Nawbandjān: during the campaign of 795 Timūr halted at Mālmīr-i Shul ("the estates" of the Antr of the Shul being thus distinguished from Mālmīr = *Idhād*); the position of this place between two water-courses, corresponds to Fahliyan which is now the capital of the district.

The Shul must form an ethnically distinct unit. The history of the Kurds by Sharaf al-Din only

mentions them incidentally perhaps because the author excluded them from his category of "Kurds". Ibn Battūta (Defremery, ii. 88), who in 748 (1347) met Shūl at Shirāz and on his first stage on the road from Shirāz to Kāsrūn (Daght-i Ardjān?) calls them "a Persian tribe (*min al-ʿāfīm*) inhabiting the desert and including devout people". The Persian dictionaries mention a peculiar dialect *Shūl* (Vulliers, ii. 481: "a kind of *Kāmanā* and *Shādr* which is spoken in Fārs"). Shihāb al-Dīn al-ʿUmari (who died in 749/1348) states that the Shūl have very considerable affinities with the Shabānkāra (q. v.) and asserts their generosity and hospitality. Their warlike character is evident from the remark of Raghd al-Dīn, who in speaking of the Tāṭars, capable of killing one another "for a few words", compares them to the Kurds, the Shūl, and the Franks (Béretine, vii. 62). In 617 the Atābeg of Lūrīstān Ḥazārāp advised Maḥammad Khwārizmshāh to entrench himself behind the chain of Tang-i Tālū (Bālū: "oak") and to mobilise there against the Mongols, 100,000 Lārs, Shūl, the people of Fārs and Shabānkāra" (Djuwaini, Gibb Memorial, xvi/2, 114). Raghd al-Dīn (Quatremère, p. 380) mentions amongst the valiant defenders of Mawālī in 659 (1260): "the Kurds, the Turkomans and the Shūl".

Established on the great road, the Shūl nomads were themselves exposed to invasions; the Atābeg of Lūrīstān Yūsuf Shāh (673—687) attacked them and killed the brother of their chief Naḍīm al-Dīn (*Tarīkh-i Guzda*, p. 343); in 755 the Murāfirid Shujaʿ Shāh chastised them severely when they attacked Shirāz (ibid., p. 660); in 796 ʿUmar Shāhīq marching in the rear-guard of his father Tīmūr pillaged on his way all the un subdued "Lārs, Kurds and Shūl" (*Zafar-nāma*, p. 615).

The nomad (or semi-nomad) state and the warlike character of the Shūl, the similarity of their speech to Persian, the inroads of their neighbours, all these factors must have contributed on the one hand to the dispersion of the Shūl and on the other to their assimilation and final absorption. At the present day, traces of them are only found in the toponymy of the Fārs: *Shūl-i Gap*, a mountain to the north of Bāshīr; *Darshūl*, name of a section of the Turkish tribe Kāshkai (q. v.); *Sāul*, a village near Dālik and another village to the N. N. W. of Shirāz. This last Shūl, situated to the east and outside the *dulūk* of Shūlistān might represent the last bulwark of the tribe, which has disappeared. Hertfeld, who emphasizes the special character of the buildings of this village, says that its inhabitants are of Persian origin and seem to have kept the pure Persian type. According to Bode, the river Ab-i Shūr ("bitter water") is called also Shākar-āb ("sugared water"); this contradiction can only be explained by the confusion between the words *Shūr* and *Shākar*, and besides, one of the most important tributaries of this river is called *Rūdkhānmayi Shūl-i Kāmīrū* in *Fārs-nūmayi Nāpīri* (Wells: "the Sul stream").

At the time of the last Safawids (*Fārs-nūmayi Nāpīri*, ii. 302) or after the rise of Nādir (Bode, i. 266) Shūlistān was occupied by new invaders, the Mamassani Lārs, after whom the district is now called *bulūk-i Mamassani*. Its extent is now about 100 × 60 miles, between the following boundaries: to the east Kāmīrū and Ardakān; to the north and to the west Razgird and the

country of the Kūh-Galūʾi (Kūh-Gilāya) Lārs; to the south Kāsrūn and the mountain of Marz-Shigift (the northern slopes of the Marwān in Daght-i Ardjān). Of the six cantons of the district four (*dar-banīn*) bear the names of Mamassani clans: Bakesh, Dīkūsh, Doshmanziyārī and Rustam. In these cantons there are fifty-eight villages and five thousand families. The clans are governed by their hereditary *kāshān*'s. The Mamassani claim to possess the annals of their tribe and say they came from Sistān (J. Morier, *J. R. G. S.*, 1837, p. 232—242); this legend must have attached itself to the name of Rustam, the name of one of the four clans. The language of the Mamassani is a Lāri dialect.

Of the two other cantons: Kāhān (to the north) was bought by the Kāshkai Turks of the Kāshkai (q. v.) tribe and Fahliyān, with seven villages dependent on it, is still the administrative centre of the *bulūk*. In the time of the Safawids this town is said to have numbered five thousand houses of which in the year 1840 no more than sixty—seventy remained (of Persian Saiyids).

SHURĀT (A., sg. *Shūrī*), the name which the extreme Khāridjīs (q. v.) give themselves. This name of a religious denomination is taken from the Kurʾān (iv. 76) and means, "those who sell their life to God" by vowing to fight to the death against his enemies.

The first Shurāt were exterminated by ʿAlī al

the battle of Nukhaila. The most celebrated of their martyrs was Abū Hūlā Mirdās b. Djawdar, of the Rabī'a tribe. They swore to fight, even when hope had gone, for the cause of justice "until only three amongst them should remain".

This state of extreme political feeling or *shūrā* is contrasted in Khāridjī terminology to the state of "triumph" (*qūṣūr*), of "defence" (*da'f*) and of "secret" (*kitmān*).

The name of *Shurāt* has been applied by extension to a group of Khāridjī jurists, natives of 'Uman, Sidjistan, Adharbāidjān, Shahrīr, and 'Okbar, like Dhubair b. Ghālib and Kartalū, who have written in justification of the attitude of *shūrā*.

The Malay custom of *amuk* sometimes takes the form of *shūrā* among Muslim Filipinos.

Bibliography: Mubarrad, *Kāmil*, ed. Wright, p. 577; Ibn al-Nadīm, *Fihrist*, ed. Flügel, p. 236—237; Abū Zakariyā Shammūkhī, *Chronique*, transl. Masqueray, Algiers 1878, p. 272—355; Ibn 'Abd Rabbāh, *al-'Iqd al-farīd*, Cairo 1316, li. 138. (L. Massignon)

SHURTA, police, police-officer. The word *shurta* (more rarely *shurafa*), in the plural *shuraf*, originally means "picked men who open the battle", "bodyguard" and then comes to be used in the sense of "police, gendarmerie"; an individual police officer is likewise called *shurta* or *shurfi* (*shurafi*). The title *shāhib al-shurta*, "commander of the bodyguard" was at first given to the governor of a province or a town who settled all questions, religious as well as secular, but in the 'Abbāsid period was reserved for a special official who was responsible for order and public security and whose duties therefore corresponded with those of our chief constables. Under the 'Abbāsids, the Spanish Umayyads, and the Fātimids in the Maghrib and Egypt the *shāhib al-shurta* had greater power than the *kādī*, inasmuch as he was empowered to take action on mere suspicion and to threaten any one with punishment even before proof was brought. Not all citizens however were under his power, but only the lower classes, particularly all suspicious individuals and those of evil repute. In Spain however a distinction was made between *al-shurfa al-kubrā* ("great *shurfa*") and *al-shurfa al-sughrā* ("little *shurfa*"); the representative of the former could take legal proceedings even against high officials, if they had been guilty of anything, while the latter dealt exclusively with the lower classes. In the time of Ibn Khaldūn, the *shāhib al-shurta* in Spain was called *shāhib al-madīna*, in Tunis *shāhim*, and among the Mamlūks of Egypt *wāll*.

From the meaning of "policeman", "constable", developed in Spanish Arabic that of "hangman" and in the *1001 Nights* we find *shurfi* used along with *qarṣat* in the meaning of "rogue, rascal" etc. In modern Egyptian *shurafi* means "pickpocket".

SHUSHTAR. [See SHUSTER.]
SHUSHTARĪ, ABŪ 'ĀLI HANĀFĀLI B. 'ABDALLĀH, a mystic poet of Andalusia, a disciple of Ibn Sab'īn [q. v.], author of *muwashshahāt* in vulgar Arabic.

Born at Yodar near Gadir (Wādī 'Ash) about 600 (1203), he died at Tina near Damietta on 17th Safar 668 (October 16, 1269). Shushtarī first studied under Ibn Surāka of Jativa who expounded to him the *Asmārīf al-Mufarīf* of Suhrawardī al-Baghādādī; he seems at this period to have joined the Madaniya order. He then lived at Rabā and at Meknes (which he mentions in his poem: "A *shāikh* of the land of Meknes — Goes singing through the suk — What do men want with me? — What do I want with them?") and Fās. He then set out for the east. In 650 (1252) he was at Damascus with a remarkable poet, Naḍīm b. Isrā'īl (d. 676—1277) of the order of Rīfā'iya Hurītiya (*Dirwān* at Constantinople, Aya Sofia MS. N^o. 1644). Finally in 651 (1253) he settled in Mecca; there he met Ibn Sab'īn, already famous at the age of thirty-eight; although his senior, he became his pupil and received his *khirqa salāmiya* (of which we know from Ibn Taimiya that its *dhikr* was *lā ilāha illāllāh* and that its *tanāid* relied "on the authority of Hallāj among other impious men, e.g. Socrates"). When Ibn Sab'īn was persecuted and put under police surveillance, Shushtarī, taking his place at the head of the *mustafjarīdīn*, brought to Egypt, before he died, about 400 adepts including Abū Ya'qūb b. Mubashshir, the hermit of the Bab Zuwayla (Cairo).

Makḥārī enumerated five prose works by him; but there survives only a *Risāla baḥāthiyya* on the poverty (Escorial, MS. 168, ff. 75—78). If his name is still known, it is owing to his *Dirwān* or collection of *muwashshahāt* in vulgar Arabic; — short, poignant poems quite modern in tone, for which music was at once provided, according to Ibn 'Abbād Rundi. To this day to end the "ecstasy" in the seances of the Shādhiliya in Syria they sing his *"Alfḥam kabla lamāni, — wa-Hamḥam kurrat al-'aini..."* (which Ibn 'Adjiba annotated). — Shushtarī also wrote some *ḥaṣīdas* in the classical style; the best known is the *lamiya 'isawiya*, on which Nabulusi wrote a commentary.

SHUSHTARĪ, SAYYID NŪR ALLĀH B. SHARIF MA'ARASHI, an original Shī'a writer who defended imāmism against Sunnī polemicists and at the same time mysticism against the anti-mysticism of the majority of the Imāmī doctors. Kādī of Lahore, he was condemned as a heretic by orders of Djalāingr and whipped to death in 1019 (1610). He is the third martyr (*shahād* *thālith*) of the Imāmī. He left two important works; in Persian the *Maḥallī al-Mu'minīn* (finished at Lahore in 1073=1604), a very fully documented biographical collection on the principal martyrs of Imāmī and mystic Iḥwān; and in Arabic the *Ḥikāḥ al-Hikāḥ*, a treatise on Imāmī apologetics.

Bibliography: Rieu, *Catal. Persian MSS. British Museum*, London 1879, I, p. 337; Goldziher, *Beiträge zur Literaturgeschichte der Sūfa und der sunnitischen Polemik*, Vienna 1874. (L. Massignon)

SHUSTER or **SHUPHTER**, among the Arabs TUSTAR, a town in the Persian province of 'Arabistān, the ancient Khūzistān, situated in

about 49° East Long. and 32° N. Lat. It stands on a cliff to the west of which runs the river Kārm [q. v.], the middle course of which begins a few miles north of the town. This position gives the town considerable commercial and strategic importance and has made possible the construction of various waterworks for which the town has long been famous. The main features of these constructions are: (1) the canal called Ab-i Gerger (in the middle ages Mārūkan) which is led from the left bank of the river about 600 yards north of the town; it runs southwards along the east side of the cliffs of Shuster and rejoins the Kārm at Band-i Kīr, the site of the ancient 'Askar Mūkrum; (2) the great barrage called Band-i Kaišar, which is thrown across the principal arm of the river (here called Shutsāf or Nahr-i Shuster) east of the town and is about 440 yards long; this barrage supports a bridge intended to connect the town with the west bank but now a considerable gap is broken in it; (3) the canal called Mināw (from Miyān-āb) which begins above the barrage in the form of a tunnel cut out of the rock on the western side of the town; the citadel is above this part; the Mināw turns southwards and is intended to irrigate the land south of the town.

Shuster along with these canals was already in existence in pre-Muhammadan times. Pliny knows a town called Sostra (xii. 78) and it appears as *Shustar* in the *Liste géographique des villes d'Iran*, publ. by Blochet (*Recueil de travaux relatifs à la philologie et l'archéologie égyptienne et assyrienne*, 1895, xvii., N^o. 46); it is found in Syriac literature as a Nestorian bishopric (cf. Marquart, *Eranshahr*, p. 27). Persian tradition also regards Shuster as a very old town (e.g. Abu 'l-Fidā', ed. Reinaud, p. 315). This tradition is found in the Arab historians and geographers and most fully in the *Ta'rikh-i Shustar* of 'Abd Allāh al-Shuštari (cf. *Bibliography*). The story goes that the town was founded by the mythical king Hūshang after the foundation of Shūsh (Susa). *Shuštār* is said to be comparative from Shūsh meaning "more beautiful" in reference to the site of the town (Marquart, *loc. cit.* also regards it as a derivative from Shūsh with the suffix *-tar* indicating direction). The Arabic form Tushtar is generally explained as an arabicization of Shūsh-tar (e.g. by Hamza al-Isfahāni and Yāqūt, i. 848). Several sources record that the town was built in the form of a horse. Tradition also says that the Mināw canal, formerly called Nahr-i Dāriyān, was built by Dārā the Great and that it was the Sāsānid Ardāshīr I who began to construct the barrage in the river below the mouth of the canal, after the latter had dried up because the bed of the river had sunk through erosion by the force of the current. The work was only completed however under Shāpūr II by his Roman prisoners under Valerian II (cf. also Tabari, i. 827 and Mas'ūdi, *Murūj al-Dhahab*, ii. 184). The Ab-i Gerger was first dug simply to divert the volume of water. The Band-i Kaišar was next constructed and called after the emperor and the bed of the river above the barrage was paved with huge slabs of stone bound with iron so as to prevent any further erosion. This paving was called Shādirwān, a term which was also applied to the barrage itself. Ultimately a new barrage is said to have been built across the Gerger.

From the xivth century the Ab-i Gerger was called Dū-Dānig and the Nahr-i Shuster Čahār-Dānig, because they contained respectively two- and four-sixths of the quantity of water in the Kārm. Muslim authors number these great waterworks among the wonders of the world (e.g. Hamza al-Isfahāni and Ibn Battūta). Although the authenticity of the tradition quoted could be for the most part disputed, it is not improbable that Roman prisoners of war took part in the construction of the barrage (cf. Nöldeke, *Geschichte der Perser und Araber*, p. 37); local tradition further attributes to Roman colonists the introduction of a number of industries e.g. the manufacture of brocade (*dishāq*) and certain popular customs.

In the caliphate of 'Umar the town was conquered by al-Barā' b. Mālik, whose tomb used to be pointed out in the centuries following. Tradition also says that the coffin of the prophet Dāniyāl was found there, which later on was brought to Shūsh. In the Umayyad period the town became one of the strongholds of the Kharridjī; the Kharridjī Shubīb made it his capital but after his death al-Hadīdādī seized it; it was then that the great bridge over the barrage was destroyed. Under the Caliphs, Shuster was the capital of one of the seven provinces (sometimes a larger number is given, cf. Maqdīsī, p. 404), into which Khūzistān was divided. When Baghdad became the centre of the empire, Shuster gradually became influenced by its proximity to the capital. One quarter of Baghdad for example in the tenth century was called Mahallat al-Tustariyīn; it was the residence of the merchants and notables from Khūzistān. The oldest mosque was built under the 'Abbāsids; begun in the reign of al-Mu'tazz (866-869), it was only finished under the Caliph al-Mustashid (1118-1135). There was however a fire-altar at Shuster in the time of al-Hallādī (Massignon, *La passion d'al-Hallāq*, i. 92).

Shuster along with Ahwāz has always been the chief town in Khūzistān; Hamd 'Allāh Mustawfī calls it the capital of this province. It was conquered by Timūr and remained in the hands of the Timūrids till the year 820/1514, when it fell to a Shī'a dynasty of Saiyids under the suzerainty of the Safawids and became a centre of Shī'a propaganda. Several governors have founded little dynasties there. The town enjoyed most prosperity in the reign of Wāhshid Khān (1632-1667) whose descendants kept the governorship till the end of the Safawids. In the beginning of the sixteenth century it was among the provinces governed by Muḥammad 'Alī Mirzā, son of Fath 'Alī Shāh, who restored, for example, the barrage and the bridge. At this period it is said to have had a population of 45,000, but the number has certainly diminished a great deal since, for Rawlinson in 1836 puts it at 15,000 and Curzon in 1890 at 8,000. The area covered by the town is out of all proportion to the population. Sykes also calls Shuster the most ruined town in Persia; this description applies also to the water works. The houses are built of stone and brick; they contain cellars, here called *shewzān*, in which the inhabitants shelter in the excessive heat of summer.

As to the inhabitants themselves, they are a mixture of Arab and Iranian or proto-Iranian elements. In the middle of the sixteenth century there were still a considerable number of Mandaeans here; Layard counted 300-400 families of them

in 1840 (cf. also the description of them given by 'Abd Allāh al-Shuḥṭari on p. 24 of his local history). They have probably now disappeared. Modern travellers (Curson and Sykes) describe the character of the present inhabitants as disagreeable and fanatical. Among the Persians the devoutness of the inhabitants has earned the town the honorific title of *Dār al-Mu'minin*. On the other hand we find Shuster included among the Persian towns celebrated for the stupidity of its inhabitants (Christensen in *Acta Orientalia*, iii. 31). They live for the most part by commerce; the present state of the population seems however to justify the ancient tradition that Shuster is fated always to remain a poor town. Since the end of last century Shuster has succeeded Dīrful as the capital of 'Arabistan.

(J. H. KRAMERS)

SHU'UBIYA. Sūra xlix. of the Kur'an teaches the brotherhood and equality of all Muslims and verse 13 reads, "and We made you *shu'ub* and *qabā'il* in order that ye may know" — "each know the other" explains Baiḍawī in loco (ed. Fleischer, ii. 276, 17), "not for prideful vying with one another in ancestors and tribes". Apparently *shu'ub* had been used in Arabic for non-Arab tribes (*al-ajām*) as distinguished from *qabā'il* for Arab tribes (*Liḥān*, i. 482, 13) and therefore this passage was used by those non-Arabs who objected to the pride of the Arabs towards them. The *Shu'ubiya*, then, was the sect which either so objected or which exalted the non-Arabs over the Arabs or which, in general, despised and depreciated the Arabs (*Liḥān*, i. 482, 13 sqq.; Lane, p. 1557). A member of this sect was a *shu'ubī*. This attitude showed itself in different forms. In the East on the part of the Persians and the Khuridjites it was dynastic and political, and for the Persians also religious, involving heresy and Zindicism. It connected with the *Shi'a* and other schisms. On the part of the Nabateans it was the old conflict of the cultivated soil and its peasantry against the desert. It was thus a more or less successful attempt on the part of the different subjected races to hold their own and to distinguish, at least, between Arabism and Islam. In Persia this meant even the restoration of Persian as the language of literature and the limitation of the use of Arabic to the theological sciences. In Spain, on the other hand, the *Shu'ubiya* accepted the whole Arabic civilization, prided itself on its command of Arabic (*al-'arabiya*) and on

its Islamic orthodoxy, but rejected the claims to superiority of the Arab race. The movement had therefore a certain kinship with the nationalism within Islam of the present day.

Bibliography: Goldziher, *Muhammedanische Studien*, i. 147—216; *Die Shu'ubiya unter den Muhammedanern in Spanien*, in *Z.D.M.G.*, lili. 601—620. (J. B. MACDONALD)

SIAK SRI INDRAPURA, a self-governing district (Sultanate) belonging to the administrative area of Bēngkalis in the gouvernement "Oostkust van Sumatra", on the east coast of Central Sumatra and practically equivalent to the valley of the river Siak; a few islands off the coast also belong to it (the boundaries of the Sultan's territory are accurately defined in the agreement concluded in 1916 between the government of the Dutch East Indies and the native Government of Siak Sri Indrapura, published in the "Kroniek 1917 van het Oostkust van Sumatra-Instituut"). It consists of a very wide fertile alluvial strip of coast, swampy in places, intersected by many streams large and small; the ground rises only very gradually to the west and is for the most part still covered with forest. The most important river, the Siak (on which stands the capital Siak Sri Indrapura, with a large modern palace of the Sultan) is very deep for far into the interior and navigable at all seasons, and is therefore of great importance for the transit traffic (mainly in the hands of Chinese) from Singapore to the west coast of Sumatra. The country is only thinly populated and the inhabitants are neither industrious nor prosperous. They live mainly by fishing (from which they are however being ousted by the Chinese) and collecting forest products (the most important of these are the leaves of the *nipah* palm which are used as roofing material); they grow rice, almost exclusively on dry fields, but the harvest is far from sufficient even for their own needs; considerable quantities of rice are imported from Singapore and coconuts from Malacca; the Chinese alone grow vegetables.

Two main elements may be clearly distinguished in the population: (a) A few tribes who may be regarded as descendants of the original inhabitants of the east coast of Sumatra; (b) Another section usually given the name "Malays". To the first group belong: (1) The Orang Talang on the Mandau river and in the forest country between Siak and Kampar; they are divided into four groups and are said to be descendants of subjects of the once powerful kingdom of Gasip, which lay on the river of the same name and according to tradition was destroyed by the Atchinese; (2) The Orang Sakai on the upper Mandau and in the adjoining Rokan territory; (3) The Orang Akit, who are gradually dying out, also on the Mandau; (4) The Orang Utan and Orang Rawa, on the islands at the mouth of the Siak and Kampar rivers. These tribes are still very primitive. Physically they are different from the Malays and it is reported of the Orang Akit in particular that they have a negro type and show a striking similarity to the Sémang of the Malay Peninsula. Some still lead a more or less wandering life; agriculture is little or not at all pursued; they live by fishing and on all that the forest yields them. The Orang Talang and the Sakai are said to have adopted Islam; but

their knowledge of this religion is only very slight and like the other tribes already mentioned they are still strongly attached to heathen customs. In family law and law of inheritance they follow the Minangkabou patriarchal *adat*. The other portion of the population, the Malays, is now very mixed in composition. They are descended from immigrants from the west coast (in the greater part of the country Minangkabou is the vernacular) and from Djohor on the other side of the straits of Malacca. It was no doubt with them that Islam came to this region.

There are said to be very old relations between Siak and Minangkabou; at the beginning of the xviii century Siak was under the suzerainty of the Maharaja of Minangkabou who had however granted it as a fief to the Sultan of Djohor. Thus it came about that when in 1689 the Dutch East India Company opened a factory for the first time in this region, they did it on authority of a treaty with the latter Sultan. Siak may be said to have become independent in 1721 when Radja Kéjil (according to a chronicle a son of Sultan Mahmud of Djohor, according to another a Minangkabou adventurer) who, coming from Siak had at first succeeded in dethroning the reigning Sultan of Djohor, but was later forced to flee back to Siak where he was able to resist there against Djohor. Jangdipertuan Besar Sharif Késim 'Abd al-Djalil Saif al-Din who now (since 1915) rules the country under the suzerainty of the Dutch East India Company is an indirect descendant of this Radja Kéjil.

(W. H. RASSERS)

SIAM. Islam has made no converts in Siam. The Siamese of Thai (i.e. the mass of the population), Laotian, Birman and Môn origin who were long ago converted to Buddhism have remained impervious to it. Unlike what has happened in Western Indonesia, it seems that in the valley of the Menam there is an incompatibility between the Buddhist faith and the doctrine preached by the prophet Muhammad.

The Muslims in Siam consist of Malays, immigrants from Java, Afghans and in larger numbers, Muslims from India. The majority live in Bangkok. The Malays are the descendants of prisoners of war taken in the north in course of numerous campaigns of the Thai in the Malay Peninsula. We know that the first expedition dates from the end of the xiii century and is recorded in the

famous inscription of Rama Kāpheng (cf. G. Coedès, *Recueil des inscriptions du Siam*, part I.: *Inscriptions de Sukhodaya*, Bangkok 1924, p. 48). Many expeditions followed and secured a considerable number of prisoners to the victors who had conquered the whole Malay Peninsula. A nautical Arabic text of the first half of the xvth century indeed tells us that "Singapore is the last land of Siam in the South" (cf. Gabriel Ferrand, *Instructions Nautiques et Routières Arabes et Portugaises des XVe et XVIe Siècles*, vol. II., Paris 1925, folio 71 recto, l. 6).

The Javanese, the Afghans and other Muslims from India came to Siam to trade. In 1870 the *Siam Directory* mentions an appreciable number of "Muslim merchants", which had considerably increased thirty years later (cf. *The Directory for Bangkok and Siam for 1898*). In addition to these foreign Muslims there are a few Arabs from Hajarumūt (on the latter see the standard work by L. W. C. van den Berg, *La Hadramout et les colonies arabes dans l'archipel indien*, Batavia 1886).

The Sunnis are in a minority. The majority of the Muslims in Siam follow the Shī'a. The procession of the 'Ashūrā' on the 10th Muharram, in commemoration of the death of Hasan and Husain is annually celebrated. The procession of the 'Ashūrā' is preceded, as in Persia, by representations during the first nine days of Muharram, recalling the events that preceded the death of Husain (cf. the articles 'ASHŪRĀ' and MUHARRAM). The place where these spectacles are presented is called as in India *imām-kūrā* [q.v.], "the enclosure of the Imām".

The Muslims settled in Siam fast or rather claim to fast during the month of Ramaḍān, but this fast is far from being as strict as in the lands of Islam. At Bangkok the main features are the rejoicings which take place each night starting at sunset. On these occasions dates are specially eaten in memory of the Prophet, whose favourite dish they are said to have been.

The festival of 'id al-*afṣr* or 'id al-*qashr* [q.v.] which closes the fast of Ramaḍān gives occasion for great feasts and rejoicings, the elements of which are borrowed from local customs. The 'id al-*qashr* or feast of sacrifices which takes place on the 10th Dhu l-Hijja (cf. 'ID AL-APHĀ) is also celebrated with great solemnity and numerous sacrifices of animals.

The mosque of Bangkok is of comparatively recent construction. It is small, badly equipped and situated in the low quarter of the town.

The Muslims who live in Siam — one cannot not talk of Muslim Siamese, since except for Malays from the Peninsula who are Siamese subjects, no one, as far as I know, has ever heard of the conversion of a Siamese Buddhist to Islam — the Siamese Muslims have become Siamesed so to speak, instead of having converted the Thai, Laotian, Birman and Môn among whom they live. In 1898, I happened to meet in Bangkok an envoy of the Shaikh al-Islām in Constantinople whose mission it was to visit all the Muslim communities of the Far East. It was the period of Sultan 'Abd al-Hamid's pan-Islamic policy and the Turkish Caliph wished to be exactly informed of the reception his plans for propaganda in Siam, Indo-China and China had received. The emissary arrived from China completely disillusioned and he did not conceal from me that his pretended

co-religionists in Bangkok were only Muslims in name. "Even those who profess to be Sunnis", he added, "are regular infidels". Indeed Islam has neither past nor present in Siam and probably no future.

The above notes are based on personal recollection and information kindly supplied me by two confreres, Messrs. C. Otto Blagden and B. O. Cartwright, teachers of Malay and Siamese respectively at the School of Oriental Studies. So far as I know, neither old narratives nor modern works make any reference to Muslims strictly Siamese. In a letter from Fernão Mendez Pinto addressed to the Fathers of the Company of Jesus in Portugal, written at Malacca and dated December 5, 1554, he says: "But, my dear brothers, there are in this city of Siao (= Siam, the reference is to Ayutthia, the old capital) seven mosques of which the ministrants (*caetés*) are Turks and Arabs and thirty thousand families (*trinta mil fogos*) of Muslims in the town which is a great shame on the soldiers of Christ" (cf. *Peregrinação* of Fernão Mendez Pinto, ed. J. J. de Brito Rebello, vol. iv., Lisbon 1910, p. 161). In vol. iii. of the same edition (1909, p. 37) there is also a reference to a certain Heredim Matamode, i. e. Khair al-Din Muhammad, a Turkish captain, who left Suez in 1538 on the Egyptian fleet sent against the Portuguese in the Indies, whose ship lost the way and landed in Tenasserim. Khair al-Din entered the Siamese service and was employed on the Lanhós (probably = Laos) frontier with an annual salary of 12,000 cruzaes. Both these are cases of foreign Muslims who had come to Siam. It is obvious that the figure of 30,000 Muslim families living in Ayutthia in the xvth century cannot be taken literally. We shall not deal here with the Muslims from the Malay Peninsula who belong from the ethnographic, linguistic and religious point of view, if not the political, to the Malay Federated States. They should therefore be dealt with along with the latter.

(GABRIEL FERREAND)

SIBAWAIHI was the pen-name of the prominent grammarian of the Basrian school whose proper name was Abū Bisr Amr b. 'Uthmān b. Kanbar; he was a client (*mawla*) of the Arab tribe of al-Hāarith b. Ka'b. This name is explained by Arabic philologists as meaning "scent of an apple", but we cannot accept this explanation as the name is never stated to have been pronounced with a duplicated *ṣ*, and from the analogy of many earlier names of Persians containing the end-syllable "oe" we may assert with much probability that the word was pronounced *Sibaw* and was a term of endearment meaning "little apple, Äpfelchen". There is a great amount of uncertainty in the chronology of his birth and death, as well as regarding the place where he was born and died. From the most trustworthy authorities it appears that he was born in al-Baidā, a place in the district of Shīrās in the province of Fārs. He came as a youth to al-Basra and studied under the chief scholars in that city among whom al-Khalil b. Ahmad was one of the most remarkable, a man whose value to Arabic science has hardly been realised to the present day. Al-Khalil died in the year 175/791 and the earliest date given for the death of Sibawaihi is the year 177 A. H., when he is said to have been only 33 years of age, so that it may be possible that he

enjoyed the teaching of al-Khalil during the last ten years of the latter's life. Ibn Khallikān and others however have a large array of other dates. Ibn Kānī gives a date as early as 166 which is impossible, while other dates are 188 and 180, and Ibn al-Djauzi gives the year 194 and fixes his age at 32 years, a date which is also impossible on account of the known date of the death of al-Khalil. As regards the place where he died also a certain amount of confusion prevails, but the best authorities name the town of Sāwah. According to the *Tarikh Baghdad* of al-Khalīb it is stated that Ibn Duraid asserted that he died at Shīrās and that his grave is there. As Ibn Duraid resided many years in Fārs and is by far the greatest transmitter of the sciences of the Basrians we may be safe to assume that his statement is the correct one. Sibawaihi is a most remarkable figure in Arabic learning if only for the simple reason that the work of a man who attained no great age should have been found such general acceptance, because Arabic scholars have always attached undue value to the works of men who have attained a great age. It must have been after the death of al-Khalil when Sibawaihi had his learned conference with al-Kisā'ī (q. v.) in the presence of the wazīr Yahyā b. Khalid al-Barmaki (d. 182) on the Zunburiya question in which al-Kisā'ī got the better of Sibawaihi through the judgment of a Beduin, who probably was suborned for the purpose by the unscrupulous opponent. Sibawaihi received a handsome present from Yahyā, but the mortification at his defeat in the dispute was so great that he returned to his native country and never came back to 'Irāq. He is said to have died of grief.

The result of his studies Sibawaihi laid down in a large work on Arabic grammar (estimated at a thousand leaves by early biographers) which is not only the largest work of its kind which has come down to us of the activity of the Basrian school, but has ever since been the basis of all native studies on the subject and is known by the honorific title of *al-Kitāb* "the Book". As stated Sibawaihi had studied under al-Khalil, but he also profited by the lectures of Yūnus b. Habib, 'Isā b. 'Umar and Abū 'L-Khaṭīb al-Akhfash. Further the grammarian Abū Zaid al-Anṣārī is said to have claimed that it is he whom Sibawaihi refers to when in his book he states that he learned a certain explanation from "a man on whom I can rely". General opinion however associates with this person generally al-Khalil, and we cannot but give this general opinion more credence than isolated statements to the contrary by biographers. It proves however that the most prominent scholars were only too anxious to have their name associated with the Book. It is also fairly certain that Sibawaihi had no opportunity of teaching from his own work nor of reading it to pupils. This task was left to his teacher al-Akhfash who after Sibawaihi's death undertook a thorough revision of the work. It was not alone among the Basrians that the Book was eagerly studied but we learn from a curious story that al-Djāhiz presented to the Wazīr Ibn al-Khalykī a copy, which was in the hand-writing of the Kāfi grammarian al-Farrā', compared by al-Kisā'ī and finally revised by the donor himself and was considered a priceless treasure. If Sibawaihi himself in speaking Arabic did so with a decided foreign accent his Book has

always been considered as a standard of good Arabic. As one of the earliest books in Arabic literature it is in its style frequently very redundant and tiring by its prolix arguments, but it is filled with innumerable examples taken from the Qur'an and contains over a thousand verses taken from ancient poetry, fifty of which are by unknown poets, but they figure in later grammatical works as valid proofs on the great authority of the Book. These verses found a capable commentator in the person of Abū Sa'īd al-Ḥasan b. 'Abd Allāh al-Sirāfi (died 368 A.H.), who commented in a similar way on a number of the most celebrated works of the Basrian school. After this time the commentaries on the books become very numerous and there is hardly one among the scholars who followed the Basrian school who has not either commented or added to the contents of the work. It will suffice to mention here some of the names of prominent scholars who devoted their energies upon elucidating the work: al-Mubarrad (d. 284); 'Alī b. Sulaimān al-Akhfashī (d. 315); al-Rummānī (d. 384); Ibn al-Sarrājī (d. 316); al-Zamakhsharī (d. 538); Ibn al-Hādījī (d. 646); Abū 'l-'Ala' al-Ma'arrī (449); and many more. The Book was studied in Spain with much eagerness and the Spaniard Abū Bakr al-Zuhayrī (d. 379) composed a short work *al-Isṭiṣṣāh* on additions of grammatical forms omitted by Sibawaihi (edited by Guidi, Rome 1890); the commentary by al-A'lam has also been preserved. While in the East the Book was superseded by later and more compendious grammars, the study of Sibawaihi appears to have continued in the Maghrib and though some biographers of Maghribis tell us that al-Makkūnī (d. 801) was the last who taught the Book of Sibawaihi in Fās, there is evidence from the lithographed editions of grammatical works of later authors in Fās that the work was still eagerly studied there at a much later date and copies have been preserved in the libraries of the intellectual capital of the West.

We possess three printed editions of the work, besides fragments elucidated by European scholars, and a translation into German, of which the Cairo edition with the Commentaries of Sirāfi and al-A'lam is perhaps the best, as the edition of Derenbourg (*Le livre de Sibawaihi*, Paris 1883 *sqq.*), the Calcutta edition of 1887 and the German translation by Jahn, Berlin 1894 *sqq.*, are far from being free of errors.

Bibliography: Fihrist, p. 51; Ibn Khallikān, Cairo 1310, i. 385; Zubaidī, *Tahkikāt*; Anbāt, *Nuḥat*, p. 71—81; Suyūṭī, *Bughyat*, Cairo 1326, p. 366 and many other works of biography; Ḥādījī Khaliḥ, *Kaṣf al-Zunūn*, Constantinople, ii. 281—283 where many commentaries are enumerated as also in Brockelmann, *G. A. L.*, i. 100—102; Flügel, *Gramm. Schuln*, p. 42—45. (F. KEENKOW)

SIBIR WA-IBIR, a name for Siberia in the Mongol period; in this form in Shihāb al-Dīn al-'Omārī (cf. Brockelmann, *G. A. L.*, ii. 141), text in W. Tiesenhausen, *Sbornik materialov, otnosyashchiesya k istorii Zolotoi Ordii*, p. 217 at top; the same source has also *Rīṣāṣ Sibir* or *al-Sibir* (ibid., i. 6 and 221 below). More frequently Ith-Sibir; e. g. Rashīd al-Dīn, *Ḍiyā' al-Tawārīkh*, ed. Berzin, in *Traité de l'Hist. de l'Asie*, vii. 168 (Ith Sibir, mentioned in connection with the Kirgiz people and the river Angara) and the Chinese Yüan-

ghī (I-th-rh Si-bi-rh, quoted in Bretschneider, *Med. Researches* etc., ii. 88; cf. also ibid., p. 37). The same expression was heard in the beginning of the xvth century by Johann Schiltberger, who reproduces it in the form Bissibur or Bissibar (*Reise und Taveln*; Hakluyt Society, London 1879, p. 49, 174). The texts in which this expression occurs are collected by Quatremère (*Histoire des Mongols de la Perse par Rashid-ud-din*, p. 413 *sqq.*) who sees in it (probably wrongly) an echo of the old names of two peoples, the Abar (Avars) and Sahir (in Mas'ūdi, *Tanbih*, ed. de Goeje, p. 83, 16: Sahir; this is said to be the name the Khazars gave themselves). (W. BARTHOLO)

SIBT. (See IBN AL-DJAWZĪ, AL-MĀRĪDĪNĪ, AL-TA'ẒĪDĪ).

SICILY. In the history of Sicily is to be found in miniature the story of Western civilisation. It lies at the heart of the Mediterranean, and it lies likewise at the heart of medieval wars, commerce and culture. The great movements of Phoenician, Greek, Roman, and Muslim met and fought their battles there, and there all of them have perished. The earliest days are clouded in the fusion of Sicels and Sicans, in the settlements of the merchants of Phoenicia on the promontories and along the sea-coast. A new era dawns when the Greek City States stretch forth their hands for new territory and settle at Naxos (735 B.C.), Corcyra and Syracuse (734). The process of colonisation went steadily forward for centuries, and the Greek element in the island became strong. At the opening of the Peloponnesian War (427) it seemed that Athens' dream of Sicilian conquest was to be. The result, however, was neither the victory of Athens, nor the tyranny of Corinth, but the spread of classic culture. Meanwhile Hannibal was displaying his Phoenician prowess. In 409 he reduced Selinus and Himera and returned to his base at Carthage. Thus that rivalry began between Greece and Carthage, which alone was to signalise the story of the island for several centuries. Dionysius I and II, Dion, Timoleon and Agathocles, Pyrrhus and Hiero II, were all to rule under the constant terror of Semitic onslaughts, and not until Rome dealt the death-blow to African rivalry did Sicily enjoy peace. And yet through all this long period the genius of civilisation was displayed in the harbours of Syracuse, the armaments of Tauromenium, the temples of Selinus, and the bucolics of Theocritus. And even when Greece and Carthage had gone down before Rome, there still fed Sicily the Hellenic spirit. Although the yoke of Rome was not oppressive, yet the slave element in the island was so large, partly through her unique history and partly through the Roman demand for corn from her fields, that revolts broke out in 132 and 102. Rome, however, fell before Vandal and Goth, and Sicily was doomed to taste alike the barbarism of the one and the unexpected toleration of the other. Yet Belisarius was still to appear and restore Roman power and and the lethargy of Roman decadence.

Meantime a great movement had been afoot in Arabia, which, if heralded by religious cries, was no less the overflow of a racial basin, and the bursting of the banks of an ethnic river. Muḥammad died in 632 A.D., but his politico-religious crusade went on. In Syria under the sway of Mu'āwīya the Muslim arms penetrated to Alexandria, where the Byzantine navy was crushed (652), and maritime power was placed in Arab hands. In the same year

was launched the first attack on Sicily, and although no Arabic historian has recorded it, the testimony of Theophanes is enough. The Euxarch Olympius defended the island, but the plunderers secured their booty, and sailed off for Damascus, with ships laden with treasures of flesh and blood, silver and gold. They returned to taste the sweets of Syracuse, which they savaged and sacked. These, however, were merely sporadic efforts out of the plenitude of martial strength. There was nothing determined or political in them. The days of Umayyad strength passed and it was from another quarter than Syria that the power of Islam spoke; and yet the instincts of Arab and Berber found a new outlet in the islands of the Mediterranean. From the days of Musa onwards the Corsairs harassed all these parts, and cast a paralysing fear over the islanders of Corsica, Sardinia and Sicily. In 705 Syracuse was again plundered, this time by Africans, who time and again throughout the century returned to their quarry and made definite efforts on the island. So troublesome did these become that the patrician Gregory thought he did well in securing a treaty with the Saracens in 813 for ten years, which pact they honourably observed. But the prize was far too glittering. The request for help which came from Euphemius of Syracuse against Michael the Stammerer in 827 was a timely pretext for a thorough invasion. Ziyadat Allah, the Aghlabid of Kairawan, sent off his hundred vessels from Susa on the thirteenth of June, and the real conquest of Sicily began. Euphemius disappears from the scene, and the Saracen alone leads the pageant of the next few centuries.

Asad b. Turah commanded a motley expedition. The untameable spirits of the Kairawan court were drafted into squadrons drawn from Yemen and Khorasan, from Syria and Maghrib, soldiers of fortune all. They attacked and reduced the first town on the island, Mazara. Then they tested their strength against Syracuse, but pestilence wrought its havoc and robbed them even of their commander. Affairs at home were in real peril. No Khalid appeared among them to inspire victory. The siege had to be abandoned. Their gloom turned to despair, however, when they saw their escape cut off by the Greek fleet, and they had to make off for the mountains and fortify themselves in the town of Mineo. There they remained until a fleet of Spanish adventurers appeared and supplied them with provisions and the needs of war. But the court at Kairawan was now secure, and, still unsatisfied with conquest, sent off a great fleet of three hundred ships, with 20,000 men. Led by Asbagh, they besieged and captured Ghaluliyah, where plague again achieved what Sicilian arms found impossible. Other enterprises, however, succeeded on the island. A division concentrated on Palermo and brought it to surrender. This with many smaller towns marked a real advance in Muslim conquest. It gave a very important vantage point for further subjugation. It provided a seat for the Amir. It definitely established the hold of the Saracens over Sicily. Indeed it made the attackers feel so sure of their new possession that they turned to challenging themselves, and that story of Sicilian schism begins which haunts the Muslim administration to the very end. The Spanish and African elements in the adventure maintained a constant friction, and even this was vitiated by the distinction of Yemenite

and Umayyad, Persian and Berber. By 840 a third of the island was under Muslim rule. Soon Naples asked aid, and the Arabian war-cry echoed on the slopes of Vesuvius, the plains of Calabria and the waters of the Adriatic. In 846 even Rome was threatened by the squadrons of the Muslim, and its gates were menaced by plunderers, who, unable to penetrate, gave what remained without to the sword and violence and sacrilege. The churches of Saint Peter and Saint Paul were not only destroyed but desecrated. But another expedition was still to come from Kairawan. In 875 Dja'far led a well-equipped force against Syracuse, and after a three years' siege the great city, rich in human story and civilisation's past, fell to the invader. The same tale of pillage follows, and follows also the passion and the jealousy, the faction and the dissension. Yet this victory gave a new charter to the plunderer, nor were the dukes of Spoleto and Tuscany innocent of sharing in the spoil. So complete in fact was the mastery of the Aghlabid that Pope John VIII deemed it wisest to pay tribute for two years. The Crescent had indeed eclipsed the Cross.

There still remained a few towns that had not bowed the knee. Along the coast the power of the Saracens was unable to subdue every place, and even within the large centres such as Palermo rebellion raised its head. In 900 serious insurrections troubled the peace of the capital. But darker still were the signs within the Muslim camp. What before had only been loud murmurings or covert moves, became now civil wars. Ibrahim appeared himself in Sicily to vindicate his name, and under the spell of his presence Taormenum and Rametta fell (908), but his death only heralded another internecine strife and prevented the settlement of Eastern Sicily. It was with a sigh of relief that the Muslims completed their treaty with the emperor Constantine Porphyrogenitus in 956, and when they had retaken Taormenum in 963 and Rametta in 965, the race of the Muhammadan in Sicily had been run. For 138 years he had been struggling for the mastery of the island, and for 73 more he was to enjoy it. Throughout all this period there streamed into Sicilian minds and hearts the culture of the East, and blended there with the precious heritage of Greece and Rome. The clash of mind with mind produced a type of life unparalleled in history. There was here all the mysticism of the East, all the beauty of the Greek and all the urge and activity of the Latin. Toleration was the only path to peace, and the Sicilian march if along no other road was certainly along the path of toleration.

After seventeen years of quiet the enemy knocked again at Sicilian gates, but Otto II, with a Western Empire behind him, had to retire discomfited from the fight. Only when the Eastern Emperor Basil II called his scattered forces together in 1027, for a final sally on the harassing marauders of his domains, did success come within sight. Although he saw not the end of his work, his subordinate Maniaces carried forward the scheme of conquest. Profiting by the disaffection of Abu 'l-A'far, he carried victory at every step for four years, and by 1042 Messina, Syracuse and many other cities were under Christian overlordship. Recalled however to satisfy domestic fears, Maniaces had to leave his work uncompleted, and soon the Muslim had recovered ground. It seemed that the Empire could not rise

to the challenge of the invader. But in 1060 the hour struck and the man appeared. Messina still struggling against the doom of Saracenic capture, appealed to the Norman Count Roger of Hauteville. Strong in the possession of Italy, the Norman had been but waiting his time for seizing the island beyond. He responded to the call of the citizens, captured the city, and constituted it the capital of his kingdom. By 1071 Palermo had fallen, and in 1078 Taormenum was wrenched from Muslim hands. In 1085 Syracuse was won. Malta which had been taken by the Saracens in 870 was retaken by Roger in 1090, and thus was completed in a few years the whole conquest of Sicily. Norman rule prevailed over the whole island. Norman lords occupied the palaces, Norman troops commanded the forts. It seemed that all the glory that had been was gone.

And yet right at the heart of the Norman conquest the Arab culture found its life-blood. Hitherto in the welter of bloodshed and unchecked rapine, they had forgotten the finer arts of peace, but now when events drove them in upon themselves they discovered the treasures of their literature and poetry, their law and their science. Not only were they now freed from fighting; they were definitely protected by Roger, who, unprejudiced even in his Christianity, encouraged the men of Islam to cultivate their gifts if not to advance their faith. He was even accused of being a Muslim himself. Being himself uncultured he saw the greatness of Arabian genius and learning with unclouded eyes, and he refused to crush its spirit. He gave full liberty to the Muhammadans to follow their religion, and even prohibited Christians proselytising among them. Under the Norman feudal system he made the yoke rest lightly on their necks. He maintained the Muslim system of administration, and even the same Muslim officials continued to act under him. The merchants of Palermo are said to have been mainly Muhammadan under Norman domination, and his best financiers were certainly of that faith. The land was entirely under the cultivation of the Moors, who in Spain had shewn how skilfully they could make the land yield its best fruits. Papyrus, sugar-cane, flax, olives were all grown in abundance on the island. Where water was scarce great irrigating systems were laid down, and every part of the island utilised. It is said that in the Valley of Mazara no fewer than two million people lived at this period. The science of Medicine was cultivated also and the court of Roger was notable no less for the skill than for the number of its physicians. The Arabic language flourished there as the principal means of communication, and it was also the official tongue. There the Golden Odes and Romances, redolent of Arabian deserts, resounded with delight and charm in the ears of Greek and Norman. There the masterpieces of Plato and Aristotle were translated. There the Arab ideals of chivalry, permeating as they do every one of their romances, set Roger and his court along a new line of European adventure, destined to add lustre to his name and dynasty.

None saw more clearly than Roger the greatness of his Sicilian prize, and well did he guard it both from political intrigue and religious rivalry, but the day soon dawned when his sons despised their birthright, and gradually Muslim thought, language, science and culture sank into disrepute

and finally into oblivion. Yet so long as Greek and Saracen were protected and favoured, so long was Sicily the most brilliant of European kingdoms.

(T. CROUTHER GORDON)

AL-SID, Spanish *el-Cid*, the Cid, the name by which the most celebrated and the most popular of the heroes of Castilian chivalry is known; he played a preponderating political part in Muslim Spain of the second half of the eleventh century, and we can now gain an idea of his real personality by removing all the legendary matter that has grown up around his life and his exploits. It is to the Dutch scholar R. Jory, that the honour is due of having established, as a result of his examination in 1844 of the manuscript of the *Dhakhira* of Ibn Basim preserved in Gotha, that the story of the *Crónica General* of Alfonso the Wise relating to the Cid, which up till then had been considered a pure invention, is really translated from the Arabic, and probably from a work of the Valencian Muhammad b. Khalaf Ibn 'Alkama (428—509 = 1036/1037—1116) called *al-Bayān al-wāḍiḥ fī l-milām al-fāḍiḥ* (cf. also F. Pons Boigues, *Ensayo bio-bibliográfico*, p. 176, N^o 140) and that it is contemporary with the Cid. This historian was thus able to base his reconstruction of the biography of the Cid on solid and authentic foundations and to show, by a series of careful deductions, how all the romantic alterations in his story had arisen which had long been considered worthy of belief and had given birth to the legendary Cid of poetry and of the theatre.

This knight who was called Rodrigo Díaz da Vivar, was descended from a noble Castilian family and was born at Burgos during the first half of the xth century. It has not been possible to fix the exact year in which he was born; 1026 according to some, 1040 according to others. It is known that in 1064 he distinguished himself, on the side of Sancho II of Castile in a war which this sovereign waged against Sancho of Navarre. He defeated at this time a knight of Navarre in single combat and the success stood him in good stead in the Castilian army, whose commander-in-chief he became (or the "Standard-bearer of the King") with the title of Campeador

(Latin *campiator* written by the Arabs **الكنيتر** *al-kunaytir*, the equivalent of the Spanish Arabic *mudarris* or *barrān*, "the champion who comes out of the ranks, when two armies are ranged against one another, to challenge an enemy to single combat"). A short time afterwards thanks to the counsels of Rodrigo Díaz, Sancho II made himself master of the Kingdom of Léon by taking his own brother Alfonso prisoner at Burgos. The latter was able to flee to the Muslim king

of Toledo al-Ma'mūn, of the dynasty of the Banū Dhū l-Nūn. On October 7, 1072, Sancho of Castile was killed before Zamora which he was besieging. The principal Castilian knights then assembled at Burgos in order to elect a new sovereign. Reluctantly their choice fell upon Alfonso, King of León, the refugee at Toledo, but they determined to make him take an oath that he had had no share in the murder of Sancho. It was Rodrigo Díaz who took this oath from Alfonso VI in the Church of Santa Agueda or Gades of Burgos. The new king of Castile always secretly felt a grudge against him for the humiliation of this oath, but in order to conciliate the knight, then very influential, and to attach him to him he gave him his cousin Jimena (Chimene) Díaz, the daughter of the Count of Oviedo, in marriage (1074). Some years later Alfonso VI sent him to the 'Abbāsid dynast of Seville, al-Ma'tamid (see the article SEVILLE), in order to collect the tribute, which this Muslim prince paid in return for a nominal alliance with Castile. He was not able to prevent an encounter between the 'Abbāsid troops and those of the Zirid king of Granada 'Abd Allāh b. Bādīs; the battle took place at Cabra. Rodrigo took an effective part and made several Christian knights prisoners, allies of the Zirid prince, amongst them a prince of the blood, Count García Ordoñez, to whom soon after he restored his liberty. He himself returned to Castile, after successfully attaining the real aim of his mission, Alfonso VI, probably at the instigation of García Ordoñez, then accused Rodrigo Díaz of having appropriated a part of the presents which had been given to him at Seville to bring to the king, and he took advantage of the first opportunity — the expedition against the Muslims of Toledo undertaken without his consent — to disgrace him and to banish him from his dominions (1081).

It is from this time that the life of a "condottiere" led by the Castilian knight dates, that he began to fight, as occasion arose, the Muslims or his own co-religionists, on behalf of a third person or on his own behalf.

After an unsuccessful attempt to be taken into the service of the Count of Barcelona, Rodrigo Díaz offered his services to the Hūdīd dynast of Saragossa (q.v.), Aḥmad b. Sulaimān al-Muqtadir. The latter agreed to take him into his army with his mercenaries. He died in the same year and his son Yūsuf al-Mu'tamid succeeded him at Saragossa, while his other son al-Mundhir received Denia, Tortosa and Lerida. The two brothers lost no time in going to war with one another. Rodrigo Díaz continued in the service of al-Mu'tamid while al-Mundhir made an alliance with the King of Aragon, Sancho Ramírez, and with the Count of Barcelona, Ramon Berenguer II. Rodrigo Díaz soon won a great victory over the enemies of his master in spite of their numerical superiority, near the stronghold of Almenar, somewhat to the north-west of Lerida, took rich plunder and made prisoner the Count of Barcelona, whose liberty he generously restored soon after. He made a triumphal entry into Saragossa where the Hūdīd ruler overwhelmed him with presents and with honours. He had acquired at one stroke prestige and an ascendancy without parallel among his Muslim soldiers who from this time began to call him "my master", *sayyidī*, vulg. Sp. *señor*, which

was translated into Spanish in the form of *"mi Cid"* (the famous *Poem of the Cid* was originally called *"El Cantar de mi Cid"*); and soon this name prevailed (with or without the employment of the possessive). Rodrigo Díaz, thanks to his military talents, had become in the eyes of the Muslims of Spain a champion and an irresistible leader in war, el Cid Campeador.

In 1084, after an ephemeral reconciliation with Alfonso VI, the Cid covered himself with glory once more in Aragon in the service of al-Mu'tamid. When this prince died in the following year, he passed into the services of his son and successor Aḥmad al-Musta'in II and from that date he decided to conquer the Muslim kingdom of Valencia.

This independent principality which the grandson of the celebrated Ḥudūdī, al-Manṣūr, the 'Amīrīd 'Abd al-'Azīz, had founded on the fall of the Umayyad Caliphate of Cordova, had been united in 1065 to the kingdom of Toledo. When the Dhū l-Nūnīd prince Yahyā b. Isma'il al-Kādir in the year 1074 ascended the throne in succession to his grandfather al-Ma'mūn, he appointed Abū Bakr b. 'Abd al-'Azīz governor of Valencia, who almost immediately declared his independence and allied himself with Alfonso II of Castile. But in the year 1085 the latter without scruple sold Valencia to al-Kādir who had been deprived of it ten years before and now gave his capital Toledo to the Christian king in exchange. The Muslim prince aided by a body of Castilian troops under the command of the General Alvar Fañez was able to make his entry into Valencia without striking a blow, but he very soon alienated the whole population of the town. When the Almoravid Sulṭān Yūsuf b. Tāshfīn landed in Spain to fight against the Christians and put them to rout at Zallūka (October 23, 1086) Alfonso VI recalled Alvar Fañez from Valencia; and al-Kādir before the repeated attacks of al-Mundhir, prince of Tortosa, had to appeal for help to the King of Castile, and to al-Musta'in of Saragossa. The latter saw in this a good opportunity to deprive al-Kādir of his kingdom, and secretly entered into an agreement with the Cid to seize the town, all the booty to go to the condottieri. But the latter, mindful of the gifts which al-Kādir had bestowed upon him, refused to touch the town and sent a new token of his vassalage to Alfonso. Thereafter with his army he made incursions into the whole district of Valencia, and in the year 1089, returned to Castile where he was received with honour by his sovereign. Then he regained the east of Andalusia with his army, numbering 7,000 men.

Profiting by the absence of the Cid, al-Musta'in of Saragossa had made an alliance with Berenguer of Barcelona, who was besieging Valencia. The Count of Barcelona retreated before the Cid, who promised al-Kādir, in return for a payment of ten thousand dinars a month, to defend his capital against all enemy attempts. A short time afterwards Alfonso asked the Cid to come to his assistance against Yūsuf b. Tāshfīn, and finding that his vassal did not hasten to join him, he quarrelled with him once more. Then the Cid, like a regular independent bandit chief, ravaged with fire and sword the whole eastern country from Orihuela to Játiva, marched against Tortosa, defeated the Count of Barcelona, and concluded a treaty with

him. Soon afterwards the Muslim princes of Tortosa once more sought his protection. He granted it in return for the payment of regular tribute. At this time, besides the sums which he received from the Count of Barcelona and the Muslim princes of Tortosa and Valencia, the Cid had also amongst his tributaries the Arab lords of Alharracín (al-Sahla), of Alpuente (al-Bunt), of Murviedro (Murbaitar today called Sagunto), of Segorba (Shubrub), of Jerica (Shāriḳa) and of Almonera.

However the quarrel between the Cid and Alfonso VI became more bitter and the King of Castile to put an end to the growing influence of his too powerful vassal, decided to deprive him of Valencia. Strong in the alliance of the Pisans and the Genoese, he came to besiege the town by land and by sea, while the Cid was engaged in helping the Muslim king of Saragossa against the Christian King of Aragon. Informed of what was taking place the Cid left Saragossa with his army and laid waste the county of Najera and of Calahorra, the particular fief of his sworn enemy García Ordoñez. The town of Logroño in the Rioja was completely destroyed by him and Alfonso VI had to raise the siege of Valencia without attaining any success.

During his absence, the Cid left at Valencia a Muslim lieutenant, Ibn al-Faradj, at the court of al-Kādir. The latter, in November 1092, was killed after a rising of the population incited by the *kādī* Ibn Djaḥhāf, who placed himself at the head of the city as president of the Valencian republic (*djama'at*), with a purely nominal representative of the Almoravid government at his side. Some months later, in July 1093, the Cid marched on the capital with the whole of his army, seized without difficulty the suburbs of Villanueva and of al-Rudya and agreed to make terms with Ibn Djaḥhāf, while maintaining a strict blockade of the town. Valencia now endured the most terrible privations and famine soon decimated the inhabitants. Compelled by these circumstances, the chief of the Valencian republic was forced to surrender the town to the Cid on the 15th June 1094. The Campador did no harm to the population, which gave him proof of the regard which it had for him, and showed a real respect for its new master. But the latter did not hesitate to burn alive a short time after the former president, Ibn Djaḥhāf, as a punishment.

From this time the Cid was absolute master of Valencia. After having, by a decisive sortie, put an end to an attempted siege by an Almoravid army, he henceforth thought only of extending his domains. In the year 1098 he had conquered Almonera and Murviedro. But he was growing old and felt that his career was coming to an end. He could hardly desire anything more. He had turned into a church the great mosque of Valencia and restored the bishopric of the town, which he gave to Jerome of Perigord. At last he was quite reconciled to his suzerain Alfonso of Castile, and he was allied to two royal houses of the Peninsula, through the marriages of his daughters, Maria with Ramon Berenguer III, and Christina with the son of Navarre Ramiro. He then tried to take Játiva (Shāḥiḥa, q. v.) from the Almoravids but his army was routed. The Cid full of wrath and broken-hearted by this disaster succumbed not long after in the middle of 1099.

After the death of the Cid, his widow Jimena

resisted, for about two years, the incessant attacks of the Almoravids. Valencia was besieged at the end of the year 1101 by the Lantúni general al-Mandali. It sustained the siege for seven months but on the advice of Alfonso VI, who had come to relieve it, Jimena decided to evacuate Valencia, which she ordered to be burned on her departure. When the Almoravid troops entered it, on the 5th May 1102, they found nothing but ruins. Jimena transported the body of the Cid to Castile; it was buried near Burgos, in the convent of San Pedro of Cardena. Jimena was herself buried there when she died five years later in the year 1104.

Bibliography: As has been already noted, the essential work on the life and historical careers of the Cid is that of R. Dozy, *Le Cid d'après de nouveaux documents*, Leiden 1860, reprinted in his *Recherches sur l'histoire et la littérature de l'Espagne pendant le moyen-âge*, Paris—Leiden 1881 (3rd ed.), II, p. 1—233. The following Arab authors deal at more or less length with the Cid: Ibn Bazzām, *Djaḥhāf*, iii. (Gotha MS. 266), Arabic text and transl. in Dozy, *op. cit.*, p. 8—28 and iii.—xviii.; Ibn al-Kardabbā, *K. al-Iktifā'*, *ibid.*, p. xviii.—xxvii.; Ibn al-Abḥār, *al-Fullat al-Siyarā'*, *ibid.*, p. xxv.—xxxi.; al-Maḥḥārī, *Nuṣṣa al-Thi, Analecta*, ..., II, p. 754 and *ibid.*, p. xxxi.—xxxii.; *Fragment anonyme inédit*, dans Ibn al-Iḥārī, *al-Rayān al-Muḥarib*, vol. III, ed. and transl. E. Lévi-Provençal (in press), Appendix I. (chapter on Ibn Djaḥhāf). Cf. also Dozy's work: *Revue Hispanique*, 1909, xz., 316—428, 1910, xxiii., 424—476, *Bulletin Hispanique*, 1914, xvi., 80—86. A complete European bibliography of the Cid is found in B. Sanchez Alonso, *Fuentes de la Historia española*, Madrid 1919, Nos. 648 to 683. Cf. also the recent work of A. Gonzalez Palencia, *Historia de la España musulmana*, Barcelona 1925, p. 75—77.

(E. LÉVI-PROVENÇAL)

AL-SIDDĪQ (probably the Aramaic *saddiq*), surname of the first caliph Abū Bakr, means "the eminently veracious" and "he who always accepts, or confirms, the truth".

According to Ibn Ishāq, Abū Bakr received this surname because when the Muslims' faith in Muḥammad had been shaken by his account of the *mī'rāj*, Abū Bakr testified that the Prophet's description of Jerusalem was strictly truthful, thereby restoring their belief in him. Another tradition relates that Muḥammad had complained to Gabriel of his people's lack of faith; the Archangel replied: "Abū Bakr believes in thee (*yaqḍidhuka*), for he is *al-siddiq*".

The saying: *wa-'lladhī dja'a bi-'l-siddiq wa-qadaḥa bihi*, in Sūra xxxix. 35, which has been rendered: "But he who brought the truth and he who accepted it as the truth", is referred, in a tradition attributed to 'Alī b. Abī Ṭālib, to Muḥammad and Abū Bakr respectively; this explanation seems to owe something to the latter's surname.

In the Qur'ān the epithet *al-siddiq* is given only to Joseph (xii. 46), in the sense of veracious. *Siddiq*, in conjunction with *nabī*, is applied to Idrīs (xix. 57) and Abraham (xix. 42); the virgin Mary is called *siddīqa* (v. 79), and true believers in general are called *al-siddīqūn* (lviii. 18 and iv. 18).

Those who claim descent from Abū Bakr are usually styled *al-Bakrī al-Siddiqī*; when only one

of these *ansūb* is used for brevity's sake, al-Siddiq is preferred.

SIDDĪQ ḤASAN KHĀN, AL-KANNAWĪJ, SA'YID, ABU 'L-TAYYIB, Nawwāb Amir al-Mulk walā Dīār Bahār, an Indian scholar, born at Barāh (Barailly) U.P. on Sunday, 19th Jumādā I, 1248 (14th October 1832), the youngest son of Saiyid Aẓīd Ḥasan Khān of Kannaẓ U.P. and his wife Naḍīb al-Nisā' of Barāh. He was a descendant of Djalāl al-Dīn Dīshānīyān Dīshāngasht (d. 785 = 1384) whose grandfather Saiyid Djalāl Gularkh came to India from Bukhārā in 653 (1255). Siddiq Ḥasan studied mainly in Dehli. When a young man he entered the Civil Service of Bhōpāl and married the daughter of the then Minister of Bhōpāl, Djamāl al-Dīn Khān (1861); he became the second husband of the Begum of Bhōpāl (1870) and took part in the government of the State. He was active in furthering Arabic and Muslim studies and published a large number of works. His son Nawwāb Saiyid 'Alī Ḥasan Khān published a full biography of the scholar entitled *Ma'āthir-i Siddiqi* in which (Part iv., appendix) he gives a list of 222 works (74 in Arabic, 45 in Persian, 103 in Urdu); they include 25 not yet published. Van Dyke's attack on him is not justified. Siddiq Ḥasan died in Bhōpāl on the 20th February 1890.

L.*, p. 503 and p. 418; Clément Huart, *History of Arabic Literature*, London 1903, p. 432—433, 434; 'Alī Ḥasan Khān, *Ma'āthir-i Siddiqi*, Lakhnā' 1924—1925; Rahmān 'Alī, *Tadhkirat-i 'Ulamā-i Hind*, Lakhnā' 1924. (A. SIDDIQI)

SIDJILL, a mysterious word in the Qur'an, Sūra xi. 84, xv. 74, cv. 4, derived from the Persian سنگ and گل, stone and clay, and

meaning stones like lumps of dry or baked clay; this is corroborated by Sūra li. 33—34: "To throw on them stones of clay, marked by thy Lord." Commentators add that these stones had been baked in hell-fire, and interpret "marked by thy Lord" (xi. 84 and li. 34) to mean that on the stones were inscribed the names of the persons for whom they were destined.

Other interpretations, not generally admitted, of *siddiqit* are: what has been written or decreed (clearly derived from its likeness to *siddiq*, q.v.), Hell or the lowest Heaven (the word being considered in this case another form of *siddiqit*, q.v.). It has also been associated with adjectives derived from the root *s-d-j-l*.

Bibliography: Lane, *Lexicon*; al-Tabari, *Tafsir*, Cairo 1328, xii. p. 57; al-Suyūṭī, *K. al-Itḥān*, Cairo 1318, i. 139; A. Siddiqi, *Studien über die persischen Fremdwörter im klass. Ara-*

bisch, Göttingen 1919, p. 73; J. Horowitz, *Koranische Untersuchungen*, Berlin and Leipzig 1926, p. 11. — On the hypothesis that in Sūra cv. these stones represent an epidemic of smallpox, see Caetani, *Annali dell' Islam*, i. Introduction, p. 147, and Fernandes y Gonsales, *La aparición de la viruela en Arabia* (Revista de ciencias históricas, v. 1887, 201—216). (V. VACCA)

SIDJILIN, one of the mysterious words of the Qur'an, lxxiii. 7 and 8: "Verily the register of the wicked is surely in *siddjilin*. And what shall make thee understand what is *siddjilin*? A book written". Explained by commentators as a place where a record of the deeds of the wicked is kept, and also as that record itself. It is said to be a valley in Hell: the seventh and lowest earth, where Iblis is chained; a rock beneath the earth or the seventh earth; a place beneath Iblis, where the spirits of the wicked are; a register comprising the deeds of the wicked, of the *ḡinn* and of mankind, or of the devils and the unbelievers. Without the article it is a proper name of hell-fire. Also said to mean anything hard, vehement, severe, lasting, everlasting (interpretations influenced by the word's likeness to *siddjil*, q.v., erroneously connected with the root *s-d-j-l*).

Though the *Itḥān* classes it among non-Arabic words, no acceptable etymology is supplied, and Dvořák does not admit it among his *Fremdwörter*; on the other hand lexicographers give it as a synonym of *siddjil*, prison, and this last word has evidently influenced the prevailing interpretation of *siddjilin* by Muslim commentators as a place where the record of the wicked is kept, rather than as that record itself. The text of the Qur'an admits of both interpretations, and most European translators, following Marracci, have preferred the latter.

Bibliography: Lane, *Lexicon*; al-Tabari, *Tafsir*, Cairo 1328, xxx. p. 60; al-Suyūṭī, *K. al-Itḥān*, Cairo 1318, i. 139; Marracci, *Refutatio Alcorani*, 1698, p. 787. (V. VACCA)

SIDJILL, one of the mysterious words of the Qur'an, Sūra xx. 104: "The day in which we shall fold the sky as *al-siddjill* to the books". Derived from *sigillum* through *seyḡḡḡ*, the word is used in Arabic for written statements of contracts, records of a *ḡāfi* in which his sentences are written, and, in general, writing, scroll or roll for writing upon or written upon. Lexicographers and commentators of the Qur'an, while recognising the word as foreign, have ascribed it either to Abyssinian or to Persian, one or both of these languages being usually made responsible for such like strange words; they have also tried to deduct its meaning from the Qur'anic context, thus interpreting it as the name of an angel, who folds the written statements of men's works, or of a scribe of Muhammad's, or meaning *man* in general in the Abyssinian language. Such scribes or angels, al-Tabari observes, are not mentioned anywhere, while *siddjill* in the sense of written document is well known in Arabic. The words that follow: *li 'l-kutub*, stand, according to al-Tabari, for *'ala 'l-kutub*.

Bibliography: Lane, *Lexicon*; al-Tabari, *Tafsir*, Cairo 1328, ed. i., xvii. p. 78; al-Suyūṭī, *K. al-Itḥān*, Cairo 1318, ed. i., p. 139; Du Cange, *Glossarium magnum et infimus Latinitatis*, s.v. *sigillum*; Fränkel, *De vocabulis in ant. coran. arab. et in Corano peregrinis*, Leyden 1880, p. 17. (V. VACCA)

SIDJILMĀSA (the forms *Saǧǧal* and *-māssa* are also found), an ancient town of Morocco now in ruins, which was the capital of Tafilālet. It was built about 200 miles S.S.E. of Fās, on the outskirts of the *Ṣaḥrā*, on the left bank of the *Wādī Ziz*, 34° 80' N. Latitude N. and 7° 31' West Long.

Sidjilmāsa was probably founded in ancient times. It is not however necessary to heed the local tradition recorded by Leo Africanus, according to which the town was founded by Alexander (= *Dhu l-Karnain*) as a home for the sick and crippled in his army. But the same author has preserved another tradition attributing its foundation to a Roman general who, starting from Mauritania, conquered the whole of Numidia and pushed on as far as Māssa, a town of *Sūs* on the Atlantic; it was at this time that he founded the town of *Sigillum mēre* (= *Massae*), thus called because it was the seal of his victory. In this legend we have a distant memory of the Roman expeditions of Suetonius Paulinus and of Hæmidius Geta (in the year 41 A. D. to the South of the Moroccan Atlas).

Be that as it may, even if the town had actually an earlier existence it was completely in ruins at the time of the arrival of the Muslims, since al-Bakrī tells us that Sidjilmāsa was founded in the year 140 (757—758) and that its development brought about the decline of the neighbouring towns of Tūdgha and of Ziz. Its foundation was the work of the rebel Miknāsa Berbers who had adopted the heterodox customs of the *Ṣūfiya* [q. v.] and had made themselves independent of the Arab governors of al-Kairawān.

Beginning with 155 (771—772), the town and its territory were governed by the Miknāsa dynasty of the Banū Midrār; the latter attained its apogee with Muhammad b. al-Fath b. Maimūn b. Midrār, surnamed al-Shakīr li 'lāh who returned to orthodoxy, took the title of *Amir al-Mu'minin*, and had coins struck in his own name (H. Lavoix, *Cat. des Monn. Musulm. de la Bibl. Nat.*, 1891, p. 401—402). He was made prisoner by the 'Ubaydī general Qjawhar, when in the year 347 (958—959) the latter besieged and captured Sidjilmāsa. In the course of time other Banū Midrār regained the government of the town, but in the year 366 (976—977) they were finally dispossessed by Khazrūn b. Falfal al-Maghrawī who, at the head of the Zanāta Berbers, was fighting on behalf of the Umayyad sovereign of Cordova.

Khazrūn and after him his descendants were at first simply the governors of Sidjilmāsa on behalf of the Umayyads of Cordova; then after the downfall of the latter they declared themselves independent and founded the dynasty of the Banū Khazrūn. But their tyranny and their impiety forced the inhabitants of the town to call to their aid 'Abd Allāh b. Yāsin, the promoter of the Almoravid movement, who in the year 447 (1055—1056) seized Sidjilmāsa; where he massacred all the Maghrawa whom he found there.

This was the end of the independence of Sidjilmāsa and henceforth the town and its territory were always, theoretically at least, a dependency of the empire of Morocco; but on account of its eccentric situation on the edge of the desert, it was at all times a hotbed of sedition and of revolts provoked, sometimes by the local governments desirous of making themselves independent,

sometimes by the turbulent Arab tribes of the neighbourhood, sometimes even by the inhabitants wearied by the exactions of the central power and always ready to support its enemies, the kings of Tlemcen or pretenders belonging to the reigning family.

In 541 (1146—1147) on the fall of the Almoravid dynasty, the inhabitants of Sidjilmāsa took the side of the agitator Muhammad b. Hūd al-Hādī who had already stirred up the *Sūs* and the *Dar'a*; but he was crushed by the Almohad chief Abū Ḥafṣ who then took possession of the town.

In the year 640 (1243—1243) the Almohad governor of Sidjilmāsa, 'Abd Allāh b. Zakariyā al-Kharraǧī delivered over the town to the Ḥafṣid prince Abū Zakariyā, who had just seized Tlemcen, but the Almohad Sulṭān 'Alī al-Sa'id recaptured the place.

In the year 653 (1255—1256) the Marinid prince Abū Yahyā b. 'Abd al-Hakḥ took possession of Sidjilmāsa. But as early as 655 (1257—1258) a section of the inhabitants asked the 'Abd al-Wādī of Tlemcen, Yaghmurāsan to come and occupy it. Abū Yahyā, warned in time, came and took possession of the place which Yaghmurāsan could only besiege without result.

In the year 657 (1258—1259) the Marinid governor al-Kīrīnī made himself independent; but the people rebelled against him and appealed to the Almohads.

In the year 660 (1261—1262) the Marinid troops came to besiege Sidjilmāsa without success. Later under the pressure of the Arab tribe of the Munabbāt, the inhabitants recognised the authority of Yaghmurāsan. But when the Sulṭān Ya'qūb b. 'Abd al-Hakḥ had won the whole of the Maghrib for the Marinids he went to attack Sidjilmāsa, at the siege of which artillery was employed for the first time in Morocco; the town was taken in *Ṣafar* 673 (August-September 1274). The 'Abd al-Wādī governors, the garrison as well as the chiefs of the Munabbāt, were massacred and the inhabitants reduced to slavery.

From this event dates the decline of Sidjilmāsa. Its name is often found mentioned in the history of the civil wars of Morocco and it seems to have had to suffer greatly from the oppression of the neighbouring Arab tribes, especially those of the *Ahlāf* Ibn Baṭṭūta, who visited Sidjilmāsa in 752 (1351—1352) says that it is amongst the most beautiful of towns. But Leo Africanus, who spent six months in this district in the first part of the xvth century says that after a rising of the people, who had killed their governor, the town was entirely destroyed and the inhabitants retreated into the country or into castles (*ḥūr*) where they lived, some of them independent, others tributaries of the Arabs. Thus we must not be led astray by modern Moroccan historians who frequently use Sidjilmāsa for the 'district of Sidjilmāsa' or of 'Tafilālet'.

For the last time Sidjilmāsa appeared in history when in the first half of the xvth century on account of the fall of the Sharfī dynasty of the Sādians, the *Shurafa'* made themselves independent and founded the present dynasty of the 'Alawīs or *Filāla* (cf. *FILĀLA*, *EDOUX*).

The Arab geographers have given us a glowing picture of the Sidjilmāsa of the Middle-Ages. Situated in the middle of a plain, fertile because

well watered, it was surrounded by gardens and orchards which stretched along the Wādī Zīr for more than four parasangs from the town. There there grow in abundance the most delicious varieties of grapes and dates which alone furnished the bulk of the food of the inhabitants; cereals grew very well there and gave harvests for three consecutive years without the necessity of sowing. The crops of the neighbourhood included in addition cotton, cumin, caraway, and beans which were exported into the whole of the Maghrib. As peculiar to the town, the Arab authors point out that flies are not found there, but dogs are eaten as well as a kind of fat lizard (*hirghann*) and that the inhabitants for the most part suffered from ophthalmia. The only notable industry was the preparation of a magnificent material made from a very fine wool which the women excel in knitting. The town, well peopled and very extensive, was composed of strong castles, buildings and of houses each built in the middle of a garden.

Its situation at the gate of the *Ṣaharā* made Sidjilmāsa a very suitable starting point for caravans going to the land of the negroes, especially to Ghāna or returning from there. Dates were the principal article of export; slaves were brought from the Sūdān, gold dust, ivory and hides.

The people of the town did not content themselves with doing a thriving trade at home; they went themselves to the Sūdān and showed great hardihood in their journeys. From Sidjilmāsa several routes led to the chief centres of North Africa, Darfa, Aghmār Warika, Fās, Tīlahrit (part of the Nadruma district), Ujdja, Tlemcen and even to Cairo, by the desert and Bahmāsa.

Sidjilmāsa with Fās was one of the two great centres for Moroccan pilgrims to assemble, going to the Hīdžāz and their inhabitants often supplied the *amir rikāb al-ḥanāḍī*. This is how it came about that one of them, at the beginning of the Marinid dynasty, having had occasion to go in this capacity several times to the Hīdžāz became acquainted with the Sayyid al-Ḥasan b. ʿAlīm at Yanbūʿ al-Nakhīl, a Hasanid sharif, whom he asked to return with him to Sidjilmāsa so that by the help of his *ḥaraka* the fruit of the palm-trees of the town could attain maturity. The sharif accepted, arrived at Sidjilmāsa in 664 (1265–1266) and became the ancestor of the *Sharfā* [q. v.] *sidjilmāsiyyūn*, who gave Morocco the dynasty which reigned from 1075 (1664).

At the present day the ruins of Sidjilmāsa, visited by René Caillé in 1828, then by Rohlfs in 1864 and by W. Harris in 1893–1894, are euphemistically called by the natives *al-madīna l-nāma*, 'the inhabited town', and lie along the east bank of the Wādī Zīr for about 5 miles; there is nothing left but one minaret still standing, in a bridge across the Zīr, and enormous masses of clay walls everywhere somewhat ruined.

European authors: Gerhard Rohlfs, *Fahrt durch Marokko*, Bremen 1868, p. 61; W. B. Harris, *Tafel*, 1895, pp. 229, 261–267, 273–275, 283–285; E. Mercier, *Sidjilmāsa selon les auteurs arabes*, R. A., 1867, p. 233, 274; (Georges S. COLIN)

SIDON, the celebrated town of ancient Phoenicia, the name of which is found as early as the Tell Amarna tablets in the form *Sidānu*, played only a modest part in the Muslim world. The Arabs call it *Ṣaydā*. According to Balādhuri, it was taken without difficulty by Yazīd b. Abī Sufyān; the future Caliph Muʿāwīya commanding the advance-guard on this occasion. This must have been about 637 A.D. The Arab geographers tell us very little about *Ṣaydā*. They mention that it belonged to the administrative district of Damascus; Kudāma observes that it was the military harbour of this region and Muḥaddas also mentions that it was fortified. Ibn Khordādhbih says that the road from Antioch to Gaza touched the town. According to Ibn al-Fakīh, *Ṣaydā* was one of the most marvellous towns and noble provinces; this verdict is probably based entirely on literary tradition. Muḥaddas condemns the language of the inhabitants as particularly 'barbarous'.

The town only became a little more prominent in the Crusading period. Among the Crusaders the name appears as *Sagitta* (*Sagette*, *Sayette*), a translation of the Arabic *Ṣaydā*. According to Yāqūt, the town was also called *ṭrīb*. The histories of the Crusaders record that the siege of the town was raised in 1107 on payment of a sum of money. According to the Arab version Baldwin retreated in 501 (1107/1108) when his fleet was defeated by the Egyptians and a Muslim army was approaching from Damascus to relieve it. According to the French accounts, the town was taken on December 19, 1111 (Ibn al-Athīr gives 20th Djumādā I, 504, which corresponds to December 4, 1110). The siege lasted forty-seven days; sixty Frank ships (Norman and Venetian) surrounded the town on the sea side, and Baldwin advanced by land from Jerusalem. The town surrendered under favourable conditions, which were observed at first, but Baldwin later levied an indemnity of 20,000 dinars on the inhabitants, who remained in the town, which destroyed its prosperity. In 1187, Saladin occupied Sidon (according to Ibn al-Athīr on 21st Djumādā 583, i. e. July 30, 1187); the Crusaders had left it without striking a blow and Saladin had most of the fortifications destroyed. In October 1197 (Ibn al-Hidjra 593, A.H.), there was a fierce encounter at *Ṣaydā* between Crusaders and Muslims, which lasted into the night and remained undecided. Al-Malik al-ʿAdil then had the remains of the defences destroyed. In 625 (1228) *Ṣaydā* was taken by the Crusaders and again fortified. In 1249, it was taken by Aiyūb, in 1253 occupied and fortified by Louis IX of France, in 1260 sacked by the Mongols, in the same year taken by the Templars, who remained here till 1291 in which year it was taken by the Muslims for the last time and its defences razed by al-Ashraf. At a later period a great deal was done for the town by the Druse ruler Fakhr al-Dīn (1595–1634). His castle is now in ruins but the market erected by him for the European traders still exists as

the Khān Fransi. Unfortunately his fear lest the Turkish fleet might choose Šaidā as a base induced him to make the Southern (the so-called Egyptian) harbour useless. In 1791 Džazār Paša banished the French merchants from the town. In 1840 it was bombarded by English and Austrian warships.

The modern town occupies the site of the ancient Sidon, but it stretches a little farther inland. A peninsula runs out from the shore under the shelter of which is the large south harbour, now useless, and the smaller north harbour still used by small ships. The latter is also protected by a ledge of rocks against the waves. Near the entrance is a little island, the Ka'at al-Bahr, which is connected with the mainland by a stone bridge. Farther north-west is a larger island opposite the mainland, called el-Djerr. South of the town, on an artificial mound is the citadel Ka'at al-Mu'azza. The chief mosque was once the Church of the Knights of St. John and the mosque of Abū Nakhlār, a church of St. Michael. On the little island are the ruins of the Château de St. Louis which was partially destroyed in the bombardment of 1840. The town has about 12,000 inhabitants including 7,000 Muslims and Metāwile, 2,000 Greek Catholics and Maronites and 600 Jews.

The Roman Catholic Church, the American Mission and the Alliance Israélite maintain schools here. Large gardens surround the town on the land side. Oranges, lemons, pomegranates, figs, almonds and pears flourish here. The commercial importance of the town is small. Grapes, corn, cotton and gall-apples are however exported.

It is evidence of the intellectual life of the town that in 1921 the epistemology of the Arab philosopher al-Fārābī, the *Kiṣāṣ ʾIḥṣāʾ al-ʿUlūm*, was first published in the columns of a newspaper, the *ʿIrṣān*.

The Šaidā mentioned in Nābiḡha al-Dhubayṭī (ed. Ahlwardt, i. 6) has been sought in the Hawrān.

(P. SCHWARZ)

ŠIFA does not occur in the Qurʾān but the infinitive *waṣf* is used once and the impf. of the I. stem 13 times in the meanings: 'to ascribe or assert as a description, to attribute' and always with an implication of falsehood. Thus of Allāh in Qurʾān vi. 100; xxiii. 93; xxxvii. 159, 180; xliii. 82 — all similar, fixed phrases; this standing implication is used in the *Mufradāt* of Rāghib al-Iṣḥāqī (p. 546, s. v.) to suggest that all descriptions of Allāh are unsound. (a) In grammar *šifa* means an epithet noun (on the epithet noun as opposed to the adjective noun see Lumsden's *Arabic Grammar*, pp. 266 sqq.) and is defined in the *Alfiya* (ed. Dieterici, p. 225, 3) as 'a thing which indicates an idea (*maʿnā*) along with an essence or substance (*dhāt*)' and in the *Mufaṣṣal* (ed. Broch, p. 46, 5) as 'a noun which indicates one of the "states" (*ahwāl*) of a *ḡāʾ*'. At the widest it covers the active and passive participles, the epithets assimilated to these (*al-ṣifāt al-muḥabbaba*;

Wright², i. 133 sqq.; *Mufaṣṣal*², 101, s. 109), the *afʿāl* of comparison and, dubiously, the *nisba*; on the last see *Mufaṣṣal*², p. 46, 17. When the active participle loses its temporary character and hardens into a substantive it becomes a *šifa ḡāʾiyya* (Balḡāwī on Kur. xxvii. 77; ed. Fleischer, ii. 74, 9). In syntax the qualifying clause to which the antecedent is undetermined and with which no relative is used, is not regarded by the native grammarians as a *šifa* but only as a descriptive, a *šifa*. (b) On the doctrine of the logical analysis of qualities and descriptives in philosophy and scholastic theology there is an elaborate discussion in the *Dict. of techn. terms*, pp. 1489–96 (under *waṣf*), giving classifications according to different orthodox and heretical schools. (c) The *ṣifāt* of Allāh are to be distinguished from his Names (*asmāʾ*). The Names are the epithets, like the *ṣifāt* above, applied to him as descriptives in the Qurʾān, following the wide use of such epithets in the old poetry. On these Names see especially al-Ghazālī, *Al-maḥḥal al-asmāʾ*. But his *ṣifāt* are strictly the abstract qualities which lie behind these epithets, as *ḡadrā* behind *ḡadr* and *ʿilm* behind *ʿalim*. A very important problem in theology is the relation of these *ṣifāt* to his *dhāt*. The resultant orthodox statement, after long controversy, is that they are eternal, subsisting in his essence, and that they are not He, nor are they other than He (*lā ḡayru mā-lā ḡayrūhū*); see Taftāzānī on Nasafī's *ʿAḡāʾid* with super-commentaries, Cairo 1321, pp. 67 sqq. and the commentary of Džurjānī on the *Mawāḥiṣ* of al-Jāḥi, BULAK 1266, pp. 479 sqq. The struggle was, in part, to maintain the internal unity of the personality of Allāh; in part, to do justice to the Qurʾānic descriptives of him; in part, to determine what were primary and necessary of these and what could be regarded as merely relations and connectives of these with the material world. It was a struggle with unbelieving philosophers, with Muʿtazilite heretics and, within orthodox Islam, between Ashʿarites and Māturidites; see Louis Massignon, *La Passion d'al-Hallaj*, pp. 568, 571 and especially 645 sqq. and the translations from Nasafī and Faḡālī in Macdonald, *Development of Muslim Theology*, pp. 309, 319 sqq. Also Sanli's *Prolégomènes Théologiques*, ed. and transl. by Luciani, pp. 162–216. Through it all ran the position of the *Mufradāt* [see above] that descriptions of Allāh must be, at the best, inadequate and misleading, and, at the worst, impossible. On Allāh's mystical manifestation of himself by means of his *ṣifāt* see Massignon, p. 514 and R. A. Nicholson, *Studies in Islamic Mysticism*, pp. 90, 98.

Bibliography has been given above.

(D. B. MACDONALD)

ŠIFFIN, in Theophanes, *Chronographia*, 347: *Sapphin*, in a Syriac inscription of the beginning of the ninth century *ʿi*² (Chabot in *J. A.*, 1900, p. 285), a place not far from the right bank of the Euphrates, west of Raḡḡa, between it and Balis, separated from the river by a strip of marshland an arrowshot broad (according to *B.G.A.*, vii. 22, 15: 500 ell) and two parassangs long, overgrown with dense willows and Euphrates palms, full of waterholes, through which a single paved road led to the Euphrates. The place was made famous by the great battle fought there in 37 (657) between ʿAlī and Muʿāwīya. When ʿAlī arrived here on his march from Kūfa, the Syrians

were already encamped in the ruins of the city, which dated from the Roman period, and a detachment of troops under Abu 'l-A'war held the road to the Euphrates. In spite of his representations and his insistence that he had not come to fight but to come to an arrangement with Mu'awiya, the latter did not give way, although his wise councillor 'Amr b. al-'As advised him to do so. 'Ali then ordered his troops to attack and they succeeded in driving back the Syrians in spite of the reinforcements sent them, and gained the approach to the river; 'Ali then gave a new proof of his chivalry by allowing the Syrian water-carriers to get water alongside of his own men, which resulted in the latter fraternising in harmless fashion with the Syrians. Some time was spent in negotiations, which came to nothing, as Mu'awiya stubbornly insisted that the Caliph should hand over the assassins of 'Uthman, which he neither would nor could do. The negotiations were however continued and when a quarrel threatened to break out, the peace-lovers on either side managed to prevent it. According to Dinawari, p. 180 *sq.*, this state of things lasted throughout the two months Rabi' II and Jumada I of the year 36. This would however give much too long a time for the preliminaries of the battle which, according to Ya'qubi (*Tamkik*, p. 295; *Tarikh*, ii. 219), began at the beginning of Safar and is corrected by Ya'qubi's statement that the battle for the approach to the water took place in Dhu 'l-Hijja. It is probably also wrong when Tabari, i. 3272 says that 'Ali and Mu'awiya in this month repeatedly — sometimes twice a day — sent out prominent men with foot-soldiers and horsemen to fight each other, which however did not result in a general battle, as both parties were afraid of the fatal consequences of it. As Wellhausen suggests, we must here have a duplication of the fighting that took place later. To keep open every possibility of coming to terms, it was agreed to observe a truce in the traditional sacred month of peace, Muharram of the year 37 (June 19—July 18, 657). But even this did not succeed, and war was finally declared at the beginning of Safar and the battle of Siffin began. To obtain a clear idea of its course is not easy, as the narrators record a mass of single combats which do not give a general survey and serve only to glorify the individual tribes. They also give very divergent figures for the size of the armies and the positions of the divisions and their leaders. The fighting was conducted in accordance with ancient custom and each tribe operated for itself, so that it was a clever move on 'Ali's part to place the parts of the various tribes in his army so that they were opposite their fellow-tribesmen. The fighting, which was continually renewed and increased in extent, was by all accounts bloody and various notable men met their death in it, such as on 'Ali's side 'Ammar b. Yasar and Hashim b. 'Utha, on Mu'awiya's side Umar's son 'Ubadallah (cf. the lament on him in Ya'qut, iii. 403). 'Ali had great assistance from the brave and experienced al-Ashtar [q. v.] who had procured the Iraq troops free access to the water and now distinguished himself in several hand-to-hand fights.

The following is the account given of the issue of the battle. After fighting had gone on for a time without a decision being reached, al-Ashtar

succeeded in the night known as *lailat al-karir* (from *karra*, 'to whine', cf. Ya'qut, iv. 970) i.e. the night before Friday 10th Safar = July 28 (see Ahlwardt's *Assyriac Chronicle*, p. 349, 2; according to Tabari, ii. 727, 1, the night before the Thursday) and on the following morning in driving the Syrians into such straits that Mu'awiya lost heart and thought of flight, from which he was restrained by the memory of certain lines by Ibn al-Ja'na (cf. *Asma'i*, ed. Wright, p. 53, 573; Tabari, i. 3300, 12). In this dangerous position, the wily 'Amr b. al-'As advised him to fasten a few manuscripts of the Kur'an to lance-heads to express symbolically that the fighting should cease and the decision be left to the book of Allah, in contrast to 'Ali who sought Allah's verdict in the outcome of the battle (Tabari, i. 3322 *sq.*). 'Amr's calculation that this proposal would produce a split among 'Ali's followers proved correct. A considerable number of them declared that such an appeal to the decision of Allah could not be rejected; and thus 'Ali, who thought he had already won, was forced to call back al-Ashtar vigorously protesting, whereupon the battle ceased. The majority in his army also agreed to Mu'awiya's proposal that each of the contending parties should choose one of two arbitrators, who were to meet a later date and come to a verdict according to the words of the Kur'an. The Syrians chose 'Amr, as was to be expected, while the Caliph had forced upon him Abu Mithab [q. v.] who was not favourably disposed to him. The agreement was signed, according to Tabari, i. 3340 on the 13th Safar 37 (July 31, 657), according to Dinawari, p. 210, 3, not till the 17th Safar and 'Ali remembering Muhammad's example of self-restraint at Hudaibiya refrained from signing as Caliph. The armies then separated and went home, 'Ali's troops in deep dejection so that although undefeated they gave the impression of having suffered a reverse.

However attractive this story, with its good points and its sharp characterisation of the persons appearing in it, may be, it is doubtful whether it can be considered historical without further examination. All the accounts at our disposal betray a preference for 'Ali and an antipathy to Mu'awiya and particularly to 'Amr, who is readily credited with everything wicked; and we therefore very much feel the want of an account of the battle from the other side, which could be used as a check. But even without this we can indicate several points, which make it probable that there is a certain amount of bias present, as is certainly the case with the story of the arbitration in Adh-rum [q. v.] and particularly that much too important a part is credited to Mu'awiya's evil genius, 'Amr. Even if we assume that it was he who proposed the demonstration with the Kur'an, and that the necessary number of manuscripts was available in the Syrian army — according to Dinawari, p. 201, even the standard text of the Kur'an (cf. *qur'an*) kept in Damascus was one of them which was carried by five men on five lance-heads — it is evident that this means could only be effective if there was a receptive spirit present, so that it only gave expression to what many felt in their hearts. That this was actually the case is evident from several hints. Not only had 'Ali endeavoured to avoid the fatal war, in which believers fought one another and

members of the same tribe, even near relatives like father and son (Dinawari, p. 184), but the majority of the troops felt that it was unnatural and disastrous. This was why it was so long before the fighting actually began and why as a last resource they concluded a truce in Muharram. In this connection Dinawari records several features which supplement Mikhnaf's story in Tabari on essential points. While in the latter the *Kur'ān*, *Kur'ān*-reciters form a separate body with their own leaders fighting ardently (Tabari, i. 3273, 2; 3283, 2; 3289, 2; 3292, 16; 3298, 2; 3304, 20 and 3323, 2) and there is very little reference to *Kur'ān*-reciters in the Syrian army (3312, 2), in Dinawari these devout men (cf. Goldziher, *Verhungen, über den Islam*, p. 189) are eager advocates of peace who on one occasion succeed in stopping a battle which is about to begin (Dinawari, p. 181, 2 299). They were at once prepared to proceed to the appeal to the *Kur'ān*; and it was mainly owing to their influence that the fighting was stopped so quickly (ibid., p. 204) and when they were agreed on the appeal to the *Kur'ān*, they negotiated with the Syrian *Kur'ān*-reciters before the two armies and recommended the choice of two referees (ibid., p. 205). If 'Amr really proposed the demonstration of the *Kur'ān* (a similar use of the *Kur'ān* is recorded in the battle of the Camel, Tabari, i. 3186, 3188 29) he was only expressing an idea that was shared by many and therefore found ready support. It is also very possible that the striking point in the tradition, that 'Alī had already the victory in his hands, when 'Amr deprived him of it by his diabolic plan, is one of the embellishments with which admirers of 'Alī later explained the unsuccessful issue of the battle. But on the other hand it is quite evident that Mu'awiya had everything to gain by the appeal to the *Kur'ān*, while it meant a severe blow for 'Alī, so that it was no wonder that far-seeing men like him and 'Amr were eager for it, especially if they were afraid that the battle might result unfavourably for them. We must in particular remember that the battle had nothing to do with the question which of the two opponents should become Caliph. That Mu'awiya cherished far-reaching ambitions is very possible, but he was much too wise to let them be revealed at so early a stage. He kept strictly to his role as the avenger of 'Uthmān and declared himself ready to pay homage to 'Alī if he would hand over the murderers of the Caliph. This made him seem to be on the side of right and morality and, at the same time, as 'Alī could not satisfy his demands, it was a good means of preventing the conclusion of a peace. For 'Alī the appeal to the *Kur'ān* was absolutely annihilating; for the sacred book was to be consulted to ascertain whether his action in regard to the assassination of 'Uthmān made him unworthy of being Caliph so that he was de facto deposed at least for the time, while Mu'awiya's position was left unaffected by the result of the verdict. Finally we have to remember that from several indications, 'Alī's position among his own followers in spite of all personal sympathy for him had become rather weak, as the serious charges brought against him had made an impression, even on people favourably disposed to him, so that they must have come to wish that some higher authority should clear up the question. If right and wrong

had been so simply and clearly apportioned between the two opponents, as the narratives make it appear, the sons of Abū Bakr and 'Umar would hardly have kept on good terms with Mu'awiya.

The view we put forward is confirmed in a welcome fashion by a very temperate tradition which goes back to al-Zuhri in Ibn Sa'd (iv. 3), in which we are told that the two armies were tired of war and reluctant to shed more blood, which induced 'Amr to propose to Mu'awiya to have the *Kur'ān* displayed, and to summon the *Ukālā* to the book of Allāh, and thus effect a split among them. When 'Alī saw the apathy of his followers, he acceded to the demand of Mu'awiya and it was in reply to his question who was to decide by the *Kur'ān*, that Mu'awiya proposed the choice of two referees. The dramatic section in the usual story is completely lacking here.

It was quite to be expected that apart from the role credited to 'Amr, an explanation of the unsuccessful turn the battle took for 'Alī should also be found in the assertion that treachery was committed. The charge was made against al-Ash'ath [q. v.] whose past might certainly lend some support to the suggestion. All sources agree that he interceded vigorously for the appeal. According to Dinawari (p. 201) he feared that a continuation of the fighting might result in the enemies of the Arab empire invading it on all sides, a view supported by Mu'awiya when he heard of it. According to Tabari, i. 3332 29, he offered to go to Mu'awiya to ascertain his further proposals and 'Alī approved. On the other hand Ya'qūbī says (ii. 220) that Mu'awiya corresponded with him to bring him over to his side and that he threatened to abandon 'Alī if the latter rejected the appeal, whereby the Caliph was forced to accede, as all al-Ash'ath's Yamani fellow-tribesmen declared their readiness to follow him. After all that has been recorded above, such an explanation of what happened is superfluous and the fact that al-Ash'ath remained continually in 'Alī's service is decisive against it.

How far some could go in their efforts to explain the unfortunate result of the battle for 'Alī is seen from Tabari, i. 3346 29, where 'Alī is made to stop the fighting because he did not dare to risk the lives of the two grandsons of the Prophet.

AL-SIFR (أ), the empty, translation of the Sanskrit *śūnya* in Hindu-Arabic arithmetic, the name for zero, and the origin of the western words *cipher*, *cifra*, *ziffer*, *chiffre* and *zero* with their derivatives (*decipher*, etc.). The question of the introduction or invention of the figures and of the zero has in spite of all palaeographical

research and study of the history of mathematics not yet been satisfactorily explained. In the oldest documents known to us, the Arabs, when they do not write out the numbers in full, use Greek numerals. Only at a later date do we find the "Arabic" numerals coming into use. The Arab mathematicians were made acquainted with the Hindu numerals and method of counting in the time of al-Ma'mūn by the Eastern Persian Muhammad b. Mūsā al-Khwarizmi [q.v.]; the earliest Arabic zero is found in the date 266 of a papyrus document (= 873/874 A.D.). The oldest absolutely certain reference to Hindu arithmetic with the 9 numerals was found by F. Nau in the Syrian Severus Saboklit (c. 662). It should not be concluded therefrom that the zero, that fundamental advance in numerical notation, was not then in use, for even later the nine numerals which we now call ciphers are distinguished from the special signs for showing that a space is left blank; we further know that Brahmagupta, the Indian astronomer (born 598), expressly prepared rules for calculating with the zero. On the connections with the abacus and the feud between the abacists and algorithmists cf. the literature mentioned below. The form of the zero is a circle among Hindus and Western Arabs, among eastern Arabs a point, presumably also in the Perso-Hindu tradition. The subscript zeroes like dia-critical points in the *Fihrist*, I. 18 sq. are remarkable.

SIFR, glamour, magic. In the vexed folklore question of the relation between magic and religion the verdict of Islam is undoubtedly with the position of R. R. Marett that "religion and magic are two forms of a social phenomenon originally one and indivisible; primitive man had an institution which dealt with the supernatural, and in this institution were the germs of both magic and religion, which were gradually differentiated; magic and religion differ in respectability; religion is always the higher, the accepted cult; but between what is definitely religious and what is definitely magical lies a mass of indeterminate elements, such as "white-magic", which do not attain to the public recognition of religion, nor suffer the condemnation meted out to the indisputably magical" (*Enc. Britannica*, ed. xi, xvii, 3056). This holds exactly of the masses in Islam and of what may be broadly called orthodox Islam. Islam is a system of frank supernaturalism; for it there is our material world of the senses and behind that a world of spirits, into relation with which we can enter by means of either magic or religion. When we attempt to define the exact nature of that world of spirits, theories appear and bring the split between magic and religion. What is the origin and nature of these spirits? How do they differ among themselves? What is their independence of action? In what way can they be reached and controlled? Does such intercourse with them affect our relation to Allāh

and imperil our eternal salvation? For in Islam, orthodox and heretical, everything centres round Allāh and our relation to him.

So in the Arabia of Muhammad's time, the original habitat of Islam, if we leave out the elements affected by Christianity and Judaism, the spirit-world consisted of Allāh, the tribal gods and the djinn; and the links between men and it were *Sihr*'s (cf. above, II. 624 sq.), magicians and soothsayers, poets and madmen; the theory as to all these being one of unlimited "possession" by different kinds of spirits, in the sense of that term in modern spiritism. "Magic", therefore, as a term of modern folk-lore is distinctly broader than the Arabic *sifr*, literally "glamour", when *sifr* is exactly limited; but clarity as to the facts of the case requires us to take *sifr* in the broad sense, and Islam itself has very often, indeed generally, done the same. Murtazā al-Zabidī in his commentary on the *Lihyā* (I. 217 foot) quotes Tadhī al-Dīn al-Suhbī as saying, "*Sifr* and *ḥakīm* and astrology and *simiya* are all of the same *wādī*". Further, when Islam spread out of Arabia it entered into contacts with all the supernatural beliefs and magical arts and rituals of the different races and countries which it conquered; these were blended with the Qur'anic and Arabian conceptions and usages and formed an amalgam of the most heterogeneous character as to vocabulary, ritual, attitudes and even fundamental conceptions. This was thoroughly recognized by the Muslims themselves who, as we shall see, traced different kinds of magic to different races. And the confusion worked in two directions: (i.) the superstitions and nomenclature of Arabia were imposed on non-Arab and even non-Semitic peoples and (ii.) even fundamental Islam was deeply affected by completely alien beliefs. On all this see above the articles *BUDUH*, *ḤAFR*, *ḤADWAL*, *DJINN*, *FA'L*, *ḤAKĪMA*, *ḤUḤ*, *ḤAKĪM* and *MĀRŪT*, *IFRIT*, *KĪHĪN* and bibliographies to these.

But *sifr* in its exact etymology suggests the limited form of magic called "glamour". The lexicons assert that it is the turning (*ṣarf*) of a thing from its true nature (*ḥaqīqa*) or form (*ṣūra*) to something else which is unreal or a mere appearance (*ḥayāl*); *ṭahkīl* is often applied to this, based on Qur. xx. 69, and it might be what we now call "hypnotism"; but the more rationalistic tried to reduce it to simple jugglery (*ḥakīm*, *ḥakīm*), cheating the eye (*al-taḥkīl* *wa* 'ṭaḥkīl *bi* 'l-'ayn) by lightness of hand and flowery speech. So it comes to suggest the subtlety of working in nature, as of food in the body (this is traced even to Imr al-Qais in *Lisān*, vi. 12 foot, but the meaning there seems more the fundamental *ṣarf*), and beauty of utterance, as we speak of the magic of words (*ṣiḥḥ*, s.v.; *Mufradāt* of Rāghib al-Iṣṭihānī, p. 224 sq.; *Lisān*, vi. 11—13; *Lam*, 1316 sq.). In the Qur'ān, however, the references are much too definite to yield to such treatment. For the mind of Muhammad and for his environment *sifr* was a real thing, although the message given in and through it might, in great part, be false. On the psychological side, the first-hand phenomena strongly suggest hypnotism and, on the religious, the attitude of Muhammad was almost exactly that of the modern Roman Church towards spiritism. In the Qur'anic situation the background was the spirit-world of the *djinn* and the *ghaḥḥ*'s — evidently unbelieving and evil

djinn. By far the most important Qur'anic verse for the whole subject is ii. 96, which may be rendered: — "And they [unbelievers in general and Jews in particular] followed what the *shayṭān's* used to recite in the reign of Sulaimān [or against the reign of Sulaimān] — and Sulaimān never was an unbeliever but the *shayṭān's* were unbelievers — teaching mankind magic (*sihr*); and [they followed] what was revealed to [er by means of] the two angels in Bāḥil, Hārūt and Mārūt; and they do not teach any one until they say to him: We are only a temptation (*fita*); so do not disbelieve. So they [the learners] learn from the two that by which they may divide a man from his wife, but they do not harm by it any one except by the permission of Allāh. They learn that which harms them and does not aid them, having knowledge, indeed, that he who purchases it has no portion in the world to come. Evil, indeed, is that for which they sell themselves, if they had known it". The construction of this passage is very loose and there are several points in the translation which are uncertain; more than indicated here. In spite of Baldawi's compact style his exposition occupies more than a page (Fleischer's ed., i. 76, —77, 7) and there is a page and a half in the *Kashshaf* of al-Zamakhshari (Lees' ed., i. 93—95). In the greater commentaries it is treated at length as the *locus classicus* on magic; thus Tabari's *Tafsir*, i. 334—353 and Fakhr al-Dīn al-Rāzī's *Mafātīḥ*, i. 427—440, in ed. Cairo 1307. But the general drift is unmistakable. The *shayṭān's*, say these commentators, are the source of magic; they listened at the walls of heaven (see below) and added lies to what they heard there; they brought this to the *ḥāḥim's* and made books of it; they taught these books to mankind, reciting them. This was widespread in the time of Sulaimān, to such an extent that it was said to have been the source of his knowledge and of his control over nature and the *djinn*. The Jews even said that Sulaimān was not a prophet but a magician (Rāzī, p. 428). This verse is an answer to them. For Hārūt and Mārūt see article above and also more below. Elsewhere in the Qur'ān (xxxvii. 6; xli. 12; lxxvii. 5; lxxxi. 8, 9) we are told that the *djinn* used to sit beside (*ḥunna naẓidu*) the nearer sky (*al-samā' al-dunya*) and listen (*istawā'a, istarāḥa al-samā'*) there to the Heavenly Host (*al-mala' al-a'la*) and that they are chased away from it by lamps (*maḥabbāt, ḥabbāt*) set in it for adornment but thrown at them as missiles (*ruḥūm*) by the angels on guard (*ḥaraz, raḥad, ḥifz*). They used to listen thus regularly but now (*al-ḥāḥim*, lxxii. 9) — apparently since Muḥammad was sent — they have found the angels especially vigilant against them. See a full discussion in the *Kashshaf* (p. 1535) on lxxii. 9, where old verses are quoted and traditions cited on the ideas of the Arabs on this in the *Djāhiliyya*. These Arabs had known such shooting-stars and had their own views about them. But with the birth of Muḥammad the vigilance of the angels was greatly increased. Yet this could have been only for a time; for the whole after history of magic represents the *djinn* as continuing to listen and to bring information to the *ḥāḥim's* and magicians. Further, the *djinn* (xxiv. 13) do not know the Unseen (*al-ghayb*), at least accurately, although evil *djinn* inspire and lead astray the enemies of the prophets (vi. 112). In Qur'ān xxvi. 221—225 is a significant passage telling how the *shayṭān's*

come down (*tanazzala*) to every great liar (*affāḥ*) and that these receive what the *shayṭān's* have heard and that the most of them (the great liars of mankind or of the *shayṭān's*) are liars, or that the most of the information is lies. The straying poets, too, follow them (apparently the *shayṭān's*), wandering in every *wādī* and never doing what they say. This is connected by the commentators (Baldawi, ii. 61, 43—62, 7; even fuller and better in the *Kashshaf*, ii. 1012—1014), and evidently rightly, with the *djinn* listening to the talk of the angels, perverting it and mixing it with lies and bringing it down to the *ḥāḥim's* and false prophets and poets. On poetry as thus inspired by the *djinn* see Goldziher, *Abhandlungen zur arab. Philologie*, i., pp. 1—121 and on this passage especially, p. 27, note 2.

It is only in Qur'ān ii. 96 that the word *sihr* occurs in connection with Sulaimān, but there are several passages (xxi. 81, 82; xxvii. 15—43; xxxiv. 11—13; xxxviii. 29—39) which deal at length with his wisdom, knowledge and control of the world and later Islām traced all licit, or "white", magic back to him. The other occurrences of *sihr* and its cognates are connected with the stories of Mūsā, 'Isā and Muḥammad himself. To the story of Mūsā and his contests with the magicians of Pharaoh belong almost all references in certain Sūras. Thus vii. 110, 113, 117, 129; x. 77, 78, 80, 81 (but verse 2 of Muḥammad); xvii. 103 (but v. 50 of Muḥammad); xx. 59, 60, 66, 69, 72—74; xxvi. 33, 34, 36, 37, 39, 40, 45, 48 (but verses 153, 185 of Muḥammad); xxvii. 13; xxviii. 36, 48; xl. 25; xliii. 48 (but v. 29 of Muḥammad); li. 39. Only in v. 110 is magic connected with 'Isā. With Muḥammad it is connected in vi. 7; x. 2; xi. 10; xv. 15; xvii. 50; xxi. 3 *sq.*; xxiii. 91; xxv. 9; xxvi. 153, 185; xxxiv. 42; xxxvii. 15; xxxviii. 3; xliii. 29; xlvi. 6; lii. 15; liv. 2; lxi. 6; lxxiv. 24. There are certain significant phrases and usages: *sihr* is opposed to *al-ḥaqq*, "reality", in xx. 77, 78; xliii. 29; xlvi. 6 and to the reality of Hell (*al-nār*) in lii. 15. — "In the Fire they will be asked: 'Is this glamour'?" eyes are enchanted in vii. 113 (Mūsā) and similarly in xv. 15, "our looks (*abṣārūna*) are made drunken (*shakkarat*) and we are an enchanted (*maḥḥūr*) people", i.e. we are glamourised, hypnotised (of Meccans); Muḥammad is "a man enchanted" (xvii. 50; xxv. 9) and Mūsā (xvii. 103); Muḥammad is "deeply enchanted" (*mutaḥḥar*) in xxvi. 153, 185; in the story of Mūsā an appearance is produced (*ḥaiyala*) by *sihr* (xx. 69); in xxi. 3 *sq.* various accusations are brought against Muḥammad — that his message is *sihr*; that it is "bundles of dreams" (*afḥāṭh aḥlām*), i.e. confused and untrue dreams; that he invented it (*iftarāḥu*); that he is a poet (*shā'ir*); he is required to produce a sign (*āya*) like the former prophets; in xxxviii. 3 Muḥammad is a "lying magician" (*shā'ir kadhib*) and Mūsā is the same in xl. 25; in li. 39 Mūsā is a *shā'ir* and a *magiḥim*, possessed of a *ḥimā*; *sihr* is called "plain" (*muḥin*) very often, *muḥṭarā*, "invented", in xxviii. 36 and *mustawir*, "enduring, firm" or "continuous, consecutive" or "fleeting" in liv. 2; in lxxiv. 24 (quite the oldest occurrence in the Qur'ān) the message of Muḥammad is called *sihr yuṭṭar*, "a magic derived or learned" from some one else; in xxvi. 36 *shāḥḥār* seems to mean an "expert, professional magician" (story of Mūsā).

The passages connecting magic with Muhammad will bear closer examination and throw much light upon the ideas of his time and upon his own situation in it. The traditional interpretation of lxiv. 24 in the *Sira* (see Wüstenfeld's *Ibn Hisham*, p. 171 *sq.*; Baidāwī, ed. Fleischer, ii. 308, 13 *sq.*; *Kashshaf*, ed. Lees, ii. 1548 *sq.*) labours to distinguish between the *kāhīn*, the *muḥṣin*, the *ṣāḥir* and the *sāḥir*, evidently using for the definition of *sāḥir*, *Kur.* ii. 96; but it is plain from the actual Qur'anic usages that such distinctions are impossible and that these four classes were closely connected *quo* links between the spirit-world and our world. *Kāhīm* occurs only twice in the Qur'an, in both places applied by the Meccans to Muhammad, once (lii. 29) joined with *muḥṣin* and once (lxix. 42) joined with *ṣāḥir*. Muhammad is called a *sāḥir* in x. 2, xxi. 3 *sqq.* and xxxviii. 3; he is "enchanted" (*maḥṣūr*) in xvii. 50 and xxv. 9 and "deeply enchanted" (*muḥṣar*) in xxvi. 153, 185. The two last expressions as used of Muhammad were evidently disliked, for the commentators give alternate meanings, "one possessing lungs", i.e. an ordinary human being. Several times the Qur'an, its message and proofs are called magic — xi. 10; xxxiv. 42; xliii. 29; xlv. 6; liv. 2; lxi. 6; lxxiv. 4. And Muhammad did not show any other signs of being a magician. He was not a wonder-worker like Mūsā, Sulaimān and 'Isā. In xxv. 9 he is only "a man enchanted"; no angel is sent to go with him, nor is a treasury (*kanz*) thrown to him, nor has he a magic garden of which he can eat, i.e. objectively existing. In xxi. 3 *sqq.* he does not work an *āya* in this sense. In vi. 7 if an actual book on *ḥirfīs* which could be handled had been sent to him they would have called even it *sāḥir*, i.e. there was no such sign. In the case of two passages in this context of magic (x. 2; xxxvii. 15) the commentators, e.g. Zamakhshari and Baidāwī, are quite sure that the reference is to miracles (*muwīd* *ḥurūf* *li* 'l-*āda*), but the whole drift of the Qur'an and even the passages themselves show that the reference is to the revelations which the Meccans thought proceeded from magic. The *sāḥir* in the case, then, must have been connected with the way in which the revelations came. In xxi. 3 the Meccans assert that they are confused and untrue dreams; and there are passages in the Qur'an which show that they, at least sometimes, came in what we now call "automatic speech". In xx. 113 and lxxv. 16 the Prophet is warned that he must not try to hasten the utterance of the Qur'an when it is being revealed by consciously moving his tongue; i.e. he must completely yield his speech-organ to it and let it come at its own speed (cf. *Ṣaḥīḥ* of Bukhārī, part ix., p. 152 *sq.* of ed. Bullāq 1315 — *Kināḥ al-awḥād*). In v. 101 the bystanders and listeners when revelation is coming through are warned not to throw in sudden questions to the Prophet, as though he were an ordinary soothsayer. Being in the state of automatic speech he will certainly answer them, and truly, and they may not like the answers. See a mass of traditions bearing on this in Tabarī's *Tafsīr*, vii. 48—52 and a very clear statement in Baidāwī, i. 275 nlt. to p. 276, 11; the more rationalistic commentators, such as Zamakhshari and Rāzī, evidently did not like the subject. For automatic speech in later Islām see article *ṢIKHSA* above and references there; Islām

has fully accepted and described the phenomenon.

From all this it is plain that to understand these passages in the Qur'an we must combine the evident meaning of the text with what we know now of abnormal psychology. The phenomena above can be abundantly verified by any one in contact with a case of the very common automatism, "automatic writing", and they hold exactly of the much rarer automatic speech. But it was necessary for the early Muslim interpreters to make as firm a distinction as possible between the phenomena of Muhammad and those of the other links with the spirit-world. This they did by emphasizing revelation through *Ḥubrīl* as opposed to automatic speech through a possessing spirit. Probably many other references exist in the Qur'an, as undoubtedly in the Old Testament, to such phenomena, which have been similarly obscured. *Sāḥir*, then, on one side, was glamour and unreal, but, on another, it was very real. For Muhammad it was *heathen revelation*, coming from the spirit-world and in so far real, but perverted and amplified by its intermediaries, spirit and human, and in so far false. In the *Ṣaḥīḥ* of Muslim, part viii. pp. 229—231 of ed. of Constantinople 1333 (*Kināḥ al-Zuhd*, trad. 73), there is a long story of a heathen king, his magician (*sāḥir*), an ascetic (*rāḥib*) and a *ghaṭīm*. The point is that heathenism is *sāḥir* and *kufr*, just as Baidāwī on Qur'an ii. 96 (i. 76, 7) equates *sāḥir* and *kufr* and lumps them in with *kāhīna*.

In the traditions on the subject it is impossible to say what goes back to Muhammad and what arose in later controversy; much seems incompatible with his usual strong common sense. Reference may be made to a most miscellaneous farrago in the *Ṣaḥīḥ* of Muslim (*Kināḥ al-salām*), part vii., pp. 13—41, on medicine (*ḥibb*) and spells (*rukya*) lawful and unlawful, magic, poison, *shāṭiṣ* 's, *ḡāṣi* 's, *kāhīna*, *ṭaira*, *ṣaṭ*, all jumbled together. In part i., p. 59, if any one says, *muḥṣin* *bi-naw'i* *kaḥḥā*, "we receive rain by such a star", he is an unbeliever, and on pp. 136—138 the 70,000 Muslims who will enter Paradise without reckoning or punishment are those who have put their trust in Allāh and have not used cautery or spells or observed the flight of birds. Medicine, etc., is dealt with in Bukhārī, chapter *Tibb*, part vii. 122—140, and the interpretation of dreams, *Ta'ḥrīr al-Rūyā*, etc., in part ix. 29 *sqq.* On seeing the Prophet in dreams and on dreaming generally see Muslim, part vii. 50 *sqq.* All these subjects were, and are, in close association in the Muslim mind.

But though Muhammad was perfectly assured as to the reality of these phenomena, whether as glamour or as perverted revelation from unbelieving spirits, the early rationalistic theologians (*al-Mu'tazila*, *ahl-kalām*; see article above, ii. 670 *sqq.*) had many doubts. This comes out very clearly in the book of Ibn Kutaiba (i. 276—289) *Muḥṣatāṭif al-ḥadīth* (Cairo 1326, p. 220—235); see on it Goldziher, *Mos. Stud.*, ii. 136 *sqq.* The Mu'tazilites attacked, on grounds of reason and reflection (*ʿaql*, *naẓar*), the traditions which tell that Muhammad was bewitched; that was impossible in a prophet who was under the protection of Allāh (*ma'jūn*). Also, the magic spoken of in the Qur'an e.g. in the story of Mūsā, was nothing but juggling (*taḥḥīl*); the two angels in Qur'an ii. 96 were two men called Malik and the verse was to be understood differently. Against

that, Ibn Katalha brings the universal testimony of all Scriptures and prophets and the unanimous belief in magic of the most diverse peoples; also the explicit testimony of Qur'an *caii.*, *caiv.* — the two *Mu'awwidhat*; also certain farther traditions, especially a curious story about a woman who went to Bāhil to learn magic from Hārūt and Mārūt, thereafter sought the Prophet at al-Madīna in repentance, found him dead and made confession to 'Ā'isha, telling her the whole story. It is a very strange story with folk-lore elements about the preparation of magic *awāḥ* reminding of the Arabian Nights "Story of Badr Bāsim" and the *Khurāṣī* of Muḥammad b. Salama (*The Earlier History of the Arabian Nights*, in *J. R. A. S.*, July 1924, p. 374—379). A fuller form of the same tradition is in the *Taṣfir* of Ṭabarī (d. 310 = 923), i. 347, 23 to 348, 25; also in the *Kitāb al-anbiyā'* of Tha'labī (d. 427 = 1036), p. 30, 26 *agg.* of ed. Cairo 1314; in the *Mafāḥ* of Rūnī (d. 606 = 1209), vol. p. 434, 19—21 there is a much sophisticated and philosophized form of the same story. And, otherwise, all the narratives vary greatly; the different forms were evidently adjusted to the magic known to each writer and current in his time. Sharrāḥ [q. v.] tells it, too, in his commentary on the *Maḥāwāt* of Ḥariri, i. 211 of ed. Cairo 1314. Yet it does not seem to have been accepted in tradition. Of the great, old, collections only the *Musnad* of Aḥmad b. Ḥanbal (d. 241), ii. 134, has anything on Hārūt and Mārūt and this story is not there (letter from A. J. Wensinck).

In the *Fihrist* (written between 377 and 400 = 987—1010) we find the magical system fully developed and with a rich literature behind it. The principal passage is in the Second *Fann* of the Eighth *Mabāḥ* (ed. Flügel, p. 308 *agg.*). The position of Muḥammad b. Ishāq, the author, who was apparently a Shī'ite and, therefore, at least tinged with Mu'tazilism (cf. *KALAM*, vol. ii., p. 673 above), appears in his statement. Magicians, he says, licit and illicit, all assert that magic is worked by the obedience of spirits to the magician. Licit magicians, whom he calls *mu'azzizūn* (from *ʿazzama*, "spell"; the word is not in the Qur'an, nor the root in this connection), assert that they constrain the spirits by obeying and supplicating Allāh, by abandoning fleshly lusts and practicing devotion and by bringing adjurations by Allāh to bear upon the spirits; the spirits then obey, either out of obedience to Allāh, because of the adjurations, or out of fear, because in the peculiar property (*ḥikma*) of the divine Names there is something which subdues them. Illicit magicians, whom he calls *ṣāḥarā* (pl. of *ṣāḥir*), assert that they enslave the spirits by offerings (*ḥarāḥ*) and by evil deeds, displeasing to Allāh, either omission of the ritual law or actual forbidden actions, such as shedding of blood, marriage with near kin, etc. This is openly practised (*ṣāḥir*) in Egypt and the adjoining countries, and there are many books existing upon it. The Bāhil of the magicians is in Egypt; Ibn Ishāq had been told of it by one who had been there and had seen actual survivors (*ḥāḥir*), magicians male and female, there. It is to be remembered that he was probably writing in Baghdad; this is still the attitude of the rest of the Muslim East towards Egypt. All these, licit and illicit, assert that they use seals (*ḥawāṣim*), various kinds of spells

(*ḥawāṣim*, *ruḥā*, *ḥiṣāḥ*), magic circles (*manāḥil*), fumigation (*ḍaḥḥan*), etc. A party of the philosophers and star-worshippers assert, he goes on, that they make talismans for all manner of purposes by watching the stars; these are engraved on stones, gems, stones in rings (*ḥawāṣim*). This is a widely spread science among philosophers; Indians believe in it and do wonderful things by it; the Chinese have artifices (*ḥiyā'*) and a magic of their own; the Indians have especially "hypnotism" (*ʿilm al-tawakkum*; cf. *J. R. A. S.*, for Oct. 1922, *Wahn in Arabic and its Cognates*, p. 516), Indian books on which have been translated into Arabic; the Turks have a science of magic and Ibn Ishāq had been assured by a trustworthy person that they did wonderful things of a physical kind, defeating armies, slaying enemies, passing over rivers, going great distances in a short time, etc. The talismans in Egypt and Syria are numerous and plain for all to see; but the working has been annulled by the passage of time.

Licit magic, which the *Fihrist* calls "the praiseworthy method" (*al-ṭarīqa al-maḥmūda*), is traced back to Sulaimān b. Dawūd who was the first to enslave the spirits (*al-ḥayāt wa 'l-ḥayātūn*) and make them serve him; the same is said for Persian magic of Djamshīd. On Djamshīd as a founder of knowledge and a controller of the *ḥayāt* see *Fihrist*, p. 12, 21 *agg.*, p. 238, 20 and for a fuller account of his place in Persian myth and of his confusion with Solomon see especially E. G. Browne's *Literary History of Persia*, i. 112—14. There was evidently an extensive magical literature ascribed to Sulaimān in Hebrew and Persian and due to that confusion; the names of three of his secretaries who compiled the books are given and there are further details on the names of these books in the long quotation from Djawbarī's *Kitāb fī ḥaḥ al-ṣarā'* (first half of viiith cent. A.H.), *Z.D.M.G.*, xx. 486 *agg.*, in de Goeje's article on the same, *Gaubarī's "entdeckte Geheimnisse"*; cf. also Fleischer in *Z.D.M.G.*, xxi. 274. A small part of this text was printed at Cairo (32 pp.; no year; *Maḥabāt al-naḥḥ*), omitting the introduction and extending only to Bāb iv. in *Faḥl* iv., evidently with other omissions. [There is also a complete edition, no printer or place but dated Djamshīd II, 1302. Cf., further, the technical, non-philological study of the book, based on a printed text and several MSS. by E. Wiedemann in *Beitr. zur Gesch. der Naturwissenschaften*, xxv., p. 206—232]. The *Fihrist* then gives a list of 70 names of spirits (*afārīt*) who entered the presence of Sulaimān and upon whom he imposed covenants (*ʿahūd*, *miḥāḥ*) using the Names of Allāh. These *ʿahūd* continue to play a great part. A tiny, undated, Cairene lithograph of 16 pp. has them as an amulet; *Ḥiḥḥ al-ṣarā'* *ʿahūd al-sulaimāniya li-ṣayyidnā Sulaimān b. Dawūd*. Another list of seven is also given, especially connected with the days of the week. This can be expanded from the account given in Kāzwinī's *Aḥḥ al-naḥḥ*, ed. Wüstenfeld, pp. 371 *agg.*, which also puts the *ḥayāt* under Sulaimān's control. Further lists and descriptions are in Damir's *Ḥayāt al-ḥayātūn*, ed. Cairo 1313, i. 177—187; Jayakār's translation, i. 448—480. The *Fihrist* then gives the names of some individual magicians and titles of their works, from the Greeks down to his own time. This can be controlled and expanded in some points from Djawbarī's list. All of these, even the

Greek Arios son of Stephanos, assertedly connected themselves with the Sulaimanic system and controlled spirits by means of his treaties with these. The last is an Abū 'Amr 'Uthmān b. Abī Raṣṣa, a man of high reputation among his fellows, the author of many books and the doer of wonderful works, whom Ibn Ishāq had personally known and to whom he said once: "I wish you were clear of having anything to do with this affair" (*ana unashihuka 'an al-ṣārruq li-kūfā 'l-ṭān*); to which the magician: "For 80 odd years if I had not known that this was real I would have abandoned it; but I have no doubts", and Ibn Ishāq could only reply: "By Allāh, mayest thou not prosper!" — apparently in his magic.

Illicit magic, "the blameworthy method" (*al-fariṣa al-maḍhmūma*), or the method of the *ṣūfara*, is traced similarly to Ishāq through his daughter or his son's daughter, Baidhakh (see BUDĪH, above). She has a throne (*'arṣa*) upon the water (*'ala l-mā'*); cf. the *'arṣa* of Ishāq upon *al-baḥr* in the *Ṣaḥīḥ* of Muslim, ed. Constantinople, part viii, p. 199, and the *'arṣa* of Allāh, *'ala l-mā'* in Kur'ān xi. 9, with the tradition in the *Ṣaḥīḥ* of Bukhārī, ed. Bulāq 1315, part ix., p. 124. When the postulant in magic (*murid*), as though he were a Sūfi neophyte, has done for her whatever she wills, he reaches her and she makes to serve him whomsoever he wills and accomplishes his needs, and he is not separated from her by any barrier (*ḥidāḥ*), whoever makes sacrifices to her, animal and human, although he abandons the absolute requirements of the canon law and practises what is rationally abominable. [The disjointed character of this statement is probably due to Ibn Ishāq's having thrown together several statements made to him]. Others say that Baidhakh is Ishāq himself. Others that she sits upon her throne and that the *murid* is brought to her to obey her and that he worships her. One of these *ṣūfara* had said to Ibn Ishāq that he, when asleep had seen her sitting as he had seen her when awake and that he saw round her people like the Nabateans of the Sawād, bare-footed and with cloven heels (*muṣṣakhkhiḥ 'l-ṣūḥūḥ*); he even recognized a certain individual among them. He (Ibn Ishāq's informant apparently) was one of the greatest of the *ṣūfara*, of recent date, and used to speak from underneath a basin (*kūna yunāḥiqun min taḥṭi l-faṣṭ*; cf. *kūna munāḥiqan*, p. 310, 18). Names of individuals follow and of some books by them; one is a Yamanite who professed to derive from a certain witch al-Zarkā (the Yamanite princess Tarīfa; cf. above, li. 625^b, foot); another is Ibn Wahshiya (see article above, li. 427) who professed to connect with ancient Chaldean magic and certainly did so with Nabatean. The *Fihrist* calls him a Sūfi and says he claimed to be a *ṣāḥib*, working with *ḥāsmāt*. A section follows (p. 312, 11-16) on simple jugglery (*al-shaḥādūḥa*). Then there is a return to magic, taking in Callisthenes, Apollonius of Tyana, Horus, Hermes, and representatives of the magic of India. For the meaning of "artifices" (*ḥiyal*) above, the section on mathematicians and engineers may be consulted (p. 265, 16; p. 271, 1). Further books on magic, mostly anonymous, are given in the *Fann* of miscellanies; p. 314, 7-18; p. 317, 13; p. 318, 4. As Isḥām has always ascribed a great part of illicit magic and astrology to Chaldean tradition the first *Fann* of the ninth *Maḥalla* (p. 318 100.)

on the Harrānian Chaldeans who called themselves al-Sābi'ūn is of importance in the history of magic, and especially the story of the head which answered questions as to the future (p. 321, 22 100.). The same holds of the tenth *Maḥalla* on alchemy where we again find a long notice of Ibn Wahshiya (p. 358) and his fellows. As Ibn Khaldūn pointed out long after, Shīsm, Sūfism, philosophy, astrology, alchemy, magic, all touch one another; cf. in the *Fihrist* (p. 354 100.) the different ascriptions as to Dīḥār b. Ḥaiyān, the names given to him and the affiliations ascribed to him (article upon him above, i. 987).

If the author of the *Fihrist* was in evident doubt as to there being any real magic and simply recorded biographical and bibliographical facts as he found them, al-Ghazālī (d. 505/1111) had no such doubts. The spirit-world was very real to him; throughout the *Iḥyā'* he enters on full details as to the *ḥinn* and the *ḥaḥīn* and their activities (Macdonald, *Religious Attitude... in Islam*, p. 274 100.); in his *Munqidh* (ed. Cairo 1303, p. 46) he gives the magic square *Budūḥ* as of tested efficacy and it has since been culled by his name; he wrote on the interpretation of dreams (*al-taḥṣīr fī 'ilm al-ta'wīr*, Aleppo, *Matba'at al-Baḥā'*, 1328, 30 pages). Ḥazwī in his *Aḥṣar al-ḥilāl* (ed. Wittenfeld, p. 272) records that he prevailed on a celebrated occultist, al-Tabasī (d. 482 = 1089; *G. A. L.*, i. 496), to raise the *ḥinn* for him. He saw them like shadows on a wall and when he desired to speak with them al-Tabasī replied that that was the limit of possibility for him — al-Ghazālī. See, further, for this side of al-Ghazālī and for its development in legend Goldziher's introduction to his *Lehrbuch der Theosophie*, Alger 1903, p. 15 100. This means that his philosophical pragmatism led him to accept all those workings in nature and in man for which he found good evidence. The *Budūḥ* square had "worked"; therefore he accepted it and all that it implied. The world was full of mystery and this was only a bit of it. But as a moral philosopher he had to consider and classify the practitioner of magic. This he does early in the *Iḥyā'* (ed. Cairo 1334, i. 15, 26; ed. with commentary of Murtaḍā al-Zabīdī, who d. 1205 = 1791, i. 146, 216 100.). On p. 15 he is considering the moral classification of the sciences (*al-ʿulūm*); they either go back to the prophets or they do not. Those that do not (derived from reason, experiment, or picked up from hearing, as language) are either praiseworthy (*maḥmūd*) or blameworthy (*maḍhmūm*) or allowable (*muṣṣaḥ*); and the example of the blameworthy is the twin sciences of magic, including talismans, and juggling. On p. 26 he enters upon further details to explain how a "science" can be blameworthy, seeing that it (*ʿilm*) is knowledge of a thing as it is and is one of the qualities (*ḥifẓ*) of Allāh. It is blameworthy, he explains, not for itself (*li 'ainihi*) but with respect to men for one or other of three causes: (i) it leads to hurt either in the practitioner of it or in some one else — example, magic; (ii.) it is mostly (*fī ḡalib al-amr*) hurtful magic; (iii.) it is mostly (*fī ḡalib al-amr*) hurtful magic; (ii.) it is mostly (*fī ḡalib al-amr*) hurtful magic; (iii.) if he who busies himself with it can not draw any real scientific advantage from it — example, scholastic theology or medicine to one who is a layman in these sciences. This is evidently the basis of that Muslim utilitarianism to which even so widely interested an investigator as Ibn Khaldūn

fell a victim (*Religious Attitude*, p. 119 sqq.). It is based on the tradition: "It is part of the beauty of a man's *islām* to let alone what does not concern him" (*Min ḥusn islām al-mar'ī tarḥūku wāḥidun la ya'nihi*; Goldziher, *Muk. Stud.*, ii. 157). Magic, then, though it is real (*ḥaqīq*), as both *Qur'ān* and traditions show, should be let alone. Further, al-Ghazālī describes magic as a science which makes use of the properties of substances (*ḡawāḥir*) and numbers under certain astrological conditions; it makes of the substances a magical figure (*ḥaiḥal*; cf. Dozy, *Suppl.*, ii. 775^b); the word seems to indicate Jewish origin for this form of magic) in the form of the person to be enchanted; an astrological situation is awaited and words, evil and involving unbelief (*kufr*), are pronounced over it, by which the assistance of *shayṭān's* is secured; from all this there result strange effects (*ahwāl ḡarībā*) on the person to be enchanted "by Allāh's influencing the custom of things" (*bi-ḥukm iḡrā' il-lāhī 'l-āda*). The commentary of Muṭaḥṣin al-Zabīdī on this is worth consulting. His great authority is evidently Fakhr al-Dīn al-Rāzī whom he scholasticizes still further. He quotes from his *Mulakhḥḥat* and his *Sirr al-mukhtam* which are still in MS. (*G.A.L.*, i. 507), also from Maṣlama al-Maḡirīṭī (d. 398 = 1007; *G.A.L.*, i. 243), *Ḥāyat* (or *Nikāyat*) *al-ḥakīm* which also is still in MS. But however even al-Ghazālī, with all the weight of his influence, might draw up a strict scheme of life to purify and safeguard the soul — his *ḥyā* is constructed entirely from that point of view, the masses of *islām* would have none of it. The position, which is quite clear in the *Fihrist*, of licit and illicit magic, was left unchanged and licit magicians could protest that their art, derived from Sulaimān, the Prophet of Allāh, was orthodox and even pious. The boundary lines, too, between the licit and the illicit were, and are, very vague; as vague as the status of spirits in *islām* (article *ḡINN* above, i. 1045), in which a mass of the *ḡinn* are "believers", the relation of the *shayṭān's* to the *ḡinn* is uncertain, and there is even record of a believing descendant of Iblīs. Further, even the scholastics found difficulty in the Ghazālīan position. It was pointed out that, on the one hand, it was only the practice of magic for evil purposes which could be called blameworthy, and, on another, that a knowledge of magic was essential to any one who had to distinguish between the results of magic and the evidentiary miracles (*mu'ḡīzāt*) of prophets and, still more, the *ḡaḡḡ*, *ḡarūmūt* [see article above] of the saints (Ḥalḡawī, ed. Fleischer, i. 76; Rāzī, *Maḡātib*, Cairo 1307, i. 434, 7 from below, 199.)

The only printed materials we have for the position of Fakhr al-Dīn al-Rāzī (d. 606 = 1209), apart from such stray references as by Muṭaḥṣin al-Zabīdī above, are in his *Qur'ān* commentary, *Maḡātib al-ḡaḡib*, where he treats the subject at length in dealing with the *Qur'ānic locus classicus*, ii. 96. He had been strongly affected by Mu'tazilite positions and had come to accept some of them, retaining in the end Sannite orthodoxy, coloured with scholastic intellectualism and a fondness for analyzed, systematic statements (Goldziher in *Der Islam*, iii. pp. 238 sqq.; *Koranauslegung*, pp. 123, 203 and by index under *Maḡātib*). His essential position upon magic is shown by his treatment of the story of the woman who went to Hārūt and Mārūt in Bāḡl to learn magic from them. After her "faith"

(*īmān*) has gone visibly forth from her and ascended to the heavens, they say to her: "You will never will a thing so as to picture it in your imagination but it will happen" (*Mā turīdūna ḡā'an fa-ḡuḡaw-wiriki fi wahmiki illā ḡān*; *Maḡātib*, i. 434, 66). Magic, therefore, is essentially a psychical working with physical effects; whatever the magician images to himself in his *wahm* comes about. On pp. 429—434 Rāzī enumerates eight categories (*na'w*) to which the term *sihr* has been applied. (i.) Ancient Chaldean magic, based on the worship and influence of the stars. To this is added a statement and a refutation of the Mu'tazilite position on magic. (ii.) Psychical magic (*sihr aḡḡāb al-awḡān wa 'l-nafūs al-ḡawāya* or *aḡḡāb al-rubb*). This is defended by the influence of the human *na'f* on its own body and on other bodies; seven illustrations of this are given and the possibility of contact with the celestial spirits (*al-arwāḡ al-samāwiya wa 'l-nafūs al-salakiya*) and the magical use of these are discussed. (iii.) The same by means of the earth-spirits (*al-arwāḡ al-arḡiya*), i.e. the *ḡinn*. This kind, see the licit magic of the *Fihrist* above, is called *al-wāḡim wa-amal taḡḡir al-ḡinn*. (iv.) Juggling by holding and directing the eyes of the onlookers (*al-taḡḡayyulāt wa 'l-shuḡḡ bi 'l-ayn*). (v.) Wonderful operations by means of machines, automata and various scientific devices. (vi.) Using properties of drugs and perfumes to stupefy. (vii.) Gaining the foolish by large claims of possessing the Most Great Name and commanding the *ḡinn*. (viii.) By slander (*namima*) and secret exciting of discord. In the statement in the *Dictionary of technical terms* — a modern compilation — pp. 648—653, which is based almost entirely on Rāzī, only the first four of these are given, and it is said that the Mu'tazilites rejected all but the fourth. In the Cairo text of Rāzī (p. 434, 4 sqq.) the Mu'tazilites are said to have rejected all but iv., vi., viii. Did they deny v. and vii.?

In Ibn Khaldūn (d. 808 = 1406) the psychical position of Rāzī is still further developed and clarified until it practically coincides with the modern psychological doctrine of automatism; thus he is the first to give a full description of the rationale of crystal-gazing, or "scrying", essentially in modern terms (*Muḡaddima*, ed. Quatremère, i. 191—195). With Ibn Khaldūn's descriptions and explanations should be taken Theodore Besterman's *Crystal-Gazing: a study in the history, distribution, theory and practice of scrying*, London 1924; also W. H. Worrel, *Ink, oil and mirror gazing ceremonies in modern Egypt*, in *J.A.O.S.*, xxxvi. 37—53. So Ibn Khaldūn had moved far beyond Rāzī as to Rāzī's second and third classes of magic. But although a devout Muslim, holding by *Qur'ān* and *Sunna*, he went strictly by what he had himself experienced and tested. Soothsayers and magicians of various kinds he had known, tried and accepted; he had dreams and found them valid; of the miracles of the saints he was firmly convinced. But he had never known either *ḡinn* or individual angels, although he felt compelled to admit the existence of a vague Heavenly Host (*al-mala al-a'la*) with celestial — and satanic — influences upon the souls of men. So he entered all the *Qur'ānic* references which gave him trouble, either intellectually or because he had no experience of the facts to which they referred, among the *mutaḡḡḡihāt* verses, those of obscure interpretation, opposed to the *muḡḡamūl*

verses, those of firmly fixed meaning, following one interpretation of Qur'an iii. 5 which asserts that no one but Allah knows the meaning of these (ed. Quatremère, iii. 47; article KALAM above, li. 673b). Thus the essential force of magic lay in the *nafs* of the magician; a magician was born not made. He might aid his own power by drawing on mysterious powers outside, whether powers in the properties of things or of numbers or in other spiritual, non-material existences. For philosophers, says Ibn Khaldūn, the difference between pure magic and the art of talismans is that pure magic is worked by the soul of the magician without any helper (*ma'in*) but in talismans he draws upon the help of the spiritualities of the stars and the secrets of numbers and the properties of substances and the situations of the celestial sphere which affect the world of the elements — our world (ed. Quatremère, iii. 133). Apparently Ibn Khaldūn himself was in broad accord with this distinction, so far as he could control it by the facts he had himself known (Quatremère, iii. 129 *sqq.*). But he also considered that the apparatus of magic, as in geomancy in which the operator makes dots and lines in sand and constructs figures out of these, to divine the future, are simply a means of producing an hypnotic state in the magician in which the physical senses are blurred and the spiritual world is directly reached. If the magician does not show signs of such an hypnotic state he is an impostor (Quatremère, i. 209). Further an attempt had been made by al-Būnī (d. 622 = 1225; see article above), following the methods of some extreme Sūfī's (*al-ghulāt, ahl al-ta'arruf*), to draw up a system of licit magic, based on the powers of the letters in divine names and constructing from these magic squares and talismans. This was called *Simiyā'*, *ḥuṣṣā* (Dozy, *Suppl.*, i. 708b), like the Jewish Kabbala of the alphabetic and thaumaturgic type connected with the Divine Names (cf. C. D. Ginsburg, *The Kabbalah*, ii. ed., London 1920, p. 127 *sqq.*) but in Ibn Khaldūn's opinion it was simply magic, because it professed to derive its forces from natural powers and not from Allah, although using his names, and so came under the condemnation of magic (ed. Quatremère, iii. 137 *sqq.*, especially p. 143 *sqq.*). The great book of this al-Būnī, *Shams al-ma'arif* (G.A.L., i. 497), is the *grimoire* of all the numberless Muslims at the present day who study magic. The two other authorities on magic to whom Ibn Khaldūn refers are Djābir b. Ḥaiyān and Maslama al-Madījī; on both see above.

It is plain from Ibn Khaldūn's theory that he was faced by the necessity of distinguishing, not only legally but also psychologically, between the working of magic and that of the powers inhering in saints and prophets. What was the difference between the prophetic, the saintly and the magical *nafs*? It was easy to rule, as he did (ed. Quatremère, iii. 134, 140), that the one is worked by a good man for good purposes and the other by an evil man for evil purposes, with an essential kinship between the *nafs* and this external power which aided it — that was the old legal distinction; see Baiḍawī on Qur'an ii. 96, vol. i., p. 76, &c. Also that the saint in his wonders and the prophet in his evidentiary miracles did everything in and by the assistance of Allah alone, without recourse to any other helper — whether spirit or natural

force. But there were the extreme Sūfīs who claimed control of the natural world; descendants, apparently, of the thaumaturgic wing of the neo-Platonists. And there was the great multitude of folk-lore saints, really animists, who, under a Muslim disguise, continued the divining and miracle-working of the old faiths and magics. This held, and holds, especially of Morocco with its hereditary sainthood. His own theory, too, of the magical *nafs* brought back the confusion of old Arabia between the *ṣāḥib* and the *nabī*. Thus the way was open for the continuance among orthodox Muslims of the study and even the practice of magic and for the very complete confusion which exists at the present day between licit and illicit magic.

For further details on Ibn Khaldūn's attitude to religion and magic, reference may be made to the present writer's *Religious Attitude and Life in Islam*, lectures ii.—vi. For saints and magic in Islam see E. Doutié, *Les Marabouts*, Paris 1900, *Les Aïssous*, Châlons 1900, *Magie et Religion dans l'Afrique du Nord*, Alger 1909 (the basal treatise on magic in modern Islam); E. Westermarck, *The Moorish conception of holiness*, Helsingfors 1916; T. H. Weir, *The Shukhs of Morocco*, Edinburgh 1904; Emily, *Shareefa of Wazan, My Life Story*, London 1911. Another of the means by which magic has survived among the Muslim masses has lain in the numerous popular stories in which unbelieving *ijfīs* and the magic and talismans of unbelieving magicians are overcome by the stronger talismans handed down from the early prophets. Two good examples of this type of story have been translated by Weil, from a Gotha MS., in his later recasting of his *Tausend und Eine Nacht — Adventures of Ali and Zahir of Damascus and Adventures of the Fisherman Djander*, vol. iv. of ed. Bonn 1897, p. 194—312. The *Strat Salf A. Dhi Yazan* is also of this type. By these stories, perhaps above all else, the equation, *sihr* = *kufr*, has been stamped on the Muslim mind, with a loop-hole left by the fact that the orthodox talismans are, in essence, as much *sihr* as those of the unbelievers. Again, another of these means lies in the popular classification of philosophers as magicians. This universal tendency has been very strong in Islam and especially so in the case of Ibn Sīnā [q. v.]. There is in wide circulation an apocryphal *Life* of him as a magician (*Hikāyat Abū 'Alī ibn Sīnā*, Ottoman Turkish lithograph, A.H. 1215 [1]; Azarbājdjāni, *Kurān* 1881; Arabic from the Turkish by Muṣṭafā Efendi Mukhīār, Cairo 1305 and other dates; cf. Petsch in *Katalog der türk. Hss. in Berlin*, p. 466; Chauvin, *Bibl. ar.*, v. 143). In consequence there exists under his name (Cairo *Matba'at al-ma'ārif*, no date, p. 32) a little magical treatise on the *simiyā'* side, *Al-ham al-ma'ārif* ma 'l-sirr al-ma'ārif, professing to be the result of his studies in the enchanted cave in the Maghrib which the apocryphal *Life* describes.

Thus in Qur'an and *Sunnah*, in orthodox theology, in mystical theology of all phases stretching to pantheistic theosophy, in philosophy and natural science of all kinds from almost experimental psychology to the speculations of the pseudo-Ibn Sīnā, in primitive animistic devotion, the existence of magic as a reality, though it may be a dangerous one, has been perpetuated.

The present status of magic in the Muslim world

can be illustrated by a little magical library formed by the present writer in Egypt in 1908 and supplemented since. — (1) The foundation is still the *Shams al-Ma'rif* of al-Būnī (large lithograph in 4 parts and 442 pp., written by Muḥammad Ḥusayn al-Shirāzī, various dates from 1322 to 1324), recommended to me as such a foundation by a native scholar, professor in a government training college for teachers, who had been a pupil of Iḥmāl al-Dīn al-Afghānī [q.v.]. (2) Another universal treatise is the *Mafūḥ al-ḥādī*, in 7 *ḥaḍīd* (Cairo 1327 = 1909; pp. 232), by Aḥmad Mūsā al-Zarkāwī. This book by a contemporary magician was published by subscription with an imposing list of subscribers; it covers the whole field from astronomy and astrology to geomancy, magic squares and werying. The author has embraced the position that the earth moves, which he knows as the Pythagorean, and has proved it from the *Ḥarān*. In this and in other ways he is far beyond the childish *ṣūfiyā* of al-Būnī. I have also a small calendar (*naḥḥa*) by him in its tenth year, for 1326 = 1908, with astrological and magical supplements. (3) Two treatises on *ṣūfiyā* of the *muḥṣar-rabāt*, "tested", type were published together, Cairo 1324 = 1906; *Kitāb al-malik al-maḥṣid* by Aḥmad al-Dairabī (d. 1151 = 1738; *G. A. L.*, ii. 323) and *Al-muḥṣar-rabāt* by Muḥammad b. Yūsuf al-Sanūsī (d. 892 = 1486; *G. A. L.*, ii. 252). The first of these must be very popular for I have also two editions of it separately, Cairo 1323, 1325. (4) Also of the *ṣūfiyā* type is *Kitāb al-fawā'id*, Cairo 1321, by Aḥmad b. 'Abd al-Latif al-Sharjī al-Yamānī (d. 812 = 1410; *G. A. L.*, ii. 190) — a very popular book in a third edition. (5) A more practical and picturesque and less verbosely pious book is *Shumūs al-annūr wa 'l-ḥanūz al-arṣār* (at least two editions, Cairo 1322, 1325) by Ibn al-Ḥajjāj al-Tilimsānī (d. 737 = 1336; *G. A. L.*, ii. 83; cf. Goldziher in *Z. D. P. V.*, xvii. 115—122). (6) Two books by a certain Muḥammad al-Rahawī (?), *Al-ḥikma al-manḥūm fi 'ulūm al-falāḥiyya wa 'l-muḥṣin* and *Ghāyat al-amān fi 'ulūm al-rūḥānī*, Cairo, no date, are of the same cabalistic type and the author names as his predecessors al-Ḥisālī, al-Būnī, Muḥyī al-Dīn Ibn al-'Arabī (d. 638 = 1240; *G. A. L.*, i. 441 *egg.*; cf. for this side of Ibn al-'Arabī the study of his *Kleinere Schriften* by H. S. Nyberg, Leiden 1919), Shihāb al-Dīn al-Kalāyī (d. 1037) and al-Sha'rānī [q.v.]. (7) Another contemporary Egyptian magician has three little treatises. He is Yūsuf Muḥammad al-Awghānī (d. al-Afghānī ?), known as al-Hindī, of the island of Shandawī in the Sa'īl, but giving as a Cairo address the abode (*manzil*) of 'Alī Efendi al-Naḥḥī, N° 8 Darb al-Duhūdā, in the Atfal al-Shaikh Murshid, over against the Mosque of al-Sha'rānī. There he is, or was, prepared to instruct in his art and to give permission to exercise it to those who, after being tested, prove worthy. His books are: *Al-dawḥar al-ghālī fi ḥawāṣṣ al-muḥallāṭ al-ḥisālī* (see above on the Ḥisālīan magic square); *Al-arṣār al-rūḥānīya fi taḥkīl al-arṣār al-rūḥānīya* (on the subjugating of the *ḥinn*); *Al-inḥiyat al-rūḥānīya fi muḥāḥadat al-arṣār al-rūḥānīya* (on the same subject). Only the last book has a date, 1325 = 1907. (8) *Kitāb al-fa'id al-muḥallāṭ*, Cairo, no date, is another treatise on the Ḥisālīan square by Aḥmad al-Damāḥī (d. 1192 = 1778; *G. A. L.*, ii. 371, under the title *Ḥad al-farā'id*). (9) Muḥammad

Ibrāhīm al-Bannān al-Zakāfī, *Al-arṣār al-ḥikma fi 'l-farā'id wa 'l-ḥawāṣṣ al-rūḥānīya*, Menāḥ 1323 (10) Al-Ḥajjāj Sa dān al-Zandī, *Al-arṣār al-rūḥānī fi 'ulūm al-rūḥānī*, Menāḥ, no date. (11) Al-Ḥajjāj Sa dān b. al-Ḥajjāj 'Abd al-Kādir al-Ḥanawī, *Al-fa'id al-rūḥānī fi 'ulūm al-rūḥānī*, Cairo, no date. (12) Al-sharī al-sharī bi 'l-Ḥadḥād, *Bahjat al-ḥinn fi taḥkīl muḥallāṭ al-ḥinn adīmān*, Cairo, no date; professes to be a very ancient book by a very famous magician about whom I know nothing. (13) Al-fa'il al-Yunānī al-ḥalīm Hermes, *Kitāb al-sa'ḥawāk al-ḥinn*, Cairo, no date, astrology; cf. *Fikrīn*, p. 239, 1 *egg.*; 267, 22 *egg.*; 353, 9 *egg.* and notes. (14) Abū Ma'shar [Djāfar b. Muḥammad] al-Balkhī, *Kitāb al-fa'id al-muḥallāṭ fi 'l-rūḥānī wa 'l-nisā' ala 'l-ḥawāṣṣ wa 'l-fawā'id*, *ala 'l-ḥalūḥat waḥḥā*, Cairo, no date, d. 272 = 885, *G. A. L.*, i. 221; article above, vol. i., p. 99; on Albumazar cf. *Fikrīn*, p. 277 and by index and notes; this title is not there; has curious conventionalized pictures of the Signs of the Zodiac. Another book of similar subject — the influence on the nature, dispositions and fortunes of men and women exerted by their birth-Signs of the Zodiac, combined with arithmetical calculations and suitable amulets — asserted by the same author, *Ḥikma kitāb . . . al-Yunānī al-fa'il al-sharī al-sharī al-sharī al-fa'il al-sharī* (Cairo, *Maḥṣar al-ḥinn*, no date; in Brill's Cat. N° 80. So there is a copy of this work [N° 33], dated Cairo 1288); another printer and publisher but has the same pictures of the Signs of the Zodiac; on p. 2 professes to give *ḥikma ramīya* but, if so, they are quite different from the usual geomantic figures as in the next book. (15) Muḥammad al-Zandī, *Kitāb al-fa'id fi 'ulūm al-raml*, Cairo, no date; on this author and on his art see Ibn Khaldūn, ed. Quatremère, i., p. 204—209; transl. de Slane, i. 233—241 and note; also J. Payne, *Aladdin and the enchanted lamp*, p. 199—201; cf. also *J. R. A. S.*, for Jan. 1906, p. 121 *egg.*; *Z. D. M. G.*, xviii. 177; xxv. 410; xxxi. 762, the geomancy of this book is essentially the same as that of modern western occultists, e. g. Franz Hartmann, *Principles of astrological geomancy*, London 1889. (16) An undated and anonymous *fa'id*-book described under *FA'ID* [q.v.]. Another very simple little luck-book is *Bahjat al-ḥinn* by Markūs Djirdjīs. A calendar, *Taḥwīn al-arṣār al-ḥafīya*, for 1326, has more elaborate fortune-telling additions with political outlook. (17) Djalāl al-Dīn al-Suyūṭī (d. 911 = 1505), *Kitāb al-rahma fi 'l-fa'id wa 'l-hikma*, Cairo 1324, *G. A. L.*, ii. 155, N° 238, a compound of *ṣūfiyā* and folk-medicine in 195 sections. (18) 'Abd al-Rahmān Ismā'il, *Tibb al-rikka* (2 parts; Cairo 1310, 1312); a counter-blast to all the above with much curious information on popular superstitions, especially medical; the author is a graduate of the Kayr al-'Aini medical school and writes with the indignation of the qualified medical practitioner.

Bibliography: In the nature of the case it must be enormous; the following is a mere suggestive selection. In Hastings, *Dictionary of Religion and Ethics* there are six cognate articles: Carra de Vaux, *Achens (Muhammadan)* in vol. i., p. 289—292; Theodor Noldeke, *Arabs (ancient)*, vol. i., p. 659—673; Carra de Vaux, *Charm and Amulets (Muhammadan)*, vol. iii., p. 457—461; Gaudetroy-Demombynes, *Demon and Spirits (Muslim)*, vol. iv., pp. 615—619.

Stevenson, *Some specimens of Muslim charms*, Glasgow University Oriental Society *Studia Scientiæ et Orientalis*, Glasgow 1920, p. 84—114; cf. further bibliography in *ibid.* xlii. 360 sq. and article by Bergsträsser, p. 227 sq.; Emile Mauchamp, *La Sorcellerie au Maroc*, Paris, Darbani-Alain, no date. On haunting spirits in modern Islam and how to exorcise them: Sophia Poole, *Englishwoman in Egypt*, London 1844, Letters iv., xiv., xvii.; Bayle St. John, *Two Years Residence in a Levantine Family*, London 1856, chap. xx.; J. S. Willmore, *Spoken Arabic of Egypt*, ii. ed., London 1905, p. 369—374 (with use of *khafaf* here in connection with the *djinn*, cf. Kur'an ii. 276 and the commentators thereon; also Ibn Khaldûn, ed. Quatremère, i. 195; *khafaf* is thus the Arabic equivalent for "raps" in western spiritism). The only occurrence of the spiritist "cabinet" for materialisations which I have so far found is in Doutte's *Magie et Religion*, p. 384 sqq. In Cairo 1908, a case of automatic writing was reported to me from Upper Egypt; otherwise it does not seem to occur. Rescher, *Studien über den Inhalt von 1001 Nacht*, in *Islam*, ix. 1—24. Richard Hartmann, *Eine islamische Apokalypse*, in *Schriften der Königsberger gelehrten Gesellschaft*, i. 3. A. Goodrich-Freest (Mrs. Hans Spoer), *The Occult in the Near East*, a series of articles by a practised folk-loreist in *Occult Review*, 1905—1906; also in *Folk Lore*, vols. xv., xviii., xxii. The classical authority in Arabic on the *djinn* is: Muhammad b. 'Abd Allâh al-Shiblî (d. 769 = 1367; *G. A. L.*, ii. 75), *Alâm al-marjân fî ahkâm al-ijân*, Cairo 1326, reviews by Nöldeke, *Z. D. M. G.*, lxi. 439 sqq. and O. Rescher in *W. Z. K. M.*, xxviii. 241—252. On the interpretation of dreams Muhammad b. Sirin (d. 110 = 728; *G. A. L.*, i. 66; Ibn Khallikân, de Sîrân's transl. ii. 586; ed. Cairo 1310, i. 453) is the oldest stated authority. Asserted by him, *Ta'îr al-nu'ûn*, Cairo 1320, 56 pages, and *Muntahab al-halâm fî tafsîr al-ahâm*, a much more extensive treatise — neither of these in Brockelmann — on the margin of the first vol. of the following: 'Abd al-Ghâni al-Nâimî (d. 1143 = 1731; *G. A. L.*, ii. 345, n^o. 28), *Ta'îr al-nu'ûn fî ta'îr al-manâm*, Cairo 1320, 2 vols., but another publisher. On the margin of the second vol. is *Al-ijârât fî*

ilm al-ihârât by Khalfî b. Shâhin al-Zâhiri (d. 872 = 1468; *G. A. L.*, ii. 135). On the whole subject cf. N. Bland, *On the Muslim Interpretation of Dreams* in *J. N. A. S.*, xvi. 153 sqq. (D. B. MACDONALD).

SIHYAWN. 1. The Arabic name for Zion, Hebrew Sîyon, the Arabic form coming from the Aramaic Šehyôn. Yâkût tells us that it is a famous place in Jerusalem, a quarter in which stands the Šihyawn church. In Muslim legend the mosque on the hill of Šihyawn is regarded as the place in which Mary, the mother of Jesus, and Joseph served in their youth in the sanctuary. Šihyawn is mentioned as early as the poet al-Ash'arî (Maimûn b. Kaïs) as a power which perhaps raises an army against the Arabs; the commentators explain this to refer to Byzantium. — Šahyûn is, according to Bakri, the name of a tribe but Ibn Duraid does not mention it.

2. The name of a fortress in Northern Syria: According to Yâkût, it is a stronghold near the Mediterranean Sea but not immediately on the coast in the administrative district of H.S.N. (without article, perhaps Hims is meant). According to Ibn al-Athîr and Yâkût the fortress was surrounded on all sides by deep ravines except for a narrow approach from the north, which was about sixty ells broad, but had been strengthened by a deep ditch made by the hand of man. Three walls surrounded the buildings, two protected the outer town and one the fortress. Ibn al-Athîr speaks of five walls. During the Crusades the fortress was for a considerable time in the possession of the French. In 584 (1188) Saladin began to bombard it soon after the 27th Jumâdâ I and took the fortress soon after the 2nd Jumâdâ II (24th and 29th July). It corresponds to the Sahian of the Crusaders and to the modern Šahyûn, about sixteen miles as the crow flies east of the seaport of Ladhîkiya.

SIKANDAR. [See **IKANDAR**.]

SIKHS. The term "Sikh" literally means a "learner", a "disciple". The name was for the first time given to the followers of Nānak, the founder of the Sikh faith in the Punjab in the xvth century.

History

Sikhism was founded, like Buddhism, as a protest against the spiritual despotism of the Brahmans and as a revolt against the restrictions of the caste system and the exaggeration of Hindu ritual. It aimed at teaching social equality and universal brotherhood, abolishing sectarianism and denouncing superstition. Nānak, the founder of the creed, was born of Khatri parentage in 1469 at Talwandi (now called after him Nankāna), a small town not far from Lahore. He did not receive much school education, yet he was from his early youth given to meditation and original thinking, and was, like the Arabian prophet, gifted by nature with strong common sense. He showed an aversion to all sorts of worldly pursuits and it was with some difficulty that he was persuaded by his father to go to Saltānpur (at present in the Kapūthala state) to enter the private service of Nawāb Dawlat

Khan Lodi, the governor of the province. The Nawab appointed him storekeeper to his household, and he performed his official duties for several years to the satisfaction of his employer. In his leisure hours he retired to the jungles for meditation, and tradition says that in one of these devotional excursions he was taken in a vision to the Divine Presence and there received his mission to preach to the world that "there is but one God whose name is True, the Creator, devoid of fear and enmity, immortal, unborn, self-existent, great and bountiful". Nanak now left the service of the Nawab and became (at the age of 30) a public preacher. He began a series of tours in the course of which he visited all parts of India, particularly the sacred places of the Hindus and shrines of Muslim saints. Wherever he went he held controversies with priests and shaikhs, demonstrated the fallacy of their belief in dogmas and rituals, and taught the necessity of self-denial, morality and truth. He is also said to have travelled through Persia and to have visited Mecca and Baghdad. In Persia and Afghanistan he gained converts and even established dioceses (*manjils*), notably at Bushahr and Kabul (Sewaram Singh, *Life of Guru Nanak*, p. 73). It is not stated, however, whether he knew enough Persian or Arabic to be able to preach to the people of these Islamic countries. The statement of the *Siyar al-Muta'akkinin* that Nanak studied Persian and Muslim theology with one Saliyid Hasan has been rejected by the modern Hindu and Sikh critics. "This", says one of them, "seems to be an effort on the part of a Muslim writer to give the credit of Nanak's subsequent greatness to the teachings of Islam" (G. C. Narang, *The Transformation of Sikhism*, p. 9). Macauliffe, however, is inclined to accept that Nanak was "a fair Persian scholar" (*The Sikh Religion*, i. 15), but does not mention the source whence he received his instruction in that language.

For the last ten years of his life Nanak settled at Kartarpur, a village founded in his honour by a millionaire on the bank of the Ravi, where he continued to preach his new religion to the numerous visitors whom his piety attracted from far and wide. He died at the age of 70 in 1539, leaving behind him a fairly large number of disciples (*sikhs*) and two sons, one of whom named Sri Chand founded the Udās sect (*see infra*).

Shortly before his death, Nanak nominated one of his devoted followers named Angad (a *Khatral* like himself) to succeed him as *guru* (apostle) of the Sikhs. After performing the ceremony of nomination he declared that Angad was as himself and that his own spirit would dwell in him. Nanak had already preached the doctrine of metempsychosis, but this particular declaration gave rise to the belief among the Sikhs that the spirit of Nanak was transmitted to each succeeding *guru* in turn, and this is why all of them adopted *Nanak* as their *nom de plume* in their compositions. Guru Angad occupied the office of apostle for 13 years until his death in 1552. Tradition ascribes to him the invention of the Gurmukhi characters in which the sacred writings of the Sikhs have been preserved, but it has been pointed out, notably by Grierson and Rose, that the Gurmukhi script is of a different and earlier origin (*J.R.A.S.*, 1916, p. 677; *A Glossary of the Tribes and Castes of the Punjab*, i. 677). The tradition may have arisen from the fact that Guru Angad adopted

the script in recording the life and compositions of Nanak.

Amar Das, the third *guru* of the Sikhs, was nominated by Angad himself. His ministry lasted 22 years (1552-1574), and is marked by his taking the first steps towards a religious and social organization of the Sikhs. Missionary work was undertaken by him in a systematic manner; over twenty dioceses (*manjils*) were established in various parts of the country, where some of his zealous disciples preached the gospel of Sikhism. In order to promote feelings of equality and brotherhood among the increasing number of Sikhs, he maintained a public refectory (*langar*) where all ate together without distinction of caste or creed. Amar Das cultivated friendly relations with the Emperor Akbar who visited him at his own residence in Goindwal (on the Beas) and granted him a large estate. This very much enhanced his prestige and helped to increase the number of fresh converts. He kept up the spirit of Nanak in his own ethical teachings, denounced the superstitious customs of the Hindus, particularly the practice of widow-burning (*sati*), and enjoined re-marriage of widows.

Amar Das was succeeded by his favourite disciple and son-in-law Ram Das, who propagated the tenets of Sikhism with a still larger measure of success. He had the good fortune to find in the Emperor Akbar a warm admirer who was ever keen to do him favour. The Emperor granted him (in 1577) a large plot of land in which he began the excavation of the sacred tank (meant for the devotional ablutions of the Sikhs) which was afterwards named *amrit sar* "the pool of nectar". Around the tank the Guru founded a small town which he called after himself Ramdaspur and which subsequently grew into the now flourishing city of Amritsar. The construction of the tank was completed by his son Arjan the 5th *guru*, who, in the midst of it, founded the *Har Mandir* — the temple dedicated to God — as a common place of worship for the Sikhs. To Europeans it is now known as "the Golden Temple of Amritsar". The Guru declared that "by bathing in the tank of Ram Das, all the sins that man committeth shall be done away, and he shall become pure by his ablutions" (Macauliffe, *op. cit.*, iii. 13). Thus was created a Mecca for the Sikhs — a centre for their national life.

Arjan succeeded his father in 1581, and henceforward the office of Guru became hereditary. Arjan took further steps to organise the Sikhs as a community. The greatest service that he rendered to the cause of Sikhism was the compilation of the *Granth*, the bible of the Sikhs. Guru Angad had already committed to writing the life and compositions of Nanak; Arjan carried the work further and added thereto the hymns of the next three Gurus, which he carefully collected. To these he added his own numerous compositions along with considerable extracts from the writings of several Hindu and Mahammedan saints anterior to Nanak. "It was one of the Guru's objects to show the world that there was no superstition in the Sikh religion, and that every good man, no matter of what caste or creed, was worthy of honour and reverence" (Macauliffe, *op. cit.*, iii. 61). The volume thus compiled by Guru Arjan (completed in 1604 after some years of labour) is called the *Adi Granth* ("the ancient scripture"), as

distinguished from the *Dasm Granth* or the *Granth of the tenth Guru* (see below).

Ardjan was an ambitious and enterprising leader. He combined business with spiritual guidance and deputed *Maranis* (collectors or agents) to various districts of the country to realise the Guru's dues, which so far were only voluntarily offered by the disciples. This brought him wealth and with it pomp and show. He styled himself *raja padshah* "the true King", which clearly marks his ambition for political power. He encouraged commercial enterprise among his disciples and sent them not only to various parts of India but also to Afghanistan and Central Asia for purposes of trade and propagation of the Sikh faith. In 1606, Ardjan financially helped Prince Khusrav who had rebelled against his father, the Emperor Djahangir. After the defeat of the Prince, the Guru was imprisoned, by the Emperor's command, at Lahore where he shortly afterwards died.

During the Guruship of Ardjan's son and successor Hargovind (1606-1645), Sikhism made a great advance. The first four Gurus were peaceful teachers of quietism and self-denial, but Ardjan initiated the policy of secular aggrandisement, while Hargovind openly adopted active resistance, which marks the beginning of the military career of the Sikhs. He was by nature a soldier, passionately devoted to the chase and manly games. Systematic collection of tithes and offerings had made him extremely rich and he was not slow to assume kingly authority. He cherished a hatred of Djahangir to whom he ascribed the death of his father; a desire for revenge was certainly one of the causes of his resorting to arms. He enlisted in his service a number of outlaws, malcontents and freebooters, "built the stronghold of Hargovindpur on the Beas and thence harried the plains. He had a stable of 800 horses; three hundred mounted followers were constantly in attendance upon him, and a guard of sixty match-lock-men secured the safety of his person" (Cunningham, *History of the Sikhs*, p. 56). The alarming reports of the Guru's military organisation reached the Emperor, who summoned him to his court and ordered his internment in the fort of Gwalior. He was released after some time, but the imprisonment gave him a further cause of resentment. Soon after the death of Djahangir and the accession to the throne of the Emperor Shah-djahan, Hargovind assumed a defiant attitude and took up arms against the government. In the course of six years he thrice defeated the troops sent against him by the governor of Lahore. But he feared vengeance on the part of Shah-djahan and retired to the hills where he lived unmolested until his death in 1645.

Under Hargovind the Sikh faith was greatly transformed. They ceased to be mere recluses, and their Guru was no longer a mere spiritual guide, but a military leader as well. They felt their strength and saw the possibility of future political power.

Hargovind was succeeded by his grandson Har Rai, who was, unlike his grandfather, of a retiring nature. He had intimate friendly relations with Durs Shikoh, the eldest son of Shah-djahan, and in 1658 when Durs wandered in exile pursued by the hostile troops of his younger brother Aurangzeb, Har Rai assisted him in crossing the Beas and teaching a comparatively safe locality. Of course he incurred the displeasure of Aurang-

zeb who summoned him to Delhi to answer for this affront. He sent on his own behalf his son Ram Rai who was detained at the imperial court as a hostage to insure the peaceful conduct of his father. Har Rai died in 1661 and his younger son Har Kishan (a child of six) succeeded him. His right to the Guruship was disputed by Ram Rai who laid his own case before Aurangzeb. The infant apostle was invited to Delhi to settle the dispute with his brother. There he was attacked with small-pox and died (1664).

There followed a struggle for succession after the death of Har Kishan, and it was after much opposition that Tegh Bahadur, son of Hargovind, was acknowledged as Guru from among a score of candidates for the pontifical throne. His opponents continued to assert their claims, and some of them were even set up as rival Gurus. Tegh Bahadur retired, in some bitterness to the Swatiks and there founded Anandpur, a town which played a part of some importance in the subsequent annals of the Sikhs. Further, he set out on an extensive tour in India, visiting the Deccan and the Eastern Beagal where bishoprics of the Sikh Church already existed. In the course of his travels he resided for some time at Patna, the seat of one of the arch-bishoprics (*satgats*), where his son Govind Rai, the future Guru and the real founder of the political power of the Sikhs, was born (1666). Tegh Bahadur's influence as Guru extended as far as Ceylon in the south and Assam in the east. After a time he returned to the Punjab where he "maintained himself and his disciples by plunder". He "gave a ready asylum to all fugitives and his power interfered with the prosperity of the country" (Cunningham, *op. cit.*, p. 64). The imperial troops marched against him and he was made prisoner and brought to Delhi where he was put to death by the order of Aurangzeb (1675). The popular story is related in the Gurmukhi chronicles that while in the presence of the Emperor, the Guru prophesied the coming of the English and destruction of the Mughal power at their hands. The words uttered by him on this occasion "became the battle-cry of the Sikhs in the assault on Delhi in 1857 under General John Nicholson and thus the prophecy of the 9th Guru was gloriously fulfilled" (Macauliffe, iv. 381).

The figure of Tegh Bahadur's son Govind Rai, who was saluted as Guru after the execution of his father in 1675, is perhaps the most prominent in the history of the Sikhs. He succeeded to the apostleship as a mere boy, but ended his career by completely transforming a community of mere devotees into a nation of warriors who were destined to rule the Punjab for nearly a century. The violent death of his father seems to have left a lasting impression on his young mind, and he cherished a bitter hatred towards Aurangzeb. But the power of the latter was too great to allow the possibility of revenge. He was therefore compelled to retire to the hills in order to be left in peace and receive the training necessary to befit him for the task of leadership. For twenty years he lived there, occupying himself in hunting and acquiring a knowledge of the sacred languages of the Muhammadans and Hindus and their religions. He nurtured his feeling of vengeance and formed his plans for the future with a view to destroying the power of the Mughals. He set about the task of uniting the Sikhs into a

nation by promoting amongst them feelings of democratic equality. He admitted both high and low into his fold and conducted a vigorous war against the caste system. In order to create uniformity in spirit as well as in form, he instituted the ceremony of initiation or baptism called *pahul* to be performed in the following manner:

"The initiate, after bathing and donning clean clothes, sits in the midst of an assembly generally summoned for the purpose, some sugar is mixed with water in an iron basin and five Sikhs in turn stir it with a double-edged dagger chanting certain verses of the Granth. After this, some of the solution is sprinkled over the hair and body of the initiate and some of it is given him to drink. The *raht* or rules of Sikh conduct are also explained to him. The solution is called *amrit* (nectar) which is supposed to confer immortality on the initiate, to make him a "Singh" (lion) and a true *Kshatriya*" (Rose, *Trials and Castles of the Punjab*, I, 696). After receiving the *pahul*, every Sikh was to leave his locks unshorn, to wear by way of uniform the 5 K's, i.e. 5 things whose name begin with a K, viz.: (1) *Kakhi* or short drawers, (2) *Kirpan*, a dagger, (3) *Kara*, an iron bracelet, (4) *Kesh*, long hair, and (5) *Kangha*, a comb. The suffix "Singh" was to be added to the name of every baptised Sikh, the Guru himself to be called in future Govind Singh. He denominated his initiated disciples the *Khalifa* (the pure, elect, liberated) or *Khalisa* (from the Arabic root *khala* - to purify or liberate). Govind Singh struck the key-note of his policy by thus addressing the Sikhs:

"Since the time of Baba Nanak *taranpahul* hath been customary. Men drank the water in which the Gurus had washed their feet, a custom which led to great humility; but the *Khalisa* can now only be maintained as a nation by bravery and skill in arms. Therefore I now institute the custom of baptism by water stirred with a dagger, and change my followers from Sikhs to Singhs or lions. They who accept the nectar of the *pahul* shall be changed before your very eyes from jackals into lions and shall obtain empire in this world and bliss hereafter" (Macauliffe, v. 93). "Abolition of caste, equality of privileges with one another and with the Guru, common worship, common baptism for all classes, and lastly, common external appearance — these were the means, besides common leadership and community of aspirations, which Govind employed to bring about unity among his followers, and by which he bound them together into a compact mass before they were hurled against the legions of the great Moghals" (Narang, *op. cit.*, p. 82).

By his prolonged residence in the hills, Govind Singh wanted, besides carrying on his proselytising activities uninterrupted, to secure the assistance of the numerous hill chiefs against what he called the tyranny of the Muhammadan rule. But in these objects he entirely failed, for the hill *rājās* whose dynasties had ruled independently since time immemorial, generally resented the principles of democracy being taught to their subjects and they unanimously resisted the religious propaganda of Govind. Failing to secure their alliance by friendly means, he tried the experiment of force. From his retreat at Anandpur he led marauding expeditions into their territories carrying away all that he could lay his hands on. The *Rājput* chiefs of Billopur, Katol, Handar, Djasrota and Nalagarh

united to attack the Guru with an army of 10,000. He opposed them at the head of 2,000 of his followers, including 500 Pathans whom he kept in his service, and won his victory at Bhangsal chiefly through the help of Saiyid Budh Shah, chief of Sādhora. Govind's power now increased; he had a number of retreats in the hills and his depredations in the adjoining territories grew more frequent and violent. The *Rājās* jointly appealed for help to Awrangzeb, who despatched orders to the governor of Sarhind to effect an alliance with them and attack the Guru. In the battle that ensued he was defeated and took refuge in the fortress of Anandpur (1701). Here he was besieged by the imperial forces and the siege was prolonged. Provisions ran short and his followers deserted him. His family, including his mother, wives and young boys effected their escape to Sarhind where they were betrayed and the two children were put to death. Govind himself escaped in disguise, and with a few faithful followers fled to the fortress of Camkaur (in the present district of Amballa) hotly pursued by the enemy. He was forced to leave Camkaur and again fly for his life. He wandered in disguise from place to place until he reached the wastes of Bhatinda, halfway between Ferozepur and Delhi. "His disciples again rallied round him and he succeeded in repulsing his pursuers at a place since called "Muktan" or the Pool of Salvation", constructed in commemoration of the Sikhs who fell in the action. For some time he settled at a place called Damdama "halfway between Hansi and Ferozepur", where he occupied himself in preaching and composing the *Darshan Granth* (see below), which is regarded by the Sikhs as supplement to the *Adi Granth* compiled by Guru Arjan. Meanwhile Awrangzeb died and was succeeded by his son Bahādur Shāh, who, contrary to the policy of his father, sought to conciliate the Guru. He conferred upon him the military command of the Deccan whither he proceeded to assume his charge. But shortly after his arrival there, he was stabbed by one of his Afghan servants for some private grievance, and he died at Nānder on the banks of the Godāwari (Oct. 1708). On his deathbed he refused to nominate anyone to succeed him, but enjoined upon his disciples to look upon the Granth as their future Guru, and upon God as their sole protector, thus putting an end to the apostolic succession. Govind's end came before his object had been achieved, "but his spirit survived to animate the Sikhs with courage."

Govind Singh was succeeded, not as a Guru but as a military leader of the Sikhs, by Banda, a *Rājput* of Kashmir belonging to the Bairāgi order. Meeting Govind in the Deccan, he was converted to Sikhism and styled himself "Banda" or "slave" (of the Guru). Banda was charged by Govind to return to the Punjab and urge the Sikhs to avenge the murder of his children and unite to destroy the Muhammadan despotism. The Sikhs "flocked to him, ready to fight and die under his banner". At heart Banda was ambitious, and under the pretext of carrying out the orders of the Guru he sought to attain to political power. He began his operations in the Punjab by committing highway robberies, freely distributing the spoils among his adherents. This attracted many criminals — scavengers, leather-dressers and such like persons who were very numerous among the Sikhs — to his person. The Moghul power, after

the death of Aurangzib, was fast declining; constant struggle among his sons and grandsons for the throne left the Sikhs free to increase their power, and the criminal activities of Banda went unchecked. He proceeded, with an army of lawless freebooters, from town to town in the very neighbourhood of Delhi, plundering and mercilessly slaughtering the Muhammadans in thousands. Prospects of plunder and the sacred duty of avenging the death of the Guru's children swelled the number of Banda's followers. The accursed town of Sarhind, where the children were done to death, was stormed by them in May 1710 and freely given to plunder. The Sikhs perpetrated horrible atrocities on the Muslim inhabitants of the town, whom they butchered without distinction of age or sex. They extended their destructive activities to the very walls of Delhi. The Emperor Bahadur Shah, who was away in the Deccan, was alarmed on hearing the reports of these outrages and forthwith hastened to the Punjab to make redress. The imperial troops defeated Banda, but he escaped to the adjoining hills. The death of Bahadur Shah in 1712 was followed by a war of succession between his sons, from which Dzhahān-dār Shah came out successful. He was however murdered, after a short reign of eleven months, by his nephew Farrukhsiyar who now ascended the degraded throne of Delhi. 'These commotions were favourable to the Sikhs', who once more began to ravage the country under the notorious Banda. Farrukhsiyar charged 'Abd al-Samad Khān, governor of the Punjab, to put a stop to the atrocities of the Sikhs. With a large army he pursued Banda who was at last besieged in the fortress of Gurdāpur on the Rāwī. Finally he was seized, made prisoner and brought to Delhi where he was tortured to death (1716).

Banda's character is by no means amiable. Even from the Sikh standpoint, he does not deserve reverence, for his motives were selfish and his means unscrupulous. Besides assuming sovereign authority, he aimed at creating a distinct sect of his own, and contrary to the dying injunctions of Govind Singh, he claimed to be acknowledged as the eleventh Guru. Moreover, he made certain other alterations in the Sikh beliefs and rituals — facts which led the more ardent followers of Govind Singh to revolt against his authority. However, there is no doubt that the stormy career through which the Sikhs passed under his leadership gave them a good deal of martial training.

The defeat and death of Banda was followed by a period of reaction and a severe persecution of the Sikhs in the reign of Farrukhsiyar. They were declared outlaws; many of them abandoned their faith, but the more loyal among them were forced to take shelter in the hills and forests. Successive governors of the Punjab, notably the Mu'in al-Mulk, better known as Mir Mannū, carried out the repressive policy of Farrukhsiyar, and for a time it seemed that the Sikh nation would become extinct. But the Moghul power was rapidly decaying, and in the Punjab it was more notably weakened by the frequent invasions of Ahmad Shah Abdālī. The distracted state of the province was favourable to the Sikhs who began gradually to reappear and reorganise themselves. They built several fortresses and acquired wealth by freely plundering the defenceless towns. The centre of their national activities was Amritsar, which they

greatly enriched and fortified. Prince Timūr, who governed the Punjab in the name of his father Ahmad Shāh Durrānī was hostile to the Sikhs. In 1756, he attacked Amritsar, demolished the Har Mandir and filled the sacred tank with the debris. The Sikhs mobilised in large numbers to avenge this outrage and succeeded in driving the Prince out of Lahore, which they temporarily occupied. Their military leader Djasāl Singh Kalāl (the 'brewer') struck coin in his own name with a Persian inscription. But the advent of the Mahrattas under Raghubar (in 1758) made them retire from Lahore, and brought the ferocious Ahmad Shāh for the fifth time to the Punjab. He inflicted a crushing defeat on the Mahrattas in the memorable battle of Pānīpat (1761). The Sikhs became active as soon as he left the Punjab and regained their lost power. He therefore came back with the definite object of breaking their power and recover his territories. In a desperate battle fought near Ludhiāna (1762) he totally defeated them with heavy carnage, but he had soon to leave the Punjab in order to suppress a rebellion at Kandahār. The Sikhs recovered soon and in 1763 they defeated Zain Khān, the Afghan governor of Sarhind, which they sacked and destroyed. Once more they took possession of Lahore, and this time their hold was more permanent. They assembled at Amritsar and proclaimed the regime of the Khālṣa as supreme in the Punjab (1764). The sovereign authority was vested in a national council called the *Guru-matta*. The coin of the Sikh commonwealth bore the Persian inscription:

*Dig u tigh u fath u nuqrat bi dirang
Yāst at Nānak Gurū Govind Singh*

*Guru Govind Singh received from Nānak

The Sword, the Bowl and Victory unfailing"

(Khazān Singh, *History of the Sikh Religion*, p. 264).

Now that the common danger which confronted the Sikhs was removed, they became disunited and divided into a number of states or confederacies called *Misals*. These *Misals* were 12 in number, governed independently of each other by their respective chiefs (*Sardār*, q. v.), who were under no supreme authority and had nothing in common with one another except their religion. "They were almost constantly engaged in civil war, grouping and regrouping in the struggle for pre-eminence". They were "loosely organised and varied from time to time in power and even in designation". After thirty years of this variable rule in the Punjab, there appeared on the scene a strong man who united these jarring confederacies into a compact sovereignty. This was Randjit Singh.

Randjit Singh's father Mahā Singh was the chief of the Sakerchakia *Misal* with its headquarters at Gadhrānwala, 40 miles to the north of Lahore. At the age of 12 (in 1792) he succeeded to the barony of his father. He gradually rose to power through his personal character and genius with which he was gifted by nature. In 1799 he acquired possession of Lahore through a royal investiture granted to him by Zamān Shāh (grandson of Ahmad Shāh Abdālī), who was still looked upon as virtual owner of the Punjab. Amritsar was reduced by Randjit Singh in 1802. The possession of Lahore and Amritsar, the two most important towns of the Punjab, made his personality conspicuous and enlarged his prestige. He assumed the title of Maharādja and continued to

extend his possessions until gradually he annexed all the *Misals* to his dominions. With the English, whose territories now extended to the Sutlej, Randjit Singh had friendly relations. A treaty of alliance was concluded between the two powers in 1809 which Randjit Singh very faithfully observed. He organised a powerful military force trained by some of the European generals, notably French, who had previously served under Napoleon, and after Waterloo came to the Punjab to enter the service of the Maharaja. With this force he was able to reduce the whole of the Punjab, annex Kashmir (in 1819) and Peshawar (in 1834). He died in 1839, leaving behind him a consolidated kingdom extending from the Sutlej to the Hindu Kush, but no one among his heirs was capable enough to manage it. Three of his sons ascended the throne in rapid succession; conspiracies were rife and led to assassinations, civil war and enormous bloodshed. The army had become uncontrollable and spread terror throughout the country. The court at last found an outlet for its activities by inciting the army leaders to cross the Sutlej and invade the British territory. This led to the first Sikh war (Dec. 1845), in the course of which the Sikhs were defeated by the English general Sir Hugh (afterwards Lord) Gough in four successive battles fought at Ferozshah and Madki (in the present district of Ferozepur) and Aliwal and Sobroon near Ludhiana (Jan.-Febr. 1846). "The victory opened the way to Lahore which was promptly occupied by the Governor-General" (Sir Henry Hardinge). The Sikh Durbār accepted the British resident (Sir Henry Lawrence) to act as President of the Council of Regency to the minor Maharaja Dalip Singh, son of Randjit Singh. The revolt of Diwan Mubārāj, governor of Multan, against the government at Lahore (in 1848) tempted the Sikhs again to take up arms against the English. War was consequently declared and Lord Gough inflicted two heavy defeats on the Sikh army, first at Chillianwala and then at Gujrat (early 1849). The Punjab was declared annexed to the British dominions and the Sikh rule came to an end.

Religion

Sikhism aimed at purifying the religious beliefs of the Hindus. The teachings of its founder were therefore mainly negative. He strongly protested against caste restrictions and superstitious beliefs. He preached absolute equality of mankind; he taught that mechanical worship and pilgrimages do not elevate the human soul; that spirit and not the form of devotion was the real thing. No salvation is possible without a true love of God and good deeds in this world. Sikhism, like Islam, condemns idolatry and teaches strict monotheism. Its God is the God of all mankind and of all religions, "whose name is true, the Creator, immortal, unborn, self-existent, great and beneficent" (*Qisṣṭi of Guru Nanak*).

Reverence for the Gurus is much emphasized, for although "God is with man, but can only be seen by means of the Gurus" (Macauliffe, II. 347). Sikhism also believes in the doctrine of Karma and Metempsychosis.

The theology of Nanak was not formal; his sole object was to bring about a social and moral reform. Sikhism remained a pacific and tolerant cult until the social tyranny of the Hindus and political

friction with Muhammadans transformed it into a militant creed. Govind Singh made Sikh theology more formal and prescribed rules for guidance in private and social affairs. He forbade the use of tobacco and wine, though the latter is now more freely indulged in by the Sikhs.

The sacred book of the Sikhs is the *Granth*, which is held by them in great reverence. The first portion of it, called the *Adi Granth* was compiled, as mentioned above, by the fifth Guru Arjan. It includes the hymns of the first five Gurus together with selections from the compositions of saints and reformers anterior to Nanak, notably Kabir, Namdev, Daj Dev, Rāmānand and Sheikh Farid. The *Granth* is composed wholly in verse with different metres. The bulk of it is in archaic Hindi written in Gurmukhi characters; other portions are in various other Indian dialects and languages including Sanskrit, together with a few verses and tales in Persian (written in Gurmukhi script). The second portion, called the *Dasam Granth* (or *Granth of the 10th Guru*) was compiled by Govind Singh and includes, in the main, his own writings. The major part of it consists, like the *Adi Granth*, of hymns in praise of God, but it also comprises the autobiography of Govind Singh, called the *Vachitra Natak* ("the wonderful drama") along with other miscellaneous compositions by the Hindi poets whom he kept in his service. The entire *Granth* usually forms a quarto volume of about 1,200 pages. Some of its chapters are used by the Sikhs as Divine Services and are repeated by them privately in the morning, evening, and at bed-time. Such are: (1) the *Dhāpdi* by Guru Nanak (see Macauliffe, I. 195-217); (2) *Asa Ki Vār* by the same (*ibid.*, pp. 218-249); (3) the *Dhāpdi* by Guru Govind (*op. cit.*, v. 261); (4) the *Rahitnā* (*op. cit.*, i. 250-257); (5) *Sohila* (*ibid.*, 258-260) and (6) the *Sukhmani* by Guru Arjan (*op. cit.*, III. 197-199). They are also recited at the administration of the *pahul* or baptism.

The cosmopolitan views of Nanak were acceptable to both Hindus and Muhammadans; moreover, he did not prescribe any particular forms of worship, hence it is not surprising that he gained converts from both religions. But it was undoubtedly Hinduism — the faith of his own parents — whose social system he wanted to reform, therefore naturally his teachings were addressed to the Hindus rather than the Muhammadans. The majority of his disciples was derived from the Dīkt, Arora and Khatri castes; to the last of them belonged all the Gurus including Nanak himself. To the Brahmins and Rājputs, whose social status was very high, the democratic tenets of Sikhism were less acceptable.

The sects and sub-sects of the Sikhs are numerous, but the main divisions are two: (1) the *Keshdhāris*, otherwise called "Singhs", and (2) the *Sahjdhāris*. The former represent the baptized and therefore more orthodox followers of Guru Govind Singh, while the latter were originally those who refused to accept his baptism and join the militant *Keshdhāris*. Other important sects are: (1) *Nanakpanthis*, "known roughly as Sikhs who are not Singhs, followers of the earlier Gurus, who do not think it necessary to follow the ceremonial and social observances inculcated by Guru Govind Singh. Their characteristics are, therefore, mainly negative; they do not forbid smoking; they do not insist on long hair; they are not

baptized with the *pahul* and so forth". In other words, they belong to the *Sahjdhāri* division. (2) *Udāsīs* (the renouncers) are also, like the *Nānakpanthīs*, included in the *Sahjdhāri* division. They represent the ascetic order founded by Sri Čand, son of Nānak. They remain celibate and their tenets are very much tinged with the Hindu ascetic beliefs. (3) the *Akālīs* (worshippers of Akāl, the Immortal, Timeless God) differ essentially from all other Sikh orders in being a militant organization founded by Govind Singh. They are more orthodox than most of the Sikhs and still retain their characteristic militant spirit. (4) the *Bandās* or *Bandāpanthīs* i.e. those who accepted Banda as the eleventh Guru, while the *Dīas Khālās* are strict adherents to the doctrines of Govind in opposition to the innovations of Banda. (5) the *Machhīs* (pron. *Maichīs*) represent members of the scavenger class converted to Sikhism by taking the *pahul*, while the name *Kāndīs* (followers of Guru Rām Dās, by whom they were first converted) is applied to *Čanāris* (leather-dressers) who have taken the *pahul*. The Sikh shrines are scattered over the greater part of the Punjab, but the better known among them are to be found in the districts of Amritsar, Gurdaspur and Ferozepur — the holiest of them being the Golden Temple of Amritsar and Nankāna Šāhīb (near Lahore) the birthplace of Nānak, where annual fairs, attended by a very large number of Sikhs, are held.

According to the census returns of 1921, the total Sikh population is 3,238,803; of which 3,110,000 (all but 4/5) are in the Punjab, the chief centres being the districts of Amritsar, Ludhiana and Ferozepur, and the native states Patiala, Nabha, Dīnd and Faridkot. The strength of the chief sects is as follows:

Keshdhāris	2,876,320
Sahjdhāris	228,600
Dīas Khālās	531,300
Nānakpanthīs	22,500

Ever since the English conquest of the Punjab (in 1849) the Sikhs have remained loyal subjects of the British Crown. As a community they are prosperous; physically they are superior to the rest of the Punjabīs. Military service is one of their favourite occupations and they are justly looked upon as among the finest soldiers of the East. Sikh regiments rendered excellent service to the cause of the Allies in the great European war.

The Sikhs have made considerable progress during the last 40 years. There now exist several organized bodies working systematically for their social and educational advancement. The "Singh Sabha" was founded 30 years ago with the object of propagating the religious doctrines of the Khālās with its headquarters at Amritsar. Another body, called "the Chief Khālās Dīwān" has undertaken the work of social reformation and spread of education. It has its branches in all districts and Sikh states. The "Sharomant Guradwārā Parbandhak Committee" is another institution very recently established with the purpose of taking into their hands the management of the Sikh shrines which were formerly controlled by hereditary Hindu *mahānts*. "The Committee chiefly represents the Akālī sects but has received support from Sikhs in its campaign for the control of shrines in which it has attained a considerable measure of success".

The Sikhs now form a distinct community entirely separate from the Hindus. Their ceremonies of birth, marriage and death are no longer presided over by the Brahmans, but by the Gṛāms, the professional interpreters of the Granth. Like Hindus they burn their dead, but unlike them they marry late and their widows freely re-marry. The Sikhs are also progressing numerically owing partially to the influx of converts from the Hindu depressed classes. The centre of all religious and social activities of the Sikhs is Amritsar where they maintain a large educational institution called the Khālās College affiliated to the University of Lahore. Another similar institution exists at Gujranwālā, while their communal schools are scattered over the whole province.

SIKKA (A., from *sakk*), die, coinage, currency, coin in general; *dar al-sikka* = mint. In the coin-legends of the Sulṭāns of Dehli of the

thirteenth (sixth) century, *al-sikka* is used only of the gold coins, the corresponding word on the silver coins being *al-ṣidda*. From 1320 to 1328, after which the formula was no longer used, *sikka* is applied to both gold and silver. Except for a sporadic occurrence of the denomination *sikka murādī* on a rare coin of Humayūn, the noun is not found again till the reign of the Mughal Shāh 'Alam Bahādur (1707—1712 = 1119—1124), who introduced on his coins the formula, *sikka* or *sikka mubārak* followed by his titles, which remained usual till the end of the dynasty. The Persian verb *sikka* *sad* however regularly occurs in the couplets of the Emperors from Dīlshāhir onwards. The word *sikka* (*sica*) came for some reason not quite certain quite early in the xviii century A. D. to be particularly associated with the rupee by the English in India and was applied to a recently struck rupee, not yet liable to discount for depreciation. The new rupee, issued by the East India Co. in 1793 to abolish the monetary confusion then existing, was known as the '19 sun sikka' because it was dated in the 19th year of Shāh 'Alam II and remained the unit of British Indian currency for 40 years.

Through Egypt and Italy (*sechino*) the Arabic *sikka* has given us the word "sequin", which found its way also into the Anglo-Indian vocabulary in the forms "chicken" and "chick". (J. ALLAN)

SILĀH-DĀR (A. P., "bearer of arms"), an officer of the Mamlūk court, each of whom carried one of the pieces of the Sultān's equipment and presented it to him when he required it. There were several of them; their chief, called the *amir silāh* was in charge of the arsenal (*silāh-khānā*) and of all that was used in it, or went in or out of it. He ranked among the amirs of a hundred (*amir mi'a*) and had the title *ḡā-nāh karīm 'ālī*.

The Ottoman Turks retained the same title under its Persian form *silāh-dār*. The *silāh-dār-aghā* and the *ṣeḥā-dār-aghā* were the two chief officials in the Sultān's chamber; at the mosque they thrice presented him with rose-water and perfume of wood of aloes. At the ceremony of *ḡharḡā-s ṡarīf* [q. v.] the *silāh-dār-aghā* stood beside the relic; each time that it was kissed, he wiped it with a muslin handkerchief which he then presented to the individual who had just kissed it. Beside him stood an official in charge of all these handkerchiefs. On the last day of Ramaḡān, after the midday prayer, the Sultān went to the apartments of this official and from a raised block witnessed the sport of *ṡomāḡ* (tilting).

The *silāhdārs* were a cavalry corps as old as the Janissaries; they numbered 8,000 men under Mohammad II and 12,000 under Ahmad III. Its chief was called the *silāh-dār-aghā* like the Sultān's sword-bearer, but did not enjoy the same privileges.

SILIWAN. (See MAIYAFARIKIN)

SILVES, in Arabic *ḡulm* (ethnic: *ḡilbi*), a small town in southern Portugal, the former capital of the province of Algarve (Ar. *al-ḡharā*) and important metropolis of the ḡharb al-Andalus under Arab rule. It was part of the district of al-Shiḡhān, in the time of al-Iḡrā. It was surrounded by gardens and orchards, and

there were many water-mills. It had a harbour on the river, with timber-yards, where the wood of the forests of the region was prepared for exportation. Its figs were renowned. Its population, which claimed to be of Yaman origin, talked a very pure Arabic and had a reputation for its taste in literature and in poetry. The town was celebrated by a poem of the 'Abbāḡid dynast, al-Mu'tamid (cf. R. Dozy, *Script. Ar. loci de Alḡbād*, i, p. 391).

After the downfall of the 'Umayyad caliphate of Spain, Silves, like many of the small capitals of the Peninsula, became the capital of a very small independent state, under the ephemeral dynasty of the Banū Muzāin, on which the recent discovery of a fragment of history has enabled definite facts to be produced for the first time. In 440 (1048—1049) the *kaḡī* of the town declared himself an independent sovereign; he named himself Abu 'l-Aḡbāḡ 'Isā b. Abi Bakr Muḡammad b. Sa'īd b. Djamīl b. Sa'īd (author of a commentary on the *Mawāḡi* of Mālik b. Anas) b. Ibrāhīm b. Abi Naḡr Muḡammad b. Ibrāhīm b. Abi 'l-Djūd Muzāin. He took the honorary title of al-Muḡaffar and organised his state with a watchful eye on his powerful neighbour, the prince of Seville al-Mu'taḡid [q. v.] of the dynasty of the 'Abbāḡids. But this sovereign did not hesitate to attack him and ended by killing him in the course of a battle, at the end of 445 (April 1053). The son of Abu 'l-Aḡbāḡ, Abū 'Abd Allāh Muḡammad, succeeded him, with the honorific title of al-Nāḡir; he made himself loved by his subjects and died in Raḡī II 450 (June 1058) leaving the throne to his son 'Isā al-Muḡaffar II. He, like his grandfather, was without delay attacked by al-Mu'taḡid, who blockaded him in Silves and cut off every means of communication. The town was besieged and its ramparts destroyed by means of siege-artillery and saps. The prince of Silves was beheaded by the victor in his own palace in Shawwāl 455 (October 1063). The little dynasty of the Banū Muzāin was extinguished with him, after maintaining itself for only fifteen years.

At the end of the Almoravid dynasty, Silves was the starting point of two revolts: that of Abu 'l-Kāsim Ahmad b. al-ḡassān Ibn Kisīy (Kast) and that of Abu 'l-Walīd Muḡammad b. 'Umar Ibn al-Mundhir. At last in 586 (1190) the king of Portugal, Sancho I, seized Silves, which was retaken a little later by the Almohad Abū Yūsuf Ya'ḡūb. Some years afterwards, it passed definitely under Portuguese rule.

AL-SIMĀK, "the prominent", the name of the brightest star in the constellation of the Virgin (magnitude 1.2). Virgo (*al-ʿaḥḥā*) has from early times been represented as a woman holding an ear of corn (*sumbala*) in the left hand. The constellation is also often called *Sumbala*. **Al-Simāk** (Greek *σπίς*, Latin *spica*) is close to her right hand. The Arabic word *al-Simāk* was corrupted in the west to *Asimach*, or *Eltamach*. As it was thought that *al-Simāk* was connected with *Arcturus* in *Bootes* by being placed opposite it, a distinction was made between *al-Simāk al-ʿaḥḥā* (the unarmed *Simāk* = *spica*) and *al-Simāk al-ʿarḥmī* (the *Simāk* with the lance = *Arcturus* [magnitude 1.2]). From the adjective part of the Arabic name for *Arcturus*, *al-ʿarḥmī*, came the *Aramē* of the west. The dual forms *al-Simākān* and *al-Anḥarān* (the day-light and the rain-bringing) occur as general name of both stars. **Al-Simāk** is the fourteenth moon-station.

Our constellation of Virgo was represented in Babylonian by the ideogram **AB.SIM** (= *Šarū*, corn standing in the stalk). *Spica* alone had the same ideogram. The stars ξ , ν , β Virginis were allotted by the Babylonians to *Leo*. The constellation of the Virgin belonged to the Goddess *Shala* (wife of the weather-god *Adad*) along with *Shubultu* (ear of corn).

SIMANCAS, a small town in Northern Spain, situated eight miles south-east of Valladolid and now famous for its castle where are preserved the archives of the kingdom of Spain. The name is transcribed in Arabic *Šamt Māntar* in the *Kitāb al-Iḥār* of Ibn Khaldūn. It was near Simancas that in 327 (939) the armies of the Umayyad Caliph 'Abd al-Rahmān III were severely defeated by the Christian King Ramiro II. This battle itself was only the prelude to a still more bloody encounter, the "battle of the ditch" (*waḡat al-ḥandaḡ*), or battle of Alhandega, which took place soon after to the south of Salamanca, on the banks of the river Tormes.

(E. LEVI-PROVENÇAL)

SIMAW, a town in Asia Minor, 85 miles S. E. of Kutahya, 110 miles south of Brussa, the residence of a *ḡā'im-maḥḥān*, capital of the *ḡāḍ* of the same name. Simaw has now about 6,000 inhabitants mainly Muslims, and has a neglected appearance. It played a considerable part at an

earlier period. It is the *Sōmas* of the ancients, of which many traces still exist (ruins, inscriptions etc.). In the Byzantine period, Simaw was the see of a bishop. In 783 (1381/1382) Simaw was conquered by Murād I and incorporated in the Ottoman Empire; cf. 'Ashkharatade, *Ta'rikh*, Istanbul 1332, p. 57; Simaw, which possesses nine large and three small mosques, four medreses and a dervish monastery was the birthplace of several men of importance in the history of the Muslim religion, e. g. Shaikh 'Abd Allāh Ilāhī (d. 896 A. H.), Kara Shams al-Dīn (cf. Ewliya, *Siyāhatnāme*, iii, 377) and notably Shaikh Badr al-Dīn Maḥmūd famous for his rebellion, the "Son of the ḡāḍ of Simaw" (cf. Ibn Kāḍī Simawna, p. 416; F. Babinger in *Ill.*, xi, 1921, p. 129; xii, 1922, p. 103 sqq.). Simaw has been visited and described in modern times by various European travellers, such as W. J. Hamilton, A. D. Mordtmann Sen., K. Buresch, Th. Wiegand, A. Philippson etc. The remains of the old defences of which, in addition to the citadel commanding the town which was afterwards transformed, there are still ruins on a low mound not far from the town, would be worthy of fuller investigation, as well as the ancient inscriptions built into the mosques. Simaw which now lies off the line of traffic, will soon be opened up by the Balikesir-Uşak (wrongly 'Uşahak') railway. Near it is the Simaw-Gölü, or Lake of Simaw.

Bibliography: V. Cuiet, *La Turquie d'Asie*, iv, 222 sq.; W. J. Hamilton, *Researches in Asia Minor*, London 1842, ii, 124; K. Buresch, *Ans Lydien*, Leipzig 1898, p. 142 sqq.; Th. Wiegand in *Athenische Mitteilungen*, Athens 1904, xxix, p. 324 (with view); A. D. Mordtmann, *Anatolien*, ed. by F. Babinger, Hanover 1925, p. 40, 41 (cf. *Das Ausland*, 1855, p. 614). (FRANZ BABINGER)

SIMIYĀ, in form like *ḥibriyā*, belongs to old Arabic beside *simā*, *imā* (Kur'an, xlviii, 29 etc.; Haidkwi, ed. Fleischer, i, 326, 14, 15), in the sense "mark, sign, badge" (Lane, p. 1476; *Ṣaḥāḥ*, s.v., ii, 200 of ed. Bull. 1282; *Ḥamān*, ed. Freytag, p. 696; *Lisān*, v, 205). But the word, as a name for certain departments of magic, had a quite different derivation; in that sense it is from *ḥimā*, through the Syriac *ܚܡܐ* and means "signs, letters of the alphabet" (Dozy, *Suppl.*, i, 708^b and references there; Payne Smith, *Thesaurus Syriacus*, ii, col. 2614). In the Syriac-Arabic lexicons the Syriac word is regularly rendered by the Arabic *ḥimā*; *simiyā* was taken over, apparently, in a technical sense. Payne Smith, following apparently Bruns, gives as the predominant technical meaning "chiromancy"; in Bochart, *Dictionnaire françois-arabe* (i, 154^b), under *Chiromancie*, *simiyā* is given as one of three Arabic renderings. By Barthelemy (d. 685/1286) the Syriac and Arabic forms are used together (*Chiron. Syr.*, ed. Paris, p. 14, 1; *Muḥḥatāt*, ed. Pococke, p. 33); according to these passages the science (*ilm*) was "invented" in the time of Moses by a certain *ܡܡܝܝܐ*,

ܡܡܝܝܐ, which Bruns and Kirsch rendered "Eunumius", but he seems to be quite unknown. The *Muḥḥatāt* (ii, 1032^b) suggests a derivation from *ܡܡܝܐ*, "name of Allāh", and the Names of Allāh certainly play a large part in *simiyā* (Douté, *Magie et Religion*, p. 344, who also suggests, p.

102 that the form of the word has been affected by *simiyā*; but see above).

The term, apart from the dubious "chiromancy", has been and is applied to two quite different branches of magic; there is no evidence which of these, if either, Barhebraeus had in mind. (1) It is very widely applied at the present day to what is often called "natural magic", but is evidently hypnotism. Ibn Khaldūn (*Muḥadditha*, ed. Quatremère, iii. 126) gives this as the third division of magic (*siḥr*) in his arrangement and says that the philosophers (*al-falāsifa*) call it *ḥa'madha* and *ḥa'badha*; cf. Lane on these words p. 1559², where it is instructive to notice his struggles, in a pre-hypnotic age, to render the idea of hypnotism. Ibn Khaldūn expresses it very clearly as a working of the *nafs* of the magician on the imagination of his subject, conveying certain ideas and forms which are then transferred to the senses of the subject and objectify themselves externally in appearances which have no external reality. Well described cases of this will be found in Lane's *Arabian Nights*, chap. i., note 15, ii. *Modern Egyptians*, chap. xii.; Ibn Baṭṭūṭa, Paris ed., iii. 452 sq.; iv. 277 sq.; Noldeke, *Docteur and Garib*, p. 5 and passim. Cf. also Doutté, pp. 102 and 345 sq.; he calls it also *nirandj*; *Muḥib*, ii. 1032²; Chauvin, *Bibl. ar.*, part vii., p. 102 and references there.

(2) The second is dealt with at length by Ibn Khaldūn in a special section (ed. Quatremère, iii. 137 sqq.; de Slane's transl., iii. 188 sqq.; Bulaḡ, folio ed. of 1274, p. 242 sqq.; Bulaḡ, quarto, p. 420 sqq.; not in Beyrout editions). In Ibn Khaldūn's time (d. 808/1405) it was called distinctively *simiyā* and at the present day many treatises on it are in print and are widely studied. For some of these see Nos. 1, 3, 4 in the list of magical books, article *siḥr* above, but all books on licit magic are affected by it and the *Zā'irifa* [q.v.] is a specially complicated form of it. Ibn Khaldūn prefers to call it the Science of the secret powers of Letters (*ḥurūf*) because *simiyā* was originally a broader term applied to the whole science of talismans and this limited one only originated in the extremist school of Sūfis who professed to be able to control (*taṣarrufa*) the material world by means of these letters and the names and figures compounded from them. It was thus considered a possible study and practice for pious Muslims. But the Sūfis who took it up were of the speculative and pantheistic school and claimed control of the elemental world and power to invade its order (*ḥawāṭir al-'āḍa*) and asserted that all existence descended in a certain sequence from a Unity (the Neoplatonic Chain); for this they constructed a system of technical terms and on it compiled treatises. In their system the entelechy (*ḥamāl*) of the Divine Names proceeds from the help of the spirits of the spheres and of the stars, and the natures and secret powers of the letters circulate in the Names built out of them. Then they circulate similarly in the changes of transient becoming (*al-'awān*) in this world and these *'awān* pass from the first initial creation (*al-'ibḍā*) into the different phases of that creation and express clearly its secrets. This seems to mean that letters contain the primal secrets of creation and the secret powers which still circulate in the *'awān* and that the Divine Names and Allocutions (*kalimat*; [q.v.]) are produced from letters; therefore

the elemental world and the *'awān* in it can be controlled by these names and allocutions when used by spiritual souls (*nufūs rabbāniya*). That is the doctrine of al-Būnī [q.v.], Ibn 'Arabī [q.v.] and their followers. As to the nature and origin of this secret power in letters there is dispute. Some assign it to an elemental nature or constitution (*ḥaṣṣ*) and divide letters into four classes according to the four elements. Others ascribe it to a numerical relationship (*nisba 'adaḍiya*) based on the value of the letters as numbers (*abjad*). Ibn Khaldūn admits that there does exist such control of the material world but it is by divine grace in the *ḥaramāt* [q.v.] of the *awān* [q.v.] and when those who lack that divine grace and insight endeavour to exert the same control by means of these names and allocutions they are in the same class as the workers of magic by means of talismans, except that they have not the scientific training and system of these magicians. They may produce effects through the influence of the human *nafs* and purpose (*ḥimma*) — which for Ibn Khaldūn is the basis of all such working, licit and illicit — but these effects are contemptible beside those of the professional magicians. Ibn Khaldūn, therefore, disapproves of this attempt by al-Būnī and others to produce a pious and licit magic; but there is no question that al-Būnī has imposed his system upon Islam. There are many examples of this form of magic in Muslim literature; e.g. several references in the longer recension of "The Forty Vezirs", transl. by Petis de la Croix (*Histoire de la Sultane de Perse et des Vezirs*), see especially an extended exposition, p. 186 sqq. of ed. Amsterdam, 1707. The best description and a sympathetic exposition of this state of mind which sees in letters relations to the universe and a science of the universe is in Louis Massignou's *Al-Hallaj*, p. 588 sqq.; cf., too, Doutté, p. 172 sqq. It is evident that this is a sister phase of thought to the Jewish Kabbala of the alphabetic and theurgic type connected with the divine names, teaching that the science of letters is the science of the essences of things and that by letters God created and controls the world and that men by suitable knowledge of these can control material things (cf. C. D. Ginsburg, *The Kabbalah*, p. 127 sqq.; article *KABBALA* by H. Loewe in Hastings' *Encyclopaedia of Rel. and Ethics*, vii. 622-628).

Bibliography has been given in the article.

(D. B. MACDONALD)

SĪMURGH (P.), a mythical bird. The word is a composition of *murgā* (bird) with (the modern-Persian equivalent of) Pahlawi *sin* (Avestan *saēna*, the name of a great bird of prey, probably the eagle). Cognate with the Iranian word is Skt. *syena* (a falcon); whether Armenian *cin* (a kite) and Greek *ἰσθίος* may be compared, is doubtful. The Avestan word occurs once in company of the word *mērēdga* (bird), and once without it (cf. Bartholomae, *Air. Wk.*, col. 1548); in Pahlawi *sin* as well as *simurgā* are found. The Avestan information about *saēna* is scanty: once, the Ised Wēdēthragha is compared with it (*Yasht*, xiv. 41), and in the 17th paragraph of the late and not very original *Yasht*, xii., in an invocation of the Ised Rāšnū, there is made mention of the tree of the *saēna*, which stands in the midst of the sea Wōnrukasha. This tree is called Waspōbish (= "having all healing powers"), and it contains

the seed of all plants. It cannot be established from the Avestan text, what precisely is the relation of the *salma* to the tree; it may be, that, as in the Pahlavi *Mēnkī-kērat*, there is implied, that the dwelling-place of the bird is on that tree (comp. *Sacred Books of the East*, v., p. 89, note 1). In any case, in this *Yāst*, the *salma* must be a mythical figure. The *Bundahishn* states, that the *sem* of two kinds (i. e. aspects, *āwēnāh*) was the first of birds, but she is not chief (*raf*) of birds, for that dignity belongs to the *harāgīst*-bird (*Pahlavi Text Series*, iii. 121). The Persian epic gives a more vivid notion of the Simurgh, less affected by Zoroastrian theology and cosmology. In the heroic tradition of Irān there are found two Simurghs, viz. the bird-shaped guardian genius of Zal and Rustam, and, secondly, a monstrous bird, killed by Isfandiyār. The first Simurgh, according to the *Sāhnamā*, lives on the mountain Alburs, far from the dwelling-places of men; its nest has columns of ebony and sandalwood; aloe-wood also belongs to the materials of this building. The nest is once even called *āghā*; to the impressive bird (*haihat-i murgh*) the awful nest (*hawā-i kunūm*) is suited. When the Simurgh comes near, the air is darkened; the bird is like a cloud "whose rain are corals". Zal, the son of Sām, who was after his birth exposed by order of his father, was found by the Simurgh, who bore him to her nest; where she educated the child. A heavenly voice announced to the bird the future glory of the race of Zal. The Simurgh has the gift of speech, like men; so she could teach the young Zal to speak. Later on, the bird delivered the youth to his father Sām. She had given to Zal the name Dastān-i Zand. When parting, the Simurgh gave the young man one of her feathers; if he should happen to want the bird's help in times of distress and peril, he had only to burn (part of) it, to see the glorious being approach (*bīhāt ham anīdar zamīn farr-i man*). Afterwards, the Simurgh, being called by that feather-magic, gave counsel at the occasion of the birth of Zal's son, the famous Rustam, to the effect that the mother should be intoxicated and her side opened; she mentioned also the herb, which, mixed up with milk and musk, would cure the wound; after that, the scar had to be rubbed with a feather of the bird. The second and last time the Simurgh was called upon, was on the occasion of the fight of Rustam with Isfandiyār; the bird extracted the arrows from the bodies of Rustam and his horse, Rakhsh, and cured his wounds, this time also by means of her feathers. Then she warned the hero, that whoever should kill Isfandiyār, must be miserable in this world and the next. Rustam, however, insisted upon obtaining the means to conquer his antagonist. So the Simurgh conveyed him within the space of a single night to the place, where the fatal tree grew, from a branch of which the arrow was to be made, with which Isfandiyār could be slain (*Sāhnamā*, ed. Vullers-Landauer, pp. 133, etc.; 222 sq.; 1703 etc.). In contradistinction to this good Simurgh, which is called *haihat-i murghān* (cp. *lit.*, 139, 191) and *farmūn-ravā* (222, 166; 1706, 1707), and which knows the mystery of fate (*rāz-i zīghr*, viz. the fact, that he, who slays Isfandiyār, will be damned: 1705, 1691 etc.), the other Simurgh, killed by Isfandiyār in the course of his seven adventures,

is a noxious monster. It lives on a mountain, and resembles a flying mountain or a black cloud; with its claw it can lift crocodiles, panthers, even an elephant. It has two young ones, as large as itself; if they fly, they cast an enormous shadow. Isfandiyār slew this being by a stratagem, using a kind of chariot (*gardāw*), which was all set over with sharp weapons. The corpse of the monster covered a whole plain (*Sāhnamā*, ed. Vullers-Landauer, p. 1597, etc.). Once, also this bird is called *farmūn-ravā* (1598, 1705).

Except the name, there is no great resemblance between the Avestan *salma* and the Simurgh of the epic, although they have some features in common. Both dwell far from the inhabited world [on the relation of the Wourukasha to the Alburs see s. v. *gāh* (ii. 659, col. 8)]; with the healing power of the epic bird, the relation of the *salma* to the medicinal tree may be compared; in turn, the Simurgh itself has a connection with the fatal, far-off tree at the sea of Ām, where the baneful twig grows, which can slay Isfandiyār. Feather-magic is known to the Avesta, but not in connection with the *salma*. *Yāst*, xiv. 34 etc. a feather-magic is taught against enemies: it consists of rubbing the body with a feather of the bird of prey *uštānīgaw*; the wearing of such a feather as an amulet is also mentioned. In the same *Yāst* (45 and 46), to ensure victory in battle, it is recommended to let fly four feathers, while uttering an appropriate spell, which helps also in mortal dangers. The difference here is great: the feathers are not those of the *salma*, they are not burned, and the procedure does not aim at summoning some one. The Avestan bird belongs to the good (non-Ahrimanic) creation, although it is no chief (*raf*) of birds. That the epic Simurgh is called *haihat-i murghān* is nothing but a poetical conception. The Simurgh, which appears in the story of Zal and his son may be considered as a kind of good genius (comp. also Nöldeke, *Das Iranische Nationalepos*, p. 10, 59). If the malignant Simurgh in the adventure of Isfandiyār is not merely an addition to the older epic tradition (for it is supposed, with much reason, that the series of Isfandiyār's adventures is an imitation of Rustam's seven exploits), perhaps the statement of the *Bundahishn*, that this bird is of two aspects (kinds) could be compared, so that also in Zoroastrian lore there would have been a difference between two kinds of *salma* (*sin*). The Pahlavi statement, however, is too indistinct, to be made use of in this respect.

The rôle of the Simurgh as a guardian genius of heroes (on a possible parallel in Achaemenian dynastic tradition comp. Nöldeke, *op. cit.*, p. 4) is not reflected in the Avesta. As it is very probable, that the cycle of Rustam and his family originally did not belong to Zoroastrian tradition (Nöldeke, *op. cit.*, p. 9 etc.), this principal feature of the epic Simurgh must also be due to a non-Zoroastrian origin. It may be then, that two different mythical conceptions have been subsumed under one name. The Avestan *salma* may, originally, correspond to one of the bird-shaped beings of Aryan mythology. We may, however, suppose, that it has lost most of its characteristics in being accommodated to Zoroastrian cosmology. There are a few resemblances between the Iranian conceptions and some features of Indian bird-mythology: the *salma* lives far off on the tree in the sea Wourukasha, and a king of birds (*pakīrāf*, is

Garuda meant) lives also far off in the *varja* Hiraṃyama (*Mahābhārata*, vi/viii, 547). The *śin*, according to the *Mittāḥi-Āṣṭa*, when alighting at his nest, breaks off thousand twigs of the medicinal tree, and the story of Garuḍa, tearing off and bearing away a branch of the Rauhipa-tree is well known (*Mahābh.*, i/xix, 39, etc.; cf. E. W. Hopkins, *Epic Mythology*, p. 21). One might also consider the fact, that, as the *śin* stands in a certain relation to the healing herbs, so Garuḍa to the *amṛta*, the drink of immortality, and the *cyrena*, mentioned in *Rigveda*, iv. 26 and 27, to the Soma. But these faint resemblances may be due to accident at any rate, they are insufficient to justify a comparison between Iranian and Indian myth in this case. On a possible explanation of the *śin* as a sun-bird comp. A. J. Wensinck, *Tree and Bird as Cosmological Symbols in Western Asia*, 1921, p. 42.

On the other hand, the principal characteristic of the epic Simurgh is its protection of the exposed child Zal and Rostam. Its function as tutelary genius of Zal and Rostam. It must therefore be classed with the various guardian-animals we meet in the stories of the youth of some historical or mythical heroes, as Cyrus, Romulus, etc. It is however true, that this Simurgh shows also features of a more fierce kind.

Tha'libi, in his history of the Persian kings, renders the word Simurgh by 'Anfā [q. v.]. In non-epic Persian literature, the dwelling-place of the Simurgh is the fabulous mountain Kāf (which originally may be the same as the Alburz; on this question comp. s.v. KAF, ii, p. 659; Wensinck, l. c.). A more rationalistic view is e.g. that of Hamdallah Mustawfi (*Nuḥāt*, ed. Le Strange, i. 232; ii. 225) who says that on the isle of Rāmu (Samarat?) the nest of the Simurgh is found.

In mystical literature, the Simurgh as a symbol of the deity, is well-known from 'Aṭṭār's *Manṣūḥ al-Qaṣr*. The name of the bird, moreover, appears in Persian literature, very often in poetical similes. A few instances out of many are: Rūmī, *Mathnawī*, ed. Nicholson, i. vs. 1441; 2755; 2962; Rückert, *Grammatik, Rhetorik und Poetik der Perser*, p. 20; Arāḳī as quoted in 'Awfi, *Lubāb*, ii. 89, where the synonym 'anfā is used.

(V. F. BÜCHNER)

SIN, twelfth letter of the Arabic alphabet, with the numerical value 60. For palaeographical details see above i. 390 and ARABIA, plate 1. Sin corresponds to: a) aethiopic ṣāṭ, Assyrian ṣā, Hebrew and Aramaic ש, whereas šin corresponds to Aeth. šmēt, to Hebrew שׁ and Aramaic ܫ to Hebrew שׁ and Aramaic ܫ.

Bibliography: W. Wright, *Lectures on the Comparative Grammar of the Semitic Languages*, Cambridge 1890, p. 57 sqq.; C. Brockelmann, *Grundriss der vergl. Grammatik der semitischen Sprachen*, Berlin 1908, i. 128 sqq.

SINAI [See ai-ṭūs].

SINÂN, usually called KODJA MİRÂN SINÂN, the greatest architect of the Ottomans. Sinân came from Kaṭariya [q. v.] in Anatolia where he was born on the 9th Raddjāh 895 (April 15, 1589) the son of Christian Greeks. His father was later called 'Abd al-Mennān but his real name is not known. His non-Turkish origin (*mühtedi*) is beyond question and is never in dispute, either among his contemporaries or among all serious

Turkish scholars. The young Sinân came into the Serai in Stambul with the levy of youths (*devşirme*, q. v.), became a Janissary, distinguished himself in the campaigns against Belgrade (1521) and Rhodes (1522) by his bravery and was promoted to be *senberberdji başı*, i. e. chief firework-operator. In the Persian war (1534) he showed special ingenuity, when he devised ferries for crossing Lake Van, which proved particularly effective. He continued to rise in rank and was ultimately appointed *Sudāşî* (police magistrate). When Selim I advanced on Wallachia, Sinân was in his train. He built a bridge across the Danube, which aroused further admiration and laid the foundations of his fame. Henceforth he was exclusively engaged in building mosques and palaces, commissions from the Sultān and grandees of the Empire. That, as is often stated, he began the building of the Selimiye immediately after Selim I's death, — the mosque which stands on the top of the fifth hill in Stambul and which was finished in 1522, — is impossible even on chronological grounds; in dazzlingly rapid succession from the end of the thirties arose the further creations of this master, which were built in parts all of the empire, mainly by command of Selim II the Great. Only the largest mosques can be mentioned here: in 1539 the Mosque of Roxelane (*Khaṣṣeki Khurram*), in 1548 the Princes' Mosque, in 1550/1556 the Soleimāniya, in 1551/1574 the Selimiye at Adrianople, built by order of Selim II. These are his finest efforts. In addition he built a countless number of small mosques, palaces, schools, bridges, baths, etc. The poet, Muṣṭafā Ḥā'ī, his biographer, gives 81 mosques, 30 chapels, 55 schools, 7 Ḳur'ān schools, 16 poor-kitchens (*imāret*), 3 infirmaries, 7 aqueducts, 8 bridges, 34 palaces, 13 rest-houses, 3 store-houses, 33 baths, 19 domed tombs (*türbe*), in all 343 buildings. Sinân was working for three-quarters of a century everywhere from Bosnia to Mecca. As Corn. Gurlitt points out, Sinân displayed an incomparable lightness of touch in his use of the dome. On a square, hexagonal or octagonal base he developed his interiors, always striving at the effect of a great ceremonial hall, a uniform architecture enclosing the worshipping rulers and their hosts. He is predominantly concerned with the interior and readily neglects the exterior for it. But everywhere, Gurlitt says, appears the peculiarity of the Turkish character, everywhere he creates models which are as little Byzantine as they are Persian, as little Syrian as they are Seldjūk, but are all the more Turkish (cf. C. Gurlitt, *Konstantinopel*, Berlin 1909, p. 94). Sinân had numerous pupils to assist him, including Ahmad Agha, Kamāl al-Dīn, Dā'ūd Agha, who was executed for free-thinking (cf. *Hadīqat al-Djūmūd*, i. 198), Yattm Baba 'Alī, Yūsuf and the younger Sinân, who is frequently confused with him, and to distinguish him from the latter he was later called *bağsa* the "old". Yūsuf, his favourite pupil, is said to have been the architect of the palaces in Lahore, Delhi, and Agra, which were built by the Emperor Akbar. This Michael Angelo of the Turks died when nearly 90 (herein also resembling him) on the 12th Djumādā I, 986 (July 17, 1578). He was buried behind his masterpiece, the Soleimān Mosque, close to the offices of the Shaikh al-Islām, beside a chapel, school, and well, built and endowed by him. The chronogram (*ta'rīkh*) gives the year of his death without any possibility of doubt as 986 (cf.

İlham, ix. 247 ff., where the sources are collected) but it is supposed by Ahmed Raîk Bey, *Âlimler ve Sanatkarlar*, Stambul 1924, p. 33 note, that in the *te'rîkâ* the vowel *i* was allotted the value 10 so that the year of death would be 996 (1588), which seems also to be added in figures. As the *te'rîkâ* was composed by Mustafa Sâî (d. 1004 = 1595; cf. Rûhî, *Tedkîkât*, 51), a famous *mağâzî* of his time, this error in the most important line seems odd, to say the least.

The following is an exact list of all Sinân's buildings based on the statements of Mustafa Sâî (d. 1595):

I. MOSQUES (*Djami*):

1) Suleimâniya, Stambul; 2) Shâh-zâde-Mosque, Stambul; 3) M. of Khayrî Khurram, Stambul; 4) M. of princess Mihr-u-Mâh, at the Adrianople gate, Stambul; 5) M. of the mother of 'Othmân Shâh, Ak Serai, Stambul; 6) M. of the daughter of Bâyezîd II, Yenî Baghçe, Stambul; 7) M. of Ahmad Pasha, Topkapu, Stambul; 8) M. of Rustam Pasha, Taht al-kâ'a, Stambul; 9) M. of Mehmed Pasha, Kadirgha limani, Stambul; 10) M. of Ibrahim Pasha, at the Siliwri-gate, Stambul; 11) M. of Pîrîle Pasha, Stambul; 12) M. of 'Abd al-Rahmân Çelebi, at Mollâ Kuvânî, Stambul; 13) M. of Mahmûd Agha, Stambul; 14) M. of Oda bashî, at Yenî kapu, Stambul; 15) M. of Khodja Khosraw, at Kodja Mustafa Pasha, Stambul; 16) M. of Hammâmî Khâjûn, Şahî Monastir, Stambul; 17) M. of Defterdâr Sulaimân Çelebi, Çukûlâ Çeşmesi, Stambul; 18) M. of Farrah K'aya, Balat, Stambul; 19) M. of Dragoman Vûnus Bey, Balat; 20) M. of Khurram Çaugh, at Yenî Baghçe, Stambul; 21) M. of Sinân Agha, at Kâdî Çeşmesi, Stambul; 22) M. of Akhi Çelebi, Izmir iskelesi, Stambul; 23) M. of Sulaimân subashi, at Un kapu, Stambul; 24) M. of Zâl Pasha, Aiyûb; 25) M. of Shâh Sulân, Aiyûb; 26) M. of Nâhândji bashî, Aiyûb; 27) M. of Amir-i Bukhârî, at the Adrianople gate, Stambul; 28) M. of Merkez Efendi, at Yenî kapu, Stambul; 29) M. of Çaugh bashî, Sütlüdjé, Stambul; 30) M. of Nûr Shâikh-zâde Hussain Çelebi, at Kiremidlik; 31) M. of Kâsim Pasha, at the Anenai, Stambul; 32) M. of Mehmed Pasha, at the 'Azâblar kapusu, Stambul; 33) M. of Kîlîdî 'Alî Pasha, at Top-khâna, Stambul; 34) M. of Muhyî ed-Din Çelebi, at Top-khâna; 35) M. of Mollâ Çelebi, between Top-khâna and Bashîk Tash; 36) M. of Abu'l-Faql, at Top-khâna; 37) M. of Prince Djihângîr, Top-khâna; 38) M. of Sinân Pasha, Bashîk Tash; 39) M. of the Sultana, Skutari; 40) M. of Shemai Ahmad Pasha, Skutari; 41) M. of Iskander Pasha; 42) M. of Mustafa Pasha, in Gebize; 43) M. of Pertev Pasha, in Izmid; 44) M. of Rustam Pasha, in Sabandja; 45) M. of Rustam Pasha, Şamanlı; 46) M. of Mustafa Pasha, Boli; 47) M. of Farhâd Pasha, in Boli; 48) M. of Mehmed Beg, in Izmid; 49) M. of 'Othmân Pasha, in Kaşaniya; 50) M. of Hâdîdî Pasha, in Kaşaniya; 51) M. of Djanâbî Ahmad Pasha, in Angora; 52) M. of Mustafa Pasha, in Ezerum; 53) M. of Sulân 'Alî ed-Din, in Çorum; 54) M. of 'Abd es-Salâm, Izmid; 55) M. of Sulân Sulaimân, in Izmit (built

out of a Byzantine church which had been destroyed by fire); 56) M. of Khosraw Pasha, in Halab; 57) the domes of the sanctuary in Mekka; 58) M. of Sulân Murâd Khân (III), in Maghâra; 59) restoration of the M. of Orkhan (Ghâzi, Kutahya); 60) M. of Rustam Pasha, Bulawadin; 61) M. of Hussain Pasha, Kutahya; 62) M. of Sulân Selim (II), Kara Buğar; 63) M. of Sulân Sulaimân on the Gök maddân in Damascus; 64) M. of Sulân Selim (II), in Adrianople; 65) M. Tashîk for Mahmûd Pasha, in Adrianople; 66) M. of the Defterdâr Mustafa Pasha, in Adrianople; 67) M. of 'Alî Pasha, in Baba eskî; 68) M. of Mehmed Pasha, in Hafsa; 69) M. of Mehmed Pasha, in Lüle Burghâ; 70) M. of 'Alî Pasha, in Ereğli; 71) M. of the Bosnian Mehmed Pasha, in Sofia; 72) M. of Süfi Mehmed Pasha, in Herzegovina; 73) M. of Farhâd Pasha, in Çataldja; 74) M. of the executed Mustafa Pasha, in Ofen (Budapest); 75) M. of Firdûs Bey, in Isbarta, Asia Minor; 76) M. of Memî k'aya, in Ulaş; 77) M. of Tatar Khân, in Gâzeve; 78) M. of Rustam Pasha, in Rusuk; 79) M. of the Wazir 'Othmân Pasha, in Trikala, Thessaly; 80) M. of Khayrî Khurram, in Adrianople; 81) M. of the Sulân wâlîde, in Scutari.

II. SMALL MOSQUES (*Masjid*):

1) Chapel of Rustam Pasha, Yenî Baghçe, Stambul; 2) Ch. of Ibrahim Pasha, on the 'Isâ kapu, Stambul; 3) Ch. of Muftî Ciwîzâde, at the Topkapu, Stambul; 4) Ch. of Amîr 'Alî, beside the custom-house (*gömrük-khâna*), Stambul; 5) Ch. of the architect Sinân, beside the offices of the Shâikh al-Islâm; 6) Ch. of the chief huntsman (*avâzî bashî*), beside the custom-house, Stambul; 7) Ch. of Defterdâr Sharîfzâde Efendi, in Stambul; 8) Ch. of Defterdâr Mehmed Çelebi, in Stambul; 9) Ch. of Hâfîz Mustafa Efendi, at Yenî Baghçe, Stambul; 10) Ch. of Simkash bashî, at the bazar of Lutfî Pasha, Stambul; 11) Ch. of Khodja-zâde, at the *titime* of the mosque of Mehmed II, Stambul; 12) Ch. of the Çaugh, at the Siliwri-gate, Stambul; 13) Ch. of the daughter of Ciwîzâde, Dâ'ud Pasha, Stambul; 14) Ch. of Taqiyâdjî Ahmad, ibid.; 15) Ch. of Şary Hâdîdjî Nâşûh, in Stambul; 16) Ch. of the slaughterer (*şakşâb*) Hâdîdjî Iwâd (properly 'Awâd), in Stambul; 17) Ch. of the cook (*tashkâb*) Hâdîdjî Hasan, at Agha çairi, Stambul; 18) Ch. of Hâdîdjî Hasan; 19) Ch. of Ibrahim Pasha, Hâdîdjî Hasan; 20) Ch. of Bairam Çelebi, Wlango, Stambul; 21) Ch. of Shâikh Farhâd, ibid.; 22) Ch. of Şurâdjî bashî (commander of the rowers), before the Küm kapu, Stambul; 23) Ch. of the workshop (*kâr-khâna*) of the damask-makers (*zâmkâr-şâhîlar*), in Stambul; 24) Ch. of the workshop of the goldsmiths (*hâyyun-şâhîlar*), in Stambul; 25) Ch. on the Hersek-Hippodrome (*Hersek-bödrümü*), near the Aya Sofia, Stambul; 26) Ch. of *yaya bashî*, on the Fenâr kapu, Stambul; 27) Ch. of 'Abdî subashi, in the Sulân-Selim-quarter, Stambul; 28) Ch. of Hâdîdjî İlyâs, at the bath of 'Alî Pasha; 29) Ch. of Hussain Çelebi, at the Selimye, Stambul; 30) Ch. of Dûkkân-zâde, at Kâdî Mustafa Pasha, Stambul; 31) Ch. of Kâdîzâde, at the Çukur hammâmî, Stambul; 32) Ch.

of *Muṣṭāfā Hāmid Efendi*, at 'Azālar hammāmı, Stambul; 33) Ch. at the tüfenk-khāna, outside the walls (*ḡār*); 34) Ch. of Serai-āghası, at the Adrianople gate, Stambul; 35) Ch. of the superintendent of the metalcasters (*dökmedjilar bahşı*), in Aiyûb, Stambul; 36) Ch. of the arpađı bahşı, Aiyûb; 37) Ch. of the physician Kâsımîzâde, in Sütlüce, Stambul; 38) Ch. of the snow seller (*ḡarđıf*) Sulaimân, in Aiyûb; 39) Ch. of the snow seller (*ḡarđıf*) Sulaimân, in Stambul; 40) Ch. of Aḡmad Celebi, in Kırımlik; 41) Ch. of Yahyâ k'aya, in the Kâsım Paşa quarter, Stambul; 42) Ch. of *ḡahr emini* (supervisor of the city) Hasan Celebi, ibid.; 43) Ch. of Sahil Bey, Topkhāna, Stambul; 44) Ch. of İlyâsîzâde, ibid.; 45) Ch. of *bazır bahşı* Memîk'aya, in Scutari; 46) Ch. of Mehmed Paşa, ibid.; 47) Ch. of Hâdjî Paşa, in Scutari; 48) Ch. of İzzetî khāna, in Khâsköi, Stambul; 49) Ch. of the çarraf, outside the Topkapu, Stambul; 50) Ch. of the *ruḡnîmodjî* 'Abdî Celebi in Şulu monastir.

III. SCHOOLS (*Madrasa*):

1) Sch. of Sulṭān Sulaimân, in Mekka; 2) Six schools, built by command of Sulṭān Sulaimân, in Stambul; 3) Sch. of Sulṭān Selim I (?) beside the Köşk of the *ḡarđıfilar* (carpet-makers); 4) Sch. of Sulṭān Selim II, Adrianople; 5) Sch. of Sulṭān Selim II, in Corla; 6) Sch. of Prince Mehmed, in Stambul; 7) Sch. of Khaṣṣeki Khurram, on the women's market (*Savrat bazarı*), Stambul; 8) the school called *Kahriya* of the Khaṣṣeki Khurram, in Sulṭān Selim, Stambul; 9) Sch. of the Sulṭān-mother, in Scutari; 10) Sch. of Princess Mihr-u Mâh, in Scutari; 11) Sch. of Princess Mihr-u Mâh, at the Adrianople gate, Stambul; 12) Sch. of Mehmed Paşa, Kadyrga limanı; 13) Sch. of Mehmed Paşa, in Aiyûb; 14) Sch. of the mother of 'Oḡmân Shâh, Ak serai, Stambul; 15) Sch. of Rustam Paşa, Stambul; 16) Sch. of 'Alî Paşa, Stambul; 17) Sch. of the executed Mehmed Paşa, Topkapu, Stambul; 18) Sch. of Süfi Mehmed Paşa, Stambul; 19) Sch. of İbrahim Paşa, Stambul; 20) Sch. of Sinân Paşa, in Stambul; 21) Sch. of Iskandar Paşa, in Stambul(?); 22) Sch. of 'Alî Paşa, in Baba eskisi; 23) Sch. of the Egyptian Muṣṭafâ Paşa, in Gebise; 24) Sch. of Aḡmad Paşa, in İmîd; 25) Sch. of Kâsım Paşa, in Stambul(?); 26) Sch. of İbrahim Paşa, at the İsm-Gate, Stambul; 27) Sch. of Şamîsî Aḡmad Paşa, in Scutari; 28) Sch. of *kapu aghası* Dja'far Agha, in Stambul(?); 29) Sch. of the Agha of the Gate Mahmud Agha, in Stambul(?); 30) Sch. of the *Mo'villâde* Amir Efendi, in Stambul(?); 31) the School called Umm wafad, in Stambul(?); 32) Sch. of the chief huntsman (*emvîlî bahşı*), in Stambul(?); 33) Sch. of the *Muṣṭāfā Hāmid Efendi*, in Stambul(?); 34) Sch. of the military judge Fîrûs Agha (?), in Stambul; 35) Sch. of Khodjagîzâde, at Sulṭān Mehmed, Stambul; 36) Sch. of Aghazâde, in Stambul(?); 37) Sch. of Yahyâ Efendi, in Stambul; 38) Sch. of the *Defterdâr* 'Abd es-Salâm Bey, in Stambul; 39) Sch. of Tûṭî kâdi, in Stambul; 40) Sch. of the physician Mehmed Celebi, in Stambul; 41) Sch. of Husain Celebi, in Stambul; 42) Sch. of

Amir Sinân Efendi, in Stambul; 43) Sch. of Shâh-kuli, in Stambul; 44) Sch. of the Dragoman Yunus Bey, in Stambul; 45) Sch. of the snow seller (*ḡarđıf*) Sulaimân Bey, in Stambul; 46) Sch. of Hâdjî Khâṭun, in Stambul; 47) Sch. of the *Defterdâr* Sharîfzâde, in Stambul; 48) Sch. of the judge Hâkim Celebi; 49) Sch. of Baba Celebi, in Stambul; 50) Sch. of Kirmasî (?) Celebi, renovated; 51) Sch. of *seghan* 'Alî Bey at the custom-house, in Stambul; 52) Sch. of the *nîḡândjî* Mehmed Bey, at Alî mermer; 53) Sch. of *İsmâîl kâḡkudâsî* Husain Celebi, in Stambul; 54) Sch. of Gâffar Khâṭun, in Scutari; 55) Sch. of Khoaraw k'aya, in Angora.

IV. KUR'ÂN-READING SCHOOLS (*Dâr al-Kur'ân*):

1) K. of Sulṭān Sulaimân, Stambul; 2) K. of the Walide Sulṭān, Scutari; 3) K. of Khoaraw k'aya, Stambul; 4) K. of Mehmed Paşa, Aiyûb, Stambul; 5) K. of the *Muṣṭāfā Sa'id* Celebi, Kûçuk Qaraman, Stambul; 6) K. of the Bosnian Mehmed Paşa, Stambul; 7) K. of the *Muṣṭāfā Kâḡîzâde* Efendi, Stambul.

V. TOMB CHAPELS (*Türbe*):

1) T. C. of Sulṭān Sulaimân Khân, Stambul; 2) T. C. of Sulṭān Selim (II.) Khân, Stambul; 3) T. C. of Prince Mehmed, Stambul; 4) T. C. of the Princess, Stambul; 5) T. C. of Rustam Paşa, Shâhîzâde bahşı, Stambul; 6) T. C. of Khoaraw Paşa, Stambul; 7) T. C. of Aḡmad Paşa, Topkapu, Stambul; 8) T. C. Mehmed Paşa, Aiyûb, Stambul; 9) of the sons of Siyâwush Paşa, Aiyûb, Stambul; 10) T. C. of Zâi Mahmud Paşa, Aiyûb, Stambul; 11) T. C. of Khair ed-Din Barbarossa, Bahşik Tash, Stambul; 12) T. C. of Yahyâ Efendi, Bahşik Tash, Stambul; 13) T. C. of Şamîsî Aḡmad Paşa, Scutari; 14) T. C. of the Beylerbeyi of Cyprus 'Arab Aḡmad Bey, Stambul; 15) T. C. of Kylydjî 'Alî Paşa, Aiyûb, Stambul; 16) T. C. of Pertew Paşa, Aiyûb, Stambul; 17) T. C. of Princess Shâh Khobân, wife of Luṭfi Paşa, Yeñi Baghçe, Stambul; 18) T. C. of Hâdjî Paşa, Scutari; 19) T. C. of Aḡmad Paşa, at the Adrianople gate, Stambul.

VI. HOSPITALS (*Tîmâr-khāna, Tab-khāna*):

1) H. of Sulṭān Sulaimân, Stambul; 2) H. of Khaṣṣeki Khurram, Stambul; 3) H. of Sulṭān Walide, in Scutari.

VII. AQUEDUCTS (*Kemer*):

1) Derbend kemer; 2) Uzun kemer; 3) Mu'allâk kemer; 4) Göründje kemer; 5) Aqueducts at Mûderris köyi; 6) Reservoirs (*hammî*); 7) Rebuilding of Uzun kemer.

VIII. BRIDGES:

1) Br. at Büyük Çekmedje; 2) Br. at Siliwri; 3) Br. of Muṣṭafâ Paşa across the Maritzza; 4) Br. of Mehmed Paşa, in Mermere; 5) Br. of Oda bahşı, Halkalı; 6) Br. of the Agha of the Gate (*kapu aghası*), Harâmî deresi; 7) Br. of Mehmed Paşa, in Sinânlı; 8) Br. of the grandvizier Mehmed Paşa at Viçegrad, Boonia (cf. M. Hoernes, *Dramatische Wanderungen*, Vienna 1888, p. 245).

IX. POOR-KITCHENS (*Zindat*):

1) K. of Sültân Sulaimân, Stambul, built 962 (beg. Nov. 26, 1554); 2) K. of Khayrî Khurram, in Mekka, near the Ka'ba; 3) K. of Sültân Selim, Kara Buğra; 4) K. of Prince Sulaimân, Stambul; 5) K. of Sültân Sulaimân, Çorlu; 6) K. of Princess Mihr-u Mâh, in Scutari; 7) K. of Sültân Walide, in Scutari; 8) K. of Sültân Murâd III, Maghnia; 9) K. of Rustam Pasha, in Ruskuk; 10) K. of Rustam Pasha, in Şabandja; 11) K. of Mehmed Pasha, in Burghas; 12) K. of Mehmed Pasha, in Hafsa; 13) K. of Mustafa Pasha, in Gebze; 14) K. of Mehmed Pasha, in Serajevo (Bosna Serali); 15) K. of Mustafa Pasha, in Kivetin (?); 16) K. of Sültân Sulaimân, in Damascus; 17) K. of the bridgehead of Mustafa Pasha köprüsü.

X. WAREHOUSES (*Makhan*):

1) W. in Galata; 2) W. at the Imperial Arsenal, Stambul; 3) W. in the Serali, Stambul.

XI. REST-HOUSES (*Karavânserai*):

1) Caravanserai of Sültân Sulaimân, Stambul; 2) C. of Sültân Sulaimân, in Büyük Çekmedje; 3) C. of Rustam Pasha, in Tekfur dağı (Rodosto); 4) C. of Rustam Pasha, on the market (*bit bazari*) in Scutari; 5) C. of Rustam Pasha, in Galata; 6) C. of 'Ali Pasha, on the market in Scutari; 7) C. of Pertew Pasha, on the place Abu'l-Wafa, Stambul; 8) C. of Mustafa Pasha, in Ilgın, Anatolia; 9) C. of Rustam Pasha, in Ak biyik, Anatolia; 10) C. of Rustam Pasha, in Şamanlı; 11) C. of Rustam Pasha, in Şabandja; 12) C. of Rustam Pasha, in Ereğli (Qaraman); 13) C. of Rustam Pasha, in Karişdiran, Bulgaria; 14) C. of Khosraw k'aya, Ipsala; 15) C. of Mehmed Pasha, in Burghas; 16) C. of Rustam Pasha, in Adrianople; 17) C. of 'Ali Pasha, in Adrianople; 18) C. of Mehmed Pasha, in Hafsa.

XII. PALACES (*Serali*):

1) Rebuilding of the old Serali, Stambul; 2) New Serali, Stambul; 3) S. in Scutari; 4) S. in Galata; 5) Rebuilding of the S. on the At mejdân, Stambul; 6) S. on the Ye'ni kapu, Stambul; 7) S. in Kandilli; 8) S. at Fener baghçe, Stambul; 9) S. in the garden of Iskandar Çelebi, in Scutari; 10) S. in Halkalı at Stambul; 11) S. of Rustam Pasha, Kadyrga limân, Stambul; 12) S. of Mehmed Pasha, at Aya Sofya, Stambul; 13) S. of Mehmed Pasha, Scutari; 14) S. of Rustam Pasha, in Scutari; 15) First S. of Siyâwush Pasha, in Scutari; 16) Second S. of Siyâwush Pasha, in Scutari; 17) S. of Siyâwush Pasha, in Stambul; 18) S. of 'Ali Pasha, in Stambul; 19) S. of Ahmad Pasha, on the At mejdân, Stambul; 20) S. of Farhad Pasha, Sültân Bâyardı quarter, Stambul; 21) S. of Pertew Pasha, on the place Abu'l-Wafa, Stambul; 22) S. of Sinân Pasha, on the At mejdân, Stambul; 23) S. of Süfi Mehmed Pasha, Kodja (Mustafa) Pasha quarter, Stambul; 24) S. of Mahmûd Agha, Ye'ni Baghçe, Stambul; 25) S. of Mehmed Pasha, in Halkalı at Stambul; 26) S. of Princess Şâh Khobân, wife of Lutfi Pasha, in the Kasim Pasha quarter,

near Kasim Çehmesi, Stambul; 27) S. of Pertew Pasha, before Şihâzade, Stambul; 28) S. of Ahmad Pasha, on the domain (*iflık*); 29) First S. of 'Ali Pasha, Aiyûb; 30) Second S. of 'Ali Pasha, Aiyûb; 31) S. of Mehmed Pasha, on the estate (*iflık*) of Rustam Pasha; 32) S. of Mehmed Pasha, in Serajevo (Bosna Serali); 33) S. of Rustam Pasha, on the estate of Iskandar Çelebi.

XIII. BATHS (*Hammâm*):

1) B. of Sültân Sulaimân, Stambul; 2) Three baths in the Imperial Palace; 3) B. of Sültân Sulaimân, Kaffa, Krim; 4) Three b. in the palace at Scutari; 5) B. of Khayrî Khurram, at the Aya Sofya, Stambul; 6) B. of Khayrî Khurram, in the Jewish quarter (*Yeküdlar*), Stambul; 7) B. of Walide Sültân, in Scutari; 8) Sultan's-Bath (*sulân-hammâm*), Kara Buğra; 9) B. of Walide Sültân, at Djubba 'Ali (usually: *Djubbali*), Stambul; 10) B. of Princess Mihr-u Mâh, at the Adrianople gate, Stambul; 11) B. of Lutfi Pasha, ibid.; 12) B. of Mehmed Pasha, Galata, Stambul; 13) B. of Mehmed Pasha, in Adrianople; 14) B. of Ibrahim Pasha, at the Siliwri-Gate, Stambul; 15) B. of the Agha of the Gate (*kapu aghasi*), Sulu Monastir; 16) B. of Kodja Mustafa Pasha, Ye'ni Baghçe, Stambul; 17) B. of Sinân Pasha, in Bashik Tash, Stambul; 18) B. of Molla Çelebi, in Fündükli, Stambul; 19) B. of Admiral 'Ali Pasha, Top-khâna, Stambul; 20) B. of the same, Fener kapu, Stambul; 21) Bath of the Mufti, in the druggists' market (*ma'djündji carhanesi*), Stambul; 22) B. Mehmed Pasha, in Hafsa; 23) B. of Markas Efendi, Ye'ni kapu, Stambul; 24) B. of Nihândji Bashî, Aiyûb, Stambul; 25) B. of Khosraw Pasha, Orta köy; 26) a bath in Izmid; 27) B. in Cataldja; 28) B. of Rustam Pasha, in Şabandja; 29) B. of Husain Bey, in Karişirya; 30) B. of Şary kürsî (Şari gürel, cf. above p. 171b), Stambul; 31) B. of Khair al-Din Pasha, at the custom-house (*gömrük-khâna*), Stambul; 32) B. of Khair al-Din, in Zairak; 33) B. of Ya'kûb Agha, Top-khâna, Stambul.

Bibliography: No monograph dealing exhaustively with the life and artistic activities of Sinân has yet appeared nor is there any architectural survey of his buildings yet in existence. The main source so far is Mustafa Sâ'i's work, *Tadhkirat al-Bünyân-i hüda minâr Sinân*, of which there are two editions: one without date and place of publication (Stambul, middle of the sixteenth century), 16 p., small 8°, entitled *Tadhkirat al-Abdiya*; the second, Stambul 1315, Ikdam press, 72 p., 8°. The two editions give lists of Sinân's buildings which differ from one another in many points. Ewliya Çelebi, *Siyâhatnâme*, seems to have known Sâ'i's work. The following are references to Sinân in Ewliya Çelebi: i. 140 (*Travels*, i. 1, p. 69); i. 147, 148 (*Tr.*, i. 1, p. 73); i. 150 (*Tr.*, i. 1, p. 75); i. 155 (*Tr.*, i. 1, p. 79, 80); i. 159 (*Tr.*, i. 1, p. 81); i. 163 (*Tr.*, i. 1, p. 82, 84); i. 307 (lacking in *Tr.*); i. 308 (*Tr.*, i. 1, p. 167); i. 309 (*Tr.*, i. 1, p. 168); i. 310 (*Tr.*, i. 1, p. 169); i. 311 (*Tr.*, i. 1, p. 169); i. 312 (*Tr.*, i. 1, p. 169); a list of all his mosques in Constantinople is given on i. p. 313, 17 (*Tr.*, i. 1, p. 170, 171); building

in Brussa (Caravanserai of 'Alî Pasha; not in Mustafa); ii. 19; buildings in Iamîd: ii. 64 = *Travels*, ii. 1, p. 31. — Almost all the Constantinople mosques built by Sinân are fully described in *Hikâsî Husain Efendi of Aivânserai* (flourished in the second half of the xviii century), *Gardens of the Mosques* (*Hikâsî al-Dîwânî*), with additions by 'Alî Sâî, printed at Stambul 1281; Extracts from it were given by J. v. Hammer, *G. O. R.*, Pesth 1833, ix., p. 47—144 (Mosques), p. 148 *seq.* (Schools, Medreses); *Beiträge zur Kenntnis des Orients*, ed. by H. Grothe, Halle 1914, vol. xi., p. 67 *seq.* (F. Babinger); *Ill.*, Strassburg 1919, vol. ix., p. 247 *seq.* (F. Babinger); *Yeni madîmûsâ*, Stambul 1917, vol. 13, p. 249—252 and vol. 14, p. 269—279 (Ahmad Rafîk Bey; with pictures). On Sinân's pupils, cf. *Quellen zur arabischen Künstlergeschichte in Jahrbuch der deutschen Kunst*, Leipzig 1924, I., p. 35 *seq.* — The two above-mentioned *Tadhkirat* are as MSS. in Cairo, National Library (cf. 'Alî Efendi Hilmi al-Dîghestîni, *Fihrist* [Cairo 1306], 231 [united in an old *madîmûsâ*]).

(FRANZ BABINGER)

SINÂN PASHA, name of several viziers of the Ottoman empire, mostly of Christian origin (as the name Sinân [al-Dîn Yûsuf] suggests; cf. *Ill.*, xi. 20, note 1 and J. v. Hammer, *G. O. R.*, ii. 536, note a). The most important are:

1. **Khodja Sinân Pasha**, vizier under Mehmed II the Conqueror. Molla Sinân al-Dîn Yûsuf Pasha was a son of the famous Molla Khidr Beg, who, a son of the kâdî of Siwri Hîsâr Djalâl al-Dîn, traced his descent to the celebrated Khodja Nasr al-Dîn. His father who died in 863 (1458/1459) was the first kâdî of Stambul (cf. the art. KIDRÛ BEG). Sinân Pasha was born in Brussa probably about 1438, was taught in his youth by his father, afterwards entered the train of Mehmed II whose teacher and councillor he became. According to one story, probably erroneous, after the second deposition of the famous grand-vizier Mahmûd Pasha [q. v.] he succeeded him but fell into disfavour about 881 (1476/1477) and was only later appointed *mudarris* in Siwri Hîsâr and in Adrianople after a remarkable cure which the Sultan made him take (cf. J. v. Hammer, *G. O. R.*, ii. 241). Sultan Bâyard who had taken a fancy to him granted him an ample allowance. In 887 (1482/1483) he retired, but a year later we find him acting as *mudarris* of Gallipoli. He died on Şafar 24, 891 (March 1, 1486) at Gallipoli where he was buried in a *türbe* restored by Mahmûd II in 1247/1248 (1831). His two brothers also earned the title of Pasha, namely Ahmad Pasha and Vakûb Pasha (cf. Tashköprüzâde-Maddî, I. 196, 197). Molla Sinân Pasha, called simply Khodja Pasha by his contemporaries, was an important scholar and the author of several works on mathematics, metaphysics, astronomy, ethics and legends of the saints. He wrote a commentary on the astronomical works of Çaghatî (Şarh-i Çaghatî), and a commentary on al-Jâzî's *Manâzîf fî 'Ilm al-Kalâm*. His *Ma'rifet-i Sinân* deals with ethics and under the title *Tadhkirat al-Awliyâ* he wrote a 'legends of the saints' (original manuscript in the Nûr-i 'Othmânîya library at Stambul). A discourse on prayer from his pen entitled *Menâzîf* was printed at Stambul (Abu 'l-Dîyâ Press).

Bibliography: Tashköprüzâde-Maddî, *al-Shaj'at al-nu'maniya*, I. 193—195, Stambul 1269; following him 'Alî, *Kunh al-Ahbar* (part not yet printed) and Sa'd al-Dîn, *Taqû al-Tawarîkh*, ii. 498—500; Brusaî Mehmed Tahir, *Othmânî Mu'ellifleri*, ii. 223 *seq.* (thorough); *Sigill-i 'othmânî*, iii. 303 *seq.*; *Salmâne* of Edirne of 1310; regarding the tomb of Sinân Pasha there are two different statements. The tomb (*türbe*) is however still in existence in Gallipoli, according to J. H. Montmann; cf. also Ewliya, *Siyâhatnâme*, v. 418 (monastery, *tekke*), 419 (poor-kitchen, *imâret*), 420 (tomb), but see Brusaî Mehmed Tahir, *op. cit.*, ii. 224, note 1.

II. **Khâdim Sinân Pasha**, grand vizier under Selim I. Sinân al-Dîn Yûsuf Pasha was probably of Christian descent; he was first of all governor of Rumelia and then of Anatolia. In the battle of Çaldîran (Aug. 23, 1514), he commanded with success the right wing of the victorious Ottoman army and when Hersekoghlu Ahmad Pasha, four times grand vizier, was suddenly dismissed on Ramadan 9, 920 (October 28, 1514) he became his successor. *Pei fa Barra Sinan un suo ichiavo qual era imirahor* (e.g. *emirahor*, master of the horse) *e uoca 7 aspri addi, e il biglierbeg di Natolia nuova*, reports the Venetian Bailo Antonio Giustinian, under date March 1, 1516. In the campaign against Syria and Egypt, Sinân Pasha was made commander-in-chief. On 29th Dhu 'l-Hijja 923 (January 23, 1517) he commanded the Anatolian troops in the battle of Ridâniya, but was killed in personal combat with Sultan Tûmân Bâi. His successor in the grand-vizierate was Yûnus Pasha [q. v.].

Bibliography: J. v. Hammer, *G. O. R.*, ii. 421, 462, 492, 496, 562; *Sigill-i 'othmânî*, I. 105; the Italian sources mentioned in Jorga, *G. O. R.*, ii. 330, note 1; *Hikâsî al-Wusârî*, 212.

III. **Kodja Sinân Pasha**, five times grand vizier of the Ottoman empire. Sinân Pasha was of Albanian descent; he was the son of a peasant in Dihra (Deir) or according to others in Delvino (cf. Jorga, *G. O. R.*, iii. 170, no authority given; *nato vicino a Delvino all'incontro di Corfu*, according to Bailo Matteo Zane in 1594; cf. E. Aliberti, *Relazioni*, iii. 3, p. 420, Florence 1855). He entered the Serai through the levy of youths (*davushirmar*; q. v.), under Sulaimin became *îshuqâr bîrî*, chief cup-bearer, was later promoted to be *mir-i ñuâ* of Malatya, Kaşamânî, Ghazza, Tarabûlûs (Tripolis in Syria), Erzerum and Halab, and in the spring of 1568 became governor of Egypt (cf. J. v. Hammer, *G. O. R.*, iii. 551). From here he undertook campaigns against the Yemen, which he conquered for the Ottoman empire. The Ottoman poet Nihâlî celebrated this event in a poem entitled *Fethnâme Yemen* (MS., perhaps autograph in the Vienna National Library, cf. G. Flügel, *Catalogue*, I. 640 *seq.*) and the Arab historian Mahmûd Kâth al-Dîn al-Makkî describes fully in prose this and the following campaigns in a work dedicated to Sinân and entitled *al-Bark al-Yemânî fî 'l-Fath al-'Othmânî* (cf. S. de Sacy, *N. E.*, iv. 473; part ed. with Portuguese translation by D. Lopez, Lisbon 1892). For further panegyrics of Sinân Pasha, cf. J. v. Hammer, *G. O. R.*, iii. 560, 779 from 'Alî, *Kunh al-Ahbar*. In 979 (1571/1572) Sinân Pasha was again appointed governor of Egypt, and in the spring of 1574 in the campaign against Tunis he was given supreme command

of the Ottoman land forces. Golotha (Hall al-Wadī) was stormed after a month's siege and Tunis incorporated in the Ottoman empire. Sinân Pasha who had become sixth vizier in 980 (1572/1573) was promoted two years later to be vizier of the cupola (*hâkim-i vestîrî*). In the spring of 1580 he led the Ottoman army against Georgia and on the 14th Radjab 988 (August 25, 1580) he was appointed grand vizier in succession to Ahmad Pasha who had died. Georgia was conquered but not subdued so that almost immediately after the conclusion of the campaign, difficulties arose which resulted on the 20th Dhî'l Ka'da 990 (December 5, 1582) in Sinân Pasha's dismissal and banishment to Dimetoka, later to Malghara (L. c. *Maryâde Kapod*) (cf. Selliniki, *Ta'rih*, p. 170; Gio. Tom. Minadoli da Rovigo, *Historia della guerra fra Turchi et Persiani*, Turin 1588 and Venice 1594, in which the writer describes fully the Persian campaign from his own experience). Through harem influence and a present of 100,000 ducats, however, he soon succeeded in exchanging his exile in Malghara for the governorship of Damascus (cf. Selliniki, p. 215; *G. O. R.*, iv, 185), from which he returned to Constantinople in Djumâdâ II, 997 (April 1589) as grand vizier. The vast wealth which he already possessed and which later assumed fabulous proportions, enabled him to make remarkable gifts (e.g. a grand-admiral's flagship and seven galleys) and to erect splendid buildings. The handsomely fitted köşk of the Serai on the shore of the Golden Horn which bore his name and was not destroyed till 1827 (cf. J. von Hammer, *G. O. R.*, iv, 187 note d), owed its origin to him. He also took up the old plan of connecting the Black Sea with the Gulf of Nicomedia by digging a canal from the Sea of Şahandja [q. v.] to the Gulf of Nicomedia for which he hoped to utilise the skill of Sinân the architect [q. v.]. This great undertaking seems to have fallen through as a result of the wars (cf. also Hâdîdî Khalîfa, *Djîhân-Namâ*, p. 666 and the literature quoted under ŞAHANDJA). On the 11th Shawwâl 999 (August 3, 1591) Sinân Pasha again fell from favour and was dismissed, but by the 25th Rabi' II, 1001 (January 29, 1593) a rising of the Janissaries caused him to be sent for to fill the grandvizierate for a third time. Henceforth all his energies were concentrated on winning military laurels in the west, especially in Hungary. In the spring of 1593, he therefore assumed in person supreme command of the army in the Hungarian campaign, which he concluded with the capture of numerous castles and strongholds. A month after the death of Murâd III on the 6th Djumâdâ II, 1003 (February 16, 1595), he had again to surrender the imperial seal and go into exile at Malghara, only for a few months however. On the 29th Shawwâl 1003 (July 7, 1595) he replaced his rival and relative Ferhâd Pasha and a few weeks later began a campaign against Wallachia, which had rebelled. The rather inglorious course of this campaign and the loss of Gran, which was ascribed to the inactivity of his son Mehmed Pasha, Beglerbeg of Rumelia (cf. the documents mentioned in J. von Hammer, *G. O. R.*, iv, 645 sq.), brought about his dismissal and banishment to Malghara on the 16th Rabi' I, 1004 (November 19, 1595). But when his successor İsmâ Mehmed Pasha died on the third day after his appointment, the imperial seal was again for a fifth time entrusted to Sinân Pasha. He

was just engaged on plans for conquering Eria in Hungary when he died on the 4th Şahbân 1004 (April 3, 1596). He was buried in his own türbe in the Sofiler quarter of Stambul. — Sinân Pasha was an unusually cruel, stubborn, selfish, and at the same time ignorant, man as to whose character Ottoman (notably 'Alî) and western chroniclers are entirely in agreement. He was feared among the European envoys at the Porte. Not all of them dared reply so sharply and to the point as the Austrian envoy Dr. Barthold Pezzen (cf. *Des Freyherrn von Wratislaw merkwürdige Gesandtschaftsreise nach Constantinopel*, Leipzig 1787, p. 138; Engl. ed., London 1862, ed. by A. H. Wratislaw). The Venetian *bailli* all agree in their descriptions of this powerful man, for example: Constant. Garzoni (1573, in *Alberici, Relazioni*, iii, 1, p. 411), Antonio Tiepolo (1576, in *Alberici, op. cit.*, iii, 2, p. 153 sq.), Lor. Bernardo (1592, in *Alberici, op. cit.*, iii, 2, p. 358: *fu fatto massu* [e.g. *ma'zûl*, deposed] *per causa della calcedin* [e.g. *Kaya Akaşun*]), Paolo Contarini (1583, in *Alberici, op. cit.*, iii, 3, p. 240), Giov. Moro (1590, in *Alberici, op. cit.*, iii, 3, p. 329, 372 sq.), Matteo Zane (1594, in *Alberici, op. cit.*, iii, 3, p. 420 sq.). He is described (1573) as "a strong young man with a thick black beard" (in St. Gerlach, *Tage-Buch*, Frankfurt on/M. 1674, p. 31, 109; cf. also C. Garzoni, *op. cit.*, iii, 1, p. 411: *non molto grande di persona, con barba lunga, castagna, di bella e grata presenza*). Sinân Pasha was immensely rich; his estate is fully described in H. F. v. Dietz, *Denkwürdigkeiten von Asien*, Berlin 1811, part 1, p. 101 sq.; cf. Pertsch, *Türk. Hist. Berlin*, p. 79; MS. 39, fol. 105, also J. v. Hammer, *G. O. R.*, iv, 258 sq. A brother of Sinân Pasha was the Beglerbeg Ayâs Pasha (d. 975 = 1568) executed by order of Sulaimân the Great, who left two sons Mahmûd Pasha (cf. *Sijill-i 'othmânî*, iv, 314) and Muştâfâ Pasha (*ibid.*, iv, 380). On Ayâs Pasha, not to be confused with the grand vizier of the same name, who also was an Albanian (from Valona) cf. *Sijill-i 'othmânî*, i, 447.

Bibliography (in addition to works already mentioned): the Ottoman historians most of whom have been used by J. von Hammer, also *Hadîkat al-Wizârâ*, p. 35 sq.; Hâdîdî Khalîfa, *Fethîkete*, i, 76 sq., followed word for word in *Sijill-i 'othmânî*, iii, 103 sq. — An Arabic biography of Sinân Pasha is in the MS. *Wetstein* 409 (Ahlwardt, vii, No. 8471) on fol. 135b. — On Sinân's son, the Beglerbeg Mehmed Pasha, cf. J. v. Hammer, *G. O. R.*, x, 527 below (Index s.v.) and *Sijill-i 'othmânî*, iv, 139; he died in Djumâdâ I, 1014 (September-October 1605). Among Sinân Pasha's relatives was the grand vizier Ferhâd Pasha, who again was related to Pertew Pasha (cf. Marcantonio Domini [1562] in *Alberici, Relazioni*, iii, 3, p. 188 at the top: *questo Pertaw pasha gli anni 55: è albanese e parente del magnifico Ferrat basso, essendo maritato nella madre di sua moglie*).

(FRANZ RABINGER)

SIND, consists of the lower valley and delta of the river Indus (Sindhu) from which the province takes its name, and lies between 20° 35' and 28° 39' N. and 66° 40' and 71° 10' E.

The Aryans were settled on the Indus before 1000 B.C. and about 500 B.C. Darius Hystaspes conquered the valley, but Persian rule in Sind had passed away when Alexander the Great traversed

the country in 325 B.C. After his departure it was included first in the Mauryan empire and then in that of the Bactrian Greeks. From the first century before, until the seventh century after, Christ India was invaded by various hordes from Central Asia, of whom the Ephthalites, or White Huns, settled in Sind and established the Rai dynasty, which was terminated by the usurpation of the Brāhman minister Caṭ, whose son Dāhir was reigning when Sind was invaded by the Arabs. In A.D. 711 Muḥammad b. Qāsim Sākifī, invaded the country, by the order of the Khalifa al-Walid, in order to avenge the maltreatment of some Muslim merchants who had failed to obtain redress, captured the seaport of Daihul, the town of Nerankot (the modern Haidarābād), and Rāwar, where he defeated and slew Dāhir, and finally took the capital, Aror or Alor, and, in 713, Multān, where much treasure fell into his hands. He had barely had time to organize his conquest when he was superseded by Sulaimān, who succeeded al-Walid in 715, and, as a protégé of al-Ḥadīdjādī, whose cruelty had made many enemies, was put to death with torture at Wasit, on the Tigris.

A succession of Muslim governors ruled Sind, leaving the administration chiefly in the hands of the natives, who enjoyed the free exercise of their religion; but the hold of the Khalifas on the province gradually weakened, and in 871 was entirely relaxed. Two Arab chiefs founded independent states at Multān and Mansūra, but when Maḥmūd of Ghazni led his raids into India, Abu 'l-Faṭḥ Dā'ūd, governor of Multān and Sind, still maintained the fiction of allegiance to the Khalifa. His adherence to the Karmatian heresy cost him his throne, and Maḥmūd placed a governor of his own in Multān. In 1053 the Sumras, a Rājput tribe, cast off the yoke of Farrukhshāh and established their authority in Lower Sind, but the upper province remained subject to the Ghaznawids and was conquered, with the rest of their dominions, by Mu'izz al-Dīn Muḥammad b. Sam. His lieutenant, Naṣir al-Dīn Kaḥāṭa, submitted to Kaṭb al-Dīn Aibak of Dihli, but was defeated by Shams al-Dīn Iltutmish, whose authority he refused to recognize. At the beginning of the fourteenth century the troops of 'Alā' al-Dīn Khaldīr overthrew the Sumras and destroyed their capital, but in 1333 the Sammās, a Rājput tribe converted to Islām, seized the reins of government, and set up a ruler of their own with the title of Dīlām. Muḥammad b. Tughlak of Dihli died in March, 1351, on the banks of the Indus, while in pursuit of a rebel whom the Sammās had harboured, and Sind contended successfully with the imperial arms until the Sammās were reduced to obedience and a vassalage by Firūz, Muḥammad's successor. With the decline of the power of Dihli that of the Sammās revived, the greatest of their line being Dīlām Nanda, or Nizām al-Dīn, who reigned for forty-six years and died in 1509. In 1520 Sind was invaded by Shāh Beg Arghūn who, having been driven from Kandahār by Bābur, succeeded in establishing himself in Sind. Dīlām Firūz, the last of the Sammās, was driven into Gujjarāt, where he died. Humāyūn, expelled from Hindūstān by Shīr Shāh, made two abortive attempts to conquer Sind, during the second of which his son Akbar was born at Umārkot in 1542, but was compelled to flee into Persia. On the death of Shāh Ḥasan, the last of the Arghūns, in 1554,

the Tarkhāns, another short lived dynasty, became rulers of Sind, and witnessed the sack of Thatha by the Portuguese in 1555, but in 1592 Akbar defeated Mirzā Dīnī Beg Tarkhān, and annexed Sind, which was incorporated in the *sulṭa* of Multān. The province was a part of the empire, but owing to its remoteness local affairs remained much in native hands. The Dādputras were powerful in Lower Sind in the seventeenth century, and were succeeded by the Kalhoras, who in 1701 ousted them from Shikārpūr and obtained from Awrangzib a large grant of land. For the next forty years the Kalhoras increased their power, but in 1740 Nūr Muḥammad Kalhora incurred the displeasure of Nādir Shāh, to whom that part of Sind lying to the west of the Indus had been ceded, and was compelled to surrender Shikārpūr and Sibt and to pay a heavy tribute. In 1754 Ahmad Shāh Durrānī (Abdālī), to whom Sind had passed on the death of Nādir Shāh, drove Nūr Muḥammad to Dajsalmer, where he died, but his son, Muḥammad Murād Yār Khān, appeased the Afghān and retained the kingdom. In 1768 his brother and successor, Ghulām Shāh, founded Haidarābād on the site of Nerankot. The relations of the Kalhoras with the English East India Company, which in 1772 opened a factory at Thatha, were the reverse of friendly, and the factory was closed in 1775. Some years later Mir Bidjar, a chief of the Tālpūr tribe of the Balūṭ, rose in rebellion, and the Kalhora compromised the matter by appointing him minister, but he was assassinated in 1781 after defeating an Afghān army near Shikārpūr, and his son 'Abd-Allāh Khān Tālpūr drove 'Abd al-Nabī, the last of the Kalhoras, to Kalāt. 'Abd al-Nabī regained his throne and put 'Abd Allāh to death, but the latter's kinsman, Mir Faṭḥ 'Alī, defeated him and finally compelled him to take refuge in Diodhpūr, where his descendants still hold distinguished rank. In 1783 Faṭḥ 'Alī, the first of the Tālpūr Mirs, established himself as Rā's of Sind. The history of the country under its new rulers is bewildering, owing to its partition among different members of the family — (1) the Haidarābād or Shāhdādpūr branch, ruling in Central Sind, (2) the Mirpūr or Manikānī branch, seated at Mirpūr, and (3) the Suhrābādī branch, ruling at Khairpūr.

The early relations of the English East India Company with the Mirs of Sind were unsatisfactory, and difficulties in connection with the passage of British troops through the province on the outbreak of the first Afghān war in 1838 led to the introduction of some degree of British control. The Mirs were now amenable, but their army rose against the British, and in 1843 was defeated by Sir Charles Napier at Miani. Mir 'Alī Murād, of the Suhrābādī branch, remained faithful to the British, and was permitted to retain his principality of Khairpūr, but the rest of Sind was annexed, and has since been a British province. Under the administration of Sir Bartle Frere it remained tranquil during the Mutiny of 1857, and the only British regiment in the province was set free for the suppression of the revolt elsewhere.

SINDIBĀD-NĀME (Syntipas), a widely known collection of stories, which since the time of Pétis de la Croix has been much studied by folklorists. The general theme is as follows: A king entrusts the education of his son to the sage Sindibād. The prince is ordered by his tutor to keep silence for seven days; during this time he is calumniated by the favourite queen and the king is on the point of putting him to death. Seven viziers, by each telling one or two stories succeed in postponing his execution and on the eighth day the prince, who has recovered the use of his speech, is proved innocent. This cycle is also known as the history of the seven viziers. In another cycle (the history of the ten viziers, *Bakhtiyār-nāma*), ten viziers accuse a prince whom they wish to ruin in the eyes of the king and the prince defends himself by relating these stories. The *Tātī-Nāma* studied by Pertuch is another similar collection.

The book of Sindibād is referred to by Mas'ūdī (tenth cent.) alongside of *The Thousand and One Nights*; at a later date it became incorporated in the *1001 Nights*, but also retained an independent existence. It is found in the Oriental literatures, Syriac, Hebrew, Greek, Pehlevi, Persian, Arabic, Turkish and it entered the mediaeval literatures of the West; French, Latin, Italian, Catalan, Slavonic, Armenian and German versions are known. India has stories of the same genre and Benfey has attempted to derive the Syntipas from an Indian prototype *Siddhapath*, which we do not however possess; its Indian descent has however not been rigorously established. It may be noted on the other hand that the moral of these stories and characteristic feature of the trial by silence would rather recall Pythagorean tradition.

Bibliography: The editions of the *Thousand and One Nights* and the *Cent et Une Nuits*, transl. by M. Gaudetroy-Demombynes, Paris 1911, a collection which contains an Arabic version of the story of the Seven Viziers older than the Persian versions that we possess; the *Bibliographie des Ouvrages Arabes* de Chauvin, viii., Liège 1904; Clouston, *The Book of Sindibād*, Glasgow 1884; René Basset, *Deux manuscrits d'une version arabe inédite du recueil des Sept Viziers*, *J. A.*, Ser. x., t. ii., 1903; do., *Contes arabes, Histoire des dix viziers*, transl., Paris 1883; Comparetti, *Researches respecting the Book of Sindibād*, London 1882; H. A. Keller, *Le Roman des Sept Sages*, Tübingen 1836. (B. CARRE DE VAUX)

SINDJĀBĪ (SINDJĀH), a Kurd tribe in the Persian province of Kirmānshāh. In summer the Sindjābī pitch their tents in the plain of Māhdisht and in the district of Dīwānūr; in winter they move to the lands south of the Alwand (in Kurdish: Halawān from the older Hulwān, cf. SARPUL), a left bank tributary of the Diyāl which it joins near Khānīqīn. Here the

pastures of the Sindjābī stretch from Sarpul to the mountains of Agh-dāgh, Bāghē and Kafār (south of Khānīqīn) and in the south stretch as far as Kālā-nāst. The delimitation of the Turco-Persian frontier in 1913 left a part of those winter-quarters of the tribe on the Turkish side but the inconvenience of this division was officially recognised. On the left bank of the Alwand the Sindjābī occupy a narrow strip to the north and west of Kaṣr-i Shīrīn [q. v.] up to the present frontier between Persia and the 'Irāq; they have some ten villages there.

The tribe consists of twelve clans (Čalabī, Daliyān, Selmenewend, Surkhewend, Haḡḡ-Nazar-khānī, etc.). The number of families cannot be over 2,500, of which not more than 500 are pure Sindjābī; the remainder consists of incorporated clans: Lārs (Arkawāzī) Wātkawend, Dīf Kurds (Barāz) and Gūrān (Tufangēr). About 1,500 families of the Sindjābī agglomeration winter on the Alwand. According to Soane they speak *Kurdī*, i. e. the dialect which does not belong to the Kurmāndjī group.

The chiefs of the Sindjābī have often acted as governors of the frontier district of Kaṣr-i Shīrīn. The tribe provided the government with a contingent of 200 irregular horsemen.

The *Shīrīf-nāma* does not mention the Sindjābī. According to themselves they once lived in Bayāt near Shīrīn whence their chief Bakhtiyār Khān brought them into the province of Kirmānshāh where they lived with the Gūrān for some time. This may explain their conversion to the religion of the Ahl-i Haḡḡ (cf. 'AHL-I LĀNĪ) although they often profess themselves outwardly "Twelve Shī'is" (*iḡwā'-aḡharī*). Under Ḥasan Khān Čalabī, son of Bakhtiyār Khān, the Sindjābī formed themselves into a separate tribe. The son of Ḥasan Khān, Shīr Khān Saḡām al-Mamālik, became chief in 1905 and died an octogenarian in 1915. His sons Kāsim Khān, 'Alī Abkar Khān etc. played a certain part in the military operations of 1916—1918; being on the side of the Turks, they adopted a hostile attitude to the English and Russians.

Orlov, *Putevye dnevniki de 1913 in Materialy po Vostoku*, ii., Petrograd 1915; H. Rabino, *Kermānshāh*, *R. M. M.*, March 1920 (an article with very full authorities). (V. MINORSKY)

SINDJĀR, the name of the capital of a district in Diyār Rab'ā [q. v.] (Balad Sindjār) and of the ranges running north of it (Djabal Sindjār). The town, which is identical with the ancient Singara is situated a very little east of 42° East Long. (Greenwich) and in 36° 22' N. Lat. in a valley of the Tawḡ (now pronounced Tōḡ) range which is south of and parallel to the Djabal Sindjār, through which the Nahr Tharthār enters the steppes on the south. On the alleged navigability of the river in the middle ages cf. Sarre-Hersfeld (*Bibl.*), i. 193 sq. As the walls show, the town was at one time much larger than now. It was bound to be prosperous from its favourable geographical situation and the fact that it lay on a fertile slope surrounded by desert. According to Ibn Hawḡal it was partly irrigated artificially so that all kinds of fruits grew there. As a stage on one of the two great roads from Mōḡal to Beled (Balat, Eski Mōḡal, see ESKI), to Khābūr [q. v.]

and on to Ra's al-'Ain, Sindjār was able to carry on an extensive trade in its own products. Now the conditions are entirely changed. Sarre and Herzfeld point out especially that in contrast to what the geographers say, namely that date-palms were extensively cultivated in Sindjār, there is not a single palm-tree there now and the limit of fruit bearing by the date-palm lies much farther south. Sachau (*Bibl.*) however talks of fertile fields in the neighbourhood of the town. — The people of the Djabal Sindjār and of the town are Kurds, who belong to the sect of the Yazidis. The district was already Yazidi in the middle ages.

Bibliography: The ancient history of Singara is outlined in Sarre-Herzfeld, *Archäologische Reise im Euphrat- und Tigris-Gebiet*, 1911 *sqq.*, I. 203. The statements of the mediaeval geographers are collected in Le Strange, *The Lands of the Eastern Caliphate*, 1905, p. 98 *sq.*; all the necessary references to the sources are given there and in Sarre-Herzfeld, I. 204. For the history of the town under Islam what is said under SARUJ holds good. Al-Sam'āni, (*G. M. S.*, xx., 1912), f. 312a—b, gives a few bearers of the *nisha* Sindjār. Modern conditions in Djabal and B. Sindjār are fully described by E. Sachau, *Reise in Syrien und Mesopotamien*, 1883, p. 322 *sqq.* and there are a number of notes in M. v. Oppenheim, *Vom Mittelmeer zum Persischen Golf*, 1899 (Index s. v. Beled [does not distinguish the different places of this name] and Gebel Singar). The above account is mainly based on the full description of the mountains, towns and monuments (with sources and bibliography) in Sarre-Herzfeld, Index s. v. Djabal Sindjār, Nahr Tharthār and Sindjār (in the quotations from vol. II/I. 355, 7) where further references are given. — Maps in the works just mentioned. General view of the town in Sarre-Herzfeld, III., plate lxxiv. — On the Yazidis of Sindjār cf. Pognon, *Sur les Yézides du Sindgar*, R. O. C., x., 1915/1917, part 3 (reference by Strothmann in *Isl.*, xiii., 1923, p. 371); Pauly-Wlasowa, *Realenc.*, s. v. Singara and *Endspaz.* (M. PLESSNER)

ŠINF (A.), pl. *sināf*; — synonyms *ḥirfa*; *kār*, pl. *kārūt*; *ḥanta* in Morocco.

Historical. The organisation of labour and the grouping of workers into corporations in Muslim cities dates from the ninth century of our era and is closely connected with a movement half religious and half social, socialistic in origin, that of the Karmatians [q. v.]. At this period, industrial development and the growth of urban populations produced serious crises under the 'Abbasid Caliphs. The servile war of the Zindj [q. v.] at Baṣra, riots in Baghdad in the first thirty years of the tenth century and lastly the anti-Arab nationalist (Shu'ubiya, q. v.) reaction in the provinces.

The custom, Karmatian in origin, of organising into guilds attained its zenith in the Muslim countries subjected to the new state which arose as a result of the propaganda of the Karmatians, namely the Fātimid caliphate of Cairo (tenth-eleventh century). Then, in 1171, the reconquest of Egypt for Sunnī orthodoxy affected it seriously. The guilds were subjected to strict police control and gradually lost all their privileges. Their organisation survived in very humble forms especially in the Ottoman empire, in the Pāndjāb, in Persia

and in Turkeṣtān, down to the last years of the sixteenth century (Kudai described those of Damascus in 1883).

Since 1917 the ancient Muslim guilds have tended to become *nağhāt* or syndicates for the new professions, dependent on the Third International (Moscow). This change was noticed in Java in 1920, then in Bukhārā, at Teherān, in Egypt and finally in Tunis since 1924.

Organisation. The earliest sketch of the organisation of the Muslim guild is found — unfortunately in too concise form — in the eighth of the *Raṣā'il al-ḥikmān al-Safā* (eleventh century) mixed with Hellenistic conceptions which suggest that they are Byzantine survivals.

From the xvth century we have (in manuscripts) a series of catechisms of initiation into the guild, called *ḥatub al-futuwwa* (q. v.; in Turkish *futuwwat-nāme*; in Persian *ḥarb-nāme*). They enable us to construct the hierarchy of the grades — *nağīb* (syn. *ḥir*, 'arīf, amīn). They describe the ceremony of initiation (*ḥadd*; q. v.); but they do not give any details regarding the regular working of the guild tribunal and the degree of its competence. We can only gather these details from historical and legal texts and from the narratives of travellers like Ibn Djabair and Ibn Baṭṭūṭa.

The master-craftsman is called *mu'allim*, his journeyman *ḥalīfa*, the apprentice *muṭa'allim*, the labourer *ḥanf*. The members of each guild are pledged to guard the secrets of manufacture and to supply good work at a fair price; the whole body of traditional customs of the guild, orally transmitted, is called *dustūr*, a word which has become well-known since 1908 with the meaning "political constitution" and has been in use among the artisans from a remote period.

Since the ninth century the following have been organised into guilds, the islamised clients (*ma-wālī*), enfranchised and converted, but not the Arab conquerors nor their mercenaries, nor their slaves. Alongside of the clients there have been constituted under their aegis, certain Jewish and Christian corporations, since it is to them alone that Muslim states permit trading in and working in precious metals and drugs.

Since, for ten centuries, there has been no revolution in the technical processes employed by the Muslim artisans, the study of the distribution of the different guilds in the Muslim cities, Fez or Baghdad, Damascus or Cairo, shows that as a general principle there was a fixed topographical distribution of the trade guilds in any particular Muslim city. The principal fixed points were the offices of the money-changers beside the mint, the public market and the tribunal of the *muftasid*: the *ḥaṣṣariya* [q. v.] at once general shops and the piece-goods exchange; the thread market; lastly the university, organised into a corporation from its origin (Karmatian propaganda). We know of other centres, economic in origin, the specialised markets for the sale of goods brought to the town from the country or from abroad — the great caravanserais (*ḥān*, *ṣūla*, etc.).

A certain number of conditions, specifically Muslim in origin, affect labour in practice, the distribution of tools and the recruiting of labourers. Firstly there is the institution of *ḥubūs* or *awḥāf*, inalienable public property such as irrigation, canals, mills, baths, gardens, bridges, drains; the administration of the *ḥubūs* also affects the guilds,

through the shops, nearly all the fixtures of which are *ḥudūd*. Then there is the institution of the *ḥisba* or control of the markets entrusted to a *muḥtashib*. This institution, purely canonical in the early centuries, and fallen into disuse in the tenth to twelfth centuries in the great period of liberty for the gilds, was revived by the state from the twelfth century as a police office with the object of keeping a close watch on the gilds, which were suspected, especially in Egypt, Syria and Turkey, of Karmanian and revolutionary sympathies. The manuals for the *ḥisba* by Nibrawi and others show this; in Morocco, for example, the *muḥtashib* ultimately established a compulsory weekly court, when, according to Muslim law, he ought on the contrary to have prohibited the gilds from fixing compulsory rates (*taʿīr*) for provisions.

There arose a whole collection of moral problems in connection with the gilds. Muslim literature is rich in documents referring to the gilds of charlatans, forgers, immoral and criminal associations, and the theologians and jurists have handed down to us collections of cases of conscience and mental reservations (*hiyal*), the importance of which has recently been shown by Schacht.

Bibliography: There is a general bibliography of the history of labour in the Muslim world in ch. 3 of vol. lviii. of the *R. M. M.* and a summary chronology in vol. liii., p. 19-21.

The connections with the Third International have been exposed in the same *Revue*, vol. li, lii. and lviii.

Additional reference will be found in the Bibliography to the article *SHADD*.

(LOUIS MASSIGNON)

SINGAPORE (from the Sanskrit *Sinhapura*, "the lion city") is the name of an island and a city thereon, situated in 1° 17' N., 103° 50' E. (Gr.), at the southern end of the Malay Peninsula, from which it is separated by a narrow strait recently bridged by a causeway which carries the line of railway running to Bangkok. In the Middle Ages Singapore was a port of call for the trade between India and China, and its native name *Tēmasik* is recorded in Chinese, Javanese and Malay sources. Originally part of the South Sumatran empire of Śrī Viḍḍaya (Palembang), it enjoyed a brief period of practical independence (from circa 1250). In the early part of the 14th century it was unsuccessfully besieged by the Siamese. It is claimed in the Javanese poem *Nāgarakṛtāgama* (1365) under the name of *Tumasik* as a vassal of the Javanese empire of Maḍjapahit, and was destroyed by the Javanese circa 1377. After that event it was superseded by Malacca, and dwindled into a comparatively unimportant place, though still occasionally visited by passing ships for wood, water and other provisions, and having a *ḥukūmdār* (port officer) under the Muslim Sultans of Malacca (down to 1511) and subsequently under their successors, the Sultans of Johor. On February 6, 1819 a British settlement was founded at Singapore by Sir Thomas Stamford Raffles on behalf of the East India Company. It was on the site of the old medieval port town and included only a small part of the island; but by a treaty made in 1824 the whole island with its adjacent islets was ceded to Great Britain in full sovereignty.

At the time of the British occupation the inhabitants numbered only a few hundred, partly

Muslims (Malays) and partly wandering sea gypsies (Orang Laut) living mainly in their boats. The growth of the town was rapid. The trade is mainly in the hands of European and Chinese merchants, though other races, such as Indians and Arabs, also share in it. Three-fourths of the inhabitants are Chinese. In 1921 the population within municipal limits was 350,355, that of the island generally 418,358. Of this last number about 64,000 to 65,000 were Muslims, the bulk, viz. 33,595, being classed as Malays (though this latter figure included only 33,184 real Malays, 13,328 Javanese, 6,582 Boyanese, 1,142 Bugis and 349 Banjarese, and a few others). The remaining Muslims comprised some 9,000 Indians and about 1,200 Arabs. The great majority are Sunnis of the school of Shāfiʿī. Being in touch with the Muslims of Arabia and India on the one hand and with those of the Malay Peninsula and the Dutch East Indies on the other, Singapore, though mainly non-Muslim in population, is an important link in the chain of Muslim propaganda and in the pilgrim traffic to Mecca.

SIN-I KALĀN (literally Great China), Arabic and Persian name (the Arabic *sin* is of course for the Persian *zin*) for the seaport of Canton in the Mongol period; it is known especially from the travels of Ibn Baṭṭūṭa [q.v.] (ed. Defrémery and Sanguinetti, iv. 271 sq.) but is used by other Muslim (Rashid al-Din, Waṣṣaf) and also by Western writers (Odon de Pordenone, Marignolli, also in the *Carta Catalana*; cf. the quotations in Yule, *Cathay and the Way Thither*, London 1866, p. 105, and Rashid al-Din, *Jāmiʿ al-Tawārīkh*, ed. Blochet, 1911, p. 493). For *Sin-i Kalān* Ibn Baṭṭūṭa also has *Sin al-Sin*; this latter name is according to Yule, taken from Idrisi [q.v.] who describes in the extreme east of the Chinese empire a large trading town under the name *Sinīya al-Sin* (*Geographia d'Edrisi*, transl. A. Jaubert, Paris 1836-1840, i. 193 sq.). (W. BARTHOLO)

SINUB, a town and seaport on the north coast of Asia Minor between the mouths of the Sakariya [q.v.] and the Kizil İrmak [q.v.] and about equidistant from the ports of Samsun and İnebolu, 75 miles N.E. of Kaşamuni [q.v.]. It is the celebrated *Sinū* of the ancients and has retained this name. Muḥammadan authors know it by the name of *Sinūb* (Abu ʿl-Fidaʾ, p. 392 and Ibo Faḍl Allāh al-ʿUmari, *Masālik al-Aḥṣār*, N.E., xiii. 361), *Sanūb* (Ibn Baṭṭūṭa, ii. 348), *Sināb* (Anon. Gliese, p. 34; Urudj Beg, ed. Babinger, p. 73), *Sinūb* (ʿAshik Paṣha Zāde, and, following him, all the Turkish historians and other writers). The town lies on an isthmus running N.E. from the mainland to

which it joins the peninsula of Bor Tepe Adaı. This position gives the town two harbours but only that on the south, the safer of the two, has remained in use since ancient times. The strip of coast behind Sinöb is bounded by the great range, which borders the Central Anatolian plateau, and is particularly difficult to cross directly south of the town.

The history of Sinöpe goes back to a remote period. It was already an important port for trade with caravans from Mesopotamia and Cilicia, before it became a Greek colony of Milesians, in the eighth century B.C. Herodotus, Xenophon and Strabo describe it, but in the time of the latter it was no longer the great terminal port for continental trade (cf. Ramsay, *Historical Topography of Asia Minor*, London 1890, p. 27). The town however retained its importance; in the second century B.C., it was the capital of Mithridates of Pontus and after its capture by Lucullus in 70 B.C., it knew several centuries of prosperity as a Roman colony under the name of Colonia Julia Felix. When, under the Byzantine empire, the interior of Asia Minor gradually lost its Hellenism, Sinöpe remained a commercial city of the first rank. The invasion of Asia Minor by the Saracens in 832 had as one result that Theophobos, commander of the "Persian" auxiliary troops of the emperor, was proclaimed king of Sinöpe for a brief period; this episode is related by the Byzantine sources, Symeon Magister and Theophanes Continuatus.

As the conquest of Asia Minor by the Seldjüks was confined for the first century to the interior of the peninsula, Sinöpe remained Byzantine, but also served as a port for the merchants of the Seldjük empire, who embarked there for the Crimea (Heyd, *Histoire du Commerce du Levant*, I, 298). At the beginning of the thirteenth century the town passed into the hands of the empire of the Comnenoi of Trebizond. The Seldjük Sultan 'Izz al-Din Kalkabādī took the town from them. Ibn Bibi, who gives a detailed account of its capture (*Recueil des historiens des Seldjoukides*, ed. Houtama, IV, 54 sqq.) gives as the date of the capture the 26th Djumādā II, 611, corresponding to the Nov. 2, 1214 (this day was a Sunday while Ibn Bibi talks of a Saturday). The Seldjük Sultan had taken advantage of the discord between the two Greek empires, but the immediate pretext for attacking the town was the raids which the lord of Sinöpe (in Ibn Bibi and Barhebraeus, *Chronicon*, ed. Bedjan, p. 429, called Kir Aleks, i.e. Kyr Alexis Comnenos, cf. Fallmerayer, *Gesch. des Kaiserthums Trapezunt*, Munich 1827, p. 94) had made into Turkish territory. Abu 'l-Fidā seems also to allude to this conquest (*Tarikh*, Constantinople 1286, III, 122 under 611 A.H., cf. Fallmerayer, *op. cit.*, p. 96); in any case Barhebraeus is wrong in saying that Alexis was killed by the Seldjüks. The Byzantine historians do not mention the taking of Sinöpe.

The town was given a Seldjük garrison and the church turned into a mosque. Some time afterwards, the town was given as a hereditary fief to the celebrated vizier Mu'ın al-Din Sulaimān Perwāne, who built a fine mosque there which is described by Ibn Battūta. It was about the same time that William of Rubruck passed through the town, which he calls Sinopola, on his way to Russia. According to Müneddjim Bāshī (III, 31)

Perwāne was succeeded at Sinöb by his son Mu'ın al-Din Muhammad (676—696) then by his other son Muḥammad al-Din Mas'ūd, on whose death in 700 A.H. his lands passed to the lords of Kaştanın. But another authority (Ali, *Kunh al-Ashbār*, v, 22, quoting Rūḥi) says that after the deposition of the Sultan 'Alā al-Din (in 1307) Ghāzī Khān granted all the lands in the north and northwest of Asia Minor to Ghāzī Celebi, son of the Seldjük Sultan Mas'ūd. This Ghāzī Celebi is well known in history especially for his bravery in his acts of piracy (for example he dived under the water to destroy the keels of enemy vessels) which he committed against the Genoese and the Greeks of Trebizond, whose ally he had sometimes been. Ibn Battūta (*loc. cit.*) and probably Abu 'l-Fidā (*Takwīm al-Buldan*, ed. Reinaud and de Slane, p. 393) however make Ghāzī Celebi a descendant of Perwāne. After his death, Sinöb was taken by Shādī' al-Din Sulaimān Pasha, lord of Kaştanın (cf. İsfendiyār Oghlū); it was shortly after this event that Ibn Battūta visited the town (c. 1340). During the thirteenth century, the town retained its importance as a commercial port, connected with the interior by a road to Izmit and Brusa (Taschner, *Der anatolische Wegweis*, I, 196). Trade was mainly in the hands of the Genoese, who probably had a consulate there since 1351; there was also a Genoese colony (Heyd, *op. cit.*, I, 550). Sinöb was the last refuge of the İsfendiyār Oghlū, when the Ottoman Sultan Bāyazīd I had attacked them and in the end they abandoned the town to him in 797 (1394—1395), according to the old Ottoman chroniclers (Ashīf Pasha Zade, p. 72; Anon. *Giese*, p. 34). After the restoration of this dynasty by Tīmūr in 805 A.H. Sinöb again passed under their rule; it was the seaport by which the rebels against the Ottomans, like Shaikh Badr al-Din (cf. Bahinger, in *lit.*, XI, 60) were able to escape under the protection of the İsfendiyār Oghlū. It was however only in the year 1458 that Muḥammad II definitely incorporated the town in his territory by a treaty with the İsfendiyār Oghlū İsmā'il Beg, who received in exchange fiefs in Rūm III. This event is recorded by all the Turkish historians and by the Byzantine Ducas and Chalkondylas; the latter mention the formidable defences, that had been erected in the town.

Under Ottoman rule the town never again became a seaport of importance. In 1614, it suffered from an invasion of the Don Cossacks (Na'imā, I, 298), which resulted in energetic measures of defence being taken. Ewliyā Celebi (II, 73) says that it was forbidden to the commandant to go more than a cannon-shot from the citadel and that the attacks of the Cossacks stopped in the reign of Murād IV. The only serious event since that date was the naval battle fought on Nov. 30, 1853 between the Russians and a Turkish fleet in the roadstead of Sinöb; the Turks were completely defeated and the town was partly destroyed by the bombardment. This event was one of the immediate causes of the Crimean war (von Rosen, *Geschichte der Türkei*, Leipzig 1867, II, 194).

Under the administrative reforms in the Turkish Empire, Sinöb became the capital of a *sandjak* and of a *merkez paşa* in the *sandjak*, in the wilāyet of Kaştanın; the other *paşa* of the *sandjak* are Boyābād and İsfenān. Cuiwet gives the population of the town as 9,749 of whom

3,041 are Muslims. From the description the town has barely changed in the last few centuries. The citadel is in the west part of the town and is surrounded by enormous walls of the Byzantine period; seen from the peninsula of Boz Tepe, the citadel looks like the bridge of a ship, according to Ewliya. Cuinet mentions other remains of older edifices. The quarters inhabited by the Greek Christians were outside the walls of the town, on the Boz Tepe side. It was this part that suffered most in the bombardment of 1853. Among the mosques Ewliya gives pride of place to the Sultan 'Alī al-Dīn Dīlāmī; he gives a detailed description of the *minbar* which was a marvel of art built of marble. According to Hādījī Khālifa, Sulaimān I wanted to transport the *minbar* to Constantinople for the Sulaimāniya Mosque but when they attempted to move it, it cracked so that the Sultan abandoned his plan. The town has many other old mosques and türbes (including that of Saliyid Ibrahim Ballal and that of Sulān Khātūn), the study of which will throw much light on the history of the town. The industry for which Sinub is more particularly noted is that of goldsmiths' work (especially filigree work). The yards of Sinub used to build the large Turkish warships of wood from the mountains to the south. Towards the end of the sixteenth century, the traffic at the port of Sinub was less important than that of Şimsin and Ineboli. An attempt to revive the trade of the town has been made by building a road for vehicular traffic from Sinub to Amasia, but it is only finished as far as Boyabdd.

(J. H. KRAMER)

SIPĀH, SIPĀHI, SIPĀH SĀLĀR. [See *SEPOY*]. **SIPĪHR**, "celestial sphere", nom de plume (*taḥalluṣ*) of the Persian historian and man of letters, Mirzā Muḥammad Taqī of Kāghān. After a studious youth spent in his native town he settled definitely in Tihirān, where he found a patron in the poet-laureate (*malik al-ḥuʾarāʾ*) of Fath 'Alī Khān. On his accession (1250 = 1834) Muḥammad Shāh appointed him his private panegyrist (*maddūh-i khāṣṣ*) and secretary and accountant in the treasury (*manqāsh wa-muḥasab-i dawla*). The same Shāh entrusted him with the composition of a universal history. Nāṣir al-Dīn Shāh also encouraged him in this enterprise and in 1272 (1853) conferred on him the title of *Lisān al-Mulk* ("Tongue of the State"). Sipīhr died about 1296 (1878). Gobineau who had known him, speaks of his "gravité docte et administrative" in contrast to the "façons légères et riantes" of his colleague Rida Kuli Khān Hādīyat.

The book entitled *Barāhīn al-ʿAdām* finished by Sipīhr in 1251 deals with Persian prosody; it is illustrated by examples from the Persian classical poets. The *Dīwān* of Sipīhr does not seem to have been published; his verses quoted in antho-

logies (*Madjmaʿ al-Fuḥūṣ*) while showing technical skill lack originality and taste. Sipīhr's history, with the pretentious title of *Nāṣiḥ al-Tawārīkh* ("Effacement of the Chronicles") according to the Indian catalogues, consists of fourteen volumes of which the last stops at the period of the fifth Shīʿi Imām Muḥammad Bāqir (d. 113 = 731). Its style is evidently appreciated in India where extracts from it have been published, as texts for examinations in Persian, but the present-day Persians criticise it severely and say it is full of inaccuracies and anachronisms. Of more importance is volume v. (I) which, anticipating the full scope of the work contains the official history of the Qājār [q. v.] dynasty. It consists of three parts coming down to 1267 (1851) with a later supplement dealing with events down to 1273 (1857). This chronicle has been much used by the historians of the Bābī movement [q. v.], Gobineau, Kazembek and Browne. The latter pays a tribute to Sipīhr's candour and accuracy ("scarcely surpassed by the witty and sarcastic de Gobineau") with which he depicts on the one hand the faults of certain representative Persian officials and on the other the courage and heroism of the adepts of the sect.

Bibliography: *Barāhīn al-ʿAdām* fi *Kawānīn al-Madīyat*, 8°, 165 p., Tihirān 1272; *Nāṣiḥ al-Tawārīkh*, vol. i., parts 1 and 2, folio, Tihirān 1285; the *Mirʿat al-Buldān* of Sanʿ al-Dawla, iii., 98, among the events of the year 1287 announced the printing of volume v. of *Nāṣiḥ al-Tawārīkh*; all 14 volumes were to be published in Tihirān. Vol. ii., part 6 (martyrdom of Himsā), appeared at Bombay 1309, folio 24-552; *Intihābat-i Nāṣiḥ al-Tawārīkh*, Lahore 1904, 200 p.; Gobineau, *Trois ans en Asie*, Paris 1859, p. 454, 461-462; do., *Les religions et les philosophies*, Paris 1866, p. 157; Rida Kuli Khān, *Madjmaʿ al-Fuḥūṣ*, Tihirān 1295, ii., 156-181; E. (V. MINORSKY)

SIRA (A.), the traditional biography of Muḥammad. The word seems to be used for the first time as the name of a separate branch of study in the title of Ibn Hishām's work (ed. Wustenfeld, p. 3, 4: *ḥadīṣ kitāb sirat rasūl 'Uṣṣ*) but there is other testimony to its use to mean biography of Muḥammad; it is already found in this sense in al-Wāḥidī (Ibn Saʿd, *Tabaqāt*, iii., 18, *man raʾi 'Isra*) and in his pupil Ibn Saʿd (*Ibid.*, iii., 152; *ḥadīṣ 'al-ʿAlam* bi *l-sirat wa l-maghāzī min ḥadīṣ*). Besides, the word *sira* at this time had already the sense of biography in general; it is known that a *Sirat Muʿawīya wa-Band Umāyia* by 'Awāna al-Kalbī (d. 147 or 158 A. H.) or by Mirdjāb b. al-Ḥarith (al-Tamīmī, d. 231) existed (*Fihrist*, p. 91, 18).

The meaning of "biography" comes in its turn from that of "conduct", "manner of living", which the word *sira* has and which is a natural development from the root *s-y-r* to "betake oneself", to "travel" (*sira* is found in the Qurʾān, xx., 22) in the meaning of "manner of being", "form". It

seems that at first the plural form, *siyar*, was used by preference in connection with the biography of the Prophet, having been probably applied to the narratives of the life of Muhammad in the style of the *siyar al-mulūk* of Pehlevi origin, with which the Arabs were acquainted at the rise of Islām (cf. Nöldeke, *Gesch. der Perser u. Araber*, p. xiv.-xviii.). This term *siyar*, in the majority of references which we possess to the early productions of Arab literature relating to the biography of Muhammad, is constantly found associated with the term *magāzī* "military expeditions" (cf. A. Fischer, in Nöldeke-Schwally, *Gesch. d. Corān*, II, 221) and the association of these two words helps to enlighten us as to the composite origin of the *Sira*.

1.

The Origin and Character of the *Sira*.

The idea of piecing together into a consecutive and organic narrative the story of the life of the Prophet from his birth to his death was neither an early nor a spontaneous one in the community of Islām. If it is natural that the deeds and sayings of the founder of the new faith should have at once attracted the interest of and have recommended themselves to the memory of his contemporaries and still more to the believers of the second generation, it is none the less true that the character of this interest was anything but historical, in the sense in which we understand the word. It was rather concerned, on the one hand with fixing the regular practice of worship and religious law according to the teaching and example of the Prophet and on the other with celebrating, after the fashion of pre-Islamic Arabia, the warlike exploits of the Muslims under the conduct of their chief, who was regarded by the majority of his followers as an amir, whose wisdom and bravery, favoured by divine assistance, had gained him the most dazzling successes but who did not differ markedly in character from the amirs of the Džihillya. It was the former of these two motives which, as we know, gave the stimulus to the process of formation of the sunna, under the typical form of the narrative *ḥadīth* (II, 200-206), which, although presented as a collection of biographical data, in reality is quite different in aim and character. The second motif, in its turn, has given rise to an abundant crop of stories relating to the Medinese period in the career of Muhammad, completely filled with military exploits. These narratives are simply the continuation or development of the literature of the *ayūm al-ʿArab* (I, 230-231), the characteristic features of which had already become fixed at a period antecedent to Islām: they have in common with the latter the naive freshness of style, the tendency to break up the narrative into a number of episodes only very slightly connected with one another, and the abundance of poetical quotations (cf. J. Horowitz in *Islamica*, II, 1926, p. 308-312), which often must have actually formed the kernel around which the prose story later established itself. One cannot deny to this kind of production a historiographical character, but one must remember that we are not here dealing with history placed in a chronological framework nor arranged on any definite plan. We have rather to deal with a series of "war memoirs" in which the faithful reproduction (although often subjective) and the realistic description of one episode are

found alongside of an inaccurate and distorted description of another, and in which, in particular, the linking up of incidents and a synthetic survey of the course of events are completely lacking.

Of quite another kind are the origins of the biography of the Prophet properly so called. The latter owes its origin to the transformation undergone by the personality of Muhammad in the religious consciousness of Islām and to the decisive influence which certain heterogeneous elements have exercised on this transformation. It was above all contact with Judaism and Christianity and the desire to set up in successful contrast to the figures of the founders of these two religions, that of the founder of Islām which encouraged the development of the legend with which the person of Muhammad has been surrounded and which has completely transformed and altered the nature of his character from his childhood (or even before his birth) to his death. The Prophet, who had so definitely declared during his mortal career, that he only considered himself a man like others ultimately came to represent the visible manifestation of divine perfections: his life, becoming a kind of copy of those of Moses and of Christ, was given the stamp of the supernatural in its smallest details (cf. the fundamental work of T. Andrieu, *Die Person Muhammads in Lehre und Glaube seiner Gemeinde*, Stockholm 1918 [*Archives d'Études Orientales*, xvi.], especially ch. i.).

How are we to conceive the elaboration of this process, which appears completed in its main lines barely a century after the death of Muhammad? Does the actual narrative, which is its result, contain alongside of elements the fictitious and fabulous character of which cannot be doubted, statements which are based on a tradition more worthy of credence, in which the tendencies, corruptions and the panegyristic amplifications may perhaps contain a kernel of historical fact? Here we have a problem of historical criticism which, first raised by the great European students of Islām in the second half of the last century, is still far from a definite solution, and one which, besides, belongs rather to the study of the personality of Muhammad and of the origins of Islām, than to that of the origins and editing in literary form of the *Sira* which forms the subject of this article. It will be sufficient to recall here that the influence of Jewish and Christian tradition (either in the form of imitations of stories from the Old and New Testament or in that of borrowings from the *midrash* and *haggada* on the one hand, and the apocryphal gospels and Christian hagiography on the other) was long ago suspected by Sprenger, and that Nöldeke (*Z.D.M.G.*, 1898, III, 16-33) was the first to point out, by analysing the stories of the conversion of the first believers, that very often the *Sira*, far from reflecting an authentic tradition only represents an anticipation, presented with a show of a historical documentation, of a state of affairs much later than the events related. The history of the beginnings of Islām was adapted and idealised for the greater glory of the families and individuals who played the leading parts in the history of the Arab empire. It was however Goldziher's brilliant essay on the character of the narrative *ḥadīth* (*Mus. Stud.*, II, 1) that marked a decisive turning-point in the critical study of the *Sira*. It was recognised that the *Sira* in the literary form, in which it

has come down to us is simply a collection of narrative *hadiths* which do not differ substantially in their mode of formation from the more strictly doctrinal *hadiths*. In the one case as in the other, the *isnād* gives no guarantee of authenticity in its remoter links. In the one as in the other, the text contains a formulation of doctrine or a polemical point rather than a historical statement (cf. Caetani, *Annali dell' Islām*, i. 28-58). The analysis of the literary processes that formed the *Sira* has been carried to its extreme by Père H. Lammens in a series of articles in which the learned Jesuit has set out to prove that the whole structure of Muslim tradition regarding the life of the Prophet, at least for the phase preceding the Hijra, is quite without foundation. Every incident related by the *Sira*, each alleged historical detail is only the result of a subjective exegesis of a verse of the *Kur'ān*, out of which the Medina school (where religious zeal for the memory of the Prophet was maintained with the greatest vigour) deduced by a process of "pious fraud" with the use of all sorts of learned combinations and foreign elements, the course which the life of Muhammad "must have taken" without the existence of any support in historical tradition for the reality of the incidents related. The *Sira* would thus be in substance only a great "Kūfānic midrash", completely fabricated with the object of glorifying the Prophet and sustaining this or that other religious or political thesis. The radicalism of Caetani and of Lammens, which extends even to the apparently most insignificant details of the life of Muhammad, including his name and parentage, has seemed extreme to many scholars (cf. de Goeje, in *Centenario Amari*, Palermo 1910, i. 151-158; Noldeke, in *W.Z.K.M.*, 1906, xxi. 297-312; *Id.*, 1913, iv. 205-212; 1914, v. 160-170; Becker, in *Id.*, 1913, iv. 263-269; *Islamstudien*, Leipzig 1924, i. 520-527; a popular account of the question in my *Storia e religione dell' Oriente arabo*, Rome 1924, p. 111-137); nevertheless, if they have not succeeded in definitely triumphing over the views of those who think that even in that part of the *Sira* which relates to the life of Muhammad before the Hijra a certain number of statements retain a historical value, the cardinal principle which has guided them has proved extremely fertile. Detailed investigation has revealed from particular passages of the *Sira*, the midrash-like method which governed its formation (cf. especially Schrieke, in *Id.*, 1915, vi. 1-30; Devan, in *Beihfte zur Zeitschr. f. alttest. Wiss.*, 1914, xxvii. 51-61; Horowitz, in *Id.*, 1914, v. 41-53; 1919, ix. 159-183; 1922, xii. 184-189); it may even be said that the character of learned combination seems to extend if not to the whole story of the Medina period at least to some of its episodes (cf. Horowitz in *Id.*, 1922, xii. 178-183; Vacca, in *R.S.O.*, 1923, x, p. 87-109).

The formation of the *Sira* down to the period of its reduction to its "canonical" form seems to have taken place along the following lines: — the continually increasing veneration for the person of Muhammad provoked the growth around his figure of a legend of hagiographical character in which alongside of more or less corrupt historical memories there gathered episodes modelled on Jewish or Christian religious tradition (perhaps also Iranian, although to a much less degree).

This material became organised and systematised in the schools of the Medina *maḥaddithūn*, through a midrash, subtle and full of combinations, of passages from the *Kur'ān* in which exegesis had delighted to discover allusions to very definite events in the life of the Prophet. It was in this way that the history of the Medina period was formed. Religious pragmatism also seized upon stories relating to the Medina period and modified their character, often quite profoundly, but in this field it encountered more precise historical statements, which had already been elaborated after the custom and style of dealing with stories relating to pre-Islāmic military expeditions. From the combination of these varied elements resulted the *Sira* in its vulgate form, which we find already fixed in its essential features by the beginning of the second century of the Hijra.

II.

The Reduction of the *Sira* to its Literary Form.

It was the *ḥawāṣī*, the professional story-tellers found throughout the Muslim world immediately after the first Arab conquests (cf. Goldziher, *Muhammed Studien*, ii. 161-166) who were the first to compose and disseminate stories of the life of Muhammad, which they compiled probably on the model of the Biblical legends and stories of Iranian origin, which formed the bulk of their repertoire. From this there grew up a kind of literature, which belonged to the historical novel rather than to history. A specimen of this sort of literature was the *Kitāb al-Maghāzī* of Waḥb b. Munabbih (34-110 A.H.), the fame of which is due particularly to works relating to Biblical and South Arabian history. But it was especially at Medina, as we have already seen, that the study of the *Sira* was cultivated in deliberate fashion alongside of religious tradition. The oldest author of a book on the biography of Muhammad, 'Urwa b. al-Zuhair (23-94), is as well known as a jurist as a historian. The son of the famous companion of the Prophet took only a very slight part in the political activity of his brothers 'Abdallāh and Maṣ'ab; early reconciled to the victorious Umayyads, he sent to the Caliph 'Abd al-Malik, at the latter's request, numerous explanatory notes on points relative to the beginnings of Islām (quotations in Tabari, cf. Caetani, *Annali*, i., index to vols. I and II; Fück [see Bibliography], p. 8, note 22). His biographical activity was however not confined to this correspondence for he also communicated to his pupils some information collected by him, according to the practice of oral transmission guaranteed by the *isnād*, which henceforth constituted the method of the *Sira* as well as of *Hadith*.

We see that the same rule was adopted by a contemporary of 'Urwa, Abūn b. 'Uthmān (23-105), the son of the Caliph, who also was settled at Mecca; his teaching regarding the life of the Prophet was collected into a book by his pupil 'Abd al-Rahmān b. al-Mughira (d. before 125). These earliest literary productions (to the two names just mentioned may be added that of Shurahbil b. Sa'd (d. 122) whose influence seems to have been slight) are given the name *maghāzī*, which, as we have seen, remained classical till a late date and suggests (as

can also be deduced from the fragments that survive) that their contents referred mainly to the public life of the Prophet. This name *maghāzī* is also regularly borne by the works of the second and third generation of historians: we may mention besides 'Ā'im b. 'Umar b. Kaṭāda (d. between 119 and 129), the more illustrious names of Ibn Shihāb al-Zuhri (51—124) and of Mūsā b. 'Ukha (d. 141) who had a very marked influence on all later tradition. A fragment of the *maghāzī* of Mūsā published as a separate work has come down to us and was edited by Sachau (*S. B. Pr. Ak. W.*, 1904) but it is not extensive enough to enable us to judge of the character and arrangement of this work any better than we can from passages preserved in the works of later writers.

At the same period the *'ilm al-maghāzī* was also cultivated outside of Medina (Sulaimān b. Tarkhān [44—143] at Buṣrā, Ma'mar b. Rāshid [d. 152] at Ṣan'a'); but such success as these works attained was eclipsed by that of Muḥammad b. Ishāq's (d. 150 or 151; cf. ii, p. 389 sq.) book which also marks the end of the development of the Medina tradition and the starting-point of a new conception of the Sira. While his predecessors seemed to have considered the history of the Prophet as an isolated, although grandiose, phenomenon, Ibn Ishāq was the first to place Islām and its founder in the scheme of universal history. The rise of Islām, according to him, is the continuation and conclusion of Jewish and Christian "sacred history" as it arises out of the divine work of creation and of the preaching of the prophets before Muḥammad, but the latter appears at the same time as the most glorious representative of Arabism through whom the age of Arab domination in the world is to be opened. This characterisation of the work of Ibn Ishāq is not of course taken from any explicit formulation of principles: his work is limited, like that of his predecessors, to the collection and arrangement of other documentary material but the very different titles by which his work is referred to (*muḥaddaṭ al-khalk*, *al-muḥadda wa-khawāṣṣ al-anbiyā'*, *al-maghāzī wa 'l-muḥaddaṭh wa-muḥadda al-khalk*, *al-maghāzī wa 'l-riyā'*, *al-sira wa 'l-muḥaddaṭh wa 'l-maghāzī*, *kitāb al-khulafā'*) clearly show his plan, whether these titles refer to different parts of a single work, a regular exposé of universal history or whether, as is more probable, they do not represent the titles of one or several works published *in extenso* by the author himself but, in keeping with the character of Arabic literary production at the time of Ibn Ishāq, that is essentially the putting in writing of oral teaching, they indicate in summary fashion the entire historiographical activity of Ibn Ishāq, whose different pupils edited and separately transmitted one or other part. This explains the present existence of a "Sira of Ibn Ishāq" separate from the rest of his work in the well-known recension of Ibn Hishām (ii. 387) which, as is now generally recognised, has preserved for us almost intact the primitive text of Ibn Ishāq. The same good fortune has not fallen to the other sections of his works, the *K. al-Muḥaddaṭh* and the *K. al-Khulafā'*, which we only possess in fragments preserved by later writers, notably al-Ṭabarī.

Ibn Ishāq thus wished to compile a work of greater scope than the *maghāzī* of his predecessors.

This explains why in his work the use of the *isnād* was corrupted in such a way that the scholastic tradition of the *'ilm al-hadīth* was deeply shocked by it and unanimously refused him the title of a *muḥaddith*, worthy of credence (cf. the texts collected by Wüstenfeld, Ibn Hishām II, introduction). This verdict (which was pronounced even in the lifetime of Ibn Ishāq by no other than the great jurist Mālik b. Anas and as a result of which Ibn Ishāq found himself forced to give up teaching in Medina and to settle in the 'Irāk) is all the more important as it marks the clear separation between historical, and purely doctrinal *hadīth*. It goes without saying that, in the collection of *hadīth* in the strict sense like those of al-Bukhārī, Muslim, etc., we find biographical information of the first order (especially in the books devoted to the *maghāzī* and to the *munāzil*) but the fact of containing material in common only serves to accentuate still more the difference between the two literary genres.

The abundance and the variety of material collected by Ibn Ishāq forced him to enlarge the circle of his authorities and to accept a number of insufficiently supported traditions. He even takes care to give the source, not always particularly clear, of some of his information, especially when, as is often the case, it goes back to Jewish or Christian sources. He does not neglect, contrary to what seems to have been the case with his predecessors, to use poetry to supplement his sources (he has even been accused of having collected a number of apocryphal verses) and he precedes the narrative of the life of the Prophet with abundant genealogical and antiquarian notes. To sum up, the character of Ibn Ishāq in comparison with the authors who preceded him is that of a real historian and in him we have the final fusion of biography of the religious type of the *muḥaddithūn* with that of the epic-legendary type of the *ḥuṣṣā'*. It is this original and personal character of the work of Ibn Ishāq, which, while it explains the hostility of the schools of tradition, justifies the immense success which it has enjoyed through the centuries, a success which has not only overshadowed similar previous works and some which closely followed him (like the *maghāzī* of Abū Ma'shar [d. 170] [ii. 106] and of Yahyā b. Sa'īd b. Abīn, d. 194) but made him a decisive influence on the future development of the Sira. In addition to Ibn Hishām's recension, Ibn Ishāq's biography was reproduced for the most part by al-Ṭabarī in his two great compilations, the *Ta'rikh* and the *Ta'fīr* and through the intermediary of these two writers it has become the principle source of later historiography.

Only one other writer has a position alongside of Ibn Ishāq of hardly less importance, namely Muḥammad b. 'Umar al-Wāḳidī (130—207) whose work as a biographer of the Prophet has come down to us by three different channels, the *Kitāb al-Maghāzī* (abridged translation by Wellhausen, Berlin 1882: unfortunately we do not yet possess a complete edition of the text) which was transmitted by Muḥammad b. Shu'ayb al-Thalabī (181—261): the *sira* which precedes the *Tabaqāt* of his pupil and secretary Muḥammad b. Sa'd (d. 230) (Ibn Sa'd, ed. Sachau, vol. I. and II.) in which, along with traditions going back to al-Wāḳidī, we have others of different origin; lastly the *Tabaqāt* themselves, especially in vols. III. and

iv. for all that deals with the relations of Muḥammad with his companions and with the part the latter played in the history of Islām before the death of the Prophet. With al-Wāḳidī the *Sira* loses this unity and this combination with universal history which Ibn Ishāq had given it, although he also, after the model of the latter no doubt, composed a *Kitāb al-Ta'rikh wa 'l-Mabūd wa 'l-Maghāzī* (*Fihrist*, 98 end): it rather assumes the form of a collection of detached monographs, of which the most elaborate are those devoted to the public life of Muḥammad, his expeditions, his correspondence, the embassies which he received or sent. In comparison with Ibn Ishāq, al-Wāḳidī shows little taste for poetry. On the contrary he had a great talent for chronology, the systematic treatment of which, as we know, goes back to him. On the other hand, in collecting the statements of tradition regarding the companions of the Prophet, al-Wāḳidī founded through Ibn Sa'd, who arranged and added to the material supplied by his master, a new branch of the study subsidiary to the *ilm al-hadīth*, the development of which has been quite extraordinary viz. the *ilm al-riḍāl*, the biography and criticism of the traditionists.

After al-Wāḳidī (the regular source with Ibn Ishāq of successive historians beginning with al-Balādhuri [q. v.]) whose *Sira* incorporated in his *Asnād al-Ashraf* goes back almost in its entirety to him (cf. de Goeje in *Z. D. G. M.*, xxxviii, 1884, p. 387—390), the *sira* is no longer dealt with for some centuries in works of great importance (we know relatively little about those which al-Madā'inī, the famous historian [d. 225], devoted to it, *Fihrist*, p. 101). The attention of the historians became attracted to the *daḥīl al-nubawwā* and to the *ḥamā'il* (cf. Andrae, *Die Person Muḥammad*, p. 57 sqq.), a branch which broke off from the *Sira* to assume a development of its own, while historical biography is restored, following the example of Tabari and in general after him, to the great works on universal history. The countless collections of biographies of the companions of the Prophet sometimes contain historical references to the *Sira* differing from those that are taken from the well known sources of Ibn Ishāq and al-Wāḳidī and some of which go back to a remote antiquity. A study, which has still to be undertaken of such works as the *Jat'id* of Ibn 'Abd al-Barr, the *Uṣd al-Gāba* of Ibn al-Athir, the *Iḡāṣ* of Ibn Hadjar, etc., aiming at identifying and collecting these statements might yield appreciable results; but in any case we have only scattered and fragmentary material. Still more meagre is the spoil that might be obtained in the commentaries on the *Sira* of Ibn Hišām of which the best known is the *Rawf* of al-Shāhī (508—581; cf. Brockelmann, *G. A. L.*, i. 135, 413). The colossal compilations of more recent date supply an incredible mass of notices, which their authors, urged by their scholarly zeal to exhaust in the completest manner possible all the sources to which they had access, have laboriously piled up; as regards matter they give no more than is contained in Ibn Ishāq and al-Wāḳidī; the most that one finds in them is only some legend of late origin, the importance of which is no doubt considerable for the history of the formation and development of the cult of the personality of Muḥammad, but the value of which for his actual life-story is absolutely nothing; or they are simply variants of

stories already known. Among these compilations, a list of which would immeasurably prolong this article it is sufficient to mention the *Uyūn al-Athar* of Ibn Saiyid al-Nās (661 or 671—734; Brockelmann, *G. A. L.*, ii. 71), the *al-Mawāhib al-laduniya* by al-Kastallānī (851—923; Brockelmann, ii. 73), the *al-Sirat al-Shāmiya* by Shams al-Dīn al-Shāmi (d. 942 or 974; Brockelmann, ii. 304), the *al-Sirat al-Halabiya* of Nūr al-Dīn al-Halabī (975—1044; Brockelmann, ii. 307) and the commentaries on the two first works *Nūr al-Nibrās* by Sibī Ibn al-Adjamī (d. 841; Brockelmann, ii. 67) and *Sharḥ al-Mawāhib* by al-Zarkānī (d. 1122; Brockelmann, ii. 319). The résumés and the versifications of the *Sira*, in which Arabic literature is so rich, are of course of no historical value.

Gött., xxviii—xxix, 1882), passim; Spronger, *Das Leben u. die Lehre des Muḥammad*, Berlin 1869, iii., liv.—lxxvii.; Caetani, *Annali dell' Islām*, Milan 1905, vol. i.; Nöldeke-Schwally, *Gesch. d. Qorān*, Leipzig 1919, ii. 129—144; Ibn Sa'd, ed. Sachau, ii/1, Leyden 1909, introduction (Horowitz), iii/1, Leyden 1904, introduction (Sachau); Nallino, *Il prof. Gabrieli e una inedita dissertazione di laurea intorno ad una fonte araba della biografia di Maometto*, Rome 1918; Gabrieli, *Ancora intorno alla primitiva biografia di Maometto*, Rome 1919, (two polemical pamphlets which however have very full references and some useful observations); J. Fück, *Muḥammad Ibn Ishāq, Literarhistorische Untersuchungen*, Frankfurt o/M. 1925 (also contains an excellent critical survey of the literary history of the *Sira* before Ibn Ishāq); Ahlwardt, *Verzeichnis d. arab. Handschriften*, Berlin 1897, ix. 110—187.

(G. LEVI DELLA VIDA)

SIRĀD] AL-KUTRUB (A.), "the gnome's lamp" or according to Idrisi, "the glow-worm's lamp", (for other meanings of *kuṭrub* see Lane, vii. 2543), the name for the mandragora (*mandragora officinalis*, L.), one of the *Solanaceae* indigenous to the whole Mediterranean area, with a turnip-shaped root often in two parts, thickly covered with root-fibres, bearing a clump of large, egg-shaped, sinuate leaves, between which grow the axillary petiolated bell-shaped flowers. The fruit is a reddish yellow berry about the size of a cherry which from ancient times has been used for medicinal and magical purposes, as a poison, narcotic or love potion, as early, for example, as the Old Testament under the name *dūdā'im* (Gen. xxx. 14). According to al-Tamīmī, the plant is also called *yabrūḥ al-waḥūd* and *ḥaḍjarat al-panam*. It is the queen of the seven mandragora and according to Hermes the herb which Solomon wore under his signet which gave him power over the djinn. The plant is therefore also valuable against all illnesses caused by evil spirits, such as lameness, cramps, epilepsy, loss of memory, etc. According to Ibn Sīnā mandragora is given to a patient to destroy his sensitiveness to pain during severe operations. The most important for magical purposes are the roots known as *al-raḥme*, about the digging of which curious stories are told even in classical authors (Plinius, *Hist. nat.*, xxv. 94; Josephus, *Bell. Jud.*, vii. 6).

SIRĀF, a town in Persia, on the Persian Gulf, once a commercial port of great importance (16th/17th century). The houses in several stories were built of teak and other woods brought from Zangbar; it was supplied with water from springs tapped in the mountain of Djam which dominates it from close at hand. The creation of an emporium on the island of Kās [q. v.] ruined it by taking away its Indian trade. It had not a harbour properly speaking and the ships used to moor in an arm of the sea eight miles off, to be sheltered from the wind. The sailors who set out from it went to Maskat, Kulam, the Nicobar Islands, and as far as Kalah in the Malay Peninsula, whence they reached Canton in a month. The trade consisted mainly in the exportation of striped cloth for bath-towels (*ḥawāṣ*), pearls, silks, balances, and in the exportation of *berberis* (Indian spices, *B. G. A.*, iv, 187). The inhabitants were engaged in sea-trade and were sometimes absent for years; they had amassed great wealth by dealing in spices and other merchants. They had built sumptuous houses but they were noted for their voluptuousness and lack of serious thought. It was also the warmest place in the district, so hot that one could not take a siesta there. Under the 'Abbāsids it was the principal town of the district of Ardashir-Khurra; it began to decline under the Būyids; destroyed by an earthquake which lasted seven days in 366 or 367 (977) it was afterwards rebuilt. Its ruins may be seen at Bandar Tāhīrī (Le Strange, transl. of *Nuzhat*, p. 116, n. 2).

A legend says that the mythical king Kai-Kā's when he tried to ascend to heaven, fell down in this country and asked for water and milk to be brought him; this story has been invented to justify a popular etymology (Pers. *shir*, "milk", *āb*, "water"). According to Yāqūt, the merchants pronounced its name *shirāw*, which is connected with the above etymology. Mention is also made of a spring of fresh water here at the bottom of the sea.

SIRĀFĪ, Abū Sa'īd al-Ḥasan b. 'Abd Allāh b. al-Maṣṣūrān was born before the year 290 (903) in the small town of Sirāf [q. v.] on the Persian Gulf; the waṣīr 'Alī b. 'Iṣṭ gave the year 280 as the exact date (Yāqūt, *Iṣṭād*, iii, 123). He made his first studies in grammar and law in his native town, but before he was twenty he crossed

the sea to 'Omān where he devoted his time to Hanafī law. Later he returned to Sirāf and went from there to al-Mu'askar, where he studied Arabic grammar under Maḥmūd (cf. Zubaidī, *Tabaqāt*, N^o 44; Suyūṭī, *Bughyat*, p. 74). Later he went to Baghdad and studied there principally under Abū Bakr Ibn Duraid and became one of the principal pupils of this eminent scholar and propagator of his works. However he did not confine himself to linguistic studies but became an authority in all branches of learning then practised. He studied the sciences of the Qur'ān under Abū Bakr b. Muḥḥabīh, grammar under Abū Bakr b. al-Sarrāj and mathematics under Maḥmūd, mentioned above, tradition under Abū Bakr b. Ziyād al-Nāshūrī and Muḥammad b. Abī 'l-Azhar. He was reputed to have been a Mu'tazilī, but this cannot be proved from his writings. For over forty years he gave legal advice (*fatwā*) in the Ruṣāfa mosque at Baghdad and the Chief Judge Abū Muḥammad b. Ma'rūf appointed him on more than one occasion his lieutenant on the Eastern side of the city of Baghdad. He was also invited to assume a post in the Secretariat of State, but declined the offer. Most biographers describe him as a very pious man, devoting his time to prayers and fasting, refusing any gifts from the great, and we are told that he used to copy each day ten leaves of manuscript which he sold for ten dirhems which sufficed for his livelihood. Against this Yāqūt tells us that he was accused of borrowing valuable manuscripts from two booksellers and, being too mean or too poor, he caused his pupils to make copies of them. At the end of these he wrote that the work had been read over to him, and such copies later commanded a higher price than the originals, on account of the reputation of al-Sirāfī. Though a lawyer of the Hanafī school his personal opinion was highly valued and the account of such a personal advice on intoxicating drink is given by Yāqūt; and though against some of the accepted principals of Hanafī law the words quoted on the subject are sound advice for any creed. His reputation as a scholar was so great that he frequently received letters from monarchs and ministers from various parts of the Muslim world. The Sāmānī prince Nūḥ b. Naṣr sent him a letter containing over 400 questions and addressed him as Imām, while the ruler of Dālam in a similar letter called him Shaikh al-Islām; other letters were from the Egyptian waṣīr Ibn Khināṣa etc. Of the ten works which are named by title by his biographers only his commentary on the "Book" of Sibawaihi is easily accessible, but this work enjoyed a great reputation even during his life-time and his contemporary Abū 'Alī al-Fārisī, also an eminent scholar of the Baṣrian school, displayed his envy openly. He and his followers tried for a long time to get possession of a copy with the intention of finding in it errors which they could point out publicly. When Abū 'Alī in the year 368 was able to buy a copy for two thousand dirhem he did not find the errors he had wished and it was too late to meet Sirāfī, as he died the same year on Monday the 2nd of Raddj in Baghdad and was buried in the Khairurān cemetery. As stated above, his biographers attribute to him ten separate works: 1) A commentary on the "Book" of Sibawaihi which has been printed in Cairo 1317 and used for the translation of the "Book" by Jahn (Berlin 1894);

2) Commentary on the poem of Ibn Duraid called *al-Mahjara*; 3) *Alifāt al-Kat' wa 'l-Waṣf*; 4) *al-Ḥunā fī 'l-Naḥw*, a grammatical work which he did not complete but which was finished by his son Yūsuf. The latter declared that his father had made the science of grammar too easy by this work; 5) *Shawāhid Sibawaihi*, explanations of the verses cited in the "Book" of Sibawaihi; 6) *al-Madhḥat (al-Mudhḥat?) ilā Kitāb Sibawaihi*, introduction to the "Book" of Sibawaihi; 7) *al-Waṣf wa 'l-Ibtidā'*, probably a work on the correct reading of the *Kur'ān*; 8) *San'at al-Shi'r wa 'l-Balaghā*, an exposition of the correct composition of poetry and prose; 9) *Akhbār al-Nuḥāt al-Baṣriyyin*, biographies of grammarians of the Basrian school or rather anecdotes about them with accounts of their literary disputes, as can be gleaned from extracts quoted by Yāqūt and other authors. This book has been preserved and a good manuscript is in Constantinople and Suyūṭi tells us that he used a copy which formed a large fascicule; 10) *Kitāb Djaṣirat al-'Arab*, a geographical book which has been extracted by Yāqūt for his geographical lexicon. Not mentioned by the biographers is the Commentary on the verses quoted by Ibn Duraid in his large dictionary, the *Djamhara*; having collated the whole of the Leyden manuscript of this work, my estimate is that about a third of the second and third volume of the *Djamhara* is occupied by the commentary on the many verses quoted. (The first volume of the same manuscript does not contain this commentary). The method is most pedantic. Every word is explained, seldom is there a reference to the historical background, but in very many cases it is evident that Sirāfi had diligently asked Ibn Duraid for an explanation and the whole commentary gives the impression that his only share in the work has been to write down these additional explanations which are not found in the other manuscripts of the *Djamhara*. In addition Sirāfi is credited with some mediocre verses, and also is the subject of a satire by his greater contemporary Abū 'l-Farāj al-Iṣṭihānī with whom he had had a quarrel.

Biographies of Sirāfi are found in all works dealing with the lives of grammarians, traditionists and Ḥanafī lawyers. The principal ones are: *Fihrist*, p. 62; *Anḥār*, *Nuḥat al-Aḥbāb*, p. 379; Suyūṭi, *Bughyat al-Wu'āt*, p. 221; Yāqūt, *Iṣṭihād*, iii, 84—125; *Djāwāhir al-Mu'āḥ*, ed. Haidarābād, i, 196; Ibn Ḥadjar, *Liṣān al-Miṣbāḥ*, ii, 218; Ibn Khallikān, *Cairo* 1310, i, 130; Flügel, *Klassen der hanafitischen Rechtsgelahrten*, p. 107; Brockelmann, *G. A. L.*, i, 113 etc.

3) Yūsuf b. al-Ḥasan al-Sirāfi, the son of the former, succeeded his father as a teacher after the latter's death and completed his grammatical work, the *Ḥunā*. He did not enjoy the reputation of his father, but three works of his, similar in nature to those of his father, are recorded: 1) a commentary on the verses quoted in the "Book" of Sibawaihi; 2) a commentary on the verses quoted in the *Iṣṭihād* of Ibn al-Sikkīt, and 3) a commentary on the verses found in the *Ḥarīb al-Muḥannaf* of Abū 'Ubaid al-Qāsim b. Sallām. He resided in Baghdad and died there in Rabi' I, 385 A. H. at the age of 55 years (cf. *Bughyat al-Wu'āt*, p. 421). (F. KRENKOW)

SIRAT 'ANTAR, the romance of 'Antar, rightly considered the model of the Arabic romance of chivalry. This *sira* surveys five hundred years

of Arab history and includes a wealth of older traditions. The story, in the *Kitāb al-Aghāni* of bow 'Antar, the son of a slave-girl, was adopted into the tribe of Banū 'Abs for saving them at a time of great crisis already bears the stamp of a flourishing but already legendary tradition. The *Sirat 'Antar* far transcends the unconscious development of a legend. By a bold stroke 'Antar, the solitary hero, is raised to be the representative of all that is Arab, 'Antar the pagan is made the champion of Islām. The romance thus comes to reflect the vicissitudes of the Arabs and Islām through half a millenium; the tribal feuds of the old Arabs; the wars against Ethiopia rule in Arabia; the subjection of Arabia and especially of 'Irāk to Persian suzerainty; the victories of the rising Islām over Persia; the remarkable historical position of the Jews in Arabia down to the seventh century; the conquests from Christianity by the Arabs, especially in Syria; the continuous wars of the Persian and later of the Muslim East against Byzantium; the victorious advance of Islām in North Africa and in Europe; the influence of the Crusades is also undeniable. The contacts between East and West are numerous. The romance is written in smooth rhymed prose into which have been interwoven some 10,000 verses. The editions printed in the East since 1286 A. H. divide the *Sira* into 32 little volumes, none of which, like the separate nights of the *1001 Nights*, ever ends at the conclusion of a tale.

Contents. The romance brings us through numerous legendary stories from early times down to the period when King Zuhair is ruling over the Banū 'Abs. The 'Abṣi hero Shaddād on a raid captures the negro slave-girl Zabiba (not till the xviiith book do we get the denouement that she is a king's daughter, who had been carried off from the Sūdān), who becomes the mother of 'Antar. As an infant, 'Antar tears the strongest swaddling clothes, at two years old pulls down the tent, at four slays a large dog, at nine a wolf and as a young shepherd a lion. Soon he comes to the rescue of his oppressed tribe, for which he is acknowledged by his father and adopted into his tribe. He seeks 'Abia, his uncle's daughter, in marriage; the latter promises her to him in an hour of need; but after 'Antar has averted the danger, he imposes the most dangerous conditions to be carried out before the marriage. 'Antar fulfils them all but is only allowed to marry 'Abia after ten volumes of wonderful exploits. The area of his exploits widens continually. In his own tribe 'Antar has first to overcome the resistance of his father, then the hostility of 'Abia's relatives, to win over his rivals including the poet 'Urwā b. al-Ward, to put an end to the feuds of the Banū Ziyād, Rabi' and 'Umāra. In the feuds between the sister-tribes of 'Abs and Fadhāra, 'Antar proves himself the saviour of the Banū 'Abs; outside of his tribe, he fights and overthrows the strongest heroes and makes them his friends; such are Duraid b. al-Ṣimma, Mu'ammār, Ḥanī' b. Ma'sūd, the victor over the Persians at Dhū Kār, 'Amr b. Ma'dikarib, 'Amir b. al-Tufail, 'Amr b. Wudd, the knight of the Ḥarām, Rabi'a b. Muqaddam, the pattern of Arab chivalry and many others. He fastens up his *mu'allaka* in the Ḥaram of Mecca after defeating the other *mu'allaka*-poets in a competition, overcoming all his rivals in duels and passing an examination in

Arab synonyms from Amr b. 'Al-Qais. From Mecca he goes to Khaalbar and destroys the town of the Jews. But 'Antar is also taken beyond the bounds of Arabia. The *Sira* does not lack reasons for this. 'Abila's father demands asfir-camels as a bridal gift, which are only bred by Mundhir, King of Hira. This takes 'Antar to the 'Irāk. From there he is summoned to Persia to fight the Greek champion Badramūt. Next we find him in constant association with the kings of the 'Irāk, Mundhir, Nu'mān, Aswad, 'Amr b. Hind, Iyās b. Kābisa and their viziers notably 'Amr b. Buḳaila. He has also constant dealings with the Shāhs, Khusrāw Anūsharwān, Khudāwand (no shāh of this name is found in Sāsānian history), Kawādī (probably Kawādī Shīroo) sometimes as a dreaded opponent, sometimes as a most welcome ally. The son of the king of Syria woos the promised bride of a friend of 'Antar. The latter goes to Syria, kills his friend's rival, defeats King Hārith al-Wahhāb (Aretas), but becomes his friend and after the death of Aretas at the request of the princess Ḥalima becomes guardian of the new king 'Amr b. Hārith, who is still a minor, and as such ruler of Syria. Here 'Antar comes into contact with the Franks, sometimes as an enemy and sometimes as their ally against the Persians. Syria is under Byzantine suzerainty. For the services which 'Antar renders the Christians here, he is invited to Constantinople and entertained and honoured. Lailamān, the king of the Franks, objects to this and demands that the emperor should hand over 'Antar to him. 'Antar along with Heraclius, the emperor's son, then leads the Byzantine army into the land of the Franks, subjects them to the emperor, reaches Spain, defeats King Santiago, pursues his victorious march through his provinces in North Africa from Morocco to Egypt. When he returns from these conquests on behalf of Byzantium to Constantinople, an equestrian statue of him is erected out of gratitude; the statue of his two brothers, who had accompanied him to Byzantium, are placed on either side of his. Shortly before his death, 'Antar comes to Rome. The king of Rome, Balām b. Markas is hard pressed by Bohemund; 'Antar kills Bohemund and liberates Rome. On a campaign of reprisal against the Sūdīnese, 'Antar goes from kingdom to kingdom deeper into Africa till he reaches the land of the Negus. Here he discovers in the Negus the grandfather of his mother Zabība. Even more fantastic are the campaigns against Hind-Sind, against the Christian king Lailamān in the land of Balā, in the land of the demons. 'Antar's death is brought about by Wizr b. Djabir called Asad al-Rahis. 'Antar had repeatedly defeated him and taken him prisoner but always set him free again. Wizr feels humiliated by this magnanimity and continually renews his attack. Finally 'Antar blinds him. Though blinded, Wizr learns to shoot birds and gazelles with bow and arrow from their sound. 'Antar is struck by one of his poisoned arrows, but Wizr dies before 'Antar under the delusion that he has missed. While dying, and indeed when dead, still sitting on his steed Abḍar, 'Antar still wards the enemy off from his people. 'Antar's marriage with 'Abila was childless but from his secret marriages and love-affairs, several children were born including two Christians, and indeed Crusaders, Ghadanfar, Coenr-de-Lion, son of 'Antar and the sister of the king of Rome

whom 'Antar had married in Rome and left in Constantinople, and Djufrān (i.e. Geoffroi, Godfrey), the son of 'Antar and a Frankish princess. 'Antar's children avenge and lament the death of their heroic father. Ghadanfar and Djufrān then return to Europe. 'Abs becomes a convert to Islām.

Analysis. The following are the main elements that have contributed to the growth of the *Sira*:

1. Arab paganism; 2. Islām; 3. Persian history and epic; 4. The Crusades. 1. To Arab paganism it owes the chivalrous and knightly Bedouin spirit of the work, the majority of the characters in it, who often have historical features, the feuds between the sister tribes of 'Abs and Fadḥāra; in connection with the race between Dāhis and Ghābra, the most powerful of the Ahbār al-'Arab, like king Zuhair's marriage with Tumādīr, Zuhair's death, Mālik b. Zuhair's death, Hārith and Lubna, Dajida and Khālid, anecdotes of Ḥatīm Taiyī, the splendid figure of Rabī'a b. Muḥaddam etc. 2. To Islām belong the introduction with a long midrash of Abraham, repeated legends of Muḥammad and 'Alī, the conclusion of the work which forms a transition to Islām; the tendency of the book, to make 'Antar really prepare the way for Islām; 'Antar's victorious campaigns through Arabia, Persia, Syria, North Africa and Spain are modelled on the conquests of Islām. Certain details give the *Sira* a slightly Shi'a colouring. 3. Persian influence is found in the knowledge of Persian history and the Persian epic, in places of the Persian language, in the conception of kingship by grace of God, in the knowledge of Persian court life and ceremonial (throne, crowns, imperial carpet), court-hunts (falcons, cheetahs), pigeon-post, Persian offices and ranks (vizier, mōbedān, mōbed, marzpan, pehlwān, eyes and ears of the Shāh) even the *zakāriya* (écuyers tranchants). 4. Christianity and the Crusades. The *Sira* knows of Christians in the Syria of the Sāsānians, in Byzantium and among the Franks. The Franks appear as Crusaders (the romance even mentions the cross worn on the breast), fighting for Shiloe and Jerusalem. Djufrān (Godfrey) besieges Damascus and sends troops against Antioch. The *Sira* mentions the cross, the dress of the priests and friars, the girdle of the order (which in the *Sira* is the most important symbol of Christianity next to the cross), the crozier, the bell (clapper), incense, holy water, prayers for the dead, unction, sacrament and of holy-days, Christmas, Palm-Sunday, is aware that among the Franks the clergy are first in Church and state, that marriages between cousins are illegal, seems also to know of excommunication and describes a Spanish place of pilgrimage and day of pilgrimage. The Christians swear by Jesus, Mary, the Gospels, John the Baptist (Māri Hanna al-Ma'madān, Yūkhna), by Luke (Lūka), Thomas (Mar Tōma) and Simon. The Emperor Rājīm rules in Byzantium and his son is called Heraclius; Balām b. Markas is king of Rome. The Christian rulers of North Africa have names which end with the -i, common in Greek and Latin, e.g. Martos, Kardus, Hermes, Ibn al-'Urūs, Kindaryas b. Kirmās, Sindaris, Theodoros. The king of Spain is called Santiago; of the names of Frankish kings and princes that of Bohemund alone is certain. The names of his brothers Mūbert, Sūbert, Kūbert and that of the prince 'Shūbert of the Sea" show what is perhaps the commonest ending

in personal names in Old French. 'Antar's son by the Frankish princess is called *Djufrān*, which conceals the old French form (*Jofroi*, *Jefroi*, *Geffroi*) of the name of Godfrey of Bouillon. As the romance of 'Antar knows nothing of Europe, but a good deal about Europeans, the author must have become acquainted with them outside of Europe, of course at the period of the Crusades; Bohemund is slain by 'Antar. Godfrey is the son of 'Antar, who comes as a Crusader to Asia, learns his paternity there, avenges the death of his father and then returns to Europe. Even the name 'Tafur' of the king of the beggars in the army of Peter of Armenia, seems to be preserved in the *Sira*: 'Tafūr' is the name of the usurper who drives the infant prince 'Amr from the throne of Syria but is overthrown by 'Antar. In regard to intelligent sympathy with and toleration of Christianity, the picture we get from the *Sirat 'Antar* is far in advance of that which the mediaeval Christian epic reveals of Islam, where the Muslims are made to worship idols, like Apollo, Cahu, Gomeliu, Jupiter, Margot, Malquedant, Tervagant etc. The romance of 'Antar regards the Crusades not without sympathy and admiration. It is true that Crusaders are mentioned, who go to the Holy Land to seek plunder and to escape punishment; but the Franks are fighting for God the Father, for the Son and for the spread of religion.

Folk-lore and literary parallels. There is remarkably little folk-lore in the *Sirat 'Antar* but it includes several noteworthy features: a splendid witches' kitchen, fine examples of allegorical speech, of omens, life-token. Most of the agreements with other narrative poetry may be regarded as commonplaces of the epic; the strength and growth of the hero, his exploits, the killing of a lion, *mu'ammarrū* (longevity is as common in the 'Antar as in the *Sūdā-nūma*), dreams, visions, Amazons, fights between father and son, the Gudrun motif of the bride's fidelity, the motif of the stupid man. There are very few borrowings: Nu'mān's lucky and unlucky day, Khuraw's bell of justice (the motif of the legend of the Emperor Charles and the snake), a flight to heaven in a box borne by eagles, several African traditions (probably taken from geographical works on Africa). There are also links with European legends. The marvellous signs at the birth of Charlemagne (in Pseudo-Turpin) resemble those recorded in our romance at the birth of Muḥammad, but Pseudo-Turpin undoubtedly borrowed from an older source. Artificial birds made of metal, which sing in various tunes by means of bells and organ pipes are described in French and German epics and also in the *Sirat 'Antar*. But here we have to deal with the historical marvel of the Chrysotriklinium in Constantinople, and with a similar thing in the Ctesiphon of the Sāsānids and also in the capital of the Tatar Khāns. Some coincidences are very striking. Hārith al-Zālim beats his sword *Dhu l-Hiyāt* against a rock, so that it may not fall into the enemy's hands; the rock is broken but the sword is uninjured, just as in the case with Roland's Durandal. 'Antar instructs his son Ghadhān, who wishes to slay Khuraw and seize the power for himself, on the subject of kingship by God's grace just as, Girard de Viane does his nephew Aimeri who wants to kill Charlemagne. 'Antar's horse Abdjār takes flight to the desert after 'Antar's death, so

that he may not serve another master, just as Renaud de Montauban's Baiart escapes to the forests of the Ardennes. Very remarkable is the parallel between the duel between Roland and Oliver and that of 'Antar and Rabī'a b. Muḥaddam; the sword of the one combatant breaks in two and his magnanimous opponent gets him another; the duellists are reconciled and become brothers-in-law. But such poetical developments have their origin in a similar chivalrous outlook, the relations of the knight to his sword, to his horse, to his overlord and to his opponent.

Chivalry in the *Sirat 'Antar*. The *Sira* is rightly recognised to be a romance of chivalry. In the pagan period among the Arabs the ideal of masculine virtue was *murawwā*, *futūwwa*; alongside of this we have more frequently in the *Sirat 'Antar* *furūdiyya* along with *farāḥa* and *tawfarrāḥa*. The knight is called *fāris*. 'Antar is called 'a father of knights', *Abū l-Famūris*, sometimes *Abū l-Fursān*, *Alā l-Fursān*, *Fāris al-Fursān*, *Afrān*. Not everyone who rides a horse is a knight. The knight's qualities are courage, fidelity, love of truth, protection of widows, orphans, and the poor ('Antar arranges special meals for them), magnanimity, reverence for women ('Antar begins and ends his heroic career protecting women; he swears by 'Abla, by 'Abla's eye, conquers in 'Abla's name), liberality, especially to poets. The knights are also poets, especially poets of the *Hijāz*, who are found in hundreds in the *Sirat 'Antar*. The *Sira* also knows the institutions of chivalry. We meet pages and squires, not only the *sahārīdja* of Ctesiphon; 'Antar himself trains several thousand squires. The *Sira* even describes tournaments on a great scale, in the *Hijāz*, in *Utra*, in Ctesiphon, the most splendid in Byzantium where 'Antar's lance strikes the ring 476 times. These tournaments have many features in common with those of Europe, fighting with blunted weapons, tilting at the ring, decorating and beflagging the lists, the presence of ladies and girls. These agreements have been explained in the most diverse ways. On the one hand Delécluse saw in 'Antar the model of the European knight, in the *Sirat 'Antar*, the source from which Europe had obtained all its ideas of chivalry, while on the other hand Reinand simply found European ideas, customs and institutions imitated in the *Sira* (*J. A.*, 1833, i. 102-105). In this some have seen the starting point for the study of the question of the origin of the *Sirat 'Antar*.

Origin. The *Sirat 'Antar* itself frequently and readily talks about itself and its origin. It professes to have been composed by al-Aṣma'ī in the time of the Caliph Hārūn al-Raṣīd at his court in Baghdad; Aṣma'ī lived for 670 years, of which 400 were in the *Djāhiliyya*; he was personally acquainted with 'Antar and his contemporaries, concluded the composition in the year 473 (1080) and recorded traditions from the mouths of 'Antar, Ḥamza, Abū Ṭalīb, Ḥatīm Ṭalīb, Amrū l-Kais, Ḥanī' b. Mas'ūd, Ḥāzim of Mecca, 'Ubaida, 'Amr b. Wudd, Duraid b. al-Ṣimma, 'Amir b. al-Ṭufail. In fact we have a regular romance regarding the origin of the romance. The repeatedly mentioned *raṣa*, *nāḥil*, *muḥannif*, *ṣūhūb al-idārat*, Aṣma'ī and other authorities have the same significance for the *Sirat 'Antar* as the *Dihkane*, Pehlwi books and the hoary authorities in Firdawsī, or as the chronicles of St. Denis for the French epic. It is

simply fiction, when the *Sirat 'Antar* tells us that it exists in two versions, one for the Hǫǫǫǫ and the other for the 'Irāk. The invention of a Hǫǫǫǫ recension is intended to make it believed that Aṣma' collected the information in the Hǫǫǫǫ from 'Antar and his companions, which was utilised in the romance. The Hǫǫǫǫ as the home of the romance is a pure invention. On the other hand 'Irāk may really have made a considerable contribution to the composition of the *Sirat 'Antar*. For the date of origin of the *Sirat 'Antar* we have the following clues: 1. In a religious dialogue between a monk and a Muslim (*Das Religionsgespräch von Jerusalem um 800 A.D. aus dem Arabischen überliefert von K. Vollers, Ztschr. f. Kirchengeschichte*, xxix, 49) the monk mentions the exploits of 'Antar. 2. About the middle of the xiith century the Jew Samaw'al b. Yahyā al-Maghribī, a convert to Islām, describes his career and mentions that in his youth he was fond of long tales like that of 'Antar (*M.G.W.F.*, 1898, alii, 127, 418). 3. The evidence contained in the book itself. The appearance of Bohemund, Djufrān (Godfrey of Bouillon), perhaps also of the king of the beggars, Tāsur, brings us to the period after the first Crusade, that is at the earliest in the first half of the xiith century. The composition of histories of 'Antar must therefore have already been begun in the viiith century — on the evidence of the religious dialogue above mentioned. According to Samaw'al b. Yahyā a book of 'Antar of considerable size was actually in existence in the middle of the xiith century and if Bohemund and Djufrān already appeared in it, it must have been completed at the beginning of the xiith century. At the same time the meddala may have continued to add a great deal to it and in particular continued its Islāmisation. The midrash of Abraham which is quite an inorganic addition and the legends of Muḥammad and 'Alī could belong to any period. An original 'Antar can be reconstructed with philological probability. In vol. xxxi, the dying 'Antar reviews his heroic career in his swan-song. He proudly recalls his victories in Arabia, 'Irāk, Persia and Syria. But he mentions neither Byzantium nor Spain, nor Fez, Tunis, Barka, nor Egypt, nor Hind-Sind, the Sūdān nor Ethiopia. This original 'Antar may have arisen in the 'Irāk (under Persian influence or perhaps in emulation of Persian epic poetry). The swan-song makes no mention of children, and knows of only one love of 'Antar's. This original 'Antar therefore should be called 'Antar and 'Abī. Following a genealogical stimulus, the later epic made royal ancestors be found in the Sūdān and royal descendants in Arabia, Byzantium, Rome and the land of the Franks. The Crusades next found an echo and a reaction in the 'Antar. The Crusaders came from the land of the Franks via Byzantium to Syria. 'Antar goes in a kind of reversed crusade from Syria via Byzantium to the land of the Franks and brings about the victory, if not yet of Islām, at least of Arab ideals and culture over European Christianity. The whole geographical area and historical range of the novel is filled with the exploits of 'Antar.

The romance of 'Antar seems to be first mentioned in Europe in 1777 in the *Bibliothèque Universelle des Romans* (J. A., 1834, xiii, 256); it was first introduced to European scholarship in 1819 by Hammer-Purgstall and to comparative

literature in 1851 by Dunlop-Liebrecht (*Geschichte der Prosadichtungen*, xiii.—xvi.). The study of the problem of scholarship raised by the *Sirat 'Antar* was begun by Goldziher (mainly in his Hungarian works). The *Sirat 'Antar* was for long a favourite subject of study in France. In the *Journal Asiatique* the work was often discussed and partly translated. Lamartine went into raptures of admiration and enthusiasm for 'Antar (*Voyages en Orient: Vie des grands hommes* I. *Premières Méditations Poétiques*, Première Préface). Taine places 'Antar beside the greatest epic heroes — Siegfried, Roland, the Cid, Rustam, Odysseus and Achilles (*Philosophie de l'Art*, II, 297). These tributes are not unmerited. The *Sirat 'Antar* unfolds before us the ever changing, glowing panorama of a particularly attractive period with an extravagant power of imagination, a skill in narration which never palls throughout the 32 volumes, and a poetical style of inexhaustible richness.

Bibliography: A very full collection of references to the manuscripts, editions, translations of and treatises on the *Sirat 'Antar* is given in V. Chauvin, *Bibliographie des ouvrages arabes ou relatifs aux Arabes*, etc., iii.; *Loumāne et les fabliaux*. Barham 'Antar et les Romans de chevalerie, Lüttich-Leipzig 1898, p. 113—126. Cf. also: I. (BRENNARD HELLER)

SĪR-DARYĀ, a large river in Central Asia, flowing like its sister stream, the Amū-Daryā [q. v.], into the Sea of Aral [q. v.]. European geographers now regard its source as the Nārīn which flows through the territory of Džail-Su (formerly Semirčēye) and the north-eastern part of Farghāna [q. v.]; the native population has always (in the middle ages and at the present day) considered the Kārā-Daryā in the southern part of Farghāna as the upper course of the Sīr-Daryā. After the junction of the two rivers which form it, the Kārā-Kuldja and the Tar, the Kārā-Daryā flows past the town (now a mere village) of Ūgend, whence it is sometimes called 'river of Ūgend'. The district between the Kārā-Daryā and the Nārīn is called in Persian Miyān-Rūdān, in Turkish İki-Şu-Arası. The length of the Sīr-Daryā from the confluence of the Kārā-Daryā and the Nārīn is over 1,750 miles. In Farghāna it runs southwest at first and then for the most part northwest. Numerous tributaries flow to the Sīr-Daryā, both from east and west (in Farghāna north and south) from the neighbouring mountains of which only three now reach the main stream (the Čirčik, Keles and Arfs). The Arab geographers mention further tributaries in Farghāna, which now for the most part enter the great Shah-rūd Khān canal which runs south of the Sīr-Daryā; this canal was only led from the Kārā-Daryā like the Vangi-Arfs from the Nārīn in the sixth century. Whether any canals of any size were led in the middle ages out of the Sīr-Daryā itself to water, for example, the so-called 'Hungry Steppes'

between Cīnā and Dīnk cannot be ascertained. Mukaddas's mention (only in the Constantinople manuscript, *B.G.A.*, iii, 22 m) of an arm or canal (*khāṣṣ*) said to be 140 farsakhs long, between Khodjand and Ustūghana, is not confirmed by any other sources. The tributaries of the Sīr-Daryā have always been of incomparably greater importance than the main stream. Nor, unlike the Amū-Daryā, has the Sīr-Daryā — at least in the historical period — had any oasis of importance in its delta.

In Western Europe the Sīr-Daryā is still frequently called by its old Greek name of Jaxartes; a Pahlavi form *Jakḥārt* is assumed and explained by J. Marquart (*Die Chronologie der alttürkischen Inschriften*, Leipzig 1898, p. 6) as *yakḥāra arta* "true, genuine pearl". Against this explanation is the fact that in the numerous personal and geographical names compounded with *arta*, this component is always found at the beginning of the word. Yet the word *yakḥāra* "pearl" seems actually to be contained in the name; the Chinese (*Cin-tu-ho*) and Old Turkish (*Yin-ti-ūgus*) names of the river have the same meaning. The Chinese transcription of the native name is given as *Yao-ia* (E. Bretschneider, *Med. Researches from Eastern As. Sources*, London 1888, i, 75), *Yao-ia* (F. Hirth, *Nachrichten zur Inschrift des Tadjuk*, p. 81, in W. Radloff, *Die alttürkischen Inschriften der Mongolei*, second Series, St. Petersburg 1899) or *Yo-ia* (E. Chavannes, *Documents sur les Toukhie Turcs occidentaux*, St. Petersburg 1903). In the Muslim period the initial "y" seems to have disappeared in the land itself; the Arabic (*Kānūn Mas'ūdī* of Birūnī, in A. Sprenger, *Post- und Reiserouten*, etc., Leipzig 1864, p. 32) and Persian (*Ḥudūd al-'Ālam*, MS. of the Asiatic Museum, i, 24^b) manuscripts have *Khāḥart*: this form and not as Marquart assumes (*Die Chronologie*, etc., p. 5), *Yakḥārt* was probably in the Khordādhbih, *B.G.A.*, vi, text, 178. The name *Sīr* mentioned by Pliny, 6, 16, 18 (cf. A. Forbiger, *Handbuch der alten Geographie*, Hamburg 1877, ii, p. 77) is connected with the word *sr* although this latter, a Turkish name, cannot be found before the xvth century. Ibn Khordādhbih (*B.G.A.*, vi, 178, 1) mentions the name *Kankar* which also appears in Chinese transcription (*K'ank'it*) and was used probably on the central course of the river only; cf. *Daryā-i Gang* from Firdawsī in *G. J. P.*, ii, 445. The Arabs introduced the name *Saiḥān* for the Sīr-Daryā like *Djāiḥān* for the Amū-Daryā (cf. the names *Djāiḥān* and *Saiḥān* in the south-eastern frontiers of Asia Minor). In the *Nuḥāt al-Kulūb* of Ḥamd Allāh Kāzwinī (ed. Le Strange, 217, 16, transl. and note *ibid.*, ii, 210) appears the *Gul Zaryān* which seems to occur nowhere else. Blochet explains this word (in Le Strange, *l.c.*) as the Mongol *gul zerikūn* = "cold river", probably wrongly, as the order of words should be reversed. The river is usually called in Arabic and Persian sources after towns and districts on its banks, most frequently "river of Khodjand" (Khodjand is now the only town situated immediately on the bank of the Sīr-Daryā). This name also was adopted by the Mongols (E. Bretschneider, *Med. Researches*, loc. cit., in Chinese transcriptions *Hoshan-mu-līn*, for Mongol *mūrān*, "river"). Other names: river of Banāket, or Fanāket (in Yāqūt, *Ma'ādī*, i, 740: Banākit) after the town

on the right bank near the mouth of the Angren said to have been destroyed by Čingiz Khān (this destruction is not recorded by contemporaries); river of Shāhrukhīya after the town built by Timūr in 794 (1392) on the site of the destroyed Banāket (*Zafar-Nāma*, Calcutta ed. 1888, ii, 636); river of Akḥākat (*ibid.*, i, 441) or Akḥīkāt (*q.v.*); river of Čač or Shāh, after the great oasis of Čorčik. The last town on the Sīr-Daryā, Arabic al-Karyat al-Haditha, Persian Dīb-i Naw (Gardizi in Barthold, *Öljet o poleubie v Srednyuyu Aziyu*, p. 83), Turkish Yangikent, later sometimes Shahr-kent in historical works (*Tārīkh-i Djāhān Guṣṣā*, i, 69 below) and on coins, was one farsakh from the bank of the river and two days' journey from its mouth (now the ruins of Djanakent). The ruins were explored in 1867 by P. Lerch and the coins found there are of the viith (xvth) century. The river is said to have altered its course about this time and no longer entered the Sea of Aral but according to some was lost in the desert, or to others joined the Amū-Daryā; on these stories cf. above i, p. 341 sq., 419; on the other hand Abu 'l-Ḥāzī in the xith (xvth) century calls the Sea of Aral the "Sea of Sīr" (Sīr Feñiz) and knows nothing of the river ever having not reached the sea.

In the ivth (xth) century the Sīr-Daryā is mentioned as a navigable river along with the Amū-Daryā (*B.G.A.*, iii, 323, 1); in "times of peace or of truce", food supplies were brought to Karyat al-Haditha by water (*ibid.*, ii, 393, 1). Navigation is now interrupted by the rapids of Begowat which begin at the village of Kōsh-Tegermen, fifteen miles below Khodjand; these rapids seem to be nowhere mentioned in Muslim sources; Djuwainī's story (*Tārīkh-i Djāhān Guṣṣā*, i, 71 sq.) of the siege of Khodjand by the Mongols in 1220, and the adventurous flight of the commander Timūr Malik presupposes an uninterrupted passage by water from Khodjand to the towns on the lower course of the Sīr-Daryā (cf. e.g. d'Ohsson, *Histoire des Mongols*, i, 225 sq.). After the foundation of Russian rule on the lower course of the Sīr-Daryā (since 1847) an attempt was made to introduce steam navigation on the river; the steamers of the Aral fleet went up the Sīr-Daryā also and had their most important anchorage at the town of Kazalinsk founded by the Russians. After this service ceased in 1882, no further such attempts have been made, although several times proposed; traffic on the Sīr-Daryā is maintained solely by boats of native construction (*kayik*).

AL-SĪRDJĀN, a town in Persia, in the province of Kirmān, near the Fārs frontier; it used to be called al-Kāsrānī, "the two castles",

and was the capital of Kirmān. The streets are broad, the gardens well irrigated, the climate healthy and temperate. The palace and mosque were built by the Būyid 'Aḡud al-Dawla. The canals which water it were dug by the Ṣaffārids 'Amr and Ṭāhir b. Laith. Wood being scarce, all the houses are covered with brick vaulting. It had eight gates, two markets, the old and the new, with the mosque between the two. The minaret was surmounted by a lampholder of carved wood built by 'Aḡud al-Dawla who had also built a palace near the Bāb Ḥakīm gate. Corn was grown, cotton and dates, cotton manufactured and *kursi* desks as at Kumm, but not so fine.

It was the capital of Kirmān in the time of the 'Abbāsids down to the period of the Būyids, when the Būyid governor moved his residence to Bardasir (the modern Kirmān). Owned by the Muṣaffarids at the beginning of the eighth (xivth) century, it did not recognise the authority of Ṭimūr and was unsuccessfully besieged by 'Umar Shaikh in 796 (1394); but, under pressure of famine, it surrendered at the end of two years. Since then it has been in ruins, and the site is still marked by the debris discovered in 1900 at Kul'a-i Sang by Sir Percy Sykes (*Ten Thousand Miles in Persia*, London 1902, p. 431), at 5 miles east of Sa'id Abād, the modern capital.

SIRHĀN, Wādī, the name of a valley in North Arabia, which runs from the south end of the Hawrān southwards for a length of 160 miles with a breadth of two to twelve miles. Its north end is marked by the fort of al-Azrak and its southern extremity by the wells of Maikā'. The whole valley is very rich in water and suitable for settlement. At al-Azrak, there is even a large permanent pond, the only one in the whole of North Arabia. If the life and property of the inhabitants are secured, the ten large and small villages in this wādī, which are still inhabited, may be further increased. But under present conditions the inhabitants suffer a great deal from the nomads, for Wādī Sirhān is their natural road to Syria. The trading caravans, which used to go from Gerrha and Babylon to Syria, used the road through this valley, the history of which as a caravan route can be traced back still further; for the Assyrian kings had tried to control this important trade route and even found themselves occasionally forced to use armed force. The army of King Assarhaddon undertook a campaign against the Bāra and Khazī who lived in Wādī Sirhān, the Bāra and Hāzā of the Bible (*Gen.* xxii. 21 sq.; *Job* xxii. 2; *Jer.* xxv. 23) whose oases are still recalled by the place-names Bīṭ and Ḥoḡowya. In the Nabataean period Wādī Sirhān formed the eastern frontier between the Nabataeans and the nomads and was called "Syrmaion pedion". In the Muslim period the Wādī Sirhān was the much contested frontier between

the tribes of al-Khazī and Kalb and was called Baṭn al-Sirr and was also used as the natural route of communication between al-Hira or al-Kūfa and Syria. The pilgrim-caravans followed it and came to Medina via Taimā'. The Sirhān Wādī now belongs to the tribe of Rawala of the 'Anaze and forms the boundary between their lands and those of the Ahl al-Shemāl (Banū Ṣakhr and Ḥwātāt b. Dīd). By section i. of the treaty of Hadda of November 1925, almost four fifths of the Wādī Sirhān fell to the Sulṭān of Naǧd, while the northeast corner fell to Transjordan.

SIRWĀH, the name of two ruined towns in South Arabia.

1. A large ruined site in the land of the Beni Dī'abr (Khawlān), a day's journey west of Mārib in the Wādī Wākifa. The castle of this town, which E. Glaser considered the oldest foundation of the Sabaeans, is mentioned in the Sabaean inscription Bibl. Nat., No. 2, along with the two ancient castles of Salhān and Ghundān. The town of Sirwāh (*ḡagarān Sirwāh*) is mentioned in the inscriptions Glaser, 904, 15, 1571, 4; there is also a reference to it in the late Sabaean inscription on the bursting of the dam of Mārib (Glaser, 618, 20) so that it must still have been of some importance in the fifth century A.D. although it could no longer have rivalled Mārib. The most important building among the ruins is the great temple of Almakah built by the priest-king Yada'il Dhārīh, which like that of Mārib is elliptical in shape. In the centre of the temple stands a stone prism seventy feet long, 35 inches high and eighteen inches thick, the two larger surfaces of which are covered with the famous Sabaean inscription, Glaser No. 1,000, over 1,000 words in length. J. Halévy, when he visited the ruined site, still found numerous monolithic pillars, some upright and others overthrown bearing long inscriptions. The main group of columns like that at Mārib is now called 'Arḡ Bīlīh (throne of Bīlīs). Opposite the temple ruins on a mound is the old citadel of Sirwāh, part of which still existed in al-Ḥamḍānī's time. A large number of legends have grown up around it. It is said that the djinn built it for Dhū Bata'; others say it was built by command of Solomon by the demons

for Bilqis, the queen of Saba. According to the learned South Arabian, Naghwan al-Himyari, 'Amr Dhū Sirwāh al-Malik b. al-Hārith b. Malik b. Zaid b. Sadad b. Himyar al-Ayghar, one of the eight princes, built it. But this is probably mere speculation by South Arabian genealogists. The Arab philologists connected the name Sirwāh with *ṣarḥ*, "high, commanding building", and interpreted it as "castle, palace". E. Osiander and following him H. v. Kremer correctly connected it with the Ethiopic *ṣarḥ* "citadel". At Sirwāh there were gold-washings, which were still being worked when Halévy visited them. Al-Ḥamdānī already knew that gold was found there.

2. A ruined site in the land of the Beni Arḥab, N.E. of Na'it in the vicinity of Maḍr, West of the Djebel Etwa. The best preserved of the ruins is the old temple which is now known as the *masjid* (mosque) and stands in the centre of the extensive area of ruins, 27 paces long and 19 broad. The walls of the temple run from south-east to north-east and are 4 feet thick. The outer wall has however fallen in and only survives to a height of 3 to 5 feet. The stones are very carefully hewn. This enclosing wall is pierced by two gateways, one 3 feet broad in the west front and another, 5 feet broad, in the east front. On the south side a niche 5 feet wide has been left in the outside of the wall, corresponding to a somewhat smaller niche in the inner side of the north wall. A sanctuary enclosed by pillars fills the inner chamber in the upper half and there is a basin also surrounded by pillars in front of it. The pillars of the sanctuary are all destroyed except two. These are 8 feet high, 16 sided, thickening at the top; the capital consists of six parts and is rounded off, and fluted in keeping with the shaft of the column. The pillars around the cistern are octagonal and are also destroyed. To the west of the temple the old town probably lay. Mounds of ruins 20 to 24 feet high now lie there out of which rise great walls forming chambers. The ruins, called *Ḥaḡḡar Arḥab* by the Beduins, form the gathering place of the whole tribe of Arḥab for the discussion and decision of important matters. This custom may be a memory of ancient times in which the temple probably played an important part in the worship and legislation of the people.

SIRWĀL (A), trousers. Trousers are not originally an Arab garment but were introduced, probably from Persia. From quite early times, other people have copied the thing and the name from the Persians and it almost looks as if Persia were the original home of trousers (cf. Noldeke, *Geschichte der Perser und Araber zur Zeit der Sasaniden*, p. 136²). The Greek *σαρβάρα* or *σαρβάρα*, Latin *sarabala* (perhaps also Aramaic *sarballin*, Daniel iii. 21; cf. Syriac *ṣarballin*) and the Arabic *sirwāl* are all derived from old Persian *sarawāra*, the modern Persian *shirwār* (which is explained as from *shir* = leg, with a suffix *-wār*); to *sirwāl* in turn may be traced the corresponding word among the Hungarians, Poles, Russians, Tartars, Siberians and Kalmyks in the east and the Spanish and Portuguese in the west. The form *sirwāl* has probably been influenced by the word *sirḡāl* meaning garment in general (explained as a development of the root *ṣ-b-l* and an originally Semitic word). This occurs in the early Arabic poetry and in the *Kur'ān*, but not *sirwāl*.

The Arab grammarians retained a memory of the Persian origin of the word. As frequently with loanwords, *sirwāl* shows several formations in Arabic, sing.: *sirwāl(a)*, *sirwāl(a)*, *sirwāl*, dialectic *shirwāl*, modern also *ṣarwāl* and the question is continually discussed whether it is triptote or diptote; plur.: *sarwāl* and double pl. *sarwāllāt* both also with *shin* and dialectic *sarwālin*, diptote only but usually (like the word from trousers in many other languages) used with singular meaning and varying in sex between masc. and fem.; dimin. *sirwāyil*, plur. *sirwāyilāt*; (*ta*)*sarwala* has been formed as a denominative verb.

When the word entered Arabic and the thing was adopted by Muslims is not exactly known,

but the Mualims must have become acquainted with trousers in the very early days of Islām, at the latest during the conquest of Persia. Tradition usually traces them to the Prophet Muḥammad and even credits pre-Islamic prophets with wearing them. A ḥadīth says: "the first to wear trousers was the prophet Abraham, wherefore he will be the first to be clothed on the day of judgment". Another ḥadīth tells us that Moses was wearing trousers of wool on the day on which God spoke with him. It is related in one tradition of the Prophet Muḥammad that he bought trousers from the linen-drappers, but it is uncertain whether he actually wore them; on one occasion he replied to the question whether he wore them: "Yes, when travelling and at home, by day and night; I was commanded to cover myself and I know no covering really better than these". According to another ḥadīth, he recommends the wearing of trousers in the words: "be different from the people of the book, who do wear neither trousers nor *izār*". But other stories deny positively that he wore them and it is also disputed whether the Caliph 'Othmān wore them. The intermediate view is that it is permitted to wear trousers, *ubīḥā, lā ba'ṣa biki*.

In contrast to the men, to whom all that has been said so far applies, the wearing of trousers is recommended for women in all ḥadīths. It is said for example: "Put on trousers, for they are the garments that cover one best and protect your women with them when they go out" or "God has mercy upon the women who wear trousers" (*yarḥamū 'ilāhu 'l-mutaṣawwila min al-nisā'*) — or "a woman came past riding one day and fell off. The Prophet turned aside in order not to see her and was only put at his ease when he was told that she was *mutasawwila*". Other ḥadīths fix the length of the trousers: — to the ankles, not longer; as a concession, as a protection against insects, they may be a little longer but must not trail on the ground.

The *muḥrim* is forbidden to wear trousers (along with certain other garments). But even the *qalāt* in trousers was *mukribā* according to the strictest view and must be repeated; trousers are also considered unfitting for the *mu'adhḥin*.

In actual practice, little attention has been paid to all such restrictions, and numerous passages in historical and geographical literature, in books of travel and in *adab*-books show that trousers have probably been worn in most Muslim lands since the early centuries of the Hijra. It is quite exceptional to find the statement that in one region a so-called *fūṭa* was worn in place of trousers (e.g. in India). The word *fūṭa* is of Indian origin and means a simple cloth without a seam, which was fastened in front and behind to the girdle. A *fūṭa* of this kind — these from the Yemen were particularly noted — was also worn in regions, where trousers were usually worn by women in negligé, in the house instead of trousers (cf. Ibn al-Hādīd, *Kitāb al-Muḥḥal*, Cairo 1320, i. 118).

Oriental trousers differ very much in different countries. They are of all possible widths, from wide pantaloons, which are only drawn together at the bottom over the feet, to close-fitting shapes which look more like drawers and indeed are so-called by European travellers. They are also of very different lengths, from knee-breeches, especially for soldiers, to long trousers coming to below the

feet. Colours were dependent not only on fashion (sometimes only natural colours were considered the thing, as a rule artificial colours never) but also on political considerations; the 'Abbāsīd colour for example was black and that of the Fatimids white. As regards material, a famous Persian speciality was silken trousers; in Egypt and the adjoining lands the white Egyptian linen was popular, trousers of red leather are mentioned as the dress of the women in the market of lights of Cairo, and so on.

In contrast to the European fashion, trousers in the east are worn next the bare body under the other garments (cf. Djāhiz, *Kitāb al-Taḥf*, ed. Zeki Paşa, p. 154 below: the shirt and the trousers are *ihfār*, the other garments *dihār* are worn above) and are supported not by braces but by a special girdle tied round the body, called the *tikka* (modern *dikka*). Although the *tikka* were covered by the other garments and could not be seen they were the objects of a particular extravagance, being adorned with inscriptions, usually of an erotic nature; the most famous and valuable were the *tikka* made in Armenia of Persian silk. The prohibition against wearing them issued by the *fukhā* had scarcely any effect. A thousand pairs of trousers of brocade with a thousand trouser bands of silk from Armenia (*alf sarwīl dāibāḥiya bi-alf tikka ḥarīr armēnī*) were, according to Makrīzī, ii. 4, part of the estate of an Egyptian noble (cf. Ibn Khallikān, *Bulāḥ* 1299, i. 110); a thousand jewelled *tikka*'s were given to the daughter of Khumārāwāh b. Aḥmad b. Ṭullūn on her wedding; the *tikka* was also used as a love-token sent by a lady to her admirer.

For practical reasons, trousers formed part of a soldier's dress. Tabari records that even the Umayyad soldiers already wore *sarwīl* made of a coarse cloth called *miṣḥ*. Under the latter, they wore very short drawers called *tubbān*, which were made of hair. When Islām adopted the old Oriental custom of granting robes of honour, trousers were included among them; indeed they were sometimes regarded as the most valuable part of the gift, which, it has been suggested, is connected with the phallic worship of paganism. Originally the garments of honour given were not new, but had been worn by the donor; he ought to have worn them at least once.

As a kind of uniform and a garment of honour, the trousers play a very special part in the Muslim *futuwwa* organisations. In the ceremonial reception of a new member into the guild, an essential feature of the initiation ceremony (*shadda*, q. v.) is the putting on of the *sarwīl al-futuwwa*, often briefly called *futuwwa*. Here also stress is laid on the point that the *kāfir* must have either previously worn them himself or at least gone into far enough to touch them with his knees. The *sarwīl* had occasionally a similar importance for the *fityān*, like the *khirqa* [q. v.] for the Sūfīs. An oath was taken on the *sarwīl* (this oath is however invalid according to Ibn Taimiya); they could also be put on a coat of arms with a cup *ku'*.

The putting on of the *sarwīl al-futuwwa* acquired a certain political significance under the "reformer of the *futuwwa*", the 'Abbāsīd Caliph Nāsir, about whose grants of *sarwīl*, a few stories have been preserved by the historians. He sent embassies to the petty dynasts of Syria, Persia and India with the demand that they and

their nobles should put on the *sarwāl al-futuwwa* for the Caliph. This was done with solemn ceremonial and they thereby placed themselves under the protection of the Caliph as overlord of the *ḡayn*. The same Nāṣir seems to have limited the right of investiture to a very few and his successors also claimed the right for themselves. But others did it, for example the Sulṭān Ashraf of Egypt two centuries after Nāṣir.

When the *futuwwa*-gilds declined, other organisations with political or other aims adopted their external ceremonies, and laid special stress on the putting on of trousers. The gild of thieves in Baghdad for example under Muktafi and a secret Sunni association in Damascus called the *Nahawiya* with anti-Shi'a tendencies, mentioned by Ibn Djubair. But with the disappearance of the *futuwwa*, the original significance of the *sarwāl* as a badge of chivalry was no longer understood and they became combined with the *ḡirḡa* of the Sūfīs into the *ḡirḡat al-futuwwa*.

For the expression *sarwāl al-futuwwa* we also find *libās al-futuwwa* with the same meaning "trousers" and in Egyptian Arabic, *libās* (cf. Lane) acquired the general meaning of "drawers" (i.e. for men; for those of women there is a new foreign word *ḡintiyān*). This circumstance is a criterion for ascertaining the Egyptian texts in the 1001 Nights; they replace the word *sarwāl* of the non-Egyptian texts without exception by *libās*.

In many expressions *sirwāl* is used metaphorically. Thus, *mutarwāl* is a pigeon with feathered legs, a horse with white legs or a tree with branches down on the trunk. *ḡirwāl al-ḡirḡ* "rogue's trousers" and *sarwāl al-ḡirḡ* (cuckoo-trousers) (*linaria elatini*) are the names of plants (on the other hand *sarwāl* or *serwāl* or *serwāl* for "cypress" is formed of the well known word *sarw* with the article behind it and has nothing to do with *sirwāl*).

(WALTHER BJÖRKMAN)

SIS, a town in Asia Minor, also called *Sisiya*, (middle-)Latin *Sisia* and *Sis*; in French sources of the Middle Ages, besides the usual forms, also *Aasis* and *Oussis* are found. The most obvious explanation of these last mentioned forms would be from *al* (the Arabic article) + *Sis*: however, attention must be paid to the fact that in the Arabic sources the name seems to occur more often without the article, than accompanied by it (for another explanation of these forms see *Rev. des Hist. des Croisades*, Doc. Arm., ii, p. xii). *Sis* is the ancient capital of the Cilician-Armenian kingdom, 65 K.M. N. E. from Adana, 290 M. above sea-level. The town lies against the slope of an isolated mountain, which belongs to the Taurus-system. The river of *Sis* rises in the Antitaurus; after uniting with another water-course, the Deli Şu, it falls in the Djālūn (Pyramus).

Before the Middle-Ages, nothing is known about this town; the attempted identifications with antique localities (some have thought of Flavia, others of Pindenissus) are very doubtful.

In the Byzantine period we hear of the Arabs besieging in vain *ῥῆ Σισίου κάστρου* in Cilicia, in the 6th year of the reign of the emperor Tiberius III Apsimaros = 703 (Theophanes, *Chronographia*, ed. de Boor, i. 372). In the Latin text of Anastasius' *Chronographia Tripartita* (Theophanes, ed. de Boor, ii. 237) we find *expugnansque Sini castrum*, where the form of the name of the locality is to be noted, as also the fact, that *expugnans* is a wrong interpretation for the word *πελοπελάς* in the text of Theophanes.

In 'Abbāsid time, however, *Sis* belonged to the Muslim empire: it was reckoned among the *ḡazā'ir al-Shāmiya*. It was rebuilt during the reign of al-Mutawakkil, under the direction of 'Alī b. Yahyā al-Armani, but afterwards laid waste by the Byzantines (al-Balādhuri, ed. de Goeje, p. 170). There is also a tradition, going back to al-Wāḡidī, of an emigration of the inhabitants of *Sis* to the *al-Fā al-Rūm* in the years 194 or 193 (809/810 or 808/809), which event may stand in relation to the loss of the locality by the Greeks, in the interval between the times of Apsimaros and al-Mutawakkil (al-Balādhuri, *loc. cit.*; cf. Yāḡūt, *Muḡjam*, ed. Wüstenfeld, iii. 217, where the years erroneously are given as 94 or 93). A further mention of *Sis* is found during the wars of the Hamdānid Saif al-Dawla [q.v.] with the Byzantines. That prince, after rebuilding 'Ain Zarba (Anazarba), sent his *ḡadib* with an army, which ravaged the Byzantine territory; the Greeks, in revenge, then took the stronghold of *Sis* (*ḡin Sisiya*), in the year 351 (962) (Ibn al-Aṡṡir, ed. Thurnberg, viii. 404). It appears, then, that in the early Middle Ages *Sis* has been a fortified frontier-town.

The continuous history of *Sis* begins about the end of the xiith century of the Christian era, when it had become the royal residence of the Armenian kings of Cilicia (the Rubenids and the

Lusignans). But already before that time it is sometimes mentioned in the annals of the Cilician kingdom. It is numbered among the places, conquered by the Armenian princes Thoros and Stephanos (Chronicle of Kirakos of Ganjak under 562 Armenian aera = 1113/1114); moreover, Sis belonged to the towns which suffered from the earthquake of the year 1114 (Chronicle of Matthew of Edessa under 563 Armenian aera). Nerses of Lambron, writing in the year 1177, complains, that in the royal residence (*ishkhananik*) Sis, there is no bishop, nor are there suitable churches. It is surprising to find the town mentioned as a royal residence as early as 1177, for it must have been Leo II (1187—1219), who transferred the royal residence for strategical and political reasons, from Anazarba to Sis. Since the time of this ruler, the kingdom of Cilicia is called, by Muslim authors, not only *bilad al-Arman*, but also *bilad Sis*; an Armenian geographer (xiiith century) cited by Saint Martin, ii. 436 *sq.* also identifies the names Cilicia and Sis.

Leo II caused many new buildings to be erected in the town. The chronicle of the *connétable* Sēmbat speaks already under the year 624 Armenian aera = 1175/1176 of the new-built (*neraghin*) town of Sis, in connection with the murder of the Rubenid prince Meh (dated in Hethum's Chronicle, erroneously under 613 Armenian aera = 1164; Sis is also here mentioned as the place, where that event did happen). If the, tolerably late, chronicle of Sēmbat is right in using the term "new-built" here, then there must already have been extensive renovations before the time of Leo II.

This prince, who in 1198 was crowned king (he himself before, and the older Rubenids only wore the title of baron) transferred, as stated above, the royal residence to Sis. His coronation must have been at Tarsus (a later chronicler, Jehan Dardel, erroneously pretends that it was at Sis), but the town of Sis is already called the "metropolis" of Leo in a poem on the taking of Jerusalem by Salih al-Din, written by the Katholikos Grigor IV († 1189; in this poem the form, *Sisuan* is to be noted: *Rev. des Hist. des Croisades; Doc. Arm.*, I. 301). In the year 1212 it was at Sis, that the coronation of Leo's grand-nephew and co-regent Ruben took place. This ceremony was witnessed by Wilbrand of Oldenburg, who in his *Peregrinatio* gives a short account of the town: "It was the capital of the king (*capitanea civitas domini regis*), with many and rich inhabitants. It had no walls, *unde potius tam villam quam civitatem nuncuparim*. But there was an Armenian archbishop, and also a Greek patriarch. Then the traveller mentions the stronghold of Sis (*castrum... super et situm in monte valde munitum*); the town rises amphitheatrically against the mountain. The locality belonged in ancient time to Darius, who was vanquished by Alexander". This singular item may be due to a reminiscence of Alexander's victory at the (Cilician) Issus. It is remarkable, that in the elegy of Grigor, cited above, after the mention of Sis, it is said that on that spot also the warriors of Alexander defeated Darius. In the neighbourhood of the town, Wilbrand continues, the king had caused a pleasure garden of indescribable beauty to be laid out.

It is surprising that the town had no wall; it seems that the stronghold was deemed sufficient

for defence. Still in 1375, when Sis was taken by the Egyptians, there was no town-wall: the royal palace, together with some other buildings, were enclosed with a wall; it seems to be this complex which is called by Jehan Dardel the "bourg", and it must be distinguished from the castle on the mountain.

The kings of Cilicia, moreover, had a summer-residence in the Taurus, to the North of Sis, Barjberd, which was also their treasure-house. Likewise, in modern times, the inhabitants of Sis, during the summer, leave the unhealthy town, to take summer habitations (*yaylak*) in the mountains.

The political history of Sis is, of course, intimately connected with the general history of the Cilician-Armenian kingdom. The chief feature of that history consists in the struggle for existence which that kingdom had to carry on against the sultanate of Egypt; it is therefore not surprising, that the chief events connected with the town are attacks of the Mamluk armies and ravages wrought by them. Other foes were of minor consequence: an attack of a Turkoman chief in the year of the accession of Leo II (1187) was repelled by that prince, but the Turkomans during the reign of the following kings remained a menace to the Cilician kingdom. These nomads, whenever a strong government was lacking, availed themselves of the opportunity to seize on pasture-grounds: we shall find them in the actual possession of the territory of Sis in the first half of the sixth century. On the occasion of the Egyptian attack of 1266, the town of Sis, with its cathedral, was burnt down and the royal tombs were desecrated. Other Egyptian incursions in the district of Sis occurred in the years 1275, 1276, 1298 and 1303: in the last named year, the city itself was plundered by the enemy. In 1321 the environs again suffered from hostile attack; this time it was the Mongol governor of Rüm, Timurtaş, who, on the instigation, as it seems, of the Egyptian sultan al-Malik al-Nasir, carried his ravages in the district of Sis. A similar incursion was made by the then officiating governor of Aleppo, by order of the same sultan in the year 1340; the incursions from the north of Aleppo were repeated in 1359 and 1369; both times the town was taken. In the meantime, Sis had suffered from the great epidemic, which in Europe, during that same time, is known under the name of the "Black Death" (1348).

However, the end of the Cilician kingdom was imminent. The last king, Leo VI (de Lusignan) was reduced to his capital, Sis; after the retreat of the Egyptians, the Turkomans fell upon the land; then, in the years 1374 and 1375 came the catastrophe. The sieges of Sis during these years by the Egyptians, and the final taking of the town, wherein the enemy was assisted by the treason of some nobles and of the Katholikos, are described in detail in the chronicle of Jehan Dardel, who had been chaplain to king Leo VI since 1377. Leo being then a prisoner at Cairo.

From the ecclesiastical history of Sis during the time of the Cilician kingdom, the following facts may be mentioned. Soon after the time when Nerses of Lambron complained about the desolate state of spiritual affairs in the town, we find Sis (since 1198, when the first archbishop is mentioned) an archbishopric, but depending on the see of Anazarba. There had also been some

church-councils at Sis, e.g. in 1238, under the reign of Hethum I, when the dogma of the processum Spiritus Sancti according to the Greek doctrine was accepted; in 1307 (March 19) another council aimed at unification with Rome, but obedience to its resolutions could only be compelled within the limits of the town of Sis itself. Two years later (1309) another church-council, not summoned by the king, was convened at Sis, to take stand against the innovations of 1307, but the king Awahin dispersed it, and had the ecclesiastics who had been convened, imprisoned. Another synod was held at Sis in 1342, under the reign of Constantine IV.

The patriarchs of the Cilician-Armenian kingdom fixed their seat at Sis in 1292. On June 29 of that year, Rūm Kāl'a, which was the former seat of this patriarchate, had been taken by the Egyptians; so the new patriarch (Grigor VII) came to reside at Sis. There his successors have remained even after the fall of the kingdom, and after the renovation of the patriarchal see of Edjmiacin (1441), which caused, of course, a schism in the Armenian church. The chief relic preserved by the patriarchs of Sis was the right hand of St. Grigor, the apostle of the Armenians, which, in 1292, was redeemed, with other relics, from the infidels by king Hethum II.

After the Egyptian conquest, the patriarchs, at first, had no fixed residence; they came only to the town of Sis to perform some ecclesiastical duties, e.g. the benediction of the sacred oil (*myron*). Under the rule of the Rubenids and Lusignans the habitation of the patriarchs had been within the circumvallation of the royal dwellings. After the period of their wandering about, the patriarchs obtained from the Egyptian government permission to reside in the town. First, this residence of the patriarch was an ordinary house; in 1734, long after the Turkish conquest, a monastery was founded by the patriarch Lucas, which seems to have been the seat of the patriarchate until 1810, when the patriarch Kirakos founded another monastery, in which the patriarchate was established when V. Langlois visited Sis (1853). A little before 1874, the patriarch was expelled from Sis, and migrated to 'Ain Tab.

But if the ecclesiastical history of the town continued until modern times, politically Sis soon became insignificant. Immediately after the Egyptian conquest, Sis remained the capital of a new province, which included Ayās, Tarsus, Adana, Manjisa and Ramadaniya, the whole being dependent on Aleppo. In 893 (1488) Sis was taken by the Osmanlis, during the war between Bāyazid II and Egypt. Afterwards, the town belonged to the realm of the Turkoman dynasty of the Ramaḍānoghlu, whose members, however, since the time of the fifth prince, Khalil b. Maḥmūd, were vassals to the Porte. Hādjdj Khalifa, in the *Djihadnammā* contrasts the once flourishing condition of the district of Sis with its uncultivated state in his time.

Under Ottoman administration, Sis belonged to the *vilāyet* Adana, and the *sandjak* of Kozan. When Langlois visited the locality, he found it to be a village, consisting of \pm 200 houses, inhabited by Turks and Armenians. There was a *masjid* and a *hasar*; the Turkoman beg of the Kozanoghlu tribe was virtually the ruler, for the *pasha* of Adana had no authority whatever in Sis. The village moreover paid no tribute to the

Porte. There were several remains of old times, but the palace of the Cilician-Armenian kings was ruined; on its site was the monastery, where the patriarch resided. The church, belonging to that monastery, is consecrated to St. Grigor Illuminator and the Descensus Filii Unigeniti; the treasure of that church contains among other relics the right hand of St. Grigor, and two Gospels from the sixth century of the Christian aera. The archives and the library of the patriarchate, Langlois found to be in a deplorable state. Other churches of Sis, partly restored after the Middle-Ages, are consecrated to St. Sophia (the *Çaḡl kilsesi*), to St. Sergius, to St. Peter and Paul (wholly ruined), to the Holy Virgin, to St. James (ruined). The mountain-stronghold of Sis, built by Leo II (Sis *Kal'a-si*) was in a tolerable state of preservation.

According to a statement of 1894 (Sāmi Bey Frasheri) Sis then had \pm 3,500 inhabitants, 2 *masjids*, 3 churches and 3 *medreses*. Its territory, though fertile, is insufficiently cultivated, but in its neighbourhood there are many gardens.

SISAM. [See SAMOS].

SISAR, a town in Persian Kurdistan, bounded by Hamadān, Dinawar and Adharbājdjān. The Arab geographers place Sisar on the Dinawar-Marāgha road 20—22 *farsakhs* (3 stages) north of Dinawar (Ibn Khurdādhbih, p. 119—121; Kūḍāma, p. 212; Muḥaddasī, p. 382). According to Balādhuri (ed. de Goeje, p. 310), Sisar occupied a depression (*ḥiṣṣa*) surrounded by 30 mounds, whence its Persian name "30 summits". For greater accuracy it was called Sisar of Sadkhāniya (*waḥāna Sisar tud'a Sisar Sadkhāniya*) which Balādhuri correctly explains as Sisar of the hundred springs: *Khāni* in Persian (*kāni* in Kurd) does mean spring; on the other hand the geographers (Ibn Khurdādhbih, p. 175; Ibn Rusta, p. 89) locate the sources of the Safid-rūd (Kizil-uzān) "at the gate" or "in the ravine" (*ḥiṣṣa*) of Sisar (Mas'ūdi, *Kit. al-Tanbih*, p. 62: in the *nāhiya* of S.). Finally Mas'ūdi (*ibid.*, p. 53), speaking of the Diyāla (q.v.), makes it come from the mountains of Armenia (?) and talks of Sisar as belonging to Adharbājdjān.

These quotations show that the site of Sisar lay near the watershed between the Kizil-Uzān (southern arm) and the Gikwarid (Diyāla) i.e. near the col of Kargāhād, where numerous streams rise flowing in different directions. According to the ingenious hypothesis of G. Hoffmann, the name of the town of Senna [q.v.] might be a contraction of the old form Sadkhāniya. There is

not sufficient evidence however to show that the site of the modern Senna is identical with that of the town of Sisar.

It should be noted that while Ibn Khurdādhbih and Qudāma give the distance between Dinawar and Sisar as 20—22 farsakhs, the whole distance between Dinawar and Marāgha is put sometimes at 50—52 farsakh (same writers), sometimes at 60 farsakh (Mukaddasi, p. 384; Isṭakhri, p. 194). If an error of 8—10 farsakhs could be made on the stretch Dinawar-Sisar, the latter place might be put further north on the line of the watershed between the northern waters of the Sirwān (Diyāla) and those of the Kizil-Uzun; at the present day names like Chihil-Chashma ("mountain of the 40 springs"), Hazār-kāniān ("village of the 1,000 springs") are common in this district.

In the district of Sisar (Balādhuri, p. 130), there were at first only the grazing-grounds of the Caliph Maḥdī (151—169). This intermediate zone (*ḥadd*) between three great provinces soon became a refuge for outlaws (*al-qāṣṣ* *wa* *l-dhū* *ʿar*) and the Caliph ordered his superintendents to build a town. The estates formed a separate district (*ḥīra*) which was extended by the addition of the following cantons (*rustāḥ*): 1. Māipahradj, detached from Dinawar; 2. Djuḥma (?), detached from the *ḥīra* of Barra in Āḥarḥādījān and 3. Khāndījar (?). Ḥārūn al-Rashīd stationed a garrison of 1,000 men at Sisar. Sisar was later the scene of battles between a certain Murra al-Rudānī al-Idīlī and the Khirīdīs under 'Uthmān al-Awdī (Yāqūt, iii. 216). The Caliph al-Ma'mūn made Humām b. Hānī al-'Abdī governor of Sisar.

In the viiith (xiiith) century Yāqūt is able to add very little to the information given by Balādhuri. In the viiith (xivth) century Ḥamdallāh Mustawfī no longer mentions Sisar. On the other hand he talks of the "mountain of Sina" forming the boundary of Āḥarḥādījān and the "pass of Sina" in the mountains of Kurdistan in which was the source of the Taghatū. The *Djihan-namā*, while marking correctly on the map the exact site and correct name of Taghatū, gives in the text the wrong reading *ḥ-f-t-w* which Norberg in his translation (Lund 1818, i. 547) renders by Neftū. Quatremère introduced the reading Naghatū found in an edition of Mirḥond. G. Hoffmann admits the identity of this river with the Khorkhōra (a right bank tributary of the Djaghātū). But there is no proof of the actual existence of the name Naghatū and the text of Mustawfī may simply indicate that in his day the frontier between Āḥarḥādījān and Sina was marked by the watershed between the Taghatū (cf. *sāwaj* *bulāḡ*) and Bāna. This last district had long been a dependency of Senna. In this way since the viiith (xivth) century the name Sina (Sinnā, Sina) has become substituted for that of Sisar and its later history will be found in the article *ḤAMNA*. As to the date of origin of this town, it may be noted that in 1630 Khuraw Pasha destroyed Hasanbād which was the capital of the princes of Ardīlān (von Hammer, *G.O.R.* 2, 1840, iii. 87). Only forty years later, Tavernier (*Les Six Voyages*, Paris 1692, i. 197) speaks of his visits to Sulaimān Khān at *Sacine* (= Senna).

The name Simar on Haussknecht's map (G. Hoffmann, *op. cit.*, p. 256) has nothing to do with Sisar; it refers to the pass to the south of Sina, the real Kurd name of which is Sīm-sā

("wearing out shoes"). There is at the present time a village of Sisar near Sardasht and another south of Bāna, on the slopes of Sirkēw (cf. *sāwaj* *bulāḡ*). This only shows how frequent such names are, and explains why the Arabs were obliged to define their Sisar by the addition of *Ṣadkhāniya*.

It may be added that the popular etymology of Sisar ("30 mounds", according to Balādhuri) does not preclude the identification of Sisar (or of one of the Sisar) with *Šisirtu* (*Šisiri*) of the Assyrian period. *Šisirtu* was a fortress of the land of Kharkhar (cf. the name of the river Khorkhōra to the north of Senna) on the frontier of the land of Ellipi. There are considerable differences in the identification of all these names proposed by Hillerbeck, *Das Sandeschah Salimania*, Leipzig 1898, p. 127, 133, 158; Justi, *Grundriss d. iran. Phil.*, ii., p. 404; de Morgan, *Mission scientifique*, iv., p. 404; Streck, *Z. A.*, xiv. 138—139; xv. 349, 379; Thureau-Dangin, *La huitième campagne de Sargon*, Paris 1912, map; Forrer, *Die Provinzialverteilung d. assyrischen Reiche*, Leipzig 1921, p. 90, 92—93, 95, 102, 120. The identification of *Šisirtu* with the capital of the Mannaens Isirtu (Streck, xiv., p. 139) is still only a hypothesis. In principle there is no difficulty in the equation *Šisirtu*-Sisar, which would give Assyriologists a fixed point in a region, where all is still uncertain.

(V. MINORSKY)

SISTĀN, or **SIDJISTĀN** (from *Sakastāna*, land of the Sakae, cf. its classical name *Sakastāne*), also called *Nimrūs* ["midday" = south-land, scil. south of Khurāsān; this name occurs often in the *Šāh-nāma*, and also on the coins of the Kayānī chiefs (*malik*) of Sistān, cf. *J.R.A.S.*, 1904, p. 669], border district between Persia and Afghānistān. Its area covers ± 7,006 square miles, 3,847 of them being Persian, and 4,159 Afghān territory; its population being about 205,000 persons (for 1906, cf. MacMahon in *Geogr. Journal*, xxviii. 213).

The land is divided between the two countries by the (theoretical) boundary-line fixed by the Sistān Mission of 1872; this line runs "from the Band-i Sistān on the Helmand to the Kūh-i Malik Siyāh, a hill to the West of the Gawd-i Zarīh" (Yate, *Khurāsān and Sistān*, p. 92). F. J. Goldsmid, the head of the Mission, distinguished "Sistān Proper" from "Outer Sistān"; the first may be said to correspond to the part, belonging to Persia. It is the more important portion of Sistān; its boundaries are according to Goldsmid: on the North and the West the Nairār and the Hāmūn; on the East, the old course of the Helmand, and on the South a line which includes the portion watered by the main Sistān canal. So, this country is enclosed by water on three sides, and can, to a certain extent, be called a

peninsula. The depressions (Hāmūn) in which the rivers discharge themselves, may be described as follows: there are two lagoons, formed respectively by the Harūd Rūd and the Farāh Rūd (both coming from the North) and by the Hēlmand and the Khāshrūd (coming resp. from the South and the East). To the South of these lakes extends the Naizār, a tract of country, covered with reeds. At the time when the Hēlmand is in flood, the two lagoons become united, and the inundation covers the Naizār also. A tract, stretching from North to South, reckoned from the Western of the two lagoons (the Hāmūn-i Farāh), then also becomes overflowed, so that a great lake is formed, which, lastly, discharges its redundant water through a course, called the Shēla, in a third depression, the Gāwd-i Zarīh (the vocalisation of Zarīh is not altogether sure, modern travellers write also Zīrah. In the *Shāhnāma* (ed. Vullers-Landauer, 1373, 1971) the name rhymes with girīh). Cf. the articles *AFGHANISTĀN* (i. 156), *HĀMŪN* and *HĒLMAND*, and specially Sykes, *Ten Thousand Miles in Persia*, p. 364 etc.

The water-supply, and, in consequence, the cultivation of Sistān, depends chiefly on the Hēlmand. Therefore, the distribution of its water has been, from ancient times, regulated by a system of dams and canals. The river has altered its course several times: this, and the fact that during Timūr's invasion of Sistān many dams and canals must have been ruined (e.g. the Band-i Rūstām is reported to have been destroyed by him), explain the reason why there are found in Sistān so many ruined localities, towns and villages, now deserted because cultivation has ceased in their environs. The principal hydraulic work of later times is the great Band-i Sistān (or Band-i Amīr), a permanent construction, near Kūhāk. The amīr of Kā'in, under whose authority the governor of Persian Sistān stood, had ordered this dam to be built, some six or seven years before the time when Goldāmīd was in Sistān. A description of this dam is given in *Eastern Persia*, i. 281 sq.

The soil of Sistān is alluvial, and consists chiefly of sand, mixed with clay. A part of the surface shows moving sands; the land is flat, but there are some low hills. The highest elevation of the soil is the Kūh-i Khwādja (± 400 feet high), which lies in the tract between the Hāmūn-i Farāh and the Gāwd-i Zarīh; at times of complete inundation the hill lies in the midst of the water. It bears this name because the sanctuary of a local saint is situated at the Northern end of its flat surface. At the vernal equinox (*Nawrūz*) the population celebrates a primitive feast, to the honour, as it seems, of this Khwādja; Sykes thinks, that in its ceremonies there are preserved pre-Muhammadan rites. The Kūh-i Khwādja is fortified.

Sistān is fertilised by the deposit, left by the inundations of the Hēlmand and the canal system. The most important production of the land is grain, but also beans, cotton, oil-seeds and melons grow there. There is plenty of fodder for the cattle; in Sistān cows are bred in large numbers as well as horses, though the country is notorious for horse-diseases and poisonous flies. Of wild-growing plants, the tamarisk is to be mentioned: the banks of one of the canals, the Mādar-i Āb, are covered with it in abundance; Sykes says of it: "one of the few jungles I have seen in Persia".

There are not many trees in Sistān, except in

the Miyan Kāngī, the district between the Rūd-i Pārīyān (the main bed through which the Hēlmand discharges itself into the Hāmūn) and the Siksar (a tributary stream to the Rūd-i Pārīyān; cf. the map of Sistān belonging to MacMahon's articles in the *Geogr. Journ.*, xxviii.).

In former times, the date-tree, which is no longer found, must have existed in Sistān (Yate, *Khurasan and Sistān*, p. 94). On the kinds of serpents (for the frequency of vipers in Sistān cf. also al-Halāqūnī, ed. de Goeje, p. 400, 402) and birds to be met with in this country, cf. *Eastern Persia*, i. 273. Of the climate not much good has been said by European travellers. The winter is cold, but not unhealthy; then, between March and August, there blows a North-Western wind, the so-called *šād-i qad u šīr rū* (the wind of 120 days), which clears the air from the miasma, produced by the stagnating marsh-water, which in the other seasons cause fevers. Summer is hot and disagreeable. Rawlinson says, in respect to the climate, that "Sistān is, in its present aspect, a wretchedly unhealthy country, only habitable for a few months in the year".

The population of Sistān consists chiefly of Tadjiks; there are also Balōchis and Kā'ins, who have established themselves in the land; moreover, Nādir Shāh forced some nomad tribes of Shīrāz to emigrate to Sistān. Genealogical data about some Sistāni families (e.g. the historical important Kayānis who claimed descent from the mythical Iranian kings), and some Balōchi-clans resident in Sistān are to be found in *Eastern Persia*, i. 415 sqq.

The Šaiyāds (fishermen and fowlers), who live to the South of the Hāmūn and the Naizār, and speak a language of their own, are considered, by some authors, to belong to the aborigines of the country. They earn their livelihood on the lake, by fishing during the summer, and by catching wild fowl during the winter. To each group of families of them (*maḥalla*), a piece of water is assigned (Yate, *Khurasan and Sistān*, p. 80). In their neighbourhood, but distinct from them, there is a class of men called *Gāwādār's* (cow-keepers). Sykes (*Ten Thousand Miles*, p. 367) supposes, that one Sistāni tribe, that of the Sarbandis is connected with the Brahōi, and therefore may be aboriginal; but, first, the question of the racial constitution of the Brahōi is a very complicated one (cf. the article *BALŪCHISTĀN*, i. 655 sqq.), and, secondly, there is reason to assume, that the Sarbandis (as also the Shahrakīs) are immigrants from Western Iran.

The language of Sistān is described as "a species of debased Persian, somewhat similar to that spoken in Khurāsān" (*Eastern Persia*, i. 259). On local names, important from a linguistic point of view cf. Bellew, *From the Indus to the Tigris*, p. 269 sq. The people lives in a state of economic misery, all land and water belonging to the Government; as regards trade, it is chiefly carried on by caravans, which are sent by the different villages in common to Quetta and Bender 'Abbās, and bring back in return articles lacking in Sistān, such as tea, indigo, sugar, etc. (cf. Yate, *Khurasan and Sistān*, p. 83 etc.).

The original chief town of Persian Sistān, Sīhkūha, is cast into the shadow by Naḡrat-Šād (built ± 1870). Sīhkūha is said to have contained (1872) $\pm 1,300$ mud huts, of which Curzon,

in the year 1892, found no more than half the number inhabited. The town of Nūsrābād (which, in Goldsmid's time, was called Nūsrābād) was founded by the amir of Kā'in, there being wanted a residence for the Persian Government in Sistān. The "new city" (*Shahr-i naw*) of the town, has gradually shut in the village of Husainābād, near which the building of Nūsrābād begun. The "new town" is populated by Kā'ins and people from Khurāsān, but Husainābād retains its original Sistāni inhabitants. The fort of Nūsrābād is called *Shahr-i qadīm* ("the old city"). The town has a garrison, and it is the administrative centre of Sistān. Another name for Nūsrābād is *Shahr-i Sistān*; this name is used almost exclusively among the inhabitants themselves. The remaining villages of Sistān are of little importance. The land, in the second half of the sixteenth century, was governed by a deputy of the amir of Kā'in, the title of the governor of (Persian) Sistān being *Hajmat al-Mulk*. He was responsible to the Government for a payment of 12,000 *tūmān*'s, while the revenue of Sistān (mostly in kind) was fixed at 24,000 *kharrār*'s (a 649 lb.) of grain a year, in addition to which, 2,600 *tūmān*'s extra (in cash) were levied (Yate, *Khurāsān and Sistān*, p. 83).

Afghān Sistān, with its capital Khākānsūr on the Khahbrūd, comprises the land on the right bank of the Helmand, and East to the more eastern of the two lagoons (Hāmūn-i Pūza) up to the district of Djuwain in the North. Also, the tract extending from the left bank of the Helmand to the boundary of Balūchistān belongs to Afghān Sistān. In this part of the country lies the Gawd-i Zarih. Cultivation is found in the district of Khākānsūr and along the banks of the Helmand. The population here is similar to that of Persian Sistān, except that there are here, of course, also Afghāns among them. In the tracts east of the Helmand, Mac Mahon found a great number of ruins, and also traces of ancient canal-systems and river-beds. He supposes, that "this must have been, not only a former delta of the Helmand, but the delta, used by the Helmand in, as far as existing ruins testify, one of the most prosperous times of Sistān history" (*Geogr. Journ.*, xxviii. 219). For all detail there should be made reference to MacMahon's paper itself.

Historical outline. In antiquity, the land at the lower course of the Helmand (Etymandros) was known as Drangiana. This word has been compared with the old Iranian word for "lake, sea", Avestan *zrayah*, old-Persian *z(ə)rayah*, but, as this etymology is not entirely certain, we can only say that the land has its name from the people of the Drangai [other forms: Zarangai, Zarangaiol, Sarangai; old-Persian: *Z(ə)ra(n)ka-*]. The name Sakastane (or Paraitakene), belongs, according to Isidorus of Charax, to the borderland of the middle-course of the Helmand. It must be remembered, that the word Sakastane is not found before the time of Isidorus, and it is generally accepted, that this name has risen from the fact, that the Sakai conquered this land about 128 B. C. F. W. Thomas (*J. R. A. S.*, 1906, p. 181 *seq.*) has attempted to show, that the Sakai were found in these tracts already in Achaemenian times, and that the late occurrence of the name Sakastane is to be explained by their becoming politically powerful not before the

Parthian epoch (cf. the articles DRANGAI, SAKAI, SAKASTANE, CARCOE in Pauly-Wissowa, *Realenz.* 2; Bartholomae, *Altir. Wörterbuch*, s.v. *zra(n)ka-*).

The Avesta knows the Helmand under the form *Haitumant-* ("abounding in dams"), and also the lake *Kasaea-*, which is formed by that river. This lake, therefore, must be the Hāmūn-system. In it, according to Zoroastrian tradition, the seed of Zoroaster lies concealed, from which in the future three sons will be born, the third of whom will be the saviour (pahl. *sahešān*). It is also in the environs of this lake, that tradition places the origin of the mythical Kawa-dynasty (Kayānids). All this leads us to suppose, that Sistān, in antiquity, was a principal seat of the Zoroastrian religion. On its relation to Iranian epic tradition see below.

For the ancient history of the Sakai cf. the article AFGHĀNISTĀN (i. 168 *seq.*) and the articles SAKAI and SAKASTANE in Pauly-Wissowa's *Realenz.* 2.

The name Sakastane (Sakastān, Sidjistān), in ancient and mediaeval times, denoted a greater area than the modern districts of Persian and Afghān Sistān (cf. al-Tabari, i. 2705: *fa-kūmat Sidjistān d'jam min Khurāsān*); this is already evident from the fact, that the name originally signifies the Saka-state on the middle-Helmand. It is not possible, to define exactly, which tracts at various times have been assigned to Sistān. It seems that a great area to the East, up to Kandahār, was sometimes included under the name also.

Ardashir, the founder of the Sāsānian dynasty, among his other conquests, subjugated Sakastān. The tie to the Persian empire cannot have been very firm, for the Sakai appear in the history of the Sāsānian epoch rather as allies as than subjects. We find, accordingly, a second conquest of the land by Bahrām II, who appointed his son, the future king Bahrām III, governor of the district with the royal title of *Sagānshāh*. But during the reign of Shāpūr II, the Sakai once more appear as allies, not as subjects. In the Sāsānian period Christianity, in its Nestorian form, had made progress in Sakastān, which even became the see of a bishop (Pauly-Wissowa, *Realenz.* 2, i.A. 1812). At the time of the Muslim conquest of Persia, Yazdijird III, after having been driven away from Kirmān, turned to Sakastān, whose king at first accorded to him his protection, but the Sāsānian having tactlessly alluded to arrears of taxation, the king withdrew his protection from him (al-Balādhuri, ed. de Goeje, p. 315). It is, however, not possible to find out whether the "king" of Sakastān at that time was a Sāsānian governor with the title *Sagā*, or a national ruler, who only owed tribute to the Persian government.

The Arab conquest of Sistān began in 23 (643/644), when 'Asim b. 'Amr and 'Abdallāh b. 'Umayr made an incursion into the land and besieged Zaranj (the old capital of Sistān, now ruined); finally the Sistānis concluded a treaty with the Arabs, to the effect that they should pay the *kharrāj*. In the year 30 (650/651), the commander of a Muslim army, encamped in Kirmān, sent al-Rabi' b. Ziyād al-Hārithi to Sistān. Al-Rabi' traversed the desert between Kirmān and Sistān (the *Daigh-i Laf*) and reached Zalik, which is described as a fortress, 5 *farasāh* distant from the frontiers of Sistān; the stronghold was taken,

and on his further march, al-Rabīf reduced two other localities, Karkūya and قيسون (or, acc. to Yāqūt: قيسون — vocalisation uncertain), without bloodshed. After returning to Zālīk, he set out anew to take Zaranj. Before reaching that town, some minor localities, Zūht, Nāshrūdī and Sharwādī were taken with much fighting; the *marzbān* Aparwēz, who commanded at Zaranj, defended the town vigorously, but at last was obliged to surrender it to the Muslims. However, the city of Zaranj proved to be no secure possession to the conquerors, as two years after its capture, the inhabitants drove out the Arab garrison. The town was retaken by the new governor of Sistān, 'Abd al-Rahmān b. Samura. This general also reduced Bust (which during the Middle Ages was included in Sistān), and Zābul. At the end of the khalifate of 'Uthmān, when 'Abd al-Rahmān was replaced by another governor, a new rebellion of Zaranj took place. During the khalifate of 'Alī, the condition of Sistān remained turbulent; thereupon, in the reign of Mu'āwiya, the governor of Baṣra sent 'Abd al-Rahmān b. Samura to Sistān once more. This energetic general subdued the land, and penetrated as far as Kābul; he subjugated also Zābulistān, which had revolted. This achievement caused the khalifa to appoint 'Abd al-Rahmān as his immediate lieutenant in Sistān; he remained there, till Ziyād b. Abī Sufyān nominated al-Rabīf b. Ziyād al-Hārithī in his stead. 'Abd al-Rahmān died at al-Baṣra in 50 (670). After leaving Sistān, the king of Kābul drove the Muslims out of his land, and the new governor of Sistān had to make head against the Irānian prince Rutbil (this is no proper name, but a title, like *kābulī*, and the like) who conquered Zābulistān and Rukhkhādī (then included in Sistān), and penetrated as far as Bust; there he was defeated by al-Rabīf. This latter being also deposed by Ziyād b. Sufyān, the following governor of Sistān made peace with Rutbil. But this prince remained a turbulent element till his death, which occurred while 'Abd al-'Azīz b. 'Abdallāh b. 'Amīr was *waṭīl* of Sistān. Another Rutbil (son of the former?) held his own against the Muslims in Sistān and Zābulistān, from the time of the khalifate of 'Abd al-Malik b. Marwān till the reign of al-Manṣūr. Sometimes, however, the Irānian paid tribute, which payment he stopped altogether during the last years of the Umayyad rule. In the reign of al-Manṣūr the Muslim government adopted rigorous measures against him; but the princes of Sistān paid, as it seems, none the less, their tribute to the *waṭīl*s of al-Mahdī and al-Rashīd, though rather irregularly.

Under al-Ma'mūn the tribute (*ṭiṣṭa*) was doubled; during his khalifate the king of Kābul embraced Islam, and, also in al-Ma'mūn's reign, Kābul (and of course also Sistān) obtained connection with the governmental post-routes. (For the history of the conquest, and the Umayyad and 'Abbāsid governors of Sistān cf. al-Tabarī, i. 2705 ff.; al-Balādhurī, p. 392 etc.).

In the Middle Ages, Sistān in a wider sense included also the districts of Zābulistān, Dāwar and Rukhkhādī. Among its cities were Farāh [q.v.], Djuwain [q.v.], Bust [q.v.], and Ghazna [q.v.]. The boundary to the East cannot be precisely defined; to the North it bordered on Khurāsān, to the West on Kūhistan and the great desert of Kirmān, to the South on Makrān. But the name does not always

imply this greater area: al-Muḥaddas, e.g. says that some authorities include Bust and Ghazna under the name Kābulistān, not assigning them to Sistān. Amongst the localities of Sistān, al-Muḥaddas cites Zaranj, Kūwain, Zanbūk, Kārnīn, Karwādīkan, etc. The capital was Zaranj, near the Sanfrūd canal, an important city, containing not only buildings of the two first Saffārid princes, Ya'qūb and 'Amr, but also of the Sāsānians Ardashīr and Khusrāw I (al-Muḥaddas, p. 306). Zaranj was taken and destroyed by Timūr (785/1383), and has remained ruined ever since (cf. Le Strange, *The Lands of the Eastern Caliphate*, p. 335, note 1).

The only time Sistān has played an important part in medieval history has been during the reign of the Saffārid dynasty, whose founder, Ya'qūb b. Laith was himself a Sistānī (born at Kārnīn). Sistān was, of course, the central land of this dynasty (cf. SAFFĀRID, 'AMR B. AL-LĀITH). After the downfall of the Saffārids, Sistān belonged successively to the empire of the Sāmānids and the Ghaznawids (coins of Sabuktigin and Mahmūd have been found in Sistān, cf. *J. R. A. S.*, 1904, p. 681). The land had, however, its own native rulers (*malik*) under the suzerainty of the greater dynasties. By the Sāmānid Naṣr b. Aḥmad the Saffārid (?) Aḥmad was appointed governor of his native country, Sistān (309 = 921/922). Aḥmad was succeeded by his son Khālaf, who was dispossessed from Sistān by Mahmūd the Ghaznawid, who conferred the land on his (Mahmūd's) brother Naṣr. Afterwards, during the Saljuq epoch, a descendant of Khālaf, named Tāhir, obtained the rulership of Sistān from the Saljuq government. It is this Tāhir, whom the *Tabaqāt-i Nāṣiri* seem to reckon as the first Kayānī *malik* of Sistān. For this text says: "These Malika claimed descent from the race of Kai Kā'ūs".

It is, however, doubtful, whether they are from the same stock as the Kayānī-family which ruled in Sistān during the epoch of the Saffārids, and later. The relation in which the Saffārid family stands to these medieval Sistānī-kings is also very obscure; it is very doubtful whether if the line from which Tāhir descends, really originates from al-Laith, the father of the great Ya'qūb. Tāhir died in 480 (1087). The following list of his successors, up to the time of the invasion of the hordes of Čingizkhān, is given after the *Tabaqāt-i Nāṣiri*. The chronology is very doubtful and rather improbable; for all detail reference should be made to the *Tabaqāt* themselves:

Tādī al-Dīn I Abū Ṭ-Faṭḥ 480/1087 — 559/1163.
Shams al-Dīn Muḥammad 559/1163 — ?
Tādī al-Dīn II al-Malik al-Sa'īd —
612/1215 (cf. the article *GHĀZNA*, ii. 171b).
Bahrām Shāh al-Malik al-Ghāsi 612/1215 —
618/1221.

After Bahrām's death, his sons Rukn al-Dīn and Nuṣrat al-Dīn contended for the kingdom. At last, the former was victorious, but both brothers perished in the massacres wrought by the Mongols. It appears, then, that the *Tārīkh-i Djuwain Guṣṣā* (i. 118), uses a less appropriate phraseology, when it seems to imply that the Mongol invasion did not afflict Sistān as much as other countries, but that the Mongol ravages reached only the frontiers of the land. Djuwain, which in the Middle Ages was included in Sistān, the author of the *Tārīkh-i*

Djahān Gushā explicitly states to have been taken by the Moogols (*loc. cit.*); the *Tabaṭṭaʾ-i Nāṣiri* (transl. by Raverty, p. 198) say that Sistān was ravaged by them in a barbarous manner. This is not to be wondered at, as the Sistāni ruler Bahrām Shāh was an ally of the Khwārizm Shāh.

After the departure of the Moogols from Sistān, its history becomes confused. Several persons strove for the supremacy; finally we find the land included in the estates of the Harawi ruler Shams al-Dīn Muḥammad Kurt. But there have been, also in the later Middle Ages, native Sistāni princes (on their coins, cf. *J. R. A. S.*, 1904, p. 669. There exists a genealogy of them in manuscript, the *Shahjārat al-Mulūk*).

After suffering from an invasion of the Čaġhatāi (700 = 1300/1301), Sistān once more sustained fearful damages at the hand of Timūr. It was this conqueror who ruined Zaranj and took prisoner the *malik* Kutb al-Dīn Kayāni (785/1383); he destroyed also the canal system of the country. But up to the epoch of the Šafawis Sistān had its indigenous rulers, and also a turbulent nobility; the *malik* Muʾizz al-Dīn Husain, for instance, was murdered by the aristocracy (859/1455).

The Šafawid Shāh Ismāʿil conquered Sistān in the year 914 (1508/1509), and the princes of Sistān remained vassals to the Persian empire, till the Afghān invasion of Mir Mahmūd, about 1134 (1722). The Kayāni Muḥammad, by means of an disloyal treaty with the Afghān, secured for himself the possession of Sistān and part of Khurāsān, and in consequence thereof dethroned the reigning king, his kinsman Asad Allāh Kayāni. Nādir Kuli Khān, the general of Shāh Tahmāsp, put to death Muḥammad, but permitted the succession of the former king, Asad Allāh, to the throne of Sistān. This *malik* however died very soon, and was succeeded by his son Husain. This latter revolted against Nādir, whose forces besieged him and his brothers Faṭṭḥ ʿAlī and Luṭf ʿAlī for several years in the fortress of the Kūh-i Khwādjā. After their submission, they remained vassals to Nādir. This last, still being in the service of Shāh Tahmāsp, was by that monarch formally placed in the possession of Sistān, together with Khurāsān, Mazandārān and Kirmān (1143/1730). After the death of Nādir (since 1148/1736 Shāh of Persia), Sistān came under the suzerainty of Ahmad Shāh, the Durrāni ruler of Afghānistān. This prince married the daughter of the then reigning Sistāni *malik* Sulaimān Kayāni, son and successor of Husain. Sulaimān's successor, Bahrām, vexed by the Sarbandi and Shahraki-tribes, which Nādir had imported from Persia in Sistān as colonists, called to his aid a Balōči chieftain; these doings caused Timūr Shāh, the successor of Ahmad Shāh, to depose the Kayāni, and to appoint a Shahraki chieftain as ruler in Sistān. This man being killed (about 1191/1777), Bahrām was restored to the government, but under the control of the Afghān governor of Lāsh. Troubles went on in Sistān without ceasing. The last Kayāni who had some power was Bahrām's successor Djalāl al-Dīn. This latter was expelled by the Sarbandis (1838). The authority in Sistān since then was exercised by the local chiefs, and the land became a bone of contention between Herāt and Kandahār, until the Sarbandi chief ʿAlī Khān allied himself with the Persian government, hoisted the Persian flag on the fortress of Sikkūha and sent his sons as hostages to Mashhad (1853).

ʿAlī became in fact a Persian governor in Sistān; his rule was, however, disliked by the Sistānis who revolted. ʿAlī Khān perished on the occasion of a night attack on Sikkūha, and was succeeded by his nephew Tādj Muḥammad, who ruled at first independently of Persia (1858). Soon, however, he made overtures to the Persian government, and 1862 he declared himself a Persian subject, being in fear of the progress of the amir of Afghānistān, Dost Muḥammad Khān, in the direction of Herāt. Dost Muḥammad Khān died 1863 and was succeeded by Shēr ʿAlī Khān. With the beginning of this reign coincides a disagreement between Tādj Muḥammad the Sistāni and the officers, the Persian government had sent from Tahrān; this caused the Sistāni nobles to incline towards Afghānistān. But as Shēr ʿAlī had enough to do with his own affairs, and could not lend effectual aid to the people of Sistān, Tādj Muḥammad again applied to Persia. Finally, the Shāh's army took possession of Sistān (1865); two years later, Tādj Muḥammad was deposed, and Sistān was placed under the authority of a Persian governor with the title of *Hāshmat al-Mulūk*. These complications between Persia and Afghānistān finally led to the British arbitration and the delimitation of the border by the Sistān-Commission of 1872, which was conducted by Sir Frederick J. Goldsmid. The Persian forces, in consequence of this regulation, evacuated the part of Sistān they had occupied on the right bank of the Helmand, and the borders were fixed, leaving what was called "Sistān Proper" to Persia. As the whole border was not marked off entirely, the border-work had to be completed by the MacMahon Mission (1903—1905).

Sistān in Iranian epic tradition. Sistān is the home of the greatest Iranian epic hero, Rostam, and of his family. Originally, Rostam does not belong to the cycle of Avestan heroic legend; but he is connected with it by an artificially composed genealogy, which makes his father Zāl descend, through the medium of Avestan heroes, from Djamshid (Yima). This theory, put forth by Noldeke, *Das Iranische Nationalepos*², p. 9 sqq. is more probable, than the opposite view, which identifies Rostam with the Avestan hero Kərəsāspa (cf. G. Hüsing, *Krasaspa im Schlangenteufel*, p. 2, and the authorities cited there), and would accordingly include him in the Avestan cycle. The legend of Rostam might belong to the old inhabitants of Drangiana, not to the Sakae (if, indeed, that people did not appear in the Hāmān-country before 128 n. c.); cf. Noldeke, *loc. cit.* The *Shāhnāma* (ed. Vullers-Landauer, p. 1637, 2495) represents Rostam as reigning in Zabulistān, Bust, Ghazna and Kābulistān, i. e. in Sistān in its widest sense. He refuses obedience to the Iranian king Gushtāsp, whom he regards as an upstart (*Shāhnāma*, p. 1637, 2495 etc.). But he is not, in Firdawsi's epic, represented as being an infidel, this idea only occurring in al-Dīnawari, and seemingly representing a rationalistic view of the old tradition, which only knows of a contest between Rostam and the special champion of Zoroastrian faith, Isfandiār.

Already in early times, we find names and facts of the Rostam legend localised in Sistān. The Arab conquerors found in the locality al-Karyātān the stable of the horse of Rostam (al-Balādhuri, ed. de Goeje, p. 394); in Karkūya, north of Zaranj,

in medieval times there was a fire temple, whose cupola's were said to have been built by Rustam (Pauly-Wissowa, *Realenz.* 2, s. v. CARCOL). Such data are of more value for the history of epic tradition, than those of the same kind, noted by modern travellers, as these latter suppose a tradition among the people, in most cases not differing from the actual one extant in the *Shāhnāma*; indeed, these localizations are very likely to have been borrowed from the *Shāhnāma* itself. Among these are, e. g., the fact, that the Sistanis call the Kūh-i Khwādja by another name Kūh-i Rustam, and identify its fortress with the stronghold of the robber-knight Kuk-i Kūhād, which castle, according to a spurious episode of the *Shāhnāma*, was taken by Rustam (Yate, *Khorasan and Sistan*, p. 86; Sykes, *Ten Thousand Miles in Persia*, p. 378 sq.). This would even suppose a tradition borrowed from an interpolated recension of the *Shāhnāma*. A ruined fortress Kal'a-i Sām exists between Dawlatābād and Sihkūha (Sykes, *op. cit.*, p. 380): Sām is the grandfather of Rustam, but belongs to the artificial genealogy of this latter, which the *Shāhnāma* traces. There was also a dam made by Garshāsp, and later on destroyed by the order of Shāhrukh, the son of Timūr (*Eastern Persia*, i. 286). Garshāsp (the Avestan Kərəšāspa) is also a forefather of Rustam, but, again, belonging to the artificial genealogy. Localizations of this kind, therefore, can tell us nothing of an earlier form of the legend than that which is known by literary tradition. The following case, however, seems to be an exception: the locality Hawd-i dār "is said to be the spot, where the dead body of Firāmūr, the son of Rustam, was impaled upon a stake by his enemy Bahrām (read: Bahman), the son of Isfandiār" (*Eastern Persia*, i. 256). Here is a difference with the tradition preserved in the *Shāhnāma*, for according to that text, Firāmūr was taken prisoner, hung upside down and killed with arrows (1753, 93 etc.), but later on, the king (Bahman) permitted his body to be buried (1755, 118).

Finally, regarding topographical matters in general, there may be noted, that the *Shāhnāma* seems to know the Gawd-i Zarīh: Kai Khusrāw crosses the *Ab-i Zarīh*, when pursuing Afrāsiyāh, but it appears, that Firdawsī, or rather his source, had no notion whatever of the real state of things, as Khusrāw, according to the text, has to sail on it for several months (1373, 191 etc.). For the rest, the *Shāhnāma* also knows the Helmand (under the form *Hirmand*: 1750, 36).

SITT AL-MULK or SAIVIDAT AL-MULK, "Lady of the Empire", the Princess Royal, sister of al-Hākim bi-Amrīllāh, viii. Fātimid Caliph. Historians also refer to her as Sitt al-Mulk and Sitt al-Nasr. She was a very clever woman and an exceedingly capable ruler as was seen during the short period of her regency. Slanderous tongues have attacked her honour and even imputed to her the assassination of her brother the Caliph. According to the popular account, al-Hākim was in the habit, during his journeys throughout his kingdom, of receiving from his subjects written petitions which he afterwards considered at his leisure. The Egyptians were not slow to take advantage of this in order to send him secretly scurrilous verses and slanderous accusations. Thus, on one occasion in Miṣr, he received a paper containing a shameful denunciation of his unmarried sister Sitt al-Mulk and her alleged gallantries. On reading this the Caliph became enraged, laid siege to the city, and went to the extent of threatening his sister with death unless definite proof were forthcoming that she was *virgo intacta*. In this extremity Sitt al-Mulk is said to have conspired with one of the chiefs of the Kitama Berbers, Yūsuf Saif al-Dawla b. Dawwās, whom she visited one evening alone and disguised. She pointed out their common danger; her brother's insane conduct; his impiety and tyranny. Their only hope of safety lay in getting rid of him and placing his son on the throne. She is said to have promised him that if their scheme succeeded he would be made commander-in-chief of the Army with complete control over the young Caliph. He consented. Two men were hired to do the deed. One night (27th Shawwāl, 411 = Feb. 13, 1021) when al-Hākim retired on his grey ass with a servant lad to the Djabal Muḳattam in order to worship Saturn and hold intercourse with Satan, he was set upon by these hirelings and murdered. Thereafter his mutilated remains were secretly brought to Sitt al-Mulk and buried in her palace grounds. When the hue and cry arose, she then denounced Ibn Dawwās and the two hirelings as the guilty ones, and they were promptly put to death (de Sacy, *Exposé de la Religion des Druses*, i., p. ccccxliii., note).

This, at any rate, is the popular account of the crime, but the true story seems to be the one told by Makrīzī (*al-Aḥbāt*, i. 354) that in the month of Muḥarram, 415 A. H. a man was apprehended who confessed that he alone was guilty, and as a proof produced a portion of al-Hākim's head and a fragment of the mad Caliph's head-dress. He declared that he had killed him "out of zeal for God and Religion", and when asked in what manner he did it, he drew a poignard and stabbed himself to the heart, saying, "I killed him thus". Al-Hākim's son who succeeded him, al-Zāhir, was a youth of sixteen. His amnt, Sitt al-Mulk, accordingly became regent. During her four years' regency

she brought back stability and order to the state, filled the treasury and organised the army. Her rule was severe but salutary, and she won the respect of her subjects. Unscrupulous state officials were impartially punished and she was swift to quench any outbursts of sedition in Egypt or in the provinces. By intrigue she captured 'Abd al-Rahmān, the rebellious governor of Damascus, whom al-Hākim had appointed as his successor (*Wali 'l-'Ahd*). She had him imprisoned in Cairo. Then when she became ill and knew there was no hope of recovery she ordered him to be slain. Three days later she died (415 A.H.).

SIWA, a group of oases in the north of the desert of Libya. From its situation at the intersection of the two great western roads of the Libyan desert, Siwa is the key to Egypt. To the south the line of oases Bahariya, Farāfra, Dakhla, Kharga, connects it with the ancient Thebes. To the north, a track now taken by automobiles puts it in rapid communication with the Mediterranean coast, at Marsā Matrūḥ, the *Parosithonium* of the ancients. It is the central stage in the desert route from Awdjila to Egypt via Jalo, Djaghbūb on the one side, Maghāra and Kerdāsa on the other. It is 200 miles from the sea, 260 from Awdjila, 80 from Djaghbūb, 270 from the Delta and 200 from Bahariya. Siwa marks the limit of Egypt on the west and the beginning of Barbary.

Siwa and the various oases grouped together under this name occupy the bottom of a depression running from west to east 60 feet above sea level, 35 miles in the length from Maghāra to Zaytūn, its bounds are not well defined except on the south where the Marmaric cliff marks the geological boundary. The sand invades it on the south, below it begins the Libyan Erg, the largest of the known *ergs*. The bottom of the basin is not uniformly level; *gārs* like islands rise out from among the palm groves. Two of them shelter the *ḡūr's* at present inhabited, Siwa and Aghurmi, which lie two miles apart.

Barely a quarter of the depression is cultivated. The remainder is desert or occupied by salt lakes. The two largest lie, one to the west of Siwa and the other to the east of Aghurmi. Magnesians or sulphurous water, perfectly limpid is abundantly supplied by numerous springs fed by a deep subterranean pool. The most important, *al-n-tawīl*, which seems to have been dug by the Romans still shows beautifully worked stones around it. The soil, strongly impregnated with salt, nourishes a prickly plant, *afsur*; the *alfa* grows in the sands.

The total number of inhabitants scattered among

the oases or collected in the *ḡūr* of Siwa and Aghurmi is estimated at about 4,000. This includes the people of Gars, *Umm al-ḡāḡār*, the "Mother of the Little Ones", the name of a wretched village which is regularly included in the Siwa group although it lies some 65 miles to the east. Siwa itself has over 3,000 including the many Sūdānese, who are mainly occupied in agriculture.

The town of Siwa, for the most part in ruins, is built on a long and narrow *ḡūra* lying along the line of the Marmaric. The walls of its houses, built along the cliff, make a rampart of red earth, which has a very picturesque effect, rising to a height of 200 feet at the east end and partly demolished on the northern front. The interior is a labyrinth of narrow tortuous dark streets often covered by a roof of palm tree trunks, which is used as a foundation for erections above them. Almost entirely abandoned by the present Kāṣirians who are building other more accessible dwellings at the foot of the cliff and near the gardens, the high town recalls the not very remote period when the prime consideration of building was defensibility.

Aghurmi, closely built on a rocky plateau, dominates the palms on all sides. The little village has retained its Berber name: *aghrem* or *ighrem* means a *ḡūr*, a town and the diminutive *ighrem* common among Moroccan Berbers, means a stronghold, a fortress, a country-house defended by towers at the corners, with walls pierced with loopholes. Aghurmi contains all that is left of a temple of Jupiter-Ammon, a few pieces of walls of huge stones incorporated in the miserable native houses.

The Kāṣirians of Siwa, who are settled and are gardeners, live in houses, as a rule roomy with flat roofs and made of the salt clay, rarely of stone. There are several types, from the cave made habitable to the modern country house and the oldest houses, several stories high. The ground floor is used as a stable, the first a granary and the second contains the living rooms. The feature of the architecture is the pyramidal appearance of all the buildings, broad at the base and narrower at the top.

The chief object of cultivation is the date-palm. There are over 160,000 of them. The dates are harvested in October and they are spread out in a kind of granary in the open air, called *ḡawwā*, of which each farmer has a share in proportion to the importance of his crop. The ground is tilled with the hoe. The Kāṣirians are not acquainted with the use of the spade; they use the ass which is of a fine breed and not the camel, which is rare in the country.

The date is the basis of their food supply together with bread made of barley-flower. They also eat rice, *cactus* on feast days, camel-meat, and exceptionally mutton. Tea which they call *ḡāḡā* is their favourite beverage and palm-wine of which they drink a great deal on days of festivals and cleaning of wells. Barley is subject to a kind of tabu. Every year in October they spend a week in the gardens; during the first few days, they live almost entirely on garlic but they do not eat it for the rest of the year.

Industry is of the most rudimentary nature. The men make baskets, mats, other woven articles of alfa and palm leaves with designs in colour. The negroes make a valued oil with the help of mills and crushers. A woman at Aghurmi makes

pottery and decorates it in black and red by the archaic process still in use in the Berber world as far as Tangier. The women weave, but little, a few blouses with designs in colour, coloured *dhubb*, which form the essential part of the native dress.

The other parts of the dress the *baïk*, *afaram* and the double white and red shirts come from Tripoli; the trousers and shoes from Alexandria. The women also wear trousers, a black blouse (*akhar*) trimmed with coloured embroidery and a long veil of cotton, in which they wrap themselves up completely when they go out. The most curious of their silver jewellery is a heavy collar (*aghras*) which young women wear up to their marriage day and to which there used formerly to be attached a little round ornament called "the disc of virginity". The women are not tattooed, they do not load themselves with anklets — these are worn only by little girls — nor do they hang a ring or button on the nose like the Nubians and the Beduins of the coast. They use henna less than the Maghribis but, use a great deal of *kahl* and *sukh* to brighten their lips and vermilion to colour their cheeks.

The Islam of the people of Siwa seems somewhat barbarous and sectarian. Some are attached to the Sanūsīya and others to the Medāni sect. They hold their local saints in great esteem; they celebrate them every year in the course of ceremonies called *mūled*, the most important of which is that of Sidi Slimān the patron saint of the town. This individual is said to have lived at Siwa in the xvth century but was originally a member of the tribe of the Banū Salīm of the Hijāz. The importance of the ceremony is shown by the belief that the worst calamities would fall upon the country if it were not celebrated every year with great splendour. It is of an undoubtedly agrarian and even in origin at least of a licentious character. It is celebrated at the end of the harvest, lasts three days and takes place partly beside the tomb of Sidi Slimān. The fellāhs eat on the treshing floors of the gardens a sheep, whose throat has been cut the night before in the *fiar* and intoxicate themselves on palm-wine. They go there in groups to the sound of flutes escorting a young boy dressed as a girl. They return in the evening by torchlight after submitting to ritual aspersions at the spring of Tmūssi.

The two canonical feasts are celebrated at Siwa as throughout the whole of Islām. The rich alone kill on their roof the sheep of 'Id Kabīr, the skin of which they eat chopped into minute pieces. Following a custom observed everywhere in Barbary they retain — contrary to orthodox rites — a part of the victim which they eat at 'Ashūra'. The last festival, the most popular of the year perpetuates the ancient festival of the summer solstice. On this day the houses are covered with long palms. The children go about singing all the night with lighted torches and little erections (*beḥaya*) ornamented with rags soaked in oil.

The different events in family life, birth, circumcision, marriage, and funeral, are accompanied by rites which are magical in their origin. The third and seventh days after the birth of a child are marked by important ceremonies. The seventh in particular is the day of purification and for giving a name. The hair is cut for the first time immediately if the child is the first born.

The girls are married, before they reach the age of puberty, at 8 or 9 years of age. The amount of the dowry in no case exceeds 120 Egyptian piastres but the fiancé is bound to give to his future wife, jewels and clothes, the number and value of which are the subject of bargaining during the preliminaries of marriage. On the marriage day at sunset the bride is led in great pomp to the Tmūssi spring, into which formerly she threw the disk of virginity which hung on her heavy silver collar. She is then taken back to her home where a professional hairdresser attends to her nuptial toilet. Next morning at dawn the women friends and relatives of the bride come for her and pretend to fight with the members of her family after which she is taken to her new home carried on the shoulder of a negress. Polygamy is nominally unknown but the men divorce their wives with such ease and so frequently in the course of their lives that there is not a clearly marked line between marriage and prostitution.

It is the custom for all the men to have to attend the funeral of every dead man. While they are at the cemetery, the women take the widow to the spring of the Tmūssi where they wash her and clothe her in mourning dress. They then shut her up in her house. She is then regarded a *ghāla* or ogress. No one except her nearest relatives can go near her during the legal period of her retirement. On the evening of the last day, the public crier announces the *ghāla* intends to go out. He also indicates the route she will take to go to the spring which is the goal of her first visit. For fear of meeting her, the men go to the gardens and do not come back till the evening. Cleansed by her bath of all the evils that attached to her, she resumes her place in society and may re-marry at once, if the opportunity occurs.

The Kāfirians have beliefs about treasures hidden in the caves and in towns buried in the lakes or sand of the desert. They people the subterranean world with *djinn*, with *afrits*, who sometimes assume the forms of men or animals or disappear in whirlwinds of dust. They attribute to the evil eye all the ills that befall them, their cattle and their crops. They preserve themselves from it by covering themselves with amulets and hanging asses' bones or pots blackened in the fire to the walls of their houses and to the trunks of their palm-trees. They say that the ostrich understands human speech. They also think that when a dog howls at the moon or the owl hoots it means that a death is imminent.

Language: Like their brethren the Tuŕeg, Kabyls or Berāber, the popular literature consisting of stories, legends and songs written in Berber is so far only known from very few specimens. Arabic is in practice the language spoken and understood in the oasis along with Berber which is still the native tongue. Berber is spoken not only at Siwa, Aghurmi and Gāra but also at Maḥshyat al-'Aḡūza, in the oasis of Bahariya, which marks the extreme eastern limit of Berber territory.

The words and the few phrases recorded by travellers who have visited Siwa in the last century are not sufficient to enable us to characterise the dialect of Siwa.

The Orientalists, Hanoteau, Stumme and notably R. Basset who have studied them have been able to connect a certain number with Berber roots

still in use, Horneman was the first European to identify them with the language of the Tuāreg and of the people of Twāi, i.e. Berber. But the Arab writers, al-Maḥḥrī first of all, had already remarked the Berber origin of the people of Sentiya and even connected their dialect with the Zenete group.

The arabisation of the dialect, unknown to an equal degree in any other Berber dialect, constitutes the most marked characteristic of the dialect. The vocabulary is very much affected. It would be difficult to quote several hundred Berber words from it. Even the morphology seems in some cases to have been affected. The phonetics on the other hand, have remained Berber in their essential features and offer points of resemblance to the dialects of Tripolitania and Southern Tunisia.

Certain grammatical forms and syntactical peculiarities regarded as common to most dialects can no longer be found in Siwa. There is no longer any trace of the participial form or of the passive in *t*, nor of the particles *d* and *n*. The feminine forms of the imperative and aorist, except that of the third person singular, have also disappeared. Negation does not effect any vocalic modification in certain verbal roots conjugated in the preterite and does not attract the pronouns direct and indirect. The latter remain in all cases a definite place following the verb. The initial vowel of the noun undergoes no modification whether the noun be governed by a preposition or be the subject of a verb and placed after it.

The study of the dialect of Siwa on account of its so marked arabisation is of obvious interest; but it is clear that it can only be made by a comparison with the dialects which offered a stronger resistance to the Arabic invasion. One can foresee its disappearance at no remote period. The establishment of a school where the teaching is given in Arabic by Egyptian masters on modern methods can only precipitate its extinction.

History: Siwa is the historical centre of the Eastern Sahara. The Egyptians called it *Sefer-imis*, "the camp of the palm-trees", the Greek and Romans, *Ammonium*, the early Arab writers *Sentiya*. The present name seems to correspond to the *Sua* of al-Ya'qūbī and the *Tirwa* of Ibn Khaldūn, both derived from the name of the Berber tribe of Banu 'l-Waswa, who according to al-Maḥḥrī were Luwāta of the province of Maṣīf.

The ancient Siwa owed its extraordinary prosperity to a ram-headed deity Ammon, whom the Egyptians identified with their great Theban deity Ammon-Ra, when at a comparatively late date in the middle of the sixth century B.C. they effectively occupied the Libyan oases. By this time the fame of the Libyan Ammon was solidly established. For nearly a thousand years, people of note came from all parts of the ancient world to consult him. He was an oracular deity who unveiled the future. In 331 B.C. Alexander the Great landed at Paroethonium with an army, which was saved from thirst by a shower that fell unexpectedly in the desert, thus learned with satisfaction that he was really the son of Zeus. The colonists of Cyrene and the Greeks of Athens held him in great veneration. They assimilated him to Zeus just as they had assimilated the king of gods, the Theban Ammon, to their great divinity. The Phoenician and Carthaginian colonies also gave him a place in their Pantheon, very soon identi-

fying him with their own Ba'al Hammon as a result of a quite fortuitous resemblance of name, according to M. Gaell. It is to the oracular god of the Great Oasis that the Romans refer, when they speak of Jupiter Ammon.

As to the original nature of the Libyan Ammon we are reduced to conjectures. Oric Bates thinks that the primitive oracle was an oracle of the dead. It is however almost certain that the ram was in ancient times a deity protecting the Libyan herds, whose character may have developed in course of time. He had solar attributes at the period when he first appears in history. The cult with which he was honoured and the manner in which he uttered the oracles were at this time essentially Egyptian.

Relics of these days still exist; besides the ruins of Aghurmi, there are the remains of another little temple situated a few hundred yards from the modern village and called by the natives *Omm al-bida*; they consist of a piece of wall standing in the midst of an area covered with large stones, completely covered with cartouches, hieroglyphs and figures of the gods of Egypt. As far as one can judge the monument belongs to the Ptolemaic-Roman period. Farther south the hills of Takrūr are riddled with tombs regularly cut out of the chalk; some still have the fine framework of stone of the same period which marked the entrance. The adjoining girs and the flanks of the Marmaric also contain such tombs by hundreds. Siwa was a vast necropolis. One of its girs even has a half-Arabic half-Berber name of *ḡīr al-mutā*, "the hill of the dead", and thousands of bones still litter the soil there.

The Romans occupied the Great Oasis. Under Augustus they made it a place of banishment for political prisoners. About the fourth century, Christianity reached the oasis. A little later, no doubt, its inhabitants joined with the Mazikes of the coast (Imāighen) in attacking the Byzantine world which was everywhere threatened. When about 640, Egypt was invaded by the Muslim armies, the people of Siwa seem to have been free and independent.

It is not known how the Muslims conquered the Libyan oases. The Arab historians and geographers on this subject only record stories or legends of no great interest. Siwa was too remote from the main route of invasion which led the conquering armies and migrating tribes to Maghrib al-Aḡḡā. We may suppose that small hordes of Arabs came and settled in the oasis and then became mixed with the population, which has remained Berber to our day.

In the beginning of the xviiith century civil war broke out between the Qharbiyūn or "people of the west" and the Sharḡiyyūn or "people of the east". These feuds which are barely settled to-day led in 1820 to the occupation of the country by the Turks.

European travellers began to visit Siwa at the end of the xviiith century and especially at the beginning of the xixth. The first was Brown in 1792; Horneman followed six years later, Cailliand in 1829, Bricchetti-Robecchi, Baron de Minutoli, in 1820-1821, then Scholz, Bayle St. John, Pascho, Hamilton in 1852 etc. All or almost all complain of the hostile attitude of the people towards them.

About 1838 Muḥammad al-Sanūsī made a stay

of several months at Siwa. He preached his doctrine there and made several converts. The cave which he used as an oratory is still shown at Qsar al-Hajina.

In the course of the Great War, Siwa and the line of oases regained their strategic importance. The chief of the Sanūsīs, Saiyid Ahmad, went to war with the Anglo-Egyptian forces. In 1915 he occupied Sellūm which the English had evacuated, but defeated before Matruh he took refuge in Siwa, from which he organised a new line of attack on Egypt, at Dakhla and Kharga. He returned to Siwa in the early days of 1917. His last forces were surprised at Girba by English troops brought up in motor cars. He was then forced to take to flight. He reached the coast with difficulty whence a submarine took him to Constantinople. His cousin Sidi Muhammad Idrīs, grandson of the great Sanūsī succeeded him and with his accession peace reigned once more in the Libyan Desert.

SIWAS, Turkish wilāyet, was, up to the new administrative partition of Turkey, the largest wilāyet of Anatolia (Sami Bey Fräsheri, *Kamūs al-A'lam*, iv. 2794). Situated between 38° 30' and 41° N., 35° 30' and 39° E., it corresponds to part of ancient Cappadocia; on the N. its boundaries are the wilāyets of Kastamūnī and Trebizond, on the E. those of Erzerūm and Ma'mūret al-'Aziz, on the S. those of Aleppo and Adana, on the W. those of Angora and Kastamūnī.

Its entire surface covered about 30,600 square miles, its population, at the end of the sixth century, 11,086,015, divided as follows: 839,514 Muslims, 279,834 of whom were Shi'a, especially Kizil-bash; 129,523 Gregorian Armenians; 30,433 Protestant Armenians; 10,477 Catholics; 76,068 Orthodox Greeks.

The wilāyet was divided in 4 sandjaks: Siwās, Tokad (q. v.), Amāsiya (q. v.), Kara Hisar Sharḳī, subdivided into *hasar* and *nāhiyas*; its capital was the town of Siwās (Sebaste).

The territory of the old Siwās wilāyet is crossed by chains of mountains; that of the Anti-Taurus penetrates it from the S. in a N.E. direction with one of its branches; another chain embraces the wilāyet to the N. in an E.-NW. direction, towards Trebizond. Amongst the highest peaks are the Kara Bel, which reaches 10,910 feet, the Yildiz Dag 8,300 feet.

The region is rich in rivers; among the most important is the Kizil Irmaḳ (q. v.; Iris of the ancients), which has its source in the Kizil Dag in the Siwās sandjak, and flows into the Black Sea N. of Bafra; its chief tributary, the Yildiz Irmaḳ, originates from the Yildiz Dag mountain. The Yeshil Irmaḳ (Halys of the ancients) has its source near Erzinjan, passes through Keldik, after which it assumes the name of Keldik Irmaḳ, flows through the Siwās and Trebizond wilāyets, and into the Black Sea E. of Samsun; it receives the Çekerek Irmaḳ, swollen by the waters of the Tozanli Su.

This wilāyet, poor as to communications, is however fertile; its chief crops being wheat and barley. Tokad has a flourishing carpet industry, and copper from the Arghana mines is worked. The climate is exceedingly warm in summer, especially in Amāsiya, and cold in winter in the northern mountain region.

The present Siwās wilāyet corresponds to the old sandjak of the same name, comprising the following nine *ḫazas*: Haḫk (Koç Hisar, q. v.), Zāra, Diwrighi, Çherun, Darende, Kankal, Şehir Kishla (Temim), Yeñi Khān (Yildiz Eli), 'Arziye. It is rich in mines: copper at Haḫk, antimony, copper and argentiferous lead at Zāra; 16 salt mines, with an annual output of 410,300 Turkish pounds.

The new reduced wilāyet has now (1925) 377,570 inhabitants on 13,000 square miles; 60,043 inhabit the capital, Siwās. There are 100 public schools with 6,790 regular pupils (*Türk Dümhürüyeti Salnāmesi*, 1925—1926, Constantinople 1926, p. 654).

The region was islāmized under the Seljūks, when Siwās reached its greatest splendour, its population increasing to 200,000. It passed subsequently in the hands of Turkoman dynasts, and for a certain time under the domination of Kādī Burhān al-Dīn, from whom it was taken by Yildirim Bayazid I (the year is not certain; from 794 to 799 according to different historians, from 'Ashik Pasha Zāde, Constantinople edition and *Tawāriḫ-i Aḫī 'Oḡmān*, ed. Giese, p. 47, to Khōdja Sa'd al-Dīn, i. 133 sqq.; Münāddijim Bashī, iii. 308; Hammer, *G. O. R.* 2, i. 189 says 1392, Yorga, i. 308, about 1398).

Taken and sacked by Tamerlane (Ertoğrul son of Bayazid fell in the defence of Siwās in 1401), it was recaptured by the Ottomans, but never regained its former splendour, albeit Ewliya Çelebi, who travelled through the region in 1060 (beg. January 4, 1650) celebrates the country's prosperity. The Siwās *ayāla* was then governed by a pasha, who lived in the fortress of the city of Siwās, and comprised 48 *zi'amas* and 928 timars; it was divided into 7 sandjaks: Amāsiya, Çorum, Bor Oḡ, Diwrighi, Djanik, Arabghir, Siwās.

The region was often laid waste in the warfare against rebel chieftains, and again at the end of the sixteenth century, during the campaigns against Çapan Oghli.

A new epoch of progress will dawn with the construction of the Angora-Siwas and Samsun-Siwas railways, already progressing thanks to the Kemal Republic's government.

Bibliography: besides the sources quoted above, see: Cuinet, *La Turquie d'Asie*, i. 613—779; 'Ali Djewad, Constantinople 1314, ii. 464—473; Ewliya Çelebi, *Siyahname*, iii. 195 sqq.; M. van Berchem and Khalil Edhem in *M. J. F. A. O.*, vol. xxxix. (E. Rossi).

SIWRI HIŞAR, also written **SIRKI HIŞAR**, i.e. strong castle (cf. Ahmed Wefik, *Lehisi Otumant*, p. 459), the name of two places in Asia Minor.

1. A little town lying in the centre of the plateau bounded on south and east by the upper course of the Sakariya and in the north by the Pursak, c. 85 miles southwest of Angora. Siwri Hişar is on the northern slope of the Güneş Dağı; the citadel of the town was built on this mountain. The town does not date beyond the Seldjuk period and has no remains of archaeological interest. But it was already known as a strong place to Kazwini (*Geography*, ed. Wüstenfeld, p. 359) and to Hamd Allah Mustawfi (ed. Le Strange, p. 99). In the xvth century it formed part of the possessions of the Karamito-oghlu, who occupied it again after Timur's conquest. The latter had his headquarters there for a time. But under Muhammad I, Siwri Hişar was annexed to the Ottoman dominions (cf. e.g. 'Ashik Pasha Zade, *Tamarkih-i Âl-i 'Otumant*, ed. Giese and 'Ali, *Kunh al-Akbar*, v. 177). In the xvith century the town belonged to the sandjak of Khudawendigar (Haidjdi Khalifa, *Dihân-namâ*, p. 656) but in the new system of administrative division, it became the capital of a *kaşa* in the sandjak of Angora. Towards the end of the xixth century it had about 11,000 inhabitants of whom 4,000 were Armenians (Sâmi). There is a mosque there attributed to the Seldjuk vizier Amin al-Din Misk'îl, with a library of 1,500 volumes. The principal industries are goldsmith's work and weaving.

Siwri Hişar does not lie on any of the main routes of Anatolia — but since the construction of the railway to Angora which runs along the Pursak, the north part of the *kaşa* has received a new economic stimulus — but near it there are relics of important centres of classical and Byzantine times. These are the ruins of Pessinus, near the village of Balla Hişar, four hours S.E. of Siwri Hişar (Texier, *Description de l'Asie Mineure*, ii., pl. lxiii.); and towards the south, on the other bank of the Sakariya, near Haidjdi Hamza, the remains of the Byzantine town of Amorium, known to Orientals as 'Ammuriya (cf. AMORIUM).

Bibliography: Le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p. 153; Ritter, *Erdkunde*, Berlin 1858, vol. ix., part i., p. 525, 577; V. Cuinet, *La Turquie d'Asie*, Paris 1892, I, p. 287; Sâmi, *Kâmûs al-A'lân*, iv. 2582.

2. A little town on the shore of the Gulf of Kish Adas (Scalanova), South of Vurla. It is now the capital of a *kaşa* in the sandjak of Lemn. Under Bayazid II, it was the refuge of the pirate Kara Tumluk (von Hammer, *G. O. R.*, ii. 346). Ewliya Çelebi passed through it in 1670 (according to Taeschner, *Das anatolische Wegenetz*, ii. 39). Sâmi (*Kâmûs al-A'lân*, iv. 2582) gives the population as 3,640.

(J. H. KRAMERS)

SIYALKÛT, officially spelt **Sülköt**, is a town in the Paundjab situated in 32° 30' N. and 74° 32' E., the foundation of which is attributed by legend to Râdjâ Sîla, the uncle of the Pandawas, and its restoration to Râdjâ Saliwahan, in the time of Wikramaditya. Saliwahan had two sons, Pûran, killed by the instrumentality of a wicked step-mother, and thrown into a well, still the resort of pilgrims, near the town, and Raadlu, the mythical hero of Paundjab folk-tales, who is said to have reigned at Siyalkût. In A. D. 790 the fort and city were destroyed by Râdjâ Naraw with the help of the Ghandaurs of the Yûsafai country, and the fort was not restored until it was rebuilt by Mu'izz al-Din Muhammad b. Sam to overawe the turbulent Khokars, who preferred the feeble rule of the later Ghaznawids to the more energetic domination of their conquerors. Under Akbar Siyalkût became the headquarters of a *sarkâr*, or fiscal district, and in the middle of the seventeenth century it fell into the hands of the Râjdput princes of Djamnû. The mound in the centre of the town, crowned with the ruins of a fort, is popularly supposed to mark the site of Saliwahan's stronghold, but it is in fact all that is left of the fort of Muhammad b. Sam. Siyalkût also contains the shrine of Bâbâ Nûrak, the first Sikh guru, where an annual fair is held. In 1849 the district passed, with the rest of the Paundjab, into the hands of the British, and the old fort, now dismantled, was gallantly defended by a handful of Europeans in the Munity of 1857.

(T. W. HAHO)

SKANDERBEG is the name by which the national hero of Albania is generally known in Europe. It is based on an Italianised or Latinised form of the name Iskandar Beg, which was given him in his youth when he was serving at the Ottoman court; the name contains an allusion to that of Alexander the Great. His real name was George Kastriot, of the family of the Kastriotas of Serbian origin, who had once ruled Epirus and Southern Albania. Born about 1404, he and his three elder brothers were given as hostages to Sultan Murad II, so that he was brought up in the Muslim religion as *il oghlan*. His ability won him the office of *sandjak beg* at quite an early age. He played no part in the campaigns of 1435 and 1436 when the Ottoman generals 'Ali and Turakhan effected a partial submission of the Albanians. From this time Skanderbeg lived at Dibra in Central Albania and showed himself a more or less faithful vassal of the Turks, although he was already negotiating with the Venetians and Hungarians. His first rebellion against Turkish rule took place in 1443 after the defeat suffered by the Turks at the hands of the Hungarians at Nish; he captured Kroya (Turkish Akça Hişar) by a ruse; it is in the mountains not far from the coast between Durazzo and Alessio. It was here that the Albanian chiefs of clans came to join him and he made it the centre of his power. He had by now returned to

Christianity and this marked a very definite change of attitude to the Turks. A Turkish army under Isâ Beg failed to take the town. Skanderbeg also attacked the Venetian possessions on the coast but in 1448 a peace was concluded between him, the Sultân and Venice but it did not last long. Murâd II commanded in person the expeditions against Albania in 1449 and 1450. The Turks took Dibra and Setigrad among other places. Skanderbeg was able to hold out, however, thanks to the mountainous nature of the country and in spite of the temporary desertion of his nephew Hamza who had joined the Turks during this period. He made an alliance with the king of Naples whose suzerainty he recognised. He was also supported by the Pope and by the Hungarians so that when hostilities again broke out in 1455, he was usually able to resist the Turkish generals. In 1460 however, Muhammad II forced Skanderbeg to conclude a truce by which he agreed to pay a tribute. The Albanian chief then went to Italy where he fought for the King of Naples. Soon afterwards he returned to his native land where, supported by Venice and other Christian powers, he resumed a guerilla warfare against the Turks. At last in 1466 Muhammad II began his second Albanian campaign. He succeeded in subduing the country and built in its centre the fortified town of Ilbasan (*il bəsan*, i.e. "dominating the country"). Next year Skanderbeg died at Alessio (Jan. 18, 1467).

The history of Skanderbeg has been much studied in Europe since the very circumstantial but not always reliable biography written by Barlesio of Scodra in the second half of the xvth century. Other sources are the Byzantine historians Chalcocondylas, Phrantzes and Critoboulos, and Venetian documents (publ. by Ijubić in *Monumenta spectantia historiam Slavorum Meridionalium* at Zagreb). The Turkish sources on the other hand, the chroniclers of the early period (e.g. 'Ashîk Paşha Zâde, p. 124, 133, 169 and the *Tawârîkh al-i 'Othmân*, ed. Giese, p. 66, 70, 73, 113) and the later historians (e.g. Münâzidjîm Bâşî, iii. 352, 361, 383) are not at all explicit and, as to dates, they do not agree with the western sources. The Turkish histories only mention the first revolt of the Khâ'in Iskandar in 846 (1442/1443), the campaign of Sultân Murâd in 851 (1447/1448) and the last campaign of Muhammad II in 871 (1466/1467).

Within ten years of the death of Skanderbeg, all Albania was subjected to Muhammad II. Nevertheless the memory of the greatest national hero of the Albanians has remained alive among Turks as well as Albanians. It is after him that the Turks called Scodra Iskenderiya. Towards the end of the xixth century the Albanian Muslim Na'im Beg Frâshert (brother of Sâmi Beg, q. v.) devoted a great Albanian epic to him entitled *Skander Beg*, publ. at Bucharest in 1898.

SKUTARË. [See *ÛSKUDÂN*.]

SLAVS. The Arabic word for "Slav", *Ṣaḥlāb*, more rarely *Ṣaḥlūb* (also *Saḥlūb*) or *Ṣiḥlūb*, pl. *Ṣaḥlābiya* is probably taken from the Greek (*Σαλαβία*, *Σαλαβία*). Slav mercenaries had been settled in the eastern frontier provinces of the Byzantine empire in the seventh century A.D., so that the Arabs must have made the acquaintance of the Slavs in their very earliest battles with the Byzantines. During his campaign against Constantinople (715—717) Maslama is said to have taken a "town of the Slavs" (*madīnat al-Ṣaḥlābiya*) immediately after crossing the Byzantine border (*Fragm. hist. Arab.*, ed. de Goeje, i. 25, 4). The Arabs found other Slavs settled in the kingdom of the Khazars (between the Caucasus and the lower course of the Volga). During the reign of the Caliph Hishām (724—743) Marwān b. Muḥammad (afterwards the Caliph Marwān II) is said to have transported 20,000 Slavs from the land of the Khazars and settled them in Kakhketia (*Khakhū*); there "they killed their emir and fled, whereupon he (Marwān) pursued and slew them" (*Balādhuri*, p. 208 at the top); but these Slavs are still mentioned under the Caliph Manṣūr (754—775) among the colonists settled on the Byzantine frontier in Cilicia (*ibid.*, p. 166). The red (or reddish) hair and complexion of the Slavs is always emphasised, for example as early as the first century A.D. in the *Divân* of Akhtai [q. v.], ed. Ṣāḥūnt, Bairūt 1891, p. 18, 3. In spite of this physical characteristic, the Slavs were classed with the Turks as descendants of Japhet (Arab: *Yafath*). Each of the three sons of Noah is said to have had three sons in their turn; Wāḥ b. Munabbih (in *Ṭabari*, i. 211, 13) gives as the sons of Japhet, Turk, Gog and Magog, while soon afterwards, Sa'īd b. Musayyib (d. 95 = 713/714) gives the descendants of Japhet as the Turks and Slavs and Gog and Magog united into one people (al-Bakri in Kunik and Rosen, i. 18), as do Ibn Ishāq (*Ṭabari*, i. 211 sq.) and Gardīzi (in Barthold, *Ort.*, etc., p. 80) on the authority of Ibn al-Muqaffa' [q. v.]. Sa'īd b. Musayyib adds that all three sons of Shem (the ancestors of the Arabs, Persians and Greeks) were well brought up while those of Japhet and of Ham were good for nothing. The anonymous author of the *Mufaḥḥis al-Tawârîkh*, who wrote under Turkish rule in the viith (xiiith) century (text in Barthold, *Turkestan*, etc., i. 19) makes an exception for Turk and Khazar among the sons of Japhet. They were intelligent but there was nothing good about their brothers. According to a story told by Ibn al-Muqaffa', Japhet's son Ṣaḥlāb was brought up on bitch's milk; this is connected with a Persian etymology *ark*, dog, *leh*, lip (Gardīzi in Barthold, *Ort.*, p. 85). In the same source (*ibid.*, p. 86) the Kirgiz are described as descendants of the Slavs on account of their "red hair and white skin". The ruler of the Bulghār on the Volga is called "King of the Slavs" by Ibn Fadlān [q. v.] not

only in Yāqūt (*Muʿdjam*, i. 723, si), but, as is now certain, also in the original *Riḥla* (*Bulletin de l'Acad.*, etc., 1924, p. 244); the story of the raids of the Khazars on Bulgars and Slavs in Ibn Hawqal (*B.G.A.*, ii. 281, 23) is to be similarly explained. It is also probable that these Slavs were subjects of the king of the Bulgars. It is perhaps to the same ruler that Yaʿqūbī's (ed. Houtama, p. 398) story of the "lord" (*ṣāḥib*) of the Slavs refers, for whose assistance a Caucasian people appealed against the Arabs about 240 (854/855) at the same time asking for the help of the "ruler of the Greeks" and the "ruler of the Khazars" (another explanation in J. Marquart, *Osteuropäische und ostasiatische Streifzüge*, Leipzig 1903, p. 200). On the other hand Tabari's story (iii. 2152) under 283 (896) of the campaign of the "King of the Slavs" against Constantinople refers to the war between the Czar of the Danube Bulgars Simeon (890—927) and the Emperor Leo VI in 893. The name "Slavs" for the people of the modern Southern Russia has been gradually ousted by that of "Russians". The Don, the course of which was thought to be an arm of the Volga was first called "River of the Slavs" (*Nahr al-Saqlabiya*, *B.G.A.*, v. 271, 3; vi. 154, 12) and later "River of the Russians" (*Nahr al-Rūs*) (*ibid.*, ii., p. 276, 16) and also by the anonymous author of the Persian *Hudūd al-ʿAlam*, cf. *Zap.*, x. 137).

The connection between the Slavs and the peoples of the west seems to have been first noticed by Ibn al-Kalbi (Hiḥām b. Muḥammad, cf. ii., p. 689). According to Yāqūt (*Muʿdjam*, iii. 405, s) he describes the Slavs as brothers of the Armenians, Greeks and Franks and descendants of Yūnān b. Yāfath, giving his father as his authority. More accurate information regarding the Slavs as neighbours of the Greeks seems to have been contained in the works of Muslim b. Abi Muslim al-Djarrī who was released in 845 after being eight years a prisoner among the Byzantines; on the authority of Muslim, Ibn Khordādhbeh (*B.G.A.*, vi. 105, 15) mentions a "land of the Slavs" (*Bilād al-Saqlabiya*) west of Macedonia. In Masʿūdī (*Murūj*, iii. 66) the Franks, Slavs, Longobards, Spaniards, Gog, Magog, Turks, Khazars, Burdjān (q.v.), Alans and the (Spanish) Djalālika (Galicians) appear as descendants of Yāfath. In another passage (iv. 38 sq.) the lands of these peoples are dealt with in geographical succession from east to west; the land (*amāl*) of the Slavs is placed between that of the Burdjān and the land of the Greeks. A reddish colour (*shubra*) is mentioned as the characteristic feature of the Slavs and Greeks (iii. 133). The Bulgars and Slavs for the most part adopted Christianity and submitted to the lord (*ṣāḥib*) of Rome, the capital of the Franks (*B.G.A.*, viii. 181 sq.). The banks of the Danube are mentioned as the abode of a large section of these peoples (*ibid.*, p. 183 infra: cf. the still more obscure passages in the *Hudūd al-ʿAlam*; in the manuscript we have *Dunā* not *Rūs* as in *Zap.*, x. 133 sq.). The Greeks, Romans, Slavs, Franks and their neighbours on the north spoke a common language and formed a joint empire (*B.G.A.*, viii. 83, 9). The fullest notices of the Slavs in Europe are found in the travels of the Spanish Jew Ibrāhīm b. Yaʿqūb in 965, transcribed by al-Bakrī (cf. i., p. 606 sq.); in it Slavs are mentioned on the Adriatic Sea, as well as in the frontierland of the Slavs, in the northeast, the

land of the Polish prince Mieszko (*Mashk*) about 900—992, the neighbour of the Russians and Prussians. On the other hand, Idriši only mentions a land of the Slavs (*Bilād al-Saqlabiya*) on the Balkan Peninsula in connection with Venice (*Géographie d'Idriši*, transl. A. Jaubert, Paris 1836—1840, ii. 286); in the description of the Slav lands from Bohemia to Poland (*op. cit.*, ii., p. 375 sq.) no reference is made to the common Slav origin of the population of these lands. From that date the words *Saqlab* and *Saqlabiya* gradually disappear from Muslim literature and are used only in quotations from older works. The word "Slavs" for example never occurs in Djuwainī's (*G.M.S.*, xvi. 224 sq.) and Rashid al-Dīn's (*ibid.*, xviii. 43 sq.) accounts of the European campaigns of the Mongols. The modern Turkish *Sllav* is borrowed from modern European scientific usage, probably from the French.

Like the Turks, the Slavs were sometimes introduced into Muslim lands as slaves, especially as white eunuchs (cf. *B.G.A.*, iii. 242, 3; v. 84, 1; vi. 92, 3). Special regiments were formed of Slav troops, as of Turks, and their leaders were sometimes able under favourable circumstances to rise to found dynasties. On Slavs in the service of the Fātimids in Egypt cf. e.g. K. Inostrancev in *Zap.*, xvii. 29 and 86; on Slavs in Spain, e.g. Dozy, *Recherches*, etc., Paris-Leiden 1881, i. 227 sq. (Prince Khairān of Almería, cf. i., p. 313 sq.) and 235 sq. (the Slavs as allies of the Arabs against the Berbers).

AL-SĀWĪ (or AL-SĀLĀWĪ), SHUHAB AL-DIN ABU L-'ABBĀS AHMAD B. KHĀLID B. HAMMĀD AL-NĀSIRĪ, a Moroccan historian born at Salé (Slā) on 22nd Dhū l-Hijja 1250 (April 20, 1835), died in the same town on 16th Djumādā I, 1315 (October 13, 1897). The genealogy of this writer can be traced in a direct line to the founder of the Moroccan brotherhood of the Nāṣiriyya, Ahmad b. Nāṣir, who was buried in his *maṣbi'a* at Tāmgrūt in the valley of the Wādī Dar'a (Drā). He studied in his native town, which had in those days some reputation as a centre of learning, and was a minor rival of Fās, the intellectual capital of the country. His principal teachers were Muḥammad b. 'Abd al-'Aziz Maḥbūba and the ḥafīd Abū Bakr b. Muḥammad 'Awwād; without neglecting theological and legal studies, he acquired a profound knowledge of profane Arab literature. At the age of about 40, Ahmad al-Nāṣirī al-Sāwī entered the legal branch of the Sharīf government's service as a notary or superintendent of the State domains. He held more or less important posts from time to time in this service. He was

stationed at first at al-Dār al-baiḥḥa' (Casablanca) from 1292—1293 (1875—1876) and made two stays at Marrākush, where he was employed in the financial administration of the imperial household. He then lived some time at al-Djadida (Mazagan) where he was attached to the customs service. He next spent some time in Tangier and Fās and towards the end of his life returned to his native town where he devoted himself to teaching. On his death he was buried in the cemetery at Salé outside of the Bab Ma'allika Gate. Al-Nāṣiri al-Slāwī was a minor civil servant who was also a man of letters and a historian. In addition to his historical work, which gained him a certain reputation even outside of Morocco, he left other works which would alone have sufficed to attract attention to him and secure him an honourable position among modern Maghribi men of letters. These are, in addition to the six little books detailed in my *Historiens des Chérifs* (p. 353, note 1): 1. A commentary on the *Shamaḥ-maḥiya*, a poem by Ibn al-Wannān which he called *Zahr al-Afnān min Ḥadīṣat Ibn al-Wannān* (lith. at Fās in 1314 A.H., vols. 2); 2. A survey of the heresies and schisms in Islām entitled *Taḥṣīl al-Minna bi-Nuṣrat al-Sunna* (Rabat MSS., N° 66; cf. my *Catalogue*, i., p. 23); 3. A monograph on the family of the Nāṣiriya to which he himself belonged: *Tafat al-nuḥṭari* & *'l-Nasab al-dīfari* (lith. at Fās, 2 vols., a French synopsis has been given by M. Bodin, *La Zouia de Tamgrout*, in *Archives Berbères*, 1918). This work, which the author finished in 1309 (1881), is a good history of the Zāwiya of Tamgrūt, with much interesting information, which compensates for all the discussions in which the historian tries to prove the authenticity of his family genealogy with the help of somewhat unconvincing arguments.

Aḥmad al-Nāṣiri al-Slāwī's great work is the *Kitāb al-Istiqṣā li-Aḥbār Duwal al-Maghrib al-aḥḡā*. Its publication was an event unparalleled in Maghribi historiography. The author produced not a limited chronicle but a general history of his country. Welcomed by European orientalists on its publication, it was not long in attracting the attention of the historians of North Africa, for whose work it became a much consulted document, especially as a French translation in the *Archives Marocaines* soon made the last quarter — the history of the 'Alawid dynasty — accessible even to non-Arabs.

It was soon recognised that this chronicle was like all the other products of western Arab historiography: it was only a compilation, the most appreciable merit of which was to have collected in a continuous narrative, items of political history scattered about the chronicles or biographical collections written in the country. But it must be confessed that al-Slāwī was the first of his compatriots to attempt to exhaust a subject of which his predecessors had only dealt with parts. But this was not his primary object: I have shown elsewhere (*op. cit.*, p. 357—360) that the starting point in the compilation of the *Kitāb al-Istiqṣā* was a work of some length on the Marinid dynasty of Morocco, based mainly on the historical works of Ibn Abi Zar' and Ibn Khaldūn, to which he had given the title of *Kaṣf al-Aṣnā fi Luyūṭ al-Baṣṣa*. His residences in the different capitals of Morocco, having enabled him to get access to

sources for other dynasties also, he had the idea of composing a complete history of Morocco. He finished his work on 15th Djumādī II, 1298 (May, 15, 1881) before the end of the reign of the 'Alawid Sultan Mawlay al-Ḥasan to whom he dedicated it. But he was poorly recompensed for this act. On the death of this ruler, the author decided to have his chronicle printed in Cairo, after continuing it down to the year of accession of Sultan Mawlay 'Abd al-Aziz. The *Istiqṣā* thus appeared in Cairo in 4 volumes in 1312 (1894).

The reader may be referred to the work quoted above for an examination of the Arabic sources of the history of al-Nāṣiri al-Slāwī, and for a list of works from which he adopted or quoted textually passages. Here we shall simply point out that the chronicler was the first Moroccan writer to use European as well as Arabic sources; he only learned of them by chance; these were the history of Mazagan (Ar. al-Djadida) under Portuguese rule entitled *Memorias para a historia da praça de Mazagao*, by Luis Maria do Conto da Albuquerque da Cunha, Lisbon 1864; and the *Descripción historica de Marruecos y breve reseña de sus dinastias*, by Manuel P. Castellanos, Santiago 1878; Orihuela 1884; Tangier 1898.

In the arrangement of his chronicle al-Slāwī does not differ from the other historians of his country. But he sometimes gives evidence of a critical sense; we have a feeling that he is a historian by accident and a literary man by vocation. He sometimes gives evidence of considerable independence of spirit and of some breadth of view. As to his style, it is clear and chastened and only rarely resorts to metaphors and rhymed prose. The writer seems to be the modern Moroccan historian who writes with most facility and elegance.

Vol. iv. of the Arabic edition of the *Istiqṣā* was translated by E. Fumey under the title *Chronique de la dynastie 'alawite au Maroc* in *Archives Marocaines*, Paris 1906—1907, vol. ix. and x. Vol. i. has just been translated in the same journal, vols. xxx. and xxxi., Paris 1923 and 1925 by A. Graulle and G. S. Colin.

Bibliography: A full study of the life and work of al-Nāṣiri al-Slāwī has been made by E. Lévi-Provençal, *Les Historiens des Chérifs: essai sur la littérature historique et biographique au Maroc du XV^e au XX^e siècle*, Paris 1923, pp. 350—368. The full bibliography of this author is given in the notes.

(E. LÉVI-PROVENÇAL)

SMALA, 1. French form for *smāla*, in the Algerian dialect of Arabic, "camp of a tribe or of an important personage, containing his family and his servants, as well as the beasts of burden". The word passed into the French language as a result of the fame of the *smala* of 'Abd al-Kādir b. Muḥyi Ḍ-Ḍin [q. v.] the capture of which made a great stir in 1843.

2. In Algeria under Turkish rule, the name *smāla* (plur. *smāl*) was given to some tribes forming a kind of mounted police (cf. the articles *ḡwāḡ* and *zmāla*).

(G. S. COLIN)

SMYRNA. [See *ISMIR*.]

SOFALA, a district and town in East Africa in the southern part of the Portuguese colony of Mozambique. — The name *Sofala* is generally connected with the Arabic root *safala* "to be low-lying" and in support of this etymology the pas-

sage in Mas'ūdī (*Murūj*, i. 331—332) is quoted, where it is stated that "wherever a mountain stretches for some distance below the sea, it is given in the Mediterranean the name *al-safala*". Apart from the question of a submarine mountain this interpretation is not untenable; the district of Sofāla as a matter of fact consists of low-lying ground. But it should not be forgotten that the name of the ancient Indian port of Surparaka, near Bombay, has likewise become *Sofāla* in Arabic and that there is no question of low-lying ground here. It is therefore not impossible that Sofāla may represent an original Bantu place-name, which however has not been recorded in Oriental texts or in western travellers. As the Arab geographers know two ports of Sofāla both situated in the Indian Ocean and relatively close to one another, according to the Ptolemaic conception of the Indian Ocean which they had adopted, they were differentiated as Sofāla of India, the ancient Surparaka and Sofāla of Zeng (Zandj) or "golden" Sofāla, its homonym on the east coast of Africa.

Mas'ūdī (943) tells us in the *Murūj*, i. 233, that this land of Sofāla lies at the utmost end of the land of Zeng (cf. Zandj) and is the lowest (i.e. most southerly) parts of the sea of Zeng. It adjoins the country of Wākwā. In vol. iii. of the same work (p. 6) we are told that the Zengs were settled in Eastern Africa as far as Sofāla, which is the extreme limit of the territory they inhabit and the limit of navigation for ships from 'Omān and Sirāf. The sea of Zeng ends at the land of Sofāla and of Wākwā. It is a land which produces gold in abundance and other marvels. The climate is warm and the soil fertile. It was there that the Zengs built their capital; then they chose a king whom they called *waḳīlīmī* [read "whose name is in their language *wafalemi*, "kings", in the singular *mfalemi*"] — the text has wrongly *وَقْلِيمِي*

for *وَقْلِيمِي* or rather *مَقْلِيمِي* — which shows that in the tenth century the eastern coast of Africa south of the equator was already inhabited by Bantu negroes].

In his *Book of the Wonders of India*, the sea-captain Buzurg b. Shariyār of Rām-Hurmuz tells how a captain of 'Omān called Ismā'īlawāh was twice driven by the tempest to Sofāla of Zeng (the first occasion in 310 = 922; the second a few years later), which was inhabited by cannibal negroes (p. 51 sq., 177). There are in this land birds which seize beasts in their beaks, or claws, carry them off in the air and then let them fall to kill and crush them (p. 64, evidently an allusion to the gigantic bird, the *robbākā*); one man said he had seen there an animal in the shape of a lizard the male of which had two penes and the female two vaginas; its bite was incurable; snakes and vipers swarm there (p. 173). In 334 (945) the Wākwā (sic) plundered many towns and villages of Sofāla of Zeng (p. 175). A bird of the country the name of which Buzurg's informant could not remember captured and tore to pieces an elephant which he was busy devouring when captured (p. 178). The story also recalls the legend of the *robbākā*.

"I thought" says al-Bīrūnī (c. 1030 A.D.) in his *India* (ed. and transl. Sachau p. 100 of the text and vol. i., p. 204 of the transl.) "that the *gajaka* was the same animal as the *karḥadann* (rhinoceros, from the Sanskrit *kāṇḍadanta*, "word-

toothed") until some one who had visited Sofāla of Zeng told me that the *karḥ* (or *karḥadann*), the horn of which is used to make knife-handles better answers the description. In the language of Zeng (i.e. Bantu) the *karḥadann* is called *impela* (more accurate *mpela*; cf. Swahili *pera*, Makua *pele*)".

On p. 135 of the text (i. 270 of the transl.) we are told that one cannot sail on the sea which is beyond Sofāla of Zeng. No one that ever tried this foolish venture has ever returned to tell what he had seen. Farther on (p. 253 of the text ii. 104 of the transl.) al-Bīrūnī says that if Somanāth in Kathiawar has become so celebrated it is because it is much frequented by sailors and is the starting-point for those who make frequent voyages between Sofāla of Zeng and China.

According to Idrisi (1154) there are in the land of Sofāla famous iron mines, and gold is found in abundance there (transl. Jaubert, i. 65, 66, 78 and 79). Among the towns of this region the Sicilian geographer mentions those of Djabasta and Daghūla but the readings are not certain and they have not been identified.

According to Yāqūt (*Muḥallan*, iii. 96) Sofāla is the last known town of the Zeng. The same stories are told of it as of the land of gold of the southern Maghrib. Merchants bring their goods there and leave them. They then go away a short distance, wait a certain time and come back. The natives have in the meanwhile put beside each article its equivalent in the products of the country (this is the practice known as secret trading, which is known among many peoples). The gold of Sofāla is known to the merchants who trade to Zeng.

Manuscript 2234 of the Arabic collection of the Bibliothèque Nationale in Paris is entitled: "The Book collected and arranged by 'Alī b. Sa'īd al-Maghribī al-Andalusī of the Book of the Geography (of Ptolemy), in seven climes and he has added the exact latitudes and longitudes from the Book of Ibn Faṭīma". Ibn Sa'īd (xiiith century) says that the names of the towns of Sofāla are not known. The capital is Sayūna (it is undoubtedly the *Chiona* of Barros, Dec. ii., Bk. I., Ch. ii., p. 22 [1777] which the Portuguese historian locates between Malindi and Monbasa), which is 99° Long. and 2° 30' Lat. in the sixth section of the inhabited world, below the equator.

"In this town dwells the king of the Sofālans. They and the Zengs worship idols and statues which they anoint with the fat of large fish. Their principal resources are gold and iron. They wear the skins of panthers. Horses do not live in their country. Their army consists of foot-soldiers". Farther on in the same section the writer says "at the foot of the mountain of Repentance (*Djabal al-Nadāma*) on the north coast and in the channel of Komr (Mozambique Straits) is the town of Daghūla. It is the last town of Sofāla and the last of the inhabited places in the lands adjacent to this Indian Sea. It is in 109° Long. and 12° Lat. (South) (cf. *Relations de voyages et textes géographiques arabes, persans et turks relatifs à l'Extrême-Orient*, ii., Paris 1914, p. 325 and 327)".

In his *Kitaḥ al-Bilād al-Bilād* (p. 29) Kaḥwāl (1203—1283) records that Sofāla is the last known town of the land of Zeng, that there are mines of gold there and secret trading is practised. He mentioned a bird called the *ḥawāy*, which speaks

better than the parrot and does not live more than a year (on p. 20 of the same book at the end of the notice of Zābag [wrongly written Zānag] i.e. Samatra there is a reference to the same bird on the authority of Zakariyā² b. Muḥammad b. Khakān, the name of which is written *ḥawūrī*, "smaller than the pigeon, with a white belly, black wings, red claws, and a yellow beak, it speaks better than the parrot"). He also mentions white, red (or yellow) and green parrots. Muḥammad b. al-Dīshām says on the subject of Sofāla, "I have seen men eating flies, they believe that that prevents ophthalmia and as a matter of fact they are not at all affected by diseases of the eyes".

Abū 'l-Fidā' (1273—1331) only devotes a few lines to Sofāla. "According to the *Kānūn al-Ma'ādī* of al-Bīrūnī", he says, "it lies in 50° Long. and 20° Lat. south of the equator, Sofāla is in the land of Zeng. According to the author of the *Kānūn*, the people, who inhabit it, are Muslims". Abū 'l-Fidā' also gives some information taken from Mas'ūdī and Ibn Sa'īd and ends by saying, "I may note that Sofāla is also a country in India" (*Geography of Abū 'l-Fidā'*, 11/1. 222—223).

Shihāb al-Dīn Abū 'Abdallāh Muḥammad al-Dimishqī (c. 1325) three times mentions Sofāla. In chapter ii., sect. 4, which deals with precious stones, he gives the following, citing Aristotle as his authority, "The oil stone is red with a bluish light; touched by oil, it is changed for the worse, the oil going right to the centre. It comes from Sofāla of Zeng. When it is rubbed over a garment stained with oil, it completely removes all trace".

In his *Nuṣṣat al-Kuṭub*, Ḥamdallāh Mustawfī records that there is in Sofāla of Zeng a cavern measuring nearly 500 parasangs in every direction. On account of the mass of shifting sands in this country and the heat and aridity, it is not thickly inhabited (Cl. Huart, *Documents persans sur l'Afrique in Recueil de mémoires orientaux publiés par les professeurs de l'École des langues orientales à l'occasion du XIV^e congrès international des orientalistes réuni à Alger*, Paris 1905, p. 95—95. This passage is not found in the edition and translation of this Persian text by Guy Le Strange, *G. M. S.*, vol. xxiii. 1 and 2).

"Golden Sofāla", says Ibn al-Wardī (c. 1340) (Cairo 1328, p. 51 infra), "adjoins the land of Zeng. It is a vast country with mountains containing deposits of iron which the people of the country work. The Indians come to them and buy the iron at a high price, although they have iron-mines in their own country; but the iron of the mines of Sofāla is better, purer and more malleable. The Indians smelt this iron and make steel of it (with which they make tools and weapons with fine cutting edges). It is in this country (India) that Indian swords and other things are made in abundance. One of the wonders of the land of Sofāla is that there are found under the soil, nuggets of gold in great numbers; the weight of each is 2 or 3 mithkāl or even more. In spite of this the people of the country only wear ornaments of copper which they esteem more highly than gold. The land of Sofāla adjoins that of Wāk-wāk". Ibn Battūṭa (c. 1355, *Rihla*, ii. 192) only says that the town of Sofāla is situated half a month's journey south of Kilwa (read Kilwa).

Ibn Khaldūn (c. 1375) in his *Prolegomena* (i. 119 of translation) is hardly more explicit: "Farther

to the east (= south) of Moḥadlāḥū (Mayadoxo) is the land of Sofāla which lies on the southern (western) shore of the sea of India, in the seventh section of the first climate. Then to the east (= south) of Sofāla on the same southern (= western) shore is the land of Wāk-wāk".

According to Bākuwī (beginning of the xvth century, in *N. E.*, 1789, ii., p. 401), Sofāla is a town of the land of Zeng, famous for its gold mines. The gold of this country is much sought after by merchants. There is a kind of bird that speaks better than a parrot (it is the *ḥawūrī* mentioned above in the extract from Khawānī).

In his *al-Umdat al-maḥriya fī Qaṣṣ al-'Uṭūm al-baḥriya* (Gabriel Ferrand, *Instructions nautiques et ventiers arabes et portugais des XV^e et XVI^e siècles*, vol. ii.: *Le pilote des mers de l'Inde, de la Chine et de l'Indonésie*, Paris 1925, f. 29 verso), the *mu'allim* or sailing-master Sulaimān al-Mahri (first half of the xvth century) places the harbour of Sofāla, 6 *lyās* from the Great Bear or about 18° south — the exact latitude is 18° 15' — but, which is peculiar, the text says that Sofāla is opposite the Timor islands of Indonesia which are 10° further north.

About 1490 Sofāla was visited by Pedro da Covilhā. But he was not the first European traveller to visit south-eastern Africa, for the *mu'allim* Ibn Maḥjīd definitely says in two verses of a nautical treatise dated 18th Dhū 'l-Hijja 866 = September 13, 1462, "It is said that in former days the ships of the Franks came to Madagascar and to the coast of Zeng and Western India, according to what the Franks say". These two verses seem to allude to the voyage of Pseudo-Brocardus (who is probably the Dominican William Adam) in the first half of the xvth century. It was actually recorded in this monk's narrative that at this time "mercatores vero et homines fide digni passim ultra versus meridiem procedebant, usque ad loca ubi asserebant polum antaricum quinquaginta [read: triginta] quatuor gradibus elevari". But the question will be treated in detail later (vide infra ZENG).

On May 18, 1506, Pero d'Anhaya or da Nhaya left Lisbon with six ships to go and build a fortress at Sofāla. Castanbēda (Bk. ii., Ch. x., p. 34 of the edition 1833) gives an account of the reception which was given him by the king Čufe (= Vlsuf). But this ruler belonged to the royal family of Kilwa and his entourage consisted of Moors, i.e. Muslims, which tells us nothing of the natives of the country.

Barros (Dec. i., Bk. x., Ch. i., p. 372—388) says that the great kingdom of Sofāla lies on an island between the two arms of the river Kuama and the sea and is over 650 leagues in circumference. It is so thickly populated that the elephants are leaving it. The natives say that every year 4 or 5,000 die, which explains why so great a quantity of ivory is sent to India. The nearest gold mines are at Manica which is about 50 leagues west of Sofāla. The gold which is gathered there is gold dust (or nuggets) which is found at 6 or 7 palms' depth (c. 5—6 feet). The most distant mines are 100—200 leagues from Sofāla. There are others also in the land of Toroa which is also called the kingdom of Butua. There is a fortress built of hewa stones, very well built of stones of astonishing size, joined without cement. The wall of the fortress is over 28 palms (23

feet) thick and its height is not proportionate to its width. On the gate of this building is an inscription which several educated Muslim merchants have seen, but they could not read it, nor say in what alphabet it was written (this is probably not accurate as no inscriptions have been discovered in this region). Around this building on eminences are others built in similar fashion; on one of them is a tower of over 12 stories. All these erections are called by the natives *zimbalwe* (read *zimbalwe*) which they say means court (royal residence: *zimba-bwe* literally means stone house and in eastern Bantu this name is given to any house of the king or chief).

In the xvth century, Sofala was the only port in this region that exported gold. Gradually the merchants began to go north to Quelimane, north of the Zambesi, and about the middle of the xvth century, the annual exports from Sofala amounted to only 500 *pastas* (c. 350 lbs) while that of Quelimane was over 3,000 *pastas* (c. 2050 lbs). A century later Sofala had practically ceased to exist.

The early Portuguese narratives and certain European scholars located at Sofala the Biblical Ophir from which the fleets of Solomon and of Hiram brought back every three years cargoes of gold, silver, ivory, apes and peacocks (I Kings, x. 22; II Chronicles, ix. 21). In a short but solid study, Sylvain Lévi (*Autour du Bâvru-jâtaka*, in *Annuaire de l'École pratique des Hautes-Études*, Paris 1913-1914) has shown that Ophir is not to be sought in India. Nothing so far makes it likely that it can possibly be located at Sofala.

The old town of Sofala seems to have been very important, if we may judge by its ruins of commodious houses which are evidence of the wealth of its inhabitants in the xvth century. It was abandoned later and rebuilt in the vicinity. The new Sofala was described as a little town in 1764. It lay in 20° 13' Lat. and 34° 45' Long. It was 252 fathoms long, 60 broad and included 35 houses, one of stone and lime and 2 of wood with tiled roofs and 32 of wood covered with thatched roofs. The famous mediaeval emporium lost its importance at the end of the xvth century. In 1883 João de Andrade Corvo speaks of the old kingdom of Sofala which was so rich under Arab rule. In 1889 the authors of the *Elementos para um dicionário chorographico da provincia de Moçambique* write the melancholy words: "The district of Sofala, so rich in historical memories, is now poverty-stricken and abandoned".

(GABRIEL FERRAND)

SOFTA, a popular pronunciation of the pers. *sūfta* from the Persian verb *sūftan*, to burn, to set on fire; literally then one afire, in flames, i.e. consumed by the love of God or learning. *Softa* in Turkish is particularly applied to students (Ar. *ṭālib*), especially the beginner in the sciences or in theology. After his first courses, the student is usually called *dānīshmand*. Risings of the *Softa*'s, who used to rebel en masse have repeatedly played a dangerous part in Ottoman history.

SOGHD, **AL-SOHD** or **AL-SOHD**, a district in Central Asia. The same name (Old. Pers. *Sugda*, late Avestan *Sughda*, Greek *Sogdion* or *Sogdiano* [the people] and *Sogdiane* [the country]) was applied in ancient times to a people of Iranian origin subject to the Persians (at least from the time of Darius I, 522—486 B.C.) whose lands stretched from the Oxus (cf. *AMU-DARYA*) to the Yaxartes (cf. *SIR-DARYA*), according to the Greek sources. The language and especially the terms relating to the calendar and festivals of the Soghdian Zoroastrians are very fully dealt with in the Muslim period by al-Birūnī in his *Chronology of Ancient Nations*, ed. Sachau, Leipzig 1878, cf. p. 46 sq., 233 sqq. and transl. London 1879, p. 56 sq., 220 sqq. From al-Birūnī's information, modern Iranists (notably F. C. Andreas and F. W. K. Müller) have been able to identify as Soghdian the language of numerous fragments of manuscripts found in Chinese Turkestan (commercial documents, Buddhist, Manichaean and Christian texts).

As in classical times the Soghdians still appear in al-Birūnī (*op. cit.*, p. 45, 21) along with the Khwarizmians as an indigenous people with a Zoroastrian civilisation in MA WAR' al-Nahr. References to pre-Muhammadan Soghdian colonies in remote regions are found, not only in Chinese, but also in Muslim sources, cf. *Hudūd al-'Alam* (unique Tumansky MS. now in the Asiatic Museum in Leningrad) in W. Barthold, *Die historische Bedeutung der alttürkischen Inschriften*, p. 4, note 1, appendix to W. Radloff, *Die alttürkischen Inschriften der Mongolei*, New Series, St. Petersburg 1897, on the Soghdians in the land of the Tughughus (cf. *ghuz*) and Mahmūd Kāshgharī (*Divān Lughāt al-Turk*, Constantinople 1333, i. 31 and 391 sq.) on the Soghdian settlers (Sughdāy, as in the Orkhon inscription) in Bīlāsaghūn [q.v.] who had adopted "Turkish dress and customs" and on the Soghdian and Turkish speaking peoples from Bīlāsaghūn to Ishdīb or Sairīm (on the name of "white town" given to the latter, cf. *ibid.*, iii. 132 sq.). The fact proved by R. Gauthiot that the Uighurs borrowed their alphabet from the Soghdians seems to have been known in Muslim times, cf. Fakhr al-Dīn Mubārak Shāh (beginning of the 15th/16th century) in E. D. Ross in *Adfān Nāma*, *A Volume of Oriental Studies presented to E. G. Browne*, Cambridge 1922, p. 405. Turkish *Kent* meaning "village, town" is already described as a Soghdian loan-word in the *Gandīya* (text in W. Barthold, *Turkestan v. epochu mongolskogo nachestviya*, I, Petersburg 1898, p. 48).

As the name of a country Soghd had a much

narrower application in the Muslim period than in antiquity. According to Istakhri (*B.G.A.*, i. 316) Soghd proper comprised the lands east of Bukhārā from Dabusiya to Samarkand; he also says that others also included Bukhārā, Kāshghar (Kash, q.v.) and Neseif in Soghd. Kash sometimes appears as the capital of Soghd, e.g. *B.G.A.*, vii. 299, 14 (Ya'qubi); it is possible that the oldest Chinese name for the region of Kash, *Sa-hai* (old pronunciation *Sugit*) is a reproduction of the name Soghd; it is so taken by J. Marquart, *Chronologie der alttürkischen Inschriften*, Leipzig 1898, p. 57. In another passage (*B.G.A.*, vii. 293) Ya'qubi describes Samarkand as the capital of Soghd; Kash and Neseif are included in Soghd but Bukhārā is separated. It is not known what geographical connotation Soghd had for al-Birūnī; whenever he associates a Soghdian festival with a particular district, it is always some village in the territory of Bukhārā. Nerzhakhi (ed. Schefer, p. 47) quotes a few expressions in the dialect of Bukhārā and these are explained as Soghdian by F. Rosenberg (*Prat. Linguistique, asarwanie J. Badovinowi de Courtney*, Cracow 1921, p. 94 sqq.). According to Istakhri (p. 314) Soghdian was spoken in Bukhārā. According to Mahmūd Kāshgharī (i. 391 sq.), Soghd is the land between Bukhārā and Samarkand. In modern native topography Soghd is only a part of the territory of Samarkand and a distinction is made between "Half-Soghd" (Nim Sughd) on the island between the two arms of the Zarafshān (Ak Daryā and Kara Daryā), and "Great Sughd" (Sughd-i Kallīn) north of the Ak Daryā. The language of the Soghdians seems to have disappeared earlier than that of the Khwarizmians, ousted like other Iranian dialects, partly by the Persian literary language and partly (especially in the colonies) by Turkish. The language called "Middle Soghdian" by F. C. Andreas still survives in a single modern Soghdian dialect, the isolated Yaghinobi (cf. *Grundriss d. iran. Phil.*, i, Pt. II, p. 291).

(W. BARTHOLD)

SÖGÜD, a little town, capital of a *kāḍa* of the same name in the sandjak of Ertogrul, belonging to the wilāyet of Khudawendigar in Asia Minor. It lies to the south of Sakariya between Lefke and Esli Shehir and is a day's journey from each of these places (*Djihad-numā*). Sögüd lies at the mouth of a mountain gorge, very deep and very narrow, and is built in an amphitheatre. The country round the town forms part of the fertile region which forms the transition between the Central Plain of Anatolia on the

south and the lands on either side of the lower course of the Sakariya to the north. It was the country of Sultān Özü, and is famous in Ottoman history as having been the cradle of power of the Ottoman dynasty. According to the unanimous tradition of the Turkish historians, Ertogrul, father of 'Othmān received this district as a fief from the Saldjūk Sultān 'Alā' al-Dīn; the mountains of Tūmtūdī and Erment were the *yailā* of the tribe of Ertogrul and Söğüd was their *yurt* ('Ashk Pasha Zade, p. 4 and Urudj Bey, ed. Babinger, p. 7, 83). The *türbe* of Ertogrul is at Söğüd; this tomb has a little cupola and lies two leagues from the town, a little to the left of the road to Lefke. Tradition still tells that one of the brothers of 'Othmān, Sarıyāl or Sawdā is buried beside his father; 'Othmān himself is also said to be buried in this *türbe* and not at Brussa (Ritter).

As regards the pre-Ottoman period we find in the *Ta'wīm al-Tawārikh* of Hādījī Khalifa the legend that the Caliph Hārūn al-Rashīd conquered Söğüd in 181 (797). The name Söğüd is pure Turkish and means "willow"; the oldest form seems to have been Söğüddjūk or Söğütdjūk (thus *Tawārikh 'Alī 'Othmān*, ed. Giese, Urudj Bey, and as late as the xviiith century, Mehmed Edih, cf. also Taeschner, *Das anatolische Wegenetz*, I. 101). The modern pronunciation is rather Söwilt.

One of the four *djāms* of Söğüd is attributed to Ertogrul and another to Sultān Muḥammad I. After the capture of Constantinople the town was situated on the main route of pilgrimage to Mecca. It was never large; in the xviiith century Ewliyā counted 700 Turkish houses there and at the beginning of the xixth century the number had hardly risen (cf. the traveller's records in Ritter). Towards the end of this century Sāmi gives 5,000 as the population. The product for which the country round Söğüd has always been noted is a preserve made of grapes cut up and steeped in vinegar (*isām turşusu*). Silkworms are also grown and there is some weaving in the town.

ŞOHĀR. [See ŞUHĀR.]

ŞOKOLLI, MUHAMMAD PASHA, surnamed "Tall", "the Tall", one of the most famous of Turkish grand viziers. He was born in the early years of the xvth century in the village of Sokol in Bosnia. His family was called Sokolewitsch, of which Şokolli is the Turkish form. According to a panegyric biography written about 1570 entitled *Djirwāhīr al-Manāhīh* (cf. *T. O. E. M.*, No. 29, p. 257 sqq.), which is regarded as the best authority for the youth of Şokolli, Sokol means "falcon's nest". He was the eldest son and was taken from his parents under the *dewchirme* in the early years of Sulaimān I's reign. His remarkable abilities gained him important posts on the staff of the Serāy where he finally reached and held for a long time the responsible post of *Kapudjī Kāyāsī*. At this period he brought his parents to Constantinople and his two brothers, who died soon afterwards, and also a cousin who later became Muḥaffā Pasha, Beglerbeg of Budin.

In 953 (1546) Şokolli left the Serāy to become *Kapudān Pasha* in succession to Khair al-Dīn Pasha Barbarossa, which was an exceptional promotion. In this capacity he conducted expeditions into Tripolitania. Three years later he was appointed Beglerbeg of Rūm-ili. He there took part in several campaigns. In 959 (1552) he took Temesvár in Hungary. In 961 (1554) he accompanied Sultān Sulaimān in his campaign against Persia (capture of Nakhcewan) after which he obtained the rank of *wazīr-i shāhī*. When the struggle began between the two princes, Selim and Bāyazīd, in 1559, Şokolli was in command of the troops assisting Selim against his brother. Henceforth he was associated by close ties with Selim whose daughter Esmeikhān he married in 969 (1562); she was 40 years his junior. After being *wazīr-i shāhī*, he was finally appointed grand vizier in June 1568 on the death of Aḥmad Pasha.

Şokolli held this office till his death in 1579 so that he was grand vizier for the last 15 months of Sulaimān's reign, the whole of that of Selim II, and the first four years of Murād III. For the greater part of this period Şokolli was the real ruler of the empire (*pādīshāh-i ma'nawī*, cf. Pečewi, I. 44) especially during the reign of Selim II [q.v.] who hardly took any interest in affairs of state. By his experience and sagacity, Şokolli was the obvious man to consolidate the glorious traditions of the time of Sulaimān. His efforts were mainly directed to the maintenance of peace abroad and order at home. Although we know of nothing very brilliant done by him, he was nevertheless the moving spirit in all the great events of his time. Very characteristic of him was the manner in which he kept secret the death of Sulaimān before Sigeth until the new sovereign had had time to reach the army, and again when Selim II refused to give the accession gifts, against Şokolli's advice, the latter only intervened at the last moment to pacify the mutinous Janissaries. After his return from the Sigeth campaign the grand vizier took no further part in military expeditions. The documents of his time however show that he was active in all branches of administration. During his grand vizierate the empire and especially the capital, passed through the richest and most glorious period in its history, while the old simple traditions were still strong enough to check the moral decadence, which was already beginning to appear. The only opposition that Şokolli encountered in his domestic and foreign policy was that of the coterie led by the Jew Yūsuf Nāsī, the favourite of Selim II and by the latter's Jewish favourite. The Jewish bankers had control of the customs and had a grip on the whole economic life of the state and Şokolli was not able completely to counteract their influence, which showed itself for example in the deterioration of the coinage.

In the foreign policy of Şokolli we have probably to recognize a pan-Islamic tendency. Up to the last year of his grand vizierate, the peace with Persia (concluded at Amasia in 961 = 1554) was not broken, while the empire endeavoured to assist Muslim rulers in India and Further India against Portuguese attacks (on the expedition to Atchah cf. *T. O. E. M.*, No. 10) and the Khāns of Transoxiana against the Russians. Şokolli's European policy was likewise peaceful; he was con-

tinuously on his guard against Russia under Ivan the Terrible, against Austria and Spain, and he hoped to hold these powers in check with the support of the friendship of France and Poland. He was however unable to prevent the expedition against Cyprus and the naval war with Venice and the other powers which resulted from it. The occupation of Cyprus was mainly due to the influence of Yüsus Nâsi and his friends with the Sultan. But once the decision had been taken, the grand vizier did his utmost to secure the success of the expedition. It was likewise entirely due to his energy that a new fleet was built in less than a year after the destruction of the Turkish fleet in the battle of Lepanto (Oct. 7, 1571). Şokolli was less fortunate in other more peaceful enterprises, like the digging of a canal between the Volga and Don and the piercing of the isthmus of Suez. He was further very skilled in the field of diplomatic negotiations, which he conducted with courtesy (he had his portrait painted for a Venetian ambassador, which later was in the collection of the Archduke Ferdinand) and finesse but sometimes with harshness. The peace concluded with Venice (March 7, 1573) left the island of Cyprus to Turkey; it was as if the battle of Lepanto had never been fought.

The personal position of Şokolli was remarkable. He was neither unusually popular with the people, nor a particular favourite of the Sultan, but every one respected him. In keeping with his character, he was not a patron of literature and poetry (Gibb, *History of Ottoman Poetry*, iii. 7); nevertheless the poet Bâkî celebrates him in his *şâhidat*. In his palace in Stambul (later bought by Ahmed I to build a mosque on the site) Şokolli maintained a vast suite. Through his great influence he was able to rid himself of his enemies, without, however, having any real friends. He was able to prevent difficulties that might have arisen from other influential men of his time like Lala Mustafa Pasha and Sinân Pasha (q. v.). His most intimate confidants were his secretary Feridân Bey (q. v.), later *Re'is al-Kutub* and his *Kiâya* Dja'far Agha. Şokolli is further depicted as a religious and incorruptible man. The latter quality did not prevent him from accepting huge presents, which, added to his own income, made him one of the richest of men. Western sources accuse him of avarice, but he built many public buildings in the provinces, especially *karaânserây*s, besides two mosques in the capital, a mosque and *tekke* in the Kaifirgha quarter and a mosque and *medrese* at Azab Kapu (cf. *Hadikat al-Djâwâmi'*, i. 193). He is also accused with some justice of having favoured too much his numerous relations and compatriots whom he brought from Bosnia, many of whom occupied important positions. The historian Pečewî İbrâhîm was the son of a female cousin of Şokolli.

After the accession of Murâd II, Şokolli's great influence began to diminish. The favourites of the new Sultan, like Şamî Pasha obtained the offices from which Şokolli's proteges were dismissed. But before the dismissal of the grand vizier himself — which seemed to have become inevitable — Şokolli was murdered on Oct. 11, 1579. An individual, disguised as a beggar, came up to him as he was leaving the *divân* and stabbed him. He was buried in a *türbe* which he had built at Aiyûb (cf. Ewliya Çelebi, *Siyahatnâme*, i. 408).

Bibliography. The principal sources for

the life of Şokolli are the *Ta'rikk*'s of Pečewî, Selânikî and of 'Alî (*Kanûn al-Akhhâr*, part still unprinted) and the *Tuhfat al-Kibâr* of Hâdîdî Khalîfa. There are other biographies of him in Mûnâddîm Bâhî, *Şahîf al-Akhhâr*, iii. 332 sqq.; 'Othmân Zâde, *Hadikat al-muwarrâ*, Constantinople 1271, p. 32 sqq.; Thureiyâ Efendi, *Sijill-i 'Othmânî*, iv. 122; Hâfiz Husain al-Awânserâyî, *Hadikat al-Djâwâmi'*, Constantinople 1281, i. 193. Among western contemporary sources the most important are the *Tagebuch* of Gerlach, Frankfurt 1674, and the *Relationi* of the Venetian Alberti. All these sources have been used by the modern historians like von Hammer, *G. O. R.*, iii. and iv.; Jorga, *Gesch. des Osm. Reiches*, iii. (especially p. 165 sqq.); Brosch, *Geschichten aus den Leben dreier Grosswesiers*, Gotha 1899; Ahmad Refik, *Şokolli*, Constantinople 1924 (an important appreciation of Şokolli and his period partly based on original documents, the provenance of which however is rarely mentioned). On the *genre* of Şokolli, cf. von Kraelitz-Greifenhorn in *Mitteilungen zur Osmanischen Geschichte*, 1923-1926, ii., p. 261. (J. H. KRAMERS)

SOKOTO or **SAKATU** is the name of a town in the western part of the Hausa country, situated on a left bank tributary of the Niger called Gulbi-n-Sokoto, which means in Hausa the river of Sokoto. The town seems to have been of little importance before the sixteenth century; in any case it was much less known than the other towns of the Hausa, such as Zaria, Guber or Tessaawa, Katsena, Zinder, Kano and Zegzeg or Zaria. It formed part of the kingdom of Guber, which like the other Hausa states then contained very few Muhammadans, almost all foreigners. There were a few colonies of Ful or Fulbe among the native population, which, as at the present day, lived mainly by agriculture and commerce. It was in 1801 or 1802 that Sokoto became the capital of a kind of empire founded by a Tuculor *shaikh* from Futa-Tora (Senegal) belonging to the Törödo caste (singular Törödo). This conqueror was called Usmânu ('Uthmân) and was the son of a certain Muhammad surnamed Fodjo, i. e. "the wise, the jurist". The *Shaikh* Usmânu having left his native land to go on the pilgrimage to Mecca was in Guber, where he was preaching Islam in 1801 when he received a deputation from the Fulbe, seeking his protection against the king of Tessaawa, against whom some shepherds had a complaint. Usmânu, who was only waiting a pretext to declare a holy war, took up the cause of these men, whom he regarded as compatriots because Fulbe and Tuculor, although of very different stocks, spoke the same language. Having collected an army of followers, he took the field against Yunfa, the king of Tessaawa, and conquered him. Continuing his conquests, he was not long in becoming master of several other Hausa provinces (Liptako, Kebbi, Yauri, Nupe, Kororofa, Bautshi, Adamawa), imposing Islam on the inhabitants by force and placing at the head of each kingdom or province a kind of governor called *amir*, chosen from the members of his family or caste. Thus there was created for the benefit of a small Tuculor aristocracy of the Törödo caste, an empire, military in character, including almost all the lands to the south of the Sahara between the eastern course of the Niger (which it reached in the west also in Liptako),

Benu, Logone, and Chad, with the exception however of Bornu, which, although invaded in its turn by Usmanu's hands, succeeded in recovering its independence in 1810. The general name of empire of Sokoto is given to these conquests because it was in the eastern quarter of Sokoto, at Wurno, that Shaikh Usmanu took up his permanent residence, and his successors lived.

But on the death of Usmanu (1816 or 1818) the empire broke up into three allied states: in the west that of Gando, including the Kebbi, the Yanri, the Nupe and Liptako; in the east that of Yola, comprising Kororofa and Adamawa and in the centre that of Sokoto including all the Hausa country and Bautshi. Abdullahi, brother of Usmanu, became king of Gando, Modibba Adama of Yola, which he gave his name (Adamawa) and Muhammad Bello, son of Usmanu, succeeded his father at Sokoto where he reigned from 1816 or 1818 to 1837.

He had a difficult task to maintain his authority. The natives everywhere abjured Islam and rebelled, supported in their rebellion by the Tuareg and the Sultan of Bornu. After suffering several reverses, Muhammad Bello's troops finally established him in power. A rather poor soldier, reluctant to take part personally in battle, this prince was on the other hand a distinguished writer. In Arabic he composed a considerable number of works in prose and verse, one of them a history of the Sudan which is not without value. He was the patron of men of letters, gave a good reception to the explorer Clapperton (1828) and exercised a strict control over the doings of his judges, who feared his enquiries and censure.

His brother and successor Atiku (1837—1847) claimed to be a reformer of morals and made himself very unpopular by prohibiting music and dancing. His puritanism did not prevent his governors committing all kinds of excesses and depredations, which resulted in the rebellion of the provinces of Gober and Katsena.

In the reign of Aliyu, son of Muhammad Bello (1843—1860) who received the explorers Overweg (1851) and Barth (1852 and 1854) at Sokoto, civil troubles and risings increased in extent. Gradually the authority of the emperor was lost and usurped by various *amirs* of the provinces. The five last sovereigns of the Tōro dynasty — Ahmadu, son of Atiku (1860—1866), Aliyu-Karami, son of Bello (1866—1867), Ahmadu-Rafaye (1867—1872), Abubakari (1872—1877) and Moyasu (1877—1904) — showed themselves incapable of efficiently governing an empire, which was too large and too badly organised, and collapsed at once in 1904, simply on the entry of Sir Frederick Lugard's troops into Sokoto.

At the present day the town of Sokoto forms part of the British colony of Nigeria, while the rest of Gober and his capital Tessaawa are included in the French colony of the Niger.

(MAURICE DELAFOSSE)

SOKOTRĀ (Socotra), an island in the Indian Ocean on the east side of the Gulf of Aden, about 150 miles from Rās 'Asir (Cape Guardafui) forms with the smaller islands of the group, notably 'Abd al-Kūr, the "brethren", Semha and Dersi, and Sambūya (Sambūniya; Saboyna of the older maps since Wellsted) and the Farūn rocks, the geographical and geological continuation of the coast of North Somaliland. It is 75 miles

long (from Rās Shoab in the west to Rās Redreese in the east), and has a maximum breadth of 20 miles and an area of 1,520 square miles. The elongated shape of its horizontal section gives it its characteristic configuration (the figure "about 240 miles" for the distance from Cape Guardafui in Theodore Bent, *Southern Arabia*, London 1900, p. 345, who gives the length and breadth of the island correctly as 72 and 22 miles, is a misprint). Sokotrā was known in classical antiquity as the island of Dioscorides, *ἵσος*, *ἡ Διοσκορίδου καλουμένη* in the *Periplus maris Erythraei*, 30 (the MS. has *Διοσκορίδα*; C. Müller, *Geographi Graeci minores*, i. 280 has in the text *Διοσκορίδον*, but see his note; Fabricius in his edition, Leipzig 1883, gives *Διοσκορίδου*) after the mention of the Saccalic Sea (coast of Shehr, east of Rās al-Kelb) and of the promontory of Syagros (Rās al-Farak), it is mentioned as a territory of the king of the land of frankincense, *Eleazar*, who lived in *Σάββατα* (Shabwat) (27; on the genitive form of the name *Ἐλεάζου*, found in manuscripts, of the king known from inscriptions as Il'azz, which Fabricius, wrongly following C. Müller on § 26, altered to *Ἐλεάζου*, see the articles *ELEAZOR* and *ELIAR* in Pauly-Wissowa's *Realencyklopädie der class. Altertumswiss.* [henceforth quoted as *R.E.*]), also *Διοσκορίδου ἵσος* in Ptolemaeus, viii. 22, 17 and *Διοσκορίδον ἡ πόλις*, vi. 7, 45 (var. *Διοσκορίδου πόλις*), the oldest and the only classical reference to the capital of Sokotrā, *ἡ ἵσος ἡ καλουμένη Διοσκορίδου* in Cosmas Indicopleustes, p. 178 (for the form of the name cf. *Διοσκορίδης* in Stephanus Byzantinus).

The island is called by Pliny, *Nat. Hist.* vi. 153: "*ciara* (insula) in Azanio mari Dioscurida" (similarly also Amm. Marc., xliii. 6, 47) and is referred to by ecclesiastical historians (see below). Agatharchides (§ 103) (preserved in extracts in Diodorus and Photius; see the article *SABA*, p. 7) refers to the whole group; after describing the land of Saba he remarks that near the coast lie the *ἵσος νῆσος*, the earliest reference to Sokotrā and the adjoining islands, which he considers to belong to South Arabia. It may be assumed that Sokotrā is included among the frankincense islands of Arabia mentioned by Theophrastus, *Hist. Plant.*, ix. 4, 10. On the identity of the island of Dioscorides with Sokotrā cf. Ritter, *Erdbunde*, Berlin 1845, xii. 64, 336 (following Vincent, etc.); C. Müller, *op. cit.*, 190 etc. Bochart (*Geographia sacra*, Leiden 1692, i/l. 436) had already derived the name, which is found in the form *Sukutrā* among the Arabs (Yāqūt, *Mu'djam*, quotes besides the regular form, iii. 101 also *Sukutrā*, i. 543; also *Sukūṭarā*), Ibn Rosta, *B. G. A.*, vii. 82, *Sukūṭ(a)ra*; on the other form *Uskutrā*, see *Kāmil*, i. 381 and *Ta'df al-'Arūṣ*, iii. 273) from the Sanskrit *svipa inkhatara*, "fortunate isle" and this explanation of the name which agrees best with the name in Agatharchides (cf. *Ἰνδαλμυ Ἀραβία*) has been adopted by Bohlen, *Das alte Indien*, Königsberg 1830, ii. 139; Benfey in Erich-Gruber's *Encyklopädie*, sect. ii., vol. vii., p. 30; C. Müller, *op. cit.*, i. 280 (cf. Ritter, *op. cit.*) and more recent writers (Bent, *op. cit.*, p. 391 was not acquainted with the literature before Schweinfurth). The Greek name arose, like many other Greek corruptions of Oriental names by a popular etymology, connecting the foreign name with some mythological figure familiar to the Greek circle of ideas. The

name *Διοσκύρων λιμήν* (Ptolemy, iv. 7, 5) a harbour on the west coast of the Red Sea, is similar in origin. This corruption was all the easier in this case as it was facilitated by the Greek idea that the appearance of the constellation of the Dioscuri (Gemini) was a good omen for navigators. The Indian origin of the name is supported by the statement in the *Periplus* (30) that the island included Indians amongst its inhabitants (there are still Hindus on Sokotra), that sailors from India land there bringing rice, a cereal that does not grow on the islands, Indian cotton and slave-girls and receiving turtles (31) and by the note of Agatharchides (Diodorus, iii. 47) that Indian merchants traded with the *ἄρου ὑδάριονες*. In ancient times Sokotra, specially noted for its frankincense was of importance as a centre of sea commerce between India, Arabia and East Africa (Atania, the coast between Ras 'Asir and Zanzibar), as a result of its situation at the entrance to the Red Sea and in spite of its lack of proper harbours. Bent's idea (*op. cit.*, p. 391) that Sūḷ (the name still survives for the ruined site of the ancient capital) the Zoko of the 15th century Portuguese, is a survival of the original Sanskrit form of the name, has little to commend it. Sprenger's suggestion (*Die alte Geographie Arabiens*, Bern 1875, p. 88) that the name Sokotra is perhaps derived from *ḥāfir*, the popular name for the resin of the dragon-blood tree, is untenable on philological grounds. F. Hommel's assumption (*Grundriss der Geographie und Geschichte des alten Orients*, Munich 1904, p. 212, note 2), that Sokotra is in some way connected with Skudra = Thrace and that the island might have received its name from Graeco-Thracian colonists, cannot be defended at all.

W. Golenishchew connected with Sokotra the magic island of A-a-penenka or Pa-anch (island of the genius) the abode of the king of the frankincense country, of which we are told in the old Egyptian fairy tale in a papyrus in St. Petersburg (French translation by Golenishchew in the *Verhandlungen d. V. Orientalistenkongresses*, Berlin 1882) of the period of the middle kingdom (about the beginning of the second millennium B.C.). G. Schweinfurth agreed with this on the whole acceptable identification first in a lecture to the 56. Versammlung deutscher Naturforscher at Freiburg i. B. (*Ein Besuch auf Sokotra*, Freib. i. B. 1884), then in *Erinnerungen von einer Fahrt nach Sokotra* (s. Westermann's *Monatshefte*, 1891, xxxiv., p. 603 sqq., xxxv. 29 sqq.); cf. also E. Glaser, *Skizze der Geschichte und Geographie Arabiens*, Berlin 1890, ii. 182 sq., and *Das Weihrauchland und Sokotra*, reprint from the addition to the *Allgemeinen Zeitung*, No. [1] 120 and 121, Munich 1899, p. 4, 11, Hommel [s. below]. Glaser (*Weihrauchland*, p. 4 and *Punt*, *M. V. A. G.*, iv., 1899, p. 43) said that the island of *Ἰακχάια* (also called *Ἰεπά*) described by Diodorus, v. 41 sq. (from Euhemerus) was identical with the frankincense island of Pa-anch, and therefore with Sokotra. Ritter, *op. cit.*, p. 364 had previously discussed the possibility that the legendary frankincense island of Panchaia, mentioned by Strabo, Pliny, Roman poets and others, should be located in the vicinity of Sokotra. The similarity of the names Panchaia and Pa-anch is certainly worthy of note; the plants mentioned in the fairy tale are in keeping with the flora of Sokotra (cf. Glaser, *Weihrauchland*, p. 3 sq.). But Glaser's hypothesis

(*ibid.*, p. 20 sq., 23) that the old Egyptian name of Sokotra was really not Pa-anch but Panach or Pōnech, i. e. "the Punic island" and that this is the root meaning of Panchaia, is untenable, as is his effort to support it by his main thesis that the original inhabitants of South Arabia and Sokotra were Phoenicians and Habbashis (*ibid.*, p. 12 sq.), the South Arabian and Sokotran no less than the African were direct descendants of the Phoenicians or of the people of Punt (cf. his *Skizze*, ii., p. 250, 297 sq.; *Punt*, p. 1, 31, 65) and that the language of Sokotra was Habbashi, a descendant of Phoenician. In spite of the fictitious character of the story of Euhemerus about Panchaia, there is no doubt that a definite island forms a real background for the scenery. Among the common features in the various descriptions of the islands is further the fact that Diodorus, v. 41, speaks of the wealth of Panchaia in frankincense, myrrh trees of excellent quality and all other kinds of spices, which agrees with modern reports on Sokotra. Diodorus, v. 43 (vi. 1) speaks highly of the rich vegetation of Panchaia (on the peculiar charms of the flora of Sokotra see Wellsted, *Report* [see below], p. 145 sq.; Schweinfurth, *op. cit.*, p. 614, 620 sqq., 38, 42 sqq.; Bent, *op. cit.*, p. 367 sqq.; on the multitude of palm-trees, Yāḡū, *op. cit.*, iii. 102; quoting Hamdāni [Sīfat, p. 53; see below], *Tādī*, loc. cit.). Among the features common to the various ramifications of the traditions about the island, which, taken together, form an important factor in the varying identifications, is the fact that according to the *Periplus* 30 there are very many snakes on the island of Dioscorides and the Egyptian story makes the royal genius of the magic islands assume the form of a snake. Pliny, vi. 169 (also Mela, iii. 8) mentions among the people of Trogydite the *Panchari*, *quos Ophiophages vocant, serpentibus vesci aduerti*, a people who bore the same name as the inhabitants of Panchaia. In the legendary description of the two islands adjoining Panchaia (Diodorus, v. 41 sq.) the reference is to the islands near Sokotra, similar to Agatharchides' statement on the *ἄρου ὑδάριονες*. Hommel, who made use of the Greek idea of Panchaia for his *Die Insel der Seligen* (Munich 1901), which deals with the history of the idea of the island of the blessed in the different literatures of antiquity (p. 1, 14 sq., 32) identified (p. 15) "the small rocky island 150 feet high" described by Schweinfurth with the little island 7 stadia from Panchaia described by Diodorus. As Panchaia as a legendary duplicate of the island of Dioscorides gradually became separated from the latter in the geography of the ancients, it is no wonder that many writers like Diodorus and Pliny mention them as two separate islands. The identification recommended by Glaser, *Skizze*, p. 337, 432; *Weihrauchland*, p. 11 and Bent, *op. cit.*, p. 345 of Sokotra with the *Iskuduru* of the Naḫṣ-i Rustam inscription of Darius has nothing to recommend it, but a similarity of name. There is no real evidence that the *Isur* (often read *to-Nuter* "land of the gods") of the ancient Egyptian monuments, a name of the land of Punt, rich in spices and usually referred to South Arabia, can refer to Sokotra, as Mariette Bey (in Bent, *op. cit.*, p. 343) thought, although it may be granted that the island was already known to the ancient Egyptians as a land of frankincense. The identification of Sokotra with *Yakchia* in

Pausanias, vi. 26, 9 (Hommel, *Grundriss [Ethnologie]*, Munich 1926, p. 650), lacks any sound foundation.

Among the names in literature for the legendary fortunate frankincense island, Hommel (*op. cit.*) included also the island of the Phaeaceans of the Odyssey and (p. 23 *sq.*) the land of the blessed in the x. and xi. book of the Babylonian epic of Gilgamesh. While very much in what he says about the part played by Sokotrā as an island of Paradise in the very earliest mythology among Babylonians and Egyptians (see his *Glossen und Exkurse*, iv., *Neue kirchl. Zeits.*, II, 1892, p. 881 *sqq.*, 899 *sq.*) can only be described as fanciful hypothesis, including his etymology identifying the Egyptian name of the "Island of the Spirits", 'i per-ne-ke with *ḥabak*, from *ḥab-i-ka*), his suggestion of the similarity of the real name of the island of the Phaeaceans *Ἐξῆρα* to *Shihir* [q. v.] (Sāhil), the old name of the Hadramawt frankincense coast is worthy of serious consideration, especially as *Ἐξῆρα* cannot be satisfactorily explained as regards form and meaning from the Greek. Continuing this line of research, I have sought in Pauly Wissowa, *R. E.*, s. v. *SABA*, col. 1405 *sqq.* by quoting the etymological meaning of the name Sokotrā, which is in keeping with the fundamental idea of the poetical conception of the island of the Phaeaceans, and to the agreement in substance of almost every sentence of the Egyptian fairy story, of the sailor thrown upon the island of the spirits and the mythical matter of the adventure of Odysseus on the island of the Phaeaceans, to make it probable that Sokotrā was the real prototype which supplied the local features of the epic idea of the island of the Phaeaceans, later developed by legend and poetry, which, as is well known, shows Oriental colouring.

Among Arab geographers, al-Hamdānī, *Sifat Djazīrat al-'Arab* (ed. D. H. Müller, Leiden 1884, p. 53) gives brief notes on the nationality and religion of the people of Sokotrā, saying that on the island there are representatives of all the Mahra tribes and the number of men able to bear arms is about 10,000; they were Christians; Kisrā (Kharaw) transplanted a number of Byzantines there; Mahra tribes then settled beside them, of whom some adopted Christianity. Vākūt, *Mu'jam* (ed. Wüstenfeld), III, 102, 3 gives a similar story (word for word the same as Hamdānī, *op. cit.*, p. 52, 45—53, 1; cf. al-Kazwīnī, *Kosmographie*, ed. Wüstenfeld, Göttingen 1848, II, 54), but, agreeing with the opinion held by the people of 'Aden, that no Byzantines came to the island, he considers the people of Sokotrā to be Greeks of the time of Alexander the Great, who lived without marrying after the introduction of Christianity and died out, whereupon Mahra tribes took their places. With these statements on the origin of the people of the island may be compared the older story in the *Periplus* (30) that the few inhabitants of the island were immigrants, a mixture of Arabs, Indians and Greeks who came there to trade, the similar statement in Diodoros v. 42, that on the island of Panchaia there were Indians, Scythians and Cretans (Greeks) in addition to the natives and what Agatharchides (103) says about the sea-trade to the *νῆσος ῥιζαίμωνος*, Persia, Caramania and the rest of the adjoining mainland. At the present day Sokotrā still has a mixed population, which on the north coast includes besides native Arabs,

Somālī, Swāhili and Indian elements. According to the above mentioned passage in Cosmos, who rightly traces the Hellenism of Sokotrā to colonisation by the Ptolemies, the Greeks had retained their language and were Christians, who got their priests from Persia. Glaser's suggestion, *Silber*, p. 184 (138) that one or other of the three Greek cities of Arabia, Arcthusa, Larisa, Chalkis, mentioned by Pliny, *Nat. Hist.*, vi. 159, should be sought on Sokotrā is without foundation. Idrisi, who knew about the traffic by sea between Sokotrā and the Mahra coast, connects (I, 48, Jaubert, Paris 1836) the story of Alexander's campaign into Arabia on account of its wealth of frankincense, with Sokotrā, which was colonised with Greeks on the advice of Aristotle on account of the excellent aloes growing there (similarly in *Ta'aj al-'Arās*, *loc. cit.*). The Christianisation of the island may have been effected by the Abyssinian rulers who conquered Arabia for a time. On the notices of Christianity there in Africanus, Theodoret, al-Mas'ūdī, Abu 'l-Fida' and his contemporary Marco Polo, see Bent, *op. cit.*, p. 344. When Persian civilisation gained the upper hand in Arabia and after it Islām, Christianity was gradually driven out of the island. The final disappearance of the church was comparatively late; the last traces are found in the beginning of the xviii. century (according to the Carmelite monk Vincenzo; cf. Bent, p. 355).

It is significant for the conditions of navigation to Sokotrā that al-Hamdānī, *op. cit.* (cf. Vākūt, *op. cit.*), says that one who sails from 'Aden to the land of al-Zindj (opposite the Zanzibar coast, the land of the Sawāhili) first shapes his course for 'Omān and leaves the island of Sokotrā on his right and then sails around it into the sea of al-Zindj, until he has the island behind him. Sprenger (p. 87) rightly observes that this circuit is caused by the prevalence of south winds on the East African coast, and not as al-Hamdānī, *op. cit.*, p. 52, thought, by the fact that the Gulf of 'Aden is enclosed by a barrier of the seas of al-Zindj (on this see also Vākūt, *op. cit.*). According to the *Kānūn* and the *Ta'aj*, *loc. cit.*, Sokotrā is on the left on the voyage from al-Zindj. He who wishes to go to Sokotrā from 'Aden sails to Kās al-Fartak along the Arabian coast (Sprenger, *op. cit.*). This may be the reason why, in ancient times, the position of the island was defined with respect to this cape, as in the *Periplus*, 30, according to which the island lay between Syagros and the African cape Aromata (Cape Guardafui) but nearer the former (in reality the contrary is true) and in Pliny, vi. 153, who gives the distance of Sokotrā from the "promontorium Syagros" fairly correctly at 280 miles. The direction of the sailing route eastwards round the island may explain the fact that it seems to be placed in Ptolemy's map too far west of the promontory of Syagros. The calculation given in the *Ta'aj*, *loc. cit.*, is based on a direct voyage, according to which Sokotrā is three days and nights distant from Mokha. The length of the island is given too long in Ptolemy (cf. Sprenger, *op. cit.*) and also in al-Hamdānī, at 80 parasangs; it is barely a third of that.

Among the statements in Greek literature about the island of Sokotrā which have been confirmed and explained by modern research is that of the *Periplus* 30, that the few inhabitants of the island are to be found on the north side; even at the

present day, the largest and most numerous settlements, including the capital Tamarida ("date-town"; the native name is: Hadibo) are on the north coast; the west coast is less accessible and the other coasts are also thinly populated. The white cattle mentioned in Agatharchides (103) whose cows have no horns are explained as zebu (Ritter, *op. cit.*, xii., p. 249; cf. Bent, *op. cit.*, p. 367 for humpless cows).

The first more accurate information about Sokoträ was obtained on the voyage of the ship *Palinurus* from the South Arabian coast to the island in 1834 under Captain Haines, who was sent by the East Indian Company to survey the coast and collect material for a chart. Lt. J. R. Wellsted produced the first topographical account of the interior, which was naturally very incomplete. He published the geographical and scientific results of his exploration of the island in his *Report on the Island of Socotra*, *J. A. S. B.*, iv., 1835, p. 138 *sqq.*, *Memoir on the Island of Socotra*, *J. R. G. S.*, v., London 1835, p. 129 *sqq.* and in shorter form in *Travels to the City of the Caliphs*, ii., London 1840. The island, which as even this first report showed, seemed a promising field for the natural historian, was studied from the botanical, zoological, and geological point of view by J. B. Balfour (*On the Island of Socotra*, *Rept. Brit. Assoc. for the Advancement of Science*, 1881, p. 486 *sqq.*); and the petrographical material brought back by him was published by T. G. Bonney, *On a Collection of Rock Specimens from the Island of Socotra*, *Philos. Transactions of the Roy. Soc.*, clxiv., London 1883, p. 273 *sqq.* In 1881 the Riebeck expedition, one of its members being G. Schweinfurth (see *Das Volk von Sokotra*, *Unsere Zeit*, 1813, his lecture of 1883 already mentioned and his *Erinnerungen* [cf. p. 477^a]), explored the country round Tamarida for about five weeks (cf. the picture in *Western. Monatsh.*, xxxv., p. 33, and p. 41 and 49) and the adjoining parts of the Hageher hills. Schweinfurth's botanical notes were worked up by Balfour (cf. his *Botany of Socotra*, *Transactions of the Royal Society of Edinburgh*, xxxi., 1888), and his geological by Sauer (cf. *Zeitschr. d. deutschen geol. Gesellsch.*, xl, 1888, p. 138 *sqq.*). In the winter of 1897 Th. Bent spent two months on the island with his wife, devoting his observations mainly to archaeology. His *Travels*, published by his wife after his death, includes a good map of Sokoträ. His companion, the zoologist Bennett was, we believe, the first to ascend the summit of Hageher (being followed in 1899 by the two Viennese, O. Simony and F. Kossmat). In November 1898, the Vienna Academy of Sciences sent out an expedition on the Swedish steamer *Gottfried*, to investigate the archaeology, ethnology and natural history of South Arabia and Sokoträ. The expedition (Landberg, D. H. Müller, Simony, Kossmat, Jahn and Panlay) were joined in 'Aden by W. A. Bury and H. O. Forbes and W. R. Ogilvie-Grant, who were to collect botanical and zoological specimens for the Liverpool and British Museum. After the unexpected break-down of the expedition in South Arabia, the majority of the Vienna explorers went to Sokoträ in January 1899 where they spent two months, investigating the hitherto insufficiently known south and west of the island; in January they also went to Semha and 'Abd al-Kürî. The scientific results were published in vol. lxi. of

the *Denkschriften der Akad. Wien, math.-naturwiss. Klasse*, 1907 (see *Bibliography*) and in H. O. Forbes, *The Natural History of Socotra and 'Abd el-Kürî*, Liverpool 1903. D. H. Müller published specimens of the language taken down from the lips of natives in *Die Mehr- und Sokotri Sprache*, *Schriften der sudarabischen Expedition*, *Ak. Wien*, vol. iv., vi., vii., 1902, 1905 and 1907. Bent gives a small vocabulary (*op. cit.*, p. 440 *sqq.*). These researches filled numerous gaps in our knowledge of Sokoträ and corrected many old mistakes. For example, the old doubts about the occurrence of frankincense on Sokoträ were removed and Ritter's statement (*op. cit.*, xii. 362) shown to be wrong, that Theophrastus' verdict on the high quality of the frankincense of this island is refuted by Juba who said that no frankincense is found on the island (Pliny, xii. 32). Theophrastus is thus confirmed (cf. previously Glaser, *Stäbe*, p. 183), and Bent also speaks (*op. cit.*, 344) of three excellent kinds of frankincense, several varieties of myrrh etc., and (p. 380 *sqq.*) of valleys of frankincense, myrrh and other spices, while Glaser, *Weihrauchland*, p. 4, had said "Sokoträ has no myrrh". Ch. I. Cruttenden's statement (*Narrative of a Journey from Mokha to San'a*, *J. R. G. S.*, viii., 1838, p. 278 *sq.*) about the occurrence of the frankincense tree in Sokoträ was obscure because he called it *zabbur* or *zabbur* but this (*zabur* [q.v.], *zabr*) means "aloe". Diodorus' remark (see above, p. 477^b) about the quantity of frankincense on Panchala thus becomes intelligible. According to the authorities, Sokoträ has only two kinds of frankincense trees, *Bortellia Socotrina* and *Bortellia Ameyri* Balfour *fl.* (For details of the localities where they are found, see Vierhapper in the article quoted below in the *Bibliography*, p. 374 *sq.* of the collected volume already mentioned). The Sokoträn name for frankincense is *shere hom di-jäher*. Al-Hamdānī speaks (*op. cit.*, p. 51; 53) of the Sokoträn species of myrrh as does Muḥaddasi, *B.G.A.*, iii. 98 (cf. Bent, *op. cit.*, p. 380, 384). Al-Hamdānī reports that the aloe is plentiful (p. 53); the Sokoträn kind is said to be the best of all and was a special article of commerce (cf. also *Kāmus* and *Täff*, s.v.; on similar testimony of al-Nuwairi, Ibn Sina, etc., cf. E. Wiedemann, *Beiträge*, *S.B.F.M.S. Erl.*, 1916, xlviii., p. 20). The native name for the aloe *socotrina* according to Wellsted is *hayof*, more correctly *tuif* in Bent, p. 381; *tuif* in Glaser, *Weihrauchland*, p. 4, i. e. *tuif* according to D. H. Müller, the Arabic *rubal*. Bent saw a very fine quality in great quantities (p. 344, 377; cf. Wellsted, *Report*, p. 143; etc.). On localities where the aloe *Perryi* Bak. grows, see Vierhapper, *op. cit.*, p. 336; on the method of getting the resin Bent, p. 381 (cf. Wiedemann from al-Nuwairi, *op. cit.*). Aloes are still exported from Sokoträ, although not to so great an extent as before (Bent, *op. cit.*; cf. Wellsted, *op. cit.*, p. 143; Schweinfurth, *op. cit.*, p. 42; A. Grohmann, *Sudarabien als Wirtschaftsgebiet*, Vienna 1922, p. 163 *sq.*; cf. also C. Niebuhr, *Reisebeschreibung von Arabien*, Copenhagen 1772, p. 284). — The finding on Sokoträ of the dragon-tree, *Draco Kinnabari*, from the resin of which dragon's blood is obtained, as is mentioned by Pliny (13, 7; 33, 115 *sq.*), recalls the testimony of the *Periplus*, p. 30, that on the island, the so-called Indian dragon's blood (καυκάριον τε λεγόμενον ὕδρον) flourishes, which is collected on the trees in the

form of tears. On the dragon's blood in Sokoträ, which is mentioned for example by al-Hamdäni, p. 53 (also the *Kämūs* and *Täǧī*), see Wellsted, *Report*, p. 144; Cruttenden, *op. cit.*; Schweinfurth, p. 624, 38; Bent, p. 344, 379, 384 (see the picture at p. 387); Glaser, *Wehrtauchland*, p. 4; especially accurate in Vierhapper, p. 336 *sqq.* with illustration. The Arabic name for the resin is *dam al-ahwāl* (*ahwāl*, see *Kämūs*); we also have (vulgar, according to Sprenger, p. 88) *šāfir* (*al-šāfir al-makki* is given in the *Täǧī*), the Sokoträn *edah* (*aida*); Wellsted, *loc. cit.* [who gives *dam khaheil* as the Arabic name]; Bent, p. 379; cf. al-Hamdäni, p. 53), i. e. *idiḥak* in Müller and al-Hamdäni, vi., p. 34 *sq.*; on further names in Nuwairi, see Wiedemann, *op. cit.*, p. 22. The description "tear of an Indian tree" from Abū Ḥanifa al-Dinawari (*ibid.*) recalls the *δάκρυον* of the *Periplus* (see above) and the *δάκρυον* of the frankincense on Panchala in Diodorus, v. 21 (cf. Dioscorides, i. 23). On the gathering of the resin, see Bent, p. 381 *sq.* The export of dragon's blood from Sokoträ (on which see also the *Kämūs* and the *Täǧī*) has decreased very much in modern times, as it is found also in India and Hadramawt (see the summary of the earlier notices in Grohmann, *op. cit.*, p. 121).

The population of Sokoträ is estimated at 13,000 Muhammadans. The people along the coast on the north devote some attention to agriculture; the *Periplus*, 30, records that there is no corn and no wine-grapes on the island; Wellsted, *op. cit.*, p. 146 and Schweinfurth, *op. cit.*, p. 620 mention only wild grapes on Sokoträ. With Hamdäni's story (p. 53) that 'anbar is washed upon the coast of Sokoträ, may be compared the account of the gathering of 'anbar in al-Mas'ūdī and in Marco Polo (see Bent p. 344) (on amber on Sokoträ cf. Wellsted, *op. cit.*, p. 160; D. H. Müller, *op. cit.*, vi., 109 *sq.*). Of the three towns mentioned in the *Täǧī*, Minša (described as the residence of the king of al-Zindj) can be found on the maps (Minsha in Bent). Bent describes the customs of the natives (p. 347 *sqq.*). That trade relations existed in early times is evident from the scanty reference in classical authors (*Periplus* and Agatharchides; see above) and the references in the *Kämūs* and *Täǧī*. Bent (p. 346, 357) mentions that Sokoträn butter, now almost the only article of export, is esteemed in the markets of the Arabian coast (Maskat) and East Africa (Zanzibar). We have already mentioned that the export of spices has declined. One obstacle to traffic is the fact that the island, which is exposed to the monsoons, has no bay which would form a safe anchorage all the year round. For this reason and in consequence of its general situation, Sokoträ is shut off from the main traffic-routes of the world and is only used for provisioning by Indian traders and whale-fishers. Tamarida has still the best roadstead; east of it is Bender Dešša. The east of the island is better watered and has a more vigorous vegetation. It is to this part that the statement refers in the *Periplus*, that the island is rich in water and has (perennial) rivers. In the *Täǧī* also the existence of streams is mentioned. Ruins in the east, e.g. at Räs Momi show that there was once a higher culture here.

The Sokoträ language occupies a singular position, a result of the ethnological mixture in the population and is not easy to fit into a linguistic

genealogical table. The statement of Philostorgius (Glaser, *Wehrtauchland*, p. 25) that the people of Sokoträ speak Syriac is due to an intelligible misunderstanding, and has nothing to do with the fact that Sokoträ has phonetical analogies with Aramaic. It is connected on the one hand with the two other Mahra languages Mehri and Shihauri and on the other with the Yemen Arabic but is also markedly different from both. Ibn al-Mudjāwir says that the Mahra used to live in Sokoträ and had a language of their own, which no foreigner would understand (Sprenger, *op. cit.*, p. 91). The contacts with Ethiopic are noteworthy (cf. Hommel, *Grundriss*, p. 153; Glaser, *Wehrtauchland*, p. 18). Glaser's suggestions, already mentioned (p. 477^b) according to which the language is *Habashi (*op. cit.*, p. 12), a hypothesis first put forward by him, which means to him sometimes a single language and sometimes a group of languages, are untenable. He even mentions the possibility (p. 24) that the Minaean, Sabaeans and Katabanians may be descendants of the Phoenicians and explains the Habashi language alleged to survive in Sokoträ as a direct descendant of Phoenician. The language of the Habashat is quite unknown to us. D. H. Müller's explanation that Mehri and Sokoträ are descendants of the old Minaean Sabaeans, attacked by Glaser (p. 18) or that Sokoträ has evolved from Mehri (*op. cit.*, vi., p. 372) certainly requires modification. There is a wealth of linguistic material in M. Bittner's monographs: *Charakteristik der Sprache der Insel Sokotra*, in *Ann. Wien*, 1918, N^o. viii.; *Vorstudien zur Grammatik und zum Wörterbuch der Sokoträ-Sprache*, I., S. B. A. K., Wien, cxxxiii, 4, 193; II., *ibid.*, cxxxvi, 4, 1918; (also studies on Mehri and Shihauri, *ibid.*, cxxxii, 1909 *sqq.* [in greater detail in his *Charakteristik*, p. 48, note 2]). He characterises Sokoträ as a sister of the two other Mahra languages (cf. D. H. Müller, *op. cit.*, vi., p. x.). Sokoträ, as spoken by the Beduins, who have lived among the hills from early times, may be the form in which the dialect of the original inhabitants has survived, which, probably coming from South Arabia, was related to the contemporary forms of Mehri and Shihauri and formed a linguistic group with these alongside of which may be placed the Minaean-Sabaeans as a sister language in South Arabia. The combination of original elements, of the strictly Sokoträn with the Mehri and Arabic to form a single language, may also however be interpreted as an isolated trace of the migration of an old language of South Arabia to Abyssinia.

Small fragments of inscriptions had already been noticed by Wellsted; Riebeck and Schweinfurth (in his diary) had copied some (those of Eriqah) (see Glaser, *Seizer*, p. 184). A rock inscription at Kalansiya was said by Bent (p. 351) to be late Himyar or Ethiopic; the reproduction of his copy (Pl. (v. of the "Appendices") clearly shows Sabaeans forms of letters. The script of the graffiti at Eriqah, which Riebeck had thought Greek is, according to Bent (p. 354), Ethiopic. The camel-brands which he copied (also reproduced in the Appendix) are obviously Sabaeans.

Geographically Sokoträ belongs to North East Africa, but politically it has always gone with Arabia. In this respect the island has changed little in the course of centuries (Bent, p. 345, 392). The linguistic conditions suggest close connections

with Mahra. In the time of the *Periplus* (see SABA, p. 9) it was dependent on the king of Hadramawt, the lord of the land of frankincense (see above, p. 496b). Sabothia, his capital (= Shabwat) was wrongly explained by C. Landberg, *Arabica*, Leiden 1898, v., p. 239, as Saba in the Wadi Djerdan; M. Hartmann's assertion (*Die arabische Frage*, in *Der islamische Orient*, ii., Berlin 1900, p. 434): "The statement in § 31 of the *Periplus* that Sokoträ, like Azania, is subject to Charibael is significant", is incorrect as the unambiguous language of the *Periplus* shows in what respect the dependence of Azania on Charibael is compared with the dependence of Sokoträ on Eleazos. C. Müller was also wrong in his note on Sokoträ (map xi. and xiii. of his *Atlas to the Geographi Graeci Minores*): "Charibaeli subjecta". On the relation of Eleazos to the Sabaeo-Himyär kingdom, it may be deduced from the *Periplus* that Eleazos reigned independently in Hadramawt, the kingdom adjoining Saba. In modern times it has again been erroneously deduced from the statements of Pliny, vi. 154; xii. 32, supported by an erroneous textual emendation, Saba for Saba in Pliny (cf. SABA, p. 6) that Hadramawt, which according to the inscriptions of Saba was independent, soon lost its independence; for in Pliny the Atramitae (i. e. Hadramütiae) are described as a province of the Sabaeans. The truth is just the reverse. From the time of Juba, Hadramawt was liberated from Sabaeo suzerainty and in the *Periplus* Hadramawt is under its own king, who acted independently, on equality with the king of the Himyars (cf. the article SABA in R. E., col. 1475). Eleazos had, according to *Periplus* 31, farmed out the revenues of the island and placed a garrison on it, perhaps against the Himyars (Glaser, *Skizze*, p. 186).

Arab merchants are still, as in the days of the *Periplus*, busy on Sokoträ and also in Zanzibar. Yāqūt like the *Periplus*, talks of Arab predominance in the island, and we can say the island was under the influence of Arabian culture down to the sixteenth century. The island was little known down to modern times on account of its position and lack of harbours. In the middle ages, it was notorious as a nest of pirates (cf. also Ibn Battūta quoted in Bent, p. 344). The first contact with Europe was the Portuguese occupation in 1507 but this was not permanent. The Imām of Maskat for a long period extended his suzerainty over the island and later the Sultān of Kishm. In the xviii century Christian missionaries were working there. At the beginning of the sixteenth century the Wahhābī movement swept over the peaceful island also. As late as 1834, E. Roberts (*Embassy to the Eastern Courts* etc., New York, 1837, p. 361) agreeing with Wellsted, *Travels*, i., p. 51, testifies to the political and economic dependence of Sokoträ on the Imām of 'Omān. In 1835 English influence was felt for a short period when the East India Company erected a coaling-station here. This was abandoned when the English occupied 'Aden in 1838. In 1876 for political reasons, English interest in the island was revived and the British government made a treaty with the amir of the island, the Sultān of Kishm, securing it as a sphere of influence. The Sultān living on the island was a relative of the Sultān of Kishm. In 1886, Sokoträ became an English protectorate as a dependency of 'Aden and belongs to the Indian province of Bombay.

Bibliography: The names of the principal books and pamphlets (Wellsted, Bent, Schweinfath, D. H. Müller, Glaser, Bittner, Kossmat, Forbes) are, along with the scattered references in the Arabic geographers and lexicons, given with detailed references in the text of the article. There is also for the earliest information: Yule, *Mario Polo*, 1903, p. 406 sq.; for the Portuguese period *Commentarios de grande Afonso d'Albuquerque* [1557]; (*Commentaries... translated* by W. de G. Birch, London 1875—1884, passim; for the period at the beginning of the xviii century, the account of the French expedition to Yemen in 1708 in *Viaggio nell' Arabia Felice*, Venice 1721 (J. de la Rocque, *Voyage de l'Arabie heureuse*, Paris 1716, p. 222 sq.). A good bibliography down to his day is given by J. Jackson, *Socotra, Notes bibliographiques*, Paris 1892. We may also mention the section Νῆκος σόδαρον of the article SABA in Pauly-Wissowa, R. E., s. v., col. 1402 sq., and in addition to the purely geological literature: F. Kossmat, *Vorläufiger Bericht der geologischen Untersuchungen in Sokotra*, S. B. Ak. Wien, mathem.-naturw. Kl., cxxxix. 9, 1894, p. 73 sq.; H. O. Forbes, *The English Expedition to Socotra*, in *The Geogr. Journal*, London 1899, xiii. 6, p. 633 sq.; I. W. Gregory, *A Note on the Geology of Socotra*, in *Geol. Magazine*, London 1899, vol. vi., p. 529 sq. — Of the already mentioned collected volume lxxi. of the *Denkschriften Ak. Wien* (presented 1901—1906) the following articles deal with Sokoträ, F. Kossmat, *Geologie der Insel Sokotra*, p. 1 sq. (with map, the topography of which is based on the Admiralty chart founded on Haines' and Wellsted's observations and Balfour's map, but the orography of which is based on the author's own observations); A. Pellkn, *Petrographische Untersuchungen*, p. 63 sq.; L. Steiner, *Bestimmung der auf Sokotra... gefundenen Flechten*, p. 93 sq.; F. Kohl, *Hymenopteren auf Sokotra*, p. 123 sq.; F. Vierhapper, *Beiträge zur Kenntnis der Flora Südarabien und der Inseln Sokotra, Semha und Abd el-Kuri*, p. 321 sq. In this connection may be mentioned Wettstein in *Vegetationbilder*, ser. 3, part v., Jena 1906. The article SOKOTRÄ in the *Encyclopaedia Britannica*, ed. 11, 1911, with special reference to physical, geological, climatological, zoological and botanical conditions is based for the most part on Forbes. — *The Pilot of the Gulf of Aden* contains accurate geographical details (on it and on A. Jahn's *Itinerary*, see Kossmat, *op. cit.*, p. 9). Finally see also the article MAHRA.

(J. TEATICH)

ŞOLAK was the name, in the old military organisation of the Ottoman Empire, of the archers of the Sultān's bodyguard. The word şolak is an old Turkish word meaning "left-handed". The relation of this meaning to that of archer is not quite clear. The şolaks belonged to the Janissaries, of which they formed four *orta*'s (60th-63rd), each of 100 men under the command of a Şolak Başlı, and two lieutenants (*rikab şolaks*). They were, however, used exclusively as bodyguards, a duty they shared with the *şahi*'s [q. v.]. They had the same uniform as the Janissaries, except that they wore a cap (*şak*) with a long plume on the top. The şolaks always went on foot and surrounded the sovereign whom they also accompanied to war.

(J. H. KRAMER)

SOLAKZÂDE, an Ottoman historian. His real name was Mehmed and his *mablağ* Hemdani. He seems to have been the son of a *çolak* and was born in Istanbul. Not much is known of his life. He probably adopted an official career. He is said to have died in 1068 (1657/1658). On account of his musical abilities he was called *nişâhî* (also *nişâhîlî*) from *nişâh*, *nişâhîlî* (a kind of shepherd's pipe); cf. Ewliya, *Siyâhatnâme*, I, 446, 509, 636 (passages, of which the second at least must refer to the historian).

Mehmed Solakzâde was the author of a condensed history of the Ottoman empire, which he wrote during the reign of Sultan Mehmed IV. The existing manuscripts as a rule come down to 1054. The work was originally called *Fihrist-i Şâhân*. It had a wide circulation on account of its succinct and very lucid style and is still a popular book. It cannot however claim to be valuable as an independent historical source, except for the reign of Murâd IV. Continuations were made by Sirri Efendi (d. 1142 = 1729) and by Mamî Pasha. The book was printed at Istanbul in 1297 (1880), 6 + 12 + 773 p., 8°. An earlier lithographed edition (1271 = 1854) was never completed. On the manuscripts of the work see F. Babinger, *Die Geschichtsschreiber der Osmanen* (Leipzig 1927), p. 203 ff.

SOLIMAN. [See SULAIMÂN.]

SÖMÄI, a Kurdish district in Persia near the Turkish frontier. In Kurdish, *sömäi* means "view" (cf. in Persian *süma*, "terminus, finis, scopus", Vullers, II, 352). To the north Sömäi is separated from the basin of the Zola-çai (Shepirin, Salmâs, q.v.) by the mountains of Bere-öt, Undjalk and Aghwân; on the east the canton of Anzal separates it from Lake Urmia; to the south-east lies the Shakh-Bârd range, to the south the canton of Brâdost; to the S.W. the peak of Kotül; towards the west the ravine of Bânegâ runs into the interior of Turkish territory (the Turkish cantons of Bâsîrgâ and Gewer). Sömäi is sometimes used to include the cantons of Shepirin and Anzal-i Bêlâ.

Sömäi is watered by the northern tributaries of the Nâzu-çai, several of which drain the main valley and one (Hasan, Berdük) comes from the ravine of Bânegâ. They unite east of Berdük, flow towards Brâdost, where they are joined by the tributary from the valley of Bâsîrgâ and then, joining the Nâzu-çai, enter the lake north-east of the plain of Urmia (q.v.).

According to the *Sharaf-nâme*, Sömäi and Brâdost were at first governed by scions of the Kurd

Hasanöya dynasty (Hasanwâliids) who had taken refuge in the north after the defeat which the Bayid Shams al-Dawla had inflicted in 405 (1014) on Illak b. Bâdî (q.v.). At the beginning of the xvth century, the *Sharaf-nâme* mentions a member of the family, Ghâzi-Khân b. Sulâm Ahmad, who for his exploits was granted by Shâh Ismâ'il the cantons of Sömäi, Tergewer and Döl but later went over to Sulâm Selim. His descendants, who were under the wall of Wân, broke up into various branches. The last mir of Sömäi mentioned by the *Sharaf-nâme* is Awliya Beg (from 985 = 1577).

When in 1065 (1654) Ewliya Çelebi (q.v.) visited the country between Wân and Urmia, the strong castle of Ghâzi-Khân still stood on a cliff commanding the plain of Urmia, while the western part of Sömäi was occupied by the Pinyânish tribe (which now lives in Turkish territory in the kâdes of Gewer and Alhak). The lord of Berdük was called Çolak ("the one-armed"). Mir 'Aiz; the strong castle stood some distance below (*ast-aghâ*) Kâfâ-i Pinyânish, which may be identified with Bânegâ (3—4 miles above Berdük).

It is not very clear whether the mirs of Sömäi who, shortly after the visit of Ewliya Çelebi, erected several curious monuments were of the same tribe of Pinyânish. At Berdük is a mosque of white and black stone and a cemetery with the tomb of Nûzar Beg, son of Ghâzi Beg (d. 1071 = 1660). His son Sulâm Takî Sulâm, whose title shows that he had consolidated the power — for *cafi-kullî* means a hief for which one has received investiture — built the very imposing and picturesque castle near Bânegâ. A reconstruction of the old Kâfâ-i Pinyânish probably also dates from his time (1078 = 1667). On a rock at the entrance to the tower can still be seen the remains of a rudely carved inscription *shih mülk — Sulâm Murâd bin Sulâm* — (?). Below the fort is an "Mâdât-Khânâ built by a certain Zâl-i 'Adil (1103 = 1691) and a mosque. The style of these buildings recalls that of the castle of Mahmûdi (Khothâb) east of Wân (cf. Bânder, p. 126—128). — In 1136 (1736) the hereditary chief of the sanjak of Sömäi, Khâtim Khân, as a reward for his services, received from the Ottoman government the adjacent cantons of Salmâs (q.v.), Kerdâzân (?), Karabâgh and Anzal (cf. v. Hammer, *G. O. D.*, IV, 211).

In the sixth century the Shakhâb (q.v.), encouraged by the Persians gradually occupied Sömäi. According to Dürwâsh Pasha, Bânegâ was destroyed by 'Alî Aghâ-Shakhâb (about 1257 = 1841).

In 1851 Çirîkow was still able to speak of a "hereditary ruler of Sömäi", Parrow Khân, who had also seized Brâdost. In 1893 the Shakhâb killed at Gunbad the last representative of the family of mirs, a certain Kîlû-Khân.

Among the antiquities of Sömäi may be mentioned: 1. the citadel of Zanju-Kâfâ (between Sömäi and Salmâs, q.v.) which must correspond to the "Shadlâdi" building of Kâfâ-yârlî, mentioned by Ewliya Çelebi (IV, 281) the name of which (*altas Farhâd-kaya*) is found in Blau, *Petersen. Mitt.*, 1863, p. 201—210; 2. a chamber carved out of the rock on Mount Kotül; 3. similar chambers where the Nâzu-çai enters the plain of Urmia. All these monuments must date from the Vannic period (cf. Minorsky, *Kelashin*, in the *Zapiski*, 1917, XXIV, p. 190).

SOMALILAND, a large country in East Africa inhabited by the Somali.

a) *Geographical outline.* Somaliland comprises the borders of the Ethiopian plateau declining eastward to the Gulf of Aden and southward to the Indian Ocean.

In the basin of the Gulf of Aden in front of the eastern edge of the plateau at a short distance from the shore there is a range of rocky and barren hills (the highest elevation of the range seems to be about 6,000 feet); among them the characteristic Būr Nāso Hablūd "girl's breasts hills" and the Hadattimo. This range running in a line almost parallel to the coast of the Gulf of Aden drops into the Indian Ocean at the promontories of Guardafui (Ras 'Asir) and Hāfūn. Beyond this range of hills it rises gradually to the Ethiopian plateau, which further is in its southern portion furrowed by the upper valleys of the Shabilla and Djub rivers. The country, owing to its features, is divided by the natives into three regions: the *guban* (literally: burnt land) that is the region of the sand-banks and dunes on the coast with a torrid climate, only fit for pasturage for a few months during and after the rains; the *āgo* (literally: upper land) that is the region of the aforesaid hills with a more temperate climate, but still of little value for agricultural purposes; the region of the *teg* ("torrents") that is the valley between the hills and the plateau, into which flow the streams springing from both sides of the depression and form thus northward the Tog Dīr "the deep torrent" and southwards the Tog Nūgāl. This is the best zone of Northern Somaliland particularly fit for cattle and horse-rearing. Even more to the interior, westwards of the *teg* zone, the Somali portion of the Ethiopian plateau is inhabited by the Ogaḍen, a tribe whose name probably means etymologically "those of the plateau". On the side of the Indian Ocean, however, the country is very different from the northern regions; the plateau in its southern portion does not fall rapidly towards the sea but slopes gradually and its furthest spurs are 200—300 miles from the coast; then its waters do not form short torrents but great rivers which flow, not only in some seasons, but throughout the whole year although with a variable level.

The Somali natives distinguish here four regions, which are found in the following order by the traveller going from the coast of the Ocean to the interior: firstly the movable sandbanks (Somali: *ḥaḥal*) on the shore; then the hills or short plains of white and hardly consolidated sand (Somali: *'arra 'al* "white land"); next the stony red sand covered with jungle, in the most part of acacia-trees (Somali: *'arra gūlad* "red land"); then along the rivers the strip of alluvial ground (Somali: *'arra mād* "black land"), comparatively rich in fertile humus, a country particularly suitable for agriculture.

In the region between the Djub and the great lower bend of the Shabilla there is, after the aforesaid "black land", another vast zone of "red land", called by the natives *ādy*, which is the most rich in pasturages in Southern Somaliland. Across the *ādy* from North East to South West runs a range of granitic hills which from the borders of the Shabilla's basin reaches at Būr Meidāḥ to the borders of Djub's valley. Beyond the *ādy*, even more in the inland, are found the "black land" regions of Būr Hakkaba and the Baidowa plateau (11,000 feet). Thence the ground rises gradually as far as the zone of Bokkol wells near the boundaries of Ogaḍen.

River system. The high flood of both Somali great rivers and the average volume of their waters depend closely on the rains falling on Ethiopian plateau and are only very slightly influenced by local rains of Somaliland. High floods take place twice in the year according to the light and heavy rainy seasons in southern Abyssinia. This is a favourable circumstance to agriculture, because Abyssinian heavy rains fall during the months June 15—September 15, which are on the contrary the most severe dry seasons in Somaliland; and in this way the high flood and sometimes the overflowing of the rivers can be considered, at least by some tribes, as a compensation for the damages of the Somali summer.

The river known as Juba in European maps and as Djub by the Arabs is called by the Somali *Webi Gūmā*, which is really a double name, as *gūmā* or *gūnd* means precisely river in Galla Borana dialects and in some Sidama languages (the name is grammatically a plural according to the common rule of Kuschitic languages that all the names of liquid substances may be used only as plural).

The other Somali river, called Shebelle in European maps, is known by the neighbouring natives as *Webi-ga* "the river". The name Shebelle is given to this river probably because the Ogaḍen natives designated it to the first travellers coming from the coast of the Gulf of Aden as *Webi Shabilla* "the river of the Shabilla region" that is the river passing through Shabilla, the most wealthy and best known country crossed by this river in its upper valley. Then the usual translation of the name "the river of the leopards" must be corrected to "the river of the leopards' country" (Shabilla means literally "where there are leopards").

The most common kind of vegetation is the jungle of thorny acacias, less dense in white lands than in red lands; high trees, especially sycamores, are found on the rivers and form sometimes little forests in a stretch of about one mile on both sides of the rivers. Sorghum *dura* (Somali: *miingo*) and Indian corn (*gallay*) are cultivated in black lands; date, millet (*ḥūmba*) in red and white lands; sesame and in a few districts sweet (American) potatoes (Somali: *ḥaḥa*) and manioc (Somali: *maḥḥ*); cotton and sugar-cane in European settlements (the most important of those are the S.A.I.S. settlements founded by H. R. H. the Duke of the Abruzzi, Luigi of Savoy and the Djinnilla settlements established by Count De Vecchi). The general physical formation of Somaliland described above has been in past times very useful to defend the natives against foreign invaders, because one must pass, before reaching the only zone economically

valuable, that is the black lands, through the sandy desert of the coast and then the jungle of the red lands, where the characteristic Bedouin skin-mishig by amish and ruse is strongly helped by the same natural feature of the ground.

b) Political divisions. Somaliland is now divided into:

I. French Somaliland, officially known as Côte Française des Somalis (5,790 square miles; 65,000 inhabitants), is administered by a civil governor. Its boundaries are determined: with Italian Eritrea under the Franco-Italian protocols of January 24, 1900 and July 10, 1901; with British Somaliland by the Anglo-French agreement of February 2 and 9, 1888; with Abyssinia by the Franco-Abyssinian convention of March 20, 1897. In spite of its name only the southern portion of the Colony is inhabited by Somali, the northern regions being inhabited by Dursk. The capital is Djibuti (8,500 inhabitants), a port of considerable traffic, especially on account of the French railway Djibuti-Addis-Ababa.

II. British Somaliland Protectorate (68,000 square miles; 300,000 inhabitants) administered by a civil Governor. Its boundaries are determined: with French Somaliland by the aforesaid agreement; with Abyssinia by the British-Abyssinian protocols of May 14 and June 4, 1897; with Italian Somaliland by the Anglo-Italian arrangement of May 5, 1894. The capital is Berbera (30,000 inhabitants).

III. Italian Somaliland (140,000 square miles; 650,000 inhabitants). The Colony, administered by a civil Governor, is divided into: Northern Italian Somaliland, viz. the protectorates of the two Somali sultanates of the Madjertén and Hobya, and southern Somaliland, formerly known as Banadir. The boundaries with British Somaliland are determined by the aforesaid agreement; with Abyssinia by the Italo-Ethiopian treaty of May 16, 1908; with Italian Oltre-Giuba by the river Djub. The capital is Maqdishu (21,000 inhabitants).

IV. Italian Oltre-Giuba, "Beyond the Djub" (25,000 square miles; 90,000 inhabitants). This is the territory granted by Great Britain to Italy under the treaty of July 15, 1924. The capital is Kismayu (12,000 inhabitants). But this territory has now been annexed wholly to the Colony of Italian Somaliland and has been administered by the same governor since June 30, 1926.

V. Abyssinian Somaliland, that is Ogaden. It is divided in two fiefs: the former comprises the upper valley of the Shabëlla and depends on the feudatory of Harar (who is actually Räs Tafari, the Heir Apparent of the Abyssinian throne); the latter comprises the basin of the Djub and depends on the feudatory of Konso territory, who actually is Fitwra Hahsa Giyorgis.

VI. Kenya Colony: The districts of Tanaland and Northern Frontier and that portion of the late Jubaland that has not been granted to Italy have a Somali nomadic population of shepherds.

c) Ethnography. The Somali may be divided in three groups: Northern Somali, who are called by the others Edji; Hawiya; Sab.

The northern Somali, the greatest group, are divided in: Isak, Dir, Darsid. The Dir, who according to some tradition should be the first Northern Somali group immigrated in the region actually called Somaliland, are now dispersed in the whole Somali territory, probably as they were driven out by subsequent invaders. The Dir

have sent forth to the following tribes: the Isak in French Somaliland, the Rimal in Italian Somaliland, the Fakr Muhammad in the middle valley of the Shabëlla near the boundaries between Italian Somaliland and Ogaden. Besides those tribes, little groups of Dir families living with more numerous tribes of other origin are found in Ogaden, in Italian Northern Somaliland, in Oltre-Giuba.

The Isak inhabit the western portion of British Somaliland and the market-places on that coast: Zeila (Arabic: Zalla; Somali: Awdal; Galla: Adali), Berbera and Bulabur. Their principal tribes are the Halar Aawal, Halar Yūsū, Halar Dja'lo, Halar Garhajis. Isak groups live also in Oltre-Giuba, especially retired clerks of the British colonial Administration with their families; another larger Isak group is in 'Aden, where they are for the most part workmen or boatmen in the port.

The Darsid, traditionally enemies of the Isak, are the most numerous Somali group. They inhabit the eastern portion of British Somaliland; northern Italian Somaliland; "Oltre-Giuba"; the Somali districts in Kenya Colony, and almost the whole Somali zone of the Ethiopian plateau. The principal Darsid groups are: 1) the Kabbalah, who are divided into Komba and Kūmala. The Komba comprise the Geri Komba tribe, living in the neighbourhood of Harar, and the ancient federation of the Harti tribes that is the Madjertén, who inhabit the whole Northern Italian Somaliland; the Warangali, and the Dullahanta, who occupy the eastern portion of British Somaliland, and the Dushleha, who live with the Madjertén. The Kūmala comprise, besides the little group Galmes, Waites, Bal'ad and Isidwuk, the great tribe of Ogaden, and then occupy the most part of Abyssinian Somaliland and the central regions of Oltre-Giuba. 2) Another Darsid group is the Sudda, whose principal tribe is the Marrehān inhabiting a portion of Northern Italian Somaliland and the northern regions of Oltre-Giuba. Darsid families (Madjertén) have occupied the little islands of Bakī and Abū Gubbā in Italian Dunkalia (Eritrea).

The Hawiya inhabit the whole valley of the Shabëlla, in Italian and Abyssinian Somaliland. According to the local tradition, the Hawiya were preceded in their present territory by the Adjura, a tribe of kindred origin, who probably were the first group to migrate towards the river. The Adjura are now dispersed and divided into four principal groups: the first living with their freedmen at the boundaries between Italian and Abyssinian Somaliland; the second in the low valley of the Shabëlla, South of Afgōy; the third near the Djub in the territory of Bārdēra; the fourth in Kenya Colony, Northern Frontier district. The region inhabited by the first group is called Shabëlla (see above); as the Adjura are there proportionately few in number the most part of the tribe being former slaves or freedmen, the Ogaden often call this group the Addōn, viz. the slaves, who have been incorrectly considered by some ethnologists as a Bantu tribe or a Bantu-speaking people. The other principal Hawiya groups are: the Guggundabe, who comprise the tribes Djidla, Dja'jale, Baal, 'Adda, Galdja'el, who inhabit South of Shabëlla region as far as Mahadlay in Italian Southern Somaliland; the Gurgate, who comprise the tribes Halar Gidir, Abgāl (a very numerous group of tribes, as the Wa'eda, the Da'ad, the 'Eli, the Mantān, the

Yäuf, the Agon-yar, the Warsangali Abgal), the Möllän, the Wa'dän, the Hillibi; they occupy the zone from the southern boundaries of Gaggäbäbe as far as the Ocean and the Sab territory.

The Sab who inhabit the territory between Hawiyya territory and the Djib are divided into Rahanwän and another group which took the name of Digil, who was probably the common ancestor of both. The Digil comprise the following principal tribes: Djiddu, Tunni, 'Irrola, Dabarra. The Rahanwän comprise two groups of tribes: the Siyyöd ("the eight") and the Sagäl ("the nine"); the principal tribes are the Eläy, the Lisän, the Haryän, the Hadämo, the Lubäy, the Galadi, the Gädilä. While the other Somali tribes are formed on the principle of a common origin from the same ancestor, whose name is generally the name of the tribe, the Rahanwän tribes are formed, besides a very small group of descendants of Rahanwän, by families or sections of different origin federated under a common name. Besides these great groups and some tribes of uncertain origin, viz.: Garga, living separately in Southern Somaliland, in Kenya Colony (Northern Frontier district) and in Abyssinian Somaliland (it is to be noted that the two last groups at quite a recent date spoke both Somali and Galla), we must mention: the freedmen, the outcast groups and the population of the towns on the coast. The slaves, for the most part of Bantu origin but now entirely somalized, delivered or escaped from their masters, have formed in some regions tribes like the Shidä in the middle valley of Shabäla; the Eläy freedmen on the plateau of Baljowa, independent from their late masters living in the black lands of Büi Hakkaba; and the so-called Wagösha in the low valley of the Djib. The outcast groups, that is the groups considered as impure on account of their trades, live with the high caste tribes to whom they are subjected. In Northern Somaliland the low castes have the general name of Sab, which, as we have seen above, is on the contrary in Southern Somaliland the name of a group of tribes. They comprise: the Vihir, magicians; the Midgan, hunters; the Tumal, smiths. Among the Hawiyya the low castes have the general name of Bon, which is really the name of a Bantu population in Kenya Colony; and comprise: the Eila, hunters; the Madarräla and the Gaggäb, tanners; the Dardow, weavers; the Yahar, magicians; the Tumäl and Kälmashuba, smiths. By the Sab the low castes are: the Rihä, hunters; the Waraboy, smiths.

The towns on the coast are inhabited by groups of the Somali tribes of the inland and by families now somalized but of the most varied origin, for the most part Arab immigrants to Somaliland or Bantu; some families would claim Persian origin and there are traditions on the origin from Madagascar of other few families.

a) Language. Somali is a language belonging to the Kuschitic family, to the group called by Keinitich "low Kuschitic" and thus akin to Saho-Afar, Be'dawiye and Galla languages. Somali, which during its history has been less influenced than Galla by non-Kuschitic languages, has not received in its phonetic system the typical consonantic sounds followed by glottal occlusion, the true consonantic diphthongs which are common to Galla, to some Sidäma dialects and have been admitted — although in a different measure — in the modern

Semitic languages of Abyssinia. *ḫ* is therefore in Somali a velar explosive pronounced as in Arabic; *ḡ* is praecacuminalis and is dialectically liable to be changed into *r*. It is also to be remarked that there is in Somali a very wide tendency to palatalisation from the influence not only of the vowels *e* *i* but also of the liquid *l* as in the case of the feminine article *-da* and the suffix of the reflexive form *-i*, which are palatalised in *-da* *-i*, when preceded by *l* final of the nouns or verbs (*lida*, *lidi* being successively changed in *lida*, *lidi* by assimilation). While other Somali dialects have kept the laryngals *ḡ* *ḫ*, the Sab dialect has changed *ḡ* in *ḡ* and *ḫ* in *ḫ*. As to morphology there are found in Somali both kinds of conjugations used in Kuschitic, viz. by praefixes and suffixes or by suffixes only, while on the contrary Galla has kept only the second kind. But on the other side it appears by comparing Somali and Afur-Saho that in the latter language the conjugation by prefixes and suffixes is more frequent than the other (perhaps on account of the strong influence of the neighbouring Semitic languages), while Somali has kept typically the aforesaid conjugation by prefixes and suffixes only in five verbs (which, however, express the most common ideas) that is: to be, to be there, to know, to come, to say. It is noteworthy that already in Hawiyya and Sab dialects two of those verbs are found used in both kinds of conjugation. Somali syntax (as there is not a declension of the nouns and especially on account of the use of the prepositions which are not placed before or after the noun, but are all put before the verb at the end of the phrase) gives to the language peculiar characters and causes it to be in some degree difficult to foreigners. For instance our phrase: "the camel and the horse were bound with this rope" is translated: *kareggan rattiga iyya faraska ḡ la gu ka la peray*, that is literally: "this rope the camel and the horse they were with-from-by bound" (the group *from-by* expressing the idea that the two animals were not bound together, but every one with a bit of the rope in question). The genitive case, which is translated in Saho-Afar by placing the word meaning the possessed thing before the word meaning the possessor and in Galla, on the contrary, by placing the word meaning the possessor before that meaning the possessed thing, is translated in Somali by the same way as in Galla or more frequently by placing before firstly the name of the thing followed by the master's name with the possessive adjective; for instance: "Umar's house" may be translated literally: "the house 'Umar' or 'Umar his house'".

The Somali dialects are distinguished, according to the ethnic divisions, in the groups Isäb, Därd, Hawiyya, Sab. Isäb dialects have kept the originary *ḡ* praecacuminalis; they form the durative verbs with the suffix *-ay*; they distinguish in the pronouns two first plural persons: "we" inclusive (that is: who speaks and who hears) and "we" exclusive (that is: who speaks and another person). Därd dialects change *ḡ* praecacuminalis when placed between two vowels in *r* (Ogadda dialect) or *+* (Madjertän dialect); their durative verbs are formed with the suffix *-ay*; they have also kept the aforesaid two "we". Hawiyya dialects change *ḡ* intercalic in *r*; they form their durative verbs with the infinitive mood followed by the verb *ay*; they have not

the double "wa". Sab dialects have changed, as we have said above, \int into k and 'in into 'a ; they have kept the *modus relativus* in $-wa$, which has been changed in the jussive in $-a$ in other Somali dialects; the negative imperative is formed by the prefix $-la-$ followed by the verb with the suffix $-ay$ (in the other dialects it is used in this case the prefix $la-$ followed by the verb with the suffix $-in$).

As to vocabulary, Somali has been very little influenced by Arabic, and even Arabic loan-words, when received, have been wholly assimilated according to Somali phonetical rules; neither had Galla, if we consider the common origin, a great influence on Somali, except perhaps Sab dialects; we may, however, find in the Somali lexicon some evidence that the Somali and the Sidāma were neighbours before the great Galla invasion.

c) History. Although the native legends may have islamized Somali history by tracing their origin from 'Aḥl b. Abī Ṭālib, cousin of the Prophet, and whatever may be thought — on the other side — about the question whether Hamitic populations may have come in Africa from Asia, there is however no doubt that the Somali occupied their present territory by various and subsequent invasions of groups following and pushing on one each other, but all starting from the African coast of the Gulf of 'Aden. Thence came the Dir, expelled by other Somali invaders, and a portion of them through Ogadēn and the region between Djub and Shabēlla reached the low valley of the latter river giving origin to the Bimāl tribe. From the Gulf of 'Aden came the Sab, who went first to the valley of the Djub and going down from the plateau along the valley of the Wēb advanced abruptly to East from the neighbourhood of Mārīlla and invaded their present countries, fighting against the Wardīy that is a Galla tribe. From the aforesaid Northern coast departed Isāk and Dīrōd to conquer their seats by driving away the Dir and the Galla. From northern regions came the Hawiya, who at first stopped North of Mārēg; while their brothers Adjūra subdued the Shabēlla's valley against Galla and Djiddū; but then the same Hawiya advanced to the river and scattered the Adjūra. Therefore we may distinguish in the history of the occupation of the Somali territory two periods: the wars against the Galla, and then the wars among the Somali groups themselves fighting one other to conquer the best lands. But a most interesting written tradition (of which I have been able to get a MS. in Arabic) tells of the war that was fought before those told in Somali legends; that is the war between the Galla invaders and the Zandj (viz. the Bantu populations) inhabiting the basin of the Djub. The series of the occupiers of Somaliland may be, of course, thus traced: Negroes (Bantu) then Kushites Galla; then Kushites Somali.

While these tribes successively occupied the interior, the zone along the seashore has been many centuries in close commercial relations with Arabia; this trade, which had already begun with the commercial colonies of the South Arabic kingdom (see GIMYAR) became even more intensive in the Muslim period. Results of this Arabic colonisation were the two little states of Zaila and Maḥdishū, formed and ruled generally by local dynasties of somalized Arabs or Somali strongly influenced by Arabic culture. The kingdom

of Zaila which was prospering from the xvth century A.D. could live and thrive on account of the trade of the inland, where it was supported by the many Muslim states of the Southern Abyssinia, till its strength was exhausted during the great war fought against Abyssinia under the command of Grēṣ (q.v.; cf. also ABYSSINIA; HARAR; ZAILA). Maḥdishū, however, had only a short period of prosperity in the xvth century A.D.; then almost rapidly began its decline, as its population was not able to overcome the resistance of the Somali Bedonins inhabiting the interior. Through various vicissitudes Maḥdishū continued to be independent under the dynasty of the Muḥaffar till the xvth century; in the xvth century it was occupied by the Imām of 'Omān, who after few years left the whole coast called Banādir with Maḥdishū to its inhabitants, insisting only that they recognize him as their sovereign. When the state of Maḥsh was divided into the Sultanate of 'Omān and the Sultanate of Zanzibār (that is at the beginnings of the xixth century), Maḥdishū was allotted to Zanzibār, and then the Sultāns tried to get a more real dominion there by establishing a wall with garrisons of soldiers in Maḥdishū, Marka, Brāwā; but after a short period of rule (sixty years about) Zanzibār sold those towns to Italy.

Nevertheless in the interior the Somali tribes had during many centuries enjoyed a full independence. Somali traditions have not kept any remembrance of the great Galla invasion in Abyssinia, which divided in the xvth century the Somali from the Sidāma and separated them from those little centres of culture. There is however to be considered the hypothesis that vestiges of a culture superior to the present Somali culture which are found in some inland regions and are referred by the natives to the Adjūra or the Madīne, may have been rather the work of Somali already in close touch with the Arabs of the Southern coast rather than of natives influenced by the culture of the Sidāma states of the North.

The interior of Somaliland remained thus independent till the end of the sixteenth century, when France (in 1884), Britain (in 1884), and Italy (in 1889) occupied their present Colonies.

f) Islām. The Somali are all Muslims and follow the *madhhab* of Shāfi'. Neither the Imām of Maḥsh nor the Sultāns of Zanzibār during their short rule on the Somali coast had in any way propagated their Ibādite views among Somali peoples; therefore since the Sultān's *wālī* retired from Somaliland there has not been any vestige of Ibādism. Among the Arabs recently migrated to Somaliland as soldiers (*askari*) or workmen in European settlements there may be found a few Zaidites, who, however, generally do not publicly profess their faith.

The diversity of formation and historical vicissitudes between the populations of the seashore and those of the interior has caused also a different influence of Islām on them. The towns on the coast many centuries in touch with the Arabian centres of Muslim culture and organised as communities of tradesmen, bound together by ties of citizenship and not by tribal relations, have been naturally more easily islamized than the tribes of the interior independent, hostile and distrustful of the populations of the seashore, and firmly united in their large territory with the bond of the common origin; Islāmic propaganda has been

obliged to struggle there against the ancient paganism and the customary law of the tribes. In this state of affairs the principal support of the diffusion of Islam in the inland has been the organisation of religious brotherhoods. We must then give some information about those three elements of the Somali religious culture: the remains of ancient paganism in the inland, the Islamic culture on the coast, the religious brotherhoods.

As a remainder of paganism may be regarded the ceremony of the *sār*, perhaps an ancient sacred dance. Natives crowd in a circle and the chorus begins to sing on a special rhythm. One or many among the singers fall fainting away to the ground. The others "beat the *sār*" by singing and striking the hands or clattering with the feet or striking drums and kettle drums. Then the person who has fainted rises little by little from the ground, takes in his hands a dagger, and dances in the circle with the dagger drawn out, till he falls again in a faint; but immediately rises fully recovered. The *sār* is danced also with a burning brand instead of the dagger; among the Sab the dancer goes out of the circle, runs in the jungle near and then comes back showing with loud cries his dagger sprinkled with blood, which is said to be the blood of the genius he has killed. See also the article *zān*.

Another heathen ceremony is the Somali feast of the New Year's day. The Somali have a solar year of 365 days; 7 years form a cycle; every year has the name of a day of the week; every cycle has the name of the most important event happened during it: thus the Hawiya quote *iminta orrah mado* the year Monday of the Black Sun (certainly thus named on account of an eclipse); the Sab mention *sahāi faranji* the year Saturday of the European, alluding to the travels of Captain Bottego in their territory. Then the first day of the New Year is celebrated with the *dabshid* a familiar and very popular festival. Every family kindles a bonfire near their hut and the paterfamilias crosses the fire by jumping from one side to another, or hurls his spear through it. Then follow public dances and processions of singing young men and sacrifices.

We must mention here the popular belief in continuation of the material life after death and the necessity of providing food and clothes for the dead by making sacrifices of cattle near the tomb and distributing meat and calicoes to the poor who are said "to cause the food to reach" the dead. Thence arises the custom of fixing in testaments a large share of the inheritance to celebrate those ceremonies ("what one is buried with"); and the affectionate care of the sons and relatives "to sweep the tomb" that is to make those sacrifices from time to time. Other traces of heathen ideas are found in the magical powers of the tribe's hereditary chief, whose eye is to him what the sun was to the ancient Heaven-God of the heathen Kushites. The "hot eye" of the chief gives or takes away cattle's fecundity, causes death, cures or causes sickness. Ancient heathen magicians have been replaced by Muslim scholars, although they have kept their name *maḥūd* and may be also applied to magical practices. Propitiatory blessing is given as in paganism by spitting. The head, the belly and the paws of slaughtered animals are regarded in Somali Islam as impure meat according to heathen Kushitic beliefs.

The Somali names of the Heaven-God (*Ebba* and *Wāḥ*) are now applied to Allah; even the heathen genius' name (*gāl*; Gallat; *ḡālā*; Amharic: *ḡāl*) is used in modern dialects to mean "fortune".

An even more strong resistance has been opposed to Islam by Somali customary law, which is based on a social stage very similar to pre-Islamic Arabian life and is therefore often in evident contrast to the Muslim law. We may quote here the characteristic precepts about the levirate and the price to be paid by the widow to the late husband's relatives if she desires to marry again with a man other than the brothers of the dead (it is, however, to be remarked that, by the Somali, the sons of the second husband, brother of the dead, are not considered as sons of the first and continuation of his progeny as is the case with the Semites; but on the contrary the first husband's offspring is regarded as sons of the second); the marriage by rape; the blood-money conceived in the Somali mind as a price of redemption of the killer from a right that the crime causes the killed man's relatives to have on the killer's person *ex delicto*; the women excluded from hereditary rights; the outcast groups into which one cannot marry or come in any way in contact with, as they are said to be in a perpetual condition of ritual impurity (*nigāṭa*) (note the skilful Islamisation of the ancient custom); exogamy, which may be still found in Northern tribes and the remarkable traces of marriages concluded between two tribes rather than single persons.

On the coast, however, in the centres of Muslim culture, particularly after the recent increase of trade in the second half of the 19th century, Muslim scholars' works formed a little local literature written in Arabic specially on mystic subjects. The principal printed works are: *al-Maḥmūd al-Mubāraka* by Shaikh 'Abdullāh b. Yūsuf, a native of the Shēkhāl group, who has had his work printed in Cairo; and the *Maḥmūd al-Kaṣīd* by Shaikh Kāsim b. Muḥyi 'l-Dīn, a native of Brava (Barāwa). The latter work is only a collection of poems of many Somali authors; *al-Maḥmūd al-Mubāraka* however is formed by five treatises by Shaikh 'Abdullāh about the *taḥawwuf*; but its real interest is placed in the third and fourth treatise entitled the former *al-Sikḥ al-ḡalīḥa 'ala 'l-Kiṭāb al-nabīḥa*, "the knife that slaughters the barking dogs", and the latter *Naqṣ al-Mu'minin 'ala 'l-Marād al-Mulḥidīn*, "Victory of the believers on the rebellion of the heretics", which contain violent polemics against the Tariqa Ṣālihiya. Another distinguished Somali scholar was Shaikh Awīs [Uways] Muḥammad al-Barāwī, who besides two poems published in the aforesaid *Maḥmūd al-Kaṣīd* composed five poems in Somali language which he was the only one to write in the Arabic alphabet; one of those poems is directed against the Mad Mulla's followers. We must also mention Shaikh 'Abd al-Rahmān al-Zailā', who wrote many mystic poems in Arabic (the most diffuse is the *Sirāḡ al-Uḡūl* or *'l-Sarīr fī 'l-Tawāwuf bi-Shaikh 'Abd al-Kādir*, "Lamp of the minds and the secrets in mystic progress through Shaikh 'Abd al-Kādir [al-Gilānī]"). Another Somali scholar is Shaikh 'Abd al-Rahmān b. 'Abdullāh a native of the Shēnshia group in Maḡdishū and commonly known as Shaikh Sufī; he is the author of the *Shāfi'at al-Yaḥyā*, "the tree of the certitude" or *al-Nubḥa*

al-yaḥṣān fī Ma'āḍi al-Bariyya, "the certain portion of the miracles of the Best among the creatures", published in *al-Madīna al-Mubāraka* and very popular in Somali schools of mysticism.

A MS. found in Brawa contains a translation of the *Ḥamāṣya* by al-Buḥārī in Suahili verses. It is very probable that further researches may cause other more ancient MS. or Arabo-Somali documents to be found.

Four Muslim brotherhoods are found in Somaliland: the *Qādiriyya* (see 'ARAB AL-QADIR AL-MULI or QILANI); the *Aḥmadiyya*, that is the followers of the mystic rule of Aḥmad b. Idrīs, died in the first half of the sixteenth century at Šabya in 'Asir; the *Šālihiyya*, which is a more recent branch of the *Aḥmadiyya* (its founder and leader was Muḥammad Šāliḥ, who had his seat in Makka and had been a disciple of the Sudanese mystic Ibrāhīm al-Raḥḥīdī, disciple of Aḥmad b. Idrīs); the *Rifa'iyya* following the precepts of Sayid Aḥmad al-Rifa'i. The *Qādiriyya*, which has among its adherents almost all the scholars mentioned above as authors of mystic works, is the most learned and modernized Somali brotherhood; it has only few settlements and has no economic organization, but it is more devoted to teaching than to agriculture. The *Qādiriyya* in Somaliland have been for many years separated from the *Šālihiyya* by a schism; firstly the polemics had been directed by the *Qādiriyya* against the Maḍ Mulla, who had begun his campaigns by proclaiming himself to be a true follower of Muḥammad Šāliḥ (see the art. MUHAMMAD R. 'ABDALLĀH HASSAN); and caused Šāliḥ Awēs b. Muḥammad al-Barāwī to be killed by the Mulla's followers in 1327 (1909). The polemics began again, although in a less rough way, after the publication of Šāliḥ 'Abdullāh's book (*al-Madīna al-Mubāraka*) and of a poem by Šāliḥ Qāsim Muḥyi 'l-Dīn al-Barāwī, where the *Šālihiyya* were offended by the refrain *lakum dīnukum wa-lī dīnī*. The *Šālihiyya*, on the contrary, have been particularly occupied with obtaining political influence over the tribes and forming, specially on the banks of the rivers, an organization of agricultural communities. The Mulla's movement, the rebellion of Sayid Muḥammad Yūsuf against Abyssinia in Wēb's valley in 1917 were led by *Šālihiyya* leaders. On the other side the "black lands" along the *Šhabella's* valley, the best for agriculture but formerly undervalued by Somali Bedouins only applied to cattle rearing, were in many territories the goal of the *Šālihiyya's* aim and they were skilful enough to take advantage of contests between the tribes or other political circumstances and thus they have tried to get granted to them by the tribes the best zones for agriculture. The *Aḥmadiyya* are less numerous and have been directed like the *Šālihiyya* to acquire lands, although they generally take more interest in teaching than the *Šālihiyya*. While the *Qādiriyya* and the *Aḥmadiyya* have not a true hierarchical organisation, the *Šālihiyya* are in Italian Somaliland led by the chief of the "Zāwiya Misra" (in the middle of *Šhabella's* valley), who is the vicar of Muḥammad Šāliḥ in the whole region.

Native justice is administered in Italian Somaliland by a Muslim *Qāḍī*, except in the case of certain crimes and cases of political interest. The sentences of the *Qāḍī* begin with this formula: *bismi 'llāh 'l-raḥmān al-raḥīm innamā aḥkumu bi-ḥaqqi al-islām bi-taḥṣīf al-malik al-mu'azzam malik*

al-ḥaqq etc. "In the name of God the merciful the compassionate. I judge according to the Law of Islām by appointment of the great King, King of Italy etc."

SONGHOY. The name Songhoi (Songoi) or Songhay was probably applied at first to the past of the valley of the Niger between Bourem and Say, to the people inhabiting this area, and to the kingdom which they formed. At a later date, this state having extended its boundaries upwards to Lake Debo and downwards to the northern boundary of the present French colony of Dahomey,

the same name was retained to describe the kingdom thus enlarged and all its inhabitants, as well as the language spoken by the majority of them, the language of Dyenne, of Timbuktu, of Gāo, of Dendi and of the land of the Zerma or Djerna.

The state of Songhoy is said to have been founded in the viiith century A. D. by an individual of Berber origin, whose dynasty ruled at first at Gogiya or Kakiya in the island of Bentia, 100 miles below Gāo until about the year 1000, then at Gāo itself or Gāogāo. The princes of the dynasty bore the title *gĩa* or *za* until 1335, and then that of *sonni*, *sun*, *san* or *ah*. It is said that the founder of the dynasty, called Alyman, was a Christian. The first of his successors to adopt Islam was the *gĩa* Kosoy or Kosay, who reigned in the xiith century, about the time when the capital was transferred to Gāo.

In 1325 Songhoy was annexed to the Mandingo or Mali empire, the ruler of which at that time was the celebrated Gongon Mūsā or Kankan Mūsā. The latter, returning in this year from his pilgrimage to Mecca, went to Gāo and there received the homage of his new vassal, the *gĩa* Asihoy or Aishay, whose two sons he brought back to his court as hostages. One of the latter, 'Alī-Kolon, later escaped from the Mali capital and returning to Gāo had himself proclaimed king there with the title of *sonni* (1335).

In 1464 (or 1465) there came to the throne another *sonni* 'Alī, called 'Alī-Ber ('Alī the Great), who delivered Songhoy from Mandingo suzerainty and considerably extended its boundaries below and especially above Gāo, capturing Timbuktu in 1468 and Dyenne in 1473. We may regard him as the original founder of the enlarged Songhoy which through him rose from a little vassal kingdom to a powerful empire. But he did not leave a good reputation behind him in the country; the chroniclers of Timbuktu accuse him of having been cruel, impious and a libertine, and of having persecuted men of learning and religion, although, nominally at least, a Muslim himself. He died in 1492, being accidentally drowned in a torrent. With his son and successor Bakari or Bari, who only reigned a few months, the line of al-Yaman died out in 1493, after having been on the throne for about nine centuries.

'Alī Ber's best general, a Sarakolle of the Silla faction named Muhammadu Ture, seized the throne in 1493 and founded a new dynasty, that of the *askiya*. It was in his reign, a particularly brilliant one, that Songhoy attained its apogee. Superficially a convert to Islam but tolerant to those who were still pagans, the *askiya* Muhammadu made the pilgrimage to Mecca in 1496/1497; in the course of his journey he made the acquaintance of people of eminence like al-Suyūṭī, whose advice he sought and in the holy city, on the proposal of the 'Abbāsid Caliph of Egypt al-Mutawakkil received at the hands of the Grand Sharif Mulay al-'Abbās investiture as *khalīfa* for the lands of Takrūr (i. e. of the Sūdān). The Grand Sharif even sent to Gāo one of his nephews named Ahmed al-Sakli. The celebrated reformer of Tiemcen, al-Meghīlī, was in constant correspondence with the *askiya* Muhammadu, whom he even went to visit at Gāo in 1502. This prince by a series of successful expeditions extended his conquests to the lower Senegal, in the west to Air, and to the

frontiers of Bornu in the east, and to Segha in the south; Songhoy assumed the place previously occupied in the western Sūdān by the Mali empire. At the same time he organised his country in a remarkable way, creating a permanent army, a flotilla of supply-ships on the Niger, a system of taxation and payments in kind to fill the public treasury, and instituting military, political and administrative offices with well defined spheres of activity, provincial governments, magistrates and a police. With all his power and by every means, he protected scholars and learned men, heaping favours and honours upon them and encouraged the opening of schools in Timbuktu, which became a real intellectual centre and a noted home of Muslim culture.

Unfortunately this able sovereign's successors were mediocre and sometimes detestable. Becoming blind, he was dethroned in 1528 or 1529 by his own son Mūsā, later interned by his nephew Bengan-Korey in 1831 on an island in the Niger, and died miserably in 1538. Eight rulers occupied the throne of Gāo from 1528 or 1529 to 1591. They were for the most part cruel, selfish and debauched, occupied in murdering one another or in satisfying their cupidity and passions; they soon allowed the great work accomplished by the founder of their dynasty to fall to pieces. Only one, the *askiya* Dī'ūd (1549—1583) one of the sons of Muhammadu, tried to stop the decline begun by his brothers and cousins. It only became more rapid after him.

On this, the Sultān of Morocco, Ahmad al-Manṣūr al-Dhahabī, desirous of gaining possession of the salt-mines of Teghazza, then the property of Songhoy, and of gaining the gold of the Sūdān for his treasury, sent against Gāo in 1590 an expedition of 3,000 men, mostly Spanish renegades, under the Pasha Djūder. This expedition lost on the way from hunger, thirst and exhaustion two thirds of its effectives; but with the thousand soldiers that remained, who had the advantage of fire-arms, Djūder defeated without difficulty on March 12, 1591 at Tondibi, a little north of Gāo some 40,000 infantry and foot-soldiers, armed only with javelins, arrows, sword and lances, who formed the army of the last *askiya*, Ishāk. Djūder then entered Gāo without striking a blow, made his headquarters at Timbuktu where he installed an *askiya*, chosen by himself who was a mere puppet in his hands. The region below Gāo, which the Moroccan troops could not subdue, remained independent and formed a little kingdom called Dendi, governed by *askiya*'s of the line of Muhammadu. But the state of Songhoy had ceased to exist. If we reckon its definite foundation to date from the *sonni* 'Alī-Ber, it had lasted 127 years (1465—1591).

(MAURICE DELAFOSSE)

SŌSŌ — or SŌSŌ according to the Malinke pronunciation — is the name of a place in the French Sūdān, 125 miles N. N. E. of Bamako, once the capital of a kingdom inhabited and ruled by Sarakolle. The kingdom of SŌSŌ was originally a dependency of the famous Ghāna empire. It became independent, when, towards the end of the xiith century, this empire broke up after its capital had been taken by the Almoravids (1076). The dynasty, then ruling at SŌSŌ, belonged to a Sarakolle Muslim family, that of the Djārīso. It was overthrown about 1180 by a soldier, also a Sarakolle but a pagan, a member of the caste

of smiths called Djara Kante. His successor, called Sumanguru (Sumahoro) Kante, considerably increased the hitherto slight prestige of the kingdom of Söös, by adding to it several provinces, north and south of its old frontiers, notably Waghadu and Baghana, which contained Kumbi, the capital of the old Ghāna empire and Manding or Mali, lying on either side of the Upper Niger above Bamako. It was in 1203, according to Ibn Khaldūn, that the Söös army took the capital of Ghāna. An erroneous interpretation of the text of Ibn Khaldūn, has sometimes attributed this conquest to the people of Sūsū or Söös, who have always lived in Futa-Djallon [q.v.] or on its western slopes, at least 350 miles S.W. of Söös and who have nothing in common with this town except a quite fortuitous similarity of name. The king of Söös, who was a pagan, persecuted the Muslims of Ghāna; the latter to escape his exactions migrated about 1224 to Fira or Wālatā, which they made a centre of Muslim life.

It was after taking Kumbi that Sumanguru Kante undertook and achieved the conquest of Manding. A tradition records that he put to death, almost as soon as they succeeded to the throne, eleven kings of Manding from 1224 to about 1230. But he met with fierce opposition, from the twelfth, called Māri-Djata by Ibn Khaldūn and known throughout the western Sūdān under the name of Sun-Djata or Son-Djata, who belonged to the family of the Keyta. This prince succeeded in raising numerous followers not only in Manding, but also in the adjoining provinces, which like his own country, were eager to escape the sanguinary tyranny of the king of Söös and he marched against the latter. The two armies met near the Niger at Kirina not far from Kulikoro, about 1235. According to the story, Sun-Djata disposed of his adversary by shooting him with an arrow pointed with the spur of a white cock, the *tama* (tabu) of Sumanguru. The latter, pierced by the arrow, vanished from sight or was turned into a rock, which is still pointed out, commanding the village of Kulikoro. In any case, Sun-Djata liberated the Manding from the bondage of Söös, conquered the town, and all the country of which it was the capital, and extended his conquests northwards, as far as the ancient capital of Ghāna, which he captured about 1240 and destroyed completely; he thus substituted the hegemony of Manding or Mali for the ephemeral hegemony of the state of Söös.

SPAHL. [See SEPOY.]

SPARTEL, a cape forming the extreme N.W. point of Morocco and of Africa, 7 or 8 miles west of Tangier. Al-Idrīsī does not mention it; al-Bakrī knows of it as a hill jutting out into the sea, 30 miles from Arrila and 4 from Tangier, which has springs of fresh water and a mosque used as a *ribāṭ*. Opposite it on the coast of Andalusia is the mountain of al-Agharr (= Taf al-Agharr > Trafalgar). The name Ishhartāl (probably connected with the Latin *spartaria* = places overgrown with esparto) given it by al-Bakrī is not known to the natives.

Bibliography: al-Bakrī, *Description de l'Afrique Septentrionale*, Algiers 1911, p. 113. (G. S. COLIN)

ŚRI WIDJAYA. [See ZĀBAO.]

ŞU (r.), water; fluid; a decoction, e.g. of aloes.

SUAHILI. [See ZANZIBAR.]

ŞUBA is an Arabic substantive from the verbal root *şāba, yaşābu* ('it poured forth') meaning primarily a collection, or heap of wheat, dates, earth, etc. In the reign of Akbar it was adopted as the official description of the great provinces of India, to which historians had previously applied such words as *zāhib, kshīṭa*, etc. Akbar's empire consisted at first of twelve and finally of fifteen *şubas*, named either from their capitals, as in the case of Dihli, Āgra, and Ilāhābād, or from the old names of the tracts which they covered, as in the case of the Panjab, Bengal, Berār, Mālwa, and Gadjarāt. After Aurangzeb's conquest of Bidjāpur and Golkunda, when the empire of the Timūrids reached its greatest extent, other *şubas* were added. By the English the word has often been wrongly applied to the governor of a *şuba*. The error seems to have arisen from the designation *Şāhib-Şuba*, meaning 'lord of a province', and synonymous with *Şubadār* [q.v.], in which the first word has apparently been mistaken for a purely honorific title.

ŞUBADĀR, the governor of a province, or *şuba* [q.v.]. It was Akbar who first regularly divided the empire into provinces, styled *şuba*, but in his reign the title *şubadār* was not in use, and the governor of a province is styled *ispāh-sālār* (commander-in-chief) in the *Āṣin-i Akbari*. His successors employed the term *şubadār* or *şāhib-şuba* (lord of a province), but the use of these titles was neither uniform nor consistent. The governor or viceroy of the Dakan is usually styled *şubadār*, but the governors of Awadh and Bengal are more often styled *nawwāb-wāṣir* and *nawwāb-nāṣir* in the eighteenth century. Europeans, as Orme, himself an offender, remarks, often called a *şubadār* *şuba*. The source of this error is undoubtedly the form *şāhib-şuba*, the first part of which was mistaken for a purely honorific title. The title *şubadār* seems also to have been applied by Europeans to inferior officials, such as the governors of towns or districts (*jarkār*).

The title *şubadār* has also been applied, since the formation of a native army in India, to the chief Indian officer of a company of sepoys [q.v.] or a troop of regular, but not irregular, cavalry; under the original constitution of such companies or troops its actual captain. This use of the title, and its former application to civil officials, are perhaps due to the habit of mind, common in India, which seeks to please by conferring complimentary titles on inconsiderable persons, but etymologically *şuba* may be as correctly applied to a company as to a province.

ŞUBAİTİLA (ŞUBAİTİLA or HENŞİTİLA ŞUBAİTİLA, ancient Sufetula), a town in Tunisia at a distance of 81 miles south-west of Kalawān and 57 miles east-south-east of Tebesa, in the centre of a large plain on a plateau to the east of which lies Wād Şubaitla. The ancient town has been often described, notably by Guérin, Tissot, Diehl and Merlin. In the history of Muslim Africa it is only mentioned in the period of the conquest and its importance cannot be ascertained sufficiently. In A. H. 26 (646/647) an army of 20,000 soldiers commanded by 'Abd Allāh b. Sa'd met the Byzantine patrikios Djurdjir (Gregorios) at the head of 120,000 men before Subaitila. According to al-Balādhuri, however, the battle took place at Akūba. The year before, Djurdjir had declared himself independent from the Emperor of Constantinople (Theophanes, ed. Bonn, i. 525) and, according to some authors, he had chosen Şubaitila as his capital. The battle was won by the Muslims; Djurdjir was killed and Şubaitila sacked or placed under a Muslim governor.

The detailed accounts of the Arabic authors, especially those of Ibn 'Idhārī and Nuwairi, are full of legendary features; Djurdjir's daughter appears unveiled at the top of a tower and is promised to him who will kill Ibn Sa'd. The rôle ascribed to 'Abd Allāh b. al-Zubair seems to have been intentionally accentuated. It is he who takes the direction of the battle; fortuitously he kills Djurdjir with his own hand; with great discretion he conceals his gallant deed and is chosen to report the tidings to the caliph. It is equally improbable that the patrikios should have chosen Şubaitila instead of Carthage as his capital. The Muslim chroniclers, who did not possess reliable sources for the history of North-Africa, are inclined to represent the capital of the country to have surrendered at the first blow. It may be admitted, however, that the patrikios had occupied, on the first appearance of the Muslim troops, this important point at one of the main ways from the South, in order to come in touch with the native populations whom he sought to win (Diehl) as well as to protect Tunisia, then a fertile and populous country. It is certain that at the end of the vith century Şubaitila was a well fortified point. It was defended by a number of fortifications built around a central point, which was formed itself by the enclosure of the three temples of the Capitol.

ŞU BASHI, ancient military title in countries of Turkish civilization. Although later popular etymology has always regarded the first element as the word *su*, "water", this interpretation

is probably erroneous. In old Eastern Turkish *su* (very possibly taken from Chinese) signified army and *su-bashi* therefore meant commander of the army (cf. Mahmūd Kashghari, *Divān Lughat al-Turk*, iii. 156; Houtsma, *Ein türkisch-arabisches Glossar*, Leyden 1884, p. 14, 30). It is not surprising, however, that this title has been connected with the word designating water, because in practice the responsibility for keeping the waters for irrigation in repair was often in the hands of a very influential functionary (cf. al-Maḳḍisī, p. 330 who says that the *amir* having charge of the waters of Merw had 10,000 men in his service). And in Turkestan, as in Asia Minor, there have always been officials in control of the irrigation (see Skrine and Ross, *The Heart of Asia*, London 1899, p. 332; and for Asia Minor Ahmad Rafiq, *Seḫilli*, Constantinople 1924, p. 108). But these functionaries have always called themselves *mīr-ū* and never *su-bashi*. There is also an Arabian explanation of the title, deriving it from the Arabic word *su* "evil". Thus Muḥammad Ḥafid, in his *al-Durar al-muntahāhāt al-manthūra fi ṭīlāt al-ghalāt al-maghāra*, p. 260, declares *su-bashi* to be a translation of the Persian *ser-dāk* (see also von Hammer, *Staatsverfassung*, ii. 121).

Şu Bashi became a very well known military and police title in the Ottoman empire, but it was found in Asia Minor as early as the times of the Seldjūqs. In the xiiith century Ibn Bibi (Houtsma, *Recueil de t. rel. à l'hist. des Seldjūqs*, iv. 210) speaks of a *su-bashi* of the town of Kharpat [q. v.] who was probably under the sultan of Konya. Every town of any importance had a *su-bashi*; when 'Othmān took possession of his first capital Karadja Hisar, one of his first acts was to appoint as *su-bashi* his cousin Alp Gauduz (*Tawārīkh-i 'Alī 'Othmān*, ed. Giese, p. 7; Urođ Beg, ed. Babinger, p. 12).

As the Ottoman supremacy became confirmed, a differentiation of the functions and the position of the *su-bashi* in the provinces and in the capital was introduced. In the provinces they obtained a position in the feudal organisation, which also proves the military origin of their functions. The *su-bashi* had their own fiefs (*timār*) and they exercised police control over the other *sipāhī* and the inhabitants of the district under their charge. Administratively they were under the authority of an *ilāy-beg*, who again was subject to the Sandjak Beg [see SANDJAK]. These *su-bashi* had many privileges, which varied according to the different provinces; they had the right to a certain amount of the imposts and the fines extorted from the people (see *Kānūn-nāme-i 'Alī 'Othmān*, ed. 'Arif Bey, Constantinople 1330, appendix to Nos. 13 and 14 of T. O. E. M., p. 28).

In the capital the *su-bashi* became one of the chief officers of police, who assisted the *Ca'ush Bashi*, whose function is most like that of minister of Police. With the Muḥzir (Muḥḍir) Agha and the 'Ases Bashi he was responsible for the carrying out of all the judicial sentences and in general for obedience to the police regulations in the capital. Besides this the title of *su-bashi* is used to designate a certain military rank in the cavalry corps of the *Ulmadžī*.

SUBĤ. [See **SHAFĀK**.]

SUBĤA (A.), also pronounced *subḥa*, the rosary, which at present is used by nearly all classes of Muslims, except the Wahhābīs who disapprove of it as a *bid'ā*. There is evidence for its having been used at first in Ṣāfi circles and among the lower classes (Goldziher, *Revue*, p. 296); opposition against it made itself heard as late as the xvth century A. D., when Suyūṭī composed an apology for it (Goldziher, *Verlesungen über den Islam*, 1st ed., p. 165). At present it is usually carried by the pilgrims (cf. Mez, *Die Renaissance des Islām*, p. 441) and the darwishes.

The rosary consists of three groups of beads made of wood, bone, mother of pearl, etc. The groups are separated by two transversal beads of a larger size (*imān*), while a much larger piece serves as a kind of handle (*yad*; Snouck Hurgronje in *Int. Arch. f. Ethnographie*, i. 154 and plate xiv, N° 12). The number of beads within each group varies (e. g. 33 + 33 + 34 or 33 + 33 + 31); in the latter case the *imān* and the *yad* are reckoned as beads. The sum total of a hundred is in accordance with the number of Allāh and his 99 beautiful names. The rosary serves for the enumeration of these names; but it is also used for the counting of eulogies, *dhikr's* and the formulae at the end of the *ṣalāt*. Lane (*Manners and Customs*, Register) makes mention of a *subḥa* consisting of a thousand beads used in funeral ceremonies for the thrice one thousand repetitions of the formula *Lā ilāha illa 'Allāh*.

Maṣābiḥ (plur. of *maṣḥaba*) are mentioned as early as the year 800 A. D. (cf. A. Mez, *Die Renaissance des Islām*, p. 318). Goldziher (*Verlesungen*, p. 165) thinks it certain that the rosary came from India to Western Asia. Still, Goldziher himself has pointed to traditions mentioning the use of small stones, date-kernels, etc. for counting eulogies such as *takbir*, *tahill*, *tasbiḥ*.

From such traditions the following may be mentioned: "on the authority of Sa'd b. Abi Waqqās... that he accompanied the Apostle of Allāh who went to visit a woman, who counted her eulogies by means of kernels or small stones lying before her. He said to her: Shall I tell you what is easier and more profitable? "Glory to Allāh" according to the number of what he has created in the earth; "glory to Allāh" according to what he has created in the heaven; "glory to Allāh" according to the number of what is between these; "glory to Allāh" according to what he will create. And in the same way *Allāh akbar*, *al-hamdu lillāh* and "there is no might nor power except in Allāh" (Abū Dāūd, *Witr*, bāb 24; Tirmidhī, *Da'awāt*, bāb 113).

The tendency of this tradition is elucidated by the following one: Ṣāfiya said: the Apostle of Allāh entered while there were before me four thousand kernels which I used in reciting eulogies. I said: I use them in reciting eulogies. He answered: I will teach thee a still larger number. Say: "Glory to Allāh" according to the number of what he has created (Tirmidhī, *Da'awāt*, bāb 103).

To a different practice points the tradition according to which the Apostle of Allāh "counted

the *tasbiḥ*" (Nasā'i, *Sahih*, bāb 97). The verb used here is *'ahada*; its being translated by "to count" is based upon the fact that the lexicons give it among others this meaning. Probably this is based in its turn upon traditions like the one just mentioned, and like the following: "The Apostle of Allāh said to us (the women of al-Madina): Practise *tasbiḥ*, *tahill* and *takdīr*, and count these eulogies on your fingers, for these will have to give account" (Abū Dāūd, *Witr*, bāb 24; Tirmidhī, *Da'awāt*, bāb 120). According to Goldziher, in these traditions the counting of eulogies on the fingers is contrasted with their being counted by means of stones etc. There is, however, a tradition that makes it a matter of doubt whether *'ahada* in connections like those mentioned has always the meaning of counting and not its proper sense of tying. I have in view a tradition preserved by Ibn Sa'd (viii. 348) according to which Fātima bint Husain used to say eulogies aided by threads in which she made knots (*bi-khuyūṭ ma'kūṭ fithā*).

The term *subḥa* does not occur in classical tradition in the meaning of rosary; it is often used in the sense of supererogatory *ṣalāt*, e. g. *subḥat al-ṣubḥ* (Muslim, *Musāfirūn*, trad. 81). Al-Nawawī explains the term by *nāfila* (Commentary on Muslim's *Ṣaḥīḥ*, Cairo 1283, ii. 204). Ibn al-Athīr, *Nihāya*, s. v. asks how it is that the ideas of *nāfila* and *subḥa* coincide. He answers: Eulogies (*subḥa*) are supererogatory additions to the obligatory *ṣalāt's*. So supererogatory *ṣalāt's* came to be called *subḥa*.

If Ibn al-Athīr's opinion is right, the semasiological evolution of *subḥa* took two directions:

(A. J. WENSINCK)

SUBHĀN ALLĀH, "Praise be to Allāh", a religious formula, frequent in the Qur'ān. It is an accumulative of exclamation from a root which does not occur in Arabic (the verb *subḥaḥa* is rightly explained by the grammarians as derived from the noun), but which goes back as a loan-word to Aramaic and was also adopted in Hebrew and Ethiopic, viz.: *shibeh* "to praise". Muḥammad probably found the expression somewhere among "the possessors of a scripture", as it is not probable that he himself should have created such a form from a non-Arabic verb. It is also evidence of an extensive use of the word that *subḥāna* is found in a verse of al-A'ṣā without a genitive with a following *min* as an exclamation of surprise (Ibn Ya'ish, ed. Jahn, p. 43, 2, 148, 1 etc.). As a regular formula in the Qur'ān it is placed in the mouth of Moses (vii. 140), Jesus (v. 116), the blessed in Paradise (x. 10) and the angels (ii. 30; cf. xxvii. 8). It is used on different occasions to express the impression made upon the speaker by Allāh's overwhelming greatness and His wonderful deeds. Thus: "Praise be to Him who made His servant travel in the night" (xvii. 1),

"Praise be to Him, who has subjected all this to us" (xliv. 12); "who created the pairs" (xxxvi. 36); "in whose hand is rule over every thing" (xxxvi. 83); "Praise be to Allāh (i.e. praise ye him) morning and evening" (xxx. 16); when the pious hear the recital of the Korān they fall upon their faces and say "Praise our Lord!" (xvii. 108); it is also found in a confession of wrong-doing: "Praise be to Allāh, we have done wrong" (lxviii. 17 sq.). As an expression of Allāh's absolute superiority and perfection, it is specially used, when anything is rejected than which Allāh is greater, and which would injure his nature (cf. xvii. 45 where it is connected with *af'ala*). The thing rejected is often introduced with *an* (xxi. 22; xxxix. 67; lii. 43; lix. 23). Thus Muḥammad is fond of using the formula when in the Meccan Sūras he is combatting the worship of other gods than Allāh as blasphemy (ix. 31; xii. 108; xvi. 1; xvii. 45 etc.) or when he is filled with horror at the idea that God should have a son (ii. 110; iv. 169; v. 116; xxxix. 6; xliii. 82) or sons and daughters (vi. 100; xvi. 59; xxxvii. 157, 180). It is in a similar connection that the pious say "Thou hast not created the world in vain (*bāṭilun*), *subḥānaka* (how much thou art raised above it) iii. 188) or that Muṣā recognises that God cannot be seen (vii. 140) or that Muḥammad turns aside the demand of his countrymen for miracles by saying he is only a man and a messenger (xvii. 95). In this way the expression may be weakened to mean almost "God forbid!" (xxiv. 15).

The derivative *subḥāna* early came to mean "to pray", especially of the supererogatory prayers, *subḥa*; e. g. Ḥassān b. Thābit in *Delectus*, lxxvii. 14 (not in Hirschfeld); cf. Lane, *Lexicon*.

(FR. BURL)

SUBHĪ MUḤAMMAD, Turkish historiographer. He was born at the beginning of the xviii century (the date is unknown) as son of Beylikli Khali Fehmi Efendi. He entered upon a long administrative career, beginning with the office of *atwān kâtibi*. Soon after, before 1750/1737, he was appointed *waḳa-nuvis* as successor to Shākir Husein Bey and he combined this position with other functions till the end of the year 1156 (Feb. 1744) when he was appointed *beylikliji*. The *waḳa-nuvislik* was then given into the charge of Sulaimān 'Izzī [q. v.]. Subhī Efendi died in Safar 1183 (June 1769). His *Tārīkh* was printed in Constantinople, together with those of his two predecessors Sāmī and Shākir in 1198/1785; the last year of which he wrote the chronicle was 1156. His Turkish biographers commend him for his style and his poems.

AL-SUBKĪ, *Nisba* from the place Subk in the district of al-Manṣūfiya, district of Manṣūf, Memphis ("Alī Paṣhā Muḥarrak, *al-Khiṭaṭ al-ʿadida*, Bulāḡ 1305, xii. 7).

A. The *Shāfiʿī* family of scholars al-SUBKĪ (the numbers beside certain persons in the family tree refer to the descriptions which follow; for the whole cf. F. Wüstenfeld, *Die Akademien der Araber und ihre Lehrer*, p. 119).

1. Šadr al-Dīn Abū Zakariyā³ Yaḥyā, Kāfi of al-Mahalla and later Professor at Cairo, died 725 (*Academiem*, No. 183).

2. Taḳī al-Dīn Abū 'l-Faṭḥ Muḥammad, b. 704, Professor at Cairo and Damascus, d. 744; wrote a *Tārīkh*; his correspondence Ahlwardt, No. 8471, 24 (*Academiem*, No. 97; *al-Khiṭaṭ al-ʿadida*, xii. 8).

3. Bahā' al-Dīn Abū 'l-Baḳā Muḥammad, b. 708, Professor, Kāfi and Ḥākim in Damascus and Cairo, Wākil of the Sulṭān and Khatīb of the Umayyad mosque in Damascus, d. 777; three unfinished writings (*Academiem*, No. 52; *al-Khiṭaṭ al-ʿadida*, xii. 8).

4. Wālī al-Dīn Abū Ḍarr 'Abdallāh, b. 735, Professor, Kāfi, Khatīb and financial officer in Damascus, d. 785 (*Academiem*, No. 98).

5. Badr al-Dīn Abū 'Abdallāh Muḥammad, b. 741, Professor, Mufti and Kāfi at Cairo, Damascus etc., Khatīb at the Umayyad mosque; unpopular on account of the influence he allowed his son Djalāl al-Dīn to exercise over his affairs, d. 802 or 803 (*Academiem*, No. 53; *al-Khiṭaṭ al-ʿadida*, xii. 8).

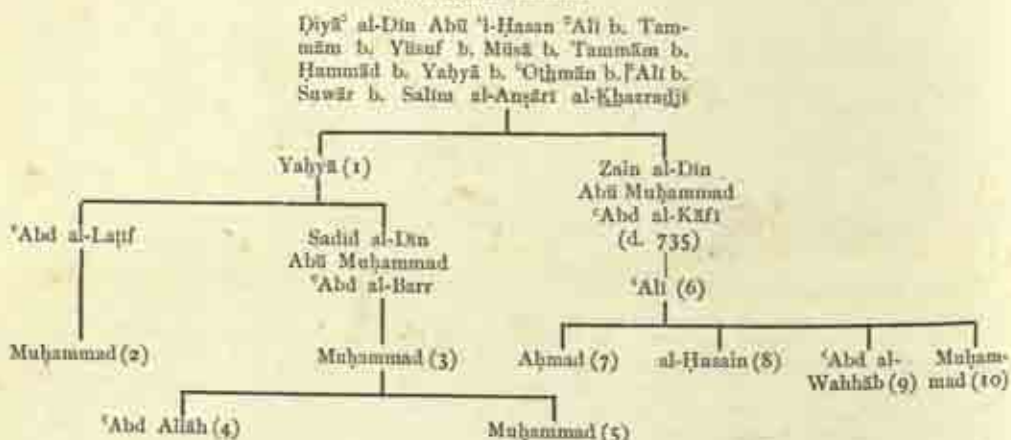

6. Shāikh al-Islām Taḳī al-Dīn Abū 'l-Ḥasan 'Alī, b. 683, studied in Cairo principally, Professor, Mufti and Kāfi at Cairo and Damascus, Ḥākim at Damascus, Khatīb at the Umayyad mosque, d. 756; produced more than 150 works, of which the following may be mentioned with a view to corrections to the list of those still extant by Brockelmann, *G. A. L.*, ii. 87 sq.: 5) printed at Haidarābād 1315, Bulāḡ 1318; 12) also Ahlwardt, No. 9399; 16) that of a *Koṭla* also in Ahlwardt, No. 8482, fol. 412; 18) Answers to legal questions, Ahlwardt, No. 5026, i. 19) *al-Durr al-naṣīm fī Taḥṣīl al-Kur'ān al-aṣīm* (unfinished); 20) *Taḥṣīl 'alā aynika 'l-Rusūl kulū min al-Tayyibāt* 'al-ʿayyā (Kur'ān, xxiii. 53); 21) *al-Itihād fī Sharḥ al-Minkhād* (Brockelmann, i. 395, l. 12 [not quite correct] unfinished; cf. below, No. 7, 2); 22) a commentary on *al-Muḥaddith* of al-Shirāzī unfinished; cf. Brockelmann, i. 387, 9, i.); 23) *al-Raḥm al-līzī fī Sharḥ Muḥṭaṭ al-Tibriṣ* (cf. Brockelmann, i. 393, 24); 24) *Raf' al-Shikāḥ fī Maṣ'alat al-Talāḥ*; 25) *al-Taḥṣīl fī Maṣ'alat al-Talāḥ*; 26) *Bayān Ḥukm al-Raḥ fī Fitrāt al-Sharḥ 'alā Sharḥ*; 27) *Munayy al-Bāḥith 'an Ḥukm Dāin al-Warīḥ*; 28) *al-Riyāḍ al-anṭa fī Kismat al-Ḥarīḥ*; 29) *al-Sahn al-qāḥ fī Kaḍā Dāin al-Ghāḥ*; 30) *al-Ghāḥ al-mughḥir fī Mitrāḥ al-Muṭṭī*; 31) *Faḥ al-Muḥṭā fī Hudūya 'l-Ummāl*; 32) *al-Kawāl al-ṣāḥ fī Ta'yīn al-Dhād*; 33) *Kaḥf al-Darāṭ fī Ḥadīm al-Kanāṭ*; 34) *al-Tarīḥ al-naḥ fī 'l-Muḥṭā wa 'l-Muḥṭā wa 'l-Muḥṭā*; 35) *Nūr al-Raḥ fī 'l-Kalām 'alā mā rawaḥu 'l-Raḥ*; 36) *al-Ṭibīr bi-Baḥā' al-Djanna wa 'l-Nār*; 37) *al-Kawāl al-mahmūd fī Tanṭih Dāwūd*; 38) *Ghairat al-Imām al-ʿajāl fī Abī Bakr wa-ʿUmar wa-ʿOthmān wa-ʿAlī*; 39) *al-Itihād fī Baḥā' Wadḥ al-Itihād*; 40) *Abḥām "kull" wa-ʿalāhi mā yadull*; 41) *al-Iḥwā' fī Ifādāt "law" li 'l-Imtīn*; 42) *al-ʿAlā fī 'l-Arabiya*; 43) *al-Djadd al-Ighrīd fī 'l-Farḥ bāin al-Kināya wa 'l-Ta'riq*; 44) *al-Iḥnāy fī 'l-Farḥ bāin al-Ḥayr wa 'l-Iḥnāy*; 45) *Iḥyā' al-Nuṣū fī Ṣanāt Ifā' al-Durr*; many of his shorter writings are in the collection of his *Fatāwā* (*Academiem*, No. 49; *al-Khiṭaṭ al-ʿadida*, xii. 7; Ḥādīḥī Khaliṭa, ed. Flügel, Index, No. 8765; Brockelmann, ii. 86, 9), in which there is an even longer list of literature; complete biography in the *Tabaḳāt* of his son [here No. 9].

7. Bahā' al-Dīn Abū Ḥamid Aḥmad, b. 719, Professor, Mufti and Kāḍī in Cairo and Damascus, d. in Mecca 773; wrote 1) an unfinished commentary on *al-Ḥāwī* of al-Kāẓimī (cf. Brockelmann, i. 394, 29, 1); 2) a supplement to the unfinished commentary on the *Minhāj*-commentary of his father (see above, No. 6, 21); 3) *Djāmi' al-Tanākhūt* or *al-Munākhādāt* (Ḥādīdī Khālifa, ed. Flügel, vi. 157); 4) *Arūs al-Afrāḥ fī Sharḥ Taḥḥīṭ al-Miftāḥ* (cf. Brockelmann, i. 295, 10); 5) an unfinished commentary on *Muḥḥṭaṭ* of the *Kāḥya* of Ibn al-Ḥādīb from al-Baiḥāwī (cf. Brockelmann, i. 305, 6); 6) a *Kāḥya* on the meaning of the word *ʿAim* (Ahlwardt, No. 7065, 1 as also in 6973, 3 and in 7334); 7) a riddle-poem on the Nile (with the answer of Salāḥ al-Dīn al-Safādī [Brockelmann, ii. 31, 3] thereupon; Ahlwardt, No. 7866, 1 also in 6111); 8) another poem by him Ahlwardt, No. 8471, 28; 9) writings addressed to him Ahlwardt, No. 7869 and 8471, 24 (*Academien*, No. 50; *al-Khiṭaṭ al-djādida*, xii. 8; Ḥādīdī Khālifa, ed. Flügel, Index, No. 1899).

read Leiden, No. 897; printed Cairo 1324; from this also M. Enger, *De vita et scriptis Mawardi commentatio*, 1851; 8b) also Ahlwardt, No. 10036; 8c) read Gotha, No. 1762; 10) also Ahlwardt, No. 941; 11) to be cancelled; 12) also Ahlwardt, No. 8465, fol. 108a; 16) *Kitāb al-Aḥḥād wa 'l-Naḡār*, passages from this Ahlwardt, No. 4611; 17) a commentary on *al-Minhāj* of al-Baidāwī (cf. 10. Muḥammad: his father's admonitory *Kāḥya* is addressed to him (see above, No. 6, 4).

THE SUBKI FAMILY

8. Ḥammād al-Dīn Abū 'l-Tayyib al-Ḥusain, b. 722, Professor in Cairo and Damascus, in the latter also deputy Kāḍī; d. 755; previously to his father; wrote a book on people with the name of al-Ḥusain b. 'Alī (Ḥādīdī Khālifa, ed. Flügel, v. 159); his correspondence Ahlwardt, No. 8471, 24 (*Academien*, No. 73; Ahlwardt, *al-Khiṭaṭ al-djādida*, xii. 8).

9. Tādī al-Dīn Abū Naṣr 'Abd al-Wahhāb, b. 727 (or 728 or 729), Professor, Mufti, Kāḍī and Ḥākim in Damascus and Cairo, Khatīb of the Umayyad mosque; in 769 he was thrown into prison for about 80 days, but was able to rehabilitate himself; d. 771 of the plague. To Brockelmann's list of his surviving works, ii. 89 sq., should be added: 1) Ahlwardt, No. 4401 is autograph from 762; the commentary of al-Zarkāshī also Ahlwardt, No. 4402; printed with the commentary by al-Majallī also Bulāq 1297 and 1891, with the same commentary and the *Zuhriyyāt* of 'Abd al-Rahmān al-Sharḥatī, Cairo 1309 and 1318; 7) ed. D. W. Myhrman, *Lusac's Semitic Text Series*, London 1908, xviii.; abridged and translated from the Arabic by O. Reischer, Constantinople 1925; 8a)

B. Shihāb al-Dīn (or Sharaf al-Dīn) Aḥmad b. Khālīl b. Ibrāhīm al-Misrī al-Shāfi', d. 1032, at the age of 93; wrote 1) a gloss to *Kitāb al-Saḥīḥ* of al-Kāḍī 'Iyāḍ (Brockelmann, i. 369, 5, 1, 4); 2) *Faṭḥ al-Muḥīṭ fī Sharḥ al-Taḥḥīṭ 'ind al-Tayyib* (Brockelmann, ii. 151, 130b); 3) *Faṭḥ al-Ḥaṣṣ fī Manḥūmat al-Kubār* (ibid. 2); 4) *Faṭḥ al-Muḥīṭ bi-Sharḥ Manḥūmat Ibn 'Isā'id al-Dīn* (cf. Brockelmann, ii. 94, 4; perhaps erroneously attributed to him, cf. v. Pestsch, No. 1080); 5) *Ḥadiyyat al-Iḥṭāṭ fī Ma'ā'il al-Islām wa 'l-Ḥiṭāṭ*; 6) *Manāṣib al-Ḥādīdī al-Khalīfa* and 7) *al-Jaghīra*; 8) besides these he collected the *Fatāwā* of al-Ramlī (cf. Brockelmann, ii. 321, 13) (*al-Khiṭaṭ al-djādida*, xii. 8 sq.; Biography also Ahlwardt, No. 8471, 15b).

C. For the modern Egyptian Aḥmad Bey al-Subkī b. Aḥmad b. Sulaimān 'Uḍjaila, cf. *al-Khiṭaṭ al-djādida*, xii. 9. (JOSEPH SCHACHT)

SŪDA, a town in the Yemen in South Arabia. It is built on a rocky ridge running S.W. to N.E. with a peak in the centre. The citadel (*ḥuṣṣ*) stands in the centre of the town which is also its highest part, a strong lofty building reached by a kind of staircase on the

west side, which is now in ruins. On the west side is also a small plateau with a fine cistern: there is a tower to the west of it on the southern edge of the cliff. The town runs N.E. by S.W. up to the castle; the northeastern part stands high and the southwest slopes down in terraces. The town is entered from the southwest; the market lies in the same direction; it consists of a few miserable booths near the mosque. The water supply is provided by four or five well cemented, regular elliptical, circular or quadrangular cisterns, N. and N.W. of the citadel. The town is surrounded by rich fields. In the lower lying areas, e.g. the Wādī Bait Kilāb and the immediate vicinity of Sūda, *sorgho* is grown and in the higher like Djebel 'Ayalī Yazid, Djebel Bent Hādīdīl, barley, wheat etc., and also coffee, which is considered the best in Yemen, especially in Wādī Thēdī and Wādī Shamayān, 600—1,000 feet lower. Bananas also flourish exceedingly. The crops are grown on terraces, which, made absolutely horizontal, enclose the hills as it were with hypsometric lines and are separated from one another by a strong stone perpendicular wall, often 12—20 feet high.

Bibliography: E. Glaser, *Geographische Forschungen im Yemen*, 1883/1884, fol. 43*, 44* (ADOLF GROHMANN).

SUDĀN. The expression *Bilād al-Sūdān* properly means "land of the negroes". It would appear then that the word *Sūdān* which comes from it ought to mean all the parts of Africa inhabited by negroes. Among Arabs, as well as Europeans, it has become the custom to restrict the application to the northern part of these regions or in a more general way to the area of sub-Saharan Africa which has been penetrated by Islam. In practice this area is divided into three parts: Western Sūdān, containing the basin of the Senegal, the Gambia, the upper Volta and the middle Niger; Central Sūdān including the basin of Lake Chad and Eastern Sūdān or the Egyptian Sūdān, confined to the basin of the upper Nile. It may be mentioned that the English use the word *Sūdān* alone to mean the Egyptian Sūdān and that the French officially apply the name "Soudan Français" to one of their colonies, which really corresponds only to a small fraction of the large Sudanese area which they occupy. In this article we shall take the Sūdān to include all the lands lying south of the deserts of the Sahara and of Libyan, from the Atlantic in the west to the western frontiers of Ethiopia in the east, the southern limit following roughly the 10° of North Latitude.

It is probable that from the earliest times there were relations between the Sūdān and Mediterranean Africa. The ancient Egyptians obtained slaves by making expeditions into the land of the negroes and they had also commercial relations with it. Caravans setting out from the Phœnician colonies, especially Carthage, used to buy in the Sūdān, gold, ivory, and slaves, in exchange for cloth, copper and tools. This intercourse which took place via the Nile or across the Sahara continued in the Greek and Roman period and later after the conquest and conversion to Islam of North Africa it was continued by the Arabs. By the end of the seventh century A.D. Muslims of Egypt, Ifrīkiya and the Maghrib were attending the great markets of the Sūdān. Some were even settled there as correspondents and agents for their coun-

patriots on the shores of the Mediterranean. But according to the Arab authors who give the earliest notices of the land of the negroes, it was evident that these Muslims were only interested in commerce and did not proselytise and it was only in the 11th century that Islam began to spread among the Sūdānese. Several traditions, it is true, make the conqueror 'Oqba b. Nāṣ' come to the Sūdān but they do not appear worthy of credence.

We should not however deduce that before the 11th century there was no civilisation or political organisation worthy of the name in these regions. While many of the princes who have ruled various parts of Sūdānese territory from the 11th century have professed Islam, it was not always nor everywhere thus. Indeed several of the Sūdānese states, including the most important were well governed before the beginning of the conversion of their country to Islam and had already attained a power and fame, in some cases considerable, and possessed institutions which Muslim rulers at a later date were pleased to adopt and which still exist to-day. In those kingdoms that have remained pagan, like the Mūsī of the Upper Volta, such as are described in the 11th century by al-Bakrī when he tells of the pagan kingdom of Ghāna.

The religion formerly professed by all the Sūdānese was the same, apparently, as that which is found at the present day among those of them who have not been affected by Islam, i.e. a form of Animism based on the worship of ancestors and of the spirits of nature.

Christianity had penetrated into several parts of the Sūdān; it was predominant in Nubia from the 11th to the 15th century and it is said that the princes reputed to be Berber origin, who founded the kingdom of Songhay [q. v.] in the 15th century were Christians.

Islam must have spread very early among the Nūba or Nūbiāns of the valley of the Nile, but it appears to have taken a long time to reach the provinces of the eastern Sūdān which lie at some distance from the main branch of the river, when it was only introduced towards the 17th century by tribes of Arab origin who at this period pushed south-westwards and came into contact with the negroes of this region. It was on the western part of the Sūdān that a deep and lasting impression was first made by the teaching of Muḥammad. It reached there, not through the Arabs, but through Berbers of the Sahara, who at this time launched the Almoravid movement.

At this time the Ghāna empire was flourishing in the Western Sūdān, founded at an unknown date by princes who are said to have belonged to a white stock, but whose rulers at the time were negroes of the Sarakollé tribe (alias Soninke, or Wākore or Marka), who lived at Kumbi, S. S. W. of Wālatā, in the province called Waghāna or Baghāna, and who bore titles of *tunka*, *kayamaḡha*, and *ghāna*. It is this last term extended from the ruler to the town that the Arab writers use for the town of Kumbi. The Ghāna extended his sway beyond the proper limits of his kingdom over the greater part of the Western Sūdān, and notably over the goldmines of the left bank of the Upper Senegal, as well as over the majority of the Berber tribes of the Sahara and in particular over that of the Lemtana and over their capital Awdaghust, probably situated at some distance to the S. W. of Tighit (Tichit).

In 1042, the Berber reformer 'Abdallāh b. Yāsīn, left the *ribat* or monastery which he had conducted on an island of the Lower Senegal and began to preach Islam to the Berbers of the Adrar and of the Tagant and to the negroes of Takrūr (Futa-Toro), ancestors of the Tokoror or Tuculor of our day and to several other Sūdānese peoples, then more or less vassals of the Ghāna. His preaching was all the more successful as it was addressed to people, black or white, anxious to cast off the yoke of the uncertainty of the Sarakolle of Kumbi, who were also a bulwark of paganism. The king of Takrūr and his family — the first of the negroes without doubt to do so — adopted Islam and even supplied contingents to the Almoravid army. The king of Manding or Mali, who lived on the Upper Niger soon became a convert also and the conversion of the king of Songhay in the region of Gao on the middle Niger is put about the same date. Awdaghust which remained faithful to the Ghāna, was attacked and taken in 1054 by 'Abdallāh b. Yāsīn and about 1076 while Yūsuf b. Tashfin at the head of the main body of the Almoravids was conquering Morocco and preparing to invade Spain, his cousin Abū Bakr b. 'Omar of the Lemtuna tribe with the Almoravids who had stopped on the threshold of the Sūdān seized Kumbi and put an end to the long period of Ghāna domination. Compelled by force to adopt the new religion, the Sarakolle became converted to Islam en masse and began to spread it in the different kingdoms which they still ruled and which had taken advantage of the fall of the Ghāna their suzerain to declare themselves independent: kingdoms or provinces of Djāza or Kanyaga (near the modern Nyorō), of Gumba (south of Kumbi), of Sāsā (between Gumba and Bamako), of Djakha or Dji (western Māsina) etc. The death of Abū Bakr b. 'Omar in 1087 and the departure for the north of the last Almoravid forces which had supported him, did not prevent the propagation of Islam from going on and at the end of the 11th century some Muslim Djula, converted by the Sarakolle of Djakha, carried the new faith up to the dense forests of the Gold Coast, to which they used to go to buy kola-nuts.

Progress was then checked for a period; then about 1234 a religious and commercial centre was organised at Walata and soon Timbuktu and more particularly Djénne were reached. In the following century Timbuktu became the Muslim metropolis of the western Sūdān. The Mandingo empire, the hegemony of which had succeeded to that of the Ghāna, was then at its zenith. In 1325 its ruler, who at this time was the famous Gongon-Mūsā (popular Kanem-Mūsā) had mosques built in Gao and Timbuktu by an Arab of a Granada family whom he had brought from Mecca; these mosques had flat roofs, and pyramidal minarets and introduced to the Sūdān an architectural style which spread rapidly there; the fact which he gave the Muslim religion contributed to consolidate Gongon-Mūsā's authority over the Niger countries. It was under his successor that regular diplomatic relations were begun between the Sūdān and Morocco.

The progress of Islam became still more rapid at the end of the 14th and beginning of the 15th centuries as a result of the policy of the greatest prince of Songhay, the *askiya* Muḥammadu Tūrē. On the other hand it suffered a considerable setback in the middle of the 16th century in Senegal,

as a result of the conquest of Takrūr or Futa-Toro by Fula and Manding hordes from Koli-Tengella and the establishment in this country of a Fula pagan monarchy which held power from 1559 to 1776. Contrary to what one would have expected, the conquest of Songhay and of Timbuktu by a Moroccan expedition in 1591, was a further signal for a decline in the Muslim faith, on the middle Niger and for the beginning of the decline of Timbuktu as an intellectual and religious centre.

It must not however be thought that Islam had ever been over all the Sūdānese. According to the Arab geographers and historians and to the local chroniclers, the new religion had made its converts mainly among the kings and high dignitaries; except in the case of a few tribes like the Tuculor, the Sarakolle, the Djula and Songhay, the mass of the population except in the large towns had remained pagan.

It was in the 17th and 18th centuries that Islam made most progress in the Western Sūdān and a progress more marked than it had ever made since the Almoravid period. The mystical temperament of the Tuculor caste of the Tōrode (sing. Tōrodo) of Takrūr was the main factor in this movement. It had begun about 1720 with the creation at Futa-Djallon (q.v.) of a kind of theocratic monarchy. It was strengthened in 1776 by the foundation at Futa-Toro of a similar theocracy as a result of the victory which the Muslim Tuculors then inflicted on the Fula, who still remained pagan and of whom the majority were now forced to adopt Islam. Gradually the Wolof of Lower Senegal were also converted to Islam. Prophets soon arose among the Tōrode of Futa-Toro and among the Fula of Māsina. The first was the Tuculor Usmānu Fōdjo who preached the holy war between the Niger and the Chad, converted a section of the Hausa, and founded the empire of Sokoto (1802). He was followed by the Fula Seku Jāmadu Bārī, who secured the supremacy of Islam in Māsina and built a capital there which he called Jāmadallāhi (1810). Then the Tuculor al-Jalāl 'Omar, who in the course of his pilgrimage to Mecca (1820) had been invested with the title of Khatib of the Tidjāniya for the Sūdān, began in 1838 a series of missionary and military campaigns which made him master of Manding (1845), Kaarta (1854), Ségou (1861) and lastly of Māsina (1862). At his death (1864) he left a vast empire in which Islam was a sort of official religion but it was to collapse before the French conquest (1890—1893). A little later in 1898, an attempt to set up another Muslim empire between the Senegal and the Upper Volta begun by the conquering Mandingo Samōrī Tūrē was definitely checked by the defeat of the latter, who was captured by the French troops.

In the Central Sūdān, Islam had made its first appearance in the 13th century. It had been introduced to Kanem in the reign of Ume whose dynasty, which remained faithful to paganism, was overthrown in 1194 by a Muslim dynasty of native origin, that of the *Mar*, which transferred its capital to Bornu at the end of the 15th century. But it was only at this latter date that the Muslim faith took firm root in these regions by establishing itself solidly on both sides of Lake Chad. It was only at the end of the next century in the reign of the *Mūsā* 'Abdallāh (1561—1602) that it reached Baghirmi and it was only at the beginning

(244) *thw*

of the xvth century that the prophet Sālih, said to have been of Arab origin, brought Islam to Wādīy where it was not firmly established till 1635 onwards. Very much later Islam spread southwards under the stimulus of the adventures of Rabah (1878-1900).

In the Eastern Sūdān, the Nūba formed almost the only native Muslim population down to the xvth century. At this period Dar-Fūr, after long being like Wādīy and Kordofān under the authority of the idolatrous Tāngūr princes, said to have been of Asiatic origin, was partly converted to Islam by the founder of a new dynasty named Soluh-Slīmān. One of his successors, Tāherth, conquered Kordofān and converted the Koldāji of this country in the xvth century. The conversion of the Eastern Sūdān made more rapid progress towards the end of the sixth century under the influence of the Mahdi Muhammad Ahmad [q.v.] who belonged to a Nūbian family of Dongola and who conquered Kordofān, Dar-Fūr, Bahr al-Ghazāl, Senār [q.v.] and finally Khartūm (1881-1885) and under his Khalifa 'Abdallāh, one of a tribe of Baggāra of Dar-Fūr, who extended his conquests into the province of Equatoria (1892), to be finally driven from Khartūm by Kitchener in 1898 and killed in Kordofān in 1899 by a force under Colonel Wingate.

At the present time (1925) the Sūdān as a whole has a population that may be approximately estimated at 25 or 30 millions, composed of Muslims and Animists in about equal parts. The former predominate in the larger centres but are relatively less numerous outside the towns. Some tribes however are all or for the most part Muslims; these are from West to East the Wolof, the Tukulor, the Samakelle, the Djula, the Songhay, the Kanuri and Kirmān, the Teda of Taba, the Maba, the Kongara, the Koldāji, the Nūba and a few others of minor importance. Some are partly pagan like the Ful or Fulbe, the Mandingos or Melinke, the Seres of Bono, the Hansa, the Bagirmi, etc.; and lastly many are entirely or for the most part Animists, like the Serer, the Djula or Flup; the Hamar and Konyagi, the Mambara, the Bobo, the Dogon or Tombo, the Samo, the Mba, the Gurusi, the Lohi, the Ungari, the Senuso, the Buzansa, the Gurmantshe, the Berta, the Kanbari, the Baushi, the Mandara, the Musga, the Mupdang and the numerous peoples of the Central and Eastern Sūdān grouped together by the Muslims as Kāfīr, Kirdi, Ferit, Djenakhe, etc.

Arabic as a spoken language has made very little progress in the Sūdān; it has only enriched the dialects of the Sūdānese Muslims with words relating to religion. These dialects, like those of the Sūdānese Animists, all belong to the African-Negro family. On the other hand, Arabic is the written language for all the Muslims of the Sūdān who have any education and there has existed since the xvth century a regular Sūdānese literature in the Arabic language. Sometimes, at least as far as the Ful and Hansa are concerned, the characters of the Arabic alphabet are used to write the native languages.

SUEZ, an Egyptian frontier town, situated at the head of the Gulf of Suez on an arid, sandy plain with the dark 'Atāḥ Mountains in the West. On account of its physical surroundings it has earned for itself the descriptive sobriquet of 'The Silent' *al-Hāṭiq* (see *Description de l'Égypte*, *État Moderne*, i 185). It is 80 miles S.E. of Cairo and 2 miles N. of Port Ibrahim, the harbour at the South entrance of the Suez Canal, 29° 58' 59" N., 32° 35' E. Population c. 20,000. Its position on the Canal (opened in 1869) has changed it from a village into a considerable town. Nowadays it is a governorship (*muhāḥaq*). The old city is largely built of sun-dried bricks, and presents a dreary appearance. There are several poor mosques. In the European quarter large offices and warehouses have been built. The town is a quarantine station for pilgrims on their way to Mecca.

The modern Suez occupies the site of several former cities. Ancient Egyptian remains have been found, and on an eminence (*Kūm al-Kūḥān*) near by, are the ruins of the Ptolemaic fortress of Kāōra (Clysma Præsidium; the *Kūḥān* [q.v.] of the Arab geographers). Previous to this, however, Ptolemy Philadelphus (c. 230 B.C.) had built in the vicinity the town of Arimos (Araos) later named, Cleopatris (Κλεωπάρις). In early Christian times a colony of natives chiefly engaged in fishing and smuggling existed here. During Muslim rule, the town became rich except under the Mameluke sultans, when a check was given to its growth. It was the starting-point of the Cape Route to India, and the discovery of the Cape Route its importance further diminished. Once again under

Seltan I (1517) it revived as a naval station. At this time the water from the *Bir Suez*, a league and a quarter distant on the road to Cairo, was brought to the town by an aqueduct, traces of which still remain. This water according to 'Alī Bey (*Travels*, ii. 30) was brackish. Water was also brought (about 8 miles) from the Wells of Moses (*ʿAyūn Mūsā*), celebrated in legend (Ibn al-Wardī, *Parles des Merveilles*, in *N.E.*, ii. 31). 'Alī Bey declares that the wells yielded 'a disagreeable and fetid kind of water'. In modern times, however, a fresh-water canal was cut in 1863 between Calco and Suez.

By the beginning of the 19th century the town had once more fallen into decay and insignificance ('Alī Bey, *ibid.*, ii. 29). But it revived again when the overland mail route was opened in 1837 between England and India, and still more after the construction of the Canal.

An etymology of the name *Suez* will be found in *Deur de l'Ég.*, i. 87. Yāqūt mentions, on the authority of al-Muhallabī, the presence in the neighbourhood of magnetic rock (*maghāṣṣī*) whose power is decreased or increased according as it is rubbed with garlic or vinegar.

An ancient canal, called *Amnī Trajanī*, although much older than the Roman occupation, once existed between the Nile and the Red Sea. One of its termini was at Kalzum. 'Amr b. al-'Ās re-opened this ancient waterway to enable grain supplies to be shipped direct to the Haramain (Butler, *The Arab Conquest of Egypt*, p. 345 *qq.*). Soon afterwards it was silted up again until restored under al-Mahdī (c. 780 A.D.). In the year 971 A.D. Hasan the Karmanian captured the city. During the middle ages the commerce of the Indians passed steadily through the town. Caravans from Farma (*Pelusium*) took four days; from Cairo, three (see J. M. Hartmann, *Edrisi Africa*, p. 449; Yāqūt, *Mu'jam*, s.v.).

ŠUFĪ. [See TAŠAWWUF.]

AL-SUFRIYA, one of the principal branches of the Khāridjīs [q.v.]. Historiographic tradition, established as early as the middle of the 2nd century by Abū Mikhnaḥ (al-

Tabari, *Annales*, ii. 517 *qq.*) places its rise in 65, when the Tamīm 'Abdallāh b. al-Saffār, a Khāridjī of al-Baṣra, broke away from his colleague Nāṣir b. al-Azraq on the question of the *al-ṣirāḍ* (the murder of adversaries and their families), propounded by the latter, and subsequently from 'Abdallāh b. Iḥād, who maintained that non-Khāridjī Muslims should not be regarded as polytheists. The account of Abū Mikhnaḥ shows, as has been aptly remarked by Wellhausen, a spirit of pragmatism, which regards the three great branches of the Khāridjīs: the Sufriya, the Azraqites [i. 563/564] and the Abūḥaḍra or Iḥādīs [i. 3/4; ii. 372/373], as the simultaneous product of a conflict of principles. Another historian al-Balādhurī (ed. Ahiwardi, p. 82—83), names as founder of the Sufriya 'Ubaida b. Kaḥbiṣ; (theological sources, on the other hand, assign this rôle to Ziyād b. al-Aṣfar, after whom the Sufriya have also received the name of Ziyādiya (al-Baghādī, *Firāḥ*, p. 70; al-Shahrastānī, ed. Caetani, p. 102; al-Khwarizmi, *Mafāṭih al-'Ulūm*, ed. van Vloten, p. 25; al-Sam'ānī, *Anwāḥ*, vol. 354 a) or to al-Nu'mān b. Sa'f (Maḥrūn, *Kāḥif*, ii. 354 below = 2nd ed., iv. 178, below): all of which persons are equally obscure. In reality the Sufriya began to take part in the Khāridjī movement in the month of Šafar 76, when the great revolt raised by Šaḥīb b. Musarrīḥ (or Musarrāḥ, cf. Tabari, ii. 881, note g) broke out, after his death led by Šaḥīb b. Yazīd al-Shaibānī [see above, p. 261—262]. Šaḥīb b. Musarrīḥ, who was regarded by his followers as a saint, and whose tomb remained an object of veneration for a long time (Ibn Kattāba, *Ma'ārif*, ed. Wüstenfeld, p. 209 = Ibn Duraid, *Liṭā'ik*, ed. Wüstenfeld, p. 133), represents the type of devotee with ascetic tendencies who becomes propagandist and ends by becoming engulfed in the turmoils of a bloody war in spite of his pacific temperament; he is represented in the account of a contemporary, who in all probability writes with authority (Tabari, ii. 886) as opposed to the terrorist methods of the Azraqīs, a point which has invariably constituted a characteristic of the Sufī theory, although its adepts have not always observed it in practice.

After the defeat of Šaḥīb b. Yazīd, the Sufriya again appear involved in the revolt of al-Dahḥāk b. Kaḥbiṣ [q.v.] towards the end of the Umayyad period. At the same epoch they are found spread over the whole of the Islamic world; they are mentioned in the Maghrib from the year 117 (Ibn al-Athīr, *Kāmil*, ed. Tornberg, v. 153 below), where, a few years later, guided by their chief Abū Kurrā, they slew the Abbāsid governor 'Omar b. Hafs, in 153 (Tabari, iii. 370—371), and seized the town of Sijilmāsa [see above, p. 432—433] where they long maintained their independence (Ibn al-Adhārī, *Bayān al-Maghrib*, ed. Dory, i. 58 *qq.*; Ibn al-Athīr, vi. 4 *qq.*, 53); they joined the Iḥādīs in the general rising of the Berbers, and ended by being absorbed by the former, who in North Africa as elsewhere became dominant. Another conflict between Iḥādīs and Sufriya, where the latter were overthrown, took place in 'Omān, in which the Sufriya had taken refuge in 134, after having been defeated by the Abbāsid chief Khāṣim b. Khuzaima (Tabari, iii. 78).

It is principally as exponents of Khāridjism

that the Sufriya are of importance; they seem to have been the first to attempt a systematic exposition of their religious principles, and one of their very earliest *imāms*, the poet Imrān b. Ḥijān (ii. 507–508), d. 84, is renowned as jurisconsult and theologian. Other names of Sufri traditionists and theologians are cited by al-Jāhiz in his list of Khāridjī scholars (*Bayān*, i. 131–133; ii. 126–127); amongst others Shubail b. Azra al-Dūshā'i (d. 140), also known as poet and lexicographer (cf. Wüstenfeld, *Geschichtsschreiber*, No. 20, where the patronymic is incorrect; Ibn Duraid, p. 193; Tabari, ii. 1913; Jāhiz, *Hayawān*, i. 152; Ibn Hajar, *Tahdhīb al-Tahdhīb*, iv. 310, etc.). al-Kāsim b. 'Abd al-Rahmān b. Sadiqa, Mulail, etc. The principal theses which divided the Sufriya from the extremist Azariqa, though not quite equalling the moderation of the Ibāḍis, are, according to the systematic tracts by 'Abd al-Kābir al-Baghḍādī and al-Shahrastānī, the admission of *ḥudūd* (temporary cessation of war with other Muslims; cf. Muḥarrad, *Kāmil*, ed. Wright, p. 527, 595, 604, 604, 604) and of *ṭabī'a* (dissimulation of faith), the negation of the doctrines of *istifāḥ* and the damnation of the children of infidels. In moral doctrine also the strictness of the Khāridjīs is somewhat modified by the Sufriya: one of their subdivisions maintains that sins do not produce in the sinner the quality of an infidel (*kāfir*) nor of a polytheist (*mushrik*) as long as it concerns infractions of righteousness for which the religious law provides a definite punishment (*ḥadd waḥḍ*); this expression has not been included in the translation of al-Shahrastānī by Haarbrücker, ii. 154, but only in those cases in which there is no punishment in the law. Other peculiarities of the Sufriya refer to questions of ritual and equity.

The Sufriya, as a religious school, seems to have especially pre-dominated, in the eastern half of the Islamic world, where they maintained themselves up to a comparatively recent period. Ibn Ḥazm (d. in 456) affirms that they were the only branch of the Khāridjīs who existed in his time, beside the Ibāḍis (*al-Faṣl fi 'l-Milal*, iv. 190–191). This leads us to suppose that there was a gradual absorption of the other schools of Khāridjīs into that of the Sufriya, which seems to be confirmed by the fact that Ibn Ḥazm ranges with the Sufriya the schools of Thā'liba, 'Adjārida (ii. 149; ii. 381), Balḥāsiya (i. 617) with their subdivisions, while 'Abd al-Kābir al-Baghḍādī and al-Shahrastānī consider them as independent schools.

The origin of the name Sufriya is greatly disputed, the etymologies that are derived from the supposed founders (Ibn al-Saffār, al-Aṣfar, Ibn Sufr) seem somewhat artificial; a perfectly foolish one, although it is due to the celebrated philologist al-Aṣma'i, is the one which, admitting the vocalisation *Sifriya*, attaches it to the word *sifr* "zero" and supports it by an anecdote according to which an imprisoned Sufrī was accosted by one of his companions in captivity with the words: "You count for no more than zero in religion!" (*Liḥw al-'Arab*, vi. 135 = *Tuḥf al-'Arab*, iii. 337). A third etymology deserves more credit, although it is not entirely beyond doubt: it is that which derives the name from *Sufr*, the "yellow colour", which their faces had assumed in consequence of their devotional practices (al-Balḥūrī, ed. Abūwardī, p. 82–83; al-Muḥarrad, *Kāmil*, p. 604,

4–11, 615–616; cf. Tabari, ii. 881, 14, where he says of Salīh b. Musarrīh that he was a man of "yellow countenance" [*muṣṣarr al-waḥḥ*]). This etymological uncertainty is the consequence of the obscurity that covers the origin of the movement itself: Salīh b. Musarrīh, who as we have seen, seems to have been the real originator, is not recognised as such by the later Sufriya, who name as their first *imām* Imrān b. Ḥijān (al-Baghḍādī, *Firaḥ*, p. 71); al-Baghḍādī, p. 89, hesitates to attribute to Salīh the denomination of Sufri and al-Shahrastānī, p. 95, in mentioning the school of the *Salīhiya* says that they do not enter into any of the known categories of the Khāridjīs.

According to al-Maḥṣūṣ (*Ḍikr*, ii. 354 below = 2nd ed., iv. 179) the Sufriya also bore the name of *al-Nakḥūr*, "the deniers" because they reprove (like all the other Khāridjīs) a part of the conduct of 'Uthmān, 'Alī and 'A'īsha; but the passages quoted by Dozy, *Supplément*, ii. 722^b (which refer without exception to the Maghrib) show that it was an insulting appellation applied to Khāridjīs in general.

(G. LEVI DELLA VITA)

SUFURŪY (vulg. *Sufrā*, *nizba*: *Sufrūy*), a small town to the north of Morocco, 33 KM. S. E. of Fās (Fes), 800 metres above sea level at the foot of the northern spur of the Middle Atlas. The town, watered by the Wādī Sufrūy, is surrounded by beautiful orchards, principally cherry. The quarters are N. Tāḡeḥb and Shebbak, E. the Kaṣba or fort, S. Moṣḥūḥ and Zemrit, surrounding the Mellāḥ or Jews' quarter on all sides. The town is protected by a high wall restored in the sixteenth century by the Sulṭān Mawḥay Sulaimān, who also built a mosque and a *ḥammām*. The population exceeds 8,000, of whom more than 3,000 are Jews.

The principal sanctuaries of Sufrūy are those of Sidi Bā-Serghin, Sidi Bā-'Alī and Sidi Bā-Medyan. The first is the most important; at the end of the summer a spring near to the sanctuary is the object of a water-cult; it has the virtue of curing madness and idiocy. These sacred spots were visited in 1179 (1765–1766) by the Sulṭāna Fāṭima bint Sulaimān who came from Marrākeṣh to Fās for the express purpose of visiting these sanctuaries.

It was in the environs of Sufrūy, that in the Berber tribe of the Ait Yūs, the learned and versatile al-Huṣayn b. Ma'ūd al-Yūsai (d. 1102/1691) (q.v.) was born; his tomb is at the *asābiya* called Sidi Laḥsen in the S.W. of the town; he is still greatly venerated by the Ait Yūs, who hold a *marṣam* there every year.

Nothing is known of the date at which Sufrūy was founded. Leo Africanus (who calls it *Sofrei*) says that it was built by the "Africans", which means that for him its origin is lost in antiquity. It would seem to have been in existence at the time of the foundation of Fās by Idrīs II; he was not slow to enter into conflict with the inhabitants of the region of Sufrūy and al-Bahillī, where the religion seems to have been strongly impregnated by Judaism, and converted them to Islam. The memory of an ancient Jewish population is preserved in the name of wādī 'l-Yahūdī (the name of the lower part of wādī Sufrūy) and by that of the grotto called *A'f al-Yahūd*, which

among the Jews in the town is the centre of a true naturalist cult.

The importance rapidly attained by Fās, the new and adjacent capital, accelerated the decline of the ancient Berber city. Sufurŷ, however, as a necessary point of passage for the caravans bound for Sijilmāsa always retained a certain vitality; it was, moreover, the natural depot for the products of the Middle Atlas, destined for Fās: fruits, wool, skins and cedar wood.

In 407 (1016—1017) on the fall of the Umayyad caliphate of Cordova Sufurŷ, which was a fief of the lord of Fās, al-Mu'izz b. Ziri, was taken from him by Wāḥid b. Kharrūn al-Maghrawī, lord of Sijilmāsa and of Dar'a. In 455 (1063) Ysauf b. Tāshīn took Sufurŷ by assault and massacred all the Maghrawa who had shut themselves up in it. In 536 (1141) Sufurŷ was seized by 'Abd al-Murṣin for the Almoravids.

Speaking of Sufurŷ in the 11th century, al-Bakrī only says that it is on the route from Fās to Sijilmāsa and that it is a city surrounded by ramparts, possessing water-courses and trees. In the 12th century al-Iḍrīṣī describing it says that it is "a small and secluded but civilised town, where there are not many markets. Its inhabitants are for the most part agriculturists, who cultivate a quantity of cereals; there are also a large number of large and small cattle. The waters of the land are sweet and abundant".

Sufurŷ suffered greatly during the civil wars which devastated the region of Fās during the dynasty of the Ḥanā Wāṭṭas and of the Sa'dites. After the accession of the 'Alawīs, it was again the victim of the wars waged by these sultāns against the rebel Berbers of the Middle Atlas.

In 1096 (1684—1685) Mawḥy Ismā'īl passed through Sufurŷ upon an expedition against the tribes of the Middle Atlas and the High Molouya. In 1736, the inhabitants of the town and the neighbourhood were massacred by the Sultān Mawḥy Muḥammad b. Ismā'īl, called Ibn 'Arabīya, infuriated by the protection which the Berbers of the district had given to his rebellious brother 'Abd Allāh; their heads were transported to Fās. In 1811, in the course of the great revolt of the Berbers they came as far as Sufurŷ to surround an army that was sent against them; they pillaged the camp and sacked the whole region. In 1235 (1819—1820) the Sultān Mawḥy Sulaymān had three hundred men of the rebellious neighbouring tribe of the Ait Vās arrested in Sufurŷ.

(GEORGE S. COLIN)

SUFYĀN AL-THAWRĪ, **ABD 'ABD ALLĀH SUFYĀN b. SA'ĪD** (according to some SA'ĪD) b. MASHŪQ AL-THAWRĪ AL-KUFĪ, a celebrated theologian, traditionalist and ascetic of the second century A.H. His *nisba* al-Thawrī is

derived, according to the view generally held by the biographers, from Thawr b. 'Abd Manāf... b. al-Yās b. Maḍar, who was among his ancestors (cf. Wustenfeld, *Register zu den genealog. Tabellen d. arab. Stämme u. Familien*, 1853, p. 452; Ibn Isḥāq, *Taḥṭīb*, ed. Wustenfeld, 1854, p. 113; Sam'ānī, *Anṣab*, G. M. S., II, fol. 117*). Ibn Khallikān, *Wafayāt*, ed. Wustenfeld, No. 265 (transl. by de Sane, 1842, I, p. 576 sqq.) gives as the date of his birth 95, 96 or 97. On the other hand, all the other sources agree in giving 97 (715/716) as the date (Caetani, *Chronographia Islamica*, I, 5, p. 1180, No. 26 puts the date of Sufyān's birth as 96, on the authority of a unique manuscript). Sufyān received his first instruction in *ḥadīth* from his father, a learned Kufan, who died in 126 (according to others in 128, cf. Caetani, *loc. cit.*, p. 1607, No. 73) and is quoted among his authorities by different names in the biographical dictionaries to be mentioned below. Sufyān was one of the old school of pious men, who showed their dislike of the new régime by declining to accept offices in the government service and thus brought the wrath of the court upon their heads. Ibn Sa'd, *Tabaqāt*, ed. Zetterstēen, 1909, VI, p. 258, says that Sufyān on one occasion accepted money and gifts from a wālī but ever afterwards refused them. In 150, he left Kufa and went, like so many others (cf. Mez, *Die Renaissance des Islam*, 1922, p. 209) beyond the bounds of 'Irāq to escape appointment as *ḥāḍi*. He went to the Yemen and made a living as a merchant by giving other merchants goods to dispose of on commission and settling up with them annually, so that he finally possessed a fortune of about 200 *ḍinārs* (according to Ibn Kutāiba, *Ma'ārif*, ed. Wustenfeld, 1850, p. 250: his estate at his death amounted to 150 *ḍinārs* in goods). But even there, he was not safe from persecution by the Baghdadī court. He was sought out but went to Mecca. The amir of Mecca, Muḥammad b. Ibrāhīm, was ordered by the Caliph in the year 158 (the year in which al-Mahdī succeeded al-Manṣūr; therefore the sources vary as to which Caliph gave the order) to find him (*yafṣuḥūhu*, so most sources; in al-Nawawī, *Tahḍīb al-Awām*, ed. Wustenfeld, 1842—1847, p. 287, and Ibn Ḥajar, *Tahḍīb al-Tahḍīb*, 1325, IV, p. 114, however some wood-merchants who were going to Mecca are ordered by al-Manṣūr to crucify him, *fa-z'libūhū*, which is certainly not simply a copyist's mistake, but it suggests another story). The governor, however, did not carry out his orders; according to Ibn Sa'd, *loc. cit.*, he warned Sufyān so that he was able to go promptly into hiding. While al-Tabarī, III, 385 sq., says that he had already taken Sufyān prisoner but then set him free again. The whole story is embellished in the different versions with details of interest to the student of the life of the time. It seems certain in any case that Sufyān was actually forced to seek refuge from his pursuers in the Ka'ba (Ibn Sa'd, p. 259). In the end however, Mecca also became too hot for him; and he went to Baḡra to Yahyā b. Sa'īd, where many learned jurists came to study *ḥadīth* under him. In Baḡra also he had to change his abode for the sake of safety. Ḥammād b. Zaid advised him to make peace with the court. Sufyān began negotiations by correspondence, which led to a satisfactory result, but before he could set out for Baghdad

he became ill and died at the age of 64, in Sha'ban 161 = May 778 (169 in al-Dhahabî al-Suyûtî, *Tabaqât al-Huffâz*, ed. Wüstenfeld, 1833, i, p. 45, N^o. 40 is probably only an error of the lithographer). The sources then are all agreed that up to the time of his death he kept himself in hiding from the temporal powers. His son, whom he loved above all else had died before him; he therefore left his whole estate to his sister and her son 'Ammâr b. Maḥammad, but left nothing to his brother al-Maḥḥrak (d. 180). He was buried, as several authorities tell us, by night; his grave in Baḡra is mentioned by several geographers. He had not seen his native city of Kūfa since the year 150; cf. Ibn Ḥajar, *loc. cit.*

The above outline is all that can be considered certain in Sufyân's biography. But in view of the extraordinary authority which he enjoyed, a large number of legendary features could not fail to creep into the story of his life, which one must treat with general distrust, even when they are not obvious inventions or cannot be shown to be historically impossible. The most characteristic is his conversation with the Caliph al-Mahdî, which has been adopted in Ibn Khallikân's biography of Sufyân from al-Maḥḥrak, *Murâdj* (vi, Paris 1871, p. 257). It is — apart from other reasons — unhistorical simply because the two certainly never met in their lives. What else is related of Sufyân's life will be discussed below in connection with the various intellectual movements in Islâm which claimed the authority of Sufyân for their views and had therefore an interest in finding the characteristics they required in his life.

As a traditionalist, the greatest praise is everywhere bestowed on him on account of the extraordinary breadth of his knowledge and his reliability. The most pregnant criticism of him is the verdict in al-Dhahabî, *Mizân al-Fihrist*, 1325, N^o. 3266: *ḥudūdha, ḥaṭṭa*. At the same time, he is credited with other "qualifications of the first rank", as collected in Goldziher, *Muḥamm. Stud.*, ii, 142. He is occasionally rated higher than Mālik b. Anas. The only reproach made against him is that of *tadlīs*, that he used to trace traditions directly to recognised authorities, although he had only received them indirectly or from transmitters of less authority (cf. *Kūmār*, s. v. and Goldziher, *loc. cit.*, p. 48; and the passages there quoted from Ibn Khaldūn). Ibn Ḥajar, *Tabaqât al-Mudallisin*, Cairo 1322, p. 9 places him in the second rank of the *mudallisin* i. e. those whose *tadlīs* the Imāms have tolerated, because they were such important personalities and their *tadlīs* amounted to very little (*ḥillat tadlīsiki*) and gives as his authority al-Nasā'î (Brockelmann, *G. A. L.*, ii, 199) and al-Bukhārî (q. v.). Sufyân's *tadlīs* however does not prevent the biographers vying with one another in telling stories to his credit. He was one of the first to commit to writing the wealth of traditions stored in his memory; cf. Abu 'l-Maḥāsîn, *Annales*, ed. Juyboll, i, 1855, p. 387 sq. and Ḥādijî Khālifa, ed. Flügel, i, 80 sq. The *Fihrist*, ed. Flügel, i, p. 225, for example gives a number of works by him, namely: 1) *al-Djāmi' al-kabir*; 2) *al-Djāmi' al-saghir*; 3) *Kitāb al-Farā'id* and 4) and 5) two epistles the subject of which is not recorded. Then there is his commentary on the Qur'ān, *Tafsir*, which according to Ḥādijî Khālifa, N^o. 3248 is quoted by Tha'alabî. These works however have not survived; several bio-

ographies record that on his deathbed Sufyân commissioned a friend whose name is not given (cf. *Fihrist*, ii, p. 98, note 3, on p. 225) to burn them, which was done. The reason for this action is said by Ḥādijî Khālifa (i, 126) to have been that he felt remorse at the traditions with weak authority which he had admitted into his books; the reproach of *tadlīs* already mentioned therefore does not seem to have been made against him unjustly. The most comprehensive list of his authorities and pupils is given by Ibn Ḥajar (*loc. cit.*, p. 111 sq.) but names not included here are given in other biographical sources. Al-Nawawî and Ibn Ḥajar give as the best Kūfic *imām*; Sufyân from Maḥḥrak (b. al-Mu'tamir, see Nawawî, p. 578) from Ibrāhīm [al-Nakha'î, see Nawawî, p. 135] from 'Alqama [al-Rāwî, see Nawawî, p. 433] from Ibn Ma'ūd (q. v.).

As a faḳīh he was the founder of a maḥbhab which however later disappeared; cf. Mez, *loc. cit.*, p. 202 sq. He was a strict follower of the *Ahl al-Hadith* (q. v.) and as regards theology belonged to the *Shāfi'iyā* i. e. he recognised the qualities of Allāh mentioned in the Qur'ān as existing in the literal sense and peculiar to him; cf. al-Shahrastānî, *Milāl*, ed. Carleton, i, 65, 160 (transl. by Haubricher, i, 97, 222). That he was a *Sunnî* is proved, if it were necessary, from the profession of faith which he is said to have dictated to Shu'ayb b. Djarir, cf. al-Dhahabî, *Tadhkirat al-Huffāz*, i, Haidarabad 1333, p. 193. In this, after speaking of the uncreatedness of the Qur'ān, he says that *ḥawā, 'amal* and *nīya* (see SAHĪ AL-TUSTARĪ) constitute the *imān* (q. v.); that it can increase and decrease (cf. Goldziher, *Vorlesungen*, ed. 2, 1925, p. 81), that pre-eminence (i. e. over 'Alī, cf. van Arendonk, *De opkomst van het zaiditische imānisme in Yemen*, 1919, index, s. v. *imān*, de beide) is due to the two shaiḫs (Abū Bakr and 'Umar), that in the minor ablution (*wuḡū*) the washing of the foot-covering is permitted in place of the feet (*al-maṣḥ 'alā al-ḥuffayn*) (cf. Goldziher, *loc. cit.*, p. 369), that it is better to recite the *ḥamāla* in a low voice than in a loud one (cf. Goldziher, *Beiträge zur Literaturgeschichte der Sufā*, S. B. W. A., lxxviii, 1874, p. 451 sq., 457), that one must believe in predestination (see KADAB), that one may pray on Friday and at the two festivals behind any imām, but at other times must choose one in whose piety one has confidence and of whom one knows that he is a *Sunnî* and finally that the *ḡibād* will exist to the day of judgment (see Hughes, *Dict. of Islām*, 1885, p. 244^b) and that one should obey every person in authority, whether he is just or unjust. It is easy to see that the majority of these articles represent well known points of difference between *Sunna* and *Shi'a*, which are all decided according to the *Sunnî* view. Nevertheless Sufyân is credited with an inclination to the *Shi'a*; thus the *Tabaqât al-Huffāz*, *loc. cit.*, mentions among his authorities the imām 'Isa'far al-Sādiq (q. v.); Ibn Kutāiba, *Ma'srif*, p. 301 mentions him in a list of *Shi'as*, and al-Tabarî, iii, 2516, gives a story according to which he was a *Shi'a* but met two scholars in Baḡra who persuaded him to change. He has, however, also been claimed as a *Zaidi*, cf. *Fihrist*, p. 178, and, thereon van Arendonk, *loc. cit.*, 284, and index s. v.; "*Corpus Iuriz*" di Zaid ibn Ali, ed. Griffini, 1919, p. clxxv. with note 3 and index s. v.

These are doubtless inventions. Massignon, *La Parole d'Al-Hallâj*, 1922, p. 72 sees their origin in the fact that for men like Sufyân, al-Sha'fî etc. reverence for the Prophet implied reverence for his family which of course included the 'Ahlâ. The explanation given by Bergsträsser in his review of the *Corpus Iuris*, O. L. Z., 1922, col. 122 *sqq.* seems to me much more illuminating, namely that the *Corpus* in many cases is in conformity with the jurists of the 'Irâq of whom Sufyân was one. As it thus comes about that he often taught the same as the *Corpus* (except that in reality it was the latter that borrowed), he might be claimed as a Zaidî. It must have been similar with his Shî'ism. — The above mentioned requirement of 'amal as an essential of *islâm* is directed against the Murjî'a; cf. thereon Goldziher, *Vorlesungen* 3, p. 351, where it is related (on the authority of Ibn Sa'd) how Sufyân refused to take part in the funeral of a murjî'.

That Sufyân was an ascetic is beyond doubt. Here also the biographers cannot quote too many stories about him. The best evidence of his asceticism is however that he is claimed by the Shî'is as one of their fore-runners. Farîd al-Dîn 'Aqqâr, *Tadhkirat al-Awliyâ* (ed. Nicholson, i., 1905, p. 188 *sqq.*) devotes an article of nearly 9 pages to him, which however contains nothing characteristic and of which H. H. Schauder's remark (*Islâm*, xiv., p. 1) on the biographies of the devout men of the past in general in 'Aqqâr holds, namely that they are "very much modelled on a single pattern of mystic piety". Sufyân is however mentioned by the *Fihrist*, i. 183, in a list of ascetics who wore the *ihf* and Abu Naṣr al-Sarrâj, *Luma'*, ed. Nicholson (*G. M. S.*, xiii., 1914), p. 22 actually quotes him as evidence of the antiquity of the *ṣūfiya*. His relations with al-Djundî (q.v.) are several times discussed, although the two could not have known one another; cf. e.g. al-Hudjwiri, *Kashf al-Mahjûb*, transl. Nicholson (*G. M. S.*, xvii., 1911), p. 128. The reference is apparently only to intellectual kinship; it is difficult to understand it otherwise when Abu 'l-Mahjâin (*loc. cit.*, ii. 213) says that al-Hallâj (q.v.) was acquainted with Sufyân (*ṣūfiya*). On the other hand, one need not doubt the truth of the story recorded by the same author (i. 424) that Sufyân was on friendly terms with the ascetic Shaibân al-Râ'î (d. 158) who lived the life of a hermit in Lebanon.

These remarks on Sufyân viewed from different angles, corresponding to different currents in the intellectual history of Islâm, are of course nothing more than prolegomena; they cannot take the place of a monograph on him, the necessity of which must be evident from the manifold variety of what we have said above.

Bibliography: On the sources it should first of all be noted that al-Dhahabî's *Tadhkirat al-Huffâ*, i., p. 192, depends on his own great historical work in which he dealt at great length with Sufyân. The volume, in which the article must have been, is however not quoted among the manuscripts of the separate volumes mentioned in Brockelmann, *G. A. L.*, ii. 47. Al-Dhahabî also refers to a book on the *Manâẓib* of Sufyân by Ibn al-Djauzi (q.v.) but this has not survived. — The biographical, bibliographical, and historical works quoted in the article almost all contain articles on Sufyân, which have been utilised here. So far as they

have appeared in European editions, the indices should be consulted, e.g. Sufyân, for scattered references to his life and teaching. The reader may be also referred to the story of his meeting with Ma'ah's Allâh in al-Kifî, *Ta'arûf*, ed. Lippert, p. 127, to his refusal of the office of *kādî*, as it is told in al-Hudjwiri, *loc. cit.*, p. 93 and to his meeting with al-Manṣûr (Ibn 'Ahd Rabbihî, *Tajd*, Cairo 1331, ii., p. 108). — The indices of the European works should also be consulted for passages not quoted here. There is further Goldziher, *Die Richtungen der islamischen Koranauslegung*, 1920 (in *Mus. Stud.*, ii., the reference in p. 58 is not in the Index: on cf. D. B. Macdonald, *Development of Muslim Theology*, 1903, p. 97 *sq.*); Browne, *Lit. Hist. of Persia*, 1909, i. 424—426 (p. 434 he adopts the already mentioned story of Sufyân's meeting with al-Hallâj).

(M. PLEISNER)

AL-SUFYÂNÎ. [See AL-MAHĀDÎ.]

SUGHĀ. [See SOGHĀ.]

SUGHĀK, once a great seaport, now a little town in the Crimea, Greek *Σουγάς* or *Σουγάς*, also *Σουγάς*, Latin and Italian *Soldais* or *Soldachis*, Old Russian *Суроѣ*; the Arabic form *Sholāṭis* in Idri'î (transl. Jaubert, ii. 395) is probably connected with the Italian form. The name is connected with Soghd (q.v.), the name of a country in Central Asia and explained as Iranian; its foundation is therefore ascribed to the Alans (see ALLAN). The Alans are mentioned in the region (east of the Tauric Chersonese) as late as the xiith and xivth centuries. Like the Greek cities, Sogdaia had an era of its own, according to which the year of its foundation was 212 B.C.; but the name is not found in Ptolemy nor in any other geographer of antiquity. It is first mentioned in the viiith century by the Anonymous writer of Ravenna (*Ravennatis Anonymi Cosmographia*, ed. Pinder and Parthey, Berlin 1860, p. 175 *sq.*; Sagdabon). At that time the town had a Greek bishop although it was not under Byzantine but Khazar rule. It was only after the destruction of the Khazar empire and of the Russian principality of Tmutarakan that the whole southern shore of the Crimea passed to Byzantium. During Latin rule in Constantinople this region belonged to the kingdom of Trebizond. Twice, in 1225 and 1238, Sughdâk was sacked by Tatars. It is to the intervening period that the very full but undated account in Ibn Bîrâ (q.v.); Houtsma, *Recueil de textes relatifs à l'histoire des Seljoukides*, iii. 329 *sqq.*; iv. 134 *sqq.* of the invasion by Turks from Asia Minor belongs; Husâm al-Dîn Çobân the commander sent by 'Alî al-Dîn Kai-kubâd (616—634 = 1219—1236) succeeded in defeating the Greeks in Sughdâk and their allies, the Russians and Kipçak. In Sughdâk the bells were broken in pieces, a large mosque built in less than a fortnight, a *mu'adhdhin*, a *khatib* and a *hâdî* appointed and a garrison left; but the Turks seem (*op. cit.*, iii. 358; iv. 138 *sq.*) to have been very soon driven out again. In 1249 the Tatars were forced to leave Sughdâk whereupon the Greek governor (*Sébastos*) had the population counted. The total was only 8,300, which probably refers only to male adults. In spite of its small population Sughdâk was then of great importance for sea-trade, especially for trade with Venice, as is evident from Venetian documents

and from Marco Polo (ed. Yule-Cordier, I. 2 29.). Sughdak suffered a heavy blow in the reign of Özbek, Khan of the Golden Horde (712—741 = 1302—1340); on Aug. 8, 1322, the town was occupied without resistance by Kara-Bulak, son of Özbek, all the bells were carried off, all images of saints and crucifixes smashed, and all the churches closed. In spring 1327 Özbek ordered his governor Tolaktemir to destroy the citadel and several churches. When Ibn Battuta (q.v.), visited "Sardak" (for Sūdāk) it looked like a Turkish and Muslim city; only a few Greek artisans were left. The harbour is described by Ibn Battuta as "one of the largest and best". The houses were mainly of wood (*Rihla*, Paris, II. 414 29.). The Christian population soon came back again. The conquest of Sughdak by the Genoese in 1365 and the treaty between them and the Tatars of 1380 were important events in the history of the town. The district of Sughdak in those days extended as far as Alushta and included 18 villages, almost the same number as the corresponding Turkish *kāşık* in 1774 (19); they must have been the same villages, as the most westerly one, Alushta (Arab. *Shālūṣṭa*), did not belong in the Genoese period to the district of Sughdak. Sughdak henceforth, down to the Turkish conquest of 1475, belonged to the Genoese colony of Gazaria or Gazarra and was administered by a separate consul, subordinate to the consul of Kafa. In the sources dealing with the Turkish conquest only the fighting round Kafa is fully described; no details of the fall of Sughdak are known. Unlike Kafa, Sughdak experienced no revival under Turkish, nor later under Russian rule. Broniewski (1578) describes Sughdak as a town in ruins. The present ruins (pictures e.g. in Marco Polo, ed. Yule-Cordier, I. 3; Yu. Kulakovskiy, *Proshlye Tavr* 12, Kiev 1914, p. 120; L. Kolli, *Ist. Tavr. Arkh. Komissii*, xxxviii, p. 1) date mainly from the Genoese period.

Melloranskii, *Seldjuk-Nams, kak istochnik dlya istorii Vizantii* = XII—XIII *vekhkh* (Vig. Vremennik, I. 613 199.); L. Kolli, *Ekristoforo Di-Negre posledniy konsul Suldai* (Ist. Tavr. Ucheny Arkh. Komissii, xxxviii, 1905, p. 1 199.). (W. BARTHOLO)

AL-SUHAIL, i.e. the *Kāwṣa* (Canopus) of the ancients, the star = Carinae in the modern star catalogues, next to Sirius the brightest fixed star in the heavens (magnitude — 0.9), but invisible for all regions north of 37° of latitude; for it has a declination of $\delta = -52^{\circ} 38' 52''$, while its right ascension AR = $6^h 22^m 14^s$. In the northern Muslim lands, therefore it scarcely rises above the horizon and for example about the year 2,000 B.C. in Babylon its altitude of culmination was only 2°.9. It was therefore the most southern of the fixed stars marked on the spider (*al-ʿamkabūt*) of the Arab astrolobes.

The name Suhail was given by the Arabs to several stars in the southern heavens; but *suhail al-Yaman*, *suhail ḥadār*, *suhail al-wazn*, or *suhail* alone, always meant Canopus i.e. the bright large star of the southern helm in the constellation of *al-safina* (the ship). As in the northern parts of the Indian Ocean, Canopus rises in the S.E. and sets in the S.W., in the nautical language of

the Arabs, according to G. Ferrand, S.E. is indicated by *muḥāl al-suhail*, S. by *ḥuḍ al-suhail* and S.S.W. with *sughrib al-suhail*. In Central Arabia Canopus is called *ʿaḥl*; it is used to find the south. According to J. J. Hess, the Beduin of Central Arabia say: *ʿat rāḥib n-ḥal fi wajḥih* ("when thou ridest, Canopus is in thy face").

Various suggestions have been made regarding the derivation and meaning of the word *suhail*. Ideler points out that *suhail* can be explained as diminutive of *ḥal* "level", but finds Buttman's explanation the least forced, that *al-suhail* received this and the two names *ḥuḍār* and *al-wazn* because it only rises a little above the horizon in the lands where these names are given it; it is therefore called "the heavy", "the earthly"; *ḥuḍār* from the earth and *ḥal* from the plain, above which it rises very little. Eratosthenes tells us that it was called *ἡρῆς*, "terrestria" for this reason by the ancients.

According to F. X. Kugler the Babylonians placed Canopus in the constellation *mulNUN* = *Erida* (= constellation of Erida i.e. Vela + Southern Puppis + Canopus). On the Greek name *Kāwṣa* the following may be noted. *Kāwṣa* was the steersman of the ship which was to bring Menelaus back to Greece. A storm drove the ship on to the Libyan coast. *Kāwṣa* died here of a snake-bite. Menelaus, deeply mourning the death of his excellent friend had a splendid memorial built to him and called the settlement of Spartiates that arose here *Kāwṣa*; in honour of *Kāwṣa*. It lay on the western mouth of the Nile, a few geographical miles north of the site of Alexandria (cf. also: Tacitus, *Ann.*, II. 60: "... Condidere id oppidum Canopum) Spartani, ob sepulchrum illi: rectorem navis, Canopum; qua tempestate Menelaus, Graeciam repetens, diversam ad mare terramque Libyam delectus est").

The Egyptian name for Canopus is not yet certainly known. In the Dekan lists (cf. Brugsch, *Thebanus inscriptionum aegyptiacarum*, Leipzig, p. 148, 173), there is the name of a dekan *ḥi* *ḥ* (= he in the boat) but that this is a steersman, let alone the steersman *Kāwṣa*, cannot be proved, on the contrary it is improbable as the dekan star is to be sought in the vicinity of the ecliptic.

According to Athanasius Kircher, Canopus was the god of moisture and of fertility and as he had his abode in the Nile, in Egypt he was the god of water generally, comparable to Poseidon and Neptune. He was therefore naturally credited with influences relating to seafaring in astrology, i.e. in the horoscope of a new born infant. The following reference to this is found in Hieronymus Vitalis (*Lexicon Mathematicum*, Paris 1668, p. 63): "Argo Navis sidus in caelo ad Australem plagam stellas continens secundum communem, numero 45, at secundum Bayer, 63. Omnes fere de natura Saturni, parvam Jovis; intra quas una fulgentissima in Canopo existens primae magnitudinis, arabice Rubail (!). Haec in Horoscopo, inquit Pontanus in Urania (cf. Pontanus, Giovanni Giovanna da Caretto, *De rebus caelestibus*, lib. xiv., Florentiae 1520), facit Nauclerum et praestat fortunam in navigationibus, praesertim si Veneris benigno radio fulciatur: At in occasu cum Saturno parititer reperi, portendit mortem in aquis".

The treatise of the Arab astronomer and court physician Sinān b. Thābit b. Kurrā Abū Saʿīd

(1945): "On the site Canopus" no longer exists.

SUHĀR, a seaport on the coast of 'Uman is 24° 22' N. Lat. and 56° 45' East Long. with about 7,500 inhabitants. The harbor has a good roadstead and excellent anchorage and is well protected in the north and west by the promontory of Fuḡḡa and from the south by Cape Sawāra. The most important building is the palace of the lord of the town, which is richly ornamented, having pointed arches, slender round pillars, crossed vaulting, projecting balconies and turrets. The palace stands on a little eminence within the town and is surrounded by a triple wall and a ditch, which is crossed by a bridge leading to the inner gateway. On the wall are old field guns and four great cannons before the entrance. Before the palace lies an open square planted with trees which stretches to the walls on the outside. The town is defended by walls on which a few old guns still stand and is guarded by a ditch against the land side. The market-place is large and has a busy trade. The market-hall called *Kalsariya* (q.v.) is vaulted with great swing-doors and is long and spacious; most of the artisans are weavers, smiths, gold- and silversmiths or copper-smiths, and are masters of their crafts. The town is picturesque. The two or three storied houses are often connected by archways over the narrow streets. The town is probably about two miles round; it is connected by a broad road with neighbouring towns like Maḡḡ; the hinterland is very fertile, well watered, and thickly populated. Fishing is very much followed, and it plays an important part in providing the food supply of the population.

Although A. Sprenger's identification of Suhār with the Onau of Ptolemy cannot be maintained, there can be no doubt that we have a very old settlement here, which can be traced back to the pre-Islamic period at least. How ancient the town is in the eyes of Arab scholars may be seen from the legend which traces its foundation to Suhār b. Iran b. Sūn b. Nūḡ. The Persians who were at one time supreme in the gulf called after Yemen were probably the first rulers of this town. The old name of the town, Maḡḡ, which the older Arab writers mention, is also Persian. *Suhār* first appears in history in the year 3 (629/630) when the envoys of the Prophet Muḡammad, 'Amr b. al-'Āḡ al-Sahmī and Abū Zaid al-Anḡarī, handed the Prophet's message to the two princes of the town, Djaifar and 'Abd (or 'Abḡḡ). They accepted Muḡammad's offer and adopted Islam; the first mentioned of the Prophet's envoys remained as resident in 'Uman. The name of the town is again mentioned in the accounts of the funeral of Muḡammad where it is recorded that the corpse of the Prophet was wrapped in two robes of Suhār manufacture (other texts give *Sahūr*); the textile industry of the town was even then ap-

parently highly developed, which may have been due to Persian influence. The general unrest which seized the whole of Arabia after the death of the Prophet also affected 'Uman and particularly Suhār. In the war against the leader of the pagan party in 'Uman, Dḡa b. Taḡḡ Laḡḡ b. Maḡḡ al-Aḡḡ, in which the leaders of the Muslim party were the two brothers 'Abḡḡ and Djaifar of the al-Djalanda family, the latter had for a time to abandon Suhār and take refuge in the mountains. But they apparently succeeded in returning to Suhār and leading the resistance against the pagan party there until the town was taken by the Muslims in 12 (633/634). But like the rest of 'Uman it was only very loosely attached to the Muslim empire. The situation was altered when the notorious Umayyad governor Ḥaḡḡḡḡ b. Yūnāḡ conquered 'Uman and united it to al-'Irāḡ. In 751 A. D. the land again became independent and chose a ruler for itself in the person of al-Djalanda b. Maḡḡḡ al-Aḡḡ, the first Imām of 'Uman. The capital however was not Suhār but Naḡwa. By the tenth century A. D. Suhār had attained considerable prosperity. It was considered the most important town of 'Uman and the most beautiful on the Persian Gulf, flourishing, populous, rich and busy, more important than Zaid or Saḡḡ, healthy, with wonderful markets and pleasant surroundings. The fine houses were built of brick and teak. The great Friday mosque was built by the sea; the splendid building with a lofty minaret stood on the spot where the Prophet's camels had knelt down. The *ḡaḡḡḡ* had a winding staircase which presented different colours, yellow, green and red, from different sides. A small chapel (*ḡaḡḡḡ*) lay in the centre of a palm-grove. Springs with good water and canals of fresh water provided the town's water-supply and its climate was considered excellent. The capacious bazars were filled with the most varied goods. Suhār was a depot for wares from China, and the centre for trade with the East and the 'Irāḡ and was also of importance for the trade of Yemen. It had an advantageous position for trade with the east. The harbour which was always busy with ships entering or leaving was a surpassing in length and breadth. The language of business was Persian, as al-Muḡaddas expressly tells us. Merchants from all parts of the world met here. There was constant intercourse with Yemen and China for which expeditions were equipped here. The rich land which produced dates, bananas, figs, pomegranates, quinces, and other fruits attained wealth and prosperity. There was also constant intercourse with al-Bahrain, for which a road ran from Suhār along the coast over the mountains to Djalār. But its decline soon set in. The campaign of the Caliph Ḥārūn al-Raḡḡḡ and that of al-Muḡtaḡḡ, the latter of whom tried with more success to gain 'Uman for the Caliphate, do not seem to have seriously affected Suhār. Suhār was destroyed in the Karmatian troubles but rebuilt again. In 361 (972/973) there was an encounter before Suhār between Abū Ḥarb, 'Aḡḡ al-Dhawī's general and the Zaidī who had occupied 'Uman. Abū Ḥarb was victorious and seized Suhār, the population of which had to take to flight. In 433 (1041—1042) the Bayyid Abū Kalḡḡḡ sent a Persian army by sea to 'Uman which had risen against him. The fleet anchored before Suhār, occupied the town and brought the people to submission. But neither the Bayyids nor the Seldḡḡ

rule of Persia, who had succeeded to the inheritance of the Caliphs of Baghdad did anything to revive the prosperity of Shar. About the middle of the twelfth century A. D. the trade of Shar with the Far East was ended, when a governor of Yemen by a clever coup seized control of the Persian Gulf and not only strangled traffic by sea but also plundered the coast so that trade went more and more to 'Aden. According to Ibn al-Mudjawir, who is well informed, Shar was already destroyed in the first quarter of the seventh century A. H. (c. 1225 A. D.) and its trade had passed to the Persian emporium of Hormuz, and to the Arabian harbour of Kalbat. Shar seems to have revived again later and to have been rebuilt; for Marco Polo mentions it under the name 'Soer' and says that it traded in horses with Malabar. Ibn Battuta also mentions Shar in his *Travels*. On Sept. 16, 1506 a Portuguese fleet, which was conducting an attack on Hormuz from Sokatra [q. v.] passed for the first time before the town which the Portuguese called 'Soar'. The town and also the fortress were occupied by them. In 1588, they built a new fort which was restored at the beginning of the eighteenth century, and was surrounded for a circumference of 8 miles with tamarisks and fields of corn and vegetables. The yield from taxation and other revenues was not unimportant and amounted to 1,500 Xerafi. When the Ya'rubid Nasir b. Murshid b. Sulṭān, who had gained a following in the towns in the interior attacked the Portuguese possessions in 'Umān, the Portuguese could only hold the fortified coast towns of Shar, Maskat, al-Matrah and Karyāt. Their influence on land in any case had never been important. In order to take Shar, Nasir b. Murshid had a fort built on the coast and threatened the city; this attack was so far successful that the Portuguese were only able to hold the citadel of Shar and also lost Karyāt. They were able to retain the fortified market-place for a time on payment of tribute to the Imām; about 1650 they were finally driven out. In 1724, Shar was taken by Khalaf b. Mubarak the rival of Muhammad b. Nasir but later surrendered to the Ya'rubid Saif b. Sulṭān. In 1738 Shar was besieged by the Persians, who after the conquest of Maskat had been defeated at Shar by its governor Ahmad b. Sa'id, but returned to attempt to take the town. The stubborn defence under Ahmad foiled all their efforts. The town must have suffered severely — its important commerce had already been ruined by the Portuguese — for according to C. Niebuhr it was of no great importance. A heavy blow to it was the raids by pirates who had settled in the stronghold of Shims at the beginning of the eighteenth century. Slight relief was brought by English intervention which led in 1819 to a naval battle between the pirates and ships of the English navy off Shar. J. K. Wellsted who visited the town in 1836 describes Shar as the most important and by far the largest town on the thickly populated 'Umān coast between Shims and Birma, and next in importance to Maskat as a commercial centre. It had 40 large bangles and maintained a considerable trade with Persia and India. The number of inhabitants including those of the adjoining small villages is put by Wellsted at 9,000, including 20 families of Jews who had a small synagogue and made a living by money-lending. It is evidence of the importance of the trade of

Shar at this time, that the Shaikh of the town drew a revenue of 10,000 dollars annually from harbour dues and in 1825 the tribute paid by Shar to the Imām of 'Umān amounted to 24,000 dollars. The treaty concluded by England on Jan. 8, 1820, with the pirates guaranteed for a brief period peace and security in the waters of the Persian Gulf so that the trade and commerce of the ports prospered. But while the then Imām of 'Umān, Sayid Sa'id, was intent on extending his possessions in East Africa, his authority was undermined in his absence; piracy was again revived and the pirate chief Hamūd b. 'Aziz seized Shar and Maskat. The Imām Sa'id could not do much against this and in 1834 was forced to recognise his rival. Two years later he went with the help of the Wahhābīs to drive Hamūd out of Shar. The town was blockaded by land and sea but the siege led to no decisive result as Sa'id was afraid that if they took the town it would fall not to him but to the Wahhābī Faṭṭāḥ b. Turki. Sa'id was freed from his dilemma by an English warship which brought Hamūd to Maskat where he was forced to sign a treaty handing over the rule over Shar to his son Saif. As the latter did not fulfil the pledges made to his father, and refused him his due share of the revenues, Hamūd had his son murdered in 1849 and assumed power himself, but with the approval of England was seized and imprisoned by Sa'id. His brother Kais b. 'Aziz succeeded him in Shar but had to hand over the town in 1852 to Sayid Sa'id under superior military pressure and to be content with ruling over Maskat. From that date Shar has again formed part of the imāmate of 'Umān, which now for the most part belongs to the kingdom of Ibn Sa'id.

(ADOLF GROHMANN)

SUHRAWARD was a town in Ljibāl [q. v.], the ancient Media. Nöldeke was the first to connect the name with Sahrāb and Marquart followed him so that one may assume older forms of the name to have been **Sugrāp-kart*, **Suhrāgerd*. Nöldeke thinks that the eponym of the town was the Sahrāb who was a Persian governor of al-Hira [q. v.]. Although this does not mean that the town was not founded till the time of this governor — it is only a hypothesis that he and no other of the many known bearers of the name Sahrāb is the one in question — one should perhaps be careful not to date the foundation of the town at too remote a period. The classical geographers do not seem to have known the town; at least, no ancient name is known, which could be applied to the place later known as Suhraward.

The site of Suhraward cannot be located with absolute certainty. We have the statements of the Muslim geographers, according to which the town lay on the road from Hamadhān to Zandjān to the south of Sultāniya. This road, 30 farsakhs long, was, according to Isfahāri, used in times of peace as the shortest route to Adharbāidjān; in troubled times the circuit via Kaxwin was taken. Ibn Hawkal states exactly the reverse about the use of these two routes. In the 14th (15th) century the town was already in the hands of the Kurds; the inhabitants were mainly heretics, who emigrated, with the exception of such as stayed in their native town out of lack of courage or love of their home.

The town, which had been walled, was destroyed by the Mongols; Mustawfi describes it as a little village with many Mongol villages around it. On account of the cold in the Median highlands, little was grown here beyond corn and the smaller fruits.

Le Strange, *The Lands of the Eastern Caliphate*, 1905, p. 223 with references; those of the Arabs only fully in P. Schwarz, *Iran im Mittelalter nach den arab. Geographen*, VII, 1926, p. 731 sqq. — The only map which attempts to locate Suhraward is map v. in Le Strange's book. — On famous men of Suhraward cf. in addition to the biographical works Yāqūt, *Ma'ājam*, s. v. Suhraward, and Sam'āni, *Ansāb*, G.M.S., xx, s. v. Suhrawardī.

(M. FLEISCHER)

AL-SUHRAWARDĪ, SHUHAR AL-DIN ABU HAFS 'UMAR B. 'ABDALLĀH, a Sūfī and theologian of the Shāfi'ī school, was born in 539 (1145) at Suhraward in the province of Ljibāl in Persia. He pursued his first studies of mysticism under his uncle Abu 'l-Nadīb, — whom he often quotes in his *Awārif al-Ma'ārif* — and under the celebrated Shaikh 'Abd al-Kādir al-Qīlī. He settled in Baghdād, where he was received at the court of the Caliph al-Nāṣir. There he became chief of the Sūfī and died at a great age in 632 (1234). Ša'dī, when he stayed in Baghdād, studied under Suhrawardī of whom he relates an anecdote in the *Bustān* (ed. Graf, p. 150). Suhrawardī, who performed the ḥajj on several occasions, met the poet Ibn al-Farīd during a pilgrimage to Mecca in 1231. On this occasion the two sons of the poet were invested with the khirka [q. v.] by the celebrated Sūfī.

'Umar Suhrawardī is a representative of orthodox Sūfism. His best known books are the *Awārif al-Ma'ārif* and the *Kaṣf al-Naṣīḥ al-Imāniya wa-Kaṣf al-Faḍīḥ al-Yūnūniya* both dedicated to the Caliph al-Nāṣir. The first is one of the most popular treatises on Sūfism. It was published in Cairo on the margin of the *Ihya'* of Ghazālī, and translated into English by H. Wilberforce Clarke (from a Persian version) as an appendix to his translation of Hāfiẓ (London 1891). It is more particularly a treatise on ethics and practical mysticism, but it at the same time contains interesting historical notes and is of value for our knowledge of the Sūfī terminology. The *Kaṣf al-Naṣīḥ* is a polemical work directed against the study of Greek philosophy. In it Suhrawardī gives, on the model of the *Kāṭib* and of Ghazālī, a criticism of the hellenising philosophers but reveals a much inferior comprehension of philosophy to that of the author of the *Tahāfat*. A curious feature of the book is that in it the Caliph al-Nāṣir, who himself taught, is frequently cited as an authority in support of traditions.

AL-SUHRAWARDĪ, SHUHAR AL-DIN YAHYĀ B. HARĀSH B. AMRĀK, known as al-Maqtūl, was born in the middle of the 11th century. He studied law at Marāgha and becoming a philosopher and Sūfī lived in Isfahān, then in Baghdād and Aleppo. It appears that at Aleppo the viceroys al-Malik al-Zāhir, son of Salāḥ al-Dīn, at first granted him his patronage but when his mysticism rendered him suspect to true believers and the orthodox party demanded his execution, al-Malik had him put to death in 578 (1191). He was then 36 or 38. He was called al-Maqtūl to show that

he was not to be considered a martyr (shāhid).

Suhrawardi declares himself a Peripatetic and a Sūfī. In his interpretation of Aristotle, he is influenced by Ibn Sīnā. But while Ibn Sīnā, just like the Greek commentators on Aristotle by whom he is inspired, does not, as a rule, make use of mysticism except to supplement or extend Aristotle's thought by certain Neo-Platonic theories when it in his view presents lacunae, or to develop monistic tendencies which he thinks are already implicit in the work of the master, one finds in Suhrawardi alongside of Peripatetic ideas all that mystic philosophy which Islām obtained from Hellenistic syncretism, all that mixture of Neo-Platonic doctrine, Hermetic theories, occult sciences, Gnostic traditions and Neo-Pythagorean elements. For Suhrawardi and other Muslim mystics, as had been the case with Hellenistic syncretism — the Neo-Platonist Aesclepiades, for example, had composed a treatise "On the Agreement of all Religions" — all philosophical systems and all religions express only one single truth and he claims as his masters Agathodæmon, Hermes and the "five greatest philosophers of Greece", Empedocles, Pythagoras, Socrates, Plato and Aristotle and at the same time Djamāl and Buzurgmīr. With patriotic pride he regards the latter as the true precursor of the Greek thinkers (the Jewish historian Artapanus — first century A.C. — had already said that Moses was the teacher of Orpheus and was known to the Greeks as Musæus) and according to him it was they who — far from being dualists — were the first to express the truth of absolute Being and contingent Being under the symbols of Light and Darkness. But, although he professes agreement with Aristotle and Plato, he gives in his principal work, *Kitāb Hikmat al-Ishrāf* (Ithogr. Teherān 1316 = 1898) a prominent place to an attack on Aristotle. The extreme liberalism of his ideas even allows him, while teaching in other passages the theories criticised, to repeat the criticisms which the *Kalām* had formulated against certain fundamental theories of the logic and metaphysics of Aristotle, e.g. against the theory of the definition of essence (by the argument, of sceptical origin, that we could only find the universal by complete induction from the particular cases which are infinite in number) and against the doctrine of matter (by the argument — of Stoic origin — that the possible has no objective existence; if this were not the case, it would be at once potential and actual). As a rule we find, quite frequently in him, those theories and arguments of the Sceptics and Stoics which the *Kalām* had taken up; he teaches for example the theory of the Stoics — revived by Leibniz — of the identity of the Indiscernables and the theory of the Stoics or of the Sceptics of the subjectivity or the impossibility of relations and he shares with the *Kalām* the optimism of Stoic (or Neo-Platonic) theodicy — revived by Leibniz — "that everything is for the best in the best of possible worlds".

But what is most characteristic of his work is his metaphysics of light, of illumination (*ishrāf*). It is the Neo-Platonic theory of light, a spiritual light which serves as a symbol of emanation but at the same time is regarded as the fundamental reality of things. We find this theory, which has played a great part in Christian and Muslim philosophy and mysticism, in most of the Arab philosophers, especially in Fārābī, Ibn Sīnā and

Qhazālī, but no one, I believe, has made so much use of this symbol as Suhrawardi. Necessity and contingency, being and non-being, substance and accident, cause and effect, thought and sensation, body and soul, are all explained by his doctrine of *ishrāf*; he regards all that lives, or moves or has its being as light and even his proof of the existence of God is based upon this symbol. It is particularly for his metaphysics of light that he is known to posterity; he was the founder of a sect, whose name *al-ishrāfiyyūn* is derived from *ishrāf* and the order of dervishes, who trace their foundation to him, are similarly called *Nūrīyah*.

AL-SUHRAWARDI, 'ABD AL-KHẒIR B. 'ABD ALLĀH, born in 490 (1097), d. in 562 (1168), a Sūfī and jurist of the Hanafī school, see Brockelmann, *G. A. L.*, i. 436.

SUHUF. (See *SAHIFA*.)

SUK (A.), market, frequent in street- and place-names. The word in this sense is, according to Fraenkel, *Die aram. Fremdwörter im Arab.*, Leiden 1886, p. 187, borrowed from the Aramaic. Fraenkel was especially induced to come to this opinion by the consideration that "markets in this sense must have been unknown to the earliest Arabs". This may be true for the early period during which the word may be presumed to have been borrowed from the Aramaic; but it is certain that regular markets were already in existence among the Arabs before Islām; on this the most recent reference is H. Lammens, *La Meique à la veille de l'Hégire* (*M. I. F. A. O.*, ix. 3, 1924), p. 57—58 (153—154), from whose quotations it is evident that *suk* was used not only in the meaning of "market-place" but also in that of "market".

The whole complex of social, economic, and legal problems of the Muslim world associated with the conception of "market" can only be hinted at here. Preliminary studies dealing with special aspects of these questions do not exist; on the other hand, in many works of the most varied nature there are occasional notes which still have to be submitted to a systematic examination. The most important thing to remember in such a study is that Islām in a very short time conquered an enormous territory, the separate parts of which, formerly independent kingdoms, with very different economic and legal histories, at once were formed into one state with a uniform government, with a system of law based on a single canon and administered by organs of the central authority and not by an independent local authority. The importance of this lies in the fact that Islām by its whole structure prevented the growth of

civic communities, possessing the right of making laws of their own, and able to use them in the local market, as was the case in the west during the middle ages. At the same time, it is recognised that in Islam the existence of a market was much more independent of the protection of the town, in which it was situated than was the case in the west, in legal theory at least, and probably in fact also. The historian of the market in the *Dār al-Islām* will thus have to trace back to pre-Muhammadan times the local history of the markets in the different regions and to ascertain to what degree the Muslim conquest interfered with their development, and finally will have to ask whether typical developments are found after a study of many different cases, as far apart geographically as possible, which are characteristic of different parts of the empire and whether and how these types differ from the markets of these towns, which were only founded by the conquerors or at any rate after the conquest. Such an investigation would be very important not only from the point of view of social, economic, and legal history, but it would to a very special degree throw light on the relation between *ḥarāṭ* and practice, and on the question whether the difference between the *ḥarāṭ* and the *madāḥil* in the different parts of the world of Islam favoured a varying development of this relation in certain fields, for example, on that of the history of the market, which is not to be traced to the fact that the regions in question belonged to different kingdoms before Islam.

The bibliography which would be required to study this problem is almost boundless; it is easier to mention Muslim works which are valueless for our subject than those that are. There is the whole theological, historical, geographical and *adab* literature, as well as applied philosophy and a part of the poetry. Only philology, metaphysics, mathematics and some natural sciences can be dropped, in so far as they do not deal with saleable goods.

There is much economic material in modern travels, etc.: but these do not deal with questions of historical development. A few observations which might serve as starting points are to be found in Max Weber, *Wirtschaft und Gesellschaft* (*Grundriss der Sozialökonomik*, iii. 1922), p. 522 *seq.* (cf. H. H. Schaefer in *ibid.*, xiv. 1925, p. 5 *seq.*) and in the posthumous *Wirtschaftsgeschichte* of the same writer (1923), Index s.v. *Vorderer Orient* (jüngere Periode).

Special mention should be made of al-Dinashkī, *K. al-Jāhiz ilā Naḥḥin al-Tiḡāra*; cf. H. Ritter, *Ein arabisches Handbuch der Handelswissenschaft* (*ibid.*, vii. 1—91). On the office of superintendent of the market cf. *MSBA*; on some *ḥadīṭ* relating to the market cf. A. J. Wensinck, *Some Aspects of Gender in the Semitic Languages*, Register, s.v. *ḥḥ*.

(M. PLESSNER)

SUK AL-SHUYUKH, a small town in Iraq on the right bank of the Euphrates, about 25 miles to the east of Nāsiriya, opposite the mouth of the canal al-Bad'a, an arm of the Shatt al-Hay. The distance to Bagda as the crow flies is about 100 miles. The town is surrounded by date-groves extending along the river bank, but the marshy country, that extends into Beḡra, makes the air very unhealthy. Suk al-Shuyukh was founded in the first half of the xviiith century as a market-place (*sūq*) of the confederation of the

Muntaṣik [q.v.] Arabs; 4 hours to the east there was formerly the residence of the chief Shaikh of the Muntaṣik, called Kūr al-Shuyukh; the plural *shuyukh* designates the members of the clan of this chief. To the end of the xviiith century Suk was a small town with a mosque and surrounded by earthen walls (Benachamp) and in the beginning of the xixth century it is described as an extremely dirty town, inhabited by 6,000 families and having a lively commercial intercourse with Bagda and even with Rūshir and Bombay. According to Fraser the Muntaṣik Shaikh disdained to live in the town, but in Petermann's time (1854) he had a house there; the last mentioned traveller estimates the number of the population at 3,000. At the end of the xixth century the number 12,000 is given (Cuinet, *Sām*), of whom 2,250 were Sunnis possessing two mosques (*ḡamāṭ*), and 8,770 Shī'is with one sanctuary (*maṣjid*). The population also included of 250 Jews and 700 Mandaeans or Subbā. The latter lived for the greater part in the suburb Subbāye on the opposite bank of the Euphrates. Before 1853 the Mandaean population had numbered 260 families, but the oppression of the Muntaṣik had caused 200 families to emigrate to Amīra. The German orientalist Petermann in the year 1854 visited in Suk al-Shuyukh the high priest of the Mandaeans, Shaikh Yahyā. As elsewhere these people are here silversmiths; they are also builders of a special type of boats.

Under Turkish administration Suk al-Shuyukh became the capital of a *ḥaḍā* of the same name in the *sandjak* of Muntaṣik. The tribes living on both sides of the town (Badūr and Bant Asāl) are Shī'is. The number of the population of the *ḥaḍā* is given as 50,000 (Cuinet).

(J. H. KRAMER)

SUKAINA, daughter of al-Husain b. 'Alī b. Abī Tālib and of Rahab bint Imr' al-Ḳala b. 'Adī b. 'Aws the poetess, who gave her daughter the name of Sukaina (sometimes called: Sakina, but the *Kāmūs* has: Sukaina). Her real name was Umayma (according to Ibn al-Kalbi quoted by Ibn Sa'd and the *Aḡḡānī*) or Umayna but more probably Amīna or Amīna (according to the *Aḡḡānī*). The date of her birth is not known; but she was a little girl at the time of her father's death (definitely stated by Tabarī, ii. 232, *no.*, and by Ibn al-Aṭhir in telling of the death of Husain, *Kāmīl*, iv. 73: the same writer says that Yazīd had the survivors of the day of Kerbelā — of whom Sukaina was one — brought to Madīna under a strong guard — and that the latter's mother died of grief a year later: *ibid.*, iv. 76/6). Sukaina is particularly famous for her successive marriages; very contradictory statements are given regarding their number and order. According to the *Kīṭ al-Aḡḡānī*, a proposed marriage with her cousin Ḥasan b. al-Ḥasan b. 'Alī came

to nothing and the latter married Sukaina's sister Fatima. Ibn Kutaiba and Ibn Sa'd give lists; the former three lists in which the order varies, the second two lists; the *Aghani* gives six contradictory lists. It is best in the circumstances to accept the oldest order, in which Kutaiba and Ibn Sa'd are almost in agreement, the order adopted by Ibn Khallikan. Her first husband, according to this, was Mus'ab b. al-Zubair b. al-Awwam (d. in 70 or 71 in a battle fought against 'Abd al-Malik b. Marwan; cf. Ibn al-Athir, iv. 263-264); Mus'ab gave Sukaina a considerable dowry when she was given him by her brother 'Ali (cf. the satirical verses in Tha'alibi, *Lata'if*, p. 53); they had a daughter to whom Sukaina gave her mother's name; this daughter married the brother of Mus'ab and died young. The second husband of Sukaina seems to have been 'Abdallah b. 'Uthman, nephew of Mus'ab b. al-Zubair; from this union was born 'Uthman called Karim (and according to Ibn Sa'd two other children Hakim and Rabiha), a union not always peaceful (according to the *Aghani*). The third husband was, according to Ibn Sa'd, Zaid b. 'Amr b. 'Uthman b. 'Affan; the *Aghani* describes him as miserly and unreliable and speaks of continual quarrels with Sukaina, who survived him. Al-Asbagh b. 'Abd al-'Aziz b. Marwan (d. 86), brother of 'Umar b. 'Abd al-'Aziz and governor of Egypt from 75 A.H., married the divorced Sukaina without ever consummating the union (too much stress need not be laid on the differences of the biographers on this question; while Ibn Kutaiba, followed by Ibn Khallikan and Safadi makes al-Asbagh the third husband of Sukaina, Ibn Sa'd and a verse quoted by the *Aghani* made him her fourth husband). According to Ibn Sa'd, besides, Sukaina married, immediately after Zaid b. 'Amr, Ibrahim b. 'Abd al-Rahman b. 'Awf al-Zuhri with whom she lived three months; they were divorced; it is said by orders of Hakim b. 'Abd al-Malik, which is not at all probable; according to Ibn Hadjar and Ibn Kutaiba (*Ma'arif*) Ibrahim died in 76, aged 75; the marriage must therefore have been earlier. Ibn Kutaiba further records, without giving an authority, that Sukaina married 'Amr b. Hakim b. Hizam. The statements of the *Aghani* about a marriage between Sukaina and her cousin 'Abdallah b. Hasan b. 'Ali may be rejected. Sukaina was generally recognised to have been one of the most remarkable women of her time. One of the authorities quoted by the *Aghani* (xiv.) describes her as chaste, fastidious, full of a dignity which did not exclude a fondness for badinage (jests and banes quoted, xiv. and xvii. p. 94, 97, 101). The beauty of her hair was celebrated; she had a particular method of arranging it; at a later period 'Umar b. 'Abd al-'Aziz strictly prohibited this coiffure. She was very proud, not only of her beauty but of her ancestors (*Aghani*, xiv. 164) and of her daughter whom she liked to cover with jewels. She also gave evidence of the possession of courage, if we may believe *Aghani* (xiv.) on the stoicism with which she submitted to an operation on the eye. She was also a woman of wit, devoted to poetry and song (numerous anecdotes, *Aghani*). She spent her life in the region of the sacred cities and died at Medina on Thursday 5th Rabi' 1 117 (April 7, 735). Her burial was postponed for several hours because the governor ordered that they should wait till he could arrive.

SUKKAR, from Pers. *shakar* or *shakar*, from Sanskrit *śaṅkarā*, Prakrit *sukkarā*, the sap crushed from the sugar-cane (*ṣaṅg al-sukkar*) and solid sugar. Vullers (ii. 439) gives the following from the *Bā*: *shakkar* is in the technical language of the physicians the sap of a plant, similar to the reed (*nay*) but not hollow between the nodes, which becomes solid on boiling. It is given different names in different stages of preparation. Thus for example, when not yet purified (simply solidified) it is called *shakkar surkh* (red sugar); when it is boiled a second time and purified by being poured into a vessel where the impurities are deposited, it is called *Sulaimani*; when it has again been boiled and poured into a mould shaped like a pine-apple (*ḥalīṣ panambari*) it is called *fānīd*; when it is boiled for a third time and reaches the highest stage of purity, it is called *imūfi* or double *ḥand*; when it is poured into long reed-shaped moulds similar at both ends, it is called *ḥalam* (sugar-stick); when it is once more boiled and poured into glass moulds, it is called *nabāt-i ḥamāz* (grown silk sugar?); if it is brought to the boil with water and stirred vigorously till it solidifies and is then drawn out into threads it is called *fānīd ḥamāz* and *sanjari* (*Sindjari*?); if in the third boiling it is brought to the boil with a tenth of its bulk of fresh milk added to it, until it solidifies, it is called *ḥabzarad* (sugar lump).

The names are not all clear. The word *fānīd* came into Persia from the Sanskrit *phāṇita*, *ḥand* or *ḥand* from the Sanskrit *ghaṇṭa* (with the meaning somewhat changed). As *Sulaimani* is probably a trade-mark, from the name of the town of Sulaimān in Khūzistān, *Sindjari* may refer to the district of Sindjar. Instead of *ḥamāz*, we find the reading *ḥamāzīn*, which P. Schwartz proposed to translate "intended for the treasures"; *sanjari* therefore might also mean "royal". The pine-apple shape is the original of our sugar-loaf, the *ḥalam*-shape were probably cylindrical; the name *ḥabzarad* "chopped with an axe" is also given to rock salt; the sugar made in this way must have been so hard that it had to be smashed into small pieces.

A wild variety of the sugar-cane (*Saccharum officinale*) is not known and the attempt to cultivate the related *S. spontaneum*, which is widely distributed, has not succeeded. The original home of the sugar-cane is Bengal; it is said to have been brought from there to China in the seventh century A. C. Herodotus did not know of the sugar-cane, nor Ktesias, the court physician of Artaxerxes Memnon (c. 416); on the other hand Nearchos and Onesikritos mention that in India

already negotiating their surrender to the Franks, when the two amirs, who had met on the Khābūr, arrived in time to relieve the town. A battle was fought on the Balikh, a tributary of the Euphrates, and the Franks were completely defeated. Count Baldwin of Edessa and Joscelin were taken prisoners, while Boemund and Tancred succeeded in reaching Edessa with great difficulty. In spite of the brilliant victory it wanted little to arouse once more the old jealousy between the two Muslim leaders, as the rich booty which fell to Sukmān's men aroused the envy of their allies and only Sukmān's skilful diplomacy enabled the threatening danger to be averted from the victors. After the resistance of the Franks had been temporarily broken, Djekirmish took possession of Harrān and then turned his attention to Edessa. There Tancred commanded, while Boemund remained in Antioch. The latter was at once sent for, but as difficult roads delayed his march, Tancred resolved to risk all on one throw and made a bold sortie early one morning. He succeeded in surprising the besiegers and put them to flight. Soon afterwards Ibn 'Ammār [q. v.], lord of Tripoli, appealed to Sukmān for help against the Franks. Sukmān declared himself ready to assist him and set out for Damascus, but died on the way (beginning of Šafar 498 = Oct. 1104). In Hīn Kaifā he was succeeded by his son Ibrāhīm and in Māridin by his brother Ighāzī.

(K. V. ZETTERSTERN)

SULAHFĀT, the tortoise, or turtle. Land (tortoise) and sea (turtle) varieties are distinguished as *al-harrī* and *al-baharī*. Al-Damiri and al-Karawī give practically the same fables about their habits. The turtle attains the size of an island. As it cannot hatch its eggs on account of the hardness and coldness of the shell on its belly, it looks after the eggs until God allows the young ones to come out. If the eggs fall into water, turtles are born from them. Magical qualities are attributed to them by the *Kitaḥ al-Khawāṣṣ* of Balīnās and healing properties are mentioned by al-Karawī and al-Damiri. Combs are made from the shell. The stupidity of the tortoise is proverbial.

Sulahfāt is also the Arabic name of the constellation of Lyra, compared to the Greek *χελών*.

(J. RUEKA)

ŠULĀIB. The generic and proper name of this Arab pariah tribe living in Central Arabia and the adjoining territory, usually called Šulāib (pronounced Šlīb), is (according to a letter from the Carmelite father A. M. de St. Élie) Šulāba (pronounced Šleba). The collective form is derived from the singular Šulābī (pronounced Šlebiy), fem.

Šulābiya. The plural al-Šulābiyāt is also found (in Wetstein, *Z.D.M.G.*, xii, 125). Here only knows the term Šleba. The diminutive form, which is commonly used in Arabia with a contemptuous sense, from Šulāba is Šulāib, or eg. in Šulāibī or Šulābiya (pronounced Šlībī, Šlībīy or Šlībīya). The combination with "Banū" and "Bani" is also occasionally found but is probably not correct, as in Arabic geographical proper names no essential alteration took place in the oldest recorded form of the name in the form or combination of these names from the period of the oldest tradition. This applies even to the use of the Arabic article *al-*.

The most varied explanations are given of the meaning and origin of their name. Those who connect the word Šulāba with totemism have most in their favour, of all the explanations given in Pieper's work (p. 65—69); for the *warm* [q. v.] of that tribe is said by some (St. Élie in *Mochrie*, Wetstein and Palgrave) to be the cross *al-qalī* [q. v.]; but Huber (197) gives their tribal badge as another symbol, a short stroke with a semi-spherical snake by its side (*mīḥā*); according to Massignon, *Annuaire du Monde Musulman*, p. 82: *al-mīḥā*; probably a parrying-shield such as is borne by the people of the Upper Nile and the Dinka. Another tribal mark is *al-ḥāim*, which looks like a "K" and is branded on the left shoulder of their animals, while the *mīḥā* is put on leg, neck or cheek (Massignon, *loc. cit.*, p. 75). The other less probable interpretation, which, according to Doughty (i, 283) and Pelly (189), is the Beduin etymology, derives the tribal name from the expression *ṣulb al-'Arab* (= the Arab's stock, from the back of the Arabs = the dregs of the Arabs). On the other hand the Arab derivation from *ṣulb* (= hard, hardened, steadfast, i. e. in faith; St. Élie in *Mochrie*, p. 674) is only to be adopted with some misgiving as perhaps illuminating but hardly scientific in my opinion. A connection of the name Šulāib with Greek gods of agriculture, who according to St. Élie (*loc. cit.*, p. 674) were called "Sulēves" may on the other hand be at once rejected as it is little probable that the Šulāba, being in the main hunters, should have formerly worshipped agricultural deities. Nor can the name be derived from names of places, e. g. from Šulāib (Solēb; St. Élie, *loc. cit.*, p. 674). Their name does not seem to be a patronymic, not simply because the compound name Banū Šulāib is hardly to be found and is incorrect but also because neither in the Arab legends so far known nor in the scanty references of the Arab historians and geographers is there any mention of the name of a possible ancestor from which the name of their tribe could be derived (their legendary ancestor Dab'ān does not come into question here). The suggestion that they are descended from the Crusaders (*Šalībī*, *Šalībīya*; cf. St. Élie, *loc. cit.*, p. 613, first made in the Paris periodical *Le Roster de Marie*, 1864) is very improbable for practical reasons and because historical references suggesting such a thing are entirely wanting.

Their origin and descent is obscure because, as already remarked, the historical sources give negligible information about them and these important points in particular, which may be due not only to their small numbers and slight importance, but particularly to their low social status as a despised and barely tolerated pariah tribe among the

Beduins. In the earlier Arabic literature they are not called by their proper name Sulah, Sulaib, etc., but are called al-Za'atf (according to a letter from St. Elie). So far as I know there are no genealogies of them in existence, not even fictitious ones. Their legends and those of the Arabs form only a very poor substitute for this deficiency. Common to them — and this is very significant — is the statement that the ancestors of the Sulah once held a much higher social and economic position than they do now (St. Elie, *loc. cit.*, p. 675; Doughty, I, 283), which however they forfeited through arrogance etc. (taut of the Fall; a Christian survival?). Pelly (p. 189) says that an Arab once had sexual intercourse with his mother and the Sulah are the descendants of this act of incest. Quite apart from the fact that it is the regular custom in Arabia to disparage the descent of one's enemies or people one holds in contempt — even beyond the bounds of truth — the story given by Pelly recalls a significant statement in Strabo (xvi, 4, 23); according to him the Nabataeans recognise marriage with the widowed mother on the death of a father, a peculiar degeneration of the true Semitic institution of the levirate marriage. Wright, p. 43, records another legend, which may be important for dating the age of this people. Their ancestors are said to have left Husain b. 'Ali and his followers and companions in the lurch at the battle of Kerbela' (61 = 680) and thus contributed to the guilt of their massacre. This is unusual as it suggests the Sh'ia and a connection with Mesopotamia.

More positive facts however throw light on the present position of the Sulah, their customs, ideas, and social position with regard to the other Arabs. It is decisive for their whole existence and peculiarities that they, like the H'aim (pronounced H'aim or H'aim), 'Aqil — Arabs and Arab gypsies (Navar, sing. Nuri) — are a race of pariahs.

The area over which they are found is the whole of the interior of the northern and central part of the Arabian peninsula. The southern frontier of the country over which they wander corresponds roughly with the Tropic of Cancer on the southern boundary of the fertile zone of Najd. Assertions to the contrary by Pelly, p. 189 and Doughty, I, 282, are not so very important in my opinion, as there had been no previous mention of them in South Arabia and Yemen by Europeans who had travelled there, which would be remarkable in the case of a people of such striking appearance as the Sulah. This does not of course mean that we deny their occasional appearance in these regions. A further argument in favour of this assertion is that the Sulah are reckoned with the Ahl al-Shamal (cf. Curtiss, p. 46, note 2). The large towns on the border of the steppes and deserts are only occasionally visited by the desert Sulah to buy provisions, arms (Weinstein in *Z. D. M. G.*, xl, 492) and munitions and other necessities or to sell their manufactures and booty of the chase. On the other hand some of them are settled in the fertile parts of Mesopotamia, Syria, Palestine and Transjordan. Within the area above defined, especially in the steppe district the desert Sulah wander northwards or southwards, according to the season, following the movements of the game, their chief source of food, which depends on the growth and decline of vegetation. They, like the Beduins, are not settled. The few Sulah in the more fertile

zones on the edge of the Arabian deserts need hardly be taken into account, especially as they are also for the most part half nomad. Their unsettled and migratory form of life is connected with their way of living. Unlike the Beduins, they live for the most part by hunting or handwork. This also causes them to split up into very small groups whether settled or migratory — here again unlike the Beduins. They are found, according to Raynaud and Martinot, p. 30—35, in groups of two or three families. But it sometimes happens although rarely, that larger bodies are found wandering or camping together. This is all the more remarkable as in Arabia the tribes acquire all the more prestige and are less exposed to hostilities the greater their numbers. The Sulah share this peculiarity with the other wandering pariah tribes of Arabia. But in particular places in Arabia the Sulah are said to be found in larger bodies. According to Doughty, I, 283 *sq.*, this is particularly the case in the oases of Taima' and Wajh. The fact that they are so thinly distributed makes it difficult to estimate their numbers and the estimates vary very much. St. Elie (*loc. cit.*, p. 678) at the end of 1898 (?) puts their strength at over 700 tents which, as a mean, is probably nearest the truth, for Curtiss, p. 46 note 1, gives 400 and Huber, p. 196, 1,000 tents for al-Hedjra or al-Hedjra alone. The latter figure can only be taken with scepticism.

They are divided into different small tribes and these again into clans. According to Raynaud and Martinot, p. 30—35 supplemented by the publications of St. Elie, the best living authority on this people, and letters from him to me, the Sulah have been divided since the last century into three sub-tribes as follows:

I. Sulah (Sulah), who are divided into the sub-tribes of:

1. al-Malik;
2. al-Tamil [Tamil] (= the shameless);
3. al-Majid in Lower Mesopotamia or Hild al-Muntafik [dial. also: al-Miyad];
4. al-Darab [D'arab] (= the nimble, alert, active);
5. al-Kahwan (= the faithful, reliable) [dial.: al-Gab'ia];
6. al-Bennak [dial.: al-Bannak] (= those who hunt partridge with extraordinary skill);
7. al-Najm;
8. al-Tarfa;
9. al-Hazim and

10. al-Sabaiba [pronounce: S'abaiba] (in Raynaud and Martinot, *loc. cit.*, wrongly called: Sbeipat).

II. Sub-tribe of al-Saidan; clan: al-Amra and

III. Sub-tribe of al-Ghunayr or al-Ghunaym, also wrongly called: Banu Ghunaym (Ben Ghunaym).

Another division on a geographical basis is given (in a letter) by St. Elie:

I. Sub-tribe of desert-Sulah or Khalawiya [Khalawiya], sgl.: Khalawi [Khlawi] or Khalawa [Khlawa], who are divided into the following clans:

1. al-Majid at Naqm Banu Majid in Najd;
2. al-Rashtida;
3. al-'Awzim; Rashtida and 'Awzim meet in the hinterland of al-Kuwait;
4. al-Hazim at Nukhail [N'khail], at Tutul [Tutal] and at al-Salam, i.e. in the land between Lower Mesopotamia and Najd;

5. al-Sulaimān [S'ulmān] at al-Shihāb [Shenbel];
 6. al-Rāshid, in the vicinity of al-Kāsim;
 7. al-Hutaim (!) [H'taim] at H'it and at Ma-dinat al-Rasid and
 8. al-Djamil, who adjoin the Mājid.
- II. Sub-tribe of the Palestine-Sulaba or al-Ghummi [Ghermi] with the clans:

1. al-Ghummi in Shihāb; among them is the supreme chief now called Mu'aidh [M'aidhef] who to some degree holds the supreme judiciary powers over them and the right of appeal; also found in Nadjd;
 2. al-Sulaimān (cf. above);
 3. al-Tarābīn between Jerusalem and the Egypt frontier;
 4. al-Khanādīra [Khanādīra], neighbours of the Tarābīn;
 5. al-Ma'āza, between Ghazza and Egypt, and
- III. Sub-tribe of the Sulaba of Transjordan, Syria and Mesopotamia or the Sulabat al-Sarhān [Serhān] with the clans:
1. al-Khuwālāt [Khawālāt], east of Jordan;
 2. the Banī 'Ayya;
 3. al-Sharāt [q.v.] and
 4. the Banī Šakhar (!) [Bani Šakhar].

These three clans are distributed over the southern and eastern part of Transjordan. A more accurate delineation of the tribes and stock of the Sulaba is urgently required, especially as regards which Arabian pariah tribes are to be included among them; the Nawar gipsies [q.v.] do not come into question.

Various branches of the Sulaba, especially those in the more fertile districts, are distinguished from the other (desert-) tribes by a higher standard of living (e.g. as camel-breeders) or by a certain tribal pride (like the Ghummi); the latter for example demand a higher price for the bride from a Sulaba not of their tribe who wishes to marry into it (*Mahr*; q.v.), than from one of their own tribesmen. Nevertheless they possess the feeling that they are all one people (see Pieper, p. 17).

From the anthropological point of view, nothing absolutely certain can be stated with regard to their racial connections for want of reliable sources and in view of the contradictory accounts of their physical appearance. This is unfortunately the weak point in our present knowledge of this people.

According to St. Élie (*Mackrig*, p. 676) the Sulaba are markedly distinct from the Beduins in their somatic attributes, by the smallness of the head, the fineness of the features, the height and breadth of the forehead, their blue eyes, light complexions, fair hair, the oval shape of the face, their more tender skin but especially by their more elegant figures. According to St. Élie (in a letter) occasionally lighter pigmented individuals are the exception among the Arabs of pure stock in Nadjd etc. The Sulaba are also proverbially lean. These statements of St. Élie are only partially confirmed by other authorities, e.g. by Blunt, ii. 109; Wright, p. 48 and von Oppenheim, I. 221 hold the contrary opinion. Generally they are said to be of a straight and rigid carriage, of no great stature and slightly built. Blunt, ii. 109 gives the height of a "little old" Sulabiya woman as "not more than four feet". These vague statements do not permit us to make any deductions about their descent or racial connections. Reliable measurements are also completely lacking. The only pictures

of Sulaba, so far as I know, are the little sketch by Euting in the second volume of his *Travels* and the group (the only picture to some extent satisfactory) in v. Oppenheim, I. 220, which however is not sufficient for any far-reaching deductions. In any case from all the evidence available, this people seems, according to Christian (*Sitz-Ber. Wien. Anthropol. Ges.*, 1923/1924) and Lattman (cf. Pieper, p. 75), to belong to the Mediterranean branch of the human race and also to be of Semitic stock.

As to their character, the Sulaba are readily distinguished to their advantage by their naively cheerful and open natures from the reticent and always suspicious Beduins. They are not ungifted, musically and poetically, whence they can earn a living in the tents of the Beduins, and are kindly, peaceful, of gentle and amiable disposition and hospitable like all Orientals. According to a letter from St. Élie they are on the other hand not very liberal on the march or on their passages through the desert so that travellers who want anything from them have to threaten them. Their moral standard, as with all pariah peoples, does not seem to be very high.

Much more important for ascertaining their racial connections are their mode of life, customs, ideas and particularly their position with regard to the people among whom they live. It is this that marks them as pariahs. As to their mode of life it has already been mentioned that they make a living in quite un-Semitic fashion (Christian, *op. cit.*) — for the true Semite of these lands earns his livelihood either as a cattle-rearing nomad or as a trader, sometimes also as an artisan and soldier — mainly by the chase. Their main booty is the gazelle (*gazella dorcas*, L.), the saïre antelope or *bakar waḥshī* (*oryx elgazi*, Pall.), the wild goat (*capra hircus nubiana-sinaitica*, Hempr. Ad. threub.), and of ground game the desert fowl or the *fatā* bird (*peperoclidurus elchata*, L.), bustards, e.g. the *hubāra* (*Houbara undulata*, Jacq.) etc. Ostriches (*struthio camelus*, L.) in spite of the statements to the contrary by several travellers (e.g. Musil, iii. 19), are no longer hunted as they have been driven away to the south. Besides these wild creatures, anything else that it is at all possible is eaten by them as, being pariahs, they have no prohibitions regarding food either from custom or belief. They even eat the vulture and the dog, despised by the Arabs as unclean (Huber, p. 197; Doughty, I. 281; Pelly, p. 189). Pieper, p. 31-34 gives a detailed account of a Sulaba hunt, which is conducted either on foot by stalking or from the back of an ass. Another main business of the desert Sulaba with whom we are mainly concerned here, is the rearing and sale of the Sulaba ass, highly esteemed for its excellent qualities, also called *Sulabi* (Šalibi). Their strength and endurance and appearance are described by Musil, *op. cit.*, iii. 291, and Butler, p. 524. As a rule they are light, almost white in colour. Huber, p. 588, however (cf. Wright, p. 52), says that a clan of Sulaba on the Djebel 'Awdjā about 1880 also bred dark coloured asses. According to Musil, *op. cit.*, the Sulaba catch wild asses (*equus asinus africanus*, Fitz.) and use them for breeding whereby the strength of their asses is maintained at a high level. On account of their excellence these animals are very highly esteemed by the citizens and *fellāḥin* of the lands bordering on the Arabian deserts who do not share the prejudice of the

Beduins against the ass, and exported even to Europe under the name Baghdad or Moroccan asses. At the same time but only rarely — this must be emphasised — individual Šulāba, e.g. those parts of this people who lived under the rule of the enlightened and vigorous amir of Ḥa'il, the well known opponent of the Wahhābīs, Muḥammad b. Raḡid, also rear camels (*camelus dromedarius*, L.). Each family among them has on an average three or four camels. But this must be considered exceptional. As a general rule if the Šulāba were to accumulate or possess wealth to any considerable degree in the larger domestic animals, desired by the robber Beduins (with the exception of the ass which they detest), they would no longer enjoy protection and security from their attacks. This immunity has also a material foundation: the Šulāba pay their hosts a tribute, the so-called 'brotherhood tax' (*ḡhawwa*; cf. in Raynaud and Martinet, p. 32, the list of their 9 *ḡhawwas*) for permission to graze and sojourn among them. Huber, p. 197 and Butler, p. 524, however, say that they are attacked and persecuted by several Beduin tribes, e.g. the 'Adīmān, and on religious grounds by the Kaḥṭān also, according to Huber and according to Butler, out of covetousness by the robber 'Anese [q.v.] as soon as they become prosperous. They also keep — although not in such large numbers as the Beduins — sheep and goats, less for their meat than for their wool, milk, and milk products. The Šulāba further work as day-labourers among the *fellāḥin* of Taimā and other oases during the date-harvest (Huber, p. 588) or work as smiths and carpenters. The latter may be evidence in favour of a great antiquity for this people (cf. Eisler, *Qenitische Weiteinschriften*, Freib./B. 1919, p. 741). They are, like the (Arabian) gipsies, with whom they have nothing racial in common, as the latter's origin has been established beyond all doubt by de Goeje (*Bijdr. tot de geschied. d. Zigeun.* and *Mim. sur les migrations d. Triganes*, etc.), skillful tinmiths, make and repair weapons, sickles, domestic utensils of brass (*ṭaḡṭ al-ḡḥāwīya*) etc. and wooden frames for the saddles of pack-camels, wooden screws, wooden vessels, etc. They are thus indispensable to the Beduins — a further ground for their immunity. They are well known and welcome for their medical practice on men and animals (St. Élie in *Mackriz*, p. 680 sq.) which consists partly of cauterisation (*ḡaiy*) and partly of unguents, manipulations which follow definite rules, known only to the experts. Their fortune-telling is also mentioned (Blunt, ii. 110) and their begging (Doughty, i. 284; Burckhardt, p. 14).

Their dress and dwellings are most primitive. They wear a garment of skins (*farwa*) made of 15–20 gazelle-hides dried in the sun and sewn together with the hair outside (cf. the picture in von Oppenheim, i. 220). Unlike the *adā* of the Beduins it is not open the whole length in front but has an opening at the neck (*ad-ḡḡā*) through which it is slipped on. The sleeves reach to the roots of the fingers and contract at the wrists. The garment has a hood which suggests Hamitic north African influence. The *farwa* is held together with a girdle of dyed lamb-skin. To wear a shirt (*ḡḡā*) below this garment or a cloak above it is considered by them to be a luxury. The two sexes dress practically alike. The Šulāba usually

go bare-footed but they sometimes wear sandals (*ḡḡā*) as a protection against thorns and sharp stones. The Šulāib wear a head-cloth (*keffiyeh*) and veil (*uḡḡā*) in the same way as the other Beduins of Arabia. Their garment of skins is further remarkable, as it is either a survival from an earlier period of development or an adaptation to the special circumstances under which they are forced to live; perhaps it may prove to be of use in eventually ascertaining their origin. The *farwa* is convenient because it wears better than woven material and by its desert colour suits the conditions of light and ground in the desert, which is very useful in hunting and enables the game to be successfully stalked.

The arms are old fashioned carbines with six chambers which therefore get the Persian name of *ḡḡā-ḡḡān* (St. Élie, *op. cit.*, p. 677 sq.), and the *maḡḡā*, a parrying-stick (Christian, *op. cit.*) which has already been mentioned, and as clubs the *maḡḡār* which consists of a rather short wooden handle with a knob of asphalt as a head, those made entirely of iron mainly in al-Kaṭf (cf. the pictures in v. Oppenheim, ii. 103). The Šulāba are still said to use also the bow and arrow (Pieper, p. 22 and 32). But they do not seem to be armed to the same degree as the Beduins. As they are extremely peace-loving and do not allow themselves to be involved in the feuds of the Arab tribes nor have any of their own, it is probably hardly necessary for them to be so well armed.

They live like the Beduins in tents (*ḡāit, ḡayāt*) which are made either of mats, of goat's hair (*al-ḡarāyir*), or like their dress from the skins of the victims of the chase. These are of varying size: Burckhardt, p. 24, once saw a Šulāba tent which according to him could shelter 20–30 families. The cleanliness in and around their habitations is not very great (Wright, p. 51). They also use caves to shelter themselves and indeed, being children of nature with no wants, they often spend the night in the middle of the ḡḡā when on a hunting expedition.

Their customs show traces of ancient Christian and Sabaeen elements. Nominally they are Muslims. According to St. Élie (in a letter to the writer) the Christian survivals only began to disappear in the last century; till then the Šulāba had remained true to the faith of their forefathers. He tells me for example that polygamy, divorce or repudiation, circumcision etc. only began to be adopted by them in the second half of last century. Whether this development is directly or indirectly due to the Wahhābī movement, as was the case with the Murḡede or Merḡede Arabs (cf. Burckhardt, p. 145–146) awaits further investigation. In any case their long adherence to Christian beliefs and customs seems to have been not without influence on their position as outcasts among the Beduins. We find undoubted reminiscences of Christianity in their religious beliefs and usages, for example the use of the cross on ceremonial occasions, baptism on the tenth or fortieth day after birth in addition to circumcision which they also practise. According to Pelly, p. 189, at baptism they dip the child seven times into the water, which is the practice of the Johannites or Mandaeans. The Šulāba also believe in the existence of a supreme being. In praying they stretch their arms out sideways so as to form a cross. According to Pelly, p. 189 sq., the Šulāba have a place

of pilgrimage and a holy town in Harrān and their kinsmen living there have older and purer forms of prayers and psalms composed in Chaldaean or Assyrian (probably Eastern Aramaic); but this, like the whole of Pelly's account, is very much to be questioned as, according to other authorities (St. Élie, Curtiss, Littmann), they have now no special language of their own but speak a beduinised Arabic. According to Pelly they still adhere to the old Arabian star-worship. They worship the Pole-Star and a star in the constellation of the Ram. Like the Jews, they pray three times a day, at sunrise, at midday and at sunset. They have priests and priestesses. Doughty p. 281 mentions a patriarch of all the Şulaba. The priestesses enjoy special reverence and according to Curtiss, p. 63, 286, are called *fakira* (female anchorites?). They heal the sick by the laying on of hands. It is still an open question whether the Şulaba may not still be crypto-Christians. Old Semitic ideas are also apparent in their conception of sacrifice (Curtiss, p. 37, 107). Pieper, p. 39—56 in his account of the Şulaba describes their festivities and dances, the morals of their women, marriage, divorce, funeral customs etc., which cannot be gone into here for lack of space. But it may just be mentioned that they tolerate polygamy, although it is rare among them on account of their poverty.

The alpha and omega of the study of this people, one of the most remarkable and most interesting of the pariahs among the peoples of Eastern Asia is and will be, as already mentioned, the question of their ethnology. Pieper, p. 67, 70, 74 sq. thinks that till the question is definitely settled they must be regarded as Semites. For several important reasons it is very difficult to uphold this view at the present time. The rigid way in which they are cut off from the other Arabs of the peninsula, who would never marry a Şulabiyah woman and consider themselves as high as the heavens above these pariahs, is in my opinion evidence of non-Arab origin. Occasional exceptions to this statement about mixed marriages are found but very rarely (Doughty, ii. 461; Curtiss, p. 34, 46). According to St. Élie (in a letter to me) they are undoubtedly pure-bred Arabs. Pieper might be right in so far as they, if they were not originally Semites, might have very much arabicised their mode of living by intermarriage, although only to a very small degree, for hundreds and perhaps thousands of years. The view held by Blunt and v. Oppenheim that the Şulabīs are gipsies is rightly rejected by Pieper (p. 69—73). From what has been said above it will be seen that there is much more probability in the hypothesis that they might originally have been a fragment of some, perhaps Hamitic, people which had found a way into Arabia; for we find Hamitic memories in their skin-dress with hood, and the parrying-shield and their living by hunting. As St. Élie claims to have found clans of the Şulaba in Palestine and even in the Sinai Peninsula, and on the frontiers of Palestine and Egypt, e.g. the Tarāḥin, al-Khanādjira and Ma'ara, we cannot see why Hamitic tribes, reversing the direction of the Arab immigration into North Africa, should not have entered Arabia and Palestine by the old route through the Sinai peninsula. The last link in this chain of argument, historical tradition, is however lacking. Careful investigation of their somatic qualities etc. by the methods of

ethnology might provide some compensation for this historical material which will barely be obtainable. In this connection, reference may be made to Möller's essay (*Die Ägypter und ihre lybischen Nachbarn*, Z. D. M. G., 1924, lxxvii, p. 45—59) particularly to the Thulmah there mentioned, who according to Möller show in many respects a really striking similarity to the Şulaba. The present position of the Şulabīs, their customs, etc. suggest in my opinion, that they are the victims of some great and catastrophic war of nations.

(PIEPER)

ŞULAIḤI is the name of a dynasty which ruled over Yaman as nominal vassals of the Fātimid caliphs of Egypt. The founder of the dynasty, 'Alī b. Muḥammad, was the son of Muḥammad b. 'Alī, kādī of Ḥarāz of the clan of Yām, a subdivision of the large tribe of Ḥamdān. 'Alī came as a young man under the influence of the Ḥāfi's missionary 'Amir b. 'Abd Allāh al-Zawāḥī, who was supposed to have had in his possession a copy of the mysterious book 'al-Djāfar' in which the destinies of the Ḥāfi's Imāms were laid down. Through ardent studies 'Alī became an accomplished jurist and for fifteen years was leader of the pilgrims from Yaman to Mecca. It was during the pilgrimage in the year 428 (1037) that 'Alī confided to sixty men of his tribe of Ḥamdān that it was his intention to set up the rule of the Fātimids in Yaman. These sixty men swore him allegiance for life and death and upon their return to Yaman and in the following year he and his followers took possession of the village

of Mazn in the mountains of Ḥarāz to the West of the city of Ṣanʿā'. They were quickly besieged by angry tribesmen, but with the utmost speed fortified the village in such a way that its conquest was very difficult. 'Alī appears to have made very little material progress at the beginning of his career and the small kingdoms formed after the disruption of the Ziyādi dynasty more than held their own while the kingdom founded by the Abyssinian slave al-Naǧdījāh in the lowlands (Tihāma) of Yaman was always a serious obstacle to the Sulaihi becoming rulers of the whole of Yaman. 'Alī obtained the sovereignty over the Tihāma and the city of Zabīd in the year 453 (1061) by having al-Naǧdījāh poisoned by a slave girl whom he sent to him. This event probably (though the historians are silent as to the grounds) led the Zaidī Imām al-Kāsim b. 'Alī to send an army against 'Alī under the command of his son Dja'far. 'Alī however surprised this army and in the month of Ṣha'bān of the same year, he routed Dja'far's army and the latter is killed. After this he attacked the strongholds of the Zaidī Imāms and took the castle of Yanā' on mount Ḥaḍḍar. After defeating Ibn Abī Ḥaḥḥid near the village Ṣawf he proceeded to Ṣanʿā' which he took in 455 (1063). After this he devoted his attention to the conquest of the city of Zabīd in the Tihāma over which he appointed in the following year his brother-in-law As'ad b. Shihāb and one year later he took possession of 'Adan, where he allowed the two sons of the late ruler al-Karam, al-'Abbās and Ma'ad to remain rulers as vassals, because they had assisted him in the conquest of Zabīd. They agreed to pay to his daughter-in-law Saiyida an annual tribute which amounted to approximately 100,000 dinārs, which tribute was regularly paid till the death of 'Alī. How great the power of 'Alī had become by this time is proved by the fact that in the year 455 he was able to install as ruler of Mecca Abū Ḥaḥim Muḥammad. He also sent from this time annually the covering of the Ka'ba and restored the treasures which had been carried to the Yaman by the Ḥasanids. Some smaller principalities still remained to be subdued and in the year 460 (1068) when one Ibn Tarf who ruled in Zar'ib having invoked the help of the Abyssinians rebelled, he and his allies were defeated and this mountainous district was conquered. After this event 'Alī returned to Ṣanʿā' which he did not leave for the next twelve years. The various districts of Yaman were administered by trusty governors and he took the precaution of keeping in his entourage the princes whose dominions he had conquered, a system followed by the rulers of Yaman to this day.

In the year 473 the rulers of Mecca abandoned the mention of the Fātimid caliphs in the public prayers and returned to the mention of the 'Abbāsid caliphs of Baghdad and it was probably this which induced 'Alī to leave Ṣanʿā' and proceed towards Mecca as if wishing to perform the pilgrimage. He took with him the princes whom he had with him at his capital, leaving his son al-Mukarram in charge of the capital. When they reached the district of al-Mahdjam in the Northern Tihāma he pitched his camp near a well named Umm al-Duḥaim. While they were off their guard the camp was attacked by followers of Sa'id, the son of al-Naǧdījāh, who murdered 'Alī and his brother 'Abd Allāh and consternation reigned

throughout the camp. Sa'id spared some of the princes who were with 'Alī, as hostages, but most of the army were massacred. Among the captured was the queen Asmā', daughter of Shihāb and mother of king al-Mukarram, whom he took with him to the capital of his father, Zabīd, which now opened its gates to Sa'id.

Asmā' was kept closely guarded by Sa'id and it was not till the year 475 (1082/1083) that she was able to send her son a letter in which she stated that she was with child by Sa'id. She wrote this to incite al-Mukarram to rescue her with all possible speed. The power of al-Mukarram had diminished considerably, because most of the vassal principalities had declared themselves independent like the rulers of 'Aden. He urged his followers at Ṣanʿā' to avenge the honour of their tribe and king. They marched against Zabīd which was defended by 20,000 Abyssinians, while the army of al-Mukarram is stated to have numbered only 6,000. He himself took command of the centre while his brother-in-law As'ad b. Shihāb and an uncle of the queen led the wings. After a fierce battle the city was taken by storm and al-Mukarram with two followers was the first to reach the place where his mother stood. He ordered the head of his father and uncle which had been put up on poles to be taken down and buried honourably. Then, after appointing his brother-in-law As'ad b. Shihāb governor of the Tihāma, he departed with his mother to Ṣanʿā'. Asmā' died in Ṣanʿā' in 479 (1086) and in the same year al-Mukarram instituted a new coinage called Maliki Dinārs which monetary standard remained in force for a long time afterwards. However the sons of al-Naǧdījāh, who had fled to the islands of the Red Sea returned to Zabīd in the same year, drove out As'ad and made themselves masters of the city and the Tihāma. Al-Mukarram retook the city and Sa'id, the son of al-Naǧdījāh, was killed under the walls of the city in the year 481 (1088) while his brother al-Djāyāsh escaped with his waṣīr to India by the way of 'Adan. They remained there for six months only, then returned to Yaman and again gained possession of the city of Zabīd.

Al-Mukarram appears to have been an incapable ruler and we find the singular spectacle in Islāmic history of a woman, his queen Saiyida, taking the most prominent part in the management of the affairs of State. She was born in 444 and was brought up under the care of the late queen Asmā'. She was married to al-Mukarram in 461 and bore him four children, two sons and two daughters. After the death of his mother, al-Mukarram gave himself up to wine and pleasures and handed the cares of the State to his wife who demanded from him full freedom of action. One of her first actions was that she left Ṣanʿā' and took up her residence at Dhū Dhibā, at a place, which had been founded by 'Abd Allāh b. Muḥammad al-Sulaihi, who was slain with king 'Alī at al-Mahdjam, in the year 458. The capital of the country was henceforth transferred to Dhū Dhibā and a palace and chief mosque erected in which queen Saiyida was subsequently buried. It was due to her that the death of Sa'id b. Naǧdījāh was brought about. Al-Mukarram died in 484 (1091) and having no surviving sons the office of Dīf was bequeathed by him upon Saba', son of Ahmad b. al-Muḥaffar b. 'Alī, the Sulaihi. He however

did not gain possession of Dhū Dhibla where the queen Saiyida reigned with the consent of the nobles and populace. Saba' therefore first turned his attention to the conquest of the Tihāma and the city of Zabīd, but was attacked unawares by the troops of Dja'ish and barely escaped to his stronghold of Ta'kar with his life. He then corresponded with the Fātimid caliph al-Mustansir and from him received a letter in which Saiyida was instructed to marry Saba'. This letter was conveyed to her to Dhū Dhibla and after much hesitation she consented to the marriage and a dowry was fixed. Saba' came personally to her capital to contract the marriage, but her majestic manner and other causes prevented him from completing the marriage contract and after the first night he departed again to his residence without consummating the marriage.

After this the queen placed her reliance principally upon al-Mufaddal, son of Abū 'l-Barakāt to whom she had granted the castle of Ta'kar which lay on one of the highest mountains overlooking the Tihāma. There the treasures of the Sulaihi were stored and the queen was in the habit of making it a place of residence during summer, returning to Dhū Dhibla for the winter. It was through Mufaddal that she regained the revenues of 'Adan and a partial submission of the lowlands. In 504 (1110/1111) Mufaddal laid siege to the city of Zabīd and his absence was used by men of the tribe of Khawlān to get possession of his fortress. Mufaddal returned but died under the walls of the castle. Then the queen herself marched with her troops from Dhū Dhibla and by a ruse again got possession of the fortress, in the following year (12th Rabi' I, 505). As the Khawlāns however did not act with justice towards the inhabitants of the district she ordered 'Amr b. 'Urfuṭa al-Djanbi to drive them out. Though not actual ruler of the country the queen managed to exercise during the following years a kind of suzerainty over the various small principalities which had sprung up in all parts of the country till the arrival in Yaman in 513 (1119) of Ibn Naḍīb al-Dawla, who was sent as an emissary by the Fātimid caliph and who for the next six years waged war against the smaller principalities reducing them gradually to obedience. The queen having aged, he made in 519 the attempt to wrest the power from her and wished to place her in seclusion, but she received such strong support from the various princes of the country that he was forced to desist from his design. As Ibn Naḍīb al-Dawla began to intrigue in the Yaman

in favour of the anti-caliph Nizār, he was arrested at the request of the caliph al-'Amir and sent in fetters to 'Aden to be shipped back to Egypt and though the queen repented and was desirous to have him back, his keepers left 'Adan by ship for Sawākin (Suakim) but the ship was wrecked on the voyage and all on board drowned. After the fall of Ibn Naḍīb al-Dawla the queen appointed one Ibrāhīm b. al-Hussain al-Hamidi, but learning of the death of the caliph al-'Amir she replaced him by Saba' b. Abi Sa'ūd, the first ruler of the Zurā'i dynasty [q.v.] who were the successors of the Sulaihi until the conquest of the country by Tūrānshāh. The queen survived for some years and died in the year 532 (1138) when the dynasty of the Sulaihi came to an end. Some of the princes held isolated fortresses and as late as 569 we find a princess 'Arwa, daughter of 'Alī b. 'Abd Allāh b. Muḥammad, in possession of the castle of Dhū Dhibla.

It would be wrong to assume that the Sulaihi, except under the first ruler, were in possession of the whole of the Yaman. The Abyssinian dynasty of the Banu 'l-Naḍīdīsh was practically the whole time in possession of Zabīd and the lowlands, while 'Adan and other important points of the country were ruled partly independently, partly in semi-independence by various smaller princes. The historians do not give many details about the Zaidī Imāms who had their headquarters in the town of Sa'da, but they too seem to have enjoyed unrestricted rule. Though the Sulaihi were the actual representatives of the Fātimid Shī'a caliphs of Egypt, there remained a large following of the Sunni doctrines as is exemplified by the temporary seizure of the fortress of Ta'kar by the Shāfi'ī tribesmen of Khawlān. The chief historian of the dynasty, 'Umāra, is unfortunately far from lucid in his account, *Wafayāt al-'A'yān*, and the later chroniclers follow mostly in his footsteps. The account given by Ibn Khaldūn is, as so often with him, very fragmentary and full of errors.

Bibliography: *Yaman and its early History* by 'Umāra al-Hakamī, ed. Kay, London 1892; Ibn Khallikān, *Cairo* 1310, i. 368; Djanadi, *Sulūk*, MS. Paris 2127; and the manuscripts enumerated by Kay in the Introduction of the *History of 'Omāra*. There is in the John Rylands Library in Manchester a large history of the Yaman by a Zaidī Imām which may throw further light upon this period but I have unfortunately not been able to make use of it.

(F. KRENKOW)

SULAIM n. MANṢŪR. This powerful and energetic tribe belonged to the group of Kaists or Kaïs-ʿAllān [q.v.]. It does not appear in Arab history until the middle of the sixth century A.D. Its lands lay along the frontiers of Najd and the Hǧǧāz and were bordered on the north by the territory of Medina and on the south by that of Mecca. On the east its neighbours were its relations, the tribes of Ghatafan, Hawāzin and Hilāl. Down to the end of the Omayyad period the district of the Sulaimis seems to have enjoyed very considerable prosperity. It was a succession of volcanic *haras*, of mining centres and wooded hills and of oases which were intelligently exploited; some of these were al-Rabadha, famous for Abū Dharr's [q.v.] sojourn there, Farān, Ma'dīn al-Borm, So-faina, Sawārikiya, etc. The two last named still exist. The oasis of Sawārikiya stretched for a length of several day's journey with its banana and pomegranate-trees, and vines, not to speak of palm-groves. The Sulaim had numerous horses, which in the desert is another sign of prosperity.

They were on good terms with the Jews of Medina. In Mecca the Kuraish financiers and business men early realised the necessity of cultivating the friendship of the Sulaimis, who possessed mineral resources and commanded the road to Medina as well as access to Najd and the Persian Gulf. Many Meccan families had joined them as *ḥalif* and jointly with the Sulaimis exploited the agricultural and mineral wealth of the country. Evidence of the latter is found in the frequency of the name *ma'dīn* (mine) in Sulaimi place-names.

Their main mineral wealth lay in gold and silver. Tradition asserts that a Sulaimi "companion" used to send Muḥammad a tithe of the precious metals extracted from his mine. In the mining district of Sulaim we find in the caliphate of Abū Bakr a resumption of activity and the mines continued to be exploited under the Omayyads whose treasury derived an appreciable revenue from them.

The Sulaimis held in reverence a stone or beryl called *Ḍamār*. Having common interests with Mecca, they were at first hostile to the Prophet, but when they saw that the triumph of Islām was assured, these practically-minded Beduins professed it ostentatiously. In the year 8 (629/630) a strong Sulaimi contingent took part in the easy conquest of Mecca after the battle of Hunain. Their chiefs after the victory claimed as the price of their assistance among others the poet 'Abbās b. Mirdās [q.v.], son of the poetess al-Khansa' [q.v.].

During the troubles which marked the reign of the third caliph, the Sulaimis as a rule took the side of 'Uthmān. This attitude earned them the favour of the Caliph Mu'āwīya I, who numbered among his best lieutenants the Sulaimi Abū 'I-ʿA'war [q.v.]. It was part of the policy of the Omayyads to conciliate this proud tribe, settled along the route of the pilgrimages and in the neighbourhood of the holy cities, the rebellious populations of which they could keep a watch upon. This entente lasted until the death of Mu'āwīya II. Along with the other Kaists, the Sulaim refused to recognise his successor Marwān I and proclaimed for the anti-Caliph 'Abdallāh b. al-Zubair. The defeat of the Kaists at Marjī Rāḥit [q.v.] provoked the definite split between Yemen and Kaïs and opened a war to the death between these two sections of the Arab race. Two Sulaimis, 'Umayr b. al-Ḥubāb and Djaḥḥaf b. Ḥukaim,

distinguished themselves in it for their ferocity rather than their valour. The poems of Akḥṭal [q.v.] preserve the memory of this merciless feud.

After the Hǧǧra a part of the tribe settled in western Mesopotamia. In 109 (727) a hundred Sulaimi families were allowed to go to Egypt and they soon multiplied there. In 230 (844/845) the Sulaim of Arabia along with their cousins of Hilāl sacked the town of Medina and brought a bloody retribution upon their heads. In the time of the Fātimid Caliphs of Egypt, they took the side of the Karmāṭians and attacked the pilgrim caravans. This was the beginning of a period of anarchy in which the Sulaimi part of Arabia suffered a great deal. In Egypt their Karmāṭian sympathies embroiled them with the Caliphs of Cairo. In 444 (1052) the Fātimid Caliph al-Mustansir, anxious to get rid of these troublesome Beduins, sent them with the Hilāl to the conquest of North Africa where many of the tribes are connected with the Sulaimis. For the long fighting in which they were there engaged, cf. the article HILĀL.

SULAIMĀN n. 'ABD AL-MALIK, Umayyad Caliph. Sulaimān was born in the year 60 (679/680); his mother was Wallāda bint al-'Abbās b. 'Ujāz'. After the death of 'Abd al-'Azīz b. Marwān [q.v.], his brother, the caliph 'Abd al-Malik, had homage paid to his sons al-Walid and Sulaimān as heirs-apparent. Towards the end of his reign, al-Walid wished to make an arrangement with al-Ḥadīdīd b. Yūsuf [q.v.] and Kaṭaiba b. Muslim [q.v.] governor of Khorāsān to exclude Sulaimān from the succession in favour of his own son 'Abd al-'Azīz, but he died before the necessary steps had been taken, so that Sulaimān succeeded him in Djumādī II, 96 (end of February 715) as Commander of the Faithful. When Sulaimān heard of his brother's death, he was in al-Ramlā, which he himself had founded when commanding the Muslim troops in Palestine and which continued to be his headquarters. As soon as he had assumed the reins of government, the supporters of al-Ḥadīdīdīd, now dead, had to pay for the enmity between him and the new Caliph. In the very same year, 'Uthmān b. Ḥaiyān al-Murri, the governor of Medina was dismissed and the same fate threatened the doughty Kaṭaiba b. Muslim. Relying on the fidelity of his troops, he tried to persuade them to rise against Sulaimān; but the daring plan came to nothing and Kaṭaiba was surprised and killed. Yarfā b. al-Muḥallab

was appointed governor of al-ʿIrāk in place of Yazīd b. Abī Muslim in 96 (715); he had been one of al-Ḥadīdjī's bitterest enemies and persecuted his supporters with the greatest ardour. But as he feared that his strict principles of taxation, which could not be altered without affecting the revenues of the state, would make him as hated as al-Ḥadīdjī had been in his day he asked the Caliph to relieve him from financial administration, whereupon Sulaimān appointed one of al-Ḥadīdjī's financial officers named Šalīḥ b. ʿAbd al-Raḥmān to the head of the treasury. But the latter's economy did not suit the extravagant Yazīd, so that in 97 (715/716) he contrived to persuade the Caliph to let him have the governorship of Khorāsān along with that of al-ʿIrāk. From there he conducted an expedition next year against Djurdjān and Tabaristān but with very little success. Sulaimān treated the conqueror of Spain, Mūsā b. Nuʿair, with great severity and according to some he was even responsible for the murder of his son ʿAbd al-ʿAzīz [q.v.]. Sulaimān continued the war against the Byzantines with great energy although fortune did not particularly favour the Muslim arms. In autumn 97 (715) Maslama b. ʿAbd al-Malik and ʿOmar b. Hubaira took the field against the Byzantines. The Arabs besieged Amorium but without success. After ʿOmar and, according to one statement Maslama also, had wintered in Asia Minor, military operations were resumed in the following summer when Maslama took Pergamos and Sardes. The Arabs also began the siege of Constantinople. By August Maslama appeared before the city and the Muslim fleet arrived a fortnight later. The siege lasted about a year; the Arabs suffered much from the cold and want of supplies and had no kind of success. An army which invaded the land of the Bulghārs was also driven back with considerable losses. In Safar 99 (Sept.-Oct. 717) Sulaimān died in Dābil and the siege was raised about the same time. Although his brother Yazīd had been designated his successor by ʿAbd al-Malik, Sulaimān had homage paid to his own son Aiyūb as heir-apparent. But when the latter was dying, he arranged with the influential theologian Radja b. Haiwa that his cousin ʿOmar b. ʿAbd al-ʿAzīz renowned for his piety should succeed him, and therefore received the title of "Key of Goodness" *Miftāḥ al-Khair*. From the statements of the Arab historians however it is very evident that Sulaimān, in spite of a certain piety, was cruel and devoted to sensual pleasures.

(K. V. ZETTERSTEN)

SULAIMĀN B. AL-AḤMĀTH. [See ANṬ DĀWUD.] **SULAIMĀN** B. DĀWUD, the biblical King Solomon, is an outstanding personality in Muhammadan legends. There were, as the Arab histories recount, four great world-rulers, two of whom were infidels, Nimrod and Nebuchadnezzar; and two of whom were believers, Alexander the Great and Solomon. Of these the last was the most resplendent figure. Special emphasis was placed on his wonderful powers of magic and divination. The most puzzling riddles and the most abstruse subjects were within his ken. Peripateticity and discernment dwelt in his eyes; wisdom and justice were graven on his forehead. His knowledge was deeper than the Jordan Valley. In the Qurʾān itself he is frequently mentioned, and along with Alexander enjoys the distinction of being designated a true Apostle of Allāh, a divine messenger and prototype of Muḥammad. The Qurʾānic passages tell how at an early age he even surpassed his father David in skilful administration of justice (xxi. 78, 79). And when David died Solomon was chosen from amongst the other sons as successor (xxvii. 16). He had admirable endowments. God had granted him esoteric knowledge. He was acquainted with the speech of birds and animals (xxvii. 16, 19), a tradition based on 1 Kings iv. 33-xxxviii. 36). It blew in the morning for a month, and in the evening for a month, while a fountain of molten brass was made to flow for his benefit (xxxiv. 12). At his command were legions of satans to do whatever he wished. They were employed, for example, in diving for pearls (xxi. 82; xxxviii. 37). The *djinn* were forced to work his will. If they disobeyed they were threatened with the pains of hell (xxxiv. 12). They constructed for him shrines and statues and costly vessels (*ibid.*, 13). His armies were recruited from men and *djinn* and birds. The hoopoe (*hudhud*) was the first to bring him tidings of the kingdom of Saba and of its illustrious queen, Bilqīs [q.v.]. Solomon, as a prophet, corresponded with her and summoned her to Islām. And after an exhibition of his strength and wisdom, she submitted (xxvii. 20-44). The devils frequently sought to convict him of infidelity, but in vain (ii. 101). On a certain occasion he failed in the observance of his religious duties, and that was when his admiration for his stud of horses led him to forget his prayers. In atonement he sacrificed them, cutting their legs and necks (xxxviii. 31-33). For a time he seems to have lapsed into idolatry. As a punishment he lost his kingdom, his throne being occupied by some one in his own likeness. When he had asked forgiveness, he was restored to his place, and promised divine favour in Paradise (xxxviii. 34, 35, 40). When he died he was resting on his staff, and no one knew of his death until a worm bored its way through the prop and the body collapsed. Then the *djinn* were released from their labours (xxxiv. 14).

Later legendary lore has magnified all this material, which is chiefly Rabbinic in origin. Solomon's control over the *djinn* and his use of them in his building operations are derived from the *Midrash* on Ecclesiastes, ii. 8. His kingdom is even made universal, perhaps after the analogy of that of the 40 (or 72) kings of the Pre-Adamic *djinn*, who were each named Solomon (Lane, *Arabian Nights*, Introd., note 21; d'Herbelot,

Bibliothèque Orientale, v. 372). His renowned wisdom included "the wisdom" for which Egypt was famous, i.e. occult science. Pythagoras is said to have received his knowledge from Solomon in Egypt (Suyūṭī, *Ḥusn al-Muhāḍara fī Akhbār Miṣr*, i. 27). Solomon is said to have been the pupil of Mambres the Egyptian Theurgist (G. R. S. Mead, *Thrice-Greatest Hermes*, iii. 283, note). Hence his reputation in tales as a magician. This magic power of his was effected by means of a talismanic ring engraved with "the most great name" of God. Permission to use this was also vouchsafed to his waṣīr, Ḥasān b. Barkhiya (q.v.), who transported the throne of Bilqīs from Sheba to Jerusalem in the twinkling of an eye. Solomon was in the habit, when he performed his ablutions, of laying aside this ring from his finger, and entrusting it to one of his wives, Amina. Šakhr, one of the Satanic spirits, assumed the form of the king, purloined the magic seal, and for forty days ruled, while Solomon was forced to wander as an outcast. The demon, however, lost the ring in the sea, whence Solomon recovered it when he cut open a fish which had swallowed it. Thus he regained his throne. It is said he was punished in this way, because of the idolatry of the royal consort, Dījārda, the daughter of the king of the Sidonians. Some say the counterfeit body that occupied his throne was his son who died. The 13th of the month is regarded as unlucky because on that day Solomon was exiled by God. The Persian *Nawrūz* festival and its customs are said to date from the restoration of Solomon to his kingdom (al-Bīrūnī, *Chronology*, ed. Sachau, p. 199). Because he boasted that 1,000 wives would bear him 1,000 warrior sons, he had one son only who was misshapen, with one hand, one eye, one ear, and one foot. Then in humility he prayed to God, and his son was made whole. In his capacity of warrior, he conquered many kingdoms (Baidāwī, v. 19).

Some of the marvellous works of Solomon may be briefly mentioned. Shortly after his accession he was in a valley between Hebron and Jerusalem, when he received his authority over winds, water, demons and animals from the four guardian angels in charge of these spheres. Each one gave him a jewel which he placed in a ring composed partly of brass and iron. With the brass he sealed his orders for the good *djinn*, while with the iron he sealed his orders for the evil *djinn*. The seal is said to have held a mandrake (Frazer, *Folk-Lore in the Old Testament*, ii. 390). Solomon's seal (*Ḥatam Sulaimān*) is a common charm, in the form of a six-pointed star, often inscribed on drinking cups. The Table of Solomon (*Mīdat Sulaimān*) and other marvellous relics, according to legend, found their way to Spain where they were discovered by Tārīk at the capture of Toledo. They had been taken from Jerusalem as booty (Ibn al-Athīr, *Annales du Maghreb*, ed. Fagnan, p. 37 199; Tabari, *Chronique*, ed. Zotenberg, iv. 183; Dozy, *Recherches*, i. 52). The Table was made of green beryl, had 360 legs, and was inlaid with pearls and rubies. There was also a magic mirror which revealed all places in the world (Carra de Vaux, *Abrégé des Merveilles*, p. 122).

The blocks of stone for the building of the Temple were hewn by means of the miraculous pebble Samur (*Šamir*) which the demon Šakhr procured from the sea-eagle. Solomon sheltered

himself from the heat of the sun under a canopy composed of all the birds of the air. A magic carpet of green silk for aerial transportation was woven for him. On this he could leave Syria with all his equipment in the morning, and reach Afghanistan by evening. Untold wealth of precious stones and gold and silver was accumulated with the help of the servile *djinn*. They also assisted him in erecting palaces, fortresses, baths and reservoirs. Various relics of these operations are pointed out in Palestine, Arabia and elsewhere (see *Revue des traditions populaires*, ix. 190; Nāṣir-i Khosraw, *Sefer-Nāma*, p. 56, 76, 84, 85). He had 1,000 glass-roofed houses containing 300 couches and 700 wives (Thaʿlabī, *Niṣāṣ*, p. 204). Besides the building of the Temple, during which he outwitted the *djinn*, the Farther Mosque is likewise claimed as his work (Mirkhond, *Rawdat al-Safā*, ii/i. 76). He is even credited with founding a mosque in Alexandria (Suyūṭī, *op. cit.*, i. 37). Part of his leisure time was spent in acquiring the art of basket-weaving, that he might have some means of earning a livelihood if the need arose (Mirkhond, *op. cit.*, p. 79). The tradition seems Rabbinic in character. His throne was constructed of pure gold. The whole natural world was so completely under his sway that on one occasion the sun stood still to enable him to say his evening prayers. The evil *djinn* he imprisoned in vessels of lead (cf. *Zachariah*, v. 8). Aīdhāb, on the Red Sea, was assigned by him as a place of incarceration for the demons (Nāṣir-i Khosraw, *op. cit.*, p. 297). His knowledge of the speech of the animal world enabled him at times to display his clemency. Once he turned aside his armed hosts in order to avoid smashing the eggs of a bird; while on another occasion, he had compassion on a colony of ants (Bīrūnī, *op. cit.*, p. 199; Sūra xxvii. 17, 18).

A claim is put forward that he invented the Arabic and Syriac alphabets, and that he was the author of many Arabic treatises on magic. He is compared with Djāmshīd, and there were, undoubtedly, Iranian influences at work in the Solomon Saga. His personal appearance is variously given, e.g. as "a large-headed man riding on a horse" (Mirkhond, *op. cit.*, ii/i. 83), and as being "fair, well-built, of lustrous beauty, with a plentiful supply of hair, and clothed in white garments" (Thaʿlabī, *op. cit.*, p. 254). When he died he was aged 53, having reigned for forty years. The exact location of his tomb is uncertain. Some place it in Jerusalem, in the Qubbat al-Sakhra; others, near the Sea of Tiberias. The Prophet said (according to Tabari, *Chronique*, i. 60) it was "in the midst of the sea... in a palace excavated in a rock. This palace contains a throne on which Solomon is placed with the royal ring on his finger appearing as though he were alive, protected by twelve guardians, night and day. No one hath arrived at his tomb except two persons, Affān and Bulūkiya" (Lane, *op. cit.*, xx. 96; see Mirkhond, *op. cit.*, p. 102-103). The tomb is placed also in the Andaman Islands (*Les Merveilles de l'Inde*, p. 134). Solomon has found his way into Malayan folk-lore. Fowlers use his name for snaring pigeons (Frazer, *Golden Bough*, iii. 418; *Folk-Lore in the O. T.*, ii. 476 19.). Regarding Solomon and the Evil Eye, see W. B. Stevenson in *Studia Semitica et Orientalia*, Glasgow 1920, p. 104 19., and the references therein. The Ethiopic Legends of Solomon

and Makedā, Queen of 'Aḏb, may be found in Bezold, *Kebrā Negast*, and in Wallis Budge, *The Queen of Sheba and her only Son Menyelek* (see art. *Ḥiḥ*). Examples of the Solomonic riddles may be seen in Tha'labi, *op. cit.*, p. 202; Jacques de Vitry, *P. P. T. S.*, p. 17.

(J. WALKER)

SULAIMĀN R. KUTULMISH, ancestor of the Saldjūks in Asia Minor. After Kutulmish had fallen in 456 (1063/1064) in battle against his relative Alp Arslān, his son Sulaimān became chief of the Saldjūks of Asia Minor and in a few years succeeded in founding an independent kingdom. Malik Shāh who had succeeded his father Alp Arslān in 465 (1072) entrusted him with the conduct of the war against the Byzantines and he was given the supreme command of all the Saldjūk troops in Asia Minor. Here a considerable part of the poor peasantry in Asia Minor had come completely under the power of the rich landowners and many estates were worked by slaves. Sulaimān declared them freemen on payment of a certain tax and he thereby won their active sympathy while misfortune followed the Byzantines. Their general Isaac Comnenos was weakened by a mutiny of his Norman mercenaries and then defeated and captured by the Saldjūks near Caesarea. When his successor Caesar Ducas tried to deal with the Norman mutineers, they took him prisoner. They then won him over to their side and persuaded him to rebel at their head against his nephew, the Emperor Michael VII. There was nothing left for the latter but to appeal for assistance to the Saldjūks and in 1074 (1066/467) he concluded a treaty, approved by Malik Shāh, with Sulaimān, who promised to send forces to assist the Emperor and in return was given the Byzantine provinces at that time in Saldjūk occupation. Ducas was captured by the Saldjūk auxiliaries; but a few years later Michael abdicated and retired to a monastery. In 1079 (1071/472) Nicephoros Melissenos rebelled. To strengthen his position, he made an alliance with Sulaimān and concluded a treaty with him by the terms of which Sulaimān,

in return for troops, was to receive the half of any towns and provinces taken in the war against the Emperor Nicephoros III. Cysicus and Nicaea fell to the Saldjūks at the beginning of the year 1081 (473). Sulaimān chose the latter as his residence. In 477 (1084/1085), he also took the city of Antakya. The Greek governor, Philaretos, who paid tribute to the 'Uḡalid Muslim b. Kuraish, had gone on a journey and in his absence his son, whom he had thrown into prison, came to an arrangement with his deputy and opened the city gates to the Saldjūks. Sulaimān then came into conflict with Muslims about the payment of tribute and there was a certain amount of raiding on either side. Finally in Ṣafar 478 (June 1085) there was a battle near Antioch in which Muslim fell. Sulaimān then advanced on Aleppo and laid siege to it but had to return after a few weeks without attaining any success. After some time he again demanded that the governor there, Ibn al-Hutaiti al-'Abbāsī should surrender the town to him; but the latter delayed replying, under the pretext that he wanted to get Malik Shāh's approval, until the lord of Damascus Tutush b. Alp Arslān and the Emir Ortoḡ b. Akasab were able to come up. When Sulaimān met them, his troops took to flight and he himself perished (479 = 1086). Whether he was slain by the enemy, or as some say, killed himself with his dagger, is uncertain.

SULAIMĀN R. MUBĀN. (See AL-'A'ASH.)

SULAIMĀN R. ŠURAD AL-KHULĀ'ī, a Shī'ī. He was originally called Vāfir; but when he adopted Islam he received from the Prophet the name Sulaimān. He enjoyed great prestige in his tribe and when the Muslims began to settle in Kūfa, Sulaimān also migrated thither. In the battle of the Camel and at Siffin, he fought on the side of 'Alī. After the death of Mu'āwiyā in Rajab 60 (April 680) he showed himself one of the most ardent supporters of Ḥusain [q. v.] but he did not maintain his first enthusiasm. He was one of those who invited Ḥusain to come to Kūfa to lead them against the Umayyads but when Ḥusain was approaching the town in answer to the invitation, Sulaimān did nothing to help him. After Ḥusain had fallen at Kerbela' on 10th Muharram 61 (Oct. 10, 680) the Kūfians who had enticed him from Mecca regretted their cowardice and inactivity and considered themselves sinners, whose guilt could only be wiped out by avenging his murder so that they received the name *al-Tawwābīn* "the penitents". After some time they organised themselves and chose Sulaimān as their commander-in-chief. None of the party was under 60 years of age; they had not agreed upon any definite measures and "vengeance for Ḥusain" was simply a rather obscure aim which they never clearly visualised. Sulaimān wrote to Sa'd b. Hudhaifa b. al-Yamān in al-Madīn and al-Muthanna b. Mukharriba b. al-'Abdi in Baḡra and secured their cooperation. But as long as Yazīd was alive however, they worked in secrecy; it was only after his death in

Rabī' I, 64 (Nov. 683) that the movement sought wider scope. But when Sulaimān's followers wanted to drive out of Kūfa 'Amr b. Huraith al-Makhtūmī the deputy of the governor 'Ubad Allāh b. Ziyād who lived in Baṣra, Sulaimān refused to allow it and advised caution. Nevertheless 'Amr b. Huraith was expelled by the Kūfāns. They then paid homage to 'Abd Allāh b. al-Zubair as Caliph, whereupon he appointed 'Abd Allāh b. Yazid al-Anṣārī as governor of Kūfa. In Ramaḍān 64 (May 684), the latter arrived in Kūfa, but al-Makhtūmī b. Abī 'Ubad [q.v.] had already entered the town a few days earlier. The latter wished to expel Sulaimān and he was suspected by the Shī'īs on account of his inactivity. Many left Sulaimān and joined al-Makhtūmī. When Sulaimān finally came out openly and asked his followers to take the field against 'Ubad Allāh b. Ziyād, who was in Syria with a large army, the governor 'Abd Allāh b. Yazid placed no obstacles in his way and even promised to support the Shī'īs; but no active cooperation took place between Sulaimān and the governor. The Shī'īs proved less enthusiastic than Sulaimān had hoped. When he appeared on 1st Rabī' II, 65 (Nov. 15, 684), in al-Nukhaila near Kūfa, instead of the 16,000 men who had promised to follow him there were only 4,000. Messengers were at once sent to all Shī'īs who had promised their help and gradually reinforcements came in. On the 5th Rabī' II (19 Nov.) they set out. They spent 24 hours in Karbalā' at Husain's tomb, confessing their guilt and giving evidence of their penitence. They then continued their march. Reaching Karḥisiyā they were supplied with provisions by Zufar b. al-Hārith al-Kilābī, who was in command there and obtained information regarding the movements of 'Ubad Allāh, who was in al-Kaḥḥa. Sulaimān then continued his march till he met the enemy at 'Ain al-Warda under the command of Husain b. Numair. The battle began on 22nd Djumādā I, 65 (Jan. 4, 685) and lasted three days. Sulaimān fell on the third day at the age of 93 and the fiercely contested battle ended in the complete route of the Shī'īs. Their supporters from al-Mada'in and Baṣra, who did not arrive in time, had to go back without striking a blow for the cause.

(K. V. ZETTERSTÉEN)

SULAIMĀN b. WAḤH b. SA'ID ABU AYYUB, an 'Abbāsid vizier. He belonged to a family which had originally been Christian but had later gone over to Islām. His father had been in the service of the Barmecide Dja'far b. Yahyā [q.v.] and later in that of al-Faḍl b. Saḥl [q.v.]. On the latter's death he was given the governorship of Fārs and Kirmān. At the age of 14 Sulaimān became secretary to the Caliph al-Ma'mūn; he later entered the service of the generals Iṣḥāq and Aḥmad, the former of whom held several important offices in the reign of al-Mutawakkil but finally was sacrificed to the cruelty of the Caliph. We

find Sulaimān mentioned as vizier as early as al-Muḥtadī (255—256—869—870) and in Dhu 'l-Hijja 263 (Aug. 877) al-Mu'tamid gave him the same office. But he did not hold this office long, being dismissed in Dhu 'l-Kāda 269 (beg. Aug. 878). Sulaimān died in prison in Ṣafar 272 (Aug. 885); according to another statement he died in the preceding year.

Bibliography: Ibn Khallikān, *Wafayāt al-A'yān*, ed. Wüstenfeld, N^o. 276, de Siane's transl., i. 596; Ṭabarī, *Annales*, ed. de Goeje, iii., see Index; Ibn al-Athīr, *al-Kāmil*, ed. Tornberg, viii., passim; Ibn al-Tijākā, *al-Fakhri*, ed. Derenbourg, p. 337—347, 344, 347, 350, 373, 375.

2. The son of the preceding, 'UBAID ALLAH b. SULAIMĀN, who also began his career in the public service as a secretary, was promoted to be vizier of the Caliph al-Mu'tamid in Ṣafar 278 (June 891) and filled the office in the reign of al-Mu'tadid also. He died in 288 (900—901).

Bibliography: Ṭabarī, *Annales*, ed. de Goeje, iii., see Index; Ibn al-Athīr, *al-Kāmil*, ed. Tornberg, vii. 96, 219, 227, 309, 317, 328, 332, 336, 332; Ibn al-Tijākā, *al-Fakhri*, ed. Derenbourg, p. 337, 347—349, 373, 375.

3. Sulaimān's grandson ABU 'L-HUSAIN AL-KĀSIM, succeeded his father 'Ubad Allāh as vizier and took the title of *Wālī al-Dawla*, "administrator of the kingdom". Even before the death of al-Mu'tadid in 289 (902) al-Kāsim was conspiring against his son, the heir-apparent al-Muktafi, and on the latter's accession he had the governor of Fārs, a freedman named Badr, put to death because he had been a confidant of his and he was afraid he might betray him. Al-Kāsim died in 291 (903/904).

(K. V. ZETTERSTÉEN)

SULAIMĀN I, the tenth and the greatest of the Ottoman Sultāns, reigned from 1520 to 1566. The Turks call him KĀNUNİ SULTĀN SULAIMĀN and western authors SOLIMAN THE MAGNIFICENT. Some Western historians like Leunclavius and, more recently, Jorga call him Sulaimān II, the first Sulaimān having been, according to them, the son of Bāyazid I who lived at Adrianople. In Turkey however the opinion that Sulaimān the Legislator is the first of the name has prevailed; he is always called SULAIMĀN KĀNUN AWWAL and the ten *sharḥ*s of the four minarets of the Sulaimāniya mosque signify, according to the *Hadīth al-Djāwīd* (p. 16) that Sulaimān is the tenth Sultān. A very special symbolical significance has even been credited to the number ten in the life of the Sultān (*G.O.R.*, iii. 4) and the name Sulaimān was also regarded as a national and religious symbol; in the documents issued by Sulaimān we frequently find allusion to passages in the Qur'ān where the royal prophet Solomon (Sulaimān) is mentioned.

Sulaimān was born in 900 (1494/1495), the son of Solḥān Saltm and 'Aḥṣā Sultān (d. 940—1533, cf. *Sulḥiyyi 'Othmāni*, i. 49), daughter of Mengli Girāy, Khān of the Crimea, celebrated for her beauty. In the reign of his grandfather Bāyazid, Sulaimān had held the sandjak of Kaffa and under

Sulaimân I he had lived in Magnisâ as governor, without playing any important part in the state. No one therefore had any idea what to expect of the new sovereign when he arrived in the capital on Sept. 30, 1520, eight days after his father's death.

The most striking feature in the career of the Sultân, by nature peace-loving according to the Venetian reports, is that he took part in person in thirteen great campaigns — ten in Europe and three in Asia — which were so many stages in the extension of the power and territory of the Ottoman empire so that their enumeration coincides for the most part with the very important military history of the empire in his reign. The first campaign was that of Belgrade which was provoked by the ill-treatment inflicted by the king of Hungary on the Turkish envoys who had come to demand the payment of tribute by him. The capture of Belgrade by the grand vizier Piri Pasha (Aug. 29, 1521) was preceded by the taking of Salacz (Turkish: Bögürdelen) on the Danube and was accompanied by the devastation of Syrmia by the Turkish troops. On Aug. 30 the Sultân made his entry into the conquered city which received a garrison under a Sandjak-beg. In the following year took place the conquest of the island of Rhodes from the Knights of St. John, who had long been a menace to Ottoman power because they supported the Christian corsairs. Sulaimân left Constantinople on June 15, 1572 and crossed Asia Minor to the port of Marmaris; the fleet sailed under the vizier Mustafa Pasha and was reinforced by an Egyptian contingent sent by Khair Beg of Egypt. The siege inflicted great hardships on the Turkish troops and towards the end of October the fleet had to take refuge in Marmaris. But in December the Grand Master of the Order, Villiers de l'Isle Adam (called by the Turks Migâl Mastûri, from the Greek Megalomastra), capitulated and soon afterwards left the island. A son of Djem, brother of Bâzard II, who was in the Christian army was killed. Shortly after the return of the Sultân to Constantinople, he deposed the grand vizier Piri Pasha and replaced him by his favourite Ibrahim Pasha [q.v.] (June 27, 1524), who remained the faithful companion of Sulaimân on all his campaigns until his sudden execution in 1536. The bond between the two was strengthened in 1524 by Ibrahim's marriage to the Sultân's sister. In 1525 new military preparations were made, without their object being revealed; negotiations with Poland and France, guerrilla warfare in Croatia, Slavonia and Dalmatia (especially the exploits of the Pasha of Bosnia who tried in vain to take the town of Jaice) and a mutiny of the Janissaries in the capital had been further indications of a great military enterprise. In April 1526 Sulaimân set out with Ibrahim; they arrived at Belgrade on July 15 whither a fleet had also gone by the Danube. On July 30, Ibrahim took Peterwardein (in Turkish: Warâdin). The army then crossed the Drave at Eszek and met the Hungarian army, weakened by the number and quarrels of its commanders at Mohács. Here on August 28 was fought the battle which cost Louis of Hungary his life and destroyed the power of Hungary to resist further, so that it was henceforth open to Turkish invasion. The Sultân and Ibrahim immediately resumed their advance and on Sept. 11 occupied the capital Buda (in

Turkish: Budin or Budun) which became a prey to the flames in spite of orders to the contrary. This occupation of the capital was however only temporary. The Turkish army crossed the Danube and returned by Saegedin, laying waste the country and crushing the resistance offered by several forces that met them. In November Sulaimân was back in Constantinople, where he had to deal with trouble in Asia Minor. For the two and half years that elapsed before the second Hungarian campaign, the war continued in Bosnia, Dalmatia and Slavonia; at the same time broke out the rivalry between Ferdinand the "Roman King" and John Zápolya, the voivod of Transylvania (Erdel Bân) for the Hungarian crown. Both sent an ambassador to Constantinople. Zápolya's envoy was able to secure the goodwill of the Sultân who set out in May 1529 for his new campaign, the Vienna campaign. On Aug. 10 they reached Mohács, where Zápolya recognised by Sulaimân as king of Hungary (Kral Yânish), came to pay homage to his suzerain. Ibrahim Pasha was now appointed ser-asker and the Sultân set out to install his new vassal in his capital which was occupied by Ferdinand's troops. On Sept. 8 Buda capitulated and Sulaimân had Zápolya installed as king of Hungary without himself being present at the ceremony. On Sept. 27, the Turkish army began the famous siege of Vienna but was forced to retreat, not without ravaging the environs of the town. In the two years following, the war with Austria continued and the various embassies from king Ferdinand had no success. In 1532, Sulaimân then undertook what the Turkish sources call "the German campaign against the king of Spain" i. e. Charles V, who claimed the *shâh-î-irânî* (Chronicle of Rustam Pasha). The most remarkable event of this campaign was the taking of Gülnâs (Turkish: Kösek) after a long siege (Aug. 21). During the next few months Sulaimân was in Styria, where his armies ravaged the country without meeting an army of the emperor. The Sultân's return to Constantinople in November was soon followed by an armistice with Austria, concluded on Jan. 14, 1533. Sulaimân's sixth campaign was directed against Persia. It was caused by the Turkish claims to possession of Bitlis (the governor of which, Ulama, had abandoned the Turks) and Baghdad. The grand vizier Ibrahim occupied Tabriz in July 1534 while the Sultân himself entered it in September. From Tabriz the army set out for Baghdad by way of Hamadân without Shâh Tahmâsp offering any resistance. Baghdad was left defenceless; Ibrahim occupied the town and a few days later Sulaimân made his ceremonial entry into it on Nov. 30, 1534. During the four months that he spent there he built the mausoleum of Abû Hanîfa and the sources mention a large number of holy places which the Sultân visited at Baghdad, Nedjef, Kâfa and Kerbelâ. As the Persians had regained the greater part of the Turkish conquests, Sulaimân set out for Persia again, this time by Arbil and Marâgha to Tabriz. The Shâh continued to avoid a battle and the Turks were able to take the strongholds of Adharbâidjân and 'Irâq-i 'Adjami. The only fighting was during the return march when the rearguard had occasionally to fight the Persians, for example at Wân. On Jan. 17, 1536, the Sultân was back in Constantinople and two months later (March 15)

there took place the disgrace and death of İbrâhîm, grand vizier and intimate favourite of the Sultân and up till then this companion on all his campaigns. His place was taken by Âyâs Paşa. In 1537 the Pâdişâh accompanied the expedition against Corfu but stayed himself at Walona. The Turks were forced to raise the siege of the citadel of the island which was defended by the Venetians on Sept. 7. This campaign is specially remembered for the raids made on the coast of Apulia led by Lutfî Paşa [p. 21]. In the following year a rebellion by the voivod of Moldavia forced the Sultân to military intervention in which he also took part; it ended in the capture of the capital Suciava; after the installation of a new voivod and a new delimitation of his frontiers Sulaimân returned to Adrianople. The two following campaigns, those of 1541, and 1543, took him again into Hungary where the war had broken out again after the death of Zápolya in 1540.

The widow of the latter was incapable of defending the rights of her infant son against the claims of Ferdinand of Austria. Sulaimân arriving before Buda — which had just been besieged in vain by the Hungarian Peter Perenyi — in August 1541, annexed it along with the kingdom of Zápolya with the exception of Transylvania which was to be left to the queen dowager Isabella; henceforth Buda was the residence of a beglerbeg and Turkish administration was introduced into Hungary. Ferdinand's claims were of no avail and his attempt to take Pest in 1542 also failed. Sulaimân's campaign in 1543 brought a number of conquests, Valpo, Siklós, Fünfkirchen (Pest) and other towns. The Pâdişâh then went to Buda, after which Gran (Esztergom, in Turkish *Usturghân*) and Stuhlweissenberg (Ustun-Belgrade) were taken in September. The Sultân returned to Buda, where he crossed the Danube and returned to Constantinople on Nov. 11. This last campaign was followed by a pause of five years in the military activity of Sulaimân. The grand vizier Sulaimân Paşa, who had succeeded Lutfî Paşa in 1541, who had in turn succeeded Âyâs Paşa (d. 1539) was dismissed and replaced by Rustam Paşa who had married Mihri-ü Mâh, daughter of Sulaimân and Khurram Sultân; it is from this time that harem influence begins to be active in politics. As a result of this, relations with Persia became more actively hostile, while the Hungarian war was terminated by a treaty making a seven years' truce with Ferdinand of Austria, who promised to pay an annual tribute of 30,000 ducats. The campaign of 1548/49 of Sulaimân against Persia was provoked by Elkâs Mirzâ, brother of Shâh Tahmâsp, a refugee at the Ottoman court. The Sultân went to Erzerûm and then to Tabriz without the Shâh offering any resistance. But circumstances forced the Turkish army to retire to Diyar Bakr, while the Persian army ravaged the frontier towns. Sulaimân spent the winter at Aleppo and passed the following year in inactivity also; the vizier Ahmad made some conquests in Georgia. In December Sulaimân was back in Constantinople. The following years were occupied with military operations provoked by Austrian intervention in Transylvania, the only part of Hungary which so far had never seen a Turkish army. The Sultân took no part in these operations, the control of which was taken by Şokollî Paşa [p. 22], beglerbeg of Rûm and future grand vizier (taking of Temesvár

in 1551). Sulaimân had not intended to take part in the new Persian campaign of 1553 either; Rustam Paşa had been appointed Ser-asker for it. But the rumour which reached him — through the intermediary of Rustam — of a rebellion said to have been organised by prince Mustafa, the governor of Amasia, decided the Sultân to rejoin the army in person. He set out on Aug. 18, 1553, accompanied by prince Salim. At Ereğli in Karamania took place the sudden and tragic execution of prince Mustafa who had come to greet his father (Oct. 16). One result of this act of violence, inspired by harem intrigues, was the temporary replacement of Rustam Paşa by Ahmad Paşa (until his execution on Sept. 28, 1555). Military operations on a large scale did not begin till 1554 and resulted in the destruction of Nakhchevân, Eriwân and Kara Bagh (in July). In September negotiations for peace began at Erzerûm but it was not till May 29, 1555 that a treaty — the first Persian peace — was concluded at Amasia. In this last town the Sultân received the famous Austrian embassy under Busbecq which could only obtain an armistice. In August, Sulaimân returned to Constantinople. Ten years passed before his thirteenth and last campaign, that of Szigeteth. In spite of the uninterrupted negotiations of Busbecq, the war in Austria went on because the Turks insisted on their claims, notably for Szigeteth, besieged in vain in 1556. The grand vizier Rustam proved a particularly difficult person to negotiate with. It was only after his death (1561), that peace was concluded by his more amenable successor 'Alî Paşa in 1562. Austria had to abandon Transylvania and after the death of Ferdinand (1562) this peace was renewed by Maximilian. The last years of Sulaimân's life were darkened by the death of Khurram Sultân (April 1558) and by the war between the princes Salim and Bîkzâd, which ended in the execution of the latter (cf. SALIM II). In 1565 hostilities with Austria were resumed and the Christians gained some successes. This gave the aged Sultân a reason for taking the field once more at the head of his armies. He left Constantinople on May 1, 1566, with the new grand vizier Mehmed Şokollî (appointed in June 1565 after the death of 'Alî). At Zemlin, John Sigismund, son of Zápolya was received with remarkable honours. Although the original plan had been to attack Erlau (Egri), the information he received decided the Sultân to lay siege to Szigeteth (Sigetvár) defended by Nicolas Zriny. The siege began on Aug. 2 and on Sept. 8 the town fell before the Turkish assault but the great Sultân, who had died on the night of Sept. 5/6, did not live to witness its capture. The death of Sulaimân was kept secret by Şokollî for three weeks to prevent trouble in the army and to give Salim II time to gain possession of the throne. Salim met the army near Belgrade; the body of Sulaimân (his heart was buried in the mausoleum near Szigeteth, cf. Jacob, *Ans Ungarns Türkenzeit*, p. 24) was sent in advance of the army to Constantinople, where it was buried in his *türbe* in the Sulaimâniya mosque.

This résumé of the campaigns of Sulaimân I reveals the extraordinary energy of this, the greatest, Sultân of the Ottoman Empire but does not give a complete picture of his personality. Unfortunately the sources do not supply us with sufficient data to reconstruct this personality. The Turkish sources

rarely contain anything but exaggerated praises, while the European sources, although more critical, are less well informed and often biased. There is however no lack of brief personal touches, such as the short but fervid prayer which Sulaiman uttered before the battle of Mohács (*G. O. R.*, iii, 59) the humility with which he assisted the bearers of the bier of Gail Baba after the occupation of Buda in 1529 (*Ewliya*, vi, 248). His piety is shown by the eight copies of the *Kur'an* copied by Sulaiman himself and kept in the *Sulaimaniya*, while his Muslim orthodoxy is evident from several *ghazal* in the *Diwan* composed by him. The chroniclers further describe him as an ardent lover of the chase. In any case Sulaiman must have been a born ruler, of remarkable dignity, a striking figure in the midst of his brilliant court, on such occasions of ceremony as the festivals of the circumcision of his sons as in 1530 or the marriages of the princesses, his sisters. His great affections were in his youth for Ibrahim Pasha and for his favourite Khurram Sultan (*q. v.*) whose influence made itself felt in politics, but it was not the latter's children that Sulaiman loved best (the princess Salim, Bayazid and the princess Mihr-u-Mah). It was rather prince Muhammad, who accompanied him on several campaigns and of whose death he learned (Nov. 6, 1543) on his return from the campaign, who was his favourite son. In memory of this prince he built the *Shahzade Djami'i* in Istanbul (finished in 1553). In memory of prince Djahangir (d. in 1553 soon after the execution of his brother Mustafa) and also buried in the *Shahzade Djami'i* another mosque was built on the heights of the Top-khane.

In the history of the Ottoman empire the name of Sulaiman is greater than that of any of the other sultans; the name marks an epoch, the epoch during which the empire became an undisputed power, in the Christian world as well as that of Islam, and one which left its stamp upon later political and cultural developments. The part played by Sulaiman himself in this development is difficult to determine; we may note however that during his reign Turkey possessed a large number of able and remarkable men, like the Kapudan Pasha Khair al-Din (*q. v.*) Barbarossa, the *mufetti* Kemal Pasha-Zade (*q. v.*), the architect Sinan (*q. v.*) and many others, but that each of them seems to have played his part in his own proper sphere. There seems to have been a lack of great personalities in the immediate entourage of the Sultan, with the possible exception of the grand-vizier Ibrahim Pasha.

On the other hand, the development of the Ottoman empire under Sulaiman may perhaps be largely explained by the internal political system of the state. The foundation of this development had been laid by earlier sultans but under Sulaiman the state institutions had been perfected to such a pitch that we may with justice speak of a system. Following the principle of his predecessors, Sulaiman elaborated this system by the promulgation of the *Kanun* (*q. v.*) which were later collected into the different *Kanun-näme* (cf. the *Bibliography*).

It is this legislative activity which has gained him the epithet *Kanuni*. The *Kanun* dealt mainly with the organisation of the army and military feudalism, the laws of landed property, the police and the feudal code; one of the principles

of the "system" was the exploiting of the Christian element in the empire through the *Dewshirme* and the entrusting of high offices of state to renegades. This was not without influence on the cultural developments which were the result.

The elaboration of the new ideal of the Ottoman state was not realised, however, without a certain amount of opposition from representatives of the old order of things, in the newly acquired provinces as well as in Asia Minor. Among these demonstrations which broke out mainly at the beginning of the reign may be mentioned the last remnants of independence shown by the *Dhu 'l-Kadroughlu*, suppressed by Farhad Pasha in 1522, and the rising in 1527 in *Uli* and the rebellion of *Kalenderoghlu* in the same year put down by Ibrahim Pasha; the mutiny of the Janissaries in 1525 in Constantinople falls into the same category. In the provinces peace was broken in 1521 by Ghazali, governor of Syria, and in Egypt by the attempt to regain independence under Kansuh and later in 1524 under the governor Ahmad Pasha. The government further had to intervene on several occasions in the dynastic troubles in the Crimea and in the principalities of the Danube.

The enormous expansion that the empire underwent under Sulaiman was also a result of the system, especially of its military side. For, as contemporary writers (e.g. Derschewitz) make him say, permanent peace is an impossibility; the country would have had nothing to support itself upon or to pay the Janissaries and the other turbulent soldiery. At the same time the great victories brought about a fundamental change in the place of the empire in international affairs. The Christian states had lost all hope of driving the Turks out of Europe; it was in the reign of Sulaiman that the famous alliance with Francis I of France was concluded which led to negotiations when he was in Italy as a prisoner of Charles V. One of the consequences of this alliance was the famous capitulation of 1535 which settled the privileges of the French in the Empire, notably consular jurisdiction. This capitulation is the starting point for the capitulations between the Christian states and Turkey in the centuries following, although similar privileges had already been granted by Ottoman Sultans, notably to Venice. Another consequence of the French alliance was the great naval activity of the Turkish fleet in the Mediterranean against the Spanish fleet under Andrea Doria and against the African, Italian and Dalmatian coasts especially after Khair al-Din Barbarossa had become Kapudan Pasha (1536-1546); it was under him that the Franco-Turkish expedition against Nice took place in 1543. In the Red Sea and Indian Ocean, a Turkish fleet under Sulaiman Pasha waged war on the Portuguese (siege of Diu in 1538). This expedition secured to Turkey possession of Aden and the Yemen. From 1550 it was the Kapudan Pasha Piyale Pasha (*q. v.*), Torghud Re'is and Salih Re'is who spread the fame of the Ottomans in the Mediterranean especially in the ports of the Maghrib. In 1565 took place the great expedition against Malta in which Torghud Re'is was killed. The Turkish fleet did not succeed in taking the island. To the same period belong the expedition and adventures of Piri Re'is and Sidi Re'is in the Indian Ocean.

Alongside of these political developments at home and abroad, the Empire experienced a cultural

advance which may be said to be more independent than that of preceding centuries. Ottoman civilisation gained its own special character in the field of literature as well as that of art. Süleimân Sulaimân played a part in the literary life of his time as a poet under the *takhallus* of Muhibbî and as a patron of the great poets of his time. In another way he and his glorious reign contributed to the development of literature by inspiring poets like Bâkî to write panegyric *kasidas* and various *shâhnâma*, and prose-writers to write histories (cf. the *Bibliography*). But it is in the field of architecture especially that Turkish culture owes much to the initiative of Sulaimân. Of the mosques which he built in the capital first place must be given to the Sulaimâniya built between 1550 and 1556 and containing the *türbe* of Sulaimân (Sulaimân II and Ahmad II are also buried here); next comes the Saltıme built in memory of Saltım I and finished in 1522; the Shahide Djâmi'i built between 1547 and 1548 in memory of prince Muhammad, also contained the tomb of the prince Djahângîr; the mosque founded in memory of the latter at Topkhâne is now destroyed; the Khayyâkî Djâmi'i was built in 1534 in memory of Khurram Sulâtân; lastly may be mentioned two mosques built, one at Stambul and the other at Skutari, in memory of princess Mihr-u-Mâh, wife of Rustam Pasha. With the exception of the Saltıme all these mosques are the work of the architect Saltım Sinân [q. v.] who also built a large number of other mosques in the capital and elsewhere, for the grandees of the empire who followed the Sulâtân's example. Among other buildings of Sinân for Sulaimân are the aqueducts of the capital and the palace at Skutari.

Of the edifices erected throughout the provinces in large numbers by Sulaimân's orders, the most remarkable are the tomb of Abû Hantfa at Baghdâd; the mosque over the tomb of Djâlal al-Dîn Rûmî at Konia, the restoration of the walls of Jerusalem (cf. AL-KUTUB), the restoration of the Kab'a (after authorisation by a *fatwa* of Abû 'l-Su'ûd, q. v.) and of the aqueducts of Mecca.

Bibliography: The contemporary Turkish sources which have been printed or translated are the *Chronicle* of Muhyî 'l-Dîn which forms the last part of the *Tawârîkh-i 'Alî Othmân*, publ. by Giese, Breslau 1922, p. 138—153 (to 960 A.H. [1553]); Kemal Pasha Zâde, *Ghâzawât-i Muhâl* or *Muhâl-nâme*, publ. and transl. by Pavet de Courteilles, Paris 1859; Rustam Pasha, *Târîkh-i 'Alî Othmân*, transl. by L. Forrer, *Die osmanische Chronik des Rustam Pasha* (to 1561) in *Türkische Bibliothek*, Leipzig 1923, vol. 21; the last years of the reign are described in Seifnîkî, *Târîkh*, Constantinople 1281 (from Sept. 1563); the "Journal of Sulaimân" describing day by day the last eight campaigns is given in Feridûn, *Munshâ'at-i istâfîn*, Constantinople 1275, i. 507 (Belgrade campaign), p. 529 (Rhodes), p. 554 (Moldavia), p. 567 (Vienna), p. 577 (Güns), p. 584 (Tabriz and Baghdâd), p. 595 (Walona), p. 602 (Moldavia); the Vienna campaign was publ. and transl. by F. A. Behrhauer, *Suleiman der Gesetzgebers Tagebuch auf seinem Feldzuge nach Wien*, Vienna 1858; the *Munshâ'at* of Feridûn also contain many documents of the reign of Sulaimân (i. 500—ii. 86). There seems to be a more complete collection in MS. No. 327 of the National Library of Vienna (Flügel, p. 293): *Munshâ'at wa-sa'at wa-sha'at-i Sulâtân*

Suleimân Khân, which von Hammer considered the eleventh vol. of the original compilation by Feridûn (cf. Seifnîkî, p. 137). Other contemporary sources not yet published are: the *Târîkh* of Luftî Pasha (only MS. in Europe at Vienna, Flügel, No. 1010); the last part of 'Alî, *Kunûd al-ahbâr*; Djâlal Zâde Mustafa Çelebi, *Tahâfât al-mumâlik wa-darâjât al-musâlik* (to 962 [1554]; No. 1010); Ferdi, *Târîkh Sulâtân Sulaimân* (to 949 [1552]; Flügel, No. 998); several *Târîkh-i fetih-i Rodes* (von Hammer knows those of Ramadân and of Waist, cf. also Flügel, No. 1067); *Ghazawât-i usturghân wa-ustûn Belghârâd*, by Sinân Cawush (also von Hammer, cf. Flügel, No. 1003); lastly various *Shah-nâma*, of which von Hammer cites those of Shams, Ahmad Parapara-zâde and Maḥramî. Another *Shah-nâma* is that of İslâfîn (quoted by Ahmad Refik in *Sofollî*) and a poem *Djâmi' al-maknûnat* in the Library of Leyden (*Cat.*, iii. 26); a *Târîkh-i Sulâtân Sulaimân* at Vienna (Flügel, No. 1006) is rather legendary in its matter and belongs to the xviii century. The most important writers since the death of Sulaimân are: Peçewî, *Târîkh*, Constantinople 1284; Kara Çelebi Zâde, *Sulaimân-nâme* (written as a continuation of the *Tudj al-tawârîkh* of Sa'd al-Dîn), Bulâk 1248, and by the same author, *Ramât al-ahbâr*, Bulâk 1248; Merâhî, *Fath-nâma-i Sigetwar*, G. O. R., iii., p. vi. and Flügel, No. 1002; finally the historical works of Solâk Zâde, Hâdîdî Khalîfa, Munadjidjîm Bashî, etc. Ewliya Çelebi is also sometimes a source for the life of Sulaimân.

For state institutions in the time of Sulaimân an important source is the *Ayâf-nâme* of Luftî Pasha, publ. and transl. by R. Tschudi in *Türkische Bibliothek*, No. 12, Berlin 1910 and the *Kânûn-nâme* of Sulaimân. These *Kânûn-nâme*, which have been collected are edited at different times and found in large numbers in the Libraries of Constantinople; editions are: 'Arif Bey, *Kânûn-nâme-i 'Alî Othmân* (ikindî), ed. by the Nishândjî Sîdî Beg, in *T. O. E. M.*, No. 15—19 (Aug. 1912—April 1913) and *Othmânî Kânûn-nâmaları* (ed. by Abû 'l-Su'ûd and the Nishândjî Ramadân-Zâde Muḥammad) in *Miftî tebbû'lar madjîm'ârî I*, Constantinople 1331; translations in A. L. M. Petis de la Croix, *Canon du Sultan Soliman II, représenté à Sultan Murad IV pour son instruction, ou état politique et militaire tiré des archives les plus secrètes des princes ottomans et qui servent pour bien gouverner leur empire*, Paris 1735; *Canon-nâme ou édit de Sultan Soliman concernant la police de l'Égypte* in Digeon, *Nouveaux centes turcs et arabes*, Paris 1781; partially in von Hammer, *Des Osmanischen Reiches Staatsverfassung*, Vienna 1815, i. 384—427; other documents in Ahmad Refik, *Onunfî 'agr-i hîdîrde İstanbul hayâlî*, Constantinople 1333.

The Turkish poems of Sulaimân (Muhibbî) were printed at Constantinople in 1308 under the title *Dîvân-i Muhibbî*. A commentary which contains an appreciation of the great qualities of Sulaimân, was written by Ahmad b. 'Abd Allah Fawrî, entitled *Ahklâk-i Sulaimânî* (Flügel, No. 665); G. Jacob, *Sultan Soliman des Grossen Dîvan in einer Auswahl* herausgegeben, Berlin 1903.

Among contemporary western sources first place should be given to the *Relazioni* of the

Venetian ambassadors publ. by Alberi, then the narratives of other envoys like Busbecq, accessible in Forster and Daniell, *The Life and Letters of Ogier Ghislain de Busbecq*, London 1881; the *Tageluch* of his companion Hans Derwisch, ed. Bahlinger, Munich and Leipzig 1923, is very useful for its description of Turkey in the time of Sulaiman; Lewenklaw, in *Neuere Chronica Türkischer Nation*, Frankfurt 1590, gives in the appendix an important document (e.g. on page 418 the stages of the second campaign in Persia); Bobsard, *Vitae et Icones Sultanorum Turcicorum*, Frankfurt 1596.

The modern historians beginning with von Hammer have also used, sometimes almost exclusively, western sources (Hungarian, Austrian, Roumanian, etc.): von Hammer, *G. O. R.*, iii. 1—495; Zinkeisen, *Geschichte des Osmanischen Reiches in Europa*, Gotha 1854, ii. 611—936; iii. 1—380; Kapelwieser, *Die Kämpfe Österreichs mit den Osmanen vom Jahre 1525—1571*, Vienne 1899; Jorga, *Geschichte des Osmanischen Reiches*, Gotha 1909, ii. iii. Modern Turkish works are: Thurnia Efendi, *Sidjill-i 'Othmani*, i. 143; Namiq Kamal, *'Othmani to'rikhi*, Constantinople 1326—1328; Khair Allah, *Dewlet-i 'Othmaniye to'rikhi*, Constantinople 1292, vol. xi.; monographs by the historian Ahmad Rakkf: *Sohelli, Kadimlar Saltanat, 'Aimiler wa-San'at-kharlar*; Mehmed Zaki, *Maqalat shahzadelar*, Constantinople 1336.

A. H. Lyhyer, *The Government of the Ottoman Empire in the time of Sulaiman the Magnificent*, Cambridge Mass. 1913; E. J. W. Gibb, *History of Ottoman Poetry*, London 1904, iii. 1—9; Hafiz Hussain al-Awamari, *Haalhat al-djawa'imi*, Constantinople 1281, i. 14, 15, 16, 101; ii. 72, 100, 186. (J. H. KRAMERS)

SULAIMAN II, twentieth Ottoman Sultan, reigned from 1687 to 1691. He was born in 1052 (1642) (on 15th Muharram = April 15, according to von Hammer, *G. O. R.*, the *Sidjill-i 'Othmani* gives the 25th Safar = May 25), and was the son of Sultan Ibrahim; from the accession of his brother Muhammad IV he lived the life of a prisoner in the palace with his brother Ahmad. On the deposition of Muhammad IV, the result of the defeat of the Turkish army at Mohács, Sulaiman was placed on the throne on Nov. 8, 1657, mainly through the efforts of the *feri-ma'azim* Köprülü Mustafa Pasha. In the precarious position of the empire, great hopes were placed upon a second Sulaiman but the latter had not the necessary qualities. He is described as being of a resolute and warlike character, and indeed he twice took the field at the head of the army; a weak constitution however prevented him from carrying out his good intentions. Soon after his accession the mutinous army returned from Hungary, invaded the capital and committed unprecedented excesses in which the new grand vizier Siyavush Pasha was killed (Nov. 24, 1688). A spontaneous rising of the population of the capital finally suppressed the rebellion and the aged Nihangli Isma'il Pasha became grand vizier (Jorga, iv. 227, speaks of another grand vizier the Sipahi 'Ali Agha, as holding the office between these two, but he is not mentioned in the *Haalhat al-Wus'at*). A new mutiny of the troops however put an end to Isma'il Pasha also. His successor was the ex-Janissary Taktur Daghl Ma-

stafa Pasha (May 1688). Meanwhile the Turkish army suffered defeat after defeat in Hungary (loss of Erlau in Dec. 1687) and in Dalmatia, while Yegen 'Othman Pasha, Beglerbeg of Rümili was in rebellion against the government; in Anatolia he had a supporter in Gedük Ahmad Pasha. After great effort to raise the necessary money, an army left the capital in July 1688. The Sultan set out with it, but went no further than Adrianople, for in the meanwhile, the Austrians and their allies had taken Belgrade (Sept. 6) and Semendria. In September the Porte sent Mavrocordat and Dhu 'l-Fakir Efendi to Vienna with the task of negotiating a peace; but fighting went on as the negotiations were prolonged. The rebels Gedük Ahmad and Yegen 'Othman were finally defeated and slain. In Dec. 1688 a great council of war was held which decided among other things, to enrol in the army a certain number of the inhabitants of Constantinople; on the other hand the assistance of France who attacked the Emperor in Germany gave the Turks a chance to re-organise their forces. In June 1689, Sulaiman again put himself at the head of an army which he only accompanied as far as Sofia, having heard of the loss of Szigeth; Radjab Pasha became Serasker. After some initial successes this campaign ended in a great Turkish defeat near Nish on Sept. 14, a result of which was the execution of the grand vizier in favour of Köprülü Mustafa Pasha (Nov. 7). The latter took energetic steps to re-establish order in the army and the finances; for example he levied a series of new taxes. In 1690 fortune turned in favour of the Turks assisted by a Tatar army. They retook Nish, Semendria and Belgrade (Oct. 8) as well as several towns in Transylvania.

In Albania the Venetians had to give up their conquests. The campaign of 1691 thus started very favourably but it ended with the defeat at Sialakemen, in which Mustafa Köprülü [q.v.] lost his life. But the Sultan was already dead (June 23, 1691; the *Sidjill-i 'Othmani* gives the date 15 Shawwal = July 12). He was succeeded by his brother Ahmad II. Sulaiman II was buried in the türbe of Sulaiman I in the Sulaimaniye in Constantinople. Two of his sons became sultans: Mustafa II and Ahmad III.

Bibliography: The principal Turkish source is Rashid, *Turikhi*, Constantinople, 1282, ii. 15—159 and several works not yet printed: — Desterdar Muhammad Pasha, *Zubdat al-Wa-jibāt* (Flügel, Vienna Catalogue, No. 1079); *Sulh-nama* of Dhu 'l-Fakir Efendi (Flügel, No. 1078); 'Abd al-Ghaffar Kirimi, *Umdat al-Tawarikh wa'l-Akhbar* (Library As'ad Efendi in Constantinople, No. 2331). Also Thurnia Efendi, *Sidjill-i 'Othmani*, i. 44; von Hammer, *G. O. R.*, vi. 499—560; Zinkeisen, *Geschichte des Osmanischen Reiches in Europa*, v. 145—150, 243; Jorga, *Geschichte des Osmanischen Reiches*, iv. 225—254. (J. H. KRAMERS)

SULAIMAN, MAWLAY ARU 'L-RABI' B. MUHAMMAD, 'Alawid Sultan of Morocco, reigned from Radjab 1206 (March 1792) to 13th Rabi' I 1338 (Nov. 28, 1822). The son of Sultan Muhammad b. 'Abd Allah b. Isma'il and a free woman of the Arab tribe of Ahlaf, he spent his youth in Sidjilmassa where he devoted himself to study without taking part in politics. When on the death of his father in Radjab 1204 (March—April 1790) the power passed to his brother Yazid, Sulaiman came

from al-Tāfilālat escorted by the Arab and Berber tribes of the Sahara to bring him the *ḥafṣa* of the people of Sidjilmāsa. After the death of Mawlay Yazīd, killed near Marrākeṣh (end of Jumādā 11 1206 = Febr. 1792) fighting against Mawlay Hishām, one of his brothers who had rebelled against him, Morocco fell into anarchy. The people of al-Hawz of Marrākeṣh remained faithful to Mawlay Hishām but those of al-Hibṭ and al-Djabāl proclaimed Mawlay Maṣlama, sterile brother of Mawlay Yazīd. The people of Fās, the tribes around the capital and the 'Abid, Wādīya and Berbers proclaimed Mawlay Sulaimān whose learning and piety particularly distinguished him. Soon afterwards the 'Abid of Miknās and the Berbers of the region joined them and the new Sulṭān received their oath of allegiance in the sanctuary of Mawlay Idrīs, on Monday 17th Raddjāh 1206 (March 12, 1792). Later he was also recognised by the Banū Ḥasan and the other tribes of al-Qharb, as well as by the people of Sale and Rabat.

He had hardly been proclaimed, when M. Sulaimān had to fight his brother and rival, M. Maṣlama, who was soon defeated and went to live in the east. At the end of 1206 (1792) M. Sulaimān made an unsuccessful expedition with the object of chastising the Anḡid, an Arab tribe around Ujdā, who plundered caravans and convoys of pilgrims. In al-Hawz of Marrākeṣh however M. Hishām was still supreme. At the end of 1207 (1793) M. Sulaimān sent his brother M. al-Taiyib against the Shāwiya but he was defeated. In 1208 (1793-1794) the Djabāla, the tribes inhabiting the mountainous massif of the northwest (Akhmas, Banū Yadar, Banū Gurfuj, Qharāwa etc.) rebelled on the invitation of a *ṣāḥib*, Muḥammad b. 'Abd al-Salām Zaijan al-Khumst. After his defeat in the first encounter, the troops of M. Sulaimān ultimately crushed the rebels and Zaijan, captured and pardoned, was appointed governor of the tribe and became one of the strongest supporters of the government.

M. Hishām was always powerful in al-Hawz of Marrākeṣh, where the tribes of Dukkāla, 'Abda, Aḥmar, Shayādhima, Ḥaḥa and Raḥmīna followed him; but discord was not long in breaking out among them and M. Sulaimān seized his opportunity. He began by attacking a section of the Shāwiya whom he defeated. In 1210 (1795/1796) the Raḥmīna sent him a deputation inviting him to march on Marrākeṣh and he took the field against the Shāwiya whom he routed, then invaded the territory of the Dukkāla and took Azammūr in 1211 (1796/1797). He then turned his attention to Marrākeṣh; on his approach, M. Hishām fled from the town to the Atlas; M. Sulaimān occupied the capital of the south and extended his authority over the tribes of al-Hawz, al-Dair, al-Sās, the Ḥaḥa and the town of Mogader. A little later, the *ḥafṣa* of the 'Abda, 'Abd al-Raḥmān b. Naḡir who had been one of the most faithful auxiliaries of M. Hishām submitted to the Sulṭān and M. Hishām now alone, soon followed his example. M. Sulaimān was now undisputed sovereign of all Morocco.

His authority once well established, M. Sulaimān undertook several secondary expeditions to assure the security of the frontiers of his empire. The Turks of Algiers had seized Ujdā and extended their authority over the tribes in the neighbourhood of this town. In 1211 (1796-1797) M. Sulaimān sent troops who reconquered the territory without

difficulty. In 1213 (1798-1799) there was an expedition to al-Sās, in 1215 (1800-1801) the unfortunate campaign against the Berber tribe of Ait-Umlā, in 1216 (1801-1802) an expedition against the land of Dar'a (Dra) and in 1217 (1802-1803) against the Rif to collect taxes. In 1218 (1803-1804) there was the campaign against the Ait Idrās of the Central Atlas and against the tribes of the Sahara (Tudgha, Farkala, Ghasts and Tāfilālat).

The power of M. Sulaimān had now reached its zenith and Morocco enjoyed several years of peace and prosperity. This period unfortunately did not last and the Sulṭān had to spend the last years of his reign in almost annual expeditions. In 1222 (1807-1808) there was an expedition against the Tādla and the Gurām; in 1225 (1808-1809) a new campaign against the Ait Umlā, who were forced on this occasion to pay tribute; in 1224 (1809-1810) there was an expedition against the Tādla and against the Ait Idrī; in 1225 (1810-1811) there was an expedition against the Rif.

Very soon afterwards the situation changed. The nationalist rising of the Berbers in the Central Atlas, exasperated by the oppression of the central arabised power imperilled the empire and brought Morocco to the verge of anarchy. In 1226 (1811-1812) the Garwān and the Ait Umlā rebelled under the chief Amḥāsh; the first expedition sent against them was routed at Azm. In 1227 (1812-1813) the Sulṭān sent to the Rif an expedition to punish several eastern tribes notably the Gal'ya, who, in spite of his prohibition, were selling wheat to the Christians. This campaign was crowned with success but had no permanent results so that the very next year in 1228 (1813-1814) the Sulṭān, accompanied by Arab contingents from the Banū Malik and the Sufyān had to go in person to the Rif which he ravaged with fire and sword. In 1230 (1814-1815) there was an expedition to the region of Marrākeṣh to punish the turbulent tribes of Dukkāla, 'Abda and Shāyādhima. In 1231 (1815-1816) the Sulṭān sent his son M. Ibrāhīm to punish various Arab and Berber tribes of the Sahara, the Sabāḥ and the Ait 'Aṭṭā who had seized fortresses (*ḥaṣūr*) built in their land by M. Ismā'īl; the expedition was a failure and the Sulṭān had to undertake a second one in person which was quite successful.

But the enemy who caused the greatest trouble to Sulaimān was the Berber bloc of the Central Atlas, which rebelled on several occasions against the Arab yoke, frequently threatening the town of Miknās. The Sulṭān never succeeded in taming them and their stubborn resistance was the cause of the internal dissensions which troubled the close of his reign. The *ṣanḥāja* of the Central Atlas and especially the confederation of the Ait Umlā of Fās refused to submit to the central power. In 1234 (1818-1819) the Sulṭān decided to subdue them with Arab and Berber contingents (Zammūr, Garwān and Ait Idrās), but as a result of the defection of the Zammūr, the Sulṭān's son M. Ibrāhīm was mortally wounded and the Sulṭān himself was captured by a Berber who however ultimately released him. This success inflamed the national ardour of the Berbers who rose under a local *murāḥḥ* Muḥammad U-Naḡir Amḥāsh, to fight against the whole Arabic speaking element in Morocco. The checks suffered by M.

Sulaimān had destroyed his prestige and the end of his reign was simply a series of shakings which he had great difficulty in putting down. While the Sulṭān was at Mārkāsh defending it against the Berbers, the people of Fās rose against his governor, al-Saffār. He therefore returned to Fās and on the way his army was attacked by the Berbers. In 1235 (1819-1820) he went to pacify al-Hilā and then to Marrākeṣh. During his absence the Wādīya plundered Fās, discord broke out among the people of the town who ultimately asked the help of the Berbers against the Wādīya. Soon the people of Fās by arrangement with the Berbers abandoned M. Sulaimān and chose as ruler M. Ibrāhīm b. Yaṣīd, who was also recognised by a part of the people of N. W. Morocco, notably the inhabitants of Tetwān; returning to the town, M. Ibrāhīm died and his brother M. Sa'ād was proclaimed in his stead. The Sulṭān M. Sulaimān then left Marrākeṣh and laid siege to Fās. The siege lasted till Raddjāb 1237 (March-April 1822). During this period the Sulṭān sent an expedition to attack Tetwān and pacified the district of Tāza.

Having retaken Fās and settled the situation in the north M. Sulaimān set out for the south where he had to fight against the Arab tribe of the Sharrīda, who lived near Marrākeṣh. Wearied with ruling M. Sulaimān was thinking of abdicating in favour of his nephew M. 'Abd al-Rahmān b. Hishām, when he died on 13th Raddjāb 1, 1238 (Nov. 28, 1822) at Marrākeṣh, where he was buried.

In spite of his unfortunate reign, M. Sulaimān left a great reputation for piety, justice and benevolence; for example he abolished the non-Islamic taxes (*malūṭ*). He was also a great builder.

Bibliography: Abū Ḥ-Rāṣim al-Zaynī, *al-Tarīkh al-mawṣūf*, ed. Hondas, text, p. 92; transl., p. 169; Muḥammad Akamūṣ, *al-Djāhī al-mawṣūf*, Ith., Fās 1336, i. 181; Ahmad al-Nāṣir, *al-Jihād*, iv. 129-172; transl. in *Arch. Marocaines*, ix. 384-399, x. 1-105. — Sulaimān al-Hawwāt wrote poems in praise of Mawlay Sulaimān, but the collection, of no historical value, is still in manuscript.

(GEORGE S. COLLYN)

SULAIMĀN, AL-MAHRĪ, a sailing-master (*mu'allim al-baḥr*) and author of 'Sailing Instructions' in the first half of the xviiith century.

MS. N° 2559 of the Arabic collection of the Bibliothèque Nationale contains several nautical treatises in prose and verse on the Indian Ocean, the sea of Western China and the seas of the great Asiatic Archipelago. The treatises in verse are by the *mu'allim* Ibn Maḥjīd (cf. *Ḥikāṭ al-ḥikā*). The five treatises in prose have been prepared by another sailing-master called Sulaimān b. Ahmad al-Mahri al-Muḥammadi (fol. 598) or Sulaimān b. Ahmad b. Sulaimān al-Mahri (fol. 1554, here wrongly written al-Mahri). In either case he would be son or grandson of Mahri, i.e. of a member of the tribe of the Mahari of Southern Arabia. Sulaimān is otherwise unknown. The 'Sailing Instructions' of which he is the author contain no biographical information. His Turkish translator, the admiral Sali 'Alī who wrote the *Muḥit* in 1554, mentions that he was dead by then (cf. *J. A. S. H.*, Nov. 1834, p. 548). One of the nautical treatises is dated 1511; it is therefore probable that the texts in question were prepared in the first half of the xviiith century.

MS. 2559 is a small 4° of 215 × 150, 187

folios with 15 lines to a page. The five treatises by Sulaimān contained in it are as follows:

I. *Kitāb fih al-ḥikāṭ wa-ṭ-ṭikāṭ al-baḥr*, folio 16 to 54. At the beginning the text says: 'The object of this epistle is to make known the [different kinds of] known years and their use by all the world; these years are the lunar, solar, Byzantine (*rūmīya*), Coptic and Persian. The epistle contains a short introduction of 10 lines and 6 *fajr* or sections. The first deals with the lunar year, the second with the basis of the solar year; the third with the solar year; the fourth with the Byzantine year; the fifth with the Coptic year and the sixth with the Persian year'. Not dated. On folio 10 where the titles of the treatises contained in the manuscript are given in another hand, this text is entitled: 'Epistle dealing with the science of eras, i.e. with the knowledge of the principle of years, the use of which is found throughout the world'.

II. *Kitāb taḥf al-fuḥūl*, from folio 42 to 104 inclusive. On 10 this text is entitled: 'Epistle of the gift to men of energy to facilitate the knowledge of the principles [of astronomical-nautical science]'. This treatise is divided into 4 lines of introduction, 7 chapters and a conclusion. Chapter i. deals with the description of the spheres and the stars which they contain; chapter ii. treats of the division of the circle which those learned in nautical astronomy are agreed to divide into 32 parts called *ḥāṣṣ* '(celestial) rumb', by analogy with the rumb of navigation. Chapter iii. deals with *ṣūm* = 3 hours sailing at sea; chapter iv. with the two kinds of sailing at sea, i.e. following the coast line or crossing the high seas; chapter v. with the altitudes of the stars to determine the latitude of a port; chapter vi. with the distances between two ports estimated in *ṣūm*; chapter vii. with the winds. The conclusion of this treatise is as follows: the art of navigation is based on a double foundation, good sense and experience.

This text is not dated but it is later than iv. which is quoted on folio 72, line 1 and than iii. which is mentioned in folio 54, line 11 which puts its date after 1512.

Folios 102 and 110 are blank in the MS.

III. *Al-'Umdat al-mahriya fi ḥikāṭ al-baḥr*, from folio 114 to 594 inclusive. It is divided into 7 chapters which are subdivided into sections.

Chapter i. deals with the principles of nautical astronomy. It contains the following sections:

(a) To know the rumb; (b) to know the distance of the stars at the equator; (c) to know the parallels (*maḍā'ir*) of the stars expressed in degrees; (d) to know the stars which are in horizontality (*fihāṭ*) (observed on a single planchette); (e) to know the *ṣūm*; (f) to know the guide to the exact number of *ṣūm* between the rumb; (g) to know the exact number of *ṣūm* (co-efficient indicating the length of the voyage to be covered to a given cape to get the same displacement in latitude sailing straight north); (h) to know the basis (for calculation) of the altitude of a star; (i) to know the distances.

Chapter ii. deals with the names of the stars and allied matters. It has two sections (a) to know the number of *ḥāṣṣ* = 1° 37' that are one between the North Pole and the *ḥāṣṣ* or Pole Star, the great *forḥad* or β of Ursa Minor, the *miḥḥ*,

li. = knot = 122 (Piazzi) of Cepheus; and (h) to know the circle described by the great *farḡad* around the pole.

Chapter iii. deals with sea routes in the regions to windward and under the wind (i.e. in the author's particular terminology, to the east and west of Cape Comorin). It contains 7 sections: (a) routes of the *Hijāz*; (b) route along the south coast of Arabia; (c) route along the north-west coast of India; (d) route along the east coast of Africa from Bāb al-Mandab (var. of Bāb al-Mandab); (e) route past the *Khūriyā* (cf. above, ii., p. 975, where these islands are wrongly called *Khūriyān-Mūriyān* from an erroneous reading of several Arab geographers) from the south coast of Arabia to Sokatra; (f) routes under the wind on the east coast of India; (g) route from the coast of Siam (i.e. west and east coast of the Malay peninsula which used all to belong to Siam), along the coasts of Siam proper of Indo-China and western China.

Chapter iv. deals with the routes along the coast of the following islands: Kōmr or Madagascar, the archipelago of the Comoros (which includes 4 islands: *Angazidja* or Great Comoro, *Mufit* or *Mohell*, *Dumūl* or *Anjuan* so-called from its capital, and *Mayotte*); the small islands to the east of Cape Ambre and Cape St. Mary (the two Capes at the north and south ends of Madagascar); the Zarin Islands or Seychelles; *Sokatra*; the *Fil* or *Laccadives*; the *Dil* or *Maldives*; Ceylon, the Andaman and Nicobar Islands; the islands along the coast of Siam (i.e. west coast of the Malay Peninsula); Sumatra, Java; the south-east islands: *Gilolo*; *Fariyū* (the *Perices* of the *Commentarios* of Albuquerque, vol. iii, ch. xviii (3)); *Qūḥr* = north part of Formosa, the *Maluccas*, *Mocassar* = *Celebes*, the islands of *Banda*, *Timūr-Lawt* or *Timūr* of the Sea, *Timūr-Kidul* or *Timūr* of the south, *Brunei* or *Borneo*).

Chapter v. deals with latitudes ascertained from the altitudes of the *gūh* or Pole Star, the *farḡad* = $\beta \gamma$ of Ursa Minor and of the *naḥḥ* = $\alpha \beta \gamma \delta$ of Ursa Major. It contains 7 sections indicating the latitudes of the ports of the Red Sea, of the eastern coast of Arabia and the western coast of India; of the east coast of Africa and the west coast of India and Ceylon; of the east coast of Africa to the south of Guardafui; of the Gulf of Bengal; of the island of Ceylon, of Sumatra and Java. It also deals with *ḥaḡh* (the correction to be made according to the elevation of the Pole Star), the 28 lunar mansions and the altitudes of the known stars.

Chapter vi. deals with the monsoons of the Indian Ocean, the dates of which are expressed in the Persian reckoning. The monsoons are divided into two categories. The first is divided into two classes. The first of these is called "head of the wind" and includes the following monsoons: monsoon of 'Aden which takes one to the west coast of India, the monsoon of *Shihir* [q.v.] for the same destination; monsoon of *Zufār*, monsoon of the *Sawāhil* or of the eastern equatorial coast of Africa for the same destination; monsoon of the *Sawāhil* to the south coast of Arabia; monsoons of *Gujarat*; of the *Konkan*, of *Malabar*, of the *Maldives*, of *Shihir*, of *Zufār*, from *Maasat* to *Malacca*, *Sumatra*, *Tenasserim* and *Bengal*. Monsoon from *Zaila* and *Berbera* to the South Arabian coast; monsoon from 'Aden to Hormuz.

The monsoons of the second class of the first category are the monsoons from Mecca (i.e. from *Djeddā*), *Sawākin*, *Zaila*, 'Aden, *Shihir*, *Maasat*; *Zufār* and *Kalahāt* to the west coast of India.

The monsoons blowing towards the lands "under the wind" (i.e. to the east of Cape Comorin) are the monsoons from 'Aden, *Shihir*, *Maasat*, *Gujarat*, the *Konkan*, *Sumatra*, *Tenasserim*, *Malabar* and *Bengal*; the monsoon from *Bengal* towards the west coast of the Malay Peninsula; the monsoon from the east coast of Africa to the *Maldives*; the monsoon of the *Sawāhil* to the south Arabian coast.

The second category of monsoons includes the monsoons from *Gujarat*, the *Konkan* and *Hormuz* to the coast of Arabia; from *Gujarat* to the east coast of Africa, from *Bengal*, *Malacca* and *Tenasserim*, *Malabar* and *Sumatra* to Mecca (i.e. *Djeddā*), 'Aden and *Hormuz*; from *Sumatra* to *Bengal*; from the *Maldives* to 'Aden and the whole Arabian coast; from *Diyyūl* in *Sind* to the Arabian coast; from *Malindi* in East Africa to *Madagascar*; from *Kilwa* to *Sofala* and from *Sofala* to *Kilwa*.

Chapter vii. deals with voyages. It begins by describing in detail the islands along the Arabian and African shores of the Red Sea. Then follow itineraries extremely in detail in the following regions: from *Bāb al-Mandab* to *mount Zafar* and *Saḥān*, in the south of the Red Sea; from *Saḥān* to *Djeddā*; from *Saḥān* to *Sawākin*; from *Djeddā* to 'Aden; from *Sawākin* to 'Aden; from *Zaila* to *Gujarat*; from *Berbera* to *Gujarat*; from *Kishin* to the south Arabian Coast of *Gujarat*; from *Kalahāt* to *Gujarat*; from *Zufār* to *Gujarat*; from *Kalahāt* to *Gujarat*; from *Maasat* to *Gujarat*, to the *Konkan* and *Malabar*; from 'Aden to *Malabar*; from 'Aden to *Hormuz*; from *Rās al-Hadd* to *Diyyūl* in *Sind*; from *Diu* to *Maasat*; from *Diu* to *Shihir* and 'Aden; from *Mahāim* and *Shayūl* (the *Chal* of our maps) and the vicinity to the Arabian coast; from *Diu* to the *Maldives*; from *Dabūl* to the *Maldives*; from *Diu* to *Maasat* and *Hormuz*; from *Cambay* to 'Aden at the end of the monsoon; from *Goz-Sindāhūr* to 'Aden at the end of the monsoon; from *Hond* and *Bāḡkālā* to 'Aden at the end of the monsoon; from *Calicut* to *Guardafui*; from *Diu* to *Malacca*; from *Diu* to *Bengal*, i.e. to *Shāṭigān* (sic); from *Malacca* to 'Aden; from *Shāṭigān* to the Arabian coast. — In the conclusion (*ḥatima*) the author enumerates the ten dangers to be avoided by sailors.

This treatise is dated in figures, 21st Rabi' II, 961 = March 27, 1554; but according to the *Muḥit* of *Shih* 'Alī, it was compiled in 917 (1511—1512) (cf. *J. A. S. B.*, Nov. 1834, p. 548), and this is the date which should be adopted as correct. The Turkish admiral actually collected the Arabic documents which he translated during his sojourn on the Persian Gulf in 1553. The date given in MS. No. 2559 is no doubt that when the copy was made as *Sulaimān* was already dead in 1554.

IV. *Kitāb al-minhāj al-fāḡhī fī 'ilm al-baḥr al-akḥīr*, from fol. 50a to 93b, l. 3. It is divided into an introduction, 7 chapters and a conclusion. The introduction deals with *zāw* and *farḡat*; chapter I. with the sea routes on the coast of Arabia, *Makrān*, *Sind*, *Gujarat*, the *Konkan*, *Tulwān*, *Malabar*; on the Somali coast and the east coast of Africa; the east coast of India, *Bengal* and *Siam* (= west coast of Malay peninsula), and of *Malacca*; on the west coast of the Malay

Peninsula, Indo-China, Western China, and some routes on the high seas.

Chapter ii. dealing with the latitudes (*ḥiḍḍ*, lit. "measure") of the ports on known and inhabited coasts: "Know", says the author, "that as regards the observation of the Polar Star, there is a difference between the people under the wind and those of the lands in the wind of Cape Comorin, as far as certain capes are concerned. The result is differences between the people of Western India (*al-Hind*, this is how we must take it in nautical terminology) and the Arabs as regards the fundamental measure (i.e. the measure of the height of the Pole Star). In my book entitled *al-Umda* (cf. above col. 2) [the latitudes given] are in conformity with those of the Ġolas; in the present book, I have reproduced the opinion of the older masters of navigation for all the coasts because [as to these latitudes] I have verified them from certain capes which I supposed to have been situated above their true latitude. . . . Then come the sections where they are indicated: (a) a great number of latitudes furnished by observation of the Pole Star, (b) of the *farkadain* ($\beta\gamma$ of Ursa Minor), (c) of the *na'ila* = $\beta\gamma\delta$ of Ursa Major, (d) the altitudes of the known stars.

Chapter iii. contains the description of the coasts of the large known inhabited islands: Madagascar, the Seychelles, Sokotra, the Laodivies, the Maldives, Ceylon, the Andaman and Nicobar Islands, the Takwa Islands on the west coast of the Malay Peninsula, Sumatra, Java and the northeastern islands (Timor, the Sandalwood Islands, Banda, the Moluccas, the island of Lākylā [Arabic transcription of the Chinese *Lieu-k'ien* also called *Ḡāh* — north of Formosa], Gilolo, Fariyūk [?], Borneo and Macassar = Celebes).

Chapter iv. deals with the distances between Arabia and Western India, the ports of the Bay of Bengal, the east coast of Africa and certain ports of Sumatra, Java and Bali.

Chapter v. deals with the winds, cyclones and the dangers to which ships are exposed. Chapter vi. treats of the landings and landmarks of western India, the Arabian coast and the east coast of Africa. Chapter vii. deals with the entrance of the sun and moon into the signs of the Zodiac. The conclusion contains the following detailed itineraries: from Diu to Malacca, from Malacca to the Maldives, from Diu to the west coast of Sumatra and back to Martaban and Tenasserim and to Bengal.

This text is not dated but it mentions *al-Umda* (iii.) in folio 64a, l. 13; it is therefore later than 1511. It also mentions ii. which is quoted on folio 60a, l. 9.

Folios 93b to 151c contain nautical treatises in verse by Ibn Mādjīd, which have already been discussed (cf. above, p. 364 *sq.*). Folios 151d to 154a are blank.

V. *Kitāb ḡharḡ ṭuḡfūt al-fuḡūl fī tamhīd al-nūḡl* from folios 155a to 187b and last. At the end of several lines of introductory matter the author says: "I have extracted [the substance] of this book from different sciences and collected the contents [by borrowing] from my own works and those of my brethren [of the brotherhood of sailing masters] (folio 155a, l. 3 *infra*).

Chapter i. deals with the description of the celestial spheres and the stars which they contain (spheres of the moon, of Mercury, Venus, the sun, Mars, Jupiter, Saturn and the fixed stars), the load-

stone and the compass. Chapter ii. deals with the division of the circle. "I say", says the author (f. 161a, l. 3) "that this chapter ii. of this book contains the description of the circle. The word *circle* here means the circle of the horizon divided into 360 parts, each part of which is considered a degree by observers i.e. astronomers. I say that those learned in nautical science are agreed to divide the circle (of the horizon) into 32 parts. I say that the masters of navigation of the ocean of Western India agree. There are the Arabs, the people of Hormuz, the people of Western India, the Ġolas and the Zengs (or Zengjs). It is the same for masters of navigation of the west, like the Maghribis, the Franks, the Byzantines (Ḥimṭya) who also divide the circle into 32 parts. As to the Chinese and Japanese — these are the people of the islands of the south — they divide the circle into 24 parts. It is the same with the people of the non-Arab countries like Ḡharḡsān and the non-Arab lands adjoining it and the masters of navigation have called each of these parts *ḡḡḡḡ* by analogy with the *ḡḡḡḡ* (or *ḡḡḡḡ*) of navigation". The same chapter then deals with the *ḡḡḡḡ* (lit. finger = 1° 37'). Chapter iii. is devoted to the *ḡḡḡḡ*; chapter iv. to the routes along the coasts and on the high seas; chapter v. to the altitudes of the stars; chapter vi. to the distances between two points; chapter vii. to the winds. The book ends with a general concluding chapter.

This last nautical treatise which is not dated is later than the *Kitāb al-minkāḡ* (iv.) quoted in f. 173a, l. 3 and 184a, l. 11; and than the *al-Umda* (iii.) mentioned in folio 165a, l. 9; 165b, l. 3; 181a, l. 13—14. The *Catalogue des Manuscrits Arabes* of de Slane wrongly says that the text of this treatise is written in red ink; the title of the chapter, sections, and paragraphs alone are written in red ink; the text itself is written in black ink like the rest of the manuscript.

Without going into details we may here mention the main rules used by Arab seafarers in the xvth—xvith centuries. According to the nautical texts of Ibn Mādjīd and Sulaimān al-Mahrī the latitudes of the parts of the Indian Ocean in the wide sense, i.e. the ports of all the coasts between Southern Africa and the Chinese province of Fou-Kien (coasts of the mainland and islands of the Indian Ocean in the strict sense, of the Red Sea, the Persian Gulf, the sea of 'Omān, the Bay of Bengal, of the Sea of western China, and the Seas of the Great Asiatic Archipelago), are determined by observation of three stars or groups of northern stars: *ḡḡḡ* = Pole Star; the *ḡḡḡḡ*, in Arabic *al-farkadain*, "the two calves", = $\beta\gamma$ of Ursa Minor; the *tomb*, in Arabic *al-na'ila* = $\alpha\beta\gamma\delta$ of Ursa Major. The latitude of the harbours between the parallels of 32° 48' N. = 17½ *ḡḡḡḡ* and 6° north = about 1 *ḡḡḡḡ* from, the *ḡḡḡḡ* is determined by the observation of the Pole Star; that of the ports situated between the parallels of 5° 21' south = about 1 *ḡḡḡḡ* from the *farkadain* by observation of the *ḡḡḡḡ* of Ursa Minor; and that of the ports between the parallels of 6° N. = 1 *ḡḡḡḡ* from the *ḡḡḡḡ* or 8 *ḡḡḡḡ* from the *farkadain* and of 5° 21' south = 1 *ḡḡḡḡ* from the *farkadain* or 13 *ḡḡḡḡ* from the *na'ila* and about 25° 16' south = ¾ *ḡḡḡḡ* from the *na'ila*, by observation of *al-na'ila* of Ursa Major. The result of these observations has been laid down in the *Sailing Instructions* in the following form: Ibn Mādjīd and Sulaimān al-Mahrī give first

of all the parallel in question and then mention all the points which are found on this latitude, the one from east to west and the other from west to east. For example in fol. 64b, l. 8 of MS. 2559 we are told:

*[There where] the *ḡā* is 11 *ḡā* [above the horizon = about 21° 14' N. are]: the harbour of Kawāḡ (Arabicised form of the Chinese 交趾

Kiao-ke near the modern Hanoi in Tonkin) which is in China (sic), this is the port of the Sūfū (of the country). Then Shatigām = Chittagong in Eastern Bengal (= west coast of Burma); then Rā al-Kanīr, on the west coast (of the Bay of Bengal = east coast of India); then Kanbāya (in the Bay of this name, on the west coast of India); then Rā Djagad (the west point of the peninsula of the Kathiawar); then Rā al-hadd (south-east point of Arabia); then al-Kahḡar [a cape] on the coast of the Hiddā; off this cape is a reef [called] al-Bām; then [cape] Dawā'ir on the African coast [of the Red Sea]...'. The list goes on by $\frac{1}{2}$ *ḡā*'s from north to south to $1\frac{1}{2}$ *ḡā*'s from the Pole Star which section ends in the parallel of 6° N. lat. The next section is entitled 'Section dealing with the altitude of the *farḡadain* of the place where the Pole Star is at 1 *ḡā*' to the end of the observations made with the two stars'. Practically 1 *ḡā*' from the Pole Star = 8 *ḡā*' from the Guards of the Ura Minor; these two expressions are interchangeable. It is at this parallel of 8 *ḡā*' = 6° N. that the section begins:

*[There where] the *farḡadain* are at 8 *ḡā*' [above the horizon are]: Kēlantun in China (read: on the east coast of the Malay Peninsula); then Kēdh on the east coast (of the Bay of Bengal = west coast of the Malay Peninsula); then the island of Perak (off the preceding harbour); then the islands of Mā-fūla and Gāni-fūla and the north-west cape of Sumatra; then Alḡam on the east coast (lit. on the back) of Ceylon; then Tūḡgām on the west coast of Ceylon; then the island of Kandikāl of the Maldives; then the beginning of Saif al-Tawīl (lit. the long bank) on the east coast of Africa...'. The enumeration continues by $\frac{1}{2}$ *ḡā*'s to 5 *ḡā*'s; then following the parallels of 4, 3, 2, 1, 2 *ḡā*'s the section ends at 1 *ḡā*' = 5° 21' S. L. The next section is entitled:

'Section dealing with the altitude of the *na'ā* in the Southern Isles [of Indonesia], Madagascar and on the coast of Zeng (or Zandj)'. 13 *ḡā*' from Ura Major = 1 *ḡā*' from the Guards. The text of this section does not begin till the following parallel:

*[There where] the *na'ā* are at 12 *ḡā*' [above the horizon = 7° South are]: the port of Sumbaya which is on the west coast (this is an error for north) of the island of Java; then [the island of] Sumbava [which produces] mandalwood and is situated west (read: east) of Java; then Monfa (the Mafia of our maps) on the coast of the Zeng...'. The enumeration goes on by *ḡā*'s (Java being always inaccurately orientated N.E. instead of E.W.) to 1 *ḡā*' and alternately $\frac{1}{2}$ *ḡā*'s = about 25° 16' south. On the parallel of 1 *ḡā*' the text says: [There where] the *na'ā* are 1 *ḡā*' [above the horizon are]: the harbour of Kūs (?) on the east coast of Madagascar; then the bay of Kūr (?) on the west coast of the same island; then the port of al-Shadīra (or port of the tree) on the (east) coast (of Africa); and the author adds: 'According to the early (i.e. writers on navigation), [this port] is the last of the

islands (sic) of the coast of Zeng; but the Franks say that the [west] coast [of Africa runs to the north and] continues to the place where the *na'ā* are 7 *ḡā*' in the water (= 15° 07' south). But Allāh knows best'. Ibn Maḡḡid expresses himself more clearly in this connection in section 9 of the *Hawāyā*, a poem on navigation dated September 13, 1462 (MSS. 2292, fol. 112a), where he says: '... the harbour of al-Shadīra which is well known lies 1 *ḡā*' from the *na'ā*. The learned give this as the position of this port. There are no others having a name.... And there is nothing south of those lands, for it is there the land of Zeng ends (on the east coast of Africa) and there is the strait [that leads] to the land of the west and of the Franks. There is nothing to the south [of Africa] except reefs and darkness which the Creator [alone] knows. Some say that there are islands and that the extreme end of the coast is 5 *ḡā*' (18° 21' S.). — O thou, the best informed! But the stories of the authorities do not agree. We ask Allāh to pardon our errors'. — I have discussed this passage in the 7. A., for Oct.-Nov. 1927 (p. 307-309) and came to the conclusion that the harbour of al-Shadīra must be identified with Lorenzo Marques.

We have seen that several sections aim at making known the distances between two fixed points. The following on fol. 81b, l. 8, 29, is particularly important because it deals with parts situated at the two ends of the Indian Ocean and with the navigation of the high seas from end to end without altering one's course:

'Section dealing with the distances [between the ports whose altitude is known] by observation of the *farḡadain* [ports which are situated] on the coast of Zeng [on the one hand] and in the island of Java and Sumatra [on the other]:

*By 7 *ḡā*' from the *farḡadain* = 4° 44' N.: of the stoll (*fūḡ*) of Muḡḡil (on the African coast) to Mākūḡ (the *Maḡḡā* of the early Portuguese travellers; cf. Barros, Dec. iii, Bk. v, Ch. 1; on the west coast of Sumatra), it is 234 *ḡā* = 39 days 6 hours.

*By 6 *ḡā*' from the *farḡadain* = 2° 47' N.: from Mmī (on the African coast) to Pandīr (lit. Fanḡūr or Baros on the west coast of Sumatra), it is 248 *ḡā* = 31 days.

*By 5 *ḡā*' from the *farḡadain* = 1° 10' N.: from Brāwa (or Brāwa of the African coast) to the harbour of Priaman (on Sumatra), it is 264 *ḡā* = 33 days.

*By 4 *ḡā*' from the *farḡadain* = 0° 30' south: from Malwān (on the coast of Africa) to Indrapura (on Sumatra), it is 278 *ḡā* = 34 days 18 hours.

*By 3 *ḡā*' from the *farḡadain* = 2° 07' south: from Kīāwa (on the African coast = Quila in Barros, Dec. ii, Bk. i, Ch. ii.) to Sunda-bāḡ (lit. the straits of Sunda or of Sandle), it is 292 *ḡā* = 36 days 12 hours.

*By 2 *ḡā*' from the *farḡadain* = 3° 44' south: from Mombasa (on the African coast) to Sunda (west coast of Java), it is 306 *ḡā* = 38 days 6 hours.

*By 1 *ḡā*' from the *farḡadain* = 5° 21' south: from the Green Island (Arabic name for Pemba on the coast of Africa) to the island of Bālī (east of Java), it is 317 *ḡā* = 39 days 15 hours.

The 'Sailing Instructions' of Sulaimān al-Maḡḡī contain a certain number of detailed itineraries which are remarkably accurate. We give as an

example the itinerary from Diu to Malacca (fol. 88a, l. 15 to fol. 90a, l. 3) translating the Arabic nautical terms in the text by their English equivalents.

*Voyage from Diu to Malacca. When you leave Diu steer on the pole of Canopus, i.e. to the south for 2 *sām* (= 6 hours sailing); then to sunrise (*al-fajr* = to the east), keeping 8 *sām* (= 24 hours sailing) from the west coast of India. Keep your course towards Canopus (= south) until you reach 4 (*sic*) *iqbā'* from the *farḡadain* (= 7° 37' N. circa). Then steer for the rising of the Scorpion (S.E.) until you reach a point a little less than 7½ *iqbā'* from the *farḡadain* (= 5° 19' N.). Then steer to the fundamental rising (*maḥlā' al-afṣṣ* = due east) for 12 *sām* (= 36 hours), then to the rising of *al-mawāḥ* (= E.S.E.) until you arrive at 8½ *iqbā'* (6° 33' N.); then due east (still) and you will strike land south of the island of Sargul (in the archipelago of the Nicobars). When you strike land, leave the island on the left (i.e. on the north) and when you have passed it, steer for the rising of *al-ṣir* (= E.S.E.) for 4 *sām* (= 12 hours); then steer for the rising of *al-ḥilīl* (= S.E. ½ E.) until you reach 8 *iqbā'* from the *farḡadain* (= 6° N.). Then steer due east and pay attention at the same time to the flood tide to strike the beginning of the island of Perak, which is a little island lying at 8 *sām* (= 24 hours) from the coast. From Perak steer a course due eastward (until) you are in sight of the island of Pulo Pinang. If the flood tide is not running north and if you see the flood tide, steer from there to the rising of *al-ṣir* (= E.S.E.) and you will reach Penang which is an elongated island of which the two coasts are identical: it is black and is seen from afar. When you are near it steer for the rising of Canopus (= S.S.E.) up to the island (read: islands) [called] Pulo Sembilan which [in Malay] means the "nine islands". You will [then] distinguish on the coast two mountains which resemble the island of Pinang and which might be taken for two islands. They lie between the island of Pinang and the islands of Dingding and the two mountains are called Fan-ktra. After these two mountains you reach Dingding. They are two great elongated islands of the same size. After these lie the island of Tamburak which is a little round island.

*Know that the island of Pinang and [those] of Dingding lie near the mainland and there is a reef there. After Dingding you come to the islands of Sembilan which are islands with high mountains; some of these islands are small. When you arrive there, when you have taken in water and resumed the voyage, steer for the pole of Canopus (= south) for 5 *sām* (= 18 hours) and you will arrive at the island [called] Pulo Djumar. Between [the islands] of Sembilan and Djumar the sounding indicates 35 fathoms until you come to the island of Djumar where there are great depths. The depth is near to 40 or 50 fathoms. When you are near Djumar you see the part of the land on the coast of the sea but you do not see the [adjoining] coast of Sumatra. In clear weather you see the outline of the coast of Siam (= west coast of the Malay Peninsula) [and] the mountains [from which] tin is obtained. When you approach Djumar, coasting along the island steer for the rising of *al-ḥilīl* (= S.E. ½ E.) for 1 *sām* (= 3 hours); then towards the rising of *al-ṣir* (= E.S.E.). Know that at the rising of the Scorpion (= S.E.) from the island

of Djumar lies a reef on which the waves break. Keeping your course E.S.E. the depth diminishes to 18 fathoms roughly. Continue to steer E.S.E. When [you are far from the island] of Djumar and it appears to you level with the surface of the sea, you have before you [lit. in front of the ship] the mountain of the island of Pualir. Keep your course E.S.E. The sounding then gives 16 to 17 fathoms. When the sounding is less than 15 fathoms turn to the right (i.e. to the west). If it becomes more than 18 fathoms turn to the left (i.e. to the east). Such is the route that you must follow. Take care of the tide if you have the flood against you with a *ḡawḡ* wind (= whirlwind); otherwise the flood tide will carry you on to the reef. When you are near the island of Pualir and land appears to the south turn towards the reef for 8, 7, 6 fathoms of depth. The sounding sometimes gives about 9 fathoms. The point for which you are making is in this place. There is the bank of Kafūṣ (= Capata of the *Commentaries* of Albuquerque, Vol. iii, Ch. xvi. and xli.; Barros, Dec. ii, Book vi, Ch. ii.) and [there are] reefs. When you are on this route continue in the same direction keeping the *ṣanḡāḡ* (here "small boat") in front of you [to show the way], from the time you leave Djumar; and keep on taking soundings. I mean that when you reach the place where the reef lies — where the sounding gives about 7 to 8 fathoms — and when you follow the route already indicated, then after having doubled the reef, sounding increases to 15, 20, 25 fathoms. Know that [all danger] has now disappeared and that you are near the land. Then follow the route along the coast and steer towards the rising of the Scorpion (= S.E.) in 25 fathoms. Sometimes the sounding gives 30 fathoms, sometimes 25, 20. It diminishes or increases at each sounding from 5 to 6 fathoms. I think that the bottom varies in level on this route. When the tide turns against you with a *ḡawḡ* wind, slacken sail. [When you resume the voyage] follow the route [already indicated] until you reach Malacca; opposite this point lie the islands of Pulo Smit and the island of Pulo Ani (the name is written without diacritical points — it is perhaps the Pulo Aniol of our maps 8½ miles from Malacca). The *ṣanḡāḡ*'s will come to meet you. Make your arrangements for entering.

Chapter iii. of the same *Kitāb al-Minhādī* (iii.) contains the description of the principal islands of the Indian Ocean. The island of Sumatra for example is thus described (fol. 78a, l. 10 to 79b l. 6):

*Section to make known the island of Sumatra. Sumatra begins in the northwest where the *farḡadain* are a little less than 8 *iqbā'* in altitude (= a little less than 6° north). The island of Gāmis-fala is west of this cape. Near this cape i.e. the [north] cape of Sumatra, lie the islands of Mā-fala. These are large and small islands. As to the southern latitude of the island of Sumatra there are several opinions which I have given in [the work entitled] *al-Umda* (iii., l. 27b, l. 6-10). The most popular belief is that the island ends at the place where the *farḡadain* are 3½ *iqbā'* in altitude (= 1° 17' south, which is inaccurate, the south part is about 6° south). This is the route to follow on the west coast, from Gāmis-fala to Mākūṣīng, towards the rising of Canopus (= S.S.E.); from Mākūṣīng to Panḡūr (or Baros) towards the rising of *al-ḡimārīan* (= S.E. ½ S.); from Panḡūr to the

south end of the island, towards the rising of the Scorpion (= S.E.). This is the route to be followed on the east coast: from Gāmis-fula to Mās-fula, due east; from Mās-fula to the port of Sumatra (also called port of Pasē; cf. *Cartas de Alfonso de Albuquerque*, Vol. I, p. 45), the rising of *al-djauā* (= E. $\frac{1}{2}$ S.E.); from the port of Sumatra to Pulo Barhala towards the rising of *al-īḥlī* (= S.E. $\frac{1}{2}$ E.) — the *farḡadain* are there 7 *īḥlī* in altitude (= $4^{\circ} 24' N.$) —; from Pulo Barhala to the island of Djumūr also towards the rising of *al-īḥlī* (= S.E. $\frac{1}{2}$ E.). This route is [called the route] across; the route along the east coast to Sumatra is as follows: from [the port of] Sumatra to 'Arūh (sic) where the *farḡadain* are 6 $\frac{1}{2}$ *īḥlī* in altitude (= $3^{\circ} 34' N.$) towards the rising of the Scorpion (= S.E.); from 'Arūh to the neighbourhood of Rēkan to the rising of *al-djauā* (= E. $\frac{1}{2}$ S.E.) — the *farḡadain* here are 6 $\frac{1}{2}$ *īḥlī* in altitude (= $3^{\circ} 02' N.$). From Rēkan the land runs in the direction of the [south] pole, from there to the end of the island. This is said, but other statements are also made.

The known harbours of the west coast of the island are: The harbour of Panḡūr (or Baros); this is the port for camphor (*al-baīy*) (sic), gold and other products; the harbour of Triaman, famous among men, [which lies in the land] of Mankāwā (= Mimaḡkabaw); it is the port for gold-dust and slaves; the harbour of Indrapura which is now no longer known (i.e. at the beginning of the xvth century) but which was at one time famous.

The harbours of the east coast are: the harbour of Peḡūr under Mount Lāmūr; it is the port for pepper; the harbour of Sumatra (= Pasē); it is the most famous of the harbours of the island. It is a large town. It is the port for pepper, silk and gold; it is a busy harbour; the harbour of 'Arūh, it is a little port; the harbour of Rēkan, also small. The port of Palembang is also small. Among these small harbours are those for benzoin, and other products of these regions. As to the latitudes of these ports, I have given them in the chapter on latitudes and there is no need to return to the subject here.

NOTE HERE! (this is written in red ink to call special attention to the passage, just as it is printed in heavy type for the same reason in our modern Sailing Instructions). Know that on the coast of Sumatra which faces the high seas, the west coast, there is a series of islands. [This is] the route along them: from Gāmis-fula to the islands of Indrapura which are the first and beginning at the north [the route is] towards the setting of Canopus (= S.S.E.) — these islands are opposite Māḡfāḡ; — the distance between these two points is 8 *āw* (= 24 hours). Then to the south a large island with large (read: numerous) creeks and harbours called Māḡmūr were the *farḡadain* are 6 $\frac{1}{2}$ *īḥlī* (= $4^{\circ} N.$) in altitude. This is the land to which belong the cannibal Batak. We seek pardon and safety from Allah! — Between this island and the west coast of Sumatra is also 8 *āw* (= 24 hours). If from this island you sail towards the rising of *al-djauā* (= E. $\frac{1}{2}$ S.E.) you arrive at a group of islands which include: Pulo Bān (read: Banyak), Pulo Lumbū, Pulo Lala, the island of Talāḡh and the desert islands close to the coast. On the coast is the harbour of Shīḡal (sic) where the *farḡadain* are 6 $\frac{1}{2}$ *īḥlī* (= $3^{\circ} 34' N.$) in altitude. This is a place with reefs of rock. After these islands

sailing towards the south lies an island opposite Panḡūr (or Baros) — between these two points there are about 8 *āw* (= 24 hours) sailing; this island is called Mankāwā (sic). Know that the route from Mankāwā (sic) to Panḡūr is towards the rising of *al-īḥlī* (= S.S.E.); but take good care of the unhealthy parts of these regions.

*Among the known islands [of the region of Sumatra are the following]: the island of Nias which lies to the south of [the below] the harbour of Panḡūr (or Baros); the island of Pāsālūr which is to the south [of the island] of Panḡūr (same name as the preceding harbour on the east coast). In this island is a stream of water which never dries up. But how many other islands and reefs exist besides those we have mentioned!

We see from certain latitudes that the coast of Sumatra and especially the south side of the island was not well known by Arab sailors. Sulaimān refers to the direction which he has given in *al-Umūdā* (iii.) on the subject of the south point. It is evident that he did not himself visit this region and that he is content to reproduce information from other sources contradictory and inaccurate. "The island of Sumatra, he says (fol. 27b, l. 7 *opp.*), ends in the south at Tūḡ-tarmad (?). Opinions differ regarding the latitude of this place; some say that it is 4 *īḥlī* from the *farḡadain* (= $0^{\circ} 30' S.$) — this is the opinion of the majority of the people of Western India — others say a little less than 4 *īḥlī* — this is the view of the Arabs and Ḳolās — and others again who have verified this latitude say $3\frac{1}{2}$ *īḥlī* (= $1^{\circ} 16' S.$). Some say that the south end of Sumatra is 3 *īḥlī* (= $2^{\circ} 07' S.$).

On several occasions the author mentions the opinion of the Ḳolās about the latitudes of certain harbours. He had in mind the Sailing Instructions of Coromandel, more or less (identical with his own. None of the Indians or Hindus whom I have consulted in this respect knew of any such document in existence or having existed. It would be extremely useful if a search could be made in India to try to find these documents the existence of which is proved for the xvth century (cf. particularly 642, l. 13 *opp.*).

In fol. 5b, l. 1, the author says that the circle of 360° is divided into 224 *īḥlī*, which gives $1^{\circ} 37'$ for the *īḥlī*, $3^{\circ} 14'$ for 2 *īḥlī* and so on. In the last treatise (fol. 162b, l. 1), we are told on the contrary that the circle is divided into 210 *īḥlī* or $1^{\circ} 42'$ for the *īḥlī*. Sulaimān also says that the first division into 224 *īḥlī* is that of the ancients but that in his time, i.e. at the beginning of the xvth century, this division was reduced to 210 *īḥlī*. The first division is thus justified by Shīḡāl al-Dīn b. Maḡḡdī: "there are", says this *ma'allim*, "7 *īḥlī* from one rumb to the other and 8 *īḥlī* from one lunar mansion to the other", which gives the figure 224 for the circumference: $7 \times 32 \text{ rumb} = 8 \times 28 \text{ lunar mansions} = 224 \text{ } \dot{\text{ī}}\text{ḥlī} = 360^{\circ}$. This conversion is thus perfectly coherent but we do not see on what basis the division of the circle was later reduced to 210 *īḥlī*. All the altitudes in *īḥlī* mentioned in the present article have been converted into degrees at the rate of $1^{\circ} 37' = 1 \text{ } \dot{\text{ī}}\text{ḥlī}$.

SULAIMÂN ÇELEBİ (Emir), son of Yıldırım Bāyazīd I, was ruler of Sarukhān and Karad; after the defeat at Angora he came to Adrianople. He was ruler of Turkey in Europe and in 1403 concluded treaties with the Emperor of Byzantium and with Venice. From 1406 he was engaged in Anatolia fighting his brother Mehmed Çelebi and in Turkey in Europe fighting his brother Mūsā Çelebi. Abandoned by his followers he was killed on Feb. 17, 1411 in the village of Dugundjilar. His brother Mūsā had his body brought to Bursa, where he was honourably buried beside his father. Although he ruled for over seven years in the European part of the empire, he is not reckoned among the Ottoman Sultans.

SULAIMÂN ÇELEBİ also called **SULAIMÂN DİR** is the earliest Ottoman poet of whom an original poem written in Turkish has survived and who is still known and popular at the present day. Turkish poems of earlier date are either translations like the *Sukull u-Newbahār* of Mevūd b. Ahmed (VIIIth century A. H.) published by Meidmann in 1925, or they seem to have been completely lost, like those of Mevlânâ Nizâmî and those of the grandfather of our poet Shaikh Mahmūd Efendi, who wrote a *taknîye* (congratulatory poem) for the Shihādâ Sulaimân Paşa b. Orkhan on the conquest of Rumelia.

Little is known of the life of Sulaimân Çelebi. He flourished in the time of Sultan Bāyazīd Yıldırım (d. 805 = 1403); he was born in Bursa, as son of Ahmad Paşa, Murād I's vizier and was Khalifa to the celebrated Khalwati Shaikh Amir Sulhān (d. 833 = 1429). Later he was Imam to the imperial *atme* under Bāyazīd and after his death became Imam at the great Bāyazīd mosque in Bursa. There he died in the year 825 (chronogram *vāḡat-i Ermiṣ*) and was buried outside the town on the road to Çekirge.

His only famous work is the *Mevlâd-i Nibî* or *Mevlâd-i Prighamberi*, called *Wastet ul-Nuḡat*. It is the oldest Ottoman example of this kind of panegyric on Muhammad, and in the course of the next five centuries had almost countless (over a hundred are mentioned) imitations which according to the unanimous opinion of the Turks all fall a long way behind this, the oldest, *Mevlâd*. It is therefore almost exclusively recited at all *mevlâd* festivals on 12th Rabi' I (cf. MAWLID).

The sources tell a story about the origin of this poem which, while not without legendary features, is interesting for the difference between Arabs and Turks in those days. A khatib in Bursa expounded Sūra II, 285 to mean that God did not prefer one prophet to another, not for example Muhammad to Jesus. This was fiercely refuted, notably by an Arab from Syria who did not rest till he got a *fevâd* against it from home and finally killed the Bursa khatib. This conflict is said to have been the cause of first a verse, then of a whole poem, the leading idea of which is the unique position of Muhammad.

The poem written in *mathnawî* verses, contains about 600 couplets and is divided into 18 sections. It describes not only the birth of the Prophet but in a prologue, after the usual exordium, develops the theory of light, of the migration of the divine light from Adam through the whole series of prophets to Muhammad. The main part deals with the marvels which foretold the birth of Muhammad, the joy of the angels, the birth itself, Muhammad's parents, etc., the popular miracles wrought by him, such as the cleaving of the moon, the fact that his body threw no shadow, that roses grew where his breath fell. The ascent to heaven (*mir'âḡ*) is then fully dealt with and finally his last illness and death.

The style is very simple and for this reason attractive and very effective; the language is pure Ottoman in the Bursa dialect. There exist numerous manuscripts, in European libraries also, but unfortunately there seem to be none very old, which might form a sound basis for linguistic study. There are also translations of the poem, which are listed by Tahir (see below): a Bosnian, a Greek, two different Albanian and one Circassian.

(WALTHER RJOVENAN)

SULAIMAN PASHA (1316-1359), the eldest son of the second Ottoman Sultan, Orkhan (1326-1359), and of Nillifer (Lalifer) daughter of the Greek lord of Yar Ilgar. His younger brother was Murad Khan afterwards Sultan. Only Greek sources record a third brother Khalid and his romantic abduction by a Greek comar (cf. J. I. Hodoi Efendi, *Shahade Khatun Sergüdüshiri*, *Revue Historique*, I, No. 4, p. 239; No. 7, p. 436, Constantinople 1328/1329). The title pasha which he bore, according to ancient custom, marks him as the elder brother, as is the case also with 'Ala al-Din Pasha (in old chronicles often called simply 'Ali Pasha) who has the title pasha in contrast to his younger brother Orkhan (Namiq Kemal, *'Osmanlı Tarihî*, Constantinople 1326, I, 137; Ahmad Qawad, *Tarihî-i Askeri-i 'Osmani*, Constantinople 1299, p. 5).

According to the usual tradition Sulaiman Pasha was the second grand vizier of the rising Ottoman kingdom, succeeding on the death of the first grand vizier his uncle, the above mentioned 'Ali al-Din Pasha, who had resigned his claim to the title Sultan or rather Beg due to him after the death of 'Osman I. But this can hardly be right, as the oldest sources (Neshri, *'Ashk Pasha-nâme*, the anonymous chronicle ed. by Giese) only talk of the older brother's renunciation of the throne by his father's orders on account of his unwarlike temperament and inclination for the contemplative life of a dervish and of his express refusal of the vizierate which was then offered to him. The reforms recorded by the chroniclers as suggested by him in the army, dress and coinage, may readily be attributed to proposals of the older brother.

In any case the alleged grand vizierate of Sulaiman Pasha is not at all in keeping with the later conception of this office. From the very first his father gave him a share in the development and expansion of the kingdom in keeping with his military inclinations and abilities, especially as a leader in the field in military operations, as they became necessary — there was not yet the later traditional objection to the Sultan's sons filling important offices — from the taking of Iznik and Isnik (Nicaea) in 1331 to the inclusion of the European coast of the Dardanelles in the Ottoman sphere of influence. Sulaiman is said to have been the first to hold the title Ser 'Asker. He led the Ottoman forces independently, especially as Orkhan latterly never took the field at all.

As it is to be deduced from the absence of any reference to military operations, after the voluntary alliance of Orkhan by treaties and matrimonial links with the Greek ruling house, there seems to have been a pause for about twenty years in the policy of conquest, which was used for consolidation in internal affairs until Sulaiman Pasha put an end to this stagnation and by a bold coup resumed the expansion of Ottoman power, skillfully taking advantage of the discord in the Greek empire in which three claimants were fighting for the throne, and giving as an excuse the combination of the Byzantines with the Genoese and Venetians.

At his father's suggestion in 758 (1356) Sulaiman with only 80 followers (including Evrenos Beg, Hadidji Ilbegi, Adje Beg, Ghazi Farid Beg) crossed, for want of boats, on rafts from the peninsula of Cyrcus (Kajur daghi) to the European shore of

the Dardanelles and took by surprise the fortress of Çemeni (Tympe), the modern Wirandje Hisar. After some 18 Turkish corsair raids on Europe, this was the first crossing with permanent results. Sulaiman at once sent for troops and Muslim settlers from Asia Minor and extended his success by taking further strongholds, notably that of Gallipoli, the key to the Dardanelles, and the whole of Rumelia, which was surrendered to him after a battle with the Greeks, Malghara, Ipsala, (Kypsele), Bulair, Tokfur daghi (Rodosto), etc. The Byzantine story of an earthquake destroying the walls and rendering the fortresses defenceless is obviously an attempt to conceal the disastrous results of Greek policy.

Sulaiman took up his residence in Bulair where he built a mosque and a palace (he had also erected mosques in Brussa and Isnik). But before he could set in motion his further extensive plans for the conquest of Rumelia, he was suddenly carried off by death in 760 (1359); while he was out hawking near Bulair his horse fell and he was mortally injured (Neshri, *Djihan-nümâ* and Kâtib Çelebi, *Tokturk al-Tawârikh*, Constantinople 1146, p. 94 give the year 760, while the anonymous chronicle ed. by Giese and Leunclavius 759 and 'Osman-nâmâ Tâ'ib Ahmad, *Hadikat al-Wus'at*, Constantinople 1271, p. 5 give the year 761).

In keeping with a wish he is said to have expressed in his lifetime, Sulaiman was buried in Bulair, being the first Ottoman prince to be interred on European soil. This was a symbol of the firm resolve never again to abandon the new won ground. The existence of his tomb made impossible the idea of going back to Asia Minor which arose in the minds of several of his comrades-in-arms immediately after his death. They successfully drove off the attacks of the combined Christian forces.

Sulaiman's tomb has penetrated to the very soul of the Turkish people; it was and still is one of the holiest places of national pilgrimage, a fact that found particular expression, when the national hero of the Turkish liberation movement, Namiq Kemal (q. v.), was interred here.

The tomb of a daughter of Sulaiman is in Aşkhehir (Ahmad Tewhid in the *Revue Historique*, Constantinople 1907, No. 44, p. 106).

SULAIMÂN PASHA, known as Kūānāt, the "eunuch", a Turkish general and statesman of the time of Sulaimân the Great. He began his career in the Imperial Harem, which he left with the rank of *madr* to take over the governorship of Syria. As *Mir-i Mirān*, he was then summoned to the important office of governor of Egypt which he filled for ten years (931—941 = 1524—1534) with vigour and circumspection. He was the first to send to the Porte the yearly revenue from Egypt, the so called Egyptian treasure, later so important for Turkey.

In reply to the appeal of the Sultān of Gūjārat he was ordered by Sultān Sulaimān to equip a considerable fleet at Soer and to strengthen Turkish power in the Red Sea and to drive the Portuguese out of India. This was the period when Khair al-Din Barbarossa (q.v.) was extending Turkish power in the Mediterranean. Sulaimān Pasha succeeded in adding 'Aden and the whole of Yemen to the Ottoman Empire. He appointed Mustafa Beg, son of Baykūl Mehmed Pasha, first governor of Yemen. But his efforts in India proved fruitless as he was not properly supported by the Indian rulers.

Returning to Constantinople, he became a member of the Council of Vizers which consisted of four viziers and governed the country (Lutfi Pasha, Sulaimān Pasha, Mehmed Pasha and Rustam Pasha). After the fall of Lutfi Pasha he became grand vizier. He filled the office in an important period (Hungarian campaign), for four years (948—951 = 1541—1544) until he came into conflict with the vizier Khomaw Pasha over a faithless page. The mutual reproaches about various derelictions of duty ended in both being deposed and an investigation ordered. Sulaimān Pasha was banished to Malghara where he died in 955 (1548). He was able, vigorous and just, which contradicts the low opinion usually held of a eunuch.

MENZEL.)

SULAIMÂN PASHA, MALAYĀLI EMEKİ, a Turkish general and statesman under Mehmed IV (1648—1687). A native of Malatya, of Armenian origin, he rose from page to *alīshāh* and became governor of Erzerūm and Siwās with the rank of *madr*. He married 'Aṣṣe Sultān. In 1065 (1655) he was appointed grand vizier in succession to Murād Pasha but he only held office for ten months on account of the confusion in the empire as a result of the mutinies in the army and the complete financial ruin. He was several times banished and again recalled to high office. In 1098 (1687) he died in Scutari at the age of 80 and was buried there.

(TH. MENZEL.)
SULAIMÂNĪYA (SULEMANI), a town and district in southern Kurdistan. A distinction must be made between the *paḍā* of Sulaimānīya proper (the canton of Sar-ḥinār) and the territory formerly ruled first by hereditary *qashās* and later by the Ottoman mutasarrifs of Sulaimānīya.

The historical region of Sulaimānīya lies between the Persian frontier, the Diyāla (q.v.), the lands that go with Kirkūk (q.v.) and the little Zab and occupies the group of mountains from which flow rivers to the east (Sirwān; cf. *SHARH*), the south ('Adām, q.v.) and the north and northwest (left bank tributaries of the Little Zab; cf. *SHAWH*).

Geography. The mountain chains which separate these three basins of the left bank tributaries of the Tigris, rise gradually from the Mesopotamian plain and have the general direction N.W. to S.E. like all the ranges of western Irān. Different summits in the southern barrier are called Basīn, Bā-Serrā, Segirma, Kara-dagh and Pā-Kāl. To the S.W. of this line on the upper waters of the 'Adām lie the districts of Čamčaml (this is also the name of the district in Persia which includes Basūn), Rihāt, etc. The second range of mountains includes peaks like Tokma, Taghlāja, Darmānā (Gīlārda) etc. Between the first and second chains lie to the west the upper waters of the Ta'wāl and to the east the plateau of Naw-kōpt, the canton of Kara-dagh, etc. which are watered by the 'Awī-dānā, which flows into the Diyāla (Sirwān). The third chain includes Āmir, Gwōn etc. It forks towards the west (along the little Zab); on the southern arm of the latter is the summit Pir-'Omar-Gudrūn (8,000 feet) which is visible from a long way off and seems to form the centre of all this mountainous region. The area between the second and third barrier is drained towards the west by the Tān-gu (Doh-drel), which runs into the little Zab and to the east by the Tān-gō-rō (Tān-gō-rū) which flows into the Sirwān. On the upper waters of the Tān which rises behind Pir-'Omar-Gudrūn lies the canton of Sūrdagh; the Tān-gō-rō waters the canton of Sar-ḥinār in which lies the town of Sulaimānīya. The chain of Āmir sends out spurs to the east, the Kari-Kāṣṣ, Kāl'a-Sāṣṣ etc. which rejoin the Awerāmān chain (cf. *SENNE*). To the south of this spur lies Shahrīzū (q.v.) in the strict sense of the word. To the north of Āmir lie the cantons of Serōṭik and Shars-hāz (Kara-ḥwōlān). The river of the latter (Gawgāsur) rises in the depths of Awerāmān (in the valley of Pirān) and receives on its left bank the waters of Serōṭik and on the right the waters of Kīfīdja. This latter canton lies north of the mountain (Sar-Sir) which rises from the right bank of the Kara-ḥwōlān. Its administrative centre is Pendjwin from which one can reach Persian territory. Before regaining the Kara-ḥwōlān the river of Kīfīdja receives on the right bank the river Tān which drains the canton of Shīr (Tān-dū) which lies inside the curve here made by the Persian frontier, and the waters of the canton of Sūwēl, the administrative centre

of which is *Shiwa-kal*. Contrary to the indications of the maps, the combined waters of the *Karā-ḫwān* and the *Khārdja* flow into the little *Zāb* in the canton of *Māwāt* (a short distance below *Teyet*; cf. *Čirikow*, p. 556; *Khurshid Efendi*, p. 398; cf. *Ṣawwaj-Bulak*). The part of the territory of *Sulaimāniya* lying between the left bank of the *Karā-ḫwān* and the chain of *Āzmir* (the districts of *Sargatu*, *Murga*) is not yet well known. The little *Zāb* forms the natural frontier between *Sulaimāniya* and *Kōi-sandjak* but the canton of *Pīdār* (*Kāfa-Dīka*) lying on the right bank of the little *Zāb* (between *Rāniya* and the *Kandil* range) regularly formed part of *Sulaimāniya*. The *Bābān* pāshās also often seized the adjoining cantons (*Khurshid Efendi*, p. 246: the cantons of *Agdžalar*, *Askar*, etc. went with *Kōi-sandjak*) and sent governors to *Kōi-sandjak* etc. (*Rich*, i. 157, 313, 384).

History. The district of *Sulaimāniya* is known from the earliest times. Mount *Nisr* (in *Lullu*: *Kniba*), where according to the Babylonian epic the ship of *Gilgamesh* rested during the Deluge, can only be *Pr-Omar-Gudra*. The region of *Sulaimāniya* corresponds to the land of *Zamun* occupied by the *Lullu* people, the southern frontier of which was on the col of *Babite* (the modern *Bāsin*). In 880 B.C. *Assur-āšir-pal* conquered all the kings of *Zamun*. A stele found at *Darband-i Gawr*, north of *Kān-dagh* seems to belong to a *Lullu* king. *Brzowski* mentions another ancient bas-relief at the entrance to the defile of *Derhend* through which the little *Zāb* forces a passage, to the extreme northwest of the territory of *Sulaimāniya*. *Hertzfeld* (*l.c.*, xi. 127) mentions ruins at *Sitak* in the canton of *Serōtik*. In 745 B.C. *Tiglath-Pileser III* transplanted to *Mazama* (*Māt-Zamna*, *Forrer*, p. 43) *Assurians* who had lived in northern *Mesopotamia*. In the *Sāsānian* period we have in the extreme S.W. of the territory of *Sulaimāniya* the famous monument of *Pal-kāl* (cf. *Ṣahārtz*). In the history of the Syrian church the district of *Sulaimāniya* formed part of the diocese of *Beth Garmai* (*Hoffmann*, *Auszüge*, p. 253).

In the *Muslim* period the history of the region was at first involved with that of *Shahrīstān*. *Sulaimāniya* had a more or less autonomous existence from the end of the xth (xvth) century to 1267 (1850). The local dynasty was called *Bābān*. According to the *Shāraf-nāma* (i. 280—288) the first chief and the eponym of this family was *Pir Būdāq Bāb* (probably about 1500). The house of this tribe seems to have been to the west of *Kandil* (cf. *Ṣawwaj-Bulak*). The direct descendants of *Bāb* were soon supplanted by their subordinates but this second line disappeared also and about 1005 (1596) the tribe had no recognised chief. A new line (of the clan *Sakr* of the tribe of *Bilbās*; *Rich*, i. 270) came from the village of *Derishmāna* to the canton of *Pīdār*; it had a legendary genealogy claiming descent from a young "Frank" woman called *Kēghān*, whom their ancestor had taken prisoner in a battle. The true founder of this third dynasty, *Bābā Sulaimān*, came to the front 1088 (1677) and in 1111 (1699) took service at the Ottoman court. *Rich* (i. 381—385) gives a list of his descendants, who include 17 *Bābān Pāshās*. The representatives of this local dynasty cleverly maintained their position between the two rival powers, Turkey and Persia, but they were really under the *Pāshās* of *Baghdād*, who

themselves held a very subordinate position with respect to the Sublime Porte. *Mahmūd Pāshā* who received *Rich* on his memorable journey through *Kurdistan* and in whom *Rich* (i. 322) tried to arouse the Kurd national pride finally submitted to the Persians. The latter invaded *Sulaimāniya* in 1842 to re-establish *Mahmūd Pāshā* but by the treaty of 1847 Persia withdrew all claims on the town and sandjak of *Sulaimāniya* in favour of the Turks (text in *Čirikov*, p. 631). The last ruler of the family of *Bābān*, *Abd Allāh Pāshā*, was deposed by the Turks in 1267 (1850) (*Khurshid Efendi*, p. 209).

It may be mentioned that the *Bābān* family was simply a conquering and warrior caste. Alongside of the *Bābān* and under their suzerainty lived several other warrior tribes (*aghras*) of which lists are given by *Rich*, i. 280 and *Khurshid Efendi*, p. 217. The principal of these tribes was *Djaf* (cf. *SEVNE* and *Ṣahārtz*). Later we often find mentioned the turbulent tribe of *Hamāwand* of *Camfāmāl* which claimed to have come from Persian *Kurdistan* (its name resembles those of the *Lūr* tribes). The *Hamāwand* in the course of their razzias used to come down as far as the banks of the *Tigris* (*Cholet*, *Arménie, Kurdistan et Mésopotamie*, Paris 1892, p. 295—311).

Beside the clans which had kept their tribal organisation there were in *Sulaimāniya* as elsewhere in *Kurdistan*, the peasants (*gārān*, *kelāzji* "white caps", according to *Rich*, i. 80).

At first the capital of the *Bābāns* was at *Shara-Bāzār* (*Shahr-i Bāzār*) in the first valley conquered by *Pir Būdāq Bāb* but *Ibrahim Pāshā* moved his residence to the canton of *Sar-Čindir*, where he founded about 1199 (1784) (*Rich*, i. 387) the town of *Sulaimāniya* on the site of the village of *Malik-Hind* (*Malik-Kendī*) built around an ancient mound which had to be cleared away on the occasion. The town was called after *Büyük Sulaimān Pāshā* (of the family of Georgian *Mamluks*), governor of *Baghdād* in 1780—1802 (*Humr*, *Histoire de Baghdad*, Paris 1901, p. 159). Towards 1820 the town had 2,000 households of *Muslims*, 130 of *Jews*, 9 of *Chaldean Catholics* (who had a little church) and 5 of *Armenians* in all 10,000 souls. There were 5 mosques in *Sulaimāniya*. In 1868 *Lycklama* estimated the population at 6,000 Kurds, 30 families of *Chaldeans* and 15 of *Jews*.

Under Ottoman rule *Sulaimāniya* remained the nursery of an indefinite Kurdish movement. The local Kurds supplied Turkey with a large number of officials and particularly army officers. Several *Bābāns* became distinguished in Constantinople, like *İsmail Hakkı Pāshā*, unionist minister and diplomat in 1909—1914. After the deposition of the *Bābāns*, a great part in politics was played by the family of religious *Shaykhs* of the family of *Baccandja*, whose ancestor *Hādjdj Kaka Ahmad* enjoyed a great reputation for sanctity and is buried at *Sulaimāniya*.

Although the conquerors in 1918 had only talked of independence for *Arabs* and *Armenians* at first, the idea of Kurd emancipation made wide progress between 1917 and 1920. *Sulaimāniya* was eventually to be included in "Southern Kurdistan" the autonomy of which was provided for in Articles 62—64 of the treaty of *Sèvres* (Aug. 10, 1920). However, as a result of long negotiations about the wilāyet of *Mōsul*, this latter territory including the sandjak of *Sulaimāniya* was

definitely included in the new state of Iraq. By the same decision of the Council of the League of Nations of Dec. 16, 1925 a certain local autonomy was granted to the Kurds (administrative officers of Kurdish origin, official use of the Kurdish language and Kurdish schools).

The official negotiations were accompanied by considerable local complications. Not only did Sulaimaniya in Jan. 1921 refrain from taking part in the plebiscite for the election of King Faisal but numerous disturbances broke out in the district. The principal instigator of the insurrectionary movement — Muslim in character and obviously aiming at the creation of a Kurd state — was Shaikh Mahmūd Barazūjī. He rebelled on May 21, 1919 and was supported by the chief of Awshām (cf. *supra*). By June 18, Sulaimaniya was re-occupied by British troops and Shaikh Mahmūd deported to India. However when under the threat of risings in Cāmāmīl and Rēniya, Sulaimaniya had to be abandoned in Sept. 5, 1922, Shaikh Mahmūd was permitted to return. In October he proclaimed himself "Hakmdār" of all the Kurds of the Iraq. His suspicious attitude caused Sulaimaniya to be bombed from the air on March 3, 1923 and Shaikh Mahmūd then retired to Sūdīsh. Re-occupied on May 26, 1923, Sulaimaniya was again evacuated and on July 11, Shaikh Mahmūd returned for the third time and was recognised by the authorities at Baghdad. An attempt on his part to occupy a detached canton of Sulaimaniya provoked new air raids (Aug. 16, Dec. 25, 1923 and March 25, 1924). Shaikh Mahmūd's headquarters were destroyed and he himself driven back on the Persian frontier. As a result of all these events the urban population of Sulaimaniya in July 1924 had been reduced to 700 persons but by November it had risen again to 20,000. The lives of Sulaimaniya consisting of 6 *kaḍās* viz.: Sulaimaniya, Cāmāmīl, Halabdjī, Kāf'a-Dira (Pikar), Kāra-dagh and Shurabār — which are again divided into 17 *nāhiya* — had in 1924 a total population of 189,000 Kurds, 1,550 Jews and 75 Arabs.

(V. MINORSKY)

SULDŪZ (Suldūza). 1. A tribe in Mongolia. According to Bérénice the Mongol form of the name would be Suldēs (plural of *sulda*, "good fortune"). L. Ligeti (*Die Herkunft der Volksnamen Kirgis*, *Körsel-Csoma Archiv*, Budapest 1925, I) sees in the ending of Suld-uz, as in that of Kīrk-iz the remains of an ancient Turkish plural suffix (cf. *his*, "we", *sin*, "you", etc.) and as a hypothetical singular quotes the name of a Kīrkiz clan: Salt, Sulta. Hāshid al-Dīn classifies the Suldūs among the *dūrlākin* Mongols, i.e. of "common" origin, in contrast to the "pure" (*shēn*), who however were descended from the *dūrlākin* through Alān Gōū, the miraculous grandmother of Čingis-Khān.

Sūrgān-Shira Suldūs one day saved the life of Čingis Khān while the latter was fighting with the Tāitūt. This exploit gained the Suldūs great prestige with Čingis Khān and his successors.

The children of Sodō came to Persia with Hūlāgū-Khān whose wife Yesūcūn (mother of Abagha) was a Suldūs. Malik is said to have conquered the Persian Kurdistan. In 688 (1289), under the Ilkhān Arghūn, an act of bravery brought to the front Čobān, son of Malik (cf. I, p. 104*) and he afterwards distinguished himself in the reigns of Ghāzān and Uljāitū. The history of the latter written by Kāshānī (Bibl. Nat., Suppl. Pers., 1419, fol. 6) is a list of the Amīr-mentions Čobān (*Amīr-i buwurg muḥammad-i Tāik wa-Turk*) in the second place next to Kātūghshāh Maḥmūd but adds that in ability he is superior to all. There is a letter from Pope John XIII., dated Avignon, November, 12, 1321 addressed to "Zohar Begilay" (Čobān?). In spite of the Shī'a leanings of Uljāitū, Čobān remained Sunni. When the young Abū Sa'īd (716 = 1316) (cf. I, p. 103b) ascended the throne Čobān became regent and in 719 (1319) married Sātī-beg, daughter of Uljāitū-Khān. The increasing influence of the family of Čobān and the evil conduct of some of its members aroused the monarch against

them. A series of persecutions began. Čobān took refuge in Herāt and was killed there in 728 (1327) by Ġhiyāth al-Dīn Kart.

A dynasty with a short but stirring life descended from Čobān (the Čobāni) arose in the period of troubles that marked the end of the line of Čingiz in Persia. Among the 18 children of Čobān the following are the best known: (1) Amir Hasan; (2) Dimishk-Khādjā, executed by Abū Sa'id in 727 (1327); (3) Timūr-Tāsh, from 718 governor in Asia Minor, rebelled in 722, struck coins in his own name and even claimed to be the Mahdi; his father brought him back to obedience but after the death of Čobān, Timūr-Tāsh, went to Egypt where the Mamlik Nāṣir, fearing his popularity and to please Abū Sa'id had him executed in 728; (4) the beautiful Baghdad-Khātūn, wife first of Hasan Buzurg Djalā'ir [q. v.] and next of Abū Sa'id; suspected of having poisoned the latter she was executed after the accession of the Ilkhān Arṣū.

Os Hasan Kūčik, son of Timūr-Tāsh, who ruled between 738 and 744 at Tahriz, Sultāniya, Hamadān, Kūm, Kāshān, Raiy, Warmin, Farāghān and Karāđ, cf. II, p. 280b. His brother Malik Ashraf succeeded him. His oppressions provoked the migration of the Kādī Muhyi 'Dīn from Herāt to Džāni-Beg, Khān of the Western Kipčak. Džāni-Beg without delay attacked Malik Hasan who was defeated, captured and executed in Tabriz in 756.

The Suldūz (Suldūz) after this are only occasionally mentioned by the historians. Under 807 (1404) Mirkhāṣād mentions the instructions given by Timūr to the Khālādī of Sāwa to reinforce the troops under Pir 'Alī Suldūz in Raiy. At the present day there is still a body of Suldūz in this region among the Shāh-serān [q. v.] of Sāwa.

Several women of the Čobāni had remarkable careers. Besides Baghdad-Khātūn we may mention: (1) Sati-beg widow of Čobān, who was first the wife of the Ilkhān Arṣū and in 739 was herself placed on the throne by the grandson of her first husband, Hasan Kūčik. Finally the latter married her to the new pretender Sulaimān who reigned from 740 to 744. (2) Dūghād-Khātūn, daughter of Dimishk-Khādjā first of all married Abū Sa'id (at the same time as her aunt Baghdad-Khātūn) and then Hasan Buzurg Djalā'ir. (3) Malik 'Izzat, wife of Hasan Kūčik, whom she killed in an indescribable and atrociously cruel fashion. She was executed by her husband's relatives. They cut her into pieces which they ate.

In Mongolia in the time of Čingiz the encampments of the Suldūz seem to have been not far from the river Onon. But in the time of Rashid al-Dīn the *yurt* of the Suldūz was near the forests inhabited by the forest-dwelling Uriaṣkit. The Chinese list of Mongol encampments published in 1867 (*Mong-gu-yu-ven-tsi*, Russ. transl. by P. Popov, St. Petersburg 1895) no longer mentions the Suldūz. In Turkestan the Suldūz with their subdivisions (?) Nukur and Tamadur, are mentioned among the troops of Shāhān [q. v.] at the beginning of the xth — xvth century. Later the Suldūz rejoined Bāhūr (*Shāhān-Nāma*, ed. Melloranski, St. Petersburg 1908, p. 137, 176; cf. the *Schribaniadi* of N. Vambéry, Vienna 1885, p. 273, 350). According to information given me personally by Zeki Walidi Ōzbeḡ genealogies (*Shāhān*) mention the Suldūz among the 92 Ōzbeḡ

clans; the people of the canton of Alifn-kul in Farghāna [q. v.] are Suldūz and there must be some in Kāziwa (Khāzrim) alongside of the Nukur.

Bibliography: Rashid al-Dīn, ed. Bérézine in *Trudy Vostoč. Otdel.*, especially vii. (St. Petersburg 1861), p. 224 *seq.* and indexes to Vol. v. (1858) and xv. (1888); Ibn Baṭṭūṭa (*Défécure et Sanguinetti*), i. 172, ii. 119—125. Other references in the article HANAN-BUZURG, i. 297 and E. G. Browne, *A History of Persian Literature under Tartar Dominion*, 1920, p. 54, 170. Later eastern writers recall the Suldūz origin of the Čobāni: Turk. transl. of Munadjjim-Baḡhī (Constantinople 1285), iii. 6: Asuldūz; Abu 'l-Ġhārī (ed. Granmaison, St. Petersburg 1871), i. 166: Suldūz. — According to Vladimirtsev, *zild* means in Mongol: "le génie-protecteur habitant le drapeau". 2. A district in Ādharbāidjān, to the south-west of Lake Urmia, on the lower course of the Ġādir-Čāl, which here receives on its right bank the Bāisāwa and Mamad-ghāh and flows into the Lake. To the west it is bordered by Ushnū which lies on the upper course of the Ġādir from which it is separated by the Darband gorge through which the river runs; to the north it is bounded by the little district of Dōl (cf. Dōl-i Bārk in the *Shāraf-nāma*, i. 288) belonging to Urmia; to the south and the east by the cantons of Paswa and Shāri-wērān which go with Sawdī-Bulṭ [q. v.].

Suldūz is a fertile plain producing much wheat. It is often flooded by the waters of the Ġādir, which near its mouth forms marshes and salt beds (*šepi*). On the south side Suldūz is bordered by the heights of Firangī at the foot of which are numerous springs impregnated with lime. The crest Bahrāmī separating Suldūz from Shāri-wērān is also of limestone formation.

We know that in 703 (1303) Ġhāṣān distributed the land in *fiefs*. It is possible that it was at this time that the name of the tribe (Suldūz, in Kurdish: Sundūz) replaced the old name of the district now lost.

According to the *Shāraf-nāma* in the time of the Turkoman dynasties (about the xvth century), i. e. long after the Čobāni had disappeared, the Makri Kurds occupied the district the old inhabitants of which were probably reduced to servitude. The same authority (i. 280) in a sentence now mutilated in the MS., and undated, says that Pir Budāk of the Kurd tribe of Bābān (Babē) took Suldūz from the Kizilbāsh which may refer to one of these sudden outbreaks of fighting on the frontier in the time of the Šafawī.

In 1828 'Abbās-Mirā gave Suldūz as *fief* to 800 families of Kara-papākh [q. v.]. The newcomers were allowed to levy and collect the taxes (12,000 *tomāns* a year) and in return had to maintain 400 horsemen at the disposal of the government. At this period there were in Suldūz 4—5,000 families of Kurds and Muḡaddām Turks but gradually the lands passed into the hands of new Shā'ī masters.

The divisions of the Kara-papākh are as follows: Tarkawān, Sarī, 'Arapli, Džān-Aḡmadli, Čakhāli and Ulačli. Each has retained its hereditary chief. The principal division is the Tarkawān to which the Khāns belong. Mahdi-Khān, son of Nakīkhān, had brought the Kara-papākh to Suldūz. His grandson Nadjaf-kuli was the chief

of the tribe before 1914 but another Khān actually exercised the functions of government. The division of Turkawūn also included a family of *aghās*, inferior to that of the Khāns but quite important; Aras-Agha was lord of a hundred horsemen.

There are at present 123 villages and small towns in Suldūz with 3,000 families. The chief is Naghāda (Nahāda; Rawlinson writes: Nakhoda?) with a thousand houses. This little town lies on the bank of the Bāzūwa around an ancient artificial mound. Another important centre is Rāhdāna (Rah-dahna) where there is a good bridge over the Gādir which provides communication between Urmia and Sawlū-Bulāq.

The village of Khālfān is inhabited by Sunnī Kazakh who also came there in 1828 from the neighbourhood of Tiflis.

The south-east corner of the district is occupied by the canton of Mamādhāh the name of which is mentioned in the *Sharaf-nāma* (i. 290). The present inhabitants are Shamsaddinī Turks. With their chief Māsi-Beg they came into Persia at the same time as the Kazakh and received from 'Abbas Mirā 3 villages with 100 families of Kurd peasants (*ra'iya*).

The Sunnī Kurds of the tribes of Mamash, Zarzā and Mukri number 2,000 families, or a quarter of the present total of the population. They entirely occupy 10 villages (Ghīlwan, Wara, etc.), and 11 others (Cānā, Naghāda, Mammiand, etc.) they share with the Kara-papākh.

Suldūz like Ushnū is mentioned among the Nestorian bishoprics (Assemani, iv. 423; Hoffmann, *Ausgabe aus syrischen Akten*, 1880, p. 204; Saldū, Saldū) but in 1914 there were only 80 Christian families left in Naghāda. The Jews are more numerous (120 families in Naghāda) and are probably the oldest element in the present population of the district.

Under the Turkish occupation of 1908–1912, the Shi'ī Kara-papākh suffered considerably as the Turks regarded them as Persian agents. The Turks, without success however, tried to destroy the tribal organisation and to emancipate the *ra'iya*'s. During the Great War the village of Haidar-ābad (on lake Urmia) became a Russian naval base and a light railway was built through the district. Suldūz changed hands several times but since the departure of the Russians and Turks it has been able since 1919 to regain its status quo ante.

SULH, composition, settlement, which is recommended as early as Kurān, iv. 127, is a contract of sale (*bai'*) with the object of averting a dispute (cf. the Roman-Byzantine *transactio*, *diakroie*; *Cod.*, 2, 4, 21; also *Dig.*, 2, 15, 1). The rules of *bai'* hold for it, especially *fuḥl* and *ijfāḥ*. There are three kinds of settlements: the defendant either acknowledges the disputed point to be justified (*īfrār*) or he disputes it (*inādr*) or he says nothing (*ināḥ*). The older jurists differ on the admissibility of these three kinds: al-Shāfi' and Ibn Abī Lailā demand definite acknowledgment, while Abū Ḥanīfa denies the possibility of a *qulḥ* in the case of *īfrār* (al-Shāfi', *K. al-Umm*, iii. 203) and adduces the principal of Roman law: *confessus pro iudicato habetur*

(*Dig.*, 42, 2, 3; cf. *Cod.*, 2, 4, 32). As to the competence to negotiate of the two parties (*muḥallāh*) the usual rules hold but it is not essential that they should have attained their majority (*bulūgh*) or be freemen. The thing which gives rise to the settlement (*muḥallāh 'alāhi*) must be a *māl*, i.e. something about which an agreement of sale can be concluded, whether it is a thing, a claim or a usufruct. The disputed legal point (*muḥallāh 'anhu*) raised by the settlement may concern a thing (*māl*) or a legal claim arising out of killing or wounding (*diya* and *ḥijāz*), but a *ḥaqq Allāh*, e.g. the *ḥadd* punishment for theft or incontinence, can never be settled in this way (cf. *Cod.*, 2, 4, 18). — The settlement is reached 1) by the will of the parties; 2) by giving back the thing given for the settlement on account of defects (*khayr al-'aib*) and 3) if circumstances unknown at the time of the settlement afterwards show that the legal position could not be disputed (e.g. rediscovery of a bond). — The Shāfi'is divide the settlement into *qulḥ al-dīn*, which is considered as a donation (*hiba*) (cf. *Dig.*, 2, 15, 1) and *qulḥ al-mu'awana*, in which in place of the object claimed another is given.

The *Cod. Civil Ottoman*, art. 1531–1571 is practically the Hanafi teaching on the subject.

Rikht*, Berlin 1897, p. 357 sq.; van den Berg, *Principes du droit musulman*, Algiers 1896, p. 90 sq.; Young, *Corps de droit ottoman*, vi. 387 sq. (HEFFERING)

AL-ŠULĪ, Abū BAKR MUḤAMMAD B. YAḤYĀ, Arab chess-player, historian and man of letters, d. 335 or 336 (946). Like many distinguished men of his time he was not an Arab by race; according to one story he was descended from a certain Šulī, who like his brother Fīrūs was a petty Turkish ruler (*mālīk*) in Dīrdjān. Both adopted Islām under Ya'zīd b. Muḥallab with whom they were closely associated till his death in 302 (720). Their descendants were for the most part secretaries (*katīb*) in the service of the caliphs; the grandfather of our al-Šulī was specially famous, Ibrāhīm b. al-'Abbās (d. 243 = 857) whose poems were collected by his grandson (*Aghāni*, ix. 21–35; Yāqūt, *Ishād*, i. 260–277).

Abū Bāk was thoroughly arabicised; among his teachers the most notable were Tha'lab, al-Mubarrad, al-Sidjīstānī, Aḥu 'l-'Aīnā (q.v.) and 'Awn b. Muḥammad. Ibn al-Mu'tazz had a very great influence on his literary tastes (cf. e.g. al-Ḥuṣrī, *Zahr al-Adab*, iii. 298 sq.). To his close connection with the court of al-Muktafi (289–295 = 902–908) he owed his skill in chess in which he defeated the *maestro* of the day, al-Mawardi. His name has not only become proverbial but a legend has been invented which makes him the inventor of chess (Ibn Khallikān, ed. Wüstenfeld, 659, p. 52). A *Kitāb f. l-Shaḥ-rundī* by him and his predecessor al-'Adī exists in two manuscripts (Cairo and Constantinople; A. van der Linde, *Quellenstudien zur Geschichte des Schachspiels*, p. 21–22, 333–337). An edition was planned by A. Gies and van der Linde; A.

van der Linde, *Das erste Jahrtausend der Schachliteratur*, 948). From the time he defeated Mawardi he was a courtier (*nadim*) of the caliphs. He was specially intimate with his former pupil al-Rāḍī (322—329 = 934—940) (al-Mas'ūdī, *Murūj*, viii. 311, 339; al-Tanūkhī, *Niḥawār*, p. 145; cf. Mez, *Die Renaissance des Islams*, p. 132). But in the last year of his life he had to take refuge in Basra when he was prosecuted for a remark about 'Alī (al-Fihrist, p. 150, 26); there he died in hiding.

As a historian al-Sulī is best known for his 'Abbāsid history, *Kitāb al-Awraḥ fī Akhbār al-'Abbās wa-Aḥbārik*; the first part was arranged chronologically and the second gave a selection of the poetical works of members of the house of caliphs and of several others. The work which filled at least five or six volumes was never completed (al-Fihrist, p. 150, 27—151, 6) and is so far only known in a few fragments. There are manuscripts of the first part in Leningrad (Publ. Libr., years 227—256, *Zapiski*, xxi. 101—102), Cairo (Azhar, *Ta'rikh*, No. 443, years 295—318, *Zapiski*, ibid., p. 99—100), Constantinople (part iii., Rescher in *M. F. O. B.*, 1912, *vii.*, p. 523) and Paris (Bibl. Nat., Fonds Arabe 4836, years 322—329); of the second in Cairo (Royal Libr., *Ta'rikh*, No. 594; Barthold in *Zapiski*, xviii. 0148—0153 = Azhar, *Adab*, No. 487, *Zapiski*, xxi. 98—99) and Leningrad (*Zapiski*, xxi. 102—113). Only a few parts of the *Kitāb al-Awraḥ* have been published: e.g. *Akhbār al-Fallāḥ* (*Zapiski*, xxi. 0137—0141; fully analysed in L. Massignon, *La passion d'al-Fallāḥ*, *passim*), some of the *Akhbār Abān al-Lāḥiq* (A. Krinskij, *Abān al-Lāḥiq*, etc., Moscow 1913, p. 1—43) and *Akhbār Ibn al-Mu'tazz* (*Zapiski*, xxi. 104—112). No less famous was the *Kitāb al-Wuzarā'* of al-Sulī, so far only known from quotations (several times mentioned by himself in *al-Awraḥ*; cf. also Yāqūt, *Iḥṣān*, ii. 131—132; v. 320; cf. Amar, *al-Faḥṣṣ*, *Archives Marocaines*, xvi., p. xxv.). Of his other works the *Adab al-Kuttāb* was recently published in Cairo by Muḥammad Bahdjat from a Baghdad manuscript (1341 = 1922). The book was written in the reign of al-Rāḍī (p. 163) and is a handbook for the guidance of clerks in the chancelleries, a kind of literature which later became very popular and attained its apogee in the monumental *Ṣubḥ al-'Aḥḍā'* of Kaḥṣhāndī (it is noteworthy that Kaḥṣhāndī, although he knows al-Sulī well, never quotes this book).

In pure literature al-Sulī made a name by his edition of the *diwān*'s of 'Abbāsid poets. Like al-Sukkari with the old poets, al-Sulī dealt with the *Muḥaddithūn*. His *Akhbār Abī Tamīm* exists in manuscript in Constantinople (Rescher in *M. F. O. B.*, *vii.*, 501—502). Among his editions of *diwān*'s may be mentioned those of Abū Nuwās (E. Mittwoch, *Die literarische Tätigkeit Hamza al-Liḥāzī*, Berlin 1909, 42 199.), Muslim b. al-Walid (De Goeje's edition, p. viii.), Ibn al-Mu'tazz (Brockelmann, *G. A. L.*, i. 81), al-Buḥārī (q. v.), Ibn al-Rūmī (extr. publ. in Cairo, 1924), al-'Abbās b. al-Aḥnaf (*Agḥānī*, viii. 15—25; xv. 141—144), al-Sanawbarī (Mez, *Die Renaissance des Islams*, p. 250) and many others (al-Fihrist, p. 151, 15—16; 161, 18, 21; 166, 3). His *Akhbār Shu'arā' Miṣr* is quoted by Yāqūt (*Iḥṣān*, ii. 5, 415—416; v. 454). He also wrote a dozen other works of which as is often the case we only know the names

(al-Fihrist, p. 151, 2—13; Ibn Khallikān, ed. Wüstenfeld, 659, p. 51; Ḥādījī Khallifa, ii. 598, 4095; iii. 144; al-Sulī, *Adab al-Kuttāb*, p. 175; Abu 'l-'Alā', *Kisālat al-Ghāfirān*, p. 147, 8). Al-Sulī was not particularly renowned as a poet, but his verses are often quoted (specimens are given by M. Bahdjat, *op. cit.*, p. 14—18).

Not a very favourable verdict is given on al-Sulī's honesty. The ironical verses on his literary are well known (Ibn Khallikān, *op. cit.*, p. 54); they show that all his learning was regarded by some of his contemporaries as merely a knowledge of other people's books. The *Fihrist* (p. 129, 27—28; 151, 6—7) and Yāqūt (*Iḥṣān*, ii. 58) regarded his *al-Awraḥ* as a plagiarism from the *Akhbār Kuraysh* of al-Marḥūḥ (so to be read in *Fihrist*, p. 151, 6 instead of al-Marḥūḥ) (but cf. the more favourable verdict in al-Mas'ūdī, *Murūj*, i. 16—17). Yāqūt calls him a liar (*Iḥṣān*, ii. 10) and the *Fihrist* thinks his *Akhbār b. Harma* a failure (158, 22). His vanity and his bad taste are several times pilloried (e.g. al-Djurdjānī, *al-Wisāṭ*, p. 260; Ibn al-Athīr, *al-Mathal al-ḥadīṣ*, p. 289). His boasting is also known to Persian literature of the 11th century (Abu 'l-Faḍl Baihaḳī in Barthold, *Zapiski*, xviii. 0151). A large number of verdicts upon him have recently been analysed by L. Massignon (*La Passion d'al-Fallāḥ*, ii. 920 and *passim*). This all goes to show that al-Sulī cannot be considered an historian of outstanding merit. He was only an industrious compiler, not always able to distinguish his own work from that of others. But this did not affect his influence on literature; among his immediate pupils are mentioned al-Darāqutnī, Ibn Shadḥān, al-Marzuḥānī, etc.; he is still more important as a source used by many Arabic historians and literary men. Even his younger contemporary al-'Arīb (q. v.) several times copies him word for word. 'Alī al-Iṣfahānī quotes him over 250 times as a particularly valuable source for the history of the 'Abbāsid poets (not noted in Guillard's *Tables alphabétiques*, as all *isnād*'s).

(IGN. KRATSKHOVSKY)

SULTĀN (A.), i. a title which first appears in the fourth (11th) century in the sense of a powerful ruler, an independent sovereign of a certain territory.

The word is of frequent occurrence in the *Kur'ān*, most often with the meaning of a moral or magical authority supported by proofs or miracles which afford the right to make a statement of religious import. The prophets received this *sulṭān* from Allāh (cf. e. g. *Sūra* xiv. 12, 13) and the idolaters are often invited to produce a *sulṭān* in support of their beliefs. Thus the dictionaries (like the *Taḥṣīl al-'Arūs*, v. 159) explain the word as synonymous with *ḥudūd* and *ḥurūd*. There are also six passages in the *Kur'ān* where *sulṭān* has the meaning of "power", but it is always the spiritual power which Iblīs exercises over men (*Sūra* xiv. 26; xv. 42; xvi. 101, 102; xvii. 67; xxxiv. 20). Now it is this meaning of power or rather of governmental power which is attached to the word *sulṭān* in the early centuries of Islam. The word and its meaning were undoubtedly borrowed from the Syriac *šulṭānā*, which has the meaning of power, and, although rarely, also that of the wielder of power (Payne-Smith, *Thesaurus Syriacus*, col. 4179; Noldeke, *Beiträge zur semitischen Sprachwissenschaft*, Strassburg 1910, p. 39). The *Kur'ān*ic sense of the word may probably also be derived from the meaning of power (some lexicographers try to explain it as the plural of *salṭ*, olive oil). Later an attempt was made to connect the title *sulṭān* with the meaning of argument, and it was paraphrased as *ḥu 'l-ḥudūd* (*Taḥṣīl al-'Arūs*, loc. cit.).

In the literature of Hadīth, *sulṭān* has exclusively the sense of power, usually governmental power (the *sulṭān* is the *waṣī* for him who has no other *waṣī*), al-Tirmidhī, i. 204) but the word also means sometimes the power of Allāh. The best known tradition, however, is that which begins with the words *al-sulṭān yill Allāh fī 'l-ard*, "Governmental power is the shadow of Allāh upon earth" (cf. Goldziher, *Muhammadianische Studien*, ii. 61 and *Le sens des expressions ombre de Dieu, kalīf de Dieu*, in *S. H. R.*, xxx. 331 sqq.). Al-Uṭbī quotes this tradition at the beginning of the *Al-ḥikm al-Yamīn* and his commentator al-Manīnī says that it was transmitted by al-Tirmidhī and others as going back to Ibn 'Umar (*Sharḥ al-Yamīn*, Cairo 1286, p. 21). This tradition later played a part in the theories of the Sultanate because an allusion to the title was wrongly seen in it. Apart from Hadīth, Arabic literature to the end of the fourth century only knows the word *sulṭān* in the sense of governmental power (among the many examples, cf. e. g. Ya'qūbī, *Kitaḥ al-Bulṭān*, p. 346, 349; Ibn 'Abd al-Hakam, *Futūḥ Miqr*, ed. Torrey, p. 183, where it is said that in ancient times the residence of the *Sulṭān* of Ifrīkiya was Carthage and Ibn Hawkal, p. 143 where al-Mawṣil is called the residence of the *sulṭān* and of the *shirāṭ* of al-Djazīra) or of the person who at a particular time is the personification of the impersonal governmental power, as opposed to *amīr* which is rather in the nature of a title. This last meaning, which is sometimes more completely rendered by *ḥu 'l-Sulṭān* (e. g. in Hadīth), and is totally different from the first is found as early

as the Egyptian papyri of the first century (for the governor of Egypt, cf. Becker (*Beiträge zur Geschichte Ägyptens*, p. 90, note 6) and in the following centuries sometimes also for the Caliphs (the Caliph al-Manṣūr is called *Sulṭān Allāh* in a *ḥudūd*, Tabari, iii. 426); the Caliph al-Mawaffaq is called *Sulṭān* (Tabari, iii. 1894; and again in 997 the Caliph al-Kādir, al-Uṭbī, *op. cit.*, p. 265). This practice of designating a person by the word which indicates his dignity has parallels in all languages (cf. e. g. for the Turkish official language: H. Ritter, in *Islamica*, ii. 475); it even appears that the Assyrian form *šulṭān* was applied to foreign sovereigns (according to Ravaine in *Z. D. M. G.*, lxxii. 330). The meaning of power, of government, has been maintained in Arabic literature to the present day.

The transition in meaning from an impersonal representative of political power to a personal title is a development, the stages of which are difficult to follow. Authorities writing later than this development make statements which can only be accepted with reserve. Thus Ibn Khaldūn (*Prolegomena*, ii. 8 in *N. E. xvii*) says that the Rāmeicide Dja'far was called *sulṭān*, because he held the most powerful position in the state and that, later, the great usurpers of the power of the Caliph obtained *laḥab* like *Amīr al-umara'* and *sulṭān*. The same thing is recorded of the Būyids (A. Müller, *Der Islam in Morgen- und Abendland*, i. 568) and of the Gharnawīds. Ibn al-Aṭhī (ix. 92) says that Maḥmūd of Ghazna obtained the title of *sulṭān* from the Caliph al-Kādir. This statement is not confirmed by al-Uṭbī who, in giving the various *alḥab* conferred on Maḥmūd by the Caliph (*op. cit.*, p. 317), makes no mention of this title. It is however true that al-Uṭbī himself always calls Maḥmūd al-Sulṭān, giving in explanation the fact that Maḥmūd had become an independent sovereign (*op. cit.*, p. 311); but to al-Uṭbī *sulṭān* cannot yet have been an official title since he gives the same epithet to the Caliph (cf. above). The first Gharnawīd on whose coins the title appears is Ibrāhīm (1053—1099). We find the Fātimids using the epithet *Sulṭān al-Islām*, Ibn Yūnus, Leyden MS.) and in the same period we find the *laḥab* of *Sulṭān al-Dawla* among the Būyids of Fārs (*Sulṭān al-Dawla Abū Shudjā*, 1012—1024). The same *laḥab* was borne by the last Būyid al-Malik al-Rahīm at Baghdad at the time when the usurping Salḡūq Tughril-Beg received from the Caliph in 1051 the *laḥab* al-Sulṭān Rukn al-Dawla (al-Rāwandī, *Rūḥat al-Su'ūr*, G. M. S., p. 105; cf. also Ibn Taghribirdī, ed. Popper, p. 233).

Tughril-Beg was also the first Muslim ruler whose coins bear the epithet or rather title *Sulṭān* and that in the combination *al-Sulṭān al-Mu'azzam*. (S. Lane-Poole, *Cat. of Oriental Coins in the Brit. Mus.*, iii. 28 sq.) This fact makes it very probable that the Salḡūqs were the first for whom *Sulṭān* had become a regular title for a ruler; the qualification by *al-Mu'azzam* was necessary to lift the word definitely out of its use as a more or less impersonal common noun; this development would at the same time explain why the word *Sulṭān* immediately became the highest title that a Muslim prince could obtain, while in the centuries preceding any representative of authority could be so designated. The adjective *al-Mu'azzam*, essential for the title, was soon omitted

in unofficial language. Thus, with the Saljuqs, *Sulṭān* became a regular sovereign title. Neither the provincial dynasties of the Saljuqs (among whom however we find the proper name *Sulṭān-shāh*) nor the Aibegs after them bore the title *sulṭān*; they were content with titles like *malik* and *shāh*. It was only after the end of the Great Saljuqs in the middle of the xiith century that the Khwarizmshāhs assumed it. The Caliph al-Nāṣir was however able to take advantage of the weakness of Djalāl al-Dīn Khwarizmshāh to refuse to recognise his claim to this title (Nasawi, *Ve de Djelal-iddin Mankoberti*, ed. Hondas, p. 247). Soon the Saljuqs of Rūm also called themselves *Sulṭān* (on coins from Kılıç Arslan II). Almost at the same time the title is applied in literature to the first Aiyūbid Ṣalāḥ al-Dīn (Ibn Djbair, *Rikla*, ed. Wright and de Goeje, p. 40), although *Sulṭān* never appears on the coins of the Aiyūbids, whose official titles were all combined with *al-Malik*. By the literature of the xiiith century *Sulṭān* had become a title indicating the most absolute political independence. Ibn al-Athir (xi. 169) speaks of Baghdad and its environs as the territory where the Caliph reigned without a *Sulṭān*. It is not certain if in the last period of the Abbāsids in Baghdad, the Caliph was already regarded as the only authority who could confer the title *sulṭān*. We see however that after the fall of the Caliphate an increasing number of Muslim potentates arrogated the title to themselves. In official use, the title was very often followed by an adjective like *al-Aṣḡam*, *al-ʿAdil* etc. (a complete list is given in O. Codrington, *A Manual of Muslim Numismatics*, London 1904, p. 81—82). During the xiiith—xvth centuries the *Sulṭāns* of Egypt added the greatest lustre to the title of *Sulṭān*; after them came the Ottoman *Sulṭāns*.

Sulṭāns, having thus become potentates whose absolute independence was generally recognised, jurists and historians set themselves to construct theories to find a justification in law for the existence of such potentates for whom there had been no place in the old conception of the Muslim caliphate (cf. KHALIFA). We find these theories as early as al-Māwardī (who wrote in the time of the Būyids), for whom *sulṭān* had not yet any other meaning than governmental power, as is evident from the title of his book *al-Aḥkām al-sulṭāniyya*. Al-Māwardī says (ed. Enger, Bonn 1853, p. 30—31) that the Caliph may remain in office even if he is dominated by one of his subordinates provided that the latter's actions are in conformity with the principles of religion. Al-Uṭṭī, who quotes the tradition that the *sulṭān* is the shadow of Allāh on earth (cf. above) does so very probably to justify the independent position of Maḥmūd of Ghazna to whom he always gives the epithet *al-Sulṭān*; but this allusion to the well-known tradition is perhaps rather a play upon words than the theory of a jurist. To al-Ghazālī the "Sulṭāns of his age" of whom he has a very low opinion (Goldziher, *Streitschrift der Gassīd gegen die Bāṣinijja-Sekte*, Leiden 1916, p. 93) are in general the representatives of temporal power. It is only under the Mamlūk *Sulṭāns* of Egypt that a definite theory is laid down by Khallīl al-Zāhirī (*Zuhdat khaṣṣ al-Mamalik*, ed. Ravaissé, p. 89—90) who says that it is only the Caliph who has the right to grant the title of *sulṭān* and that in consequence this title only belongs in reality to the *Sulṭān* of Egypt. The

Mamlūks called themselves in their inscriptions *Sulṭān al-Islām wa 'l-Muslīmīn* (van Berchem, *Inschriften aus Syrien, Mesopotamien und Kleinasien*). About the same time Ibn 'Arabshāh in the biography of Sulṭān Dīnmaḥ (J.R.A.S., 1907, p. 295 sqq.) calls the *Sulṭān* the Khalīfa of Allāh on earth in affairs of government while the 'ulama' are the heirs of the Prophet in matters of religion; this statement contains, like that of al-Uṭṭī, an apt allusion to the tradition (in another form). Lastly al-Sayyidī (*Ḥusn al-Mukāḍara*, ii. 91 sqq.) gives a definition of the titles of *sulṭān* (he in whose possessions there are *maliks*) of *al-Sulṭān al-aṣḡam* and of *Sulṭān al-Sulṭān*, which is the highest title. In the time of the Mamlūks there were actually quite a number of Muslim potentates who called themselves *Sulṭān*; some of these, in keeping with al-Zāhirī's theory, had even asked the permission of the Caliph in Cairo to bear the title.

From the beginning of the use of the title we may say that all the great rulers who have borne it have been Sunnis, except the Khwarizmshāhs. It is therefore not a mere coincidence that this development went parallel with the religious revival in Islām in the period of the Crusades; the great *Sulṭāns* became at the same time the defenders of Sunnī Islām and the Mongol rulers, after having embraced this form of Islām, assumed this very title. This Sunnī significance of the title is specially noticeable in the Ottoman sultanate. It appears that some coins of Orghān already bear the title *sulṭān* (S. Lane-Poole, *Cat. Or. Coins*, viii. 41) although the first Ottoman princes were generally regarded as *amir's* (Ibn Battūṭa, ii. 321). Bayasid I is said to have been the first to obtain from the Caliph in Cairo the right to call himself *Sulṭān* (von Hammer, *G.O.R.*, i. 235). After the taking of Constantinople, Muḥammad II assumed the title of *Sulṭān al-barrān wa 'l-baḥrān* (*G.O.R.*, i. 88) but even in the Ottoman empire itself as the title of the sovereign it has never been as popular as those of *Khān* and of *Pādishāh*. In the official protocol on the other hand, it occupies an important place, e.g. in the formula *al-Sulṭān ibn al-Sulṭān*, etc. before the names of the rulers. After the extinction of the Mamlūk sultanate by the conquest of Selīm I, Ottoman rulers had become indisputably the greatest *Sulṭāns* in Islām. The Safawids of Persia were called *Shāh* and the opposition *Sulṭān-Shāh* henceforth corresponded to that between Sunnis and Shī'is. It is true that officially the Safawids also called themselves *Sulṭān*, e.g. on their coins (R. S. Poole, *Catalogue of the Coins of the Shahs of Persia in the British Museum*, London 1887, Index, p. 313), s.v. سلطان

but they were only known by the title of *Shāh*.

In Turkey *Sulṭān* has always been an elevated title. In addition to rulers, it was borne by princes and one of the causes, why the grand vizier and favourite of Sulaimān I Ibrāhīm Paḡha, was disgraced is said to have been that he had taken the title of Ser'asker *Sulṭān* (*G.O.R.*, ii. 160). In the time of 'Abd al-Hamid II the petty chiefs who were appointed *sulṭān* in their own country (e.g. in Hadramawt) were not allowed to use the title when they visited Constantinople (information given me by Prof. Snock Hurgmoje). In Turkish the title *sulṭān* is always placed before the name of the sovereign or of the prince, which shows its foreign origin. The real popular use of the word

in Turkish is with the meaning of princess (cf. e.g. the story, *Sultān Sultān* in Jacob, *Illustrierte*, II, p. 59 and the use of the word in erotic poetry and it is by this usage that the practice of placing sultān after the word when it means princess is to be explained (cf. also 'Alī, *Kunh al-Akhbār*, v. 16). For the same reason Sultān is added after the name when it is applied to a mystic (cf. below).

In Persia on the other hand, Sultān was used as a title for officers and governors ('Alī, *loc. cit.*, Z.D.M.G., lxxx. 30). Ewliyā Čelebi, speaks of the Sultāns of Persia as minor governors (*Siyāhat-nāma*, II, 299—305). The only case in which the sovereign has been given the title Sultān is that of the last Qājār Ahmad I, who received it on his accession, after the revolution of 1908.

In Egypt, the title had disappeared with the last Mamlūks, but was revived for the short period (1914—1922) of the reign of Sultān Husayn and the beginning of the reign of Fu'ād (cf. the article KHEDIVÉ).

The number of dynasties, whose rulers have borne or bear the title Sultān is very great; only in North Africa it appears relatively late; in Morocco the dynasty of Filāliya Shurafa' (since the second half of the xviii century) was the first to assume the title sultān.

2. Sultān is also a title given to mystic shāikh. This use of the word is not earlier than the xiii century and has spread particularly in Asia Minor and the countries influenced by Ottoman civilisation. The beginning of the development of the use of the word may have been titles like *Sultān al-Dīn* given to the mystical poet Ibn al-Fāris, and *Sultān al-ʿulamā'* borne by Bahā' al-Dīn Walad, father of Djalāl al-Dīn Rūmī. But this mystical epithet was no doubt also influenced in its development by the conception frequently expressed in mystical poetry that the mystic obtains the rank and power of a sovereign in the spiritual world. It is through the same order of ideas that the title of Khwākar (cf. *Khawāndigār*) may be explained. Ewliyā Čelebi (*Siyāhat-nāma*, III, 367—368) in bracketing the names of Sultān Muhammad II and Baysid III with the names of two mystics says that all were great sultāns. This was the origin of names like Dede Sultān and Baba Sultān. The Shāikh Badr al-Dīn, leader of the religious revolutionary movement in Asia Minor in the xvth century was also called Sultān by his adepts; Babinger (*Id.*, xi. 74) sees in this an indication that he was considered a real sovereign. It appears that the surname of Sultān was especially borne by the Baktāshis; it did not however indicate a particularly high rank in the order; thus Babinger (*loc. cit.*) is probably right; in any case for the latter period, in regarding it as simply a "Kosenname" or term of affection.

F. Seybold, *Minellen*, in Z.D.M.G., 1908, lxxii, p. 563 sqq.; 714 sqq.; do., *Nochmals Sultān*, in Z.D.M.G., 1909, p. 329 sqq.; C. H. Becker, *Barthold's Studien über Kalif und Sultān*, in *Islam*, vii, esp. p. 356 sqq.; A. Mez, *Die Renaissance des Islams*, Heidelberg 1922, p. 133; T. W. Arnold,

The Caliphate, London 1924, esp. p. 202 sqq.; Paul Wittek, *Islam und Kalifat*, in *Archiv für Sozialwissenschaft und Sozialpolitik*, 1925, vol. lili, esp. p. 414 sqq. As it is impossible to study the history of the title Sultān completely without using the wealth of material in the inscriptions, it is to be hoped that the systematic publication of this material will not be long delayed.

(J. H. KRAMERS)

SULTĀN AL-DAWLĀ ABE SHURĪĀ' U. BAHĀ' AL-DAWLĀ, a Būyid. After the death of Bahā' al-Dawla on Djumādā II, 5, 403 (= Dec. 22, 1012) in Arradjān, his son Sultān al-Dawla succeeded him as amir of Fārs and al-ʿIrāq. He at once left Arradjān for Shīrāz and appointed his brother Djalāl al-Dawla [q. v.] governor of Bagra and his other brother Abu 'l-Fawāris governor of Kirmān. The latter was persuaded by the Dailamī troops to rebel against Sultān al-Dawla; he went to Fārs and entered Shīrāz but was immediately driven out of the town and had to retire to Kirmān. He then went to Khurāsān and asked help from Sultān Mahmūd b. Subuktegn, who was then in Bust. The latter placed an army under the command of the amir Abū Sa'īd al-Jā' at his disposal. Abu 'l-Fawāris occupied Kirmān, then turned his attention to Fārs and entered Shīrāz while Sultān al-Dawla was in Baghdad. On the latter's return a battle was fought in which Abu 'l-Fawāris was defeated; he fled to Kirmān (408 = 1017/18) pursued by Sultān al-Dawla's troops, who soon conquered the province, while Abu 'l-Fawāris sought refuge first with Shams al-Dawla b. Fakhr al-Dawla [q. v.] and then with Muḥammad al-Dawla, lord of al-Baṣṣā. After long negotiations an agreement was reached in 409 (1018/19), by which Abu 'l-Fawāris was to retain the governorship of Kirmān while he bound himself to obedience to his brother. In the same year Ibn Sahlān was appointed governor of al-ʿIrāq. As he made himself much hated by the Turks, the latter complained to Sultān al-Dawla, who endeavoured to appease them and summoned Ibn Sahlān to him. Instead of appearing before his overlord he fled to al-Baṣṣā and when Sultān al-Dawla demanded that he should be handed over, the lord of al-Baṣṣā, al-Ḥusayn b. Bakr al-Sharāhi refused to do so. Sultān al-Dawla then sent an army against him; al-Sharāhi was defeated and Ibn Sahlān fled to Bagra to Djalāl al-Dawla. As the troops were discontented with Sultān al-Dawla and showed themselves inclined to recognise his brother Muḥarrir al-Dawla as their lord, the two brothers agreed that the latter should receive the governorship of al-ʿIrāq and neither should take Ibn Sahlān into his service. But after Sultān al-Dawla had gone to Tustar, in spite of the agreement he appointed Ibn Sahlān his vizier, which roused the wrath of Muḥarrir al-Dawla. Sultān al-Dawla then equipped an army and commissioned Ibn Sahlān to drive Muḥarrir al-Dawla out of al-ʿIrāq. But the latter took the field to meet him; Ibn Sahlān was defeated and fled to Wāsiṭ where after a long siege he had to surrender in Dhū 'l-Hijja 411 (April 1021). After this victory Muḥarrir al-Dawla took the honorary title of *Shāhānshāh* "king of kings" and in Muharram 412 (May 1021) he dropped his brother's name from the *khutba* and replaced it by his own. In the same year Ibn Sahlān was seized and blinded by order of Djalāl al-Dawla

and Muḥarrif al-Dawla. In spite of Sulṭān al-Dawla's defeat a part of the Dailāmb in al-Ahwāz declared for him, so he sent his son Abū Kalīdār [q. v.] thither to take possession of this province. In 413 (1022/1023) peace was made, the terms being that Fārs and Kirmān should be ruled by Sulṭān al-Dawla and all 'Irāk by Muḥarrif al-Dawla. Sulṭān al-Dawla, according to the usual statement, died in Shīrāz in Shawwāl 413 (Dec. 1024/Jan. 1025) but according to one source he did not die till Shā'ban 416 (Sept./Oct. 1025).

SULTĀN IŠHĀK (more frequently S. Sohāk, S. Sohāk), an important personage in the beliefs of the Ahl-i Hakk sect (popularly known as 'Alī Ilāhī; q. v.). The first manifestations of God (Khawandigār, 'Alī, Bābā Khoshin) correspond to the stages of *sharī'a*, *ṭarīqa* and *ma'rifa*, but it is the fourth avatar — Sulṭān Sohāk — which marks the highest degree of gnosis, the *ḥakīqa* [q. v.].

Everything goes to show that Sulṭān Ishaq was a historical personage. The Ahl-i Hakk put him in the sixth century. He is said to have been a son of a certain Shaiḫ 'Isā and Khārūn Dāyira (Dayarāk), daughter of Ḥasan Beg Djalāl. By his wife Khātūna-Baḥr he had seven sons who are called *haft-tan* (to distinguish them from another heptad called *haft tawāna*). Like each of the seven fundamental avatars Sulṭān Sohāk has a retinue of four (five) angels: Benyāmīn, Dāwūd, Muṣṭafā, Dawūd, Pīr Mūsā (and Khārūn Dāyira) each of whom has his special duties.

An analysis of the proper and geographical names in the religious work known as the *Saravān* shows that the area of Sulṭān Ishaq's activity was the part of Kurdistan between the Zagros (Dālahū) and the river Sīrwan (Diyālā). According to the Turkish hymn called *Ḥuṣṣ-nāma*, Sulṭān Ishaq spoke the Gūrānī language which is still that of the inhabitants of this region, who, although Iranian by race, are not true Kurds from the linguistic nor probably from the ethnic point of view. The tomb of Sulṭān Ishaq and his companions is at Pāndīwār on the right bank of the Sīrwan in the Awramānī-Luhūn (cf. *SENNA*).

The polemical MS. in the O. Mann collection (Preussische Staatsbibliothek, Acc. MSS. 1904, No. 30, fol. 8) calls Sulṭān Sohāk *ḥūma-yi Hakk* "incarnation (dress) of God" and *muḥannī-i ḥān-i ḥakīqa* ("legislator of the law of the ḥakīqa"). In fact it is to him that the majority of the rites of the sect are traced as for example the "recommendation of the head" [to a *pir*] (*sur sipurdan*) which symbolises the contract which the divinity (the "King of the World") had made with Benyāmīn before reappearing on earth in the form of Sulṭān Ishaq. Benyāmīn was to assume the role of *pir* and the "King of the World" that of *ṭalīb*, for he declared "the *ṭalīb* must obey the orders of his *pir*; one may execute thy orders but, if I become the *pir* and thou the *ṭalīb*, thou wouldst not be

able to execute what I tell thee". This seems to be an echo of Ismā'īlī beliefs, according to which God is without attributes and creation returns to "Universal Intelligence" (*al-Malak al-ʿaṣm*, *ahl al-kull*); cf. Guyard, *Fragmente relatifs à la doctrine des Ismā'īlīs*, Paris 1874, p. 43, 162.

Sulṭān Sohāk is recognised by all branches of the sect, who do not agree regarding later manifestations.

(V. MINOROVSKY).

SULTĀN ŌŪ, is the ancient name of the part of Phrygia in Asia Minor, situated to the N.W. of Eski Shehir, which was the birthplace of the Ottoman power. The name existed already in the time of the Seldjūqs, for it is mentioned in the Chronicle of Ibn Bībī (Houtsma, *Recueil de textes relatifs à l'histoire des Seldjūquides*, ii, 217) as a frontier district of the Seldjūq empire, the protection of which was trusted to frontier warders (*al beglerī*) such as Ertoghul. Among the early Ottoman historians Neshrī (ed. Nöldeke, *Z.D.M.G.*, xiii, 190) mentions Sulṭān ŌŪ as the place where Ertoghul and his little tribe went, after their stay in the Karadja Daḡ near Angora. Bur Neshrī as well as Ibn Bībī write: سلطان

اوونك (dative case). Hence the name is probably to be explained at the Sulṭān's tumulus (*oyuk* or *oyuk*) and not as the Sulṭān's front, as was suggested by the later spelling اوکی (comp. Leunclavius, *Historiae Musulmanae Turcorum*, col. 107); moreover Ibn Baṭṭūṭa (ii, 324, 342) mentions two persons with the *nisha* السلطانموكي and J. H. Mordtmann takes it that the place name In ŌŪ, which occurs in the same region was originally In Oyūyū; the local name Bos Oyuk is formed in the same way (Taeschner, *Das Anatolische Wegenetz*, i, 122, note 1). The story told by von Hammer (*G. O. R.*, i, 45) about the reason why Sulṭān 'Alā al-Dīn called the region Sulṭān ŌŪ does not seem to occur in any early historical work. In Ertoghul's time, the towns of this part of the country were still held by Christian lords, but after these towns had been brought under the immediate rule of his successor 'Othmān, the region was made a *sandjak* under the name of In ŌŪ and with Karadja Hissār as capital. This *sandjak* was given to Orkhān and, afterwards, by Orkhān to his son Murād ('Ashik Pasha Zāde, ed. Constantinople, p. 20, 38; *Tawārīkh-i 'Alī 'Othmān*, ed. Gliese, p. 7, 13; Orudj Beg, ed. Babinger, p. 15, 87, 89; Neshrī, ed. Nöldeke, *Z. D. M. G.*, xiii, 211). It seems that already in these chronicles, even as in later times, the place name In ŌŪ was often used instead of the regional name Sulṭān ŌŪ (the latter name only twice in the *Tawārīkh*, but both times in a poem; comp. also Taeschner, *loc. cit.*). In later centuries the *sandjak* of Sulṭān ŌŪ bordered according to Ḥādīdī Khulfa, *Lihān-nāma*, p. 631, to the S.E., upon the *sandjak* of Kara Hissār Sahib, and, to the N.W., upon that of Khudāwendigār; it contained, besides, the capital Eski Shehir [q. v.],

the *şafâ's*: In Özü or Dos Öyük, Bilecik, Seidl Özü, Karadja Shehr, Kal'edjik, Sultân Özü and Ak Bilyik. In the sixteenth century the name was no more used and, by the new administrative division, Sultân Özü was divided over the sandjaks of Kutahiya [q.v.] and Ertoğrul. A communication about a *şafâ's defteri* of Sultân Özü in the time of Muhammad II was made by Ahmed Refik to *Türk Tarihî Enjümanı Mecmû'ası*, No. 3 (81) of May 1, 1924. (J. H. KRAMERS)

SULTÂN WALAD, eldest son of Djalâl al-Din Rûmî and his second successor as head of the Mawlawî order, was born in Lârida [cf. KARAMAN] in 623 (1226) before Djalâl al-Din's family had settled in Konya. He was called after Djalâl al-Din's father, Bahâ al-Din Walad, known as Sultân al-'Ulâmî. He was brought up among the Şûfis who surrounded his father and seems to have been particularly intimate with Shams al-Din Tabrizi, while his younger brother Celebi 'Alâ al-Din was rather hostile to the latter's influence. Sultân Walad married the daughter of another of his father's disciples, the goldsmith Şalîh al-Din Feridûn of Konya. After the death of Djalâl al-Din, Sultân Walad did not at once succeed him but insisted on Celebi Husâm al-Din, hitherto the *makîl* of the master, assuming control. Eleven years later Husâm al-Din died and Sultân Walad succeeded and held office till his death on 10th Radjab 712 (Nov. 11, 1312). He was followed by his son Djalâl al-Din Amir 'Arîf.

Sultân Walad does not seem to have been a dominating personality like his father. Pious traditions about his life reveal him to us as a contemplative mystic; a certain manner of performing the whirling dance has been called after him, *Sultân Walad Devri* (Brown, *The Dervishes*, ed. Rose, Oxford 1927, p. 252 sq.). He was also the author of a large *Mathnawî* called *Walad-nûma* and dedicated to the Mongol Sultân Uldjaitû Khân, in three parts *Ibtidâ-nûma*, *Intihâ-nûma* and *Rabab-nûma*, a voluminous *Divân* and a work in prose called *Ma'arîf*. The *Mathnawî* contains many data of importance for the biography of Djalâl al-Din Rûmî and may be regarded as a kind of commentary on the *Mathnawî-i Ma'nûmî*.

The works of Sultân Walad, none of which have been printed, are written in Persian. They have a special interest because they include verses written in Turkish and Greek. The Turkish verses are in the *Ibtidâ-nûma*, the *Rabab-nûma* and the *Divân*; their importance lies in the fact that they are the first literary documents in Turkish written in Asia Minor and for this reason the language has been called the language of the *Seldjûk* Turks. The 156 *kâfî's* in Turkish from the *Rabab-nûma* are all that have been published and studied so far (from the Vienna MSS., written in 767 [1366] and the St. Petersburg one, later in date) by von Hammer, Wickerhauser, Behrmann, Radloff, Salemann, Künos, Smirnow, Foy and Gibb (cf. *Bibliography*). According to Köprülü Zâde Fa'âd Bey (*İlk Mütâvazzî*, p. 266 sqq.), the influence of Mawlinâ Djalâl al-Din Rûmî on western Turkish literature begins with Sultân Walad. The latter is said to have been at the same time the first representative of the school of Turkish poetry under Persian influence, while the other category, that of popular mystic poets (*'âşîk* as opposed to *şâfîr*), is represented about the same time by Yûnus Emre. The Turkish verses of the *Rabab-nûma* already

show an attempt at writing Turkish in the *romani* metre in which the *Mathnawî* of Mawlinâ was written. The language is archaic and represents an old form of the dialect of the Oghuz.

The 13 Greek *kâfî's* of the *Rabab-nûma* have been published from the MSS. in St. Petersburg, Budapest and Oxford (those in Munich and in Gotha do not contain them) by G. Meyer, *Die griechischen Verse im Rabab-nûma, in Byzantinische Zeitschrift*, 1895, iv, p. 401 sqq.

SULTÂNABÂD, i. capital of the Persian province of 'Irâk (popularly: 'Arâk). The town was founded in 1808 by Yûsuf Khân Gurdjî in the S.W. corner of the plain of Farshân. The town is built very regularly in the shape of a rectangle; its walls (2,000 × 2,666 feet) are each protected by 12 or 18 towers. The inhabitants number 25,000 (Stahl).

The province now bearing the name of 'Irâk ('Arâk) must not be confused with the extensive area to which the geographers of the Mongol period gave the name of 'Irâk 'Adjamî (cf. Le Strange, *The Lands of the Eastern Caliphate*, p. 185—186) which included Kirmânshâh, Hamadân, Raiy, and Isfahân. The present province of 'Irâk lies almost entirely within the bend formed by the Kars-su (Do-âb) south of Sâwa. It is bounded on the east by Kum, on the north by Sâwa [q.v.], on the west by Malâyir (Dawlatâbâd) and to the south by Borûdjird (canton of Sîlâkhor) and the districts of Djalâlgh and Kamara, mainly in the hands of local landlords of the Bakhtiyârî family of Çahâr-lang.

The cantons of al-'Irāk are as follows: 1. Farāhān (Zulfāhād and Muḥkād) with 144 villages forms the central plain, the scanty waters of which (Karah-rūd) flow into the salt lake without outlet which in the Mongol period was called Tsaghanna'ur = "the white lake". The old capital of Farāhān is Sūrūkh, situated 25 miles N.W. of Sultānābād. Farāhān is an old Shī'a centre; 2. Sharrah (Čārāh); 3. Bosālu and 4. Wafā with 42, 52 and 12 villages respectively lie W. and N.W. of Farāhān; 5. Tafrīsh and 6. Ashīyān with 16 and 3 villages respectively lie to the north of Farāhān. Tafrīsh is a hollow surrounded by mountains on all sides. Ashīyān and Garakān are noted as the birthplaces of many Persian holy men and statesmen; 7. Rūdbār with 47 villages lies N.W. (?) of Farāhān; 8. Khāis-ānistān with 90 villages lies in the direction of Kūm and Sāwa; 9. Kazzās with 150 villages lies south of Sultānābād on the fan-shaped upper waters of the Karā-su and on those of the Karah-rūd (Kara-Kahriz). The important canton: encroaching on the environs of Sultānābād seems to be identical with the Karādj Abi Dūlāf of the Arab geographers (i.e. Strange, *The Lands*, etc., p. 198 and *Nushat al-Kulūb*, p. 69); the mountain Rāsmānd is the modern Rāsbānd (Rāswānd) (although Mustawfī seems to give this name to the Kūh-i Shāh-Zinda which continues the Rāsbānd range northwards); the stronghold of Farrān (cf. *Liḥān-guḡā*, G. M. S., xvi/2, p. 116; Farrān) must be on the mountain of Farr (north of Tūla); finally the name of the "spring of Kai-Khusrau" which rises on Rāsmānd is explained by the local legend which tells how Kai-Khusrau disappeared on the mountain of Shāh-Zinda (Čirikow, p. 186; cf. *Shāh-nāma*, ed. Mohl, iv., p. 266); 10. Sarābānd, with 130 villages to the S.W. of Kazzās on the Borūjdīrd road; the canton is watered by the upper waters of the Karākhā (Ab-i Kulān, etc.). In addition to the cantons above enumerated, the following have at times formed part of al-'Irāk: Dardjāzin (Dargazin) on the left bank of the Karā-su to the north of Wafā and south of the Hamadān-Karwin road; Ashmakhor, a dependency of Borūjdīrd; Kamara (with its capital Khumain) and Nimwar (on the Anār-rūd) both now merged in the district of Mahallāt. The total number of inhabited villages, etc. in al-'Irāk is 686. Before 1914 it paid to the treasury a *mālūt* of 80,000 *tomans* and 16,000 *gharwārs* of corn. Five regiments of *sarāz*, each of 800 men, were raised in the province.

The province, agriculturally rich, is especially noted for its famous carpets (Sūrūkh, Sultānābād) exported by the European and Persian houses established in Sultānābād. The importance of al-'Irāk will increase if the Mohammara-Borūjdīrd-Teherān railway (still only a proposal) is completed through the province. The population for the most part is pure Persian. In Khāladjīstān are Khāladjī Turks speaking a very curious dialect (cf. the article *sāwa*; this region also has a Khāladjīstān (near Kūshak on the Teherān-Hamadān road) where however a central Iranian dialect is also spoken; cf. Brugsch, *Reise d. k. preuss. Gesandtschaft*, I, 337-338 and Justi, *Kurdische Gram.*, p. xxv.). In Kazzās there are 13 Armenian villages the inhabitants of which (564 houses, 2,959 souls in 1916) were settled here by the Safawids. At Kamara there are Armenians and Georgians and

also Turks repatriated from Syria by Timūr whose language is said to be connected with Coghatai (?).

Kavkazsk. Otd. Geogr. Obšč.*, 1845, p. 262-267; Brugsch, *Reise d. k. preuss. Gesandtschaft*, Leipzig 1863, ii. 7-14; Čirikow, *Putnnoi žurnal*, 1875, p. 141-152, 181-187; H. Schindler, *Eastern Persian Irak*, London 1896, p. 129; Strauss, *Routen im westlichen Persien* (map), *Pet. Mitt.*, 1905, map 21; Stahl, *Reisen in Zentral-Persien*, *Pet. Mitt.*, 1905; do., *Reisen in Nord-Persien*, *Pet. Mitt.*, 1907 (maps).

For particulars of Karādj Abi Dūlāf, see P. Schwarz, *Iran im Mittelalter*, 1925, v., p. 574, 82. The position of Farrān (Farrasin) settles the site of Karādj on the Kazzās (according to Yāqūt, Farrān was at the gate (in the defile) of Karādj). The hypothesis of Houtum-Schindler (*Zeitschr. d. Geolisch. f. Erdk.*, 1879, xvi., p. 60) who thought Karādj was to be located on the river Karādj which waters Gulpāyagān (= Džarbāhān) cannot therefore be accepted. Burdj also (10 farsakhs east of Karādj) is to be sought west of Gulpāyagān (at Džapalak or Barburūd).

2. A town founded by the Mongol Ilkhān Uljāitū in 711 (1312) at Čamčamal at the foot of the hill of Bisutūn. D'Ohason, *Hist. des Mongols*, iv. 545; *Nushat al-Kulūb*, p. 107; Rahino, *Kermanshah*, R.M.M., March 1920, p. 14.

3. Name of several villages in Persia for example the capital of the canton of Turghā [q.v.] in Khorāsān. (V. MINORSKY)

SULTĀNIYA, a town in Persian 'Irāk, about ten miles west of the watershed between the Zandjān [q.v.], which runs to the Kāsi-Ūzan and the Abhar, which loses itself in the direction of Teherān. The old Persian name of the canton of Sultāniya was Shāhriyār. It was originally a dependency of Kāzin. The Mongols called this district Kāghur-ōlāng ("the prairie of the Aleuts"; there is still a village called "Ōlāng" S.E. of Sultāniya). Sultāniya is about 5,000-5,500 feet above sea-level. The coolness of its climate in summer and the richness of the high plateau in pasturage and game must have had a special attraction for the Mongols. Arghun began the construction of a town, the wall of which (*darā*) was 12,000 paces in circumference. His successor Uljāitū, to celebrate the birth of his son Abū Sa'īd, began in 705 to enlarge the new town (up to 30,000 paces in circumference) and made it the capital of his kingdom. The sovereign and his ministers vied with one another in embellishing Sultāniya. The vizier Rashīd al-Dīn alone built a quarter of 1,000 houses (d'Ohason, iv. 486; Hammer, *Geschichte d. Ilkhane*, ii. 184-186). The building of the town was finished in 713 (1313) and was solemnly celebrated. After his conversion to the Shī'a, Uljāitū thought of bringing to Sultāniya the remains of the Caliph 'Alī and of the Imām Husain. Hamd Allāh Mustawfī says that nowhere except Tabriz could so many splendid buildings be seen as in Sultāniya and he makes the five great roads (*shāh-rāh*) radiate from Sultāniya as the centre of Irān (*mīzān-i Irān-Zamin*). The exaggeration in the last statement is apparent; the site "so inconvenient" (P. della Valle) of the town was the main cause of its decline. Uljāitū died in

Sultāniya and was buried in the famous mausoleum there. The karūnā of Abū Sa'īd was held in Sultāniya, but the fact that 'Alī Shāh, the ruler's minister, began to build a magnificent mosque in Tabriz seems to indicate that pride of place was returning to the old capital.

After the fall of the Mongols, Sultāniya often changed hands and its possession was disputed between the Sultāns [q.v.], the Djālā'ir [q.v.] and the Muzaffarids. A former captain of Shaikh Uwais Djālā'ir called Sarfī 'Adil fortified himself in Sultāniya in 781. He inflicted a defeat upon the Muzaffarid Shāh Shudjā but finally submitted to him and kept his position. A little later Sarfī 'Adil proclaimed Sultān Bāyazīd Djālā'ir at Sultāniya; his brother Sultān Ahmad complained of this to Shāh Shudjā, who removed Sarfī 'Adil from Sultāniya. Timūr's troops took Sultāniya from the sons of Sultān Ahmad in 786. At the same time Timūr re-established Sarfī 'Adil as governor there and seems to have respected the tomb of Uldjāitū (cf. Olearius). Among the villages built by Timūr around Samarkand with the names of celebrated towns, there was one called Sultāniya (Barthold, *Ulug-beg*, p. 32). In 795 Sultāniya formed part of "the fief of Hūllāgū" conferred by Timūr on his son Mirān-shāh, *Zafar-nāma*, i. 388, 399, 623. Clavijo, who visited Sultāniya in 1404, says that Mirān-shāh (from 798 = 1395, afflicted with madness which showed itself in the destruction of monuments, *Zafar-nāma*, ii. 221), had plundered the town and citadel (*alcázar*) and profaned the tomb of Uldjāitū ("é el Caballero que yacía enterrado mandólo echar fuera"). In spite of this, the ambassador of Henry III of Castile adds that the town had many inhabitants and that its trade was greater than that of Tabriz. Under Tīmūshāh I the mausoleum was restored and P. della Valle and Olearius found it in good preservation. Trade however gradually went back to Tabriz and the removal of the political centre to Isfahān completed the ruin of the old capital of Uldjāitū and caused it to become forgotten. It only experienced a brief revival of favour when, in the reign of Fath 'Alī Shāh, when the court followed the old custom of moving to a summer residence, a hunting-palace was built near Sultāniya with materials taken from the old city. This new Sultānshād was also abandoned after the Russo-Persian war of 1828. The splendid mausoleum now rises from the centre of a wretched little village. In 1880 Houtum-Schindler counted 400—500 houses there.

Dieulafoy regarded the mausoleum as "the largest and most remarkable of all the buildings erected in Persia since the Muslim conquest"; and this opinion is corroborated by Sarre's study. The mausoleum is in the form of an octagonal prism 85 feet broad and 175 feet high (including 25 feet for the cupola). It is built of brick covered with superb blue faience. The inscriptions on the mausoleum do not appear to have been studied. Uldjāitū's tomb was in the interior of the mausoleum. P. della Valle speaks of a chapel the entrance of which was closed by a beautiful grill of damascened iron. According to Olearius this grill was forged in India and formed a single piece. The mosque seems to have been fortified. According to Mustawfi, the *fat'a* (Clavijo, *alcázar*), Uldjāitū's burial-place (*khāna-kah*), was of carved stone. Olearius saw at Sultāniya about 20 cannon which had been used

to defend the old fortress in the Safawī period. Tavernier saw in Sultāniya the remains of other mosques, but now all that exists is one ruined mosque or madrasa near which is situated the tomb of Čelebi-oghlu (xivth century) in the form of an octagonal tower of brick with the ornamentation arranged to form a Kufic design. The tomb of the theologian Mullā Hasan Shīrāzī (adorned with faience) dates from the xvth century and was built by Imā'īl I. Nothing remains of the walls on which Morier saw an inscription in the name of Uldjāitū.

(V. MINORSKY)

SULUK (A., "journeying") is a term used by Sūfis to describe the mystic's progress in the Way to God, beginning with his entrance into the *ṭarīqa* (Way) under the direction of a Shāikh and ending with his attainment of the highest spiritual degree within his capacity. *Sulūk* implies a quest deliberately undertaken, methodically pursued; he who prosecutes it (*sālik*) must pass through, and make himself perfect in, each of the "stages" or "stations" (*maqāmāt*) — *dhikr*, trust in God, poverty, love, knowledge and so on —

before he can become united with God (*waḥid*). Hence *sulūk* is contrasted with *ḥudūd* (see art. *MAḤDUD*).

Bibliography: See, in addition to the references given in art. *MAḤDUD*, *Djāmī, Naṣaḥat al-Uṣṭā*, Calcutta 1859, p. 79; R. A. Nicholson, *The Mystics of Islam*, p. 289; E. H. Palmer, *Oriental Mysticism*, p. 652.

(R. A. NICHOLSON)

AL-ŠUMAIL b. ḤETIM ABU DJAWSHAN AL-KULĀNT, a famous Arab chief in Spain. (The vocalisation of the name *al-Šumail* is confirmed by the transcription *Zumahel* used by pseudo-Isodorus of Beja). He was the grandson of Šamir b. Dhī Ḍawshān of Kūfa who killed al-Husain at Kerbela (cf. above, ii, p. 339). The family of Šamir had left Kūfa, because of reprisals made on them by the Shī'is, and settled in the district of Kinnasrīn (cf. above, ii, p. 1021) and this is how it came about that al-Šumail came to be one of the *ḡund* of Kinnasrīn in the Syrian army sent to North Africa by the Umayyad Caliph Ḥishām b. 'Abd al-Malik in 123 (741). He shared the fortunes of his chief Balḍ b. Bishr al-Khathiri (cf. above, i, p. 617) and when he had settled in Spain he soon became chief of the Kaiss of the country and lived in Cordova.

As a result of a quarrel with the governor of Cordova, Abu 'l-Khaṭṭār al-Husain b. Ḍirār al-Kalbi, who insulted him, al-Šumail whose Arab amour propre was touched, decided to rebel against him and to get the Lakhmids and Djudhāmits in Spain to join him. He offered the command of the rebels to Ṭhawāba b. Salama al-Djudhāmi, who after the victory he gained over Abu 'l-Khaṭṭār on the banks of the Guadalete became governor of Muslim Spain at Cordova.

On the death of Ṭhawāba, al-Šumail intervened to choose a successor to this governor and chose an individual on whom he knew he could exert great influence: Yūsuf b. 'Abd al-Rahmān al-Fihri. His choice was at first disputed but after the victory of Secunda (Shakunda, q. v.) in 130 (747) won by the Ma'addi clan under Yūsuf and al-Šumail over the Yamani clan commanded by Abu 'l-Khaṭṭār, the authority of the new governor was consolidated and the latter offered al-Šumail the command of the district of Saragossa [q. v.] in 132 (749). He distinguished himself for his great generosity during a severe famine there, but two rebel chiefs finally besieged him in his capital. Al-Šumail appealed for assistance to his Kaiss fellow-tribesmen in Spain and his enemies raised the siege of Saragossa.

The later history of al-Šumail is closely and regularly connected with that of Yūsuf al-Fihri and that of the founder of the Umayyad caliphate of Spain, 'Abd al-Rahmān al-Dhīl. He at first promised his support to the latter, then changed his mind, in circumstances of which a picturesque account is preserved in the anonymous chronicle entitled *Akhḍār maḡmū'a*, and these show the inconsistency and complexity of the character of al-Šumail. 'Abd al-Rahmān however after the return of his emissaries from the peninsula landed at Almuñecar in Rabī' II, 138 (Sept. 755). Al-Šumail, after forcing his master Yūsuf al-Fihri to get rid of two important Kaiss chiefs Sulaimān b. Shihāb and al-Husain b. al-Dadīn, persuaded him to entrust to the new Umayyad pretender the government of the two districts occupied by the

*ḡund*s of Damascus and Jordan and give him in marriage his daughter Umm Mhā. But the negotiations broke down through the inaccuracy of the envoy, hostilities began between Yūsuf and 'Abd al-Rahmān and the former was defeated near Cordova. Al-Šumail had a son killed in the battle and his palace at Secunda was looted. He tried with Yūsuf to regain the upper hand but both had soon to submit to the new caliph and al-Šumail installed himself in Cordova again. Yūsuf having taken to flight, al-Šumail was accused of being his accomplice and imprisoned; when Yūsuf after being defeated was killed near Toledo and his head brought to Cordova, 'Abd al-Rahmān, wishing to be rid of his other enemy, whose submission he suspected was only nominal, had al-Šumail strangled in 142 (759).

(E. LEVI-PROVENÇAL)

SUMAIŠĀT, the ancient *Samosate* on the right bank of the Euphrates, now *Samsat* (in Cuiet: *Simsat*). The Muslims under 'Iyād conquered it in 18 (639). From its position on the frontier between Arab and Byzantine territory, it was often ravaged by both sides. The Byzantines raided it in 245 and 259 and this contributed to the destruction of the old Greek and Roman town. It was again the scene of fighting in the Crusades. Saladin took it in 584 (1188).

It is now an unimportant village; but Yāqūt called it *madīna* and mentions among its noted inhabitants a certain Abu 'l-Kāsim 'Alī b. Muḥammad al-Sulami who died in Damascus on Rabī' I 453.

Under the Ottomans, *Sumaisāt* was capital of a *nāhiya* in the kadā of Ḥiṣn-i Manṣūr, a sanjak in Malāṭiya in the wilāyet of Ma'mūret al-'Aziz; now it forms part of the wilāyet of Malāṭiya. Cuiet gives it 800 inhabitants; at one time it contained many Armenians but now its population is entirely Kurdish.

(ETTORE ROSSI)

SUMANĀT, or rather *Soma Nāth* ('Moon lord') is an ancient town situated in 20° 53' N. and 70° 28' E. at the eastern extremity of a bay on the south coast of Kāthiāwār. On the western headland of the bay stands the port of Verāval, and on the sea-shore, half way between the two towns, is an ancient temple dedicated to Shiva.

The town was the object of the most famous of the raids of Mahmūd of Ghazni [q. v.] into India, in 1024. The invader reached Sumanāth early in 1025, captured the town, desecrated the temple, and destroyed the idol, a *lingam*, two pieces of which were sent to Ghazni, one to Makha and one to Madina, to be trodden underfoot by the faithful. Of the history of Sumanāth before its capture by Mahmūd little is known. In the eighth century it was in the hands of the Čawada Rājapūta, vassals of the Čālūkyas or Solankis of Kalyāni, but Mahmūd, on leaving the town in 1025, placed a Muhammadan governor in the district. Muslim rule did not endure, and Kāthiāwār fell into the hands of the Wadjā Rājapūta, who revived the glories of the ancient fane, but in 1298 it was captured, and again desecrated, by Ulugh Khān, in the reign of 'Alā' al-Dīn Khaldjī. It was included in the dominions of the Rājā of Gīrnār, and when that kingdom was overthrown, in 1470, by Mahmūd Begarha of Gūdjār it passed into the possession of the Muslim kings of that country. It was afterwards ruled, at different times, by the Shaikh of Mangrol and the Rānā of Forbandar, but was finally conquered by the Nawwāhs of Djunāgarh, in whose hands it still remains.

SUMATRA. Sumatra, with an area of 420,000 square K.M., is the fifth largest island in the world. The distance between its Northern and Southern extremities is $\pm 1,750$ K.M., and its greatest width is ± 400 K.M. The equator passes through the middle of the island, which lies between lat. $5^{\circ} 30'$ N. and lat. $5^{\circ} 57'$ S. For the geology, hydrography and orography, geography and ethnology, political and economic condition, statistics, administration etc., reference may be made to the great encyclopaedias and to special works, a summary of which is given in the Dutch Encyclopaedie van Nederlandsch Indië, s. v. *Sumatra*. The present article, therefore, will be confined to an account of Islām in Sumatra, viz.: the history of the coming of this religion into Sumatra, the conversion of its heathen inhabitants, their special religious characteristics etc.

The name Sumatra appears to have originally indicated only a small locality and afterwards to have come to denote the whole island. Later names will be mentioned in the short historical sketch that follows. The first mention of Islām in Sumatra was made in 1292 by the Venetian traveller Marco Polo, who mentions the spread of Islām in *Ferlac* (i. e. *Perlak*, Ach. *Purraia*), a name well known from Malay chronicles. Since the old Muhammadan tombstones in Aceh have been deciphered, it has been ascertained that the founder of the Muslim kingdom of Samudra-Passi, on the N.W. coast of Aceh died in 1297. So it is unlikely that the conversion of this country took place between 1270 and 1275, as has been assumed. Northern Sumatra is called by Arabic authors, in the 10th and 11th century: *Rami*, *al-Rami*, *al-Rami*, *Lamari*; al-Idrisi also calls it: *al-Rami* (11th century); al-Karwini: *Ramni* (12th century). Marco Polo mentions, besides *Ferlac*, the countries

Bozma, *Samara*, *Lamori*, *Fansur*, etc. In the 15th century "Sumatra" is mentioned as a state at war with Lamori. The son of Sultan Muhammad of Samudra (died in 1326) was Sultan Ahmad, who probably was still reigning when Ibn Battūta arrived there in 1345. In 1365 the Javanese poetical chronicle *Nagarakertagama* mentions: *Aru*, *Taming*, *Perlak*, *Samudra*, *Lambri*, *Barat* and *Barus*, as being all subordinate states to the empire of Majapahit. In 1416 and 1436 the secretaries of the Chinese ambassador Cheng Ho described *Aru*, *Samudra*, *Lampoli* etc., as being Muhammadan countries; according to their records there must have been a Sultan Husain at *Aru*. It may be surmised that the name *Samudra* was generalised, and so became the name of the whole island. In 1432 Nicolo de' Conti calls it *Taprobane* "or in the native tongue *Sjanutera*". In later periods the Arabic denomination of both Java and Sumatra was *Yāwa*; hence the term *Java Major* and *Java Minor* in European sources. The more modern native names are: *pulo peraka* (= *merica*, from Sanskrit *martya*, mortals, mankind), or *pulo andalas* (a well known tree); this name has occasionally been interchanged with the Arabic term *Andalus*. After the Portuguese took Malacca (1511), *Samudra* ceased to be a country of commercial importance and its place was taken by *Acheh*, and that country soon became the most important in North-Sumatra. As regards the conversion of *Acheh* the following short notices may suffice: The Malay chronicles may on the whole be regarded as historically trustworthy. The most reliable of them mentions as the first king who embraced Islām: 'Alī Mughāyāt Shāh (913—928 H.), the conqueror of *Pedir*, *Samudra* etc. During the reign of Sultan 'Alī Rī'āyat Shāh a learned man came from Mecca to *Acheh*, and taught metaphysics there. But the introduction of Islām into *Acheh* was certainly not carried out by Arab preachers. It is most probable that Arab traders carried Islām to Sumatra in the early centuries of the Hijra. In the 2nd century B. C. the trade with Ceylon seems to have been wholly in their hands; in the 8th century Arab traders were to be found in great numbers in China. So it is quite possible that they also established commercial settlements on some of the islands on the W.-coast of Sumatra. Learned men, however, must also have come to the Archipelago from the South of India, as may be assumed from certain peculiarities of dogma and the Islām now prevailing in Muhammadan parts of Sumatra. The South-Indian origin of the Indonesian form of Islām reveals itself in many ways, and theological, literary and linguistic evidence is abundantly available; as examples of the latter class may be adduced the name for "theologian" (*ḥabai*), which is the South-Indian term *ḥabaiḡem* merchant, and *ḥiyapari* = Sanskrit *vyāpārī* = merchant. There cannot possibly have been any introduction of Islām by compulsion, and the gradual spread of Islām through the eastern islands must have been the result of the settlement of Muhammadan traders, especially Gujjaratis, their intermarriage with native Malay women, the improvement of the status of the natives by their adoption of the religion of the influential strangers, in short a process of peaceful penetration. But from the very beginning of its influence, Islām adapted itself to the native creed, i. e. to the indigenous animism, and made large concessions to Hinduism as is clearly shown

by the remarkable fact that the Sanskrit words for religion (*agama*), Muhammadan facts (*gumara* = *upadana*), teacher (*guru*), disciple (*swayan* = *gita*) are still in use. In the period of its greatest power (xvth and xvith century) Aceh was the most important Muhammadan state in Sumatra, and made its influence felt by the heathen inhabitants of the south; so it is probable that proselytising by means of warfare was sometimes carried on among the Bataks and other heathen peoples, but without any permanent success. It is a curious fact that the Bataks, who for centuries had offered obstinate resistance to the entrance of Islam into their midst, have in the sixteenth and xvth century responded with enthusiasm to the efforts made for their conversion. Especially the Karo-, and still more the Mandeling-Bataks are fervent Muhammadans. The efforts of the Malay subordinate officials of the Dutch Government, the desire to attain the same social level as the educated clerks and tax-collectors, and further the impulse given to Muslim propaganda by the establishment of Christian missions among the Bataks, have all paved the way for Islam. On the island of Nias the same process is to be observed; there, just as in the Batak-land, heathendom is breaking down before the two higher religions, Islam and Christianity. Of the introduction of Islam in the Minangkabau country (W. Sumatra), in early times a Hindu kingdom, there are no historical records. It may be surmised that the new religion made its way along the commercial routes from Padir (Pidie) to Priaman and other harbours, and came up from the coast to the uplands in the interior. It is probable, judging from some scanty data, that Islam did not come into the Minangkabau country before the middle of the xvth century. No reliance can be placed upon the current tradition that Shaikh Ibrahim, a man of Minangkabau, who had learnt the tenets of Islam in Java, introduced them into his own country on his return via Priaman and Tiku, but this may be regarded as an indication of the route along which Islam made its way into this part of the island. In the Minangkabau country, with its strong matriarchal form of society and its primitive Malay laws of inheritance the success of Islam for a long time hung in the balance, and open conflicts inevitably broke out in the struggle against these unorthodox survivals. The most serious of these was the long, bloody warfare of the Padris, so called after the name Padari or Pidari, i.e. men from Pedir in Aceh (not from Port. *padre*, as was formerly supposed), who tried, in the middle of the sixteenth century to introduce, by violent means, the orthodoxy of Islam into their native country. But their efforts were resisted by the greater part of the population and further the Padri-sect involved the Dutch government in a fierce and long war, which ended by their being defeated after the fall of their last stronghold Bongjol in 1839. A great many Minangkabau men emigrated to the Straits-Settlements, their old place of refuge. At the present time, the people of Aceh and Minangkabau are the most zealous followers of the Prophet, the former being rigidly orthodox, having discarded the numerous Shi'a and mystical elements that were formerly mixed up with their creed; the latter clinging persistently to their old national social laws, and only slowly accepting the orthodox dogmas. In Palembang, once the classical Malay country under

Hindu rule, Islam spread at a comparatively late period, but now it is completely Islamised, like the adjacent country and sultanate Siak on the East coast. The southern part of Sumatra, the Lampong-districts, seem to have been Islamised by preachers and influential persons from Banten (W. Java), which country is now the most zealous province in the almost entirely Islamised island of Java. The conversion of the less-civilised tribes, the Lahu and Kubu, is only a question of time; the process of peaceable penetration has been begun, and is slowly but inevitably going on.

SUMBAWA, an island in the Malay archipelago, belonging to the Little Sunda group and lying east of Lombok. The coast line, especially on the north, is very irregular; the largest bay is that of Saleh which runs deep into the country and almost divides the island into two halves. This division is of more than purely geographical significance. The inhabitants of the two parts differ in many respects in manners and customs and the physical type is not exactly the same in both. The population of the western part is distinguished by its lighter complexion and higher stature. As regards administration, the island belongs to the residency of "Timor en Onderhoorigheden" and politically it consists of four districts ruled by native princes under the suzerainty of the government of the Dutch East Indies; the western half of the island forms the sultanate of Sumbawa, on the eastern side are the two very small kingdoms of Dompo and Sanggar and in the extreme east the sultanate of Bima. The island is very mountainous and there are no rivers large enough to be navigable at all seasons. The soil is not unfertile and the population lives mainly by agriculture and cattle-rearing; the collection of wheat products is also of some importance. The exports include rice, horses, buffaloes and wax. The greater part of the native population (many foreigners have settled on the coast: Macassars, Buginese, Saleerese and Araks) belongs to the so-called Young Malays and is considerably mixed with Buginese and Macassars. At the same time an older stratum is clearly discernible to which the people of the interior of W. Sumbawa and some tribes in the east belong and from the anthropological point of view shows a great similarity to the Sasakers of Lombok. The Dou Donggo (i.e. "hill-men") on the west coast of Bima Bay may be considered the purest representatives of this group; they live severely isolated from their neighbours and are on a much lower level of civilisation. The Dou Donggo and the Bimanese do not intermarry. While almost all the rest of the population of Sumbawa has adopted Islam and even observes the prescription of the religion with comparative punctiliousness, the Dou Donggo are still pagans and in their paganism as well as in

their social institutions traces of an original totemism have with great probability been recognised. Bimanese society is remarkable for a sharp division of the people into 26 or (including the nobility) 27 classes (*dari*), which may roughly be described as guilds. These *dari* are under the control of two state-officials (*bumi*) and their functions and other obligations to the state are definitely laid down. Very little is certainly known about the earlier history. Some antiquities found on the island suggest Hindu influence at some time; in the later Hindu period Sumbawa belonged to the Javanese kingdom of Majapahit; in 1357 Dampo was conquered by Majapahit. At the beginning of the 17th century when the first intercourse of the Dutch with Bima began, the various Sumbawan kingdoms were under Gowa (Macassar); in the second half of the same century they were forced to recognise the suzerainty of the Dutch East India Co. According to a Bimanese court chronicle (the older parts of which are only of mythological interest) there have so far been 50 rulers of Bima and the 38th of these, 'Abd al-Kābir, who lived about 1640, was the first Muslim sultan.

SUNAN. [See **SUNNA**.]

AL-SUNBULA, the ear (of corn), the usual name for the constellation of the Virgin (*al-'Adra*) from its most brilliant star, the ear of corn in the hand of the Virgin which is still called *Spica*. According to al-Kāwini, the constellation consists of 26 stars with a further six lying outside the figure. The head of the Virgin lies south of *al-Sarfa* (β Leonis); the feet are pointed towards the two pans of the Scales. The brightest star is also called either *Sunbula* or *al-Samā al-'al*, the unnamed Simk, in contrast to *al-Simk al-rūmī*, Simk with the lance (*Armech* on the star-map).

Bibliography: al-Kāwini, *'Adfīl al-Makānat*, ed. Wüstenfeld, i. p. 36; L. Ideler, *Sternnamen*, p. 168, 172. (J. RUSKA)

SUNBULIYA, a branch of the **Khalwati** Order, named after Sunbul Sinān al-Dīn Yūsuf, whose birth-place is variously given as Bolou and Marsuan. His death-date is given in the *Ḥamū al-'Alāw* as 936 (1529/1530); according however to *al-Shaḥīḥ al-Nu'māniya* (transl. Rescher, 1927, p. 224, 225) he died before 929 (1522/1523); and this author, who was a contemporary, mentions him among the **Shaikhs** of the reign of Bāyazid II (died 918 = 1512), wherein he is followed by the author of the *Taḍī al-Tawārīkh* (Constantinople 1279, ii. 595), who is half a century later. On the other hand Hādījī Khalifa attributes to a Sunbul Sinān b. Ya'qūb, who died 989 (1581), a treatise in defence of Sūfi Dancing, and a Chain of **Khalwati** **Shaikhs**; the former work was dedicated to Sulaimān I (whose reign began 926 = 1520), and stated that Salīm I had asked for a *fatwā* on this subject, merely for the purpose of confirming his prejudice against the practice. It is probable that Hādījī Khalifa is mistaken in the date. From the brief biography of him which is almost identical in the *Shaḥīḥ* and the *Taḍī*, it appears that after being attached to the Mullā Afīzal-zāde (died 908 = 1502/1503) he entered the service of Celebi Khalifa (Rescher, p. 175; wrongly given as Sunbul's successor in *Mī'at al-Makānat*, quoted by A. J. Rose, Brown's *Dervishes*, 1927, p. 455), whose discipline involved severe exercises; after submitting to these he received permission to enroll disciples. He spent some time in Egypt, where he instructed aspirants, and presently came to Constantinople, where he was lodged in the *sāwīya* of Muṣṭafā Paḡha, and occupied himself with training disciples. The *Taḍī* adds that his tomb is in that *sāwīya*.

His successor there was Muṣṭafā al-Dīn Markas al-Lādīkī (Rescher, p. 332), who died 959 (1552). Another disciple, Ya'qūb al-Kirmiyānī, who had some doubts about the successor's qualifications, was convinced by a dream, wherein the Prophet with the Companions etc. appeared attending one of Markas's sermons. The Prophet's turban was green and black; the former indicating the completion of the Law, the latter that of the Path (Pečewi's *History*, Constantinople 1283, i. 465).

Reference has already been made to the severity of the exercises practised and enjoined by Sunbul Sinān; Pečewi (*loc. cit.*) mentions that Ya'qūb al-Kirmiyānī had to break his fast once only in three days, and drink water once in six months (!). He appears, as has been seen, to have favoured dancing or whirling as a religious exercise. Depont and Coppolani (*Confirmez*, p. 375) state that the Sunbuliya, while maintaining **Khalwati** principles, have adopted practices belonging to the Rīfā'iya and Sa'diya. Their work contains a list of Sunbuli *tehye* in or about Constantinople, fifteen in number; a similar list is given by J. P. Brown, *The Dervishes*, 1868, p. 316, with their respective days of service; it is rearranged in H. A. Rose's edition of the work (1927, p. 480). The order would seem to be confined to that city.

(D. S. MARGOLIOUTH)

SUNBULZÄDE WEHBI, a Turkish poet and scholar of the latter half of the eighteenth century.

Mehmed b. Rāḡhid b. Mehmed Efendi Wehbi was born in Mar'ash in the province of Aleppo; he belonged to the prominent local family of Sunbulzāde, which had already produced several

muftis including the grandfather of our poet, Mehmed, mufti in Marâş and author of several works including the *Şerh al-Aşbâh al-musammâ bi-Tawfîhi'lâh, Nûr al-Dîn* and *Kifâ al-Tanzihât*. His father Râşid also was a learned man and collaborated in Aleppo with the poet Saiyid Wehî. As one of the latter's sons died at the same time as a son, our poet, was born to Râşid, the infant received the poetic name of the father of the dead child: Wehî. In his native town Sunbulâde was *murid* of Ghalatali Tîd (?) Efendi and received the *icâzâs* from him. He then went to Stambul and lived there by writing chronograms and other vers d'occasion, but later became *kađi* through the influence of distinguished patrons. He then entered upon the career of a *Hodja* and was particularly entrusted with the drawing up of the more important state documents, in which he so distinguished himself that Sulţan Mustafa III had his attention called to him and bestowed honours upon him. In 1190 (1776) at the beginning of the reign of the next Sulţan 'Abd al-Hamid I he was sent as ambassador to Isfahân to Karim Khân. In the course of his mission a dispute broke out between him and 'Omar Pasha, governor of Baghdâd; Sunbulâde complained in Stambul of the difficulties the governor had put in his way; 'Omar Pasha on the other hand accused him of high treason and of unbecoming conduct in Persia. Sunbulâde was condemned to death in Stambul and a courier with the order for his execution sent to meet him, but he was warned in time and kept in concealment in Scutari. 'Omar Pasha soon fell into disgrace and Sunbulâde's innocence was established. Sunbulâde then won complete forgiveness from the Sultan by the "Resonant" (*tenânnûnî*) *kađida*. In it he describes, after an extravagant eulogy on the Sulţan, his Persian journey and continually emphasises the superiority of the Turkish court and of all things Turkish over those Persian.

On his return Sunbulâde again became a *kađi* and went in this capacity to Eski Zagra in Eastern Rumelia. Here his *ketkhudâ* was the poet Sûrûrî [q.v.]. The two poets became close friends and remained always intimate but they continually used to attack one another in good-humoured but ribald lampoons, which with their grotesque reproaches and their continued efforts to outdo one another are very amusing. The Arabic poems of Djarir and Farasdaq have been suggested for comparison. Their joint activity in Eski Zagra came to a sudden end, however, when they were both imprisoned because they had aroused the indignation of the populace by their dissolute conduct.

Later we find Sunbulâde again as *kađi* on the island of Rhodes. In his period of office there took place in Rhodes the execution of the unhappy Krim Khân Shâhin Girâi who had been betrayed by Russia to Turkey. Sunbulâde felt he had to celebrate this event in a *kađida* (called *Tuwayr*, the "Volant", because there is much talk of birds in it); the glorious Stambul Sulţan is again extravagantly praised in it, the unfortunate victim abused; the whole is little suited to place our poet in an enviable light.

Sulţan Salim III was keenly interested in literature and helped poets in every way. Sunbulâde dedicated his *Divân* to him and received rich rewards and honours. The *Divân* contains, besides ghazels and quatrains, a large number of short occasional poems, especially riddles and chrono-

grams. Sunbulâde spent the rest of his life in Stambul, versifying and merry-making. He suffered much from illness in his last years, gout, failing sight, perhaps mental derangement, and he is said to have been bedridden for seven years. He died on 14th Rabi' I, 1224 (April 28, 1809) aged over 90. His tomb is in Topdjular before the Adrianople Gate.

Sunbulâde wrote several works in addition to those already mentioned: the *Lutfiya*, an imitation of Nâbî's *Khairiya*, a rhymed *Akhâr* book for his son Lutfallah, of advice, about his studies in particular. The poem is of interest for social history but its literary value is slight. Sunbulâde himself boasts that he wrote it within a week and in a fever besides. It was written in 1205 (1790) and could not have long availed the son as he died of the plague five years later.

A *Hikâyat-nâmê*, entitled *Şerh-Engiz* was probably the most congenial to the poet of all his poems. It is a kind of *munâzara* between a debaucher of women and pederast who then ask the Shaikh of Love for his judgment. The latter shows how little either knew of pure absolute love, and the whole concludes with the praises of the love of God.

The next two poems are primarily an educational effort and as they are still used in Turkey as schoolbooks, they give the modern Turks an acquaintance with Sunbulâde. The *Tuhfa* is a rhymed Persian Turkish vocabulary, written in 1197 (1783) for his son, in imitation of the similar work of Shâhidî (xvth century). It is excellent for the time and a fruit of Sunbulâde's Persian journey. It contains 58 *peşva's* in different metres, the last of which is a double rhymed *marzûm* on the *İstiklâl-nâmê* 'Adjam. The Arabic counterpart to it is the *Nuḥḥa* written in 1214 (1799). There are commentaries on both, notably that of Hayâtî Efendi, which also gives valuable details of Sunbulâde's life.

There are other educational works by Sunbulâde which are now more or less forgotten; thus in 1184 (1770) he made a translation of a part of the *İqd al-Djuman* of 'Aini which exists in MS. in the Es'ad Efendi Library in Stambul.

The Ottoman critics agree that while Sunbulâde was a master of the language with few rivals, he is not really to be called a great poet. He was primarily a lover of life, then a man of learning and next a writer of occasional verse and a very clever one. His choice of material is as characteristic as his technique. The latter is based on a thorough knowledge of prosody and not on poetical feeling. Sunbulâde can treat poetically the most banal subject and a continual stream of graceful phrases seem to pour forth from him. He is therefore always pleasing in spite of a lack of real poetic talent. He never has become really popular; Ziyâ Pasha compares his poems to wild roses without scent. For the history of culture his exact knowledge of Persian acquired in the country itself, is of importance, and it is very interesting to see the impression made by Persia of that day on a highly intelligent Turk. References to Persia are exceedingly frequent in all his works.

SUNKUR (Sunkor), a canton between Dainawar [q. v.] and Senna [q. v.], a dependency of Kirmānshāh. Lying on the road between Dainawar and Adharbāidjān it must correspond approximately to the first *marḥala* on the stretch from Dainawar to Sisar, the name of which is read al-Ḥārāḥ (Mukāḍḍasī, p. 382), Khārḥārdjān (Ibn Khurḍādhbih, p. 119; Kudāma, p. 212) etc. which was 7 farsakhs from Dainawar (the actual distance between the present ruins of Dainawar and Sunkur is however not more than 15 miles). Sunkur might therefore correspond to the canton of Mīlāḥradj (Balādhuri, p. 310) which was detached from Dainawar under the Caliph al-Mahdi and joined to Sisar [q. v.]; cf. Schwarz, *Iran im Mittelalter*, iv., p. 477—479. If however we are to recognise in the name of the Kurd tribe Pārawand (Pārawand) a reminiscence of the old name Pāhradj ("custodia, vigilia") this tribe must have been driven westwards for it now occupies the west face of Mount Parrau (= Rūstān), lying S.W. of Dainawar (cf. Rabino, *Kermānshāh*, R. M. M., xxxviii., p. 36).

The easy pass of Mele-mān on the line of heights from Dilakḥān to Amrula separates Sunkur from Dainawar. On the north-east Sunkur is bordered by mount Pandja-ʿAlī (*Nashat al-Kulūb*, ed. Le Strange, p. 217: Pandj-Angusht), behind which runs the direct road from Hamādān to Senna. Sunkur is watered by the upper tributaries of the river of Dainawar, which ultimately joins the Gamas-āb (Karkha). Sunkur in the strict sense is adjoined by the more northern canton of Kulyāʾi on the upper course of the Gāwa-rūd (cf. SENNA) the western dependencies of which are Bīlawar and Niyāḥar (on the Kirmānshāh-Senna road; cf. Rabino, *loc. cit.*, p. 12, 35). The importance of Sunkur lies in the fact that it is on the road followed by Muslim pilgrims from Tahrīr to Kirmānshāh; to avoid the Kurdish territory of Senna the road now makes a detour by Bīdjār (Garrās) and Sunkur, from which Kirmānshāh is reached in a day's march.

The population of the district is made up of two distinct elements. The town (about 2,000 houses) is peopled by Turks who are said to have come there in the Mongol period (in the cemetery there are Kufic inscriptions). Their chief Sunkur was a vassal of the Mongols of Shīrās (?). The language of the townspeople (a Turcoman dialect?) is remarkable for its peculiarities and the decadence of its forms. To the Ottoman-Turkish forms *güçlüyürüm/güçlüyürüm* correspond the local forms *g'ü-lew'ürüm/g'ü-lir'ürüm*; *mā g'ü-low'ürüm*, *is g'ü-low'ür*, *g'ü-low'ür*, *is g'ü-low'ür*, *is g'ü-low'ür*, *is g'ü-low'ür*, *is g'ü-low'ür*. *Come" — *g'ä*, *go" — *g'ä*; I wish to go" — *is'iyew'ürüm g'iyäm*; "he also" *o-ä* (= *o-da*), "since the day before yesterday" — *is'iyew'ürüm h'ä*, etc.

The district (165 villages) on the other hand is inhabited by Kurd agriculturists whose chiefs belong to the Kurd tribe of Kulyāʾi. The present Khāns are said to be the descendants in the

eighth generation from Safi-Khān who lived in the time of the latter Safawids. In 1213 (1798) 'Alī Himmat Khān and his brother Hābi Khān (of the Nānakali tribe) supported the pretender Sulaimān Khān and were executed by Fath 'Alī Shāh (H. J. Bridges, *History of the Qajars*, London 1833, p. 38—39, 67). The Kulyāʾi speak a Kurd dialect resembling *Kirmānshāhi* and are suspected of *Ahl-i Ḥaq* (= 'Alī-illāhi, q. v.) tendencies. (V. MINORSKY)

SUNNA (A.), custom, use and wont, statute. The word is used in many connections. Here only the following will be dealt with. In the Kur'ān sunna usually occurs in two connections: *sunnat al-anwāl*, "the sunna of those of old" (viii. 39; xv. 13; xviii. 53; xxxv. 41) and *sunnat Allāh*, "the sunna of Allāh" (xvii. 79; xxxiii. 62; xxxv. 42; xlviii. 23). The two expressions are synonymous in so far as they refer to Allāh's punishment of earlier generations, who met the preaching of prophets sent to them with unbelief or scorn. The expressions are therefore found mainly in the Meccan sūras of which the main subjects are stories of the Prophets. In Sūra, iii. 131, the plural *sunnas* occurs meaning judgments. *Sunnat Allāh* is found in Sūra, xxxiii. 38, where it means the privileges which Allāh granted to earlier prophets.

In Ḥadīth by sunna is usually understood Muhammad's sunna; Allāh is connected with the community by his Book and Muhammad by his sunna (cf. Muslim, *Imān*, trad. 246: "Allāh's book and your Prophet's sunna").

According to the usual explanation Muhammad's sunna comprises his deeds, utterances and his unspoken approval (*fi'l, ḥawl, taḥrīr*). Observance of the sunna might in a way be called: "Imitatio Muhammadis".

In itself however the word is colourless. One speaks of good and bad sunna's, e.g. of the bad sunna of the *Ḍuhāliya* (Bukhārī, *Ḍiyāl*, bāḥ 9). Muhammad prophesies: "Verily ye shall imitate the sunna of those who were before you, inch for inch, ell for ell, span for span; if they were to crawl into a lizard's hole, you should follow after them" (Aḥmad b. Ḥanbal, *Musnad*, ii. 327).

The contrast between good and bad sunnas finds its classical expression in the following ḥadīth: "He who institutes a fair sunna in Islam, so that it is practised after his death, to him a reward shall be given equal to that of all who have practised it, without anything being deducted from their reward. But he who institutes a bad sunna in Islam, so that it is practised after his death, against him a sin shall be debited, like that of all who have practised it without anything being subtracted from their sins" (Muslim, *Imān*, trad. 15).

Al-Sunna has however become the characteristic term for the theory and practice of the catholic Muhammadan community, *Ahl al-Sunna wa'l-Jamā'a*, the Sunna. "The people of the sunna and of the community", are those who refrain from deviating from dogma and practice. The expression is particularly used in this sense in opposition to Shī'a [q. v.]; the division of Islam into Sunna and Shī'a is generally known in the West. Great stress is therefore put upon following Muhammad's sunna, "He who tires of my sunna, does not belong to me" (Bukhārī, *Nikāḥ*, bāḥ 1). "The prescribed *ḡafāt*, Friday and Ramaḍān are an atonement for the period till the next *ḡafāt*, the next Friday and

the next Ramaḍān, except in the case of polytheism, breach of agreement and neglect of the sunna . . . and neglect of the sunna is secession from the community" (*Ḍiyāḥ*; Aḥmad b. Ḥanbal, ii. 229). Among the six categories of those who are cursed by Allāh, Muḥammad and all the prophets are those who have abandoned Muḥammad's sunna. (Tirmidhi, *Ḍaḥḍaḥ*, bāb 17). Knowledge of the sunna is one of the criteria in deciding who will act as imām at the ḡalāt (Tirmidhi, *Ḥalāt*, bāb 60; Nasā'i, *Imāma*, bāb 3).

The companions are the propagators of the sunna (Muslim, *Imān*, trad. 80); the word is occasionally referred to the example of the companions and the oldest generations of Islām; in Būḥārī, *Aḥḥām*, bāb 43, the sunna of Allāh, his prophet and the two khalīfas is mentioned; in Tirmidhi, *Imān*, bāb 16, there is a reference to the sunna of Muḥammad and the rightly guided caliphs.

The word thus acquires the meaning of standard; it is recorded that Muḥammad said when drawing up such prescriptions: "at discretion lest any sunna (burdensome to the community) arise" (Būḥārī, *Tahajjud*, bāb 35).

The opposite of sunna in the sense of the theory or practice consecrated by Muḥammad's example or the tradition of the community is *bid'a* (q. v.) (cf. e. g. Tirmidhi, *Imān*, bāb 16).

Muḥammad's sunna in the sense of his words, actions and silent approval is fixed orally and in writing in the Ḥadīth (q. v.). In theory the conceptions of sunna and ḥadīth are separate but in practice they often coincide, which may be due to the fact that some of the collections of ḥadīth have the title *Sunna* (e. g. the collections of Abū Dā'ūd, Ibn Mā'jā and al-Nasā'i).

If we are to understand the theoretical and practical significance of the sunna in Islām we must remember that while the Qur'ān was a source from which a considerable part of the practice was deduced, on the other hand Muḥammad had settled many questions, not by revelation but by decision from case to case and that the words and deeds of the Prophet even in his lifetime were recognised as a "fine example" and as a result of this recognition the sunna of the Prophet was drawn up and fixed in writing, although not in a form equally canonical with the Qur'ān. The Ḥadīth itself illuminates this side of Muḥammad's sunna in traditions: People came to the Prophet and asked him: "Send us men to teach us the Qur'ān and Sunna" (Muslim, *Imān*, trad. 147). "The faith has settled in the depths of the hearts of men. They have thus learned Qur'ān and Sunna" (Būḥārī, *Riḥāḥ*, bāb 35). 'Umar b. al-Khaṭṭāb said: "People will come to dispute with you over doubtful points in the Qur'ān. Answer them with the sunna, for the people of the Sunna are best able to decide about the Qur'ān" (Dārimī, *Introductio*, bāb 16).

In the Qur'ān itself references to the importance of Muḥammad's sunna are found, like the command to believe in Allāh and Muḥammad (Sūra vii. 158; xiv. 8) and Ibrahim's prayer, when he founded the temple at Mecca: "O Lord send to them a prophet from their midst, to read out to them thy verses and to teach them the book and wisdom and to purify them" (Sūra ii. 123 and similar passages).

It is clear then that in the system of Islām the Sunna became a standard of conduct along-

side of the Qur'ān, and that the representatives of the system also sought to answer the question of the mutual relation of the two elements. This question is also discussed in traditions. At first Qur'ān and Sunna appear as of equal authority. Khālid b. Usaid said to 'Abd Allāh b. 'Umar: "We find the *ḡalāt al-ḥaḍar* and the *ḡalāt al-ḥaḍar* in the Qur'ān but not however the *ḡalāt al-ḥaḍar*". Ibn 'Umar answered: "My cousin, Allāh sent us Muḥammad when we were in complete ignorance; therefore we do as we saw Muḥammad do" (Aḥmad b. Ḥanbal, ii. 94). Another tradition is still more definite: "a prohibition by the prophet of Allāh is equal to a prohibition by Allāh" (Dārimī, *Introductio*, bāb 48). Ranking the Sunna equal to the Qur'ān led to the idea that the Sunna also was revealed: "Djibril used to come down with the Sunna to Muḥammad just as he used to come down with the Qur'ān" (Dārimī, *Introductio*, bāb 48). They even went further and said: "the highest standard is not the Qur'ān but the Sunna" (l. c.: *al-sunna ḡāfiya 'ala 'l-Qur'ān, ma-la-isa 'l-Qur'ān bi-ḡāfiya 'ala 'l-sunna*).

The question of the relation between Qur'ān and Sunna is fully discussed in the Uṣūl books. Shāfi'i in his *Riḍla* explains that there are prescriptions in the Qur'ān, the general form of which was only made precise in the Sunna (p. 12), e. g. the punishment of the thief punished in the Qur'ān (Sūra v. 42) by the tradition that the punishment is not to be applied when it is a question of the theft of an insignificant amount (see e. g. Būḥārī, *Ḥudūd*, bāb 13). It is known that Muḥammad punished *sinā* of a *ḡaiyib* with stoning (cf. e. g. Būḥārī, *Ḍiyāḥ*, bāb 61), while Sūra xxiv. 2 prescribes 100 lashes as the punishment for the *zina* and the *zina*.

The Sunna's relation to the Qur'ān may be of three kinds: (1) in entire agreement with the Qur'ān; (2) an explanation of the sacred text; (3) not directly connected with the sacred text (*Riḍla*, p. 16). — The last named is however not recognised by those who always give the Sunna a direct connection with the sacred text.

The relation between Qur'ān and Sunna is illustrated by the doctrine of *nāsikh wa 'l-manūkh*, "the abrogating and the abrogated", and by other examples relating to Qur'ānic commands and prohibitions. Here we shall only point out that al-Shāfi'i in contrast to other scholars does not agree that the Qur'ān can be abrogated by Sunna. In his view, Qur'ān can only be abrogated by Qur'ān and Sunna by Sunna (p. 16-17). But there are verses of the Qur'ān the abrogating character of which is only made clear by Sunna (p. 18-21) or by Sunna and *ijmā'* (p. 21-22).

The *uṣūl al-fiqh* are of course not confined to Qur'ān and Sunna; nevertheless in wide circles protests were made against any attempt to add to the two historical objective norms such subjective elements as *ijmā'* (q. v.) or *fiyāḥ* (q. v.). In Ḥadīth we find traces of this opposition: "When Ibn Ma'ūd and Ḥudhaifa one day were together, a man propounded a question to them. Then Ibn Ma'ūd said to Ḥudhaifa: Why do you think that people ask us about these things? He replied: As soon as they are told they neglect it. Then Ibn Ma'ūd said to the questioner: If you ask us about a Qur'ānic matter, which we know, we will give you information, likewise about a sunna of Muḥammad, but we have no advice to give

about your innovations" (Dārimī, *Introduktion*, bab 16). Bakhārī has significantly given a chapter of his *Ṣaḥīḥ* the title: "On the observance of Qur'ān and Sunna".

This attitude is however abandoned by the four *maḥallih*; *idjma'* and *ḥijāb* have obtained their place among the *uṣūl al-fiqh*. The four roots were never recognised by the Khāridjīs and Wahhābīs, in addition to the *Ṣūra*.

With the term Sunna in the theory of the Uṣūl must not be confused the second of the five categories, under which actions are considered from the legal point of view and which is also called Sunna. On this see the article *ḤAḤĪLA*.

SUNNITES. [See SUNNA.]

ŠUR (TYRE), the island city of Phoenicia. From the Amarna period it was one of the richest commercial centres of the Syrian coast and gradually developed into a powerful rival of the adjoining Sidon [q. v.] for dominion over the Phoenician colonies in the west. Its conquest and destruction by Alexander the Great only deprived the flourishing metropolis of its importance for a brief period; but it had one permanent important result, namely that the island city was henceforth connected with the mainland by the Alexander dam, which was gradually widened into an isthmus by the material swept up by the southwestern coast currents; from very early times Palatitros (Assyr. *Uṣūl*) had lain opposite the island town on the mainland. Under the Roman empire Tyre was the secular and ecclesiastical capital of the eparchy *Φοινίκη Παλαια*.

After the occupation of Damascus, Shurabīl b. Ḥaana captured Šur and Ṣaffūriya among other towns of the region (al-Balādhuri, ed. de Goeje, p. 116; Caetani, *Annali dell' Islam*, II/iii., § 321; III., § 107). According to Pseudo-Wāḥidī (*Futūḥ al-Ṣūḥr*, Cairo 1278, II. 58 sqq.), Šur was taken through the treachery of the former commander of Ḥalab, 'Abdallāh Yūḥanā. Al-Wāḥidī and the Syrian Highām b. al-Lāth say that Mu'āwīya restored 'Akka and Šur at the time of his expedition against Cyprus (27) and in 42 transplanted Persian colonists from Ba'albak, Hims and Anṭakya to the cities of al-Urdunn, namely Šur, 'Akka, etc. (al-Balādhuri, *op. cit.*, p. 117). The authorities of the above mentioned Tyrian said: "When we settled in Šur and the cities of the coast there were Arab troops there and still many Greeks; later, people came from other regions and settled alongside of us just as happened in all the other cities of the coast of Syria". In 49 the Greek fleet raided the Syrian coast-towns

which had not yet arsenals (Balādhuri, *op. cit.*; Maḥbūb of Manbij, *Kitāb al-Uṣūl*, ed. A. Vasilev, in *Patrol. Orient.*, VIII. 492). Mu'āwīya thereupon built dockyards in 'Akka for the district of al-Urdunn. 'Abd al-Malik b. Marwān restored Šur, Ḳaisariya, and the suburbs of 'Akka, which had again fallen into ruins (al-Balādhuri, *op. cit.*, p. 117, 143). When at a later date Highām b. 'Abd al-Malik wished to purchase mills and store-houses from one of the descendants of Abū Mu'ā'iz, and the latter refused to sell them, he had the arsenal removed to Šur and built magazines and docks there (al-Balādhuri, p. 117). According to al-Wāḥidī also, Šur replaced 'Akka under the Marwānids as a naval station and remained one henceforth (al-Balādhuri, p. 118; Ibn Djuhair, ed. Wright, p. 305). The Caliph al-Muwakkil later (247/248 A. H.) distributed the fleet and naval forces among all the Syrian coast-towns.

The Arab geographers describe Šur as a city on the sea-coast (*al-samāḥil*) of al-Urdunn (the Jordan province) which was strongly fortified and thickly populated and had fertile country round it. The island city was only accessible from the mainland through a gate to which a bridge led, and was fortified by walls which rose straight out of the sea, almost all the way round it; as in ancient times, a second part of the city lay opposite it on the mainland. The bridge which is mentioned by al-Muḥaddas also, is described by al-Ḳaṣwī (ed. Wüstenfeld, II. 366, l. 5 from below, under *Talaṣṣila*) as the largest arch in the world (confusion with the Sandja bridge?). The ancient aqueduct which led from *Sidw* (now Rās al-'Ain or al-Rāḥidīya) via Tell al-Maḥḥuk to the city still provided it with water in the middle ages (al-Muḥaddas, *S. G. A.*, III. 163; Nāṣir-i Khuraw, ed. Schefer, p. 11). Nāṣir-i Khuraw, who visited Šur in 1047 mentions the five to six storied houses there and a richly decorated Maḥḥad at the city-gate; the inhabitants were then for the most part *Shi'a*; only the *kādī* was Sunnī. In the Crusading period al-Idrisī (1154 A. D.) records the flourishing glass industry, the pottery and the weaving of valuable stuffs in Šur. Ḳudāma mentions the wharves of the town.

From the Tūlūnid period, Syria was almost continuously under Egyptian suzerainty, which became still more firmly established under the Fatimids. The Tyrians rose against the Caliph al-Ḥākim in 388 (998) under a peasant named 'Alāḳa ('*Uṣūl*) at the same time as al-Ramla rebelled and the citadel of Fīmiya was besieged by the Byzantine General Dukas. The governor of Syria, Djaish b. Muḥammad b. Samsām, sent the Hamdānid Ḥusain b. 'Abd Allāh b. Nāṣir al-Dawla and the eunuch Fāṭik (var. Fa'ik) al-Barras against the city. When they attacked Šur by land and water, 'Alāḳa appealed for help to the Byzantine emperor. The latter sent several ships but these were completely defeated in a naval battle. The town, the inhabitants of which thereupon lost all heart for a stubborn resistance, was taken and sacked, its inhabitants massacred and 'Alāḳa tortured and executed in Egypt.

But the risings continued; the vizier Badr al-Djamālī in 1089 A. D. was forced to take Šur, 'Akka and Djabail from the Saljuḳ Sultan Tutuḥ and his successor al-Aḥdāl Shāhshāh in 490 (1097/1098) punished a new rising with a terrible massacre, in which even the governor of the city

was executed. This took place in the same year as the Crusaders left Constantinople. Coins were struck in Şūr in the name of the Caliph al-Musta'li (1094—1101).

Although the city at first (1100—1101) sought to win Baldwin's good graces by gifts, it soon (1103) joined in the defence of 'Akkā and Ṭarābulus. By arrangement with Tughtakin the amir 'Izz al-Mulk of Şūr in 500 (1106—1107) attacked the Crusader's stronghold at Tibnān (Toron), plundered a suburb and massacred the inhabitants, but fled quickly away when Baldwin advanced on Şūr from Ṭabariyya. The king appeared next year before its walls, built a fort on Tell al-Ma'shūka and besieged the city for a month; its wall had to purchase his withdrawal by a payment of 7,000 dinārs.

A week after the fall of Ṭarābulus, the Egyptian fleet with soldiers, money and supplies for a year appeared before this city, but on hearing that the fortress had been taken by the Franks, they returned to Şūr and the supplies and soldiers were distributed between Şūr, Ṣaydā' (Sidon) and Bairūt.

Baldwin laid siege to Şūr once more on the 25th or 27th Dhu'l-ḥijja I (November 27 or 29, 1111); he built two wooden towers 10 ells high, put 1,000 soldiers in each and had them pushed up to the walls of the city. On the appeal of the Tyrians, Tughtakin came from Damascus to Bāḍiyās and sent reinforcements from there, who cut off the Franks' supplies while he himself marched on Ṣaydā'. Baldwin had already stormed two walls when the governor of Şūr, 'Izz al-Mulk al-A'azz held a council of war in which a shaykh, who had taken part in the defence of Ṭarābulus offered to destroy the siege-towers of the Franks. He actually succeeded in setting both on fire. The Franks gained no success worth mentioning up to the spring of 1112. In the meanwhile Tughtakin, after taking the fortress of al-Djish in the Damascus came up with 20,000 men and cut off supplies from the Franks. When they received their supplies by sea, he laid waste the country round Ṣaydā'. On the 10th Shawwāl (April 21) Baldwin raised the siege and retired to 'Akkā. The people of Şūr welcomed Tughtakin with rich gifts and restored the injured walls and ditches of their town. On his departure Tughtakin handed over Şūr to the Caliph again; but in the very next year the people and their governor 'Izz al-Mulk Anushtakin al-Afjalī, fearing another attack from the Franks, decided to hand over the city to him again. Tughtakin at their request sent them the amir Mas'ūd with forces for its defence; but the caliph continued to be prayed for in the mosques and coins were still struck in his name.

The vizier al-Ma'mūn, al-Afjal's successor, in 516 (1122/1123) sent a well equipped fleet of 40 galleys under Mas'ūd b. Sallār to Şūr; when the commander Mas'ūd came on board to greet them he was put in chains and brought to Egypt. There however he was shown great honour and sent to Damascus, where diplomatic apologies were offered and the incident explained away; Tughtakin replied courteously and promised his further assistance in the defence against the common enemy.

The Franks however saw in the removal of the valiant Mas'ūd a good omen and prepared for a further siege with renewed hopes. The Egyptian commander recognised the feebleness of the garrison and the insufficiency of the city's supplies and

appealed for help to the Caliph. Al-Amir replied that he would put the defence in the hands of Zahir al-Din (Tughtakin). The latter thereupon occupied the city again and put it in a satisfactory condition for defence. In the month of Rabi' I (April) 1124 the second siege of Şūr began. Venetian ships blockaded the harbour while on land the armed troops attacked the walls with a siege-tower. Damascus troops distinguished themselves by particular bravery in the defence. The besiegers sent a portion of their army against Tughtakin while the Venetians were to ward off the Egyptian fleet. After various vicissitudes the Tyrians decided, after famine had broken out in the city, to surrender under favourable conditions. After Tughtakin had conducted negotiations for surrender with the Frank commanders, they were allowed to leave the city with their possessions or to remain there on paying ransom. On 23th (or 28th) Dhu'l-ḥijja I (July 9 or 14) 1124, the inhabitants marched out of the city between the troops of Tughtakin and the Frankish army; they were settled partly in Damascus and partly in Ghazza. After this surrender, which marked the zenith of the power of the Crusaders in Syria, Tyre remained till 1191 in the hands of the Franks. Ibn al-Athir laments its fall as a great misfortune for the Muslim world, as it was one of the finest and strongest of cities, and adds: "Let us hope that God the Almighty will restore it to the rule of Islam".

Shams al-Mulūk (Burr) of Damascus in 528 (1133/1134) after a raid of the Franks into the Hawrān laid waste the region of Ṭabariyya, Şūr and the rest of the coast-lands and returned via al-Sha'ra' with a great booty. An Egyptian fleet appeared in 550 (1155/1156) in the harbour of Şūr, sank ships which belonged to Christian pilgrims and others, and returned with numerous prisoners and rich plunder. In 552 (1157) Şūr, Ṣaydā', Bairūt, Ṭarābulus and other towns suffered from an earthquake.

From the Crusading period we have the descriptions of the city by Idrisi and Ibn Djubair. The former admires the glassworks and potteries and the manufacture of an extraordinarily finely woven cloth. Ibn Djubair who spent 11 days in Şūr gives a full description of the town and of a ceremonial procession that took place during his visit. On the land side the city had 3—4 successive gates. The entrance from the sea was through two high towers, between which one entered a harbour (the old "Sidonian"), the finest of all the harbours of the coast-cities. On three sides the walls surrounded the harbour, on the fourth a wall with an entrance through an arch below which the ships anchored. This inner harbour could be shut off by a huge chain which was stretched between the two towers.

Salāh al-Dīn after the capture of Jerusalem and most of the coast-towns proceeded to besiege Şūr and pitched his camp before the city (on 5th; according to others, on the 9th Ramaḍān 583 = Nov. 8 or 12, 1187). He had at first to wait for the impediments of the army and summoned his son Malik al-Zahir from Haleb and his brother Malik al-'Adil from Jerusalem to his side; his second son al-Afjal and his nephew Taḥī al-Dīn were with him. As soon as the siege artillery arrived, they began to bombard the town from movable towers with catapults etc. Ten ships

brought from 'Akka blockaded the harbour; but they were surprised by the Frankish fleet and some destroyed, some sunk. An attack on the walls was repulsed. A council of war summoned by Salāh al-Dīn decided, on account of the approach of winter, to raise the siege till next year. On the 2nd Dhū l-Ka'da 584 (= Jan. 3, 1188, according to Bahā' al-Dīn; Ibn al-Athīr gives the last day of Shawwāl = Jan. 1, 1188), Salāh al-Dīn began to withdraw his army. Hardly was the city freed from its besiegers than a fight for its possession broke out between king Guy de Lusignan who had just returned from captivity and its valiant defender Conrad of Montferrat.

The failure of the siege of this strong seaport marked a reverse in Salāh al-Dīn's fortunes. With Shaḥīf Arnūn (Belfort) it was the only fortress of Syria to remain in the hands of the Franks. In the harbour of Tyre assembled the powerful forces for the Third Crusade; into it poured the garrisons of the towns taken by Salāh al-Dīn whom he always chivalrously released; from it the siege of 'Akka was launched, which completely distracted the Caliph's attention from Sūr.

On the 15th Rabi' II, 588 (April 29, 1192) the Marquis Conrad who now lived in Tyre as titular king of Jerusalem was murdered by Isma'īl. His successor Henri de Champagne concluded the peace of Ramla with Salāh al-Dīn (Sept. 1192) by which the coast from Jaffa to Tyre was left to the Franks.

When the garrison of Tibnin undertook a campaign against Sūr and laid waste the surrounding country, the Crusaders began to besiege this fortress on 1 Šafar 594 (= Dec. 13, 1197). On a rumour of the approach of a large army under al-Malik al-'Adil however they retired without achieving anything. In Sha'ban 597 (May-June, 1201) Sūr was visited by an earthquake, and in 600 (1203/1204) by another in which the walls of the fortress collapsed. By the peace between Frederick II and al-Kāmil of Egypt (1229) Sūr, 'Akka, and several coast-towns of Syria were left in the hands of the Christians, in addition to Jerusalem. In the next few decades the power of the Franks was further weakened by the ceaseless fighting between the coast-towns, and the Venetian and Genoese fleet.

The powerful Baibars in May 1266 and in 1269 attacked Sūr, on the second occasion, it is said, in anger at the murder in Sūr of a merchant, whose mother had laid her complaint before him in Khirbat al-Lusūs. But he agreed to a treaty in 669 (1270/1271) with the prince of the city by which ten districts of Tyrian land were allotted to the latter, 5 to the Caliph to be chosen by him while the rest were to be jointly administered. In August 1285, Margaret of Tyre purchased from Kalā'ūn a ten years' peace by paying him half her revenues and promising not to restore the defences of the city. But after the fall of 'Akka (1291), Sūr and the few remaining Frankish towns could no longer hold out. After the taking of Sūr, Khalīl had the inhabitants killed or sold into slavery and the city itself was destroyed.

It was still completely in ruins in the time of Abu 'l-Fida' (1321), al-Kalkashandī (c. 1400) and Khalīl al-Zahiri (c. 1450). Ibn Baṭṭūta (1355) could only find a few traces of the old walls and harbour. Henceforth Sūr was an unimportant place. The Druze chief Fakhr al-Dīn (1595—1634) did

not succeed in improving the situation of the town; nor did the Shaikh Zahir al-Umar of 'Akka and his successor Dījazir Pasha in the second half of the xviiith century. An earthquake in 1837 brought further misfortune to Sūr. The town has now 6,500 inhabitants (1840: 3,000; 1880: 5,000; 1900: 6,000) of these about half are Muslims and rather less Roman and Greek Catholics, the remainder Jews.

SŪR, a clan of Afghāns to which Shīr Shāh, the conqueror of Humāyūn the Tīmūrid, and founder of the short-lived Sūr dynasty of Dīhli and Agra, belonged. Firāhtā, following earlier authorities, describes the Sūr as a tribe of Afghāns of Roh, the hill-country which is now the abode of frontier tribes over whom the British Government exercises little authority, and the Afghān Government less. According to the same authority the Sūr tribe traces its descent from the Shamsabānī dynasty of Ghūr, but this seems to be a fictitious genealogy, fabricated possibly to gratify Shīr Shāh. The Sūr are a subdivision of a clan of the Lodi or Lūdi tribe, to which Buhlāl Lodi and his two successors on the throne of Dīhli (1451—1526) belonged. According to Surgeon General Bellew the Lodi tribe has three great divisions, Siyāni, Niyāz and Dotāni, of which the

Siyaḥ division is divided into two clans, Parangi and Ismā'īl, the latter having three subdivisions, Sūr, Lohānī and Mahpāl. The accession of Bahlāl Lodī to the throne of Dihlī attracted many Afghāns to India, among them a community of the Sūr subdivision of his own tribe, headed by Ibrāhīm Khān Sūr, who was first employed in the Hīẓar Firūza and Nārnāl districts. He had four sons, Hasan, Ahmad, Muḥammad, and Ghāzī. Hasan and Muḥammad accompanied Djamāl Khān to Džawnpūr, where Muḥammad remained, while Hasan received the fiefs of Sahāraṁ and Khawāspūr Tānda in Bihār. He had four sons, Farid and Nīẓām by his wife, an Afghān lady, and Sulaimān and Ahmad by a slave girl. Farid eventually became emperor of India under the title of Shīr Shāh (q. v.). His strength of character and commanding ability suppressed that tendency to internecine strife which he recognised as the besetting sin of the Afghāns and the chief source of their weakness, but after his death there was none to restrain them, and the empire which his valour and ability had won was speedily lost by the dissensions of his successors. He was succeeded by his son Djalāl Khān, who took the title of Ismā'īl or Salīm Shāh and reigned for nine years (1545–1554), but whose energies were dissipated in a contest with his elder brother, 'Adil Khān, Salīm Shāh's young son, Firūz, was put to death by his maternal uncle, Mubārīz Khān, son of Shīr Shāh's younger brother, Nīẓām, and Mubārīz ascended the throne under the title of Muḥammad Shāh 'Adil, but was contemptuously nicknamed 'Adalī by his own people, and *Andhālī* ("blind") by the Hindūs. During his feeble reign (1554–1556) his cousin Ibrāhīm, son of Ghāzī Khān Sūr of Hindawān, brother of Hasan Khān, and Ahmad, son of Ahmad Khān Sūr, another brother of Hasan, assumed the royal title, and at one time there were three emperors pretending to reign in India: (1) Ibrāhīm Shāh, who seized Dihlī and Āgra; (2) Muḥammad Shāh 'Adil, who retired to Cunnār, and (3) Ahmad Sūr, who assumed the title of Sikandar Shāh in the Panjāb, drove Ibrāhīm from Dihlī and Āgra, and was occupying those districts when Humāyūn returned in 1555 and expelled him. He fled into the Siwālīk and thence to Bengal, where he died. Ibrāhīm Shāh, when driven from Āgra by Sikandar Shāh, fled to Sambhal and thence to Kālpi, where he was defeated by Hemū, the minister of 'Adalī. Ibrāhīm next fled to his father, Ghāzī Khān, then in Biyāna, and Hemū besieged him there, but was recalled by 'Adalī to repulse Muḥammad Khān Sūr, governor of Bengal, who was marching on Cunnār. Ibrāhīm followed him, but was defeated, and again retired to Biyāna, and thence to Patna, where he attacked Rājā Rāmcandra, who defeated and captured him, but treated him with great honour, enthroned him, and acknowledged him as his sovereign. 'Adalī meanwhile attacked and slew Muḥammad Sūr near Kālpi. The news of Humāyūn's return and of Sikandar's defeat and flight had now reached Cunnār, and was followed by that of Humāyūn's death, on receipt of which 'Adalī sent Hemū with 50,000 horses and 500 elephants to recover Āgra and Dihlī. He took both cities, for himself, not for his master, but was defeated and slain at Pānpāt by the army of Akbar, for whom both Dihlī and Āgra were recovered. 'Adalī was defeated and slain by Khidr

Khān, son of Muḥammad Sūr, who had assumed the title of Bahādūr Shāh. Ibrāhīm Sūr was for some time in Mālwa, and fled thence to Uṛta, where Sulaimān Katarīnī treacherously put him to death in 1567.

(T. W. HALE)

SŪRA, the name given to the chapters of the Qur'ān. In the Qur'ān itself, the word means, in the Meccan as well as the Medinese parts, the separate revelations which were revealed to Muḥammad from time to time. Thus he challenges his opponents to produce a sūra like his own (ii. 21; x. 39) or to bring ten sūras like his of their own devising (xi. 16). As a superscription we have in xxiv. 1: "(this is) a sūra which we have sent down and sanctioned and in it we have revealed clear signs (*āyāt*)". The Muḥakkimūn, we are told (ix. 65), fear that a sūra may be sent down that will tell them what is in their hearts; cf. ix. 87: "when a sūra was sent down which commanded them to believe and to fight etc.". In ix. 125, 128; xlvii. 22, mention is made of the different effects of a sūra upon believers and unbelievers. As far as contents are concerned the word thus coincided with the word "Qur'ān" in its original meaning, but in later usage they became separated; Qur'ān became the name of the collected revelations in book form while sūra was used of the chapters of the sacred book, which consisted originally each of a single revelation but later were formed of the combination of several revelations or fragments.

Where Muḥammad got the word is still uncertain in spite of the attempts made to trace its origin. Noldeke thinks it is the modern Hebrew *šūra* "order, series" but even if this could be explained as "line" it would not take us to the original meaning of the word, and against it is the fact that one sūra, according to xxiv. 1, contained several *āyāt*. Perhaps the word is in some way connected with Muḥammad's conception of a book in heaven (*al-Kitāb*), the contents of which were revealed to him piecemeal. "Piece, section" or a similar meaning would make good enough sense and would also explain the later usage, but linguistically it cannot be proved, for H. Hirschfeld's supposition that it is a corruption of the Hebrew *sefer* is not at all probable. *Sūra*, to mount, fall upon, overcome (e.g. with wine) might possibly yield a meaning like *impetus*, sudden overwhelming inspiration etc., but *sawra* and not *sūra* is the derivative found from it.

The authorised Qur'ān contains 114 sūras of which the first (*al-Fātiha*, q. v.) and the two last are conjurations loosely connected as introduction and conclusion to the rest. This agrees with the fact that these three sūras are said to have been lacking in the Qur'ān as edited by Ibn Ma'ūd. There was a certain amount of freedom at first

in this respect so that Ubayy for example had two *sūras* in addition to those usually accepted. The order of the *sūras* also was not definitely fixed, although the same principle of arrangement may be recognised in the different editions. The reader may be referred to the article *YŌW'AN* on this point, as well as on the names of the *sūras*, their separation in the manuscripts and the letters which are found in the superscriptions to some of them.

Bibliography: Nöldeke, *Geschichte des Qurans*, p. 24 sq., 227 sq., 320 sqq.; second edition by Schwally, I. 30 sq., II. 30 sqq.; H. Hirschfeld, *New Researches into the Composition and Exegesis of the Quran*, 1902, p. 2. (F. Bum.)

SŪRA (A.), image, form, shape, e.g. *ṣūrat al-arḍ*, 'the shape of the earth', *ṣūrat ḥimār*, 'the form of an ass' (Muslim, *Ṣaḥīḥ*, trad. 115) or face, countenance (see below). *Tajāwiz* are rather pictures. *Sūra* and *ṭawwira* are therefore in the same relation to one another as the Hebrew *demūt* and *zelem*. The Biblical idea according to which man was created in God's *zelem* (Gen., i. 27) has most probably passed into Hadīth. It occurs, so far as I am aware, in three passages in classical Hadīth; the exegesis is uncertain and in general unwilling to adopt interpretations such as Christian theology has always readily associated with this Biblical passage. In Bukhārī, *1st ḥiṣṣa*, bāb 1 (cf. Muslim, *Ḍaḥḥa*, trad. 28) it is said: 'Allāh created man after (*ʿaṣr*) his *ṣūra*: his length was 60 *ells*'. On this Kaṣṭallānī (ix. 144) says: 'the suffix *'his*' refers to Adam; the meaning therefore is: — Allāh created Adam according to his i. e. Adam's form, that is perfect and well-proportioned' (cf. also, *Lisān al-ʿArab*, vi. 143 sq.). But there are also other explanations. Another tradition says: 'One should not say: *'amā Allāh make thy face hateful and the faces of those who are like thee*', for Allāh created Adam after his *ṣūra*'. In this tradition the suffix obviously refers to the person addressed. Others say: The suffix refers to Allāh, for in one version the tradition runs: Allāh created Adam in the shape of al-Rahmān, i. e. as regards his qualities, knowledge, life, hearing, sight, etc. although Allāh's qualities are incomparable. — The theologians are divided into two groups on the exposition of this tradition; the one refrains from any interpretation through dread of anthropomorphism; the other explains the expression as an indication of Adam's beauty and perfection, an *iḍāfat takrīm wa-taḥḥīz* (like *ṣūrat Allāh*, *Baṣṭ Allāh*, says al-Nawawī, see below). — So far Kaṣṭallānī.

The second passage in which the tradition occurs is Muslim, *Birr*, trad. 115: 'If a man fights with his brother, he ought to spare his face, for Allāh created man after his *ṣūra*'. Al-Nawawī's commentary on this tradition coincides in part with the already quoted section in Kaṣṭallānī; we need only quote the following here: al-Māzarī says: 'Ibn Kutaiba has interpreted this tradition wrongly by taking it literally'. He says: 'Allāh has a *ṣūra*, but not like other *ṣūras*'. This interpretation is obviously wrong for the conception *ṣūra* involves composition and what is put together is created (*muḥallaḥ*); but Allāh is not created therefore is not composed, therefore he is not *muḥallaḥ*. Ibn Kutaiba's interpretation is like that of the anthropomorphists, who say: 'Allāh

has a body, but not like other bodies'. They quote in support the orthodox pronouncement 'The Creator is thing (*ḥaṭ*) but not like other things'. This is however reasoning by false analogy for *ḥaṭ* does not involve the conception of coming into existence (*ḥudūṭ*) and what is associated with it. Body and *ṣūra* on the other hand involve joining together and composition and therefore also *ḥudūṭ*', etc.

We have further to deal with the conception *ṣūra* in connection with the prohibition of images, which, in so far as it is known in the west, is traced to the Kurʾān like most Muslim institutions. Although this idea is one of the numerous popular errors about Islām, we cannot deny that the prohibition of images is based on a view which finds expression in the Kurʾān. In Kurʾānic linguistic usage *ṭawwira* 'to fashion' or 'form' is synonymous with *baraʾa* 'to create': Sūra, vii. 10, 'and we have created you, then we have fashioned you, then we have said to the angels, etc.'. Sūra, iii. 4: 'It is he who forms you in the mother's womb as he will'. Sūra, xl. 66: 'It is Allāh who has made the earth for a home for you and the heavens for a vault above you, shaped you and formed you beautiful' (cf. Sūra, lxiv. 3). Sūra, lix. 24 Allāh is called *al-ḥaṭṭāḥ*, *al-ḥaṭṭī*, *al-muṭawwīr*, i. e. according to Baḍāwī: 'He who takes the resolution to create things according to His wisdom, who creates them without error, who calls their forms and qualities into existence, according to His will'.

This linguistic usage shows complete synonymy between the concepts 'to fashion, to shape', and 'to make, to create'. In the older Hebrew literature also *Yahwe* as creator is called *Yager*, i. e. the potter. The roots *ṭ-r* and *ḥ-r* are also ultimately connected.

If then Allāh according to the Kurʾān is the great fashioner, it follows in Hadīth that all human fashioners are imitators of Allāh and as such deserving of punishment: 'Whosoever makes an image him will Allāh give as a punishment the task of blowing the breath of life into it; but he is not able to do this' (Bukhārī, *Buyūʾ*, bāb 104; Muslim, *Lisān*, trad. 100). 'Those who make these pictures will be punished on the Day of Judgment by being told: Make alive what you have created' (Bukhārī, *Tawḥīd*, bāb 56). 'Those whom Allāh will punish most severely on the Day of Judgment are those who imitate Allāh's work of creation' (Aḥmad b. Ḥanbal, vi. 36). Such are called the worst of creatures (Nasāʾi, *Mawḍiʿ*, bāb 13), cursed by Muḥammad (Bukhārī, *Buyūʾ*, bāb 25), compared to polytheists (Tirmidhī, *Dyaḥannam*, bāb 1). Houses which contain images, dogs and ritually impure people are avoided by the angels of mercy (Bukhārī, *Badʾ al-Ḥaṭṭ*, bāb 17, etc.). The latter statement is illuminated by the story of how ʿĀʾisha once purchased a cushion (*nunruḳa*) on which were pictures; when Muḥammad saw it from outside the house, he stood at the door without coming in. When ʿĀʾisha saw repugnance expressed on his countenance, she said: 'O Apostle of Allāh, I turn full of penitence to Allāh and his Apostle, but what law have I broken?' He replied: 'What is the meaning of this cushion?' She said: 'I purchased it for thee to sit upon and use as a cushion'. Then the Apostle of Allāh answered: 'The makers of these images will be punished and they will be told: Make

alive what you have created". And further he said: "A house which contains images is not entered by the angels" (Muslim, *Liḥāḥ*, trad. 96; cf. 85, 87, 91-99; Bukhārī, *Liḥāḥ*, bāb 92; Ahmad b. Hanbal, vi, 172). Muhammad is said to have removed the images and statues out of the Ka'ba (Bukhārī, *Magāzī*, bāb 48). There are also references to this in the *Sira*. Here we need only quote one more remarkable tradition, which has some resemblance to the Christophorus legend. 'Alī relates: "I and the Prophet walked till we came to the Ka'ba. Then the Prophet of Allāh said to me: "Sit down". Then he stood on my shoulders and I arose. But when he saw that I could not support him, he came down, sat down and said: "Stand on my shoulders". Then I climbed on his shoulders and he stood up and it seemed to me as if I could have touched the sky, had I wished. Then I climbed on the roof of the Ka'ba on which there was an image of copper and iron. Then I began to loosen it at its right and left side, in front and behind until it was in my power. Then the Prophet of Allāh called to me: "Throw it down". Then I threw it down so that it broke into pieces like a bottle. I then climbed down from the Ka'ba and hurried away with the Prophet, till we hid ourselves in the houses for fear some one might meet us" (Ahmad b. Hanbal, i, 84; cf. 151).

According to the law it is forbidden to copy living beings, those that have a *ruh*. Nawawī in his commentary on Muslim's *Ṣaḥīḥ* to *Liḥāḥ*, trad. 81 (Cairo 1283, iv, 443) gives the following summary: "The learned men of our school and other 'ulama' say: The copying of living beings is strictly forbidden and is one of the great sins, because it is threatened with the severe punishment, mentioned in the traditions. It does not matter whether the maker has made the copies from things used in little esteem or from other things, for the making of them is in itself *ḥarām*, because it is an imitation of Allāh's creative activity. From this point of view it makes no difference whether the image is put upon a cloth, carpet, coin, vessel or wall, etc."

The copying of trees, camel-saddles, and other things apart from living creatures is not forbidden. — So far the legal prescriptions affecting the copying itself.

As regards the use of articles which have on them images of living creatures, if these are hung on a wall or are on a garment which is worn or on a turban or other article which is not treated lightly, they are *ḥarām*. If the reproductions however are on carpets which are walked upon, on cushions and pillows etc., which are in use, they are not *ḥarām*. Whether the angels of mercy avoid houses which contain such articles will be discussed immediately, as God will.

In all these cases it makes no difference whether the reproductions have a shadow or not. Some of the older jurists say: Only what has a shadow is forbidden; there are no objections to other reproductions. But this is an erroneous view. For the reproduction on the curtain was condemned by the Prophet and it certainly had no shadow. The other traditions should be remembered which forbid all images of whatever nature.

Al-Zuhri says: Images are without exception forbidden as well as the use of articles on which there are images or the entering of a house in

which there are images, whether embroidered on a cloth or not embroidered whether they are put on a wall, on a cloth or carpet, to be trodden upon or not, on the authority of the literal interpretation of the tradition about the *sumruḥa* (pillow) which Muslim records (cf. above). This is a very strict point of view. Others say: What is embroidered on a cloth whether for humble use or not, whether hung on a wall or not is permitted. They regard as *makrūh* images which have shadows, or reproductions on walls, whether embroidered or not. They rely for this view on Muhammad's words in several traditions in the *Baḥ* concerned: "except what is embroidered on cloth". This is the attitude of Kāsim b. Muhammad.

The *igmas* forbids all representations which have shadows and declares their defacement *muḥrib*. The Kādi (1540) says: "Apart from little girls playing with dolls and the permission for this". Mālik however declares it *makrūh* for a man to buy his daughter a doll. And some say that the permission to play with dolls was abolished by the traditions... (p. 447 sq.). These traditions lay it down without any ambiguity that the representation of living creatures is strictly forbidden. As regards representations of trees and such like without *ruh* neither their making nor purchase is thereby forbidden. Fruit-trees in this respect are the same as other trees. This is the view of all the 'ulama' except Mājjīdīd, who considers the representation of fruit-trees *makrūh*. The Kādi (1540) says: Mājjīdīd is alone in this view. He relies on the tradition: "Who is more unrighteous, than he who imitates my creation?" (Muslim, *Liḥāḥ*, trad. 101; Bukhārī, *Tawḥīd*, bāb 56); while all the others quote the tradition: "Then it shall be said to them, put life (*ahyū*) into that which ye have made, for *ahyū* means: make living creatures (*hayawān*) with a *ruh*". — So far al-Nawawī.

In spite of the opinions of theologians and jurists, breaches are not rare as in the case of the prohibition of wine; as for example, the frescoes in the bath-house of 'Amra [q. v.], the miniatures in Persian and Turkish manuscripts, Turkish and Egyptian stamps. There have even been pictures of Muhammad in recent times. But this does not affect the fact that among Muslim peoples there has been neither painting nor sculpture to any considerable extent. Arabesques and calligraphy may be regarded as a substitute for it. Streygowsky has tried to explain the absence of human figures from Muslim art by the latter's being influenced by a school of art in which there were no human figures for some other reasons.

Objections were for long made to photography (see Snouck Hargronje, *Verrijde Geschiedenis*, ii, 432 sq.); now these seem, in certain circles at least, no longer to be so strong or even to have been quite overcome. In Cairo there is an illustrated weekly *al-Muṣawwar*, which is produced entirely on western lines. This does not however mean that the old opinions have entirely disappeared. Chauvin gives examples of the horror of being copied, examples which still have their counterparts in the modern western world. Here also we find people objecting to being photographed because they feel as if something were being stolen from their persons.

We also find the second commandment quoted literally in the west against pictures although the usual interpretation regards it only as prohibiting

the worship of idols. It may be asked whether the Muslim interdiction of images was influenced by the Jewish interpretation of the second commandment. From the literature (Flavius Josephus) on the one hand and the coins on the other, it is evident that the Jewish extension of the prohibition of images was exactly the same as the Muslim: no living creatures, only plants and other objects. On the one hand we may assume Jewish influence on the Muslim prohibition of images, on the other hand recognise that the foundations for this transference can already be found in the Qur'an. The Biblical idea of the creation of man by the making of an image and breathing the breath of life into it as found in the story of the creation is also found in the Qur'an (Sura, xv. 29; xxxviii. 72) and it is this very idea which has had great influence on traditions and legal literature. — For the philosophical meaning of the conception *sura* see *MAKIDA*.

SURAKARTA, or **SURAKERTA**, name of a kingdom on the island of Java and of its capital, ruled by two Javanese princes, the Susuhunan and Mangku-Negara, under Dutch suzerainty. It arose along with the kingdom of (A)jyogyakarta (-kerta), likewise ruled by two chiefs, out of the older kingdom of Mataram, which on the decline of the kingdom of Demak and Padjang appeared as a third Muhammadan state in Java proper. The Muslim character of Mataram, although rather superficial and only nominal, was the result of the official recognition of the Susuhunan as Muslim ruler by the authorities in Mecca and found expression in the title *Panatu-gama*, "Arranger of the religion (of Islam)". Although the population was quite consciously Muhammadan, the kingdom nevertheless remained in many ways, e.g. in political organisation, Hindu-Javanese. The same holds of the states, which succeeded it, and particularly perhaps of Surakarta, where especially of recent years an active interest in the older culture has arisen in educated circles under the influence of studies by Europeans.

The kingdom of Mataram founded by Senapati about 1575 reached its greatest prosperity under Agung (1613—1645). Under his successors the influence of the eastern Dutch Trading Company (Vereenigde Oost-Indische Compagnie) rapidly increased, which, founded at the beginning of the 17th century was the *de facto* ruler of Java by 1725. Disputes about the succession brought about (1755) the already mentioned partition of the kingdom

into the states of Surakarta and Yogyakarta. The Susuhunan, who still ranks higher than the Sultan, had already founded a little state by 1744 in the village of Sala (often written Solo); the name of which, Surakarta, as usual in Java, took the place of that of the previous state, Kartasura (from Sanskrit *kṛta* = flourishing etc. and *sura* = hero, heroic, brave). The state and the village of Sala were officially called Surakarta after the state, although the present town is still also called Sala (pronounced Solo by Europeans). Very soon after the partition, one of the rival princes received an important fief from the Susuhunan; this gradually developed into an independent principality the ruler of which the Mangku-Negara is still however formally subordinate to the Susuhunan.

The history of the kingdom is, like that of Yogyakarta, rather confusing on account of the continual alterations in its boundaries. It passed more and more under Dutch influence and is of no special importance for the world of Islam. On account of the impossibility of giving a brief sketch of it here, the reader must be referred to the fuller studies by Dutch scholars quoted below.

The present town which has now about 130,000 inhabitants, of whom only a few thousands are Europeans, has remained the centre of Javanese culture. Native arts and crafts were always cultivated in the capital but on account of the often keen European competition have lost a good deal of importance for Java itself. The Javanese fine arts, especially music and dancing, are however still flourishing and Javanese learning was officially encouraged and this is partly true of the present day. Literary life, which seems almost to have disappeared with the death of the last *pujangga*, Rangga-Warita (*pujangga* was originally a priest, later court-scholar; Sanskrit *bhūṅga* = snake, snake-demon, and it is not quite clear how the present meaning has developed from this), appears to be reviving again to some extent and may still have a future in a more modern form under the influence of the expansion of European education. Quite recently (1926) the Dutch authorities have founded a school in Surakarta, on account of its central situation for Javanese culture, the special object of which is to give native scholars a classical oriental training.

The buildings of the capital with its old customs and usages, its *bédaya* dances and wayang plays, with its many remarkable features, its reflection of former Javanese splendour, form the greater attraction of the town. The princes have their own officials for various services, who live with their families in the palaces and are estimated to number 15,000. But actually the power is exercised by the Dutch resident who is equal in authority to the prince, an arrangement which has repeatedly caused friction.

Bibliography: Exceedingly valuable for our knowledge of the two native states is G. P. Rouffaer's article *VORSTENLANDEN in the Encyclopaedie van Nederlandsch-Indië*, iv. 587a—653b, with a valuable bibliography. P. J. Veth, *Java*, ii. 165 sqq., is more general. (C. C. BERG)

SURAT, a city situated in 21° 12' N. and 72° 50' E. on the south bank of the Tapti and ten miles from its mouth. The geographer Ptolemy (A. D. 150), speaks of the trade

of Palipula, perhaps Phulpāda, the sacred part of Sūrāt city. Early references to Sūrāt by Muslim historians must be scrutinized, owing to the confusion of the name with Sorath (Saurashtra), but in 1373 Firz Tughluq built a fort to protect the place against the Bhils. The foundation of the modern city is traditionally assigned to the beginning of the sixteenth century, when its prosperity was restored by Gopi, a rich Hindū merchant, and in 1514 it was already an important seaport. The Portuguese burnt the town in 1512, 1530, and 1531, and the present fort was founded in 1540 by Khudāwand Khān, a Turkish officer in the service of Muḥmūd III of Gūjarāt. In 1572 it fell into the hands of the Mirās, then in rebellion against Akbar, who besieged and took the place in the following year. For 160 years the city, known as "the Gate of Makka" and "the Blessed Port" from its being the port of departure for pilgrims, enjoyed peace and prosperity under the Timūrids. An English ship first arrived at "Swally Hole" (Suwālī) the anchorage near the mouth of the Tapi, in 1608, but the English encountered great difficulty in founding a factory, owing to the hostility of the Portuguese. They succeeded, and their position was secured by the treaty brought back from Agra by Sir Thomas Roe in 1618. In 1664 Shiwaḍji plundered the town for three days, but could not touch the English and Dutch factories, which were bravely defended by their inmates. From 1669 an annual Marāṭha raid was almost a matter of course, but the foreigners defended themselves. In 1687 Bombay superseded Sūrāt as the principal English settlement on the western coast, and in 1733 the Muslim governor proclaimed his independence, but in 1759 the English, with the approval of the Marāṭhas, charged themselves with the administration of the town, which became a British possession in 1800. The English and Dutch graveyards contain interesting memorials of European trade and adventure in India.

SURAJDĪYĀ (MAS'ALA). This is one of the classical "questions" in the theory of law (*uṣūl*), one of the few that have a special name (cf. AKDARĪYĀ) derived from one of the first to propound it. It refers to the legal fiction (*dawr hukmī*) invented by some Shāfi'is (Mas'ālī, Ibn Surajī, and Ghazālī, who later recanted) to cancel, by bringing it into a vicious circle (*yamin bi-ḍ-ḍā'ira*), the solemn declaration (*ta'liq*) pledging the contracting party to divorce his favourite wife if he breaks his oath (*ṭa'ah mu'allaf*), employed in the Karīmīan initiation; cf. KARIMATĪYAS. Snouck Hurgronje has shown the use made by the Shāfi'is of the *ta'liq* to stabilise marriages in Java.

SURŪRĪ, the name of several Ottoman poets of whom the most notable are the two following:

I. MUḤLĪḤ AL-DĪN MUṢṬAFĀ EFENDI, called SURŪRĪ, a distinguished philologist and expositor born in Gallipoli where his father Shāhān was a merchant or a teacher. After the conclusion of his studies he became an assistant *kādi* in Sтамbul, in 944 (1537). When the medrese founded by Kāsim Pasha [q.v.] was finished, he was appointed its first *muderris*, but resigned a year later and by the desire of his patron Kāsim Pasha began to lecture on *Djālāl al-Dīn Rūmī's Mathnawī* as a Nakshbandi derwish. In 950 (1543) he became tutor to prince Muṣṭafā [q.v.], the ill-starred son of Sulaimān [q.v.] the Magnificent. After the prince's execution in 960 (1553) he retired into private life and died on 7th Jumādā 1 969 (Jan. 13, 1562) in Sтамbul at the age of 72. His tomb was at the little mosque which has now disappeared built by him in the Kāsim Pasha quarter (cf. Hāfiḡ Husain, *Hadīkat al-Djawāmī*, ii. 4 19, and J. v. Hammer, *G. O. R.*, ix. 106, No. 593). In this mosque at one time were preserved the manuscripts of all his works. On his tomb cf. also Ewliyā Čelebi, *Siyāhatnāme*, i. 426; Surūri was one of the greatest philologists of his day and probably the greatest authority on Persian language and literature that Turkey has ever produced. In his capacity as tutor to the prince he prepared several of his famous commentaries e.g. those on the *Bustān* and *Gulistan*. Towards the end of his life (968) he published the commentary on Hāfiḡ which is probably the best of its kind; his text book of prosody and rhyme *Ḥaḡr al-Ma'arīf* prepared for prince Muṣṭafā in 956 (1549) and his *ʿAḡā'id al-Makhḡlūḡāt* a synopsis of the *Comography* of Kāwīmī are also famous. Less well known is his commentary on the very popular introduction (*Isḡhāḡ*), *Gr. 10474*) of Shaikh Athīr al-Dīn Mafaddal. His other works are almost all expositions of Arabic or Persian works, or translations. He had a command of Turkish, Persian and Arabic such as is rarely found.

D.*, ii. 287 109; Brūsālī Mehmed Tahīr, *Othmānīl Mu'etrikh*, ii. 225 sq.; 'Atā'i, *Dhail on the Shāhā'ik al-Nu'māniya*, p. 23 sq.; Kınallıade, *Tadhkirā* (MSS.); Brockelmann, *G. A. L.*, ii. 438; *Sidjill-i othmānī*, iii. 12; 'Alī, *Kunh al-Akḡār*, unprinted part (very full).

II. SAİYD ORUḤXAN, called SURŪRĪ, the greatest Ottoman writer of chronograms, usually called Surūri Mu'etrikh, i.e. Surūri the writer of *ta'riḡh's*. Saīyid 'Othmān was born in Adana in 1165 (1751) in Southern Anatolia, the son of Hāfiḡ Mūsā. As a youth he came to the capital through his fellow townsman, the *kādi* Tewfik Efendi of Adana, where he mixed with distinguished men of letters and finally became a *kādi* through the influence of Tewfik Efendi, afterwards Shaikh al-Islām. He was for many years on intimate terms with the poet Sunbul-sāde Wehbi Efendi [q.v.] whom he voluntarily accompanied into exile at Old Zagħra. He later settled in Sтамbul again where he built a house and died on 11th Šafar 1229 (Feb. 2, 1814). 'Othmān Surūri was considered the greatest Ottoman writer of chronograms. His chronological rhymes (*ta'wārīḡh's*), which he wrote on every occasion with remarkable readiness are innumerable. He was also distinguished

as a poet but his poems seem to be of less merit and it is only his skill in making chronograms that it is really admirable. He was imitated by 'Izzet Molla (q.v.), his pupil, and Es'ad Efendi, the imperial historian, in this style of composition. There is no complete edition of his works; and not all his chronograms are contained in his *Divān*. A selection of the latter is given in Ahmad Djewdet Pasha's *Sururî Medfûnât*, Stambul 1299, 109 pp. 8° and by Abu 'I-Diyâ Tewfik, *Sururî-i Mu'errif*, Stambul 1305, 54 pp., small 8°.

(FRANZ BABINGER).

AL-SŪS, a ruined site in the Persian district of Khūzistān or 'Arabistān. At a very early period (from at least the second millennium B.C.) it was the capital of the kingdom of Elam. Its name in the Bible and in cuneiform inscriptions is *Šūšan*; Greek *Σόσα*; Late Egypt *Sush* (see *M. V. G.*, iii. 141; *O.*, 6); Syriac and Armenian *Šōshā* (not to be confused with the town of the same name, the see of a bishop, in the region of Mōsul; cf. e.g. G. Hoffmann, *Auszüge aus syrisch. Akten pers. Märtyrer*, Leipzig 1880, p. 204; Sachau, *Abh. Pr. Ak. W.*, 1905, p. 55); modern Pers. *Shush*. When between 642–639 B.C. Assurbanipal put an end to the kingdom of Elam, its capital Susa was sacked and completely destroyed (cf. Streck, *Assurbanipal*, Leipzig 1916, p. CCCXXXIX sq.). Cyrus raised the town from its ruins again and made it his winter residence. In this capacity it experienced a new period of glory under the splendour-loving great kings of the Achaemenid house. To the great riches which were again accumulated in Susa in this period, we have eloquent testimony in the vast booty which Alexander the Great carried off from it in 331.

In the Sassanian period, as we know from Syrian, Byzantine and Arab sources (cf. Noldeke, *Gesch. d. Pers. und Araber zur Zeit. der Sassaniden*, Leyden 1879, p. 58), the vigorous Sapor II (309–379) had the town of Sūs stamped into the ground by 300 elephants as a punishment for a rising there and built a new city beside it, to which he gave — after the fashion of Oriental potentates — a new name alluding to himself, *Frānshahr-Sūs* (= probably the abbreviation *FRN* on Sassanian coins of Susiana) but this however ultimately disappeared before the older name. Sapor settled Roman prisoners in his new city. The latter no doubt strengthened the already not inconsiderable Christian element in the population. Sūs was the see of a bishop from 410–605 as we know from Syriac literature; see Guidi, in *Z. D. M. G.*, xliii. 414; Sachau, *op. cit.*, p. 40.

Sūs fell into the hands of the Arabs in 17 (638) (or not till 639) when Abū Mūsā al-Ash'arī (q.v.) carried through the conquest of Khūzistān. The forces there, commanded by the Persian governor Hormuzān, apparently offered little resistance to the Muslim troops (cf. the Syriac *Chronicle*, ed. by Guidi, *Act. du 8^e Congrès Intern. des Orient.*, J.-A., 1891, p. 32 and history of the Armenian Sebeos of the 5th century; see Hübschmann, in *Z. D. M. G.*, xlvii. 625). The older historians Balādhuri

and Tabari (cf. Schwarz, *op. cit.*, p. 364) know nothing of severe fighting with the natives and a destruction of the city by Arab troops, mentioned by al-Mukaddasi (and cf. Loftus, *op. cit.*, p. 344). Under Islām, Sūs remained for several centuries more a populous flourishing city — we have coins struck in it (cf. Loftus, *op. cit.*, p. 400) — but it was no longer the capital of the whole region of Khūzistān or Ahwāz; this part now fell to the city of Ahwāz (more precisely Sūḡ al-Ahwāz; cf. above, i. p. 208; ii. p. 778b). Sūs was now merely the capital of one of the seven (and at times more) divisions of this district. To the district of Sūs belonged several smaller towns, notably Karkha (Syriac Karkhā dhr fādhan) which is well known from Syriac literature. Sūs was surpassed in importance not only by the capital Sūḡ al-Ahwāz but soon also by other places in Khūzistān, e.g. Tustar and 'Askar(a)-Mukram (cf. i. p. 488b; ii. p. 778b). All these three places lay on the river Kārūn (q.v.) towards which during the caliphate the political and economic centre of gravity of the region moved.

The Arab geographers emphasise the busy industries of Sūs, notably weaving which was highly developed. Its silk was famous (cf. the *Divān* of Kaia al-Ruḡaiyāt, ed. Rhodokanakis, N^o 63, 8 in *S. B. Ak. Wien*, 1909). The lemons grown here were held in particular esteem; in the middle ages a good deal of sugar was grown around the town and still more was refined in the town. According to al-Mukaddasi, in his time (end of the tenth century), the town proper had already fallen into ruins; the population lived in a suburb. Idrisi (transl. Jaubert, Paris 1836, i. 381, 384) makes Sūs still thickly populated at the middle of the 11th century, and Benjamin of Tudela who travelled through Asia a few years later says that there were no less than 7,000 Jews here with 14 synagogues. The two banks of the river 'Ulai' — the Shāwūr (see below) must be meant — were united by a bridge; on the west bank was the quarter of the poor (cf. Ritter, *op. cit.*, ix. 305 sq.; Loftus, *op. cit.*, p. 320). The Persian geographer Mustawfi, writing in the 14th century, describes Sūs as still a flourishing town. But we are justified in doubting whether this is really accurate at this late period and was not simply taken from earlier writers. It is certain that Sūs became more and more completely deserted from the 17th century, and this agrees with the results of the French excavations, according to which most of the remains of the Arab period discovered in Sūs belonged to the 11th and 12th century (see de Morgan, *Mém. de la Délé. en Pers.*, viii. 32). Dizfūl, 3½ hours N.E. of Sūs, which only appears to have come into prominence since the Mongol period, and is now an important town in Khūzistān ('Arabistān'), may be in a way considered the successor of the mediaeval Sūs.

Sūs has a very favourable strategic and commercial situation; for it is at the point where the two principal rivers of the country of Khūzistān, the Kārūn (q.v.) and the Kerkhā (also written Kerkha), approach nearest to one another. They were at one time connected by canals. The ancient Susa lay between two arms of the Kerkhā, the western, i.e. the modern Kerkhā (Chosaspes of classical writers) and an eastern branch which has now disappeared but is still recognisable (cuneiform: Ulai) which was connected with the Kārūn

(Pustigra, the Ulai proper, *Eufrates*). The mounds of ruins of Sās begin about 12 miles S.W. of Diāfāl. A short hour's journey east of them, the Diāfāl-Rūd or Ab-i Dī, a tributary of the Kārin, runs through the plain. The western side of the area of the town 100—300 yards from the two western main mounds is washed by the narrow but deep Shāwūr (Shaur) which rises about 2½—3 hours above the ruins of Sās, and does not flow out of the Kerkhā itself as has been assumed (contrary to Schwarz, *op. cit.*, p. 30; cf. Rawlinson, *op. cit.*, ix., p. 70 and Layard, xvi. 56). A canal, now dried up, leaves the Kerkhā a little above the source of the Shāwūr, runs round the side of the town on the north and east and finally disappears in the S.W. in the swamps which stretch to the Shāwūr. This watercourse is the above mentioned eastern branch of the Kerkhā. The Kerkhā proper is about 2 miles from Sās, while its earlier bed (the old western main arm) now a ditch thickly overgrown with bushes is only 500 yards west of the Shāwūr (cf. thereon Loftus, *op. cit.*, p. 346).

The Arab geographers not infrequently call the Kerkhā, like the Shāwūr, the "river of Sās"; see G. Le Strange, *op. cit.*, p. 233; Schwarz, *op. cit.*, p. 304—305 and cf. above, ii., p. 778, 857a.

The system of ruins at Sās is quite considerable (3—5 miles in circumference). It is only since the beginning of the 19th century that we have reliable accounts from European travellers, namely: Kinneir and Montell (1809), Gordon (1814), H. Rawlinson (1836), A. H. Layard (1840) and notably Loftus (1851—1852). The English excavations conducted by the latter in 1851—1852, and those of the French, first (1885) under M. and Mme Dieulafoy, then 1897—1899 and later by de Morgan and others have settled the main topographical and archaeological problems. Four large artificial platforms stand clearly out from the ruins, separated from one another by more or less broad ravines. At a short distance from the Shāwūr (100—300 yards, increasing towards the south) stand two hills, the larger to the north, roughly a rectangle, about 60 feet above the bed of the river, which conceals the palace of the Achaemenid kings and a smaller one irregular in shape, but higher (up to 120 feet above the Shāwūr), which formerly bore the citadel mentioned by Greek writers, still called Kal'a-i Shūsh = "the citadel of Shūsh" by the people. On the east these two mounds are adjoined by a roughly rectangular area, larger than these in area, which Loftus calls the great or central platform, attaining a height of 65 feet and covering an area of over 60 English acres. Next comes on the east an extensive fourth platform, the eastern and northern edges of which are not easy to define as they slope by terraces to the plain. Besides these four mounds of ruins, there are a series of smaller ones mainly in the east and northeast. When Benjamin of Tudela speaks of a quarter of the town on the west bank of the Shāwūr (cf. above), it should be noted that no distinct traces can be found of this suburb where the poorer people dwelled, at least in the form of well marked mounds of rubble. In the south or southwest the ruined area is bounded by marshes with a luxuriant growth of reeds and trees.

In the northeast mound Loftus found a pillared hall like that in Persepolis, apparently the throne room, the walls of which were adorned by the

reliefs of the immortals now in the Louvre. This splendid room formed part of the royal palace built by Darius I and restored, after suffering in a fire in the reign of Artaxerxes I, by the latter's grandson, Artaxerxes II Memnon, who was particularly fond of Susa. The western pair of mounds near the river, must have been the residence of the court and of the government, while in the third "the central platform", we have probably to locate the town proper. Remains of a great wall surrounding the town dating from the Elamite period (before Assurbanipal) have been found during the excavations; the sides not protected by watercourses could easily have been defended by fortifications. The town destroyed by Assurbanipal is buried 12—16 feet below the surface, covered by ruins of the later settlements of the Achaemenid, Seleucid and Sasanian period. The English and French excavations recovered a vast quantity of inscriptions and other relics from all periods of Sasan history down to the Arab. These are now partly in the British Museum and partly in the Louvre. For London, cf. the *Guide to the Babylonian and Assyrian Antiquities in the British Museum*, 1921, esp. p. 175 sq.

About 150 yards from the N.W. corner of the S.W. hill just on the bank of the Shāwūr is the tomb-mosque of the Prophet Daniel usually called by the Persians *Pir* (= Arabic *Shaykh*) or *Paizambar* (= Prophet *Daniyāl*) still visited by numerous pilgrims, Muslims, Jews and Mandaeans (Sabbe). The present building is only a few centuries old but in it were used several fragments from the ruins (bricks with cuneiform inscriptions, capitals etc.) as *wāqf*-pieces (cf. Rawlinson, *op. cit.*, p. 69). The sanctuary has a roomy rectangular court surrounded by a wall, entered by a low doorway from the river side. Within, on both sides are arched ways leading into the sanctuary which runs in the west of the court yard. The actual tomb is dark and consists of a sarcophagus of smooth cement behind perforated wood lattice. Above the mosque, rises out of the centre of the roof terrace, on which the pilgrims sleep in hot weather, a sugar-cone like tower ending in a pointed pyramidal cupola crowned by a crescent. This remarkable type of tower found especially in tombs is not rare elsewhere in 'Irāq, in Khuzistān (cf. e.g. i. 1026a and Herzfeld in *Petermann's Geogr. Mitteil.*, 1907, p. 62, 75a), Lüristan and the Persian Gulf. Cf. thereon F. Langenegger, *Die Baukunst des Irāq*, Dresden 1911, p. 115—116 and Herzfeld in *Sartre-Herzfeld, Archäolog. Reise im Euphrat- und Tigrisgebiet*, Berlin 1911, i., p. 231, 239, 246; 1919, ii., p. 177—178, 321.

According to the statements of various Arab writers, with whom the above mentioned Syrian chronicle also agrees, the sarcophagus with the bones of Daniel was found after the capture of the town by the Arabs, and, as some say (Balādhuri, ed. de Goeje, p. 378; Tabari, *op. cit.*, see below), in a chamber in the citadel. By orders of the Caliph 'Omar the river Shāwūr was turned from its course, the sarcophagus placed in its dry bed and the water then led back into its old course (cf. the Arab legend of the original tomb of the prophet Joseph in the Nile in Schwarz, *op. cit.*, p. 361, note 5, and the burial of Alarie in the Buvento). The place of the burial in the river is, as Muḥaddasi (p. 407 and cf. p. 417)

and Yāqūt, iii. 189, remark, not known exactly. But others say that the present mosque of Daniel lies exactly opposite the burial-place in the Shāwūr. The burial of Daniel's sarcophagus in the river-bed is also recorded by Iṣṭakhri, p. 92, Ibn Hawkal, p. 174 and the Kufan Ibn A'ṭham (d. 314 = 921) in his *Futūḥ*, which was translated into Persian about 596 (1200) by Muḥammad b. Aḥmad al-Mustawfī al-Harawī; see the part of this Persian version given by W. Ouseley in Walpole, *op. cit.*, p. 429 sq. (repeated in Loftus, *op. cit.*, p. 318). A different tradition (e.g. Kārwint, ii. 114) however claims that the sarcophagus of Daniel was found not in Sūs, but in Tusar (the modern Shāshar). We are also told that the two towns constantly disputed the possession of the relic (cf. Z.D.M.G., liii. 59, and Schwarz, *op. cit.*, p. 357). The relics of the prophet were also held in great estimation for the power attributed to them of averting any misfortune, particularly drought (cf. Balādhuri, *op. cit.*; Muḥaddasi, p. 417; Ibn A'ṭham, *loc. cit.*). The Jew Benjamin of Tudela who travelled in this part of the world between 1160 and 1170 gives a version of the story that differs from those in the Arab writers. According to him the people of both banks of the Shāwūr in Sūs for long fought for the possession of this blessed palladium until they finally agreed to keep it alternately on the right and left bank. When the Seljuq Sultan Sandjar (q. v.; d. 1157) heard the story while in Sūs he ordered the sarcophagus to be put in another of crystal and suspended by iron chains in the centre of the bridge joining the two banks. The Rabbi Petakhia from Ratisbon who was here about a decade after Benjamin of Tudela, says he saw it in this position.

The present sanctuary of Daniel has been held in veneration from very early times. In the Sāsānian period it was held sometimes to be the tomb of Kai-Khosrow [q. v.], a mythical king of Iranian legendary history, sometimes as that of the great Darius; cf. Hübschmann, in Z. D. M. G., xlviii. 625; Noldeke, in *Grundriss der iran. Phil.*, ii. 146 (= *Das Iran. Nationalepos*, p. 11, resp. 2nd ed., p. 18) and Justi, *ibid.*, ii. 486. There was perhaps on this site at an earlier date an Elamite sanctuary in honour of Athene or Artemis-Anahita or rather a native goddess concealed under that name (Kiritisha). Artaxerxes II is recorded to have erected several temples in his kingdom to some such deity (cf. Justi, *op. cit.*).

It has already been mentioned that there was a tradition which sought to locate the original burial-place of Daniel in Tusar (Shāshar; q. v.), where earlier European scholars wrongly located the Sosa of the ancients (cf. Ritter, *op. cit.*, ix. 304 and Benjamin of Tudela, ed. Asher, ii. 152 sq.; the explanation still found in Reclus, *Nouv. Géogr. Univers.*, 1814, iii. p. 191, of the name Shāshar as "Little Sosa" is wrong). There are a number of other places in the east which also claim to possess the bones of this prophet.

On the tomb of Daniel in Sūs, cf. Tabari, i. 840, 2566; Yāqūt, ii. 533; iii. 188, 189; Benjamin of Tudela, *op. cit.*; Ouseley, *op. cit.*; Loftus, *op. cit.*, p. 311—323; Th. Dombart in *Jahrb. der hist. Ver. für Nordlingen und Umgeb.*, 1927, vol. x., p. 172—179. Cf. also the Bibliography given below (notably Rawlinson and Layard) and the article DANIEL.

Near the tomb of Daniel stands another ruined tomb of a saint (*imāmādaḥ*); see Rawlinson, *op. cit.*, ix. 70 and J. Dieulafoy, *A. Suse*, p. 83. East of the ruins of Sūs towards Diāfūl, are two other similar sanctuaries, one of which is considered to be the tomb of 'Abdās and the other that of Ibrāhīm al-Khalil; see Loftus, *op. cit.*, p. 345—346; Jéquier in de Morgan, *Mémoires de la Dilig. en Perse*, viii. 31, 32 (speaks of the tomb of two brothers and of one of a Shāikh). Bricks and capitals from the Achaemenid period are also built into these saints' tombs. One Muslim tradition (Tabari, i. 252, 22) says that Abraham (Ibrāhīm; q. v.) was born in Sūs. In keeping with this tradition the site of the oven into which Muslim legend says Nimrūd threw Ibrāhīm is also moved to Khuzistān (Mandjanik, south of Māl-Amir; see Rawlinson, *op. cit.*, ix. 81. But these associations with Abraham are usually localised in al-'Irāq (in Kūthā, 'Aḥar-kūf, Birs Nimrūd, etc.). It may be further mentioned that the Arabic sources consider Sūs, like Bābil, one of the oldest cities in the world and make them both foundations of one of the mythical Iranian kings (Ōshang or Tahmuraṭh; see Tabari, i. 171, and above, i., p. 548 sq.).

The country round Sūs suffers for nine months of the year from the glowing heat of the Iranian sky. In January however a luxurious, almost tropical, vegetation springs up after the winter rains. The rich pastures that then cover the soil attract the nomads thither. In the spring it is mainly Arabian Beduins that camp here and indeed they are in the majority in Khuzistān generally, so that this district is actually officially called 'Arabistān' by the Persians [q. v.]. The region of Sūs is particularly visited by the tribes of 'Alī Kāthir and Bant Lām [q. v.]. On the 'Alī Kāthir, who migrated hither over three centuries ago from Najd in Central Arabia, cf. Layard, *op. cit.*, xvi. 33, 56, 90; Loftus, *op. cit.*, p. 327, 331, 356, 358, 381 sq. and Schwarz, *op. cit.*, p. 417. Of the great tribe of 'Alī Kāthir we are here mainly concerned with two of its subdivisions, the Ka'b and Zabāh (cf. Layard, *op. cit.*, p. 33). The Ka'b were originally members of the powerful Ka'b tribe leading a nomadic life on the lower Karūn; on the latter, cf. ii., p. 778, also Layard, *op. cit.*, xvi. 8, 37—39, 41—45, and Loftus, *op. cit.*, p. 285 sq., 381, 390. Lār nomad tribes are often found in the plain of Sūs. At the beginning of May all is again as quiet as the grave. Even the guardian of the tomb of Daniel leaves the district, which is filled with miasma from the swamps and the heat now becomes unendurable.

On the banks of the Shāwūr covered by luxurious woods (notably acacias, poplars and willows), in the desert that was once the left arm of the Kerkhā and in the undergrowth of the swamps are many beasts of prey, wolves, hyenas and even lions, also wild pigs.

III. (Achämeniden-Inschrift by Weissbach, 1913), and in the volumes of the *Mémoires de la Délégation en Perse*.

(M. STRECK).

AL-SŪS AL-AKṢĀ, a district in the south of Morocco, forming a triangular plain about 120 miles long by 25 to 26 miles broad with an area of about 7,500 square miles. On the west it is bounded by the Atlantic Ocean and on the north by the last slopes of the Great Atlas and on the south by the Anti-Atlas, gradually narrowing till it reaches the junction of these two ranges. It is watered by the Wādī Sūs and its tributaries. The Arab geographers of the middle ages usually distinguish between *al-Sūs al-aḡṣā*, "Farther Sūs" and *al-Sūs al-adnā* "Nearer Sūs". *Al-Sūs al-adnā* seems in those days to have meant the whole of northern Morocco with Tangier as its capital and *al-Sūs al-aḡṣā*, the whole of the massif of the two Atlases. According to Yāqūt the distance which separated the two Sūs was two months' journey. The term *al-Sūs al-adnā* seems in any case to have been very early ousted by that of *Ḡharb*. The same geographers praise the excellence of the products of Farther Sūs and describe it as a thickly populated country. Al-Idrīsī speaks of the cereals which grew there — wheat, barley and rice, fruits of all kinds in abundance — nuts, figs, grapes, quinces, pomegranates, lemons, peaches, apples and particularly an incomparable sugar-cane. When he wrote, a sugar was made in Sūs that was celebrated throughout almost the whole world. Cloth which enjoyed a good reputation was also made there. The same author gives some notes on the people who were a mixed race of Maṣmūda Berbers.

He charges them with a lack of urbanity, coarseness and insolence. The dress of the men consisted of a *kisā* of wool which enveloped them entirely, with a *miṣār* of wool around the waist which they called *ṣifāḥ*. They were armed with short spears with steel heads. They drank a liquor made from the must of sweet grapes which they called *amīs* and considered it a permitted beverage as it did not bring about drunkenness. These notes show clearly that the term *al-Sūs al-adnā* was then applied to a much wider area than at the present day; it included not only the valley of the Wādī Sūs but also the mountainous country towards the Haḡaz of Marrakeṣh, the Dra (Dar'a) and the Tafālāt.

Farther Sūs, as a province of the Maghrib, has always been closely connected with the history of the whole country and with the histories of the different dynasties which have successively established themselves there. In 117 (735) it was conquered and converted to Islam by Ḥabīb b. Abī 'Ubaida, the grandson of 'Uḡba b. Naḡf. Under the Idrīsids it passed on the death of Idrīs II in 213 (828) to his son 'Abdallāh, at the same time as the massif of the Great Atlas with the towns Aghmāt and Naḡā. It was next one of the main objectives of the Almoravids [q.v.] when they thrust their way northwards. In 451 (1059) the general Abū Bakr b. 'Umar seized the towns of Māsūt and Tārūdānt but the authority of the Almoravids was never very secure in Sūs, in spite of the submission of the province to Yūsuf b. Tāshfin in 478 (1085).

Sūs played a prominent part in the early days of the Almohad movement in the Maghrib. It was, along with the plain of Marrakeṣh, the centre of Almoravid resistance against the attempts at expansion by the companions of the Mahdī Ibn Tūmart beyond the massif of the Grand Atlas where the movement began. A son of the Almoravid ruler 'Alī b. Yūsuf, Baḡgū, organized the resistance there and it was only in 535 (1140—1141) that the Caliph 'Abd al-Mu'min definitely conquered the whole of Sūs. During the whole period of the Almohad dynasty it was one of the most important provinces of the empire. On its decline in the reign of al-Murtadā (646—665 = 1248—1266) it was the scene of a rebellion on a great scale fomented by the agitator 'Alī b. Yaddar. This individual, a former dignitary of the Almohad court, wishing to found a little independent kingdom in Sūs, appealed to the Arab tribes settled between Tlemcen and the Rif, the Dawī Ḥassān and the Shabbānāt of the Ma'kil group. He was able to hold out against the Almohad governor of Tārūdānt but his success was not of long duration. In 1266 the Almohad prince Abū Dabbūs with the help of Marinid contingents regained the province from him and seized Tākhūt and Tiyūnīm. Nevertheless the independent kingdom of Sūs after the final fall of the Almohads was able to maintain some sort of independence in the period of the early Marinid Sultāns until the reign of Abū 'I-Ḥassan 'Alī who broke it up for ever.

In 1504 the Portuguese gained a footing on the coast of Sūs in the bay of Agādīr [q.v.] and founded the fortress of Santa Cruz; it was a strategic point of great importance, the gateway to a rich hinterland and at the same time an excellent harbour, one of the best on the Atlantic coast of Morocco. The people of the country tried

in vain to dislodge the garrison; in order to harass it increasingly and to blockade it by land they established quite close to the Portuguese station, a *ribāṭ* or concentration camp of the "volunteers of the faith" who used to come there in relays to deliver open attacks on their Christian foes or prepare murderous ambushes for them. Between the sea and Tārūdānt, a *sāwīya* was soon formed to take charge of the local *qihād*, the *Zāwīya* of Tedāi, the cradle of the Sa'dian (q. v.) dynasty. It was founded by some Hasanī Shurfā, whose ancestor Ahmad b. Muḥammad b. al-Ḳasīm, had come in the 11th century from the Hūdūd and settled in the valley of the Wādī Dar'a, at Tāḡuādānt. His descendants then migrated to Sūs near Tedāi, settled there and took up a position in the country which daily increased in importance. At the beginning of the xvth century, the head of the *sāwīya*, Muḥammad b. 'Abd al-Raḥmān, became the real leader in the holy war in al-Sūs; assisted by his two sons, Ahmad al-A'rādī and Muḥammad al-Shaikh, he displayed great activity and denounced the impotence of the ruling dynasty to the people. He was not long in achieving his object; the tribes of al-Sūs proclaimed him their Sulṭān in 1510. He died soon afterwards, leaving his son to continue his work. The eldest, al-A'rādī, who had assumed the title of king of Sūs in the lifetime of his father, established himself as sovereign in Tārūdānt and in 1541 succeeded in driving the Portuguese finally out of Āgādīr.

We see from the above what a large part Sūs plays in the history of the first of the two Sharifian dynasties of Morocco. The Sa'dian Sulṭāns also always kept a watchful eye on this vital part of their Empire. Muḥammad al-Shaikh al-Mahdī was the first to extend the cultivation of sugar in al-Sūs and thus created an important source of revenue for the treasury. It was in the reign of the great prince Ahmad al-Manṣūr that this province saw its greatest revival of prosperity. A regular army, formed of citizens recruited in Sūs, at this time formed the garrison of Marrakesh and relations between the capital and the province were never closer. But after the death of al-Manṣūr, when anarchy once more reigned throughout the empire, al-Sūs did not escape the various rebellions which broke out on all sides. Prince Zaidān, a claimant to the throne, made his headquarters there. A few years later al-Sūs fell into the hands of a powerful rebel Abū 'l-Ḥasan 'Alī al-Samīlī called Abū Ḥassan who made an alliance with the Filālī Sharif of Sijilmāsa. But this alliance was only ephemeral and the early days of the second Sharifian dynasty of Morocco were marked by the struggle between the Abū Ḥassan and the 'Alawid pretenders of Tāfīfūt. He was succeeded on his death by his son Abū 'Abd Allāh Muḥammad, who was soon brought to terms by the 'Alawid Sulṭān al-Raḥīd. In 1670 the latter led an expedition to the very heart of al-Sūs and captured the stronghold of Igh. Next year the people of al-Sūs sent a deputation to him at Marrakesh to offer their submission. The latter was not of long duration for in 1677 the Sulṭān Mawlāi Ima'īl had to send an expedition to al-Sūs and another in 1682. The country was finally pacified and at the end of his reign when Mawlāi Ḥasan divided his empire among several of his sons, al-Sūs fell to Muḥammad al-'Alīm, with Tārūdānt as his capital. But this prince only went to his domain to set up as a pretender to

the throne and from this time on we find each successive 'Alawid Sulṭān forced to suppress one or more rebellions in al-Sūs during his reign. We may just mention the expeditions to put down rebellions sent by Mawlāi 'Abd Allāh (1733), Mawlāi Sulaimān (1802) and particularly those of Mawlāi al-Ḥasan in 1882, 1886 and 1896. Al-Sūs has been definitely at peace since the establishment of the protectorate of the French Republic in Morocco after the expedition of 1917.

These continual rebellions have resulted in the gradual impoverishment of al-Sūs since the xvth century. The enthusiastic descriptions of the geographers and travellers of the middle ages no longer apply to the second period of the history of this reign. At the present day, while modern methods may be expected to raise the value of this country, the only part of al-Sūs that is really rich is the narrow strip of irrigated land which lies along the banks of the Wādī Sūs which is hardly susceptible of extension except to the north of this river. The products of al-Sūs are cereals, oil of *argān* and fruits. Cattle-rearing is very limited. Al-Sūs on the other hand seems certain of an great economic future as a result of the exploitation of its abundant mineral deposits: copper (already worked in a rudimentary fashion by the natives), lead, rock-salt, and lime.

The principal town of al-Sūs at the present day is Tārūdānt, the residence of a pasha appointed by the Sulṭān. It has about 7,000 inhabitants of whom 1,000 are Jews who live in a ghetto or *mellah*. This town seems to have been founded at a very early period and we already find it playing a part in history in the Almoravid period. In the middle ages al-Sūs had as its capital sometimes Tārūdānt and sometimes Igh. After the death of Mawlāi al-Ḥasan, at the end of the sixteenth century, Tārūdānt was the centre of the rebellion of al-Hiba who held out there till the town was taken in 1613 by the Maḥallas of the Maḥzen. It is surrounded by a great wall of clay which dates from the end of the xvth century.

Besides Tārūdānt, there is the little town of Tiznit, 52 miles south of Āgādīr, and 12 miles east of the Atlantic coast, at the foot of the Anti-Atlas. It has a population of 4,000. Sulṭān Mawlāi al-Ḥasan founded it on his expedition to al-Sūs in 1882. Finally we may mention about 15 miles S.E. of Tiznit the famous *sāwīya* of Sīdī Aḥmad-u-Mūsā, in al-Tāssarwālī. It is the mother-*sāwīya* of the *Uḡād-u-Mūsā*, who are all acrobats and follow their profession throughout North Africa and also in Europe.

On the coast besides Āgādīr [for which see the separate article] we may mention the villages of Āḡū and Māsāt, which in the middle ages were comparatively important centres of maritime trade, frequented especially by Genoese sailors, and the terminus for several caravans from the Sahara.

The people of al-Sūs still speak a Berber dialect belonging to the *Tāḡelḥalt* group but the speakers of Arabic are becoming more and more numerous as a result of the emigration of large numbers of natives who go to exercise various trades in the towns of the rest of Morocco.

AL-SUSAN, the common name for the white and yellow-red lily and for the blue iris which is more precisely described by the addition of *armānigūnt* and is also called *irisā* by the physicians. The name is a general Semitic one, but whether from *šrēh* (six), as Löw suggests, seems to me doubtful on account of the *š* or *ṣ* always found in it. The root of *iris florentina* L. is still used in medicine.

(J. RUEKA)

SUSAN, a ruined site on the Upper Kārūn in Khūzistān in the territory of the Lūr tribe of the Bakhtiyārī [q. v.], 5 hours' journey from Dīfūl; cf. above, II, p. 779^a. The place is also called 'Arūdī (or 'Arūdī?) and Djabālik by the Persian geographers. H. Rawlinson discovered these ruins in 1836; Layard then visited them twice (1840, 1841) and made several important corrections in his predecessor's description, which was in part based only on the information of natives. No later European traveller seems to have made a thorough examination of the locality.

According to Layard the ruins seem to belong to two different epochs, the old Persian and the Sāsānian. On the right bank of the Kārūn at a point where the river makes a turn westwards and forms a semicircle can still be seen for a stretch of nearly two miles the ruins of a mass of unknown stones called by the Lūrs Māl-i Wirān "possession in ruins". They are said to come from an old, probably Sāsānian, town. On both banks of the river very old paved roads can still be traced. At a short distance from Māl-i Wirān, N.E. at the foot of the hill stands the tomb of Daniel, revered by the Lūrs of the 'Alī Ilāhi sect [q. v.] as the burial place of the Old Testament prophet. It is called the tomb of the "Great Daniel" (Dāniyāl-i Akbar) to distinguish it from that of "Little Daniel" (Dāniyāl-i Aghar) in Sūs. Muslims, Jews and Mandaeans in agreement with the older Christian tradition, believe firmly in the authenticity of the latter as the real tomb of the Biblical prophet (cf. further the article AL-SŪS). Rawlinson describes the tomb of Daniel at Sūs as a building of huge white marble blocks with a large artificial pool in front. The latter is fed by a little river which comes down from the hills. The many fish in the pool are held sacred by the superstition of the people. Layard on the other hand says the building is of earth and denies the existence of any pool or of a general belief in the sacredness of the fish in this stream. Even in the middle ages, however, as we know from the stories of the Jewish traveller, Benjamin of Tudela, and the Persian traveller al-Mustawfī (cf. Layard, *op. cit.*, xvi, 61) at the tomb of Daniel in Sūs the fish in this stretch of the Shīwūr stream near this sacred site were considered sacred, probably a relic of the ancient fish cult of Nearer Asia.

According to Rawlinson, there were near the tomb of Daniel a large block of marble with a completely preserved cuneiform inscription and many similarly inscribed tablets. Layard saw nothing of these nor could he see anything to indicate the survival of such monuments.

The Kārūn is enclosed by fearful ravines a little below the ruins of the Māl-i Wirān. Where the

rocks fall back again there is another mound of ruins of roughly hewn stones called by the Lurs Masjid-i Sulaimin (= Mosque of Solomon) apparently a very old but unimportant building. There are no inscriptions. In the neighbourhood still exist the remains of a very old arch-bridge. Layard knows nothing of further ruins in and near Süsan. At some distance above Süsan we have Süsan Surkh-Ab = "Red-water Süsan", which marks the site of an old town.

The mountains which run along the left bank of the Kärün are called Djildir, Djilwir, Djilwir, or more accurately Gilgird, Gilgird (see Rawlinson, *op. cit.*, ix, 87; Layard, *op. cit.*, xvi, 62, 80). At the foot of them lie the remains of a Sasanian castle, *Kal'a-i Gilgird*. This Gilgird chain separates Süsan from the imposing ruins, about 4–5 hours S.E. of Irbad, or Mäl-Autr [q. v.]. In *Kal'a-i Gilgird*, Rawlinson has rightly recognised the famous state prison of the Sasanids in which the Armenian king Arsaces III, surrendered to the Persians by the Emperor Jovian, languished for years as a prisoner until he committed suicide in dramatic fashion after a feast. The *ṛā Ašwē Spōpōs* "the castle of oblivion" which was the scene of the story so vividly told by Procopius (*Bell. Pers.*, i, 5, 12) can only have been on Persian soil. The castle is often mentioned by this name in Greek and Armenian writers, the real name *Gilgirda* is preserved only in Theophylaktos Simokatta (iii, 3). According to him and to Armenian writers also, the place should be sought in Susiana not far from Djundai-Sabur [q. v.]. From these data Rawlinson established the identity of *Pōrōpōs* with *Kal'a-i Gilgird* (East of 50° East Lat. and south of 32° N. Lat.). The Arab geographer Yāqūt, iii, 303, knows the place as Kildjird. The name means "clay fortress" (lit.: made of clay), a term analogous to the Toprak-Kal'a = "earth fort", found in Turkish-speaking lands. From what has just been said it is evident that Ritter cannot be supported (xi, 83–84) in moving "the castle of oblivion" to Northern Mesopotamia, although he has been recently followed by V. Chapot and Lehmann-Haupt (see Streck, *op. cit.*, lvi, 308, note 3). Layard (*op. cit.*, xvi, 64, 96) wrongly sought it in Diar. Rawlinson also thought that the tradition of the tomb of Daniel later migrated from Süsan southwards to the Shawr and that the ruins of Süsan represented the older Susa of the Assyrian period, while the town of Susa of the Persian-Greek period was to be recognised in the ruins of Sus. This hypothesis of two different Susa's, which Ritter also rather favoured, must be definitely rejected: it was refuted as early as Layard, *op. cit.*, p. 93 sq.

(M. STRECK)

SUSU or **SOSU** is a name of a people who are thought to have at one time formed the autonomous population of Futa-Djallon and who have since been driven to the west and particularly

the southwest of this province in lower French Guinea; the *Susu* are in part Muslims.

Susu is also the Mandingo pronunciation of the name of the Sasanian town of *Sōsō* [q. v.].

(MAURICE DELAFOSSE)

SUTRA, covering, protection, shelter, especially at the *ḡalāt*, where *sutra* means the object, which the worshipper places in front of him or lays in the direction of the *ḡalāt* whereby he shuts himself off in an imaginary area within which he is not disturbed by human or demoniacal influences. "The fictitious fencing off of an open place of prayer, the *sutra*, seems to have had among other objects that of warding off demons" (Wellhausen, *Reise*, p. 158). In one tradition the man who deliberately penetrates into this imaginary area is actually called a *ḡalāt* (Bukhārī, *Ṣaḥīḥ*, bāb 100; cf. Ahmad b. Hanbal, *Musnad*, iv, 2; Tāyālīsī, *Musnad*, Haidarābād 1321, No. 1342).

The word is not found in the *Qurʾān*. In *Ḥadīth* it often occurs in the expression *sutara* (*sutara*, *istara*) *bi-ḡalāt* in traditions which describe the ritual ablution, in which one conceals one's nakedness or causes it to be concealed by a cloak or curtain (e.g. Bukhārī, *Ṣaḥīḥ*, bāb 14; *ḡalāt*, bāb 21; Muslim, *Ḥadīth*, trad. 70, 79; Abū Dāwūd, *Taḥāra*, bāb 123; *Manārik*, bāb 37). Similarly *sitra* is the name given to the curtain by which Muḥammad concealed his women from the gaze of the world (Bukhārī, *Ṣaḥīḥ*, bāb 56; *Nikāḥ*, bāb 67). We are further told that one performs the *ḡalāt* in the direction of an object which isolates him from the multitude (*suturuḥu min al-nās*) so that he is not disturbed by them (e.g. Bukhārī, *Ḥadīth*, bāb 53; Muslim, *Ṣaḥīḥ*, trad. 259; Abū Dāwūd, *Manārik*, bāb 53).

Muḥammad is said to have been quite unrestricted in his choice of a *sutra*: baggage-camels, horses, trees, saddles (Bukhārī, *Ṣaḥīḥ*, bāb 98), a couch (*ibid.*, bāb 99), lance (*ḡarā*, bāb 92), stick (*ḡamara*, bāb 93), the pillars of the mosque (bāb 95) are mentioned. *Ḥadīth* has preserved the memory of two opinions regarding the *sutra*: one gives minute rules and the other opposes this.

The former endeavours to lay down accurately what distance should be preserved between the *sutra* and him who performs the *ḡalāt* (*manara al-ḡalāt*, "space to allow a sheep to pass"; Bukhārī, *Ṣaḥīḥ*, bāb 91; Muslim, *Ṣaḥīḥ*, trad. 263, 264 etc.); it makes Muḥammad explain that no one is to be allowed to pass between anyone and his *sutra* (Bukhārī, *Ṣaḥīḥ*, bāb 100, 101; Muslim, *Ṣaḥīḥ*, trad. 258–262 etc.), that passers-by, especially dogs, asses and women, intercept the *ḡalāt*: the Apostle of God said: "If one performs the *ḡalāt* without having in front of him something, such as the end or central part of a saddle, his *ḡalāt* is intercepted by a passing dog, ass or woman" (Tirmidhī, *Manārik*, bāb 136; Ahmad b. Hanbal, vi, 86).

The other view holds that the *ḡalāt* is never intercepted by passers-by (this is also Shāfiʿi's view according to Tirmidhī's note on *Manārik*, bāb 135). 'A'isha exclaims indignantly: "you place us on the same level as asses and dogs; by Allāh, the Prophet used to perform the *ḡalāt* while I lay on the couch between him and the *ḡalāt*" (Bukhārī, *Ṣaḥīḥ*, bāb 105). The same tendency is seen in an anecdote by Ibn 'Abbās: "I was riding behind al-Faḥl on a she-ass; we came up

to the Prophet just as he was performing the *ṣalāt* with his companions in Minā. We dismounted and took our places in the row, while the animal ran among the people without intercepting the *ṣalāt*" (Tirmidhī, *Mawāṣiṭ*, bāb 135; cf. Ahmad b. Hanbal, ii, 196).

The *Shāfi'is* call the *sutra sunna*. The various views of the jurists are given in al-Nawawī in his commentary on Muslim's *Ṣaḥīḥ*, Cairo 1283, ii, 76 sq.; cf. also Tirmidhī's remarks on bāb 133—136 in his chapter *Mawāṣiṭ al-Ṣalāt*.

Abū Ishāq al-Shīrāzī, ed. Juynboll, p. 29, writes as follows: "If anyone passes a man who is performing the *ṣalāt* and there is a *sutra* or stick between them of about an arm's length in size, it is not *mahrūḥ*; nor is it *mahrūḥ* if there is no stick but a line which the worshipper has drawn at a distance of 3 ells; if on the contrary there should be nothing of the kind at all then it (passing by) would be *mahrūḥ*. The *ṣalāt* would however remain valid".

It may be mentioned in conclusion that the *sutra* of the *imām* at the *ṣalāt* serves for those with whom he performs the *ṣalāt* (Bukhārī, *Ṣalāt*, bāb 90).

(A. J. WENSINCK)

AL-SU'UDĪ, SAIF AL-DIN 'ABU AL-LATIF B. 'AED ALLAH, a theologian who died in 736 (1335/1336). Biographical data do not seem to be known hitherto. He contested the tenets of Ibn 'Arabi [q.v.] in some *ḥaṣṣa*'s occurring in al-Sakhawī's work *al-Kawāṭ al-munabbih 'an Tarjamat Ibn 'Arabi* (MS. in Berlin, Ahlwardt, *Verzeichnis*, No. 2849, cf. No. 7846, 4) and is mentioned (*op. cit.*, No. 8379, cf. No. 3658) as the author of a prayer (*du'a*).

Bibliography: C. Brockelmann, *G. A. L.*, ii, 9.

(C. VAN ARENDONK)

AL-SU'UDĪ, ABU 'L-FADL AL-MĀLIKI, theologian of the xth (xvth) century. He wrote a controversial work finished in Shawwāl 942 = April 1536 against the Christians (and the Jews), which has been edited from manuscripts of Leyden and Oxford by F. J. van den Ham (*Disputatio pro religione Mohammedanorum adversus Christianos*, Leyden 1877—1890) and is in substance an extract from a book by Abū 'L-Bakā' Ṣalīb b. Ḥusain al-Djāfari (wrote in 618 = 1221) entitled *Tahkīf man ḥarras al-Imān*. He is probably to be identified with Abū 'L-Fadl al-Mālikī, the servant (*khādīm*) of the Ṣaḥīḥ Abū 'L-Su'ūd al-Djāfari (died some years after 930 = 1523/1524), cf. al-Shāranī, *Lawāḥiḥ al-Anwār fī Tahkīf al-Aḥyār*, Cairo 1317, iii, 113 sq., who wrote, according to Ḥādīdī Khālifa (iv, 557, No. 9521) a commentary on the *Ḥamīya* of al-Buhārī [q.v.]. For al-Su'ūdī refers in his polemic (p. 146, 147, 4) to Abū 'L-Su'ūd as his master (*ustādh*) and al-Shāranī (*op. cit.*, ii, 113, s. f.) mentions Abū 'L-Fadl al-Mālikī as a devoted adept of Abū 'L-Su'ūd, from whom he probably derives his *nisba* al-Su'ūdī. According to van den Ham (*Preface* of his edition, p. 6), his book contains many passages occurring word for word in a manuscript commentary on the *Ḥamīya* preserved in Gotha (Pertsch, *Die Arab. Handschriften* . . . zu Gotha,

iv, 294, No. 2295), in which the author's name is Faḍl Allāh al-Mālikī.

Bibliography: in addition to the works mentioned above: Ḥādīdī Khālifa, *Kaṭīb al-Zunūn*, ed. Trieb, *Liber decem questionum contra Christianos auctore Ṣalīb ibn al-Ḥusain*, Thesis Bonn 1897, p. v.—vii; C. Brockelmann, *G. A. L.*, i, 430, ii, 329.

(C. VAN ARENDONK)

SU'UDĪ (or ABU 'L-SU'UD) B. YAḤYĀ B. MUḤYI 'L-DIN AL-MUTANABBI AL-'AHHĀL AL-SHĀFI' AL-DIMASHQĪ, a man of letters, who died in Damascus in Safar 1127 (Febr. 1715). He studied several branches of Muslim knowledge and one of his preceptors was 'Abd al-Ghānī al-Nābulusi. Al-Murādi mentions his *Diwān* entitled *Mudā'ih al-Ḥafarat bi-Lisān al-Iḥrār* and gives specimens of his poetry. According to the same author, al-Muḥibbī gives an article on him in his *Nashat al-Raḥīna wa-Raḥbat Tūl al-Ḥana* (cf. Brockelmann, *G. A. L.*, ii, 294). A *muwawḥḥ* in praise of Damascus from his pen is extant in a manuscript of the Preussische Staatsbibliothek (Ahlwardt, *Verzeichnis*, No. 6090, We 1120, f. 78a, cf. No. 8174, 2).

Bibliography: al-Murādi, *Silk al-Durar fī Ayūn al-Karn al-thānī 'ashar*, Bulāq 1301, i, 58—62; M. Hartmann, *Das arabische Strophen-gedicht*, 1. Das *Muwawḥḥ* (Semitist. Studien, ed. by C. Bezold, Heft 13/14), Weimar 1897, p. 83; C. Brockelmann, *G. A. L.*, ii, 279.

(C. VAN ARENDONK)

ṢUWĀ'. [See ṢĀ']

AL-SUWAIDIYA, the harbour of As-Ṣūḥkiya, which lay 12 *mil* from the Mediterranean. The town owed its rise owing to the gradual silting up of the harbour of Seleucia Pieria which lay a little farther north. Even in the time of Vespasian an attempt had been made, by making a great tunnel through the rock (which still exists and is called al-Gāris, i.e. the Pers. Čehriz or Kāris) to avert the danger of setting up its port from the great trading centre but without permanent success. In the early Muslim period Ṣalūḥiya is still occasionally mentioned (al-Balādhuri, ed. de Goeje, p. 148, 12: *Ḥiṣn Ṣalūḥiya*; al-Mas'ūdi, *Murāj al-Dhahab*, ed. Barbier de Meynard, ii, 199; Yāqūt, *Muḍam*, iii, 126; Saḥī al-Dīn, *Murāḥid al-Iḥṣā'*, ed. Juynboll, ii, 47). In the historians of the conquest also for *Kalāḥiya* or *Malāḥiya*, *Ṣalūḥiya* (in 21 H.) should probably be read (Caetani, *Annali dell' Islam*, iv, 506, § 81), and perhaps also later the unknown al-Mālūniya, since Basūt (*Basūt*) and al-Kuḥair (now Kaḥat al-Zaw) are mentioned in its neighbourhood, to which the people of Dar-kūsh migrated (Quatremère, *Hist. d. Sult. Maml.*, i, b, p. 266; van Berchem, *Voyage en Syrie*, i, 250, 6). But gradually the importance of the ancient seaport passed to its southern neighbour al-Suwaidiya, which took its name from the "Black Rivers" (the *ḥaṣṣa* *Māḥiya*, still called Böyük and Küçük Kāra-*su*) and the "Black Mountains" (*Māḥiya* or *Māḥiya* *ḥaṣṣa*, Montana Nigra, Syr.: *Tūr Ukāmā*, i.e. Amanos). In the older Arab geographers (e.g. al-Khwarizmi, Ibn Khurīdīdhīh, al-Battānī), the town is not yet mentioned. It only seems to have become of some note shortly before the Crusades, if its name is to be recognised in the *Evangelion*

of Georgios Kedrenos (Migne, *Patrologia Graeca*, cxviii, col. 97) 1030 A.D. Anna Comnena (Alexina II, Bonn, 87, 21, 126, 22, 239, 2) at a later date calls the town *ῥῆς Ἀντακίας ἑρῆμης ἐνδοῦ, ἀπὸς τοῦδ' ἢ τοῦ ἐξῆς*. It is only with the foundation of the principality of Antioch that its period of great prosperity began. According to Yāqūt the Franks took their goods from there to Antākiya. Al-Idrisi reckons from Hīan al-Suwaidiya 15 *mil* to Hīan al-Huryāda (Ἡὲν ἡρῶν in Estori ha-Farkhi, *Glorieta of the Italian charts and Portulane*) and 20 *mil* to Djabal Rās al-Khanātr. From the adjoining sanctuary of the younger Symeon Stylites on Djabal Mār Sim'ān (Ἰωαννῆς ὁ στυλῖτης) al-Suwaidiya was called Portus Sancti Symeonis by the Crusaders (Guill. Tyr., xiv, 5; xv, 13; xvii, 31). The town is rarely mentioned later. In 666 (1267/1268) the Amir Badr al-Dīn marched via al-Suwaidiya on Antākiya (al-Makrizi, *Hist. des Sult. Maml.*, transl. Quatremère, i/fi. 52 and ii/fi. 226 al-Suwaidiya for al-Suwaidd should perhaps also be read).

The name *es-Swēdiye* still survives. According to M. Hartmann it is however applied "sometimes to the highly cultivated plain between Orontes, the sea, the southern slopes of the Djabal Mūsā and the western slopes of Djabal Mār Sim'ān, sometimes to the largest place in this plain, *es-Zēfīniye*"; as in Barker's time "*es-Swēdiye* is still known north of the Djabal al-Aḥmar and south and east of the Orontes almost only as the name of a village, while the inhabitants of the plain itself and its immediate vicinity never use this name for a definite village but understand by it only this plain with its villages which differ very much from one another".

SUYŪTĪ. [See ASYŪT.]

AL-SUYŪTĪ, ABU 'L-FARĀ 'ABD AL-RAḤMĀN B. AH BAKR B. MUHAMMAD DJALĀL AL-DĪN AL-KHŪDAIRI AL-SHAKRĪ, the most prolific Egyptian writer in the Mamlūk period and perhaps in Arabic literature, came of a Persian family, formerly living in Baghdad, which for at least nine generations before him had been settled in Suyūṭ and had attained prominent positions in the public life of this town and in the government service.

Suyūṭi was born on 1st Radjab 849 (Oct. 3, 1445) in Cairo where his father was a teacher of *fiqh* in the Madrasa al-Shaikhūniya. After the early death of his father in Safar 855 = March 1451 (see his *Bughyat al-Warā*, p. 206) a Sūfī friend of his adopted the boy. He began his studies in 864 (1460) and concluded them on a journey through the cities of Egypt and a pilgrimage to Mecca in 869 (1463). Returning to Cairo, he first set up as a consultant on legal problems, and in 872 (1467) on the recommendation of his teacher al-Bulḥīn he received the professorship at the Shaikhūniya formerly held by his father. In 891 (1486) he was moved to the more important al-Hairūniya but in Radjab 906 (Feb. 1501) he lost this office, as he was accused of a breach of trust in the management of the institution's property. He then retired to al-Rawḥa on the Nile island and, when his successor died three years later, would not be induced to take up the office again. He died on 18th Djuṃādī I, 911 (Oct. 17, 1505).

Suyūṭi's literary activity, which he had already begun at the age of 17 was distinguished by an unusual versatility. The very long list of his writings compiled by Flügel in the *Wiener Jahrb.*, 1832, vols. 58—60, gives 561 works but it includes numerous quite short treatises in addition to substantial works. Suyūṭi's ambition was to try his skill in all branches of Muslim learning, and he did make a number of compilations, which are now of great value to us as compensating for lost works of classical literature as well as collections of material. From the catalogue of his extant works given in *G.A.L.*, ii, 145 only the best known will be dealt with here, in so far as they have been printed.

He collected all traditions referring to the exposition of the *Kur'ān* in his (apparently lost) *Tarḡimūn al-Kur'ān fī 'l-Tafsīr al-musnad*. He abbreviated this work by giving only the literary sources instead of the *isnād's* in his *Kitāb al-Durr al-manthūr fī 'l-Tafsīr al-ma'ṭhūr*, Cairo 1314, 6 vols. A number of obscure passages, he discussed in his *Muḥkamāt al-Aḥrān fī Muḥkamāt al-Kur'ān*, Bulaq 1384, Cairo 1309, 1310. He dealt with the occasions of the separate *sūras* in his *Lubāb al-Nuḥūl fī Aḥbāb al-Nuḥūl*, which is based on Wāḥidī's work but supplements this material from tradition and exegesis and lays special stress on making his sources clear (printed s.l. [Stambol], 1290 and several times on the margin of its most popular commentary). This was begun by his teacher al-Maḥallī Djalāl al-Dīn (d. 864 = 1459) and finished by Suyūṭi in 40 days in 870 (1465) it is therefore usually called *Tafsīr al-Djalālīn*, pr. Bombay 1869, Lucknow 1869, Calcutta 1257, Delhi 1884, Cairo 1300, 1301, 1305, 1308, 1313, 1328; among the glosses the best known is that of Sulaimān al-Djāmāl († 1204 = 1790), pr. Bulaq 1282, Cairo 1302, 1308. Suyūṭi later planned a large commentary entitled *Mafīd al-Bahrain wa-Mafīd al-Badrain*, but it is not clear whether this is lost or was never completed. Only the introduction to it has survived, a survey of all the branches of study relating to the *Kur'ān*, which he published separately in 872 (1367) under the title *al-Takḥrīr fī 'Ulūm al-Tafsīr*. He afterwards expanded this work, by using the *K. al-Burḥān fī 'Ulūm al-Kur'ān* of al-Zarkashī (d. 794 = 1392) into his *Irḡān* which is the most exhaustive presentation of the whole subject (ed.

by Mowlawies Banbeeroudeen and Nour-ool Haqq with an analysis by A. Sprenger, Calcutta 1852/1854, pr. Cairo 1278, 1307, 1317).

Suyūṭī aimed at collecting from Tradition all the sayings of the Prophet in his *Djāmi' al-Maṣānīd*, which is also called *Djāmi' al-Djawāmi'* or *al-Djāmi' al-kabīr*. He himself prepared a synopsis of this, *al-Djāmi' al-taḥṣīr min Ḥadīth al-Buḥārī al-maḥṣūr* and added a supplement *al-Ziyāda*; a commentary on this by 'Abd al-Rahmān al-Munāwī (d. 1032 = 1623) was printed at Bulāq in 1286. The work which had an alphabetical arrangement was re-arranged by al-Muttaḥī al-Hindī (d. 975 = 1567 or 977 = 1569) according to the rubrics of Fikḥ with the title *Munḥaḥḥ al-'Ummāl fī Sunan al-Aḥwāl wa 'l-'Aḥwāl* and added a supplement *al-Iḥwāl*. He next worked the two books into his *K. Ghayāt al-'Ummāl fī Sunan al-Aḥwāl*. He finally collected together the traditions about the sayings and doings of the Prophet once more and thus arose the *Kana' al-'Ummāl fī Ṭibḥat Sunan al-Aḥwāl wa 'l-'Aḥwāl* (printed Haidarābād 1312/1313, 8 vols., folio). Of Suyūṭī's numerous works dealing with special points of Tradition we may mention his book on the qualities of the Prophet, *Kifāyat al-Ṭalīb al-labīb fī Khawṣat al-Ḥabīb al-ma'rūf bi 'l-Khaṣṣat al-tawrā*, Haidarābād 1319/1320, 2 vols. He dealt with questions of criticism of Tradition on the lines of Ibn al-Djauzī [q. v.]; on the latter's *K. al-Mawqūfāt* he first wrote notes entitled *al-Nukat al-hadīth* (see *Fihrist al-Kutub al-'arabiya* 8. 'l-Kutub al-hadīth, l. 445) which is probably identical with the *al-Toḥḥūṭ al-'ala 'l-Mawqūfāt*, printed in a *Maḥmūṣa*, Lucknow 1303. He then edited the work himself again in the *al-La'āl al-muṣṣaḥa fī 'l-Aḥādīth al-mawqūfa*, Cairo 1317. Of Suyūṭī's smaller works, very many dealt with eschatological questions. Al-Kurṭubī's (d. 672 = 1273) *al-Tadhkira li-Aḥwāl al-Mawtū wa-Aḥwāl al-Aḥbār*, he edited under the title *Sharḥ al-Sudūr fī Sharḥ Ḥāl al-Mawtū fī 'l-Kubūr*, also often called simply *K. al-Borāh* (pr. Cairo 1309, 1329, in a Persian translation, Lahore 1871). A synopsis of it *Buḥārā 'l-Kawātib li-Likā' al-Ḥadīth* is printed on the margin of the Cairo edition. As a supplement he wrote in 854 (1479) *al-Budūr al-sāfira fī Umūr al-Aḥbār*, lith. in India 1311. On the examination of the dead in the grave he wrote 176 raddas verses entitled *al-Ṭahḥīṭ fī Lailat al-Mabīt*, pr. with a commentary by M. Arriya, Fās 1314, by M. al-Tihāmī Djanūn, *ibid.* 1321. His *K. al-Durar al-ḥisān fī 'l-Ba'ṭh wa-Na'im al-Djinnān* has also been several times printed. Several of his shorter works, e.g. six on the question whether the parents of the Prophet are in Paradise, are printed in the *Maḥmūṣat al-Maṣā'il al-'isrā'*, Haidarābād 1316/1317 and 1334.

Suyūṭī discussed the whole field of philology in an extremely full and valuable encyclopaedia entitled *al-Munḥir fī 'Ulūm al-Luḡa*, Bulāq 1282, Cairo 1323, verified by Mā' al-Ainain under the title *Ṭīmār al-Maḥṣūr*, Fās 1324. Following the example of Ibn al-Anbārī [q. v.] he endeavoured to apply the *uṣūl*, or principles of the science of Fikḥ to grammar in his *al-Iṭṭirāḥ fī 'l-'Uṣūl al-Naḥw wa-Djadalihī*, Haidarābād 1310, cf. Sprenger in *Z. D. M. G.*, xxxii. 7; A. Schmidt in *al-Muqaffariyya, Sbornik Stetit*, St. Petersburg 1897, p. 309 sqq. He also dealt with separate gram-

matical points on the lines of the discussion of legal points in a work which he called *al-Aḥkām wa 'l-Naḥw*, a title he had already used for a compendium of Fikḥ, with the supplement *al-Naḥw*, printed Haidarābād 1317, 4 vols. From 868 (1463) he had originally been collecting the material for this, along with particulars of the lives and works of the philologists; but after 899 (1493) he separated the *Nukat* from his material and on the advice of Maḥḥā al-Dīn b. Fahd collected the historical matter under the title *Buḥārāt al-Wa'at*, pr. Cairo 1326. He collected traditions regarding the beginnings of grammar in the *al-Aḥbār al-marwīya fī Sabab Waḥd al-'Arabiya*, pr. in the *al-Tuḥfa al-baḥṭiya*, Samsul 1320/1322, p. 49-53. He wrote a commentary on the *Alfiya* of Ibn Mālik [q. v.] called *al-Baḥṭiya al-marwīya*, Cairo 1310 and on Ibn Hishām's [q. v.] *al-Mughnī* he wrote a *Sharḥ Sharḥih*, Cairo 1322. He wrote an original grammatical study entitled *al-Farida fī 'l-Naḥw wa 'l-Taḥṣīf wa 'l-Khaṣṣ*, on which a commentary by Maḥmūd b. 'Abd al-Rahmān b. Zakarī al-Fāsī was printed at Fās in 1319, and another in the *Djāmi' al-Djawāmi'* which was printed with notes by al-Shanqīṭī in Cairo 1318 and 1327/1328 in two vols., and a commentary on the verses quoted as examples by the same entitled *al-Durar al-'iswāmī*, Cairo 1328.

In the field of history Suyūṭī has given us three works: one on general world history entitled *Bad' al-Zuhūr fī Waḥṣ' al-Uḥūr*, Cairo 1282 etc., a history of the Caliphs, *Tārīkh al-Khulafā'*, ed. by S. Lee and Maulawī Abd al-Haqq, Calcutta 1857, Cairo 1305, 1913, Lahore 1870, 1887, Delhi 1306, transl. by H. S. Jarrett (*Bibl. Ind.*), Calcutta 1881, and a history of Egypt entitled *Ḥuṣn al-Muḥādara fī Aḥbār Miṣr wa 'l-Kūhira*, lith. Cairo 1860 (?), pr. *ibid.* 1299, 1321. In biography in addition to the already mentioned history of the grammarians he also wrote a biographical collection on Kur'ān expositors, entitled *Ṭabaḥāt al-Mufasssīrīn*, ed. A. Meursing, Leyden 1839, and a synopsis of al-Dhahabī's (d. 748 = 1348) *Ṭabaḥāt al-Huffā'*, ed. F. Wüstenfeld, Göttingen 1833/1834.

The gift of poetry was denied to Suyūṭī. But he experimented in belles-lettres with the composition of *Makāma's*, which only have the title and the form (rhymed prose) in common with the perfect examples of this genre and collect all kinds of interesting notes about plants etc. out of Ḥadīth and Adab. Twelve of them were lithographed in Cairo in 1275 and again in the collection issued at Bihār 1297 and printed at Samsul in 1298; 6 of them have been translated by O. Kencher in *Beiträge zur Maḥmūṣen-Literatur*, part 8, Kirchheim N. L. 1918. Some of them are also quite original, for example *Raḥf al-Za'at min al-Sīr al-ḥalāl*, in which he makes 20 representatives of different branches of learning describe their wedding-night in the technical terms of their particular subject, lith. Cairo, n. d., pr. Fās 1319. Other works also show that he did not hesitate to treat of sexual and pornographical subjects (cf. those detailed in *G. A. L.*, ii. 153, N^o. 207-211). A synopsis *Djawāhir al-Hikāyat wa 'l-Aṭila wa 'l-Laṭā'if wa 'l-Riwayāt wa 'l-Amthila*, was made from his *Adab*-book *Anīs al-Djāli*, by 'Abd al-Kāyim b. Molla 'Abd al-Nāṣir al-Shirdānī in Tatar (7th ed., Kasan 1905). He was not ashamed to

collect the anecdotes of Dīlāz under the title *K. man nahā ilā Nawādir Dīlāz*, s. *A descriptive List of the Arabic MSS. acqu. by the Trustees of the Brit. Museum since 1894*, p. 62, Or. 6646, 2, while in the same MS. a satire on Ḳarāḡush [q. v.] by Ibn al-Maḡmūṭ (d. 606 = 1209) is wrongly ascribed to him. The anthology *al-Mawāḍiʿ al-naḍīr wa 'l-ʿarāḍi al-ʿaṣīr* (cf. Kosegarten, *Christ. ar.*, p. 151-176; Grangeret de Lagrange, *Anthol. ar.*, No. 11, etc.) does not belong to him but to an older al-Suyūṭī Muḥammad b. Naṣīr al-Dīn Abū Bakr Yahyā, of the first half of the 12th century, perhaps his grandfather; see Cheikh, *Machreq*, 1906, p. 581-598.

His versatility, already sufficiently displayed by separate works, was further revealed in an encyclopaedia covering 14 branches of knowledge entitled *al-Uṣūl al-maḥimma li-ʿUlūm Djamma* or briefly *al-Naḍāya* with the commentary *Imām al-Dīrāya*, pr. Bombay 1309, Fhs 1317, also on the margin of al-Sakkākī's *Miftāḥ al-ʿUlūm*, Cairo 1800.

Bibliography: Autobiography in *ʿIṣṣan al-Muḥāḍara*, i. 153, 203; ii. 65, printed in Moursing, *op. cit.*, p. 4-12; Wüstenfeld, *Geschichtskreiser*, p. 506; Goldziher in *S. B. Ak. Wien*, 1871, lxix., p. 28 sqq.; Hartmann, *Das Muḥallāḥ*, p. 82; *G. A. L.*, ii. 145-158.

SWAHİLĪ. [See TANZIRAR.]

SYRIA. [See AL-ḤAMĀ.]

SYRT. **SURT** (IDRIS: **SURT**) on the Gulf of Sidra (*Syrtis Major*) was according to al-Bakrī, a large town (*madīna*) on the sea shore, with a wall, a *ḡḡāmī*, a *ḡammām* and *sūḡ*'s; it had three

gates one of which faced the *ḡilla*, the other inland, and the third the sea; the water there was sweet and the gardens flourishing, but the population had a bad reputation. The people spoke a peculiar dialect among themselves which was neither Arab, Berber nor Coptic. The town, lying halfway between Tripoli and Adjāḍīya, was on the road for pilgrims from the Maghrib. Al-Aḡḡāḡ, who went through it three times in the xviiith century, speaks of Surt as a well-cultivated land but suffering from the tyranny of its conquerors; there were 3 *ḡazr*'s there. The Muslims conquered the region in the first invasion of Africa in 22/23 A. H. Surt henceforth shared the fate of Tripoli. But the governors and kings of Tripoli were not always able to exercise effective control over this region and its nomad inhabitants. Its communications with Fezzān made it an important political centre.

Under the Ottomans, Surt was grouped with Barḡa and after 1847 put in the wilāyet of Tripoli in the sanḡḡak of el-Khoms. Now (since 1912) it has been in the Italian province of Tripoli. The population, mainly Arab, belongs to the tribes of the Banū Sulaim. The Berbers are Hawāra. It is difficult to identify this place exactly with a Roman site. It is thought that Madīna al-Saltān, near Surt, where there are still ruins and Roman wells, corresponds to *Charax* or *Icina* of the Antonine *Itinerary*.

T

TĀ, third letter of the Arabic alphabet, with the numerical value of 400. For palaeographical details see ARABIA, i. 382^b, 383^b and plate I.

TĀ, sixteenth letter of the Arabic alphabet, with the numerical value of 9. For palaeographical details see ARABIA, i., plate I.

TA'ABBATA SHARRAN, a nickname of the old Arab poet and Beduin hero, famed in legend, Ṭāḡīb b. Dīḡāb b. Sufyān of the tribe of Fahm. Various explanations of it are given by the sources: 'he carried mischief under his arm', namely a sword, a knife (*ḡamīḡa*), a rum which proved to be a *ḡamīḡ*, or a skin full of poisonous snakes (*Aḡḡānī*). His mother was according to one statement (in Fresnel) a negress, according to the *Aḡḡānī* a woman of the Fahm tribe called Amīna, who afterwards married the Hudḡāḡ Abū Kabīr, who sought to take his step-son's life. Ta'abbata Sharran was throughout his life an enemy of the Banū Hudḡāḡ and Banū Badīḡa. He perished in a fight with the latter on Mount Numār in their territory (Vāḡḡ, *Muḡḡarīk*, p. 421). According to a statement of Ibn Ḳutaiba quoted by Baur (cf. *Bibliography*) he was a contemporary of Nawfal b. Mu'āwiya, who is said to have lived for sixty years before and after Islām. But all that is recorded of the life of Ta'abbata Sharran and the

poems ascribed to him breathe throughout the spirit of the old Arab Dīḡāḡīya. He is pictured as having all the traditional features of the wandering robber knight of the early Arab period. He wrote a lament for Shanfara, who was his companion in battle, along with 'Amr b. Barrāḡ (*Aḡḡānī*). The longest and finest of his four longer poems on a fallen relative inspired Goethe to write a poem in the same style.

(H. H. BRÄU)

TABĀLA, a place in the west of northern Yaman, in the interior of 'Ash, about seven days' journey S.E. of Mecca. Its fertility was

proverbial among the Arabs. The basin of Tabāla and Taraba is often called *aḡḡar* ("green"; cf. al-Hamdānī *Djāzira*, ed. D. H. Müller, Leiden 1884, p. 105; Yāqūt *Muḡjam*, ed. Wüstenfeld, i. 164). The itinerary of the pilgrim caravans from Mecca through the frontier lands of the Ḥijāz and Yaman to Ṣanʿā is given in Burckhardt, *Travels in Arabia*, London 1829, i. 445 was marked on the map as early as Berghaus, *Arabien und das Nil-land* (Gotha 1835, cf. esp. p. 69; and see also Ritter's map [1852, ed. by H. Kiepert]), for the stretch from Mecca to Tabāla. The latter was the 16th station on the territory inhabited by the Shumrān. Al-Idrīsī (see Jaubert, *Géographie d'Édrisi*, Paris 1836, i. 148) describes it as a fortified place belonging to Mecca, with perennial water, corn-fields and palms (similarly Ibn Khordādhbeh, *B. G. A.*, vi. 135, 188, 192); on the irrigation cf. al-Hamdānī, p. 258, 116 (180); on its wealth in palm-trees, cf. al-Hamdānī, p. 258; al-Azraqī (ed. Wüstenfeld), p. 262; its fertility may also be deduced from Bakrī, ed. Wüstenfeld, p. 191 and damage done to it later by Berbers from al-Hamdānī, p. 258. Al-Idrīsī further (*op. cit.*) says that Tabāla was occupied for the Caliph ʿAbd al-Malik b. Marwān but was considered too insignificant. Al-Ḥadīdī, appointed governor of it, did not think it worth while going to take up the post, whence the proverb: "More despicable than Tabāla to al-Ḥadīdī" (cf. thereon with further information Yāqūt, *op. cit.*, i. 816; Freytag, *Proverbia* ii. 98; also *Lisān*, xiii. 80 sq.; *Tāj*, vii. 239 sq.). According to al-Idrīsī, Tabāla lay 4 days' journey from Mecca and 3 from the market of 'Ukāz. In the itinerary given by him from Mecca to Ṣanʿā (see Jaubert, *op. cit.*, p. 143, N^o vi; cf. thereon Ritter, *Erskunde*, xii. p. 168 188, 197), Tabāla is the sixth station from Mecca and is described as a town lying in a depression in a valley. This broad depression beginning at the foot of the hills of Ta'if and Yaman is well watered at its beginning and also contains the towns of Taraba and Biṣṣa (Yāqūt; cf. Sprenger, *Das Leben und die Lehre des Mohammed*, iii. 297). Of the nine stations mentioned between Tabāla and Ṣanʿā on this itinerary, the next to Tabāla is said to be Biṣṣa (Yāqūt). Sprenger proposes the connection B. Baʿān (also al-Hamdānī, *op. cit.*, p. 118, 127 and in his itinerary from Mecca to Ṣanʿā p. 178 and 165; Ibn Khordādhbeh, *op. cit.*, p. 134) in contrast to his earlier spelling (*Z. D. M. G.*, 1888, xlii. 321). According to the same authority Tabāla itself lies 8 stations north of the (14th) station Maḥdāra, in which stands the tree (*Talḥat al-Malik*) which is regarded as marking the boundary between the lands of Mecca and Yaman (so Ibn Khordādhbeh, *op. cit.*, vi. 135). Modern writers mention another route from Mecca via Ta'if and Taraba to Raniya (instead of the latter al-Ruwaitha in al-Idrīsī, al-Roheyta in Burckhardt, Roheiyta in later writers) and Tabāla as a main road (cf. Burckhardt, *op. cit.*, p. 451; Ritter, *op. cit.*, p. 200). Its topographical position may be clearly seen from the large map of the coast of S. W. Arabia, sheet 7, *Wadi Biṣṣa* (compiled for the *Geographical Section General Staff*, from the Survey made in 1917) on which the place ("Teballa") is marked at 19° 53.5' N. Lat. 42° 31' E. Long. Greenwich. It lies on the Wadi of the same name which forms the northern boundary of the land of the Beni Bu 'l-Karn on the main road from Ta'if to S. E. via Bīr al-

Ghazāl, with the road from the S. W. from al-Silme and Halbe which also starts from Ta'if in a southerly direction. Sprenger's assertion, deduced from a comparison of several mentions of (Wādī) Biṣṣa and Biṣṣa in al-Hamdānī in *Deutsche Geographie Arabiens*, Bern 1875, p. 47, that al-Hamdānī thought that the Wādī Biṣṣa which is often confused with Biṣṣa also waters Tardj and Tabāla cannot therefore be accepted nor the assumption of more recent writers that Tabāla lies in the Wādī Biṣṣa. The Wādī Tabāla (mentioned in a quotation from Ṭarafa in al-Hamdānī p. 173 [not in the *Diwan*; see D. H. Müller's edition of Hamdānī, ii. 183]) flows into the Wādī Biṣṣa. Al-Hamdānī often mentions Tabāla in topographical statements in connection with Biṣṣa and Tardj (p. 27, 49, 84, 127 [on mentions in poetry of the occurrence of the lion at Tabāla, cf. Sprenger, *op. cit.*, p. 165, 257; and Yāqūt, *op. cit.*, i. 835, 791; iv. 1006; Ibn Hawkal, *B. G. A.*, ii. 35; Bakrī] in distances (p. 187, 189) and in quotations from the poets (p. 173, 207, 215, 258). To the land of Tabāla he includes 'Arram (Yāqūt, *Muḡjam* ii. 918) Zabiya, for which some write Raniya; cf. Sprenger, *op. cit.*, p. 240 and (p. 239) his map of this region constructed from al-Hamdānī's data. The latter (p. 165) mentions Tabāla along with Raniya (the vocalisation Runiya in D. H. Müller's edition is not certain; the manuscripts do not give the vowel signs in the passage; Yāqūt, *op. cit.*, ii. 826; al-Mukaddasī, *B. G. A.*, iii. 112 and Bakrī have Raniya, as has al-Hamdānī *op. cit.*, p. 215 and 259, see D. H. Müller, ii. 32 and Sprenger, *op. cit.*, p. 240 and *Z. D. M. G.*, *op. cit.* and modern geographers).

Sprenger's supposition (*op. cit.*, p. 156, 253) that *Θεομαλα* in Ptolemy, vi. 7, 39, was an error for *Θεομαλα* and identical with T(h)omala in Pliny, *Nat. Hist.*, vi. 154 and the assertion he bases on it that "Tomala is only a dialectical variant from Tabāla or as highly educated men say, Tabāla" are both incorrect. This identification adopted also by M. Hartmann, *Die arabische Frage*, Leipzig 1909, p. 420 is not supported by Sprenger's interpretation of al-Hamdānī's statement, p. 188 about the old pilgrim routes from Hadramūt, which according to his construction (*op. cit.*, p. 156, 161) meet in Tabāla. Pliny describes Thomala as a city of the Sabaeans (see further Pauly-Wissowa, s. v. Saba, col. 1328). Sprenger's assumption (p. 253) that Tabāla lay in what had originally been Minaean territory is also erroneous; his localisation of the Minaeans was completely wrong (see *Realencycl.*, col. 1316 sq.).

The traditional derivation of the name of the town (Tebalet, in the *Djān-nuṣṣa* of Ḥadīdī Khalifa, p. 520) from that of an Amalekite woman Tabāla is of no value, but one may nevertheless assume that the town is a very old foundation (Yāqūt, *op. cit.*, i. 816). — In the pre-Muhammadan period a white stone in Tabāla was worshipped as an idol, called Dhu 'l-Khalasa (Khulasa); Muhammad had it destroyed (Ibn Hishām, *Sira*, i. 55 sq.; the Khath'am, who are mentioned there among the followers of this cult, are also mentioned alone by al-Hamdānī, p. 119, and by Yāqūt, *op. cit.*, ii. 461 sq., iii. 608, 850 in connection with Tabāla). The verses given there, in which this oracle of Tabāla, which was consulted by casting lots with arrows, is mentioned are wrongly ascribed to Imru 'l-Qais, according to Ibn Hishām (cf. on the idol the information collected in *Lisān*, viii.

295; *Taḥḍīr*, iv, 389; on Tabāla as the site of a pagan cult, cf. Wellhausen, *Reise arabischen Heidentums*, p. 45 sqq.). The Khath'am, whom Ibn Rosta, *B. G. A.*, vii, 316, 320 describes roughly as the inhabitants of Tabāla, are more accurately the people of Taraba and Bisha and the land behind Tabāla while the inhabitants of Tabāla proper are the Banū Māzin (Wüstenfeld, *Die Wohnsitze und Wanderungen der arabischen Stämme*, xiv, of the *Abhandl. d. Kön. Gesellsch. d. Wissensch.*, Göttingen 1868, p. 84 and 58, following Bakrī). According to Kudāma (s. *Bibl.*) there were camping places of the Kalās around Tabāla (cf. Ibn Khordādhbeh, *op. cit.*, p. 188). According to Ibn Khaldūn (ed. Kay, *Yaman*), p. 129 sq., Tabāla is the land of the Banū Nahd. Dhū 'l-Ḥalāqa, about whom see also Bakrī, p. 316, Ibn al-Kalbi, *Kitāb al-Aḥnām*, Cairo 1332 [1914] (from whom Yāqūt borrowed; cf. Wellhausen, *op. cit.*, p. 10 sqq.) and Yāqūt, *op. cit.*, ii, 461 sq., is boldly explained by D. Nielsen, *Handbuch der altarabischen Altertumskunde*, Copenhagen-Paris-Leipzig 1927, p. 231, 234, as an Arabian Venus-deity. As the centre of a cult Tabāla was also a market: al-Hamdānī mentions the traffic there (p. 258). In the history of Islām Tabāla is known as one of the towns which were among the first to adopt the new religion and thus preserved their independence (Goliuz, in *Al-Faragani, Elementa Astronomica*, Amsterdam 1669, p. 85).

Bibliography: The works of Burckhardt, Sprenger, Wellhausen, Ritter and the Arabic geographers and lexicographers (al-Hamdānī, Yāqūt, Bakrī, al-Iḥṣā'ī) mentioned in the article; also J. v. Hammer-Purgstall, *Jahrbücher der Literatur*, Vienna 1840, vol. 92, p. 55 (on the itinerary from Ṣan'a' to Mecca in *Djihad-numū*), and vol. 94, p. 94; Sprenger, *Die Post- und Reiserouten des Orients*, *Abhandl. f. d. Kunde des Morgenl.*, Leipzig 1864, iii/iii, 125 sq., 138 sq. (on the itinerary of al-Hamdānī), 128 sqq. (on the itineraries of Kudāma, Ibn Khordādhbeh and Ibn al-Maḍāwir). (J. KEATSCH)

AL-TABARĪ, *nishā* from Tabaristan; most of the bearers of the *nishā* have come from Āmul, the capital of this province. This *nishā* is also wrongly referred to Tabariya (Tiberias) in place of the correct al-Tabarānī (cf. Sam'ānī, *Anṣab*, fol. 366b; *Taḍḍīr al-Aḥḥā*, iii, 355).

1. **ABU 'L-TAIYIB AL-TABARĪ**, ṬḤIR b. 'ABD ALLĀH b. ṬĤIR, a Shāfi'i jurist, teacher of Abū Ishāq al-Shīrāzī and of al-Khaṭīb al-Baghḍādī; al-Shīrāzī who attended his lectures for over ten years, praises him as his best teacher. Al-Tabarī was born in Āmul in the year 348 (959/960). At the age of 14 he began his studies in *fiqh* in his native city and in 371 (981/982) went to Ljūrdjān to study under Abū Bakr al-Jamālī but the latter died the day after his arrival there. For four years he studied with Abū 'l-Ḥasan al-Māzārī (d. 383 = 993) and continued his studies in Baghdād with Abū Maḥammad al-Bāṣī (d. 398 = 1007/1008), Abū 'l-Ḥasan al-Dūrakūfī (d. 385 = 995), the famous Shāfi'i Abū Ḥamid al-Isfārā'ī (d. 406 = 1015/1016) and with Abū 'l-Farūj al-Mu'afa b. Zakariya al-Nahrawānī (d. 390 = 1000), a follower of the school of law of the historian al-Tabarī. He then remained in Baghdād engaged in private study. He was victorious in different disputations with Ḥanafis, e.g. with al-Kadiri (Subki, iii, 182 sqq.). In 422 (1031) he was admitted a notary

(*shāhid*) in Baghdād by the *ḥāfi* 'l-Ḥuḍayf Abū 'Abd Allāh (d. 447 = 1055/1056) (Ibn al-Aṭhīr, *Kāmil*, ix, 287sq.). When in 429 (1037/1038) the Būyid Ḍiyāl al-Dawla wished to assume the title *Malik al-Mulūk* in the *khutba*, Abū 'l-Taiyib al-Tabarī was one of the *ḥāfi*'s who were approached by the caliph for a *fatwa* and who declared this title permissible (Ibn al-Aṭhīr, ix, 312). In addition to his judgeship in the Bāb al-Tāq quarter (Ibn al-Aṭhīr, ix, 360) he received that of the al-Karkh quarter in succession to the Ḥanafī Abū 'Abd Allāh al-Saimari in 436 (1044/1045). He died in this office at the age of 102 in full possession of his intellectual vigour on Saturday, 19th Rabi' I, 450 (May, 16, 1058). He was buried in the cemetery at the Bāb Harb, after a funeral service in the *Djāmi'* al-Manṣūr. Up to the day of his death he was present at the receptions in the Caliph's palace. According to al-Khaṭīb he was as experienced in *Uṣūl* as in *Furū'*, and had a dignified figure, a noble character and great distinction of language. He composed numerous legal works, including a commentary to the *Mukhtaṭar* of Muzant, which still exists in manuscript in Cairo (Brockelmann, *G. A. L.*, i, 180) and a commentary on the *Furū'* of Abū Bakr b. al-Haddād al-Misri (d. 345 = 956/957; Ibn Khallikān, i, 234; Subki, ii, 113; iii, 195; cf. also Ḥādjdī Khalifa, No. 9036), also a *K. al-Minhāj* (Subki, iii, 176), a *K. al-Talīf* in ten vols. (Subki, iii, 195; Ḥādjdī Khalifa, No. 3120) and a *Mukhtaṭar fī Masā'il al-Shāfi'i* with biographies of his followers (Ḥādjdī Khalifa, iv, 141).

Bibliography: al-Shīrāzī, *Ṭabaṭ al-Fuḥalā'*, No. 206 (edition in preparation); al-Khaṭīb al-Baghḍādī in al-Nawawī, *Taḥḍīr*, p. 735. — The later sources are mainly based on these two: al-Sam'ānī, *Anṣab*, *G. M. S.*, xx, fol. 367r; al-Nawawī, *Taḥḍīr*, ed. Wüstenfeld, p. 734—736; Ibn Khallikān, *Wafayāt*, Cairo 1310, i, 233 sq.; al-Subki, *Ṭabaṭ al-Shāfi'iya al-Kubrā*, Cairo 1324, iii, 176—197; Wüstenfeld, *Der Islam al-Schāfi'i*, No. 393 (= *Abh. G. W. Gott.*, xxxvii, 1891).

2. **MUḤIB AL-DIN AL-TABARĪ**, ARU 'L-'ABRĀS AHMAD b. 'ABD ALLĀH b. MUḤAMMAD b. ABU BAKR, a traditionalist and Shāfi'i jurist in Mecca, born 615 (1218/1219), d. 694 (1294/1295), a pupil of Ibn al-Djūmaṭī (d. 649 = 1251/1252; Subki, v, 128), of Maḍī al-Dīn al-Kushairī (d. 667 = 1268/1269; Yāqūt, iv, 166) and others. The Rasūlid al-Muḥaffar (647—694 = 1250—1295) summoned him to the Yemen to learn traditions from him (al-Khaṭīb al-Baghḍādī, *Uṣūl* in *G. M. S.*, iii, iv, 277; cf. also Ḥādjdī Khalifa, No. 1533). Among his pupils may be mentioned Abū Maḥammad al-Kāsim b. Maḥammad al-Bizālī (d. 739 = 1338/1339), one of the Shaikhs of the *Dhahabī*. He is the author of the well-known collection of traditions: *Ghāyat al-Aḥkām fī 'l-Aḥādīth wa 'l-Aḥkām*, in which he has however included "weak" traditions without marking them as such (Yāqūt). In addition to the extant works listed by Brockelmann, the following writings are mentioned in various sources: 1. *Mukhtaṭar fī 'l-Hadīth* (Subki); 2. *Kitāb fī Fadl Makka* (Subki); 3. *Itiqā' al-Bayān fī Masā'il al-Shāfi'iyya* (Ḥādjdī Khalifa, No. 617); 4. *Khaṭir al-Kirā' fī Ziyāra Umm al-Kurā'* (Yāqūt); 5. *Arba'in fī 'l-Hadīth* (Ḥādjdī Khalifa, No. 406); 6. *Awāṣif al-Nuṣra fī Taḥḍīr al-Tawāf 'ala 'l-Umra* (Ḥādjdī Kha-

lifa, N^o. 8402, 11859); 7. *Siṣa Ḥadīdī al-Nabī* (Ḥadīdī Khalifa, N^o. 7758; if not identical with Brockelmann, N^o. 4); 8. *Waḥīyat al-Mānī* [fi] *Kamīhi: Man ra'ani fi l-Manūm faḥad ra'ani* (Ḥadīdī Khalifa, N^o. 14176); 9. *Manṭūr il-Malīb al-Manūr* (Ḥadīdī Khalifa, N^o. 13142); 10. *al-Simṭ al-ṭamin fi Manāḥib Ummahāt al-Mu'minīn* (Ḥadīdī Khalifa, N^o. 7250, 13038); 11. *Taḥrīb al-Marām fi Ḡharīb* (so read for *Ḥarīb*) *al-Kāsim b. Salām* (d. 223 = 837), alphabetically arranged selection (Ḥadīdī Khalifa, N^o. 3465 and iv. 325); 12. on the rare words in the *Qānīn* *al-Uṭl* of Ibn al-Aṭhīr (Ḥadīdī Khalifa, ii. 506); 13. Extract from the *Awārif al-Ma'arīf* fi *l-Ṭawwūf* of Shihāb al-Dīn al-Suhrawardī, (d. 632 = 1234; Brockelmann, G. A. L., i. 440; Ḥadīdī Khalifa, iv. 276); 14. a ten volume commentary on the *Tanbīh* of Shīrāzī (Subkī; Yāfī'; Ḥadīdī Khalifa, ii. 435); 15. Extract from the same *Tanbīh* (Yāfī'); 16. *Tirāz al-Maḥḥab fi Talḥīṭ al-Muḥḥab*, two volume synopsis of the *Muḥḥab* of Shīrāzī (Ḥadīdī Khalifa, vi. 275).

Bibliography: al-Dihābi, *Tadhkirat al-Ḥuffā*, Haidarābād n. d., iv. 264; al-Subkī, *Tabaḥḥūt al-Shāfi'īya al-Kubrā*, Cairo 1324, v. 8; al-Yāfī', *Mir'āt al-Djānān*, Haidarābād 1339, iv. 224 sq.; Brockelmann, G. A. L., i. 361.

(HEFFERNING)

AL-ṬABARĪ, ABU ḬAṬAR MUḤAMMAD b. DJARĪ, the Arab historian, was born probably in 839 (end of 224 or beg. 225 A. H.) at Āmul in the province of Ṭabaristān. He began to devote himself to study at a precociously early age, and is said to have known the Qur'ān by heart by the time he was seven. After receiving his early education in his native town, he received from his father who was quite well off the necessary means of visiting the centres of the Muslim learned world. He thus visited Ray and its vicinity, then Baghdād, where Ahmad b. Hanbal under whom he had intended to study had died shortly before his arrival there. After a brief stay in Basra and Kūfa he again returned to Baghdād where he remained for some time. He then set out for Egypt but stopped in the Syrian towns to study *ḥadīth*. When he was in Egypt (according to Ibn 'Asākir in 876—877; according to Yāqūt however for the first time in 867 and after a stay in Syria again in 869—870; in 871—872 according to *Annalen*, iii., 1862 he was in Baghdād) he must already have been regarded as a celebrated scholar. From there he returned to Baghdād where except for two journeys to Ṭabaristān (the second in 902—903) he lived till his death in 923.

Ṭabari seems to have been of a quiet scholarly disposition but full of character. In his earlier years he devoted his whole energy to acquiring the material of Arab and Muslim tradition; later he spent his time mainly in teaching and writing. Although he had only a modest competence, he rejected all financial advantages and even refused lucrative official positions which were offered him. In this way he was able to devote himself to an extremely prolific and versatile literary activity. Apart from his main subjects, history, *fiqh*, the recitation and exegesis of the Qur'ān, he devoted himself also to poetry, lexicography, grammar and ethics and even mathematics and medicine. For ten years after his return from Egypt he followed the Shāfi'ī *Maḥḥab* and then founded a school

of his own, whose followers called themselves *Djarīriyya* after his father's name. But it seems to have differed less in principle than in practice from the Shāfi'ī school and fell comparatively quickly into oblivion. His break with Ahmad b. Hanbal however was more fundamental. He recognised the latter only as an authority on *ḥadīth* but not on *fiqh*. He thus brought upon himself the hostility of the Hanbalis. He is said to have attracted the particular hostility of the latter by attacking their interpretation of Sūra xvii. 81. He had to shut himself up in his house to protect himself from the anger of the enraged mob and was only left in peace when a strict order by the police was issued for his protection. His enemies also sought to injure him through the law by laying an accusation against him in which he was accused of heretical tendencies, certainly unjustly.

Ṭabari's works have not come down to us by any means completely. For example those writings have been completely lost in which he laid down the principles of his new school of law. On the other hand his commentary on the Qur'ān (*Qānīn al-Bayān fi Tafsīr al-Qur'ān* or briefly *Tafsīr*) has survived. In this work Ṭabari collected for the first time the ample material of traditional exegesis and thus created a standard work upon which later Qur'ānic commentators drew; it is still a mine of information for historical and critical research by western scholars. Ṭabari's own position with regard to the traditions collected by him is mainly defined by linguistic (lexicographical and grammatical) criteria. But he also deals with dogmatic and legal deductions which can be obtained from the Qur'ān and sometimes permits himself to express a rather candid opinion without however in any way basing it on historical criticism.

Ṭabari's most important work is his history of the world (*Tārīkh al-Rusūl wa'l-Mulūk*). The well known Leyden edition gives only an abbreviated text of the huge work which is said to have been ten times as long but even it fills 134 volumes. Even this synopsis is not complete but had to be supplemented in various passages from later writers who had used Ṭabari's history of the world.

The work begins after an introduction with the history of the patriarchs, prophets and rulers of the earliest period (i. 1). Then comes the history of the Sāsānian period (i. 2) and of the period of Muḥammad and the first four caliphs (i. 3—6); the history of the Umayyads (ii. 1—5); lastly the history of the 'Abbāsids (iii. 1—4, middle). From the beginning of the Muhammadan era the material is arranged annalistically under the years of the Hijra. The work stops in July 915. It was afterwards continued by other historians. Among such supplements may be mentioned (1) the lost *al-Muḥḥab* or *Sīlat al-Tārīkh* of Ṭabari's pupil Abū Muḥammad al-Faḥḥāmī, (2) the work of Abū 'l-Ḥasan Muḥammad al-Hamadhānī (d. 1127), which came down to the year 1094 but the only surviving first volume ends with the year 977—978. Later historians like Ibn Miskawayh and Ibn al-Aṭhīr used Ṭabari's material for their histories but came down beyond his period so that in a sense they continued his history (down to 979—980 or 1225). Ibn al-Aṭhīr made large use of Ṭabari's work and sought to harmonise different accounts and to supply gaps from other sources. The fragment of the Spanish Arab 'Arīb (covering

903—932) edited by de Goeje also comes from an independent version and continuation of the annals. In 963 Tabarī's history was translated into Persian by order of the Sāmānīd vizier Abū 'Alī Muḥammad al-Bal'ami. It was much abbreviated and supplemented from other sources, especially in the older period. This version was also translated into Turkish and Arabic.

Tabarī's *Ta'rikh al-Rijāl* gives the most necessary facts about the persons whom he has used as authorities in *hadīth*. The work was originally current as an appendix (*ghail*) to Tabarī's *Annals*. A synopsis, not however complete, was published at the end of the Leyden edition of Tabarī (iii, p. 2295—2501).

Tabarī procured the material for his history of the world from oral tradition, for the collection of which he had ample opportunity on his wide travels which were mainly devoted to the *ṣalab al-'ilm*, and in studies under celebrated scholars. He also used literary sources, namely a book by Abū Mikhnaf; 'Umar b. Shabba's *Kitāb al-Akhbār Ahl al-Bayra*, a work on tradition out of which Ziyād b. Ayyūb read to him; Naṣr b. Muḥammad's history (Z. S., iv, 6); and further the *Sira* of Muḥammad b. Ishāq and the works on the subject by al-Wāqidi, Ibn Sa'd, Muḥammad and Hishām al-Kalbi, al-Madīnī, Saif b. 'Umar, Ibn Taifir etc.; for his account of Sāsānīan history, he used an Arabic version of the Persian *Book of Kings*, which seems to be based in part on a translation of this work prepared by al-Mukaffa'. Tabarī did not work up the material into a connected account of historical events. He was rather content to collect the available material and to record the different, often contradictory, accounts as they were handed down to him. He therefore declined any responsibility for the reliability of the traditions collected by him. But it is just in the conscientious unharmonised repetition of the collected material of tradition that the value of Tabarī's work for modern historical research lies, especially when it is a question of reconstructing the events of the early period of Islām.

TABARISTĀN (in Pahlavi inscriptions on coins: *Tāpūristān*, land of the Tāpūsi), the name applied by the Arabs to Māzandarān, a province of Persia, north of mount Alburz; the name is explained by a popular etymology to mean 'land of the jahar' (Abū 'l-Fidā', *Geography*, text p. 432; Mehren, *Cosmography*, p. 314) on account of the thick forests which cover the country and the principal industry of the inhabitants (wood-cutting). It is bordered on the north by the Caspian Sea, on the south by the chain of the Alburz, on the east by Djurdžān and on the west by Gilān. The soil is fertile and well watered, rich in fruits but unhealthy on account of the stagnant waters; the little rivers, Herhaz, Tābir and Tedjen run through it. The principal towns are: Amol, Sāzi, Šāllā, Rāyān and Bārfurūš. The tribes are warlike, undisciplined and inclined to murder and plunder. The industries are fishing, catching aquatic birds, cultivating of rice, flax and hemp (Mukaddas, p. 354).

History. At the time of the Muslim conquest this district was ruled by hereditary chiefs who had the title of *ispahbadh* (Persian: 'head of an army'). In 29 (650) in the reign of the Caliph 'Othmān, Sa'd b. al-'Aṣī, governor of Kūfa, undertook an expedition against Tabaristān. In the reign of Mu'āwiyā I, Maḥkālā b. Ḥubaira entered it at the head of 10 or 20,000 men but he perished with the greater part of his army in the passes, crushed by rocks hurled down upon them by the enemy. Another unsuccessful attempt was made by Muḥammad b. al-Ash'ath. In the time of Sulaimān b. 'Abd al-Malik, Yazid b. Muḥallab invaded it; the *ispahbadh* made peace and promised to pay an annual tribute of 4,700,000 dirhems, 400 ass-loads of saffron, and the sending of 400 men each bearing a shield, a silver cup and a silk saddle cushion. The inhabitants rebelled in the time of Marwān b. Muḥammad. They were subdued but for a short time only by the governor sent by Abū 'l-'Abbās al-Saffūh. The Caliph al-Manṣūr sent against them Khārim b. Khuzaima al-Tamimi and Rawḥ b. Ḥātim al-Muhallabi. 'Umar b. al-'Alā' invaded the mountainous country of Dailām. His great-grandson Muḥammad b. Mūsā b. Ḥafṣ and Māyazdayār b. Kārim conquered the wild mountain country of Sharwin. The latter was given the title of *ispahbadh* by al-Ma'mūn. When he rebelled in the sixth year of the reign of al-Mu'tasim, he was defeated by Ḥusain b. Ḥasan sent by his nephew 'Abdallāh b. Tāhir, governor of Khorāsān, captured and sent to Sāmarrā, where he died under the lash (225 = 840). His body was hung beside that of Bābak al-Khurrāmī. Tabaristān thus passed to 'Abdallāh b. Tāhir.

In 240 (854) the *ispahbadh* Kārim b. Shahriyār who ruled in the mountains became a convert to Islām. In 247—248 (861—862) the 'Alid Muḥammad b. Zajd seized the province and agreed with the Būyid 'Aḥud al-Dawla Fannī-Khusraw about the propagation of the *Shi'a* and the restoration of the mausoleums of the family of 'Alī.

He was killed by an emissary of Muḥammad b. 'Abdallāh b. Tāhir. One of his brothers, Ḥasan b. Zaid, rebelled in 250 (864); on his death in 270 (884) he was succeeded by his brother Muḥammad who took the title of *al-Di' al-Kabir* 'the great missionary' and was killed fighting with Muḥammad b. Ḥārūn, a general of the Sāmānid Ismā'il b. Aḥmad (287 = 900); the latter annexed the country. In 297/298 (910/911) the Russians, coming by water laid waste Abaskūn and Sarī but were finally driven back by the inhabitants; on their way back what remained of their fleet was intercepted and destroyed by the king of the Khazars. Another 'Alid, al-Ḥasan b. 'Alī, surnamed al-Nāṣir al-Kabir, rebelled in Amul against the Sāmānids (301 = 914) and on his death (304 = 917) left his power to his son-in-law al-Ḥasan b. al-Kāsim, surnamed al-Di' ila 'l-Hakk, till in 311 (923) he disappeared into the mountains after long fighting with Abu 'l-Kāsim Dja'far b. al-Nāṣir and with the condottiere Mākān b. Kākī; he was killed by Mardāwīj, then in the service of Asfār b. Shīrūya (cf. ZIVARUS) with a blow from a mace at 'Alīābād. Thus Asfār became lord of Tabaristān until he perished by the hand of Mardāwīj in 319 (931). It was the brother of the latter, Waḥmīr, who next ruled, down to the battle of Ishāk-Abād in 329 (940) where Mākān b. Kākī was killed and the army of Waḥmīr destroyed; the latter having made up his mind to become a vassal of the Sāmānids, settled in Džurdžān and Tabaristān at intervals like his successors Kābūs I and Mīnūfir; the latter accepted the suzerainty of the Ghaznawids. The province next passed to the Seldjūks; but *isfahābād*'s belonging to the house of Bāwand for long remained practically independent, especially in the mountains: 'Alī al-Dawla 'Alī b. Shahrīyār b. Kārin, contemporary of the Ghaznawid Mas'ūd III; Nuḡrat al-Dīn Rustam; Taḍj al-Mulūk 'Alī b. Mardāwīj, contemporary of the Seldjūk Sandjar; 'Alī al-Dawla Ḥasan b. Rustam b. 'Alī; Ḥusām al-Dawla wa 'l-Dīn Ardashīr b. Ḥasan, contemporary of Toghril II b. Arslān.

(CL. HUART)

TABARIYA, Tiberias, a town on the western side of the lake of Tiberias (sea of Galilee) (*Buḥayrat Tabariya*) through which the Jordan flows to the south; the lake is rich in fishes, is 13 miles long, 6 broad and lies 700 feet below the level of the Mediterranean; the town is long and narrow as it is shut in by the steep hills on the west which come right down to the water, north and south of the town. S.S.W. of the town is the Mount of Herod. Tabariya had probably a predecessor in a little town in this

region mentioned in the Old Testament (on account of the hot springs some identify it with Hammat, Joshua, xix. 35) but nothing certain has been established on this point. The town only became of importance when Herod Antipas about 26 A.D. founded a city to which he gave the name of Tiberias in honour of the emperor Tiberius. It was built with great splendour on the model of Hellenistic towns with temples, theatres, and other public buildings. The splendid palace of the king, described by Josephus, lay on the Mount of Herod (Kaṣr bint al-Malik) surrounded by the old city wall, the course of which has been traced by G. Schumacher. The stricter Jews avoided it and the population was therefore very mixed, some forced by Herod to settle there and others tempted thither by various privileges. At a later date a remarkable change took place as Tiberias became one of the main centres of purely Jewish life and a centre of Talmudic studies. Here about 200 A.D. was edited the collection of laws known as the *Mishna* and later at the beginning of the fourth century the Palestinian *Gemara* (the so-called Jerusalem Talmud) composed and in the vii/viii century the 'Tiberian' system of notation in general use established. The Hebrew teacher of Jerome was a Jew in Tiberias. The Jewish scholars who worked here are recalled by a series of tombs among them those of R. Johannan b. Zakkai and R. Akiba. Another old Jewish cemetery with several sarcophagi has been discovered close to the western gate of the city in laying out a new road.

After Constantine the Great, Christianity penetrated, although slowly, into Galilee and in the lists of synods several bishops of Tiberias are mentioned. A temple begun by the Emperor Hadrian in this town was turned into a temple.

The destroyed walls of the town were rebuilt by Justinian. At the Persian invasion in 614 the Jews there, as was the case elsewhere also, are said to have sided with them. In 13 (635) Tiberias passed to the Muslims. While a number of towns in the province of Urdun had to be taken by force, Tabariya surrendered to the Arab general Shahrābīl who guaranteed the inhabitants their lives and the half of their houses and churches. For each *ḡarīb* of ground they had to pay annually a *ḡarīb* of wheat or barley, and a *ḡarīb* for each head of cattle; he also reserved for himself a site on which a mosque was to be built. In the caliphate of 'Uthmān the people of Tiberias broke the agreement but were conquered by 'Amr b. al-'Āṣī (according to others by Shahrābīl) and yielded on the old terms. With the Crusaders began a new chapter in the history of Tabariya. It was granted as a fief to Tancred and ultimately came into the possession of Raymond of Tripoli. On Thursday July 2, 1187 (583 A.H.) Saladin surrounded the town and conquered it in a few hours, although it was strongly fortified, and then set it on fire. The Christian army encamped at Ṣaffuriya in spite of the urgent warnings of Raymond was persuaded by the overweening Grand Templar Gerard to set out to the help of the town, which resulted in the disastrous battle of Hattin [q.v.] which again in turn led to the capture of Jerusalem and the collapse of Frankish power. Later, in 1240 the town again came into the hands of the Christians when Odo of Montbelliard took it, but in 1247 it was lost to

the Khazars and henceforth Tiberias was Muslim right down to the end of Turkish rule in Palestine. In the middle of the xviiith century the town belonged to the Shaikh Zahir al-'Amir who had it fortified. In 1759 it suffered from an earthquake, but that of 1837 was much worse, as it destroyed most of the town (but not the baths). In 1799 it was occupied for a short time by Napoleon's troops.

There are more or less brief descriptions of Tabariya, the capital of the province of Urdunn, in the Arab geographers. Ya'qubi (278 = 891-892) mentions the position of the town at the foot of a mountain and on a large lake through which the Jordan flows. Isakhrī (340 = 951) gives the lake a length of 12 and a breadth of 2-3 miles (its real dimensions are 13 miles long and 6 broad). Muḥaddasī (375 = 985) says: "The houses stand between the mountain and the lake, the town is narrow and in summer hot and unhealthy. It is about a mile long but of no breadth. The market place stretches from one gate to the other and the cemeteries are on a hill. The chief mosque on the market place is large and beautiful.... Around the lake are villages and palm-trees and ships go up and down. The lake is full of fishes and the water quite pleasing". The Persian traveller Naṣir-i Khusrāw, who visited Tabariya in 438 (1047) puts the length of the lake at 6 and the breadth at 3 miles. "The town is surrounded by walls but not on the lake side; many houses have their foundation on the rocky bottom below the water; besides the chief mosque in the centre of the town there is another on the west side, the Masjid al-Yasmin. Here is the tomb of Joshua son of Nun and of the 70 prophets slain by the Israelites and also the grave of Abū Huraira. The inhabitants make mats of rushes; on the hill west of the town is a castle built of hewn stones, with a Hebrew inscription". Idrisi (1154, during the period of Crusader rule) describes Tabariya as an imposing town on a high hill on a lake with fresh water, 12 miles long and the same in breadth (?). The boats on it bring supplies to the town. He also mentions the making of rush-mats which was a very important industry. Yāqūt (623 = 1125) reproduces what is said by several of his predecessors; like the other Arab geographers he makes Tabariya be built by Tiberias. Abū l-Fida' (d. 732 = 1331) records that the town was destroyed by Saladin, which shows that it was still in ruins and from Ibn Battuta (725 = 1325) it is evident that this remained the case later.

As long as they existed, the hot medicinal baths (al-ḥammāmāt) played an important part in the life of the town. They lay about 40 minutes in the south of it and perhaps influenced Herod in choosing this town for his capital. Josephus correctly tells us that they were not far from Tiberias at a village called Ἀμαθόνη (i.e. the native Ḥammāt) which agrees with the fact that the old city wall discovered by Schumacher ran from the Mount of Herod to the shore of the lake without enclosing them ("in Tiberias", as Josephus, *Vita*, 85, *Bell.*, ii. 1614 says therefore means "in the territory of Tiberias"). They are mentioned as early as Pliny (*Nat. Hist.*, v. 15) and frequently in the Talmud and the Arab geographers are never tired of telling that they are warm without fire being kindled there. Ya'qubi says that the hot water is brought into the town in pipes and

Isakhrī adds that the water, although the springs are about 3 parasangs from the town (quite an absurd exaggeration), is still so hot on entering the baths that skins thrown into it have the hair taken off by it, so that the baths cannot be used till cold water is added. Muḥaddasī speaks of a boiling spring, which supplies most of the baths jointly and from which the steam warms the building. Naṣir-i Khusrāw mentions a spring at the door of the mosque in the centre of the town over which a bath was built, ascribed to King Solomon. Idrisi makes special mention of a large bath called Damākir, in the saltish water of which small goats and fowls could be stewed and eggs boiled; one bath called al-Lāṭū had hot water which was not salt, while the so-called "little bath" was the only one that was heated by fire; a Muslim prince had built a bath for his family over the latter but later it was presented to the public. There were also many hot springs to the south of it; to these baths there came from all parts paralysed and injured people, or those with diseases of the chest who remained three days in the water and with God's help became healed. These descriptions leave something to be desired in accuracy and clearness, especially as some of them mention in connection with the baths springs at a considerable distance away. In 1703 the springs dried up for a period (Roland, *Palestine*, p. 703). When the old bathing establishment fell into ruins, a new one was built at the beginning of the xixth century which is described by Burckhardt; it was however very simple so that Ibrahim Pasha in 1853 had a more handsomely equipped one built. In 1890 a third was built somewhat more to the South. According to Robinson the water comes out of four springs one of which is under the old bath house. According to his measurements the water has a temperature of 60° C. Frei read the temperature of the new bath where the water enters the basin as 59.5° behind the old one 58°, in a smaller spring near it 63°. Frei also gives the result of a chemical analysis of the water.

The new political conditions will no doubt bring a revival of prosperity to Tiberias, while before the war its condition formed a striking contrast to its brilliant past (cf. the enthusiastic description in *Jos., Bell.*, iii. 516 sq.). Ships and boats were only rarely seen on the lake and the once so intensively cultivated gardens were a wilderness. There is an almost complete lack of ancient remains.

TABARKA, a town on the Tunisian coast, 75 miles W.N.W. of Tunis and 10 miles E. of the Algerian frontier. It is built on a sandy bay surrounded by hills at the mouth of a rather narrow fertile valley watered by the Wād al-Kabr, which descends from the mountains of Ain-Drahm (Khumira). Three quarters of a mile from the shore lies a rocky islet, 2,000 yards long and 500 broad. A roadstead lies between this island and the mainland accessible on the east side to ships of medium tonnage but only possible on the west side, the better sheltered, to small boats. The trade is insignificant, but the anchovy and sardine fishery attracts from March to September, 200—300 Italian fishermen. The village itself, the capital of a 'contrôle civile', has a thousand inhabitants, half French and half Italian. A few European works have been built on the adjoining plain.

The site of Tabarka corresponds to that of Thabraca, a flourishing town in the Roman period and Byzantine period. It was the port for the export of 'Numidian marble' from the quarries of Simitha (Chemton) on the left bank of the Medjerda. Ancient ruins were still standing in the time of al-Bakrī (*Description*, transl. de Slane, p. 121); they have now almost completely disappeared except for a few traces of cisterns and buildings of the Christian period; on the other hand Christian burial-places have been unearthed in the neighbourhood. In the time of Bakrī Tabarka had still considerable trade; the ancient harbour however no longer existed and ships moored in the mouth of the Wād al-Kabr itself. The wealth of the coral deposits there later attracted Provençal and Italian sailors thither. In 1540 the Lomellini of Genoa obtained for an annual payment the monopoly of the exploitation of the coral and the right to keep a garrison on the island. It is without proof however that this has been said to be the ransom paid for Dragut made prisoner by the Genoese Admiral Doria. In any case for two centuries (1540—1741), the island belonged to the Lomellini; they built a strong castle there and established a colony of their compatriots who sometimes numbered as many as a thousand. The Turks in their turn becoming lords of Tunisia installed a garrison of Janissaries on the mainland. As a result of the presence of the Christians, the island became a market where European merchandise was exchanged for the products of the country (wax, hides, corn) purchased very cheaply (cf. Savary de Brèves, *Relation*, p. 254). It was at the same time a kind of depot where the Christian slaves were interned while awaiting the arrival of the sums arranged for their ransoms, a transaction in which the Genoese apparently acted as intermediaries. The profits made by the Lomellini no less than the strategic value of the island could not fail to excite the cupidity of the French companies established on the Algerian coast. In 1633, Sansou Napollon, governor of "Bastion de France", tried to take the island but was killed as soon as he had made a landing on the island. During the second half of the 17th century and the first half of the 18th negotiations were several times conducted between the French government and the Lomellini to obtain the cession of the island by the latter. They were just reaching a settlement when the Bey 'Alī learning what was going on sent troops to occupy the island (June 12,

1741). The Genoese establishments were destroyed, a section of the inhabitants managed to escape and settle on the island of San Pietro, off the coast of Sardinia. The others were taken to Tunisia where their descendants were long known as Tabarkans. War as a result broke out between France and the Regency and a French naval officer M. de Saurins attempted an unsuccessful attack on Tabarka on July 2, 1742; a hundred men were killed and 224, including the leader of the expedition, captured by the Turks. Henceforth the Tunisians remained in possession of the island and refused to yield to the demand for concessions made by France and other foreign powers. But although the coral continued to be exploited, Tabarka lost all commercial importance. At the beginning of the Tunisian expedition, the French bombarded the Turkish front and landed at Tabarka on 26th April 1881. Since then a European centre has been created here and a road made to connect the coast with the valley of the Medjerda through the massif of Khumira. But as a result of its outlying position, the town has only developed slowly. The making of a road and a railway to Mateur and Beja and the exploitation of the mineral deposits discovered in the region will undoubtedly however bring it some elements of prosperity.

(G. VVEX)

TABAS, a town in Persia, in the province of Khūzāsān, in reality two towns whence the dual form used by the Arab geographers: *Ṭabasāni*. The first is called Ṭabas al-Unnāb, "T. of the jujube-trees" (in Persian Ṭabas-Masīnā), and the second Ṭabas al-Tamr, "T. of the date-palms" (*al-sūfā*, *Mukaddas*), in Persian Ṭabas-Gilaki (Kuri, Kurin). The first has walls now in ruins and no citadel. The second is commanded by a fortress; it has a small market and a graceful mosque; it gets its water-supply from reservoirs fed by open canals (*qāhira*). These two towns are under Kāzin, the capital of the district of Kāhisiān; they form the southern frontier of Khūzāsān. In the reign of the Caliph 'Othmān, they were the first Muslim conquests in this province, for these two towns are, as it were, the gates of this country. They were taken by 'Abdallāh b. Budail b. Warāka. After the occupation of Alamūt by Ḥasan Sabbāh, they became centres of the Ismā'īlīs. In the Saljuq conquests, they were allotted to Kāwart, son of Caghrī. They were laid waste by the Uzbeks in the reign of Shāh 'Abbās I before 1006 (1597).

(CL. HUARY)

TABĀSHIR, a drug highly esteemed in the east, consisting of pebble-like accretions, which are formed in the nodes of *Bambusa arundinaria* Willd. The substance is obtained, according to Kāzimi (II, 82) or Ibn Muḥallil, by burning the reed and from ancient times it has always been a valuable article of commerce which the Greeks called *raṣṣarē*.

(J. RUSKA)

TABĪ' (A.), pl. *tabī'ūn*, follower, follower of a prince, disciple of a teacher, adherent of a doctrine; the verbal form is *tabā'a*, e.g. *tabā'a Ḍjālūn*, he followed Galen (in medicine).

The word is of special significance in Tradition where the name *tabī'* is given to those who came after the Companions of the Prophet, the *Aṣṣāḥ*. The *asṣāḥ* are the people who saw and were directly acquainted with the Prophet; the *tabī'ūn* are those of the next generation or contemporaries of the Prophet, who did not know him personally but who knew one of his Companions. The "followers" of the second generation (*tabī'ūn* 'I-*tabī'ūn*) are those who knew one of the first *tabī'ūn* and so on. Traditions are of more or less value according as they go back to a "follower" of a more or less early generation and according as the *tabī'* who is the first transmitter of it is more or less esteemed and famous. Thus the *maṣṣāḥ* or wide-spread tradition is that which goes back to a *tabī'* of the first generation and which has been disseminated and handed down by several *tabī'ūn* of the second generation and their successors (cf. **HADITH**). There are in the same way generations of transmitters for traditions regarding the reading of the *Kur'ān* and for those of *Ṣaḥāb*. One of the most celebrated "followers" of the first generation is Ḥasan al-Baṣrī.

(B. CARRÉ DE VAUX)

TABĪR. [See **RU'YĀ**.]

TABRIZ, capital of the Persian province of Ādharbāidjān [q.v.].

Geographical position. The town lies in the eastern corner of the alluvial plain (measuring about 30 × 20 miles) sloping slightly towards the north-east bank of Lake Urmīya. The plain is watered by several streams, the chief of which is the Adjī-zai ("bitter river") which, rising in the south-west face of Mount Sawālān runs along the Karadja-dagh which forms a barrier on the south and entering the plain runs around on the north-west suburbs of the town. The left bank tributary

of the Adjī-zai, Miḥnān-rūd (now the Meidān-zai), runs through the town. The altitude of the different quarters of Tabriz, according to the Russian map may be put at 4,000—5,000 feet. Immediately to the north-east of the town rise the heights of 'Ainālī-Zainālī (the *ziyarat* of 'Awa b. 'Alī and Zaid b. 'Alī) which (6,000 feet) forms a link between the mountain system of the Karadja-dagh (in the north and north-east) and the outer spurs of the Sahand whose peaks (about 30 miles south of the town) reach a height of 11,500 feet. As the Karadja-dagh is a very wild and mountainous region and the great massif of Sahand fills the whole area between Tabriz and Marāgha, the site of Tabriz is the only suitable pass for communications between east (Astrā [on the Caspian]—Ardābil—Tabriz and Teherān—Kāzwin—Miyāna—Tabriz), west (Trebizond—Erzerūm—Khoi—Tabriz) and north (Tiflis—Erzrūm—Djulfā—Marand—Tabriz). Lastly as the outer spurs of the Sahand leave a rather narrow couloir along the east bank of the Lake of Urmīya, communication between north (Transcaucasia, Karadja-dagh) and the south (Marāgha, Kurdistan) must also take place via Tabriz.

This fortunate position had predestined Tabriz to become the centre of the vast and rich province lying between Turkey and Russian (or Soviet) Transcaucasia and in general one of the most important cities between Constantinople and India (only Tiflis, Teherān, Isfāhān and Baghdād fall into the same category). Tabriz has now about 200,000 inhabitants.

The climate of Tabriz is very severe in winter with heavy snowfalls. In summer the heat is tempered by the proximity of the Sahand and by the presence of numerous gardens about the town. The climate is on the whole healthy except for epidemics of cholera and typhus which are due rather to the unsanitary state of the town.

One feature of Tabriz is the frequent earthquakes. The most formidable took place in 244 (858), in 434 (1042) mentioned by Nāṣir-i Khuraw in his *Safar-nāma* (and predicted by the astronomer Abū Tāhir Shīrāzī), in 641 (Arakel of Tabriz, p. 496), in 1727, in 1780 (Ousely, III, 436; Ritter, ix, 854) etc. The earthquakes of Sept. 22—23, 1854 and of Oct. 30, 1856 have been described from personal observation by Khanykow in the *Bull. Hist. Phil. de l'Acad. de St. Pétersbourg*, 1855, p. 251; 1858, p. 337—352. Seismic shocks are of everyday occurrence at Tabriz; they may be due to the volcanic activity of the Sahand but Khanykow thought they were due rather to a mechanical displacement of the earth's strata.

The fortifications of the town were razed to the ground in the reign of Nāṣir al-Dīn Shāh (*Mir'at al-Bulān*, I, 343). The part of the town called the *Kāl'a* (the districts of Čār-minār, Surkhāb, Dāwāzi, Waidjūya [vulgo: Wardjī], Miḥd-miḥn [vulgo: Miyar-miyar], Nawbar, Maḳḳūdiya etc.) is therefore no longer separated from the former part *extra muros* (the districts of Ahrāb, Lailabād [vulgo: Lailava], Čarandāb, Khīyābān, Bāgh-mēsha etc.). The town has also incorporated the former suburbs to the west of the town (Amir-khiz, Čūst-dūzān, Hukmābād [vulgo: Hukmawar], Kāra-malik, Kāra-aghādī, Akhūnī, Kūča-bāgh, Khas-tib) and the south-east (Marālān). The tendency of the city is to extend to the west and south-west.

Tabriz is the administrative and economic centre of the vast province of Ādharbāidjān, the present

sub-divisions of which are: Ardabil (with Astārā, Mughān etc.), Karadja-Dagh (capital Abar), Marand (with Djulfā and Gargar), Khōi, Mākū, Salmā, Urmia (with Ushnū), the region of Mukri (capital Sawdī-bulāk), Sa'in-kāl's, Marāgha, Hashtārūd and Garmārūd (capital Miyāna), Sarīb and the central district of Tabriz.

In the xivth century, Hamdullāh (cf. Ewliyā, ii. 257) gave the divisions of this last district (*tuman*) as: Mīhrān-rūd, to the east of the town; Sardārūd, to the south-west of the town; Bawī-rūd (?), to the south of the preceding (with the villages of Khuataw-shāh, Uškūya, Mīlān); Arwanak, to the north-east of the Lake of Urmia with the villages of Shabistar, Sofiyā etc.; Rūdāb (?), Khānum-ābād (?) and Badmān (?), all three to the north of the town. The boundaries of the old central *tuman* were unchanged down to the xth century.

The name. According to Yāqūt, i. 822, the name of the town is pronounced Tibriz. Yāqūt gives as his authority Abū Zakariyā al-Tabrizī (a pupil of Abū 'l-ʿAlā' al-Maʿarrī, 363—449) of whom we know that he spoke the local Iranian dialect (cf. al-Samʿānī, *Kitaḥ al-Aniḥ*, G. M. S., s. v. Tanūkhī, and Saiyid Ahmad Kīrāwī Tabrizī, *Adhār yā zabān-i būstān-i Adharbāyagān*, Teherān 1304, p. 11). The pronunciation Tibriz must be one of the peculiarities of this dialect which is related to those called "Caspian". The modern pronunciation is exclusively Tabriz (or with a metathesis typical of the Turkish dialect, now predominant throughout Adharbāyagān: Tarbiz). The Armenian sources confirm the pronunciation with a. Faustus of Byzantium (fourth century) has Thavrē and Thavrēb, Asolik (xth century) Thavrē. Vardan (xivth century) has Thavrē and Davrē, this last form evidently adopted to a popular Armenian etymology: *da i vrē*, "that is for vengeance"; cf. Čamčian, *History of Armenia*, Venice 1784, i. 365; Hübschmann, *Armen. Gramm.*, i. 42; do., *Pers. Stud.*, p. 179. For the fifth (fourth) century of the Christian era the form of the name attested in Armenian is therefore Thavrē < Pers. Tavrē (Hübschmann). The popular Persian etymology explains Tabriz as "making fever run" (= disappear). (Ewliyā Čelebi: *İstma dokhān*), but it is possible that the name rather means "that which makes the heat disappear", in some connection with the volcanic activities of the Sahand (cf. also the name of the pass between Bayazid and Vān: Tapariz). The Armenian orthography reflects the peculiarities of Northern Pehlevi (*tan* < *tap* and especially *rē* for **rē*) and this suggests the origin of the name may go back to a very early period, pre-Sāsānian and perhaps pre-Arsakid (on the linguistic changes that have taken place in Adharbāyagān as a result of the Turkish invasions cf. the article *rār*).

History. The identification of Tabriz with some ancient city of Media has given rise to much discussion (cf. the resumé in Ritter, ix. 770—779). The possibility that Tabriz = Tāpuz in Ptolemy vi., Ch. 2 (from **Tāpuz*) is made less probable by the analysis of the Armenian form quoted above. Rawlinson, *Memoir on the site of the Atropatenian Ecbatana*, J. R. G. S., 1840, x., p. 107—111, has definitely cleared up the confusion between Tabriz and Ganza = al-Shīr (in Armenian Gandrak Shahanast distinguished from Thavrē by Faustus of Byzantium).

According to the Armenian historian Vardan

(xivth century), Tabriz was founded on Persian territory by the Arsakid Armenian Khosrow (217—233) as an act of revenge against the first Sāsānian king Artabān (224—241) who had killed the last Parthian king Artabān; cf. St. Martin, *Mémoires sur l'Arménie*, i., 423. This story is not found in any ancient source and is probably explained by the popular etymology given above. In Faustus of Byzantium, transl. Lauer, iv., Ch. 25 and 39 and v., Ch. 2, we only find that in the reign of Artabak II of Armenia (351—367) the Armenian general Wasak attacked the Sāsānian Shāpūr II (309—379) who was encamped at Thavrē. Wasak later slew the Persian general Boyekān there, burned the royal palace and shot an arrow into the statue of the king there. Later Mushegh, son of Wasak, defeated the Persian troops at Tabriz.

It remains to be seen whether the name Thebarmis, where in 614 the emperor Heraclius after laying waste Ganzaka, burnt the town and fire-temple (Theophanes, p. 474: *ἀράται ἀπὸ τῆς αἰῶνος κατασκευῆς τοῦ θεοβάρμης*) does not show some confusion with Thavrē.

Arab rule. During the conquest of Adharbāyagān by the Arabs (c. 22 = 642) the principal efforts of the latter were directed against Ardabil. Tabriz is not mentioned among the towns from which the Persian Marzban had levied his troops (Balādhuri, p. 326). After the devastation mentioned by Faustus, Tabriz must have become a mere village (cf. Yāqūt). The later legend (*Nusbat al-Kutub*, 730 = 1340) of the "building" of Tabriz in 175 (791) by Zubaida, wife of Hārūn al-Rashīd, is perhaps based on the fact that after the sequestration of the Umayyad estates Zubaida had received Warthān (in Adharbāyagān on the Araxes). According to Balādhuri, p. 331 and Ibn al-Fakih, p. 285 (cf. also Yāqūt, i. 822) the rebuilding of Tabriz was the work of the family of al-Rawwād al-Azdi and particularly of the latter's sons, al-Wadīnā and others who built the walls round the town. Tabriz (iii. 1171 = Ibn al-Athīr, vi. 315) speaking of the rebellion of Babak (201—220) mentions among his conquerors a certain Muhammad b. Ba'ith, owner of two castles: Shāhī which he had taken from al-Wadīnā and Tabriz (no details given). Shāhī which was 2 farsakhs (?) in extent was stronger than Tabriz (cf. the name of the peninsula of Shāhī or Shāhī on Lake Urmia to the south-west of Tabriz; but according to Balādhuri, p. 330 the fief of Ba'ith was Marand.)

When Ibn Khurdādhbih, p. 119 wrote (232 = 840), Tabriz belonged to Muhammad b. al-Rawwād. In 244 the town was destroyed by an earthquake but rebuilt before the end of the reign of al-Mutawakkil (232—247). Tabriz seems then to have changed hands several times, for, according to al-Isfahānī (c. 340), p. 181, the strip of territory which included Tabriz, Djabrawān (or Dīb-Khura-kān?) and Ushnūh [y. v.] bore the name of the ruling tribe Banū Rudainī, which had already disappeared by the time of Ibn Hawkal (c. 367), p. 289. These owners seem to have ruled in practical independence for the history of the Sājjids (lords of Adharbāyagān from 276—317) contains no reference to their intervention in the affairs of Tabriz: cf. Defrémery, *Mém. sur la famille des Sadjides*, J. A., 1847 (the capital of this dynasty was first Marāgha and later Ardabil; *ibid.*, reprint, p. 25, 41, 47, 57, 77).

After the disappearance of the Sādjids, Ādharbāidjān became the arena of numerous struggles. A former governor for the Ziyārid Mardāwīdī, Laghkarī b. Marīh, had seized the province in 326. He was driven out by the Kurd Daisam (cf. KURDS) who soon came into conflict with the Dailamī Musāfirids [q. v.]. The people of Tabriz invited Daisam into their town, which was at once besieged by the Musāfirid al-Marrubān. Daisam left Tabriz and the rule of al-Marrubān was proclaimed in all the towns of Ādharbāidjān (c. 330).

The end of the Musāfirid dynasty is not quite clear. Huart, *Les Musāfirides de l'Ādharbāidjān*, in *Volunté*... presented to E. G. Brévint, Cambridge 1922, gives 438 as the last mention of their rule at Tārom but Sir E. D. Ross, *On a Muhammadan dynasty, Asia Major*, 1925, II, p. 212—215 connects with the Musāfirids the family of the Rawwādi which can be traced at Tabriz down to 446. It is however possible that these Rawwādi were descendants of al-Rawwād al-Azīdī, father of the rebuilder of Tabriz, and had nothing to do with the Dailamī Musāfirids (apart from intermarriage). The following events are connected with these Rawwādi: in 420, Wahsūdān b. Mahlū (Mamlū?) had a large number of Ghuzz chiefs massacred at Tabriz (Ibn al-Athīr, ix: 279); in 434 an earthquake destroyed Tabriz and the amir (probably the same one) went to his other strongholds for fear of al-Ghuzz al-Saldjūkiya (*ibid.*, p. 351); in 438 Nāṣir-i Khusrāw found in Tabriz a king Saif al-Dawla wa-Sharaf al-Milla Abū Manjūr Wahsūdān b. Muhammad (Mamlū?) Mawla Amīrī l-Mu'mintin; in 446 Toghril received the submission of the lord of Tabriz al-Amīr Abū Manjūr b. Muhammad al-Rawwādī (*ibid.*, ix: 410).

Tabriz in the early centuries of the Hīdjrā. While Ibn Khurdaḍbih, p. 119, Balādhuri, p. 334, Tabari, iii: 1171, Ibn al-Fakih, p. 285 and even al-Isṭakhri, p. 181 simply mention Tabriz among the little towns of Ādharbāidjān, al-Mukaddasī already sings the praises of Tabriz and his contemporary Ibn Hawkal (c. 367 = 978) considers it the most prosperous town in Ādharbāidjān with a busy trade and manufactures of *armant*. Ibn Miskawayh (d. 421 = 1030) calls Tabriz a "noble city with a strong wall, surrounded by woods and gardens", and calls its inhabitants "brave, martial and rich". According to Nāṣir-i Khusrāw the area occupied by the town in 438 was 1,400 × 1,400 paces which is only about a third of a square mile.

Saldjūk period. Tabriz is very rarely mentioned in the history of the Great Saldjūks. In the vicinity of the town Toghril celebrated his marriage with the caliph's daughter (*Rūḥat al-Sudūr*, p. 111). During his struggle with his brother Muhammad, Sulṭān Barkiyārūq retired in 494 to the mountainous region to the south of Tabriz but at the reconciliation of the brothers, Tabriz fell to Muhammad who appointed Sa'd al-Mulk as waṣīr there (498). In 505 we find al-Amīr Suḥmān al-Kuṣṭī mentioned as lord of Tabriz i.e. the founder of the dynasty of Shāhs of Armenia (*Shāh-armen*) which ruled at Akhlat from 493 to 604.

Under the branch of the Saldjūks of the 'Irāq whose capital was at Hamadān, Ādharbāidjān played a more important part. In 514 Sulṭān Mahmūd spent some time at Tabriz to calm the inhabitants who were alarmed at the inroads of the Georgians. The name of the atābeg of Ādhar-

bāidjān at this period was Kun-toghdi. After his death (515) the Amīr of Marāgha Aḥ-Sunḡur Aḥmadilī endeavoured to get Tabriz out of the hands of Toghril (brother of the Sulṭān) but these intrigues came to nought. Mahmūd appointed to Ādharbāidjān the Amīr Djuṣūsh of Mawṣil who was killed at the gate of Tabriz in 516. After the death of Mahmūd (525), his brother Mas'ūd occupied Tabriz and was besieged there by Dāwūd, son of Mahmūd. Finally Dāwūd established himself in Tabriz and from this town ruled (526—533) a great fief composed of Ādharbāidjān, Arrān and Armenia. Ādharbāidjān and Arrān were later entrusted to Toghril I's old slave, the Atābeg Ḳara-Sunḡur, whose capital seems to have been at Ardabil (Ibn al-Athīr, xi: 52). After his death in 535 the Amīr Djalālī (Cawli) al-Tughrilī succeeded him but we soon find Ildigiz, the founder of the dynasty of Atābegs which ruled the province till 622, established in Ādharbāidjān. The centre of Ildigizid power was at first to the north-west of Ādharbāidjān while Tabriz became part of the possessions of the Aḥmadilī Amīr of Marāgha for it was not till 570 that the Atābeg Pahlawān b. Ildigiz took Tabriz from Falak al-Dīn, grandson of Aḥ-Sunḡur b. Aḥmadilī, and gave it to his brother Ḳisf Arslān. It was during the period that Ḳisf Arslān was Atābeg (582—587) that Tabriz definitely took its place as the capital of Ādharbāidjān.

In 602 the Amīr Ḳara-Sunḡur 'Alī' al-Dīn Aḥmadilī in alliance with the Atābeg of Ardabil made an attempt to retake Tabriz from Ḳisf Arslān's successor, the bon-vivant Abū Bakr. The attempt failed and Ḳara-Sunḡur lost Marāgha.

The Ildigizids lived in great style as we may judge from the odes addressed to them by poets like Niẓāmī and Khāḡanī but of their buildings we only know the remains at Nakhḡawān [q. v.]. The political weakness of their epigones is confirmed by the episode mentioned in the Georgian chronicle which took place between 1208 and 1210 (605—607 A. H.). Iwane and Zakare, generals of queen Thamar, in the course of a hazardous marauding expedition traversed the whole of northern Persia to Djuḡdjan. The Georgian troops coming from Marand levied a ransom from the people of Tabriz (Thawrīz) but otherwise did not disturb the peace of the country. A little garrison left in the town awaited the return of the troops. The episode is not mentioned in the Muslim sources but by its detail the story inspires a certain confidence. Cf. Brosset, *Histoire de la Géorgie*, I: 470.

The Mongols. The Mongols made their appearance before the walls of Tabriz in the winter of 617. The incapable Atābeg Ōzbek b. Pahlawān obtained their departure by paying a heavy ransom. Next year the Mongols came back again. The Atābeg fled to Nakhḡawān but a resistance was organised by the valiant Shams al-Dīn al-Tughrilī and the Mongols departed with a new ransom after which Ōzbek returned to Tabriz. In 621 a new horde arrived from Mongolia and demanded from Ōzbek the surrender of all the Khwārizmians in Tabriz. Ōzbek hastened to yield to this demand.

Djalāl al-Dīn. The Khwārizm-shāh soon arrived from Marāgha and on 27th Raddjāb 622 gained admittance to the town which Ōzbek had again abandoned. The inhabitants were glad to find a valiant defender especially as Djalāl al-Dīn

was soon to show his energy by an expedition against Tiflis and by the punishment of the marauding Turkomans of the tribe of Aiwā (al-Aiwā'iya). Djāla' al-Dīn having married the *malika*, the former wife of Özbek, held Tabriz for six years but towards the close of this period, his position was seriously compromised by his failures as well as by his personal conduct (Ibn al-Athīr, xii. 323). As early as 627 a Turkoman chief of the tribe of Kūsh-yalwa (?), a chief of Rūyī-dīz (near Marāgha), dared to plunder the environs of Tabriz. In 628 Djāla' al-Dīn left Adharbāidjān and the Mongols conquered the whole province, including the town of "Tabriz which is the very heart (*aqī*) of the country [for] every one is dependent on it and on those who live there" (Ibn al-Athīr, xii. 328). The "malik" of the Mongols (Djarmaghun-noin) sent for the notables (Shams al-Dīn al-Tughra'i alone did not stir), levied a heavy indemnity, ordered the weavers to make *khālīz* stuffs for the use of the great king (Ügedei) and fixed the amount of the annual tribute. From the time of Gayūk the effective rule of Arrān and Adharbāidjān was in the hands of Malik Šadr al-Dīn, a Persian ally of the Mongols. Cf. *Djāhān-Gushā*, ed. M. Kazwini, G. M. S., ii., 255.

The Mongol Ilkhāns. After the taking of Baghdad in 654 (1256) Hülagü went to Adharbāidjān and settled at Marāgha [q. v.]. In 661 (1263) after the defeat inflicted on him in the northern Caucasus by Berka'i's troops, Hülagü returned to Tabriz and massacred the merchants there of Kīpčak origin. In 662 (1264) at the re-distribution of the fiefs Hülagü confirmed Malik Šadr al-Dīn in the governorship of the province of Tabriz.

Tabriz became the official capital under Abakā (663—680) and kept this position under his successors till the coming of Öljaitü. In 688 (1289) under Arghūn the Jewish vizier Sa'd al-Dawla appointed his cousin Abū Manšūr to Tabriz. Under Kai-Khātū the revenues of the province of Tabriz were estimated at 80 *tumāns*. In 693 (1294) Tabriz was the scene of a rebellion as a result of the introduction of a paper currency (*ḥav*). It was in the reign of Ghāzān-Khān that Tabriz attained its greatest splendour. This monarch entered Tabriz in 694 (1295) and took up his abode in the palace built by Arghūn in the village of Šām to the west of the town, on the left bank of the Adj-dai (the old form of this Persian name is *shān*, "cupola" [Quatremère, *N. E.*, xiv., p. 31: "building surmounted by a cupola"], but the name was already pronounced Šām in the sixteenth century, cf. *Nushat al-Kulūb*). Orders were at once given to destroy the temples of idols, churches and synagogues, and fire-altars. These orders are said to have been revoked in the next year on the appeal of the Armenian king Hethum. In 699 (1299) on his return from the Syrian campaign, Ghāzān began a whole series of buildings. He intended Šām, already mentioned, as the site of his eternal rest. A building was erected there higher than the *gumbad* of the Sultān Sandjar at Marw, which was then considered the highest building in the Muslim world. Besides this mausoleum, which was crowned by a dome, there was a mosque, two madrasas (one Šāfi'i and the other Hanafi), a hostel for Saiyids (*dār al-sayyidat*), a hospital, an observatory like that at Marāgha, a library, archives, a building for the officers of these establishments, a cistern for drinking-water

and baths with hot water. *Wakfs*, the revenues from which amounted to 100 *tumāns* of gold (Waqāf), were set aside for the maintenance of these foundations. At each of the gates of the new town was built a caravanserai, a market and baths. Fruit-trees were brought from distant lands.

In the town of Tabriz itself great improvements were also made. Hitherto its wall (*ḥarā*) was only 6,000 *gām* ("paces"; *Djāhān-nūmā: kulūf* "fathom"). Ghāzān gave it a new wall 25,000 *gām* in length (44 *farsakhs*). All the gardens and the Kūh-i Wallyān and Sandjarān quarters were incorporated in the town. Within the wall on the slopes of the Kūh-i Wallyān (now Kūh-i Surkhāb or 'Aināli-Zainālī) a series of fine buildings was erected by the famous vizier Rashīd al-Dīn and the quarter was therefore known as *Rab'i-i Rashīdī* (*Nushat al-Kulūb*, p. 76). We have a letter from Rashīd al-Dīn in which he asks his son to send him from Rūm 40 young men and women to people one of the villages in the new quarter; cf. Browne, *A Hist. of Pers. Liter.*, iii. 82.

As if to emphasize the fact that Tabriz was the real centre of the empire which stretched from the Oxus to Egypt, the gold and silver coins and the measures (*ḥila*, *gās*) were standardised according to the standards of Tabriz (D'Osson, iv. 144; 271—277, 350, 466—469).

In 703 (1304) Ghāzān-Khān was buried with great ceremony in the mausoleum of Šām. In 705 (1307) his successor Öljaitü conceived the idea of creating a new capital at Sulṭāniya [q. v.]. It was however not easy to move the inhabitants, as in 715 (1315) we still find the ambassador from the Özbeqs of Kīpčak following the route by Tabriz instead of the shorter Mughān—Ardabil—Sulṭāniya. It is also noteworthy that Tādī al-Dīn 'Alī-Shāh (vizier from 711—1312) had begun the construction of a magnificent mosque at Tabriz (outside the Mihād-mūhin quarter).

In 717 (1317) under Abū Sa'd the retiring vizier Rashīd al-Dīn went to Tabriz and only left it the following year to meet his fate. His property was confiscated and Rab'i-i Rashīdī sacked (Browne, iii. 71). His son Ghiyāth al-Dīn who was called to power by Abū Sa'd himself continued to enlarge Rab'i-i Rashīdī. The capital continued to be Sulṭāniya judging from the fact that Abū Sa'd was buried there in a mausoleum which he himself had ordered to be built (d'Osson, iv. 720).

When in 736 (1336) his successor Arpa lost the battle of Taghatu (this to be read for Baghatu) his vizier Ghiyāth al-Dīn was killed by the conqueror 'Alī Pādshāh Oirat. The property of the family of Rashīd al-Dīn was plundered by the people of Tabriz and valuable collections and precious books disappeared on this occasion.

The Djāla'irs and the Čobanids: In the midst of the anarchy which followed these events we have the rise of the Djāla'ir (Ilkhānī) dynasty whose fortunes were closely associated with Tabriz. In 736 (1336) Hasan Burzurgh Djāla'ir established on the throne of Tabriz his candidate Sultān Muḥammad. In spite of its temporary nature this episode marks the restoration of its primacy to the old capital. The Čobanid Hasan Kūčik soon appeared on the scene with his own candidates. Hasan Burzurgh retired to Bagdad and Hasan Kūčik (740—1340) put on the throne Sulaimān Khān with rule over 'Irāq 'Adjam, Adharbāidjān,

Arrān, Mughān and Georgia. The successor of Hasan Kūtik, his brother Ashraf, in 744 (1344) proclaimed a new puppet Anūshīrwān whom he relegated to Saljāniya while he himself remained in Tabriz as the real ruler and extended his authority as far as Fārs. His cruelty and exactions provoked an "intervention in the cause of humanity" by Djāni-beg Khān of the Blue Horde (Eastern Kipčak). Ashraf was defeated at Khoi and Marand and his head suspended over the door of a mosque in Tabriz (750 = 1355). The vizier Akhīdjūk whom Djāni-beg had left in Ādharbāidjān found his authority disputed on several sides. Tabriz was temporarily occupied by the Djālā'ir Uwais b. Hasan Buzurg who came from Baghdad. Hardly had he been driven out by Akhīdjūk than the Muḥaffarid of Fārs, Muḥarrir al-Dīn Muḥammad, quarrelling with Djāni-beg who had called upon him to recognise his suzerainty arrived from Shirāz, defeated Akhīdjūk at Miḡāna and seized Tabriz in 758 (1357). After two years he retired before Uwais (cf. *Tārīkh-i Guzda*, G.M.S., p. 677-679, 715-717) who soon afterwards reoccupied Tabriz and slew Akhīdjūk.

When the news of the death of Sulṭān Uwais (776 = 1377) reached Fārs, Shāh Shudjā' who had succeeded Muḥarrir al-Dīn set out from Shirāz to take Tabriz. Husain, son of Uwais, was defeated and Tabriz occupied but after a few months a rebellion having broken out at Uḡjān forced Shudjā' to evacuate the town which Husain reoccupied without striking a blow. Sulṭāniya seems to have marked the limits of the lands of the Muḥaffarids in the north-west (*Tārīkh-i Guzda*, p. 723-725). In 784 (1382), Husain Djālā'ir was slain at Tabriz and his brother Sulṭān Aḥmad succeeded him in Ādharbāidjān but his rule was to be brief for Timūr soon after appeared on the scene.

In spite of all the vicissitudes of their intermittent rule the Djālā'irs were able to gain the sympathy of the people of Tabriz. Their rights were implicitly recognised by the lords of Shirwān and the Kara-Koyunlu. Among their buildings in Tabriz are recorded their mausoleum Dimishkiya and a large building by Sulṭān Uwais, which, according to Clavijo, ed. Srennewski, p. 169, contained 20,000 chambers ("camaras apartadas e apartamentos") and was called Dawlat-Khāna ("Tolbatgana ... la casa de la ventura"); cf. Markow, *Katalog Djālā'ir. monēt*, St. Petersburg 1897, p. I—aliv.: history of the Djālā'irs. — Coins of the following years struck by the Djālā'irs at Tabriz are known: Hasan Buzurg — 757, Uwais — 762, 763, 764, 765, 766, 769, 770, Husain — 777, 778, 779, 780, 781, Aḥmad — 785, 810.

Period of Timūr. During his first invasion of Persia (786) Timūr returned to Samarqand after taking Sulṭāniya. His great rival Tuḡtamīsh-Khān of the Golden Horde at once sent an expedition against Ādharbāidjān by Darband in 787 (1385). The invaders took Tabriz which was badly defended by Amīr Walī (the former lord of Djurdjān (cf. *RUSSIA-TIMUR*) driven out by Timūr) and the Khān of Khalkhāl, plundered the inhabitants, carried off prisoners (including the poet Kamāl Khudjandi) and returned to Darband (*Zafar-nāma*, I. 392; Browne, *Hist. Pers. Lit.*, iii. 321).

Hardly had Sulṭān Aḥmad Djālā'ir recovered Tabriz than he was driven out again by Timūr (788) who came on the pretext of protecting the Muslims. Timūr encamped at Shām-Gharān and

levied an indemnity (*māl-i amān*) on the people of Tabriz; cf. *Zafar-nāma*, I. 326; al-Aīnī is much severer on Timūr, cf. Markov, *Catalogue*, p. xxvii.).

In 795 (1392) the "hef of Hūllāgū" (*taḡh-i Hūllāgū*), consisting of Ādharbāidjān, al-Rāy, Gīllān, Shirwān, Darband and the lands of Asia Minor, was granted to Mirān-shāh (*ibid.*, II. 623) and Tabriz became the capital of this territory. Three years later this prince became insane and committed a series of insane actions (execution of innocent people, destruction of buildings, *ibid.*, II. 200, 213, and Browne, *op. cit.*, iii. 71). Timūr immediately on his return from India set out for Ādharbāidjān in 802 and executed those who shared in Mirān-shāh's debauches.

In 806, Mirzā 'Omar, son of Mirān-shāh, was placed at the head of the "hef of Hūllāgū" and the lands conquered by Timūr in the west. His father Mirān-shāh (in Arrān) and his brother Abū Bakr (in Mesopotamia) were placed under the authority of Mirzā 'Omar. After the death of Timūr a long struggle began between 'Omar and Abū Bakr. In 808, Abū Bakr succeeded in levying on Tabriz a tribute of 200 'irāḳī tumāns. 'Omar returned to Tabriz but his Turkomans harassed the people and Abū Bakr regained the town. Hardly had he left Tabriz than the Turkoman rebel Bistām Djāgīr entered it but hurriedly retreated on the approach of Shāhīn Ibrāhīm of Shirwān (q. v.). In 809 the latter handed over Tabriz to Sulṭān Aḥmad Djālā'ir as to its true sovereign and the inhabitants showed great joy on this occasion; cf. *Mafī' al-Sa'dain*, transl. Quatremère, N. E., xiv., p. 109. On Rabī' I, 8, Abū Bakr was again at Shām-Gharān but did not dare go into the city where the plague was raging.

A short time before these latter happenings, the Ambassador of Henry III of Castile, Clavijo, spent some time in Tabriz (June 11—20, 1404 and with intervals Febr. 28—Aug. 22, 1405, i.e. from the end of 806 to the beginning of 808 A.H.). In spite of the trials it had undergone, the town was very busy and conducted considerable trade. Clavijo talks highly of the streets, markets and buildings of Tabriz.

The Kara-Koyunlu. On the 1st Djumādī I, 809, Kara Yūsuf, the Kara-Koyunlu Turkoman on the Araxes, inflicted a defeat on Abū Bakr who in his retreat handed Tabriz over to plunder, and nothing escaped the rapacity of his army (*Mafī' al-Sa'dain*, p. 110). Kara Yūsuf advanced as far as Sulṭāniya and carried off the population of this town to Tabriz, Ardabil and Marāgha. Abū Bakr soon returned to Ādharbāidjān but Kara Yūsuf assisted by Bistām defeated him at Sardarūd (5 miles south of Tabriz). Mirān Shāh fell in this battle and was buried at Tabriz in the cemetery of Surkhāb.

Kara Yūsuf, remembering the agreements on the redistribution of the territory made with Sulṭān Aḥmad at the time when both were in exile in Egypt had recourse to a stratagem. With great ceremony he put on the throne of Tabriz his son Pir-Budāgh who was regarded as the adopted son of Sulṭān Aḥmad (according to the *Mafī' al-Sa'dain*, Kara Yūsuf did not give the title of Khān to Pir-Budāgh till 814). Aḥmad at outward appearance resigned himself to this arrangement but, when Kara Yūsuf was absent in Armenia, he occupied Tabriz. In the battle of Asad (?) two farsakhs from Tabriz, Sulṭān Aḥmad was finally defeated (28th

Rabi' II, 813 = 1410). He was executed by Kara Yūsuf and buried in the Dimighkiya beside his father and mother. Once more the sympathies of the people of Tabriz were with the last Djaisir king; cf. Huart, *Le fin de la dynastie des Ilkhaniens*, *Journ. As.*, Oct. 1876, p. 316—362.

Tabriz is regularly mentioned as the centre from which Kara Yūsuf sent out his expeditions. The Timurid Shāhruh fearing the influence of Kara Yūsuf in 817 undertook his first expedition against him but did not advance beyond al-Raiy (*Majlis al-Sa'dain*, p. 238, 250). When in 823 (1420) he was renewing his attempt, news reached him of the death of Kara Yūsuf (on *Ulu' l-Ka'da* 7, 823 = November 12, 1420). Anarchy broke out in the Turkoman camp and a week later Mirza Baisunghur occupied Tabriz; cf. Price, *Chronological Retrospect of the Events of Mahom. History*, London 1821, iii. 541, following the *Kawqat al-Safa* and the *Khatimat al-Akhbar*. Shāhruh arrived there in the summer of 824 (1421) after defeating in Armenia the sons of Kara Yūsuf. In 832 Iskandar, son of Kara Yūsuf, seized Sulṭāniya. Shāhruh again arrived at Shām-Ghaznī at the head of an army and inflicted a defeat on the Kara-Ḳoyunlu at Salmā. In the winter of 833 Adharbāidjān was given to Abū Sa'īd b. Kara Yūsuf who had come to pay homage to Shāhruh. In the following year he was slain by his brother Iskandar. In the winter of 838 (1434) Shāhruh came to Adharbāidjān for the third time. Iskandar thought it wiser to retire before him but his brother Djahānshāh hastened to join Shāhruh. The latter spent the summer of 839 (1436) in Tabriz and on the approach of winter gave investiture to Djahānshāh.

Thus began the career of the prince who made Tabriz the capital of a kingdom stretching from Asia Minor to the Persian Gulf and to Herāt. The most remarkable building in Tabriz "the Blue Mosque" (*Gök-masjid*) is the work of Djahānshāh (according to Beresin, of his wife Begum Khātūn). It is possible that the presence in Tabriz in the Surkhāh and Čarandāh quarters of members of the Ahl-i Haqq sect (cf. *Sulṭān-i-ḡāḡ*) dates from the time of Djahānshāh on whose heretical views cf. *Minedjīm-baḡh*, iii. 154.

The Ak-Ḳoyunlu. On the 12th Rabi' II, 872 (10th November 1467) Djahānshāh was surprised in Armenia and slain by Urūn Ḥasan Bayandur, chief of the Ak-Ḳoyunlu Turkmans. The two daughters of Iskandar proclaimed at Tabriz their dervish brother Ḥusain 'Alī but Begum Khātūn, widow of Djahānshāh, put a stop to this plan. Tabriz was however occupied by Ḥusain 'Alī, the mad son of Djahānshāh (by another wife) who put to death Begum Khātūn and her relatives (*Minedjīm-baḡh*).

In spite of the assistance which he had received from the Timurid Abū Sa'īd, Ḥasan 'Alī was defeated at Marand. Subsequent events led up to death of Abū Sa'īd himself. In 873 (1468) Urūn Ḥasan seized Tabriz which he made his capital (he announced this decision in a letter to the Ottoman Sulṭān, Ferīdūn-bey, *Münghā'ir*).

The Venetian sources are of considerable value for the period of Urūn Ḥasan. [The first Venetian consul at Tabriz was Marco da Molino in 1324]. Giosafa Barbaro, sent by the republic in 1474, describes the animated life of Tabriz to which embassies came from all parts. Barbaro was received in a pavilion of the magnificent palace which he calls

"Aptisti" (*Haft + i*). The anonymous Venetian merchant who visited Tabriz as late as 1514 (?) still speaks of the splendour of the reign of Urūn Ḥasan "who has so far not yet had an equal in Persia". Urūn Ḥasan died in 852 (1477) and was buried in the Naḡsiya Madrasa which he had built and which was later to be used for the burial of his son Ya'qūb. During the twelve years of his comparatively peaceful reign (853—866) the latter attracted to his court many men of letters (the Kurdish historian Idm was his secretary) and in 888 built in the garden of Shāh-abād the Haḡht-bihisht palace (cf. the history of Ya'qūb by Faḡl Allāh b. Rūzbihān, a unique MS. of the Bibl. Nat. de Paris, ancien fonds pers. 101, fol. 105v). This palace (*Aḡht-bihisht*) has also been described by the Venetian merchant; on the ceiling of the great hall were represented all the great battles of Persia, embassies, etc. Beside the Haḡht-bihisht there was a harem in which 1,000 women could be housed, a vast *maidān*, a mosque and a hospital to hold 1,000 patients (cf. also Ewlyā, ii. 249).

The Safawis and the Turco-Persian wars. Ismā'īl I occupied Tabriz in 906 (1500) after his victory at Sharūr over Mirza Alwand Ak-Ḳoyunlu. Of the 200—300,000 inhabitants of the town two-thirds were reported to be Sunni but the new ruler was not long in imposing the Shi'a upon them and took rigorous measures against those who objected (*Ālam-ārā*, p. 31). In his hatred of the Ak-Ḳoyunlu Ismā'īl had the remains of his predecessors exhumed and burned (the historian of Ya'qūb, fol. 206v; G. M. Angiolella). The Venetian merchant speaks of the despair into which the debauches of the young prince had plunged several noble families. When Ismā'īl set out for Arzindjān after Alwand the latter succeeded in returning to Tabriz and during his brief stay there "oppressed the rich" (*Ālam-ārā*, p. 31).

The battle of Čaldīrān (2nd Raddjab 920 = 23rd August 1514) opened to the Ottomans the road to Tabriz. Nine days later the city was occupied by the vizier Dukagin-oghla and the defterdār Piri and on the 6th September Sulṭān Selim made his triumphal entry into it. In the town the Turks conducted themselves with moderation (Browne, *Pers. Lit. in Mod. Times*, p. 77) but seized the treasures amassed by the Persian sovereigns and carried off to Constantinople 1,000 skilled artisans. The Sulṭān only stayed a week in Tabriz as he had to return to his own lands in consequence of the refusal of the Janissaries to continue the campaign (v. Hammer, *G. O. R.*, i. 720).

The events of 1514 were a grave warning to the Persians and under Tahmāsp I, the capital was transferred much farther east to Kazwin. According to the Venetian Ambassador Alessandri, Tahmāsp, as a result of his avarice, was not popular in the old capital of the Ak-Ḳoyunlu.

At the suggestion of the renegade Ulāma (of the Turkoman tribe of Tekke) the troops of Sulaimān I under the command of the grand vizier Ibrāhīm Pasha, occupied Tabriz in 941 (July 13, 1534) and went to the summer camp at Asadābād (Sa'īd-ābād?). Ibrāhīm Pasha began to build a fortress at Shām-Ghaznī. The government of Adharbāidjān was entrusted to Ulāma who had held the same post under Tahmāsp. On September 27, Sulṭān Sulaimān himself arrived in Tabriz. A little later he made a thrust as far as Sulṭāniya and occupied

İsfahân. On his return to Tabriz he spent 14 days engaged in administrative business. The cold forced the Turkish army to retreat and the Persian troops at once advanced as far as Wân. Again in 955 (July 28, 1548) at the instigation of Alikâs Mirzâ, brother of Shâh Tahmâsp, Sulaimân occupied Tabriz but only stayed five days there. The Persian tactics were to destroy all means of subsistence for the invader and famine thus forced the Turks to retreat once more. According to the *Hafiz-i Ahkam* Sulaimân had bought back from his soldiers their right of plundering the conquered city for 3 days but in spite of this the citizens continued to slay Turks in secret. Sulaimân refused Alikâs Mirzâ's proposal that the inhabitants should all be massacred or carried off into captivity. M. d'Aramon, ambassador of Francis I, was an eye-witness of the occupation of Tabriz and testifies to the Sulaimân's efforts to protect the town (*Voyage*, p. 83). In 962 (May 29, 1555) there was signed at Amasia the first treaty of peace between Turkey and Persia which lasted about 30 years (v. Hammer, II, 112, 120, 269; *Âlam-ârâ*, p. 49-59).

In 993 (1585) the grand vizier of Murâd III Ördemir-zâde Othmân-pâshâ with 40,000 men undertook the recapture of Tabriz. The governor of Wân, Çiğhala-zâde, joined him with 6,000 men. Going via Caddârân and Soleyân the Turks arrived before Shâm-Ghasân. The Persian governor 'Alî Kulî-Khân after a bold sortie which cost Çiğhala-zâde 3,000 men, retired during the night. In September the Turks occupied the town. As a punishment for the murder of several soldiers, the Turks sacked the town and massacred its inhabitants for three days. The Persian prime minister Hamza Mirzâ operating around the city on several occasions inflicted heavy losses on the Ottoman troops. To defend Tabriz, 'Othmân-pâshâ-zâde built a square citadel the walls of which were 12,700 ells long (Ewliyâ, *inmâ-i mekki arzharî*). This citadel which was erected in 36 days was inside the town (*Âlam-ârâ* "on the site of the old dawlat-khâna"; Ewliyâ "around the Khayâhân of the Shâh"). It was held by a garrison of 45,000 men. The eunuch Dja'far Pâshâ was appointed governor of Tabriz. On October 29, 1585, 'Othmân Pâshâ died. Çiğhala-zâde whom he had appointed on his deathbed to command the Ottoman troops succeeded in defeating the Persians but soon the latter were able to besiege the Turks within the town. Forty-eight encounters took place before Farhâd Pâshâ definitely relieved the garrison (v. Hammer, II, 354). By the disastrous peace of 998 (1590) Shâh 'Abbâs had to cede to the Ottomans their conquests in Transcaucasia and the west of Persia. Henceforth the Turks took their occupation of Tabriz seriously. Their many buildings, especially those of Dja'far Pâshâ, are mentioned by Ewliyâ in Tabriz and its vicinity. But the Persians were keeping a watchful eye on their old capital.

The troubles with the *siyâsi* at the beginning of 1603 showed the weakness of Sulân Muham-mad III. In the autumn Shâh 'Abbâs left Isfahân unexpectedly and entered Tabriz 12 days later. 'Alî Pâshâ was defeated at Hâdjidji Harâmî (2 farsakhs from the town) after which the citadel surrendered. Shâh 'Abbâs treated the defeated foe with generosity (cf. the evidence of Tectander who was in Tabriz) but in a revival of Shâ' fanaticism the inhabitants killed a large number of Turks in the town and neighbourhood without heed for any bonds of

kinship or friendship that had been formed during the 20 years of Ottoman occupation. 'Abbâs I invited the people to do away with all traces of Turkish rule and "in a few days they had left no vestige of the citadel nor of any of [their] houses, buildings, dwellings, caravanserais, shops, baths etc." (*Âlam-ârâ*, p. 441, 451).

In 1019 (1610) in the reign of the weak Sulân Ahmad III the Turks again tried to resume the offensive. The grand vizier Murâd Pâshâ with an army unexpectedly appeared in front of Tabriz but 'Abbâs I had had time to make his preparations. The town was defended by the governor Pir-Budâk-Khân while the Shâh took up his position to the north of the Surkhâb. No fighting took place but the Turks suffered greatly from want of provisions in the country which the Persians had laid waste. Five days later the Turkish army was retracing its steps while Shâh 'Abbâs and Murâd Pâshâ continued to exchange embassies. This Turkish invasion hastened the building of a new fortress at Tabriz. The site of the old Turkish citadel was thought to be unsuitable as liable to inundation by the Mîhrân-rûd. The new fortress was built under the shadow of Surkhâb in the Rah'-i Raghâbi quarter. The materials were taken from old ruins particularly at Shâm-Ghasân (*Âlam-ârâ*, p. 584, 601). On the other hand the unsuccessful invasion by Murâd Pâshâ led to the conclusion of a new treaty in 1022 (1612) by which the Persians succeeded in restoring the status quo as it had existed in the time of Shâh Tahmâsp and Sulân Sulaimân (*Âlam-ârâ*, p. 600, 611; v. Hammer, II, 736, 745). The actual demarcation however met with obstacles.

In 1027 (1618) at the instigation of some Tatar Khâns of the Crimea the Ottoman troops (60,000 men) of Wân suddenly invaded Âdhâr-hâjdjân. The Persians evacuated Tabriz and Ardabil. The Turks who were short of supplies revictualled at Tabriz and advanced to Sarâb where Karçkai Khân, *sipâhikâr* of Tabriz, won a brilliant victory over them. A new treaty was made confirming the conditions of that of 1022 (*Âlam-ârâ*, p. 656-661; v. Hammer, II, 773).

After the death of 'Abbâs I the struggle between Turk and Persian was resumed on a great scale. In the reign of his successor Shâh Saif, Sulân Murâd IV invaded Âdhâr-hâjdjân in 1045 (1635) and entered Tabriz on September 12. The aim of this campaign was plunder rather than conquest. Murâd ordered his soldiers to destroy the town. Having in this way "knocked down Tabriz" (Ewliyâ, *eyâle-i ırâzîye*) Murâd in view of the advance of the season hastened to return to Wân. He only spent 3 days in Tabriz. In the following spring, the Persians reoccupied their possessions as far as Eriwân and by the treaty of 1049 (1639) secured for themselves the frontier which has survived in its main lines to the present day.

Hâdjidji Khâtifa who was an eye-witness of the campaign of 1045, says that after the devastation wrought by Murâd IV the old ramparts had completely disappeared and "only here and there could traces of old buildings be seen" (*Diyân-nâmâ*, p. 381). Even Shâm-Ghasân was not spared; the mosque of Usun Hasan alone was left intact. The soldiers also tried to cut down the fruit-trees but in view of their number only managed to destroy a tenth of them.

Such then was the state of the town when a

series of travellers who visited it a few years later say had undergone a splendid revival. The interesting story of Ewliyâ Çelebi (in the reign of 'Abbâs II in 1057 [1647]) gives detailed statistics of Tabriz, its madrasas (47), schools (400), caravanserais (200), houses of notables (1,070), derwish tekkes (160), gardens (47,000), animated public promenades. In the same period Tavernier says that in spite of the damage done by Murâd IV "the town is almost completely rebuilt". According to Chardin (ii. 328) in 1673 under Shâh Sulaimân I, there were in Tabriz 550,000 inhabitants (the figure seems exaggerated), 15,000 houses and 15,000 shops. It was "really a large and important town... There is plenty of all the necessities of life and one can live very well and cheaply in it". There was a hospice of Capucins at Tabriz on which the authorities cast a kindly eye. The Begler-begi of Tabriz had under his authority the Khâns of Kars, Urmiya, Marâgha and Ardabil and 20 "sulhâns" (= local chiefs).

The end of the Safawids and Nâdir. The Afghan invasion of Persia resulted in a state of complete anarchy. The heir to the throne, Tahmâsp, who had fled from Isfahan arrived in Tabriz where he was proclaimed king in 1135 (1722). When by the treaty of September 12, 1723, Tahmâsp II ceded the Caspian provinces to Russia, Turkey announced that as a precautionary measure she would be forced to occupy the frontier districts between Tabriz and Eriwân. After the fall of Eriwân, Nakhçevân and Marand, the Turks under the ser-asker Abdullah Pâshâ Köprülü arrived before Tabriz in the autumn of 1137 (1724). They occupied the Dewetî and Surkhâb quarters (where Selim I had once pitched his camp). The Persians who made Shâm-Gharân their base held out. The Turks had some success but the advanced season of the year forced them to retreat before the end of the month. In the following spring Köprülü returned at the head of 70,000 men. The siege only lasted four days but the fighting in the seven fortified quarters was very desperate. The Persians lost 30,000 men and the Turks 20,000. The survivors of the Persian garrison to the number of 7,000 withdrew without hindrance to Ardabil ('Ali Hazin, ed. Balfour, p. 153; Hanway, ii., p. 229).

The treaty of 1140 (1727) concluded with the Afghân Ashraf confirmed to the Ottomans the possession of N.W. Persia as far as Sulâtîya and Abhar. Two years later Nâdir defeated Mustafâ Pâshâ's army at Schailân (vulgo Sawallîn or Stokh-köprü) near Tabriz. He entered this city on the 8th Muharram 1142 (1729) and made prisoner Rustam Pâshâ, governor of Hâsharûd.

Anxious to take advantage of the domestic troubles of Turkey, Shâh Tahmâsp resumed the offensive but lost the battle of Kuridjân (near Hamadân) and the ser-asker 'Ali Pâshâ returned to Tabriz in the winter of 1144 (1731) and even built a mosque and madrasa there. By the treaty concluded a little later (January 16, 1732), the Persians ceded to the Porte the lands north of the Araxes but kept Tabriz and the western provinces. As Tabriz had actually been occupied by 'Ali Pâshâ, the Porte very reluctantly agreed to its restoration to Persia and the signing of the treaty resulted in the dismissal of the grand vizier (v. Hammer, iv. 281). On the other hand the cession of the Transcaucasian provinces to Turkey gave Nâdir an excuse for deposing Tahmâsp II.

After checking Nâdir near Baghdad the governor of Wân Rustam Pâshâ re-occupied Tabriz. In 1734, Nâdir set out for Tabriz and as a result of his victories in Transcaucasia the treaty of 1149 (1736) re-established the status quo of 1049 (1639).

Towards the end of the reign of Nâdir, when anarchy was again beginning, the people of Tabriz declared in favour of an obscure pretender who claimed to be Sîm Mirzâ. The death of Nâdir in 1160 (1747) might have given the Porte an opportunity to intervene in Persian affairs especially as Ridâ Khân, son of Fâth 'Ali Khân, *dârûn-begi* of Tabriz, had come to Erzerûm to beg Turkish support for one of the candidates for the throne (a Nâdirid; v. Hammer, iv. 474) but Turkey maintained complete neutrality.

Nâdir Shâh had entrusted Âdharbâidjân to his valiant cousin Amir Arslân Khân who had 30,000 men under him. After Nâdir's death, this general aided Nâdir's nephew Ibrahim Khân to defeat his brother 'Adil Shâh (Sulhân 'Ali Shâh) but Ibrahim at once turned on his ally, slew him and after collecting 120,000 men spent six months in Tabriz where (Dhû 'l-Kâ'da 7, 1161) he had himself proclaimed king (*Târîkh-i bâ'd-Nâdirîya*, ed. O. Mann, p. 36-37). He was soon killed by Shâhruh, grandson of Nâdir.

The history of Âdharbâidjân during the rule of the dynasty of Karim Khân Zand is still little known. The Afghân Asad Khân was at first lord of the province. In 1170 (1756) it was taken from him by Muhammad Husain Khân Kâdjâr. Next year Karim Khân defeated Fâth 'Ali Khân Afshâr of Urmiya and conquered the greater part of Âdharbâidjân (Malcolm, *Hist. of Persia*). In 1780 an earthquake did great damage in Tabriz.

The Kâdjârs. Towards the end of 1205 (1790) Âkâ Muhammad, founder of the Kâdjâr dynasty, set out to occupy Âdharbâidjân. Among the governors who came to meet him was the hereditary lord of Khoi, Husain Khân Dumbull (cf. KURDS, ii., p. 1145). Âkâ Muhammad added Tabriz to his fief. After the assassination in 1211 (1796) of the first Kâdjâr Shâh, troubles broke out in Âdharbâidjân. Sâdik Khân of the Shikâkî tribe [q. v.] attempted to seize the supreme power and appointed his brother Mahammad 'Ali Sulhân to Tabriz. The Dumbull Khâns took an active part in suppressing the rising and in return Fâth 'Ali Shâh confirmed Dja'far Kuli Khân Dumbull in the governorship of Tabriz. The latter as soon as he arrived in Tabriz in 1213 (1798) formed a coalition with Sâdik Khân who had re-established himself in Sarâb and the Afshâr Khân of Urmiya and shaking off "the dependence which was so slight that it really was absolute independence" drove out the Shâh's representatives. Troops were sent against Dja'far Khân who with the help of the Kurds held out for some time in Khoi; cf. H. J. Brydges, *The Dynasty of the Kadjars*, London 1833, p. 50, 84 etc. In 1214 (1799) the heir to the throne of Persia 'Abbâs Mirzâ established himself in Tabriz with Ahmad Khân Mukaddam (of Marâgha) as his beglerbegi. Dja'far Khân sought refuge in Russia (cf. BIKKRI) but for some time other members of the Dumbull family continued to rule in Tabriz. In 1224 (1809) Nadja' Kuli Khân Dumbull rebuilt the citadel of Tabriz (*Mir'ât al-Buldân*, i. 343; S. Wilson, p. 325) around which 'Abbâs Mirzâ dug ditches in 1241 (1825).

After the incorporation of Georgia into Russia (1801) complications between Russia and Persia gradually increased and Tabriz became the principal centre of Persian activities. 'Abbās Mirzā set himself the task of europeanising the Persian army. An important English mission including a number of very notable explorers of Persia (Ouseley, iii. 199; Ritter, ix. 876-880) made its headquarters in Tabriz. The English and Russian diplomatic missions (the secretary and later head of the latter was the famous writer Griboyedov) also came to the court of 'Abbās Mirzā. The energetic heir to the throne built arsenals, cannon foundries, depots and workshops. After the trials it had undergone the town was however but a shadow of the splendid city of the time of Chardin. Tancoigne (1807) estimated its population at 50-60,000 including several Armenian families; Dupré (1809) at 40,000 with 50 Armenian families. Kinnear gives Tabriz ("one of the most wretched cities") only 30,000 inhabitants. Morier, who in the account of his first journey (1809) had given the exaggerated figure of 50,000 houses with 250,000 inhabitants, in his second journey confines himself to saying that Tabriz has only a tenth of its pristine magnificence and that it has no public buildings of note.

The Russo-Persian wars filled the period to 1828. During the operations of 1827 the General Prince Eristow with the help of certain discontented Khāns entered Tabriz with 3,000 soldiers on 3rd Rabi' II, 1243. 'Abbās Mirzā was away and opinions in the town were divided. Allāh-yār Khān Asaf al-Dawla was for continuing the struggle but an important ecclesiastic the Imām Mirzā Fattāh insisted on surrender and opened the gates of the town to the Russians. (After the peace Mirzā Fattāh had to leave Persia and take refuge in Transcaucasia). The commander-in-chief Count Paskewitch then came to Tabriz and met 'Abbās Mirzā at Dih-Kharraḳān. An armistice was signed but the court of Teherān did not approve of the terms. The Russians resumed the offensive and occupied Urmiya, Marāgha and Ardabil. The peace of Turkman-chai (5th Sha'bān, 1243 = Feb. 22, 1828) which fixed the frontier on the Araxes finally put an end to the Russian occupation (urush). On these events cf. the *Mir'at al-Baidān*, i. 404-410; Mianarov, *Bibliographia caucasica*, St. Petersburg 1874-1876, p. 743-747; *Détails sur ce qui s'est passé à Tauris du 24 octobre au 5 novembre 1827*, in *Nouv. Annales de Voyages*, Paris 1828, i. 38, p. 325; P. Zubow, *Kartini voyai: Persiyei 1826-1827*, St. Petersburg 1834; do., *Persidskaya voyna*, St. Petersburg 1837; Osten-Saken, *Administration de l'Adharbāidjān pendant la guerre persane de 1827-1828* (in Russian), in *Russki Iuvallid*, 1861, N^o 79.

Since the time of 'Abbās Mirzā, Tabriz has been the official residence of the heir to the Persian throne. Down to the accession of Muhammad Shāh in 1250 (1834) the British and Russian diplomatic missions spent most of their time in Tabriz (Fraser, *Travels in Kurdistan*, ii. 247). Their transfer to Teherān marked the definite transference by the Qājars of the political capital to that city. Down to the end of the sixteenth century little of general importance marked the life of Tabriz. On Sha'bān 27 1286 (July 8, 1850) the Bāb [q. v.] was executed in Tabriz at the entrance to the arsenal (*ḡhah-ahna*); cf. this correction in

Wilson, *Persian Life*, p. 62. In 1880, the approach of the Kurds under Shāikh 'Ubaiddallāh (cf. SHAMDIRĀN) greatly disturbed the people of Tabriz. Gates were put up between the quarters to isolate them better if necessary but the Kurds did not go beyond the Bināb.

The consolidation of Qājār power secured peace for Adharbāidjān and Tabriz gradually recovered. In spite of the terrible ravages of cholera and plague in 1830-1831 the census made in Tabriz in 1842 recorded 9,000 families or 100-120,000 people (Beresin). In 1895 the number of inhabitants was estimated at 150-200,000, of whom 3,000 were Armenians (Wilson, *op. cit.*, p. 53). Twenty years later the population was certainly over 200,000 and in spite of the rudimentary nature of the municipal organisation the town showed every sign of prosperity. The trade of Tabriz after a period of stagnation developed, especially between 1833 and 1836, but the too great excess of imports produced a great crisis in 1837. The opening of the route by Transcaucasia (Poti-Baku) meant considerable competition for the parallel route Trebizond-Tabriz. In 1883 the Russian government closed the route through Transcaucasia and Russian trade was thereby encouraged in Northern Persian markets but the movement of goods via Trebizond-Tabriz (the only route to the west) also increased.

Twentieth century. The history of Tabriz since 1904 has been very stirring. The Turks of Tabriz (who are the result of intermarriage of Persians with Ghuzz, Mongols, Turkomans etc.) with their energetic and passionate character played a very important part in the Persian nationalist and revolutionary movement. Open rebellion broke out in Tabriz on June 23, 1908, the day of the bombardment of the Parliament in Teherān. The names of Saṭṭār Khān, a former horse-dealer who became chief of the Amir Khiz quarter and his companion Bāḳir Khān are closely associated with the brave defence of Tabriz but darker sides of their activity have not escaped even E. G. Browne, *The Pers. Revolution*, p. 491-492. The government troops under Prince 'Ain al-Dawla, surrounded the town and at the beginning of February 1909, blockaded it completely. On April 20 the Cabinets of London and St. Petersburg agreed to send to Tabriz a Russian force "to facilitate the entrance into the town of the necessary provisions, to protect the consulates and foreign subjects, and to help those who so desired to leave the town". The Russian troops led by General Snarski entered Tabriz on April 30, 1909 (Browne, *op. cit.*, p. 274). The negotiations for their withdrawal lasted till 1911 when the Russian ultimatum presented at Teherān on November 29 provoked a new agitation in the country. On December 21 the *fidā'i* of Tabriz attacked the weak Russian detachment, distributed about the town, and inflicted considerable losses on them. This had the immediate result of the despatch to Tabriz of a Russian brigade under Voropanov, which arrived on the eve of the new year. The Russian military tribunal pronounced several death sentences (including one on the Thikāt al-Islām, an important member of the Shākhī sect). In October 1912 the Turkish detachments who occupied the "disputed" districts west of Adharbāidjān were recalled but the question of the Russo-Turkish frontier [cf. KURDS] remained still undecided. The Russian troops therefore re-

maintained in Adharbāidjān till 1914 when the world war broke out.

At the beginning of December, the Kurdish irregulars commanded by Ottoman officers began a movement from Sawdī-bulāk towards Marāgha and Tabriz. At the same time Enver Pasha's raid on Sarī-kamīsh (south of Kārī) threatened the whole Russian army in the Caucasus. Orders were given to evacuate Adharbāidjān. Between December 17, 1914 and January 6, 1915, the Russian troops and following them the bulk of the local Christian population had left Tabriz. On January 8 Ahmad Mukhtār Bey Shamkhāl at a head of a body of Kurds entered the town. The situation changed suddenly and on January 31 the Russians returning in force re-occupied Tabriz (cf. the details in the book by the former German consul in Tabriz: W. Litten, *Persische Flitterwochen*, Berlin 1925, p. 8—127).

Since 1906 a paved road connecting Tabriz with the Russian frontier (Djulfā, terminus of the Russian railway) had been constructed by the Russian government company which had obtained the concession from the Persian government. The work of changing this road into a railway was now actively hurried on and it was opened to traffic at the beginning of May 1916. The railway (80 miles long, with a branch line from Sofīyan to Lake Urmīya 25 miles long) was the first to be built on Persian territory.

The Russian army on the Persian frontier had become disorganised on the outbreak of the revolution of 1917. Adharbāidjān was evacuated at the beginning of 1918. The representatives of the Persian central government and even the Crown Prince had remained all this time at their places but when the last Russian detachment left Tabriz on February 28, 1918, the actual power passed into the hands of the local committee of the democratic party and its head Ismā'īl Nawbarī.

Meanwhile the Turks emerging from their inactivity quickly occupied the frontiers abandoned by the Russians. On June 18, 1918, the Ottoman advance guard entered Tabriz. On July 8 General 'Alī Ihsān Pāshā arrived and on August 25 Kāgīm Kura-bekir Pāshā who commanded the army corps. The Ottoman authorities banished Nawbarī and supported the appointment of Majd al-Sultāna as governor of Adharbāidjān. This troubled situation lasted for a year and only with the arrival in Tabriz of the new governor-general Sipah-sālār (June 1919) did affairs begin to resume their normal course. Complete order was only established under Rūfā Khān, who became first of all minister of war and later ruler of Persia.

By the treaty of February 26, 1921, the Soviet government renounced all the old concessions in Persia and the railway from Tabriz to Djulfā built at the expense of the Russian government thus became the property of the Persian state.

Antiquities. The oldest monuments in Tabriz date from the Mongol epoch (beginning of the sixth century) but no systematic study has yet been made of this field. The earthquakes and the indifference of the Shī'as to the buildings of their Sunni predecessors or rivals are the two main causes of the disappearance of the monuments, interesting traces of which however still remain.

The magnificent buildings of Gharān Khān in the village of Shāh-Shām (now the suburb of Kāra-malik) have completely disappeared. As early

as 1611 we find Shāh 'Abbās using the material of the ruins of Shām-Gharān to build a fortress. The earthquake of Feb. 5, 1641 caused further destruction (Arakel of Tabriz, p. 496). Ewliyā Çelebi (ii. 265) still found the ruins of the sepulchral tower standing which reminded him of the tower of Galatz (the same remark is made in the *Dihkō-namā*). Mme. Dieulafoy and Sarre also visited the mound which is all that remains of Shām-Gharān and talences were still found there.

A detailed description of this marvellous building is given in the *Isht al-Dīnān* of Badr al-Dīn al-'Alāī (d. 835 = 1431) who made use of the account of the embassy from the Mamlūk Sulhān al-Nāsir in the time of the Ilkhān Abū Sa'īd (the text was translated by Baron Tiesenhausen, *Zap.*, i. 1886, p. 114—118). The mosque was said to rival the vault of the palace of Choaroes at Ctesiphon. According to Hamdullāh (1340) the mosque was built too rapidly, which caused it to collapse (*farūd amad*). The Venetian merchant (in 1514) speaks with enthusiasm of its ruins but Chardin (ii. 325) only found the lower part (restored) and the "tower". The name Tak-i 'Alī Shāh ("vault of 'A.") is at the present day given to the enormous dilapidated brick building which stands in the centre of the town at the entrance to the old Mihād-Mihm quarter (volgo: Miyar-miyar; cf. Beresin). It is probable that there is some confusion between the old mosque which has now disappeared and the neighbouring citadel which in no way agrees with the description which we have of the mosque. Nothing is definitely known of the date of the ark. It may be the vast *dawlat-khāna* ("Tolbatgana") of which Clavijs speaks and which is mentioned in the *Alam-ārā* (cf. above). The ark was turned into an arsenal by 'Abbās Mirzā and is still the most imposing building in Tabriz.

The beautiful mosque of Djahān Shāh (the Blue Mosque) described by Tavernier and Chardin has been exhaustively studied by Tesler, Mme. Dieulafoy and Prof. Sarre. It is in a state of collapse. It is possible that its abandonment was the result of the heretical views of which its builder was accused by the Ak-Koyunlu. Ewliyā Çelebi is enthusiastic about "the mosque of Sulhān Hasan" adorned with stones from Najaf and inscriptions traced by the hand of the calligrapher Yāqūt-i Mustā'zim. On either side of the *mihrāb* were two pillars of a rare stone, like amber. This mosque known as Ustād-Shāgird ("master apprentice") was the work of Hasan Kūzik Cobani (d. 741 = 1340) (*Zinat al-Madīnat*, in the *Mis'at al-Buldān*, p. 341, Chardin). According to S. Wilson, the new mosque of this name (built on the site of the old one) is situated near the wool-market. This mosque seems to be different from the mosque of Uzun Hasan, of which very little is known.

Ewliyā says that the mosque of Shāh 'Abbās was opposite the Ustād-Shāgird. To the Safawī period also belongs the "allée" (*Kāhizān*) of Shāh Saif (cf. Ewliyā). To the Qājār period belong the residence of the governor-general Ala-Kapl ("the red gate"), the beautiful gardens of Bāgh-i Shīmāl ("north garden's") which lie however on the south of the town, the pavilion of Shāh-goli ("the Lake of the Shāh"), 5 miles S. of the town (Beresin, p. 80) etc.

A detailed list of the monuments of Tabriz will be found in the *Travels* of Ewliyā Çelebi. The view of Tabriz by Chardin (*Atlas*, Pl. XI) which

View of Talata from the West.

Tabara. The ark.

shows the public buildings is valuable for the study of the topography. The *Mir'at al-Buldān*, i. 346—348 and the book by the American missionary Wilson also contain useful details. A plan of the town prepared in 1880 by the students of the military school of Tabriz on a scale of 1:8,820 was published in 1894; cf. Houtum-Schindler, *Geogr. Journ.*, 1895, p. 104. Berzin, p. 52 gives a sketch of the quarters of the town. There is a little Persian plan reproduced in Browne, *The Pers. Revolution*, p. 284. A very detailed plan of Tabriz was also published in Tiflis in 1912.

TABUK, a town on the pilgrim road and on the railway from Damascus to Medina (according to Yāqūt four days' journey from al-Hijr and 12 from Medina). It lies on a slight undulation of the sandy plain and has a very good well, probably the one mentioned in Arab legend.

The most important building is the pilgrim's fort built according to the inscription in 1064 (1654), the oldest parts of which can easily be distinguished from the later restorations. Beside it is a modern mosque built of beautifully hewn stones. Eating found the place empty except for a garrison of five men. Jausen and Savignac speak of about 40 houses with walls of sundried bricks and roofs of branches covered with rubble. The fruit-trees were in a very neglected condition.

In the time of the Prophet, Tabuk was on the northern frontier of Arabia beyond which Byzantine territory began. The place became historic when Muhammad's great campaign against the north began in the year 9. The population, Greeks, 'Amila, Lahm and Djedham, fled on his approach. He had however to abandon his objective which was evidently the lands farther north inhabited by Arabs, as the great heat caused his followers to become dispirited. He therefore only stayed ten days before beginning his retreat but made use of this time for negotiations with the people of Aila, Adhrah and Maḡna, which led to their submission.

TABULA SMARAGDINA, the revelation of secret alchemistic teaching ascribed to Hermes Trismegistos. Known in a later version in the west since the middle of the 15th century, the origin of the text was until recently an unsolved problem in the history of chemistry. Since R. Steele in his edition of Bacon (1920) showed that the text of the *Tabula* existed in Arabic and Latin in the *Sirr al-Aḡrār* of Pseudo-Aristotle, and E. J. Holmyard in 1923 discovered a more primitive form of the text in the *Kitāb al-Uḡḡḡ al-ḡḡḡ* of Djabir b. Haiyān, J. Ruska has been able to show that the original source of the still in many passages puzzling document is to be found at the end of the *Sirr al-ḡḡḡḡ*, composed by Hermes, said to have been found by Bahiās (Apollonius of Tyana) in the tomb of Hermes and to throw light on many points of the history of the *Tabula* from the time of Hugo Santelliensis to the present day. He was finally able to show that Djabir b. Haiyān already was acquainted with the book of Apollonius, so that it is fairly certain that the work originated in gnostic circles.

TADALLIS, TADULLIS (Dellys), a town on the Algerian coast, 70 miles east of Algiers and 4 miles E. of the mouth of the Seban, the principal river of Kabylia, from which it is separated by the mountainous mass which ends in Cape Bengut. — It lies in 55° 20' N. Lat. and 3° 55' E. Long (Greenwich). — The town consists of two distinct quarters: the native quarter with its narrow streets and the European quarter regularly built on a plateau about 175 feet above sea-level. Below, the harbour, sheltered against the winds from the west and northwest, offers a fairly secure anchorage but is frequented only by a few small trading vessels. The country round is covered with tall trees and well-tilled gardens and offers a pleasing picture. The total population is 3,884 of whom 2,508 are natives. The latter are of Kabyl origin but like the majority of the tribes of the district speak only Arabic.

The site of Dellys was occupied in the Roman period by the town of Rauscurru a few traces of which have been discovered (remains of walls, cisterns, etc.). This town must have been destroyed at the Arab conquest and for long the site remained uninhabited. Al-Bakri (*Description de l'Afrique*, transl. de Slane, p. 135) does mention a port situated to the east of Merna 'l-Hadjadj which he calls the town of the Beni Djennad but this place seems to correspond to Cape Djinet rather than to Dellys.

The name itself under the form Thadellast, Thadellasth ("the cottages") does not appear till the period when the Hammādid sovereigns (cf. HAMMĀDIDS) established their capital in Bougie. Owing to its position which enabled relations to be easily established with the people of the valley of the Seban, this little town acquired a certain commercial and military importance; it even had a Hammādid governor. (In 496 [1102—3] the Sulṭān al-Maḡḡūr gave this office to a prince of Almería who had taken refuge in Africa). Idriṣī (p. 104) describes Tada'llis as a town on an eminence and surrounded by a strong wall. He mentions the fertility of the country round, the low cost of living, and the abundance of cattle which were exported to the adjacent regions. After the fall of the Hammādid kingdom, Dellys passed under the rule of the Almohads, was taken by Yahyā b. ḡḡaniya (622=1226—1227), then its possession was disputed among the Almohads, Zayyanids, Hafsids and the Marinids who took it in 1394. In the 14th century according to Leo Africanus (Bk. IV., transl. Schefer III., 69), Dellys shared the fate of Algiers. Like all the towns on the coast, it received a number of refugees from Spain who must have contributed to the economic and intellectual life of the town. Leo (*loc. cit.*) says that the inhabitants engaged in dyeing, traded successfully and were noted for their skill in playing the lute. As to their fashion of dress, he says it is like that of the people of Djanṭir. When the Algerians had submitted to Spain (1570), the people of Dellys followed their example but in 1517 it was retaken by Arād [q. v.]. The Turks

put a garrison there and made the town a base of operations against the tribes of the valley of Sebau. Although the inhabitants kept up a constant intercourse by sea with Algiers, Dellys only vegetated under Turkish rule. It was a wretched village when the French occupied it on May 7, 1844. A European quarter was established there two years later. The conquest of Kabylia, which was followed by the transfer of the military establishment to Teisi Uzon and Fort National, arrested its development. In the course of the insurrection of 1871, Dellys was blockaded on the land side by the Kabyls (April-May) but maintained its own communication by sea so that it could not be taken by the rebels. Since then its peace has not been disturbed but owing to its outlying position and the difficulties of its communications the town has remained stationary and colonization by Europeans has not developed around it.

Bibliography: S. A. Boulifa, *Le Djurjura à travers l'histoire*, Algiers 1925; Robin, *Notes sur l'organisation militaire des Turcs dans la Grande Kabylie* (R. Afr., 1873). Cf. also the Bibliography to the articles ALGERIA, KABYLIA. (G. YVER)

TADBIR (A.), *Maḍḍar* of the second stem of the root *d-b-r*.

1. With the meaning of 'direction, administration'. The Arabic lexicographers explain *dabbara* as a verb from the noun *ḍabur* 'the hindmost, the end' (opposite: *ḥubūd*); thus we read in the *Lisān*, v. 358: *an tanqura ilā mā ta'ūla ilaihi 'aḥkātāhū*, 'to heed what one attains at the end of a matter', or *yanturu fī 'awāḥibihī*, 'to heed the end of a matter'. This verb has now a double application: a. in the sense of government, administration (e.g. in the title of a work by Ibn Abi 'l-Rabi', *Sulūḥ al-Mulūk fī Tadbir 'l-Mamālīk* [cf. XIV.5A]) and b. which concerns us here, in the sense of guidance, management of a household, *tadbir al-manzil* = *oikonomia*. Thus for example, Ibn Khaldūn says in his *Muḥaddima* (ed. Quatremère in *N. E.*, xvi. 62; transl. de Slane in *N. E.*, xix. 78): *al-siyāsāt al-madaniyya hiya tadbir al-manzil aw al-madīna*... 'The *Siyāsāt al-madaniyya* is the management of a household or of a state in keeping with the demands of ethics (*al-ḥikm*) and wisdom, so that the whole may be led on a path on which regularity (*nawā*) is maintained'.

The *Tadbir al-Manzil* is one of the three subdivisions of practical philosophy, which was taken over by the Muslims from Hellenism with these divisions; the latter are ethics (*ilm al-akhlāq*), economics (*ilm tadbir al-manzil*) and politics with *ilm al-siyāsa* (cf. e.g. Ibn Sinā, *Aḥkām al-'Ulūm al-akhlāq*, in *Madjma' al-Rai' al-'Aḥkām*, Cairo 1328, p. 229 sq.; al-Kāṣi, *Ta'riḥ al-Hukamā'*, ed. Lippert, p. 52 and many others). As Ritter was the first to show, the whole economic literature of Islām can be traced to the *Economics* (of which the Greek original is now lost) of the Neopythagorean Bryson, which survives in an Arabic translation Bryson, (ed. Cheikh in *Mashriq*, xix. [1921], 161—181; mentioned as early as *Fihrist*, p. 315), from which again came a Hebrew (Munich, Cod. Hebr. 263, Ritter in *Jel.*, vii. [1917], 12 sq.) and a Latin (Dresden MS. of Galen to which Plessner has called attention) translation. The latter has edited and studied all the material. According to his results the main lines of development of economics in Islām are as

follows: apart from copyists and imitators (al-Dimaḡhī, *Iḥḍāra ilā Maḥāsin al-Tijāra*, ed. by Ritter in *Jel.*, vii. 1 sq.; Ibn Abi 'l-Rabi', *Sulūḥ al-Mulūk*; the *Encyclopaedia* of Fakhr al-Dīn al-Rāzī; Ibn al-Fanārī) the *Economics* of Bryson was independently edited by Nāṣir al-Dīn in his *Aḥkām* and extended by the incorporation of Muslim and Persian ideas. Tūṣī's *Economics* was regarded for all time in Islām as the final model. On it were based the *Aḥkām al-Djāli* and for the most part the later authors also who deal with economics, like al-Ghazālī, al-Shahrastānī, al-ʿAmulī (inserts a chapter on attitude to relations) and al-Idjī.

The contents of these economic writings deal with the following subjects: acquisition, preservation and utilisation of property (*mal*), attitude to slaves, women and children; everything is regarded from the point of view of acquiring and retaining the greatest possible good fortune.

The *Fihrist*, p. 263, further mentions a second work on Economics apparently dating from the Hellenistic period and translated into Arabic: The *Kitāb Rūfūs fī Tadbir al-Manzil* (LWSWS (for 'one should probably read *gh*, *f* or *ḥ*): 'The book of Rūfūs on the Economics of...')'. The name of this ancient author cannot be ascertained with certainty, especially as the names of very few ancient economists have come down to us. One might imagine it to be some name like Philodemus.

There is also an Arabic translation (or synopsis) of the first book of the *Economics* wrongly attributed to Aristotle (now usually attributed to Theophrastus) in a manuscript of varied contents in the Escorial (Casiri, No. 883) entitled *Kitāb Ariṣṭū fī Tadbir al-Manzil* (cf. Ma'rif in *Mach.*, xix. [1921], p. 257—262). These two manuscripts have however not yet been closely studied. In the *Fihrist*, in Abi 'Uṣāibī's and al-Kāṣi's this *Economics* is not mentioned (cf. thereon Baumstark, *Syrisch-arabische Biographien des Aristoteles*, Leipzig 1900, p. 53 sq.), while Abu 'l-Kāsim Ṣāḍ b. Aḥmad al-Andalusī (d. 462 = 1069—1070), *Tabaḥāt al-Umam*, Cairo, n. d., p. 39 or his authority seems to have been acquainted with an *Economics* (*Siyāsāt al-Manzil*) of Aristotle. The way in which this translation has been handed down in MS. seems to indicate that it originated in Christian Arab circles: Ma'rif suggests without any authority that the translator was Abu 'l-Faraj 'Abd Allāh b. al-Taiyib (d. 435 = 1043—1044). The writer is preparing an edition and study of this book on Economics.

Bibliography: Djirdit Zaidān, *Ta'riḥ Adab al-Lughāt al-'Arabiyya*, Cairo 1912, ii. 232 sq.; Ritter, *Ein arab. Handbuch der Handelswissenschaft*, in *Jel.*, vii. (1917), 4—14; Plessner, *Der Einfluß des Neupythagoräers Bryson und sein Einfluss auf die islamische Wissenschaft*, Breslau, phil. Diss. 1925 (synopsis only; the complete work will appear shortly).

2. With the meaning 'Manumission of a slave, which however only becomes operative after the death of the master'. *Dabbara* is in this case a verb formed from the noun *ḍabur*, '(life's) end', i. e. death. Cf. *Lisān*, v. 358; Muṭarriz, *Muḥḍib*, s. v. For particulars cf. the article 'Avd'. The fullest treatment of the subject in Santillana, *Istituzioni di diritto musulmano malichita*, Rome 1926, I. 122. (HEFFERNING)

TADHKIRA (A.), memorial, memorandum, from *dhakara* "to record". The word appears in the titles of many famous works: the *Memorandum of Astronomy* of Naṣr al-Dīn Ṭūsī, the *Tadhkirat al-Awliyā*, "Memorial of the Saints" of Farīd al-Dīn 'Aṭṭār, the *Tadhkirat al-Shu'arā*, "Memorial of the poets", a biography of the poets, popular in Persia.

In administrative language it means: ticket, memorandum, permit. It is the name given to travellers' passports, *ṣul tadhkirati*, to the custom house office's *ṣul tadhkirati*. It is also more especially applied to the diplomas of investiture given to *ḥādis* on taking up their office, the general name for these diplomas for ministers of religion being *ḥawāṣ*. Under the old Turkish government system there were two *tadhkirat*, a major and a minor, entrusted with the delivery of *tadhkira*'s; they were important officials directly under the orders of the *ḥādis-sāker* [q. v.] and admitted to the table of the grand vizier.

(B. CARRA DE VAUX)

TĀDJ (A.), Crown. A Persian loanword in Arabic going back to the Old Persian **tag*; cf. Armenian *tag*, Aramaic *taga*. From it are formed in Arabic the broken plural *tājūn* and the corresponding verb *t-aw-dj* II "to crown", V "to be crowned", and *tādjī*, "crowned" (Horn, *Grundriss der neupersischen Etymologie*, Strassburg 1893, p. 81; Siddiqi, *Studien über die persischen Fremdwörter im klassischen Arabisch*, Göttingen 1919, p. 74, 84; Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, Leyden 1886, p. 62). Like the name, the thing itself comes from old Persia. The form of the crowns of the old Persian kings, which we know best from their coins, was not unknown in Arabic literature. Mas'ūdī, for example, tells us he had seen an old book with coloured pictures of Persian kings wearing their crowns, which was translated into Arabic for the Omayyad Ḥishām b. 'Abd al-Malik b. Marwān (*B.G.A.*, viii., p. 106). A whole series of books now lost with titles like *Kitāb Siyar al-Mulūk*, *Kitāb al-Tādj* seem to have been of similar content. On the latter, cf. Zeki Paṣṣa in the introduction to his edition of *Kitāb al-Tādj* of Ljshīr (Cairo 1332 [1914]). It is presumably on such sources that are based the statements on the Persian crown in Hamra Jafūhānī, *Kitāb Ta'riḥ al-Salt Mulk al-Arṣ wa 'l-Andalus* (Berlin, Kavian Press, p. 17, 24 sq., 32, 35 sq.), and the Persian *Mudmil al-Tawāriḥ* which utilises him and the statements in Ṭabari's also (on the relation of their sources cf. Nöldeke, *Geschichte der Perser und Araber*, Leyden 1879, introduction; on the crown among the Persians cf. especially p. 95, 221, 304, 385, 453; A. Christensen, *L'Empire des Sasanides*, Copenhagen 1907, p. 14, 89 sq., 106; do., *Le Règne du Roi Kawād II et le Communisme mazdakite*, Copenhagen 1925, p. 22 sq.). In the Arabic *Awā'il* literature we are told that the first to wear a crown was Dāhūk (see Kalkashandī, *Ṣubḥ al-A'ṣḥā*, Cairo 1331 [1913], i. 415).

On Muhammadan miniatures which depict the old Persian kings, the latter wear regular crowns but their form is of course in no way authentic. On the miniatures, crowns are also worn by the angels, and notably by the Prophet Muhammad and Burūk in the *Al-Firdaws* (see the miniature in

the edition of the Uigur *Mīrādī-nāme*, ed. by Pavet de Courteille, Paris 1882).

The Arabs made their first acquaintance with crowns before Islam, for the Persian kings occasionally gave their Arab vassal kings crowns as a token of their rank, e.g. to the Lakhmid Imra' al-Kais (d. 328 A. D.; cf. Clermont-Ganneau, *Revue d'Archéol. Or.*, vi. 307; *Le roi de tout les Arabes* and vii. 176 sq.; *Le Tādj des Imra' al-Kais et la royauté générale des Arabes*; Lidzbarski, *Epigraphie*, ii. 35, 375; also on the difference between *ikhlīl* and *tādj*; the latter seems to mean a simple chaplet only), and to the Lakhmid Nu'mān III (a. Rothstein, *Die Dynastie der Lakhmiden in al-Hira*, Berlin 1899, p. 128) and to the *Qaṣṣ* Tādj Hawdhā b. 'Alī, the Christian ruler of the Yemāma in the time of Muhammad, to whom the Prophet is said also to have sent a demand to become converted to Islam (Ibn Hishām, ed. Wüstenfeld, p. 971; Kalkashandī, vi. 379; Fraenkel, p. 62; Ṭabari, i. 985; Nöldeke, *Gesch. d. Perser u. Araber*, p. 258). Crowns and bearers of crowns were often celebrated by the poets (see Siddiqi, p. 84; Mubarrad, *Kāmil*, p. 289 sq., where the crown is said to be a peculiarity of the Yemen, possibly a reminiscence of the old relations between Yemen and the Abyssinians; on the crown of the latter cf. Nöldeke, *Geschichte*, p. 225 and 233).

The celebrated crown of Khusrāw II was among the booty which the Arabs took at Ctesiphon (Christensen, *L'Empire*, p. 106). But the crown continued to be something foreign and rare among the Arabs. There is a ḥadīth which says *al-amā'im tājūn al-Arab*, "the turban is the crown of the Arabs", i. e. according to the usual explanation in the *Liḥān al-Arab* and elsewhere: turbans are as rare amongst them as crowns, for most Beduins do not wear turbans but only *ḥalāzīn* (caps; cf. the article *ḤALANSUWA*) or no headdress at all.

Islam knows no regular royal crown or coronation in our sense as a symbol of regal power. When we find mention of crowns, the reference is to foreign rulers like those of the old Persian Great Kings, of Christian rulers etc. The *tādj al-Bakā* is the tiara of the Pope, *tādj al-ashuf* the mitre of a bishop. Only in the case of the so-called *tādj al-ḥanīf* do we seem at first sight to have a Muslim ruler's crown. This crown of the caliph, which is included among the insignia (*āṣāt al-mulūkīya*) of sovereignty, is not found till the 'Abbasid period and it has been suggested that this dynasty imitated the Persian tradition in deliberate contrast to the early caliphs and Omayyads (Nöldeke, *Geschichte*, p. 453). The Caliph wore this *tādj* on ceremonial occasions (*ma'ādhib*) on the great feast-days. Kalkashandī (iii. 472 and 484 = Wüstenfeld, *Caucaschandi*, p. 172 and 182) describes the *tādj* of the Fātimid Caliph of Egypt. It is evident from him that it was not a proper crown but a turban richly studded with gems, including a particularly large one called *al-yatima*, weighing seven dirhams, of the colour of the Fātimids, namely white, for the elaborate winding of which (*ḥadd al-tādj al-ḥanīf*) a special official (the *ḥadd*, later called *ḥafḍ*) was appointed (cf. Inostrancev, *The ceremonial procession of the Fātimid Caliphs*, in Russian, St. Petersburg 1905, p. 64; Ibn al-Sairatī, *Ḥawāṣ al-Diwan al-Rasūlī*, ed. Bahgat, p. 271). — The Hafṣid Sulṭān too wore a *tādj* on his *ma'ādhib* (cf. Ibn Faḍl Allāh, *Mawāliḥ al-Adīb*, extract: *Waṣf Ifrīḥya wa 'l-Andalus*, ed. Hasan

Hasani 'Abd. al-Wahhāb, Tunis [ca. 1922], p. 23, No. 2).

Among the robes of honour which the Caliph or the Sultān used to send to governors, ambassadors etc. there was usually a *tadj*, as is often expressly mentioned. Thus according to Kalkashandī, viii. 375 *sq.* on his accession the Caliph presents a gilt crown (*tadj murraqq*); cf. also Wüstenfeld, *Statthalter*, iii. 38. A similar *tadj* seems also to appear as an emblem on the arms of emirs of the Mamlūk period.

The name *tadj* was also given to the headdress of the Ottoman sultāns. Even 'Othmān I is said to have worn a *tadj-i Khurāsānī* (d'Ohsen, ii. 135). We know exactly the kind of headdress worn by the conqueror of Constantinople from the pictures by Bellini. He wears a large turban, and the *tadj*; the inner cap of this turban is in the shape of a truncated cone, is usually red and rippled (? stitched). Round this is wound the turban proper (*parīš*) of thin cloth. The form of the turban of the Fatih found on his pictures is also shown on the medals. When we find on the reverse of a medal three regular crowns, which are believed to represent the three kingdoms of Asia, Greece and Trebizond united under Ottoman rule, the explanation probably is simply that the medal was designed and executed by a European artist (cf. G. F. Hill, in *Namismatic Chronicle*, 1926, p. 287—298 and Pl. xiv.). Karabacek has dealt fully with the *tadj* of the Ottoman Sultāns. According to him the Perso-Turkish *tadj* corresponds to the *farfur* of Arabic-speaking lands, a rather high cap which is found represented as early as a papyrus of the viii century A.D. and assumed many varying forms in the course of time. In remarkable agreement with these forms are the headdresses (*hen[n]in*) of the xvth—xvth centuries of ladies in France and Spain, which according to Karabacek came direct from the east (the name: Arabic *hanīn* as well as the thing itself). Particular forms of this headdress have survived on women to the present day e.g. among the Druses of the Lebanon and in Algeria and Tunis. In modern Egypt there has developed from this the *hurs* as a woman's headdress. This is a plate-like ornament of gold and gems, which is sewn on the crown of a rather high cap and is sometimes of considerable weight. This *hurs* is put on the top (*shāhid*) of the hier of dead women, as is done with the turban in the case of men (cf. Lane, *Manners and Customs of the Modern Egyptians*, Appendix A; Lane, *Arabian Society in the Middle Ages*, p. 218, 234). The use of a special crown for brides, which is found all over the world, is also sometimes found in the Muslim world (Lane, *The Thousand and One Nights*, i. 424; Lagarde, *Arabi mirat*, *Nachrichten* Göttingen, 1891, p. 160 *sq.* and the title of the well-known *Tadj al-'Arūs*; cf. for Eastern Turkestan: Brockelmann, in *Asia Major*, ii. 122).

The *tadj* has been given a special religious significance as a headdress among the dervishes. The assumption of the *tadj* is an essential part of the *shād* [q. v.]. The different dervish orders have each their *tadj* of distinct form and colour, frequently with 12 seams (*terk*) from the number of the Imāms, or with 9, 7 etc., and there are numerous names and symbolical interpretations associated with them (see Ahmad Rif'at, *Mir'at al-*

Maḥḥid, Stambul 1293, p. 212—215; Brown, *The Dervishes*, p. 148 *sq.*; pictures in d'Ohsen, ii. 292; there is also a large coloured table of the 14 most important dervish orders with pictures of their *tadj* and accounts of the *shād* of their founders, printed in the Stambul press of Mahmūd Bey, publ. by the *Sana'i-i nefis Resid-Khān* of Ziya Bey, dated 15th Shabān 1314. In Persia under Shaikh Haidar (q. v.); whence *Tadj-i Haidari*) and Shāh Ismā'il [q. v.] we find the Sult *tadj* as a kind of official headdress for the king, the court, the army and the officials, granted with a special ceremonial, but it probably existed before them (see Karabacek, *op. cit.*, p. 87; Babinger, *Islam*, xi. 84, on the *Kilidhah*).

We find *tadj* used in many ways with a metaphorical application. Names of honour (*alḥād*) combined with *tadj* are very common in later times and were probably most popular in the Mamlūk period. At first they were content with simple epithets like *Tadj al-Dīn* for soldiers (Kalkashandī, v. 488) or *Tadj al-Dawla* for Christian secretaries (Kalkashandī, v. 487); then we get double epithets like *'Aḥd al-Dawla wa Tadj al-Milla* (v. 492), *Tadj al-'Ulamā' wa 'l-Hukkam* for *ḥāfīs* (vi. 41 *sq.*) and many others. For infidel kings forms of address like *Bakīyat Abnā al-Tuḥḥāt wa 'l-Tajjān* (vi. 85), *Mukhawwil al-Tuḥḥāt wa 'l-Tajjān* (vi. 175), *Wārith al-'Asīra wa 'l-Tajjān* (vi. 177) were used. Perhaps the custom of which there are countless examples of giving books titles in the form of *Tadj* with a genitive is connected with this.

In astronomy *Tadj-i Sa'dān* = Saturn; *Tadj al-Djāhār* a star near Orion. *Tadj 'Amūd* is the capital of a column (see Sarre-Hersfeld, *Archaeol. Reise*, ii. 185); *tadj* is also the name given to the comb of a cock and similar birds. *Tadj* is also the Arabic name of the Tagus. — A famous palace of the Caliph was called *Kaḥr al-Tadj*. It was built under the caliphs Mu'tadid and Muktafi out of the ruins of a palace in Madā'in, one of the seven wonders of the world, burned down in 549 after being struck by lightning, rebuilt but not finished, and completely destroyed in 574 (Yāqūt, i. 806—809, transl. Z. D. M. G., xviii. 403—406; Sacy, *Chrestomathie*, i. 74; v. Kremer, *Kulturgeschichte*, ii. 54; Sarre-Hersfeld, i. 92; ii. 63, 148). Among the pleasure houses (*Manāzīr*) of the caliphs in Cairo there was one called *Manḥarat al-Tadj*, built by Badr al-Djāmālī (q. v.), which was in ruins by the time of Makrīzī (Makrīzī, i. 481; ii. 129; Yāqūt, suppl. v. 15; Sacy, *Chrestomathie*, i. 224 and 228).

Jahrhundert*, i. *Italienische Künstler am Hofe Muhammeds II. des Eroberers 1451—1481*, *Dankschreiben d. k. Akad. d. Wiss.* Wien, lxii, vol. i, 1918. (W. BJÖRKMAN)

TADJ MAHALL, the beautiful mausoleum erected at Āgra by the emperor Shāh Djāhān [q. v.] for his dearly loved wife, Adjumand Bānū Begum, of whose title, Mumtāz Mahall, the name is a corruption. She was the daughter of Āṣaf Khān, brother of the famous Nūr Djāhān [q. v.], and was married to Shāh Djāhān on May 10, 1612, at the age of nineteen. She bore him

fourteen children, and died in June, 1631, at Burhānpūr, after giving birth to a daughter. She was buried temporarily at Zalmābād, a suburb of Burhānpūr, but her husband, who mourned her deeply, resolved to commemorate their love by a tomb worthy of it, and her body was removed to Agra, and again temporarily buried on a site which he acquired from Rājā Dajai Singh, and on which the Tadj was erected. The structure, with its subsidiary buildings was not completed for twenty-two years, during which period 20,000 workmen were continuously employed on it. A council of the best architects in the empire was held, and designs were submitted, that finally chosen being the work of Ustād Tāi, a native either of Turkey or of Shirāz. The tradition that the architect was the Venetian, Gerontino Veroneo, based on a statement made by the Italian Augustinian Friar, Father Manrique, finds no corroboration either in native annals or in the writings of the travellers Tavernier, Bernier, and Thévenot, who regarded the building as a purely Oriental work. It is, moreover, improbable. The tomb, of white marble from Djodhpūr, stands on a raised plinth, also faced with white marble, 18 feet high and 343 feet square. At each corner of this stands a beautifully proportioned minaret, 133 feet high, girt with three galleries and finished with an open, domed *latri*. In the centre of this platform stands the mausoleum, "a square of 186 feet with the corners cut off to the extent of 33 feet 9 inches, the façade rising 92 feet 3 inches from the platform. The centre of this is occupied by the principal dome, 58 feet in diameter, and rising 74 feet above the roof, or 191 from the platform". In each face of the building is a high arched porch, and in each a small domical apartment of two stories in height. Each is surmounted by a domed *latri*, and each has, in its three outer faces, six arched recesses, arranged in two stories and admitting light to latticed windows. These recesses, and the great porches, are vaulted. Beneath the dome, in the centre, is the cenotaph of Mumtāz Mahāl, and beside it that of her husband, both adorned with inscriptions. Immediately beneath these, in the crypt, which is on the ground level, are the true tombs, less ornamented than the cenotaphs. The cenotaphs are enclosed by a screen of trellis-work of white marble, "a chef d'oeuvre of elegance in Indian art". The porches are framed in ornamental inscriptions in the Arabic character, and the beauty of the whole is enhanced by copious and graceful ornamentation in *pietra dura*, all the spandrels, angles, and important architectural details, being inlaid with precious stones, agates, jaspers, bloodstones, cornelians, and the like, combined in wreaths, scrolls, and frets, as exquisite in design as beautiful in colour. Light is admitted only "through double screens of white marble trellis work of the most exquisite design, one on the outer, and the other on the inner face of the walls". Beyond the mausoleum and its platform are the two wings, one of which is a beautiful mosque. "This group of buildings forms one side of a garden court, 880 feet square; and beyond this again is an outer court, of the same width, but only half the depth". Pedants in art have endeavoured to judge the Tadj by the canons of Greek and Gothic architecture, but such comparisons are merely impertinent. As Fergusson truly says "the combination of so many beauties, and the perfect manner in which each is subor-

dated to the other make up a whole which the world cannot match".

TADJ AL-DAWLA [See TUTUH.]

TADJ AL-DIN [See AL-SUBRI.]

TADJ AL-MULUK [See BUKI.]

TADJIK, older form **TARİK** or **TARİK** (in Mahmūd Kāshghari, i, 324: **TELIK**), the name of a people originally used with the meaning "Arab" (later this meaning became confined to the form **Tāzi**), afterwards "Iranian" in contrast to "Turk". The word is derived from the Arab tribal name of **Tāyi**. The nearest Arab tribe to the Iranians was the **Tāyi**, hence the name of this tribe came to be applied to the whole Arab people. The **Tāyi** are "mentioned as early as the beginning of the third century by an Edessene along with the Saracens as representatives of all the Beduins" (Caretton, *Spicil. Syr.*, p. 16 ult. in Noldeke, *Z. D. M. G.*, lxx., 713). The corresponding word with the meaning "Arab" is in Pahlavi **Tālik**, in Armenian **Tālik** (cf. *Grundr. d. iran. Phil.* i, 2, 187), in Chinese **Tashi**. The Muslim conquerors seem to have been known by the same name to the Iranian population of Central Asia; as, in the view then prevailing, an Iranian convert to Islām became an Arab (cf. Tabari ii., 1508, 15), the word reached the Turks with the meaning "Muhammadan, a man from the land of Islām"; as the majority of the Muslims known to the Turks were Iranians, the word "Tadjik" came to mean Iranian in Turki. Mahmūd Kāshghari (op. cit.) explains the word "Tazik" as "Persian" (*al-Fārisi*); in the contemporary *Kutadghu Bilik* (esp. 8, 1) the "Tadjik" are distinguished from the Arabs as Persians (cf. Radloff, *Vorw. eines Wörterbuchs der Türk-Dialecte*, iii., 1096). The Iranians themselves even at this date already called themselves "Tārik" in contrast to their Turkish rulers; cf. e.g. Balhakt, ed. Morley, p. 746 at the top. The difference between Turk and Tadjik is frequently emphasised; it was asserted that relations between a Turk and a Tadjik always ended badly and that a Tadjik could never rely on a Turk (Zahir al-Din Mar'ashi, ed. Dorn, p. 248 and 253 199). On the relation of the word Tadjik to the word "Sart" cf. the article **SART**. In the use of the two words the importance of the Iranians as a race of traders is apparent. The word "Sart" is first found in Turki as a noun meaning "merchant" and later became the ethnic of the Iranians who were principally regarded as a race of traders; *vice versa*, the name Tadjik (**TELIK**) later, at least among the Tatars on the Volga, came to be used as a word meaning "merchant". According to one of the original sources for the conquest of Kazan by the Russians in 1552 (Prince Kurbskiy's account) the citadel of Kazan was surrounded by the "ditch of the **TELIK**" ("tezikiy" or "tezhickiy" *rev*) and the word **TELIK** is explained as "merchant" (cf. Karamzin, *Ist. gos. Rossi.*, VIII, 110; P. Zarinskiy, *Otkr. drevnyy Kazani*, 1877, p. 8).

At the present day the name Tadjik is sometimes

given to the Eastern Iranians in contrast to the Persians proper; the strip between Astarabad [q.v.] and Yazd is said to be the western limit of the dwellings of the Tadjik. In Turkestan the Tadjik, especially under Özbek rule have been gradually driven from the plains into the mountains. The Russians include under the name "Tadjik" all the Iranian peoples in Turkestan, both the Tadjik proper, i.e. the people who speak "Tadjiki" and the highlanders on the Pandj (cf. AMU-DARYA) and the upper Zarafshan, who occupy a special linguistic position. In keeping with the use of the name, the autonomous republic of Tadzhikistan was founded in 1924 with its capital Dushanbe (on the upper Kafir-Nihan). According to a census of the same year, the number of Tadjik was 571,532. The people themselves use Tadjik in different ways. The inhabitants of several mountainous districts like Shughnān and Roshan call themselves Tadjik while they describe their Tadjik-speaking neighbours in Darwāz as "Persian-speaking" (*fārsi gūy*); in contrast to this, the people of the upper Zarafshan, who speak a Persian dialect, apply the name Tadjik to themselves and call the people on the river Yaghnob, who speak a peculiar dialect "Galtā"; the latter people seem also to distinguish their "Yaghnobi" from the language of the Tadjik.

The old derivation (still given in *Grundr.* ii, 403) of the ethnic Tadjik from the head-dress *tādī* may be absolutely rejected on both linguistic and historical grounds.

Bibliography: N. de Khanikof, *Mémoire sur l'éthnographie de la Perse*, Paris 1866 (*Recueil de voyages et de mémoires*, viii); A. Shishov, *Tadjiki. Etnograficheskoye i antropologicheskoye izsledovaniye*, Tashkent 1911 (*Srednyaya Asiya*, God II.); W. Barthold, *Tadjiki. Literaturny Oчерk* (Tadjikistan, Tashkent 1925, p. 93—112); M. Andreyev, *По этнографическим материалам из Средней Азии* (ibid., p. 151—78). (W. BARTHOLD)

TADJIKI, the language of the Tadjik [q.v.]. As a literary language Tadjiki seems to be "more or less remote from modern Persian according to the degree of education of the person writing or speaking it". In this sense (aiming at the elegance of the "Persian literary" but without "denying a dialectal colouring"), the Tadjiki was the official and business language under the rule of the Özbeks of Bukhārā [q.v.] and remained so after the revolution of 1920; since 1924 however Tadjiki has been limited to the area of the new autonomous republic of Tadzhikistan founded in that year. As a spoken language Tadjiki has lost a portion of its area to Turkish in the last few centuries; on the other hand in the mountains it has extended its territory at the expense of other dialects (like the Yaghnobi). On the linguistic position and peculiarities of Tadjiki cf. *Grundr.* d. ir. Phil., i/ii, 407 sq., and the observations thereon by A. Freiman on M. Andreyev in *Tadjikistan*, Tashkent 1925, p. 162. (W. BARTHOLD)

TADJIKS or **DJIKS** (A.), paronomasia, play upon words, is a figure of rhetoric (*śloka*) which consists in using in the same phrase two words of a similar or almost similar sound but of different meanings, e.g. *amantes sunt amantes*.

I. 1. The Tadjiks is complete (*tamm*) when the two words resemble one another in kind, number, vocalisation (or form) and in the order of the consonants.

a. If the two words are of the same kind (e.g. two substantives, two verbs or two particles), it is called identical (*munāṣṭih*), e.g. "The day and the hour (*al-sā'a*) will dawn, the guilty will swear that they have only been an hour (*sā'a*) in their graves" (*Sūra* xxx. 54, 55).

b. If the two words are of different kinds (e.g. a noun and a verb, a noun and a particle, a verb and a particle), it is called "sufficient" or "imperfect" (*mustawfi*), e.g. *man wāta min ḥadāthi 'Isamūni fa-innahu — yaḥyā lādā Yaḥyā b. 'Abdallāh*, "he who dies of the sudden changes of fate, lives (*yaḥyā*) with Yaḥyā b. 'Abdallāh, for he is generous and will revive the name of generosity" (*Abū Tammām, Diwān*, Bahrūt 1905, p. 341).

2. If one of the two words is a compound and the other simple, it is called a compound paronomasia (*ḡinās al-tarkīb*):

a. If the two words, the simple and the compound, are similar in writing, it is called "resembling" (*mutashābih*) on account of the resemblance or conformity of the two words in writing: e.g. *idhā malikun lam yakhun dhā hida — fa-idhā fa-dawlatuhu dhā hida*, "when a king is not generous (*dhā hida*), leave him, for his kingdom — power — will not be long in disappearing" (*dhā hida*) (*Abū l-Faṭḥ al-Bustī*).

b. If there is no conformity in writing between the two words, it is called separated, divided, cut (*mafrūḡ*), e.g. *kullukum ḥad akḥadha't ḡāma wa-lā ḡāma lahu — ma'lladhi farra mudir al-ḡāmi law ḡāmalanā*: "You have all taken the cap and we have no cap (*wa-lā ḡāma lahu*): what would have harmed him who made the cap circulate if he had been kind to us" (*law ḡāmalanā*) (*Abū l-Faṭḥ al-Bustī*).

II. 1. If the two words are not similar in form or even vocalisation, it is called "transposed" (*muḥarraf*) on account of the transposition found in one compared with the other (*inḡirāf*); e.g. *ḥard* and *ḥard*, in *ḡubbat al-ḥard*, *ḡunnat al-ḥard*, "a cloak of striped material (*ḥard*) is a cuirass against cold" (*ḥard*); *mufrīt* and *muḥarraf* in *al-ḡāhil innā mufrīt aw muḥarraf*, "the ignorant man either goes beyond the limits (*mufrīt*) or remains far below them" (*muḥarraf*) (one may note that in this example no notice is taken of the *taḡhād*); *al-bid'a ḡharak al-ḡirak*, "innovation is the lace (*ḡharak*) of polytheism" (*ḡirak*).

2. If the two words do not agree in the number of consonants so that one has one or more consonants more than the other, it is called "imperfect" (*naḡḡi*):

a. Either the extra consonant is at the beginning of the word: e.g. *wa l-taḡḡat l-sūba bi l-sūfi ilā rabbika yamwā'idhā l-mawāḡ*, "when one leg (*al-sūfi*) shall be twisted over the other (*bi l-sūfi*)" (on account of the terror which will seize man on the approach of the last judgment), it is to thy Lord that the driving (*al-mawāḡ*) of men shall take place on that day" (*Sūra* lxxv. 29); or it may be

b. in the centre as in *ḡaddi ḡahdī*, "my fortune (*ḡaddi*) depends on my efforts" (*ḡahdī*);

c. or it may be at the end as in the verse of *Abū Tammām (Diwān, p. 42)*: *yamuddūna min aidin 'awāḡin 'awāḡimin, taḡḡū bi-ayyāḡin ḡawāḡin ḡawāḡidin* "they stretch out their hands, strong as rods (*'awāḡin*) and protecting (*'awāḡimin*); they attack with their swords which deal death (*ḡawāḡin*) and which are cutting (*ḡawāḡidin*) (they stretch out

hands which strike their enemies, defend their followers, attack their adversaries with swords which deal death and which cut". Sometimes this last variety is called *mujarraf*, "rhymed".

d. or the addition is more than one consonant as in this verse of al-Khansā' (*Dirwān*, ed. Beyrouth, 1896, p. 25): *inna 'l-bukū'a kuma 'l-ḥifā'a min al-ḥawā' bainas 'l-ḥawā'niḥ*, "tears are the cure of the fire (al-ḥawā') which is in my loins" (al-ḥawā'niḥ). This variety is sometimes called *mudḥaiyal* (prolonged).

3. If the two words do not agree in the nature of the consonants, it is necessary that they do not differ in more than one consonant:

A. If the two different consonants are of pronunciations adjacent to one another, the *djins* is called *mufārī'* (similar) and comprises three varieties:

a. The different consonant is at the beginning of the words: e.g. *baini wa-baini kinni laḥm dūmīn wa-fariḥu fāmīn*, "between the place where I am and my dwelling there is a dark night (dūmīn) and an obliterated path (fāmīn)" (Hartiri, ed. de Sacy, *Science*, xvi., p. 185).

b. It is in the middle: e.g. *wa-kum yaahawna 'anhu wa-yaahawna 'anhu*, "they forbid it to them and (themselves) avoid it" (Sūra vi. 26).

c. It is at the end; e.g. *al-ḥailu ma'ḥūdu fi nawāḥiḥa 'l-ḥairu*, "good fortune (al-ḥair) is associated with the forelocks of horses (al-ḥail)" (a ḥadīth quoted by Bukhārī, Muslim, Tirmidhī, Nasā'i, Ibn Maḥja).

B. If the two consonants have no analogy in pronunciation, it is called *ṭāḥiḥ* (approximate) and is of three kinds:

a. The different consonant is at the beginning e.g. *waḥḥu li-kullī ḥumazātū lumaḥātū*, "curses on each detractor and defamer" (Sūra civ. 1).

b. It is in the middle: e.g. *lattu 'an tharwatī balaghū madāḥ — ḥairu annī 'mra' wa-ḥafāni ḥafāfi*, "it is not by good fortune that I have attained my end, but that I am a man: what is sufficient for me to live (ḥafāfi) is sufficient for me (ḥafāni)" (Buhārī, *Dirwān*, Cairo 1320 [1911], ii. 108).

c. It is at the end: e.g. *wa-ighā ḍi'ahum amru min al-amni awi 'l-ḥawā'*, "when news (amr) inspiring confidence (amni) or fear arrives for them" (Sūra iv. 85).

4. If the two words do not agree in the order of the consonants, it is called *taḍjīn al-ḥalā* ("palindrome" or "inversion"); e.g. *ḥusūnuhu faḥḥu li-awliyā'ihī ḥafḥu li-a'dū'ihī*, "his sword is victory (faḥḥ) for his friends and death (ḥafḥ) to his enemies".

a. It is called "complete inversion" (*ḥalā kull*) when the order of all the consonants is inverted: e.g. *allāḥumma 'ṣur 'awratinā wa-āmin ra'atīnā*, "O God, conceal our faults ('awratīnā) and assuage our fears (ra'atīnā)".

b. It is called "partial inversion" (*ḥalā ba'ḍ*) when inversion only takes place with respect to some of the consonants. And in this case, if one of the two words in this variety is at the beginning of a line and the second at the end of a line, it is called "winged inversion" (*maḥḥūḥ mudḥannāḥ*): e.g. *ṣāḥa awāḥu 'l-ḥudā min — ḥaffīḥi fi kullī ḥālī*, "the lights of the good path shone (ḥaffīḥ) from his hand in every circumstance (ḥālī)".

III. When one of the two similar words follows the other, it is called, *musdawwiḍ*, *muraddad*,

muharrar (joined, repeated); e.g. *ḍi'ṭuḥa min Saḥa' li-maḥa*, "I have brought news (maḥa) from Saḥa'" (Sūra xxvii. 22).

IV. *Djins* is conditional on two things:

1. The two words must be derived from the same root; e.g. *fa-ḥḥu waḥḥa li-l-dīni 'l-ḥayyīni*, "raise thy face towards the immutable religion" (Sūra xxx. 42), in which the words *ḥḥu* and *ḥayyīni* are derived from *ḥḥu*, *yaḥḥu*.

2. There is an "appearance of derivation" (*ṭāḥiḥ* (ṭāḥiḥ)) between the two words, i.e. the two words which resemble one another, belong to different roots: e.g. *Ḥāḥa inni li-'amalikhū min al-ḥāḥa*, "he says: I am for your action among the reprovers" (Sūra xxvi. 168) where *ḥāḥa* and *ḥāḥa* do not belong to the same root.

Abu 'l-Faḥḥ al-Buḥārī composed *al-Taḍjīn al-anis al-badī' al-ṭāḥiḥ*, which is a collection of maxims or sentences containing words similar or almost similar but having a different meaning; extracts from it are given in *Tashkīr al-Mifḥāḥ al-Sa'ād*, ii. 229.

(MOH. BEN CHENEB)

TADJWID (أ) is the art of reciting the Qur'ān, giving each consonant its full value, as much as it requires to be well pronounced without difficulty or exaggeration: strength, weakness, tonality, softness, emphasis, simplicity (*tarfih*). There are three kinds of *tadjwid*: 1. *tarfih*, slow recitation; 2. *hadr*, rapid recitation; 3. *hadwir*, medium recitation. — *Tadjwid*, "the adornment of recitation", has for its object to prevent the tongue making any mistake in the recitation of the divine words. Besides the study of the articulation of consonants it deals with the knowledge of the laws which regulate the pause, the *imāla* or inclination of the vowel *ā* to the sound *i* and contraction. The consonants fall into two groups:

1. *Mustafīḥa* "elevated" so called because in pronouncing them, the tongue is raised to the palate. These are ط, ظ, ص, ض, and غ. They are all emphatic and ص, ض, more so than the others.

2. *mustafliḥa* "depressed", so called because the tongue is below the palate when they are pronounced. They are called simple; i.e. they are not emphatic, except *rā'* and *lām* in the following cases: *rā'* is emphatic when it is vocalised with a *damma* or a *fatha*. The *rā'* is not emphasised if it is vocalised with an original or accidental *keṣra*, if it is quiescent and preceded by an original *keṣra*, and lastly if the *rā'* and the *keṣra* belong to the same word, provided the *rā'* is not followed by an elevated consonant. *Lām* is only emphatic

in اللّيم and اللّيم when they are only preceded by a consonant modified by a *fatha* or a *damma*: *ḥāla* 'ilāh, *ḥāla* 'ilāhumma, *yaḥūlu* 'ilāh, *yaḥūlu* 'ilāhumma. At the end of a word the *nūn* and *tanwīn* retain their natural pronunciation when they are followed by one of the six guttural letters ط, ظ, ص, ض, غ, ح. The quiescent *nūn* and *tanwīn* are assimilated to the letter which follows them if the latter is ن, م, ر, ي. The assimilation takes place with nasalisation except for the ر.

When the word that they affect ends in another consonant the *nūn* and *tanwīn* have not their natural pronunciation; they are assimilated but not completely. It is the same with the quiescent *mīm* which is contracted with the *mīm* which follows it. It is modified when it is followed by a vocalised *ḥā'*. In other cases it retains its ordinary pronunciation.

There are two kinds of contractions:

1. Great, when the consonants are both vocalised like ما سلّم (Sūra lxxiv. 43) to be pronounced ما سلّم.

2. Little, when the first of the consonants is quiescent and the second vocalised.

It should also not be forgotten that the *lām* of the article is only assimilated if the consonant following is solar; the sound should be prolonged when the word contains an *alif*, a *wāw* or a *yā'* preceded by a vowel of the same nature. If the *wāw* or *yā'* are preceded by a *fatha* they become softening letters. The *hamza* may be retained or suppressed; in the latter case, its vowel is carried back to the preceding quiescent consonant. If the *hamza* is quiescent, not by apocope, it may be changed into a letter of prolongation of the same nature

as its support. The pronunciation of *hamza* is incompletely softened when it is not preceded by a vocalised and non-quiescent *hamza*; the vowel of the second *hamza* then resembles a *subhā*, a *wāw* when the *hamza* is preceded by a *damma* أوتبتكم, a *yā'* when it is preceded by a *keṣra* أئدا, an *alif* when it is preceded by a *fatha* أالت. The second *hamza* "falls" when the two *hamzas* are affected by the same vowel and belong to two words أَجَلَكُم which follow them.

The verses of the Qur'ān, although separated by a sign, are not to be recited with a stop at the end of each of them. The pause is only to be made if the cease of the verse or verses is complete and forms a homogeneous whole. As a rule in good copies of the Qur'ān, the places where the pause is not allowed are indicated by an لا (= no pause). If a pause is made after words like مِمَّ، مِمَّ، مِمَّ، a quiescent *mīm* should be added (called silent *mīm*). Some readers restore the suppressed final *ī* in the middle of the discourse like وَاقٍ عَادٍ etc.; other drop the *subhā* and its vowel and say وَاقٍ عَادٍ etc.. When a word ends in a *hamza* preceded by a *yā'* or a *wāw*, the *hamza* is assimilated to the letter which precedes and one says يَرَى for يَرَى, especially

after *hamza*. The *lām* of the accusative is changed to *alif*. The final *ī* of feminine singular nouns is changed to quiescent *ī*. A vocalised final consonant loses its vowel; this vowel is sometimes only weakened (by *rawm*) or rather it is pronounced like a final French *e* (*iḥmām*). However this last method of pronunciation is not allowed in words ending in *keṣra*; some even say that *rawm* and *iḥmām* only affect *damma*.

(MOH. BEN CHENEB)

TADLĀ (or TADILĀ), the *Telle* of Leo Africanus, a district of Morocco comprising the plateaus which stretch to the west of the high valley of

the Wādī Umm al-Rabī', as well as the western slopes of the Central Atlas, from Wādī 'l-'Aīd to the sources of the Molaya. The classical ethnic Tādīt is no longer used except for the *Sharfa* of the district; the popular ethnic is Tādīawī.

The region of the plateaus is occupied by six semi-nomad tribes of Arab origin: Urdigha, Bni Khirān, Bni Zemmūr, Smā'ia, Bni 'Amer, Bni Mūsā, whose centres are Wād Zem, Bajad (= Bejdja'd for the classical Abu 'l-Djā'd) and Dār Uld Ziddū.

In the central region of the high valley of the Umm al-Rabī' (the old Wādī Wansafan) is settled the group known as Āit Rbō', made up of tribes almost entirely sedentary and of mixed Arab and Berber origin. These are the Gīāya, the Semget, the Bni Ma'dān and Bni Mellāl. The two principal centres are Kaṣba Tādīā and the *ḥaṣba* of the Bni Mellāl.

On the western slopes of the Central Atlas we have from north to south the following Berber tribes: Āit Sī, Āit 'Aṭṭā, Āit Bū-rid, Āit 'Aiyā and Āit 'Atīāh.

The Berber peoples of the mountains belong to the Zanāga group (= Ṣanhādja). In the plains there were at first Zanāta, Berbers who led a nomadic life between Meknās and the Umm al-Rabī' and the Lawāta (Zanāra). The earliest Arab tribes here were the Djuṣham (B. Djabir, Zīrāra) then the Khulj; it was the Sa'dians who introduced tribes of the Ma'kil group.

At a remote period, Tādīā seems to have been inhabited by people more or less professing Christianity or Judaism. When Idrīs II conquered it in 172 (789), he found — according to the author of the *Rawḍat al-Kirfāz* — very few Muslims, but many Christians and Jews. Leo Africanus who was in Tādīā at the beginning of the xvth century mentions the large Jewish colonies there; at Tāfīa, the capital of the country in his time, there were about 200 houses of Jews, all merchants and rich artisans. At the present day there are still many Jews at Bajad and in the *ḥaṣba* of the Bni Mellāl. This last place corresponds to old Madīnat Udsī, an Arabic-Berber name which seems to mean 'town of the Jews'. Tādīā was one of the provinces which the sons of Idrīs II divided among themselves. According to the author of the *Rawḍat al-Kirfāz*, it went to Aḥmad, but al-Bakrī says that Dāi, the capital of the region, belonged to Yahyā.

In time Tādīā became incorporated in the empire of the Banū Yafran of Shālla [q.v.] (xth—xith centuries). In 449 (1057—1058) the Almoravids having taken Aghmāt, the Maghrāwīd Lagḡāy b. Yūsuf, who reigned there, managed to escape and took refuge with the Banū Yafran of Tādīā; 'Abd Allāh b. Yūsuf, leader of the Almoravids, followed him there and conquered the province. A local legend says that the town of Dāi was destroyed by the Almoravid Sulṭān Yūsuf b. Tāshfin, who built Tāgrāret to replace it, the ruins of which may still be seen in the immediate vicinity. This incident, which does not seem to be recorded in history, may perhaps be located in the period of Yūsuf b. Tāshfin's war on the fortresses of Fasās, a region adjoining Tādīā on the north.

In 526 (1131—1132) the Almohad Sulṭān 'Abd al-Mu'min seized Tādīā and henceforth the province lying halfway between Fās and Marrākeṣh on the

direct road between them, became the battleground of the rival dynasties. Its history is that of these struggles and of the constant risings of the Arab or Berber tribes who live in it.

In 660 (1261—1262), the Marinid chief Ya'qub b. 'Abd al-Hakk having come to attack Marrākeṣh, the Almohad Sulṭān al-Murtadā sent his cousin Abū Dabbās against him. The Marinid troops drawn up on the Umm al-Rabī' were defeated at the place called Umm al-Rajilāin, which perhaps corresponds to the ford now called Umm al-Rajilā.

In 666 (1267—1268), the Marinid Sulṭān Ya'qub invaded and laid waste Tādīā; having raided the Khulj, an Arab tribe of Djuṣham stock, allies of the Almohads, the latter came to their assistance but were defeated as they were deserted in the course of the battle by their Arab allies, the Banū Djabir. In 761 (1359—1360), the *Wazīr* al-Ḥasan b. 'Umar, governor of Marrākeṣh for the Marinid Sulṭān Sālim Ibrāhīm, rebelled against his master and sought refuge in Tādīā, where he was welcomed by the Banū Djabir; but, when hard pressed by the Marinid troops, he had to flee to the Zanāga of the mountains who finally handed him over to his pursuers.

On the coming of the Sa'dians, it was once more in Tādīā at the ford of Abū 'Akaba on the Wādī 'l-'Aīd, that was fought the decisive battle in which the Marinids were routed in Ṣafar 943 (July 1536). In the reign of al-Manṣūr, in the xvth century, Tādīā was governed by Zaidān, son of this Sulṭān. In the middle of the same century, Tādīā threw off the authority of the Sa'dians and became part of the principality of Zanāga Berbers of the *zāwiya* of Dīlā', and one of them, Muḥammad b. al-Ḥādjdī, defeated the Sa'dian Sulṭān Muḥammad al-Shaikh at the ford of Abū 'Akaba in 1050 (1640—1641). The sovereignty of the Dīlā' was exercised over this region until the 'Alawī Sulṭān al-Raṣhīd destroyed their *zāwiya* in 1079 (1668—1669). In 1084 (1673—1674), the 'Alawī Sulṭān Imāmīl defeated at Abū 'Akaba his nephew Aḥmad b. Muḥriz, who had rebelled against him.

In 1088 (1677—1678), Mawlay Ismā'il had to put down a serious rising of the Zanāga of Tādīā, who had rebelled at the instigation of a Dīlā', Aḥmad b. 'Abd Allāh. In 1099 (1687—1688), he had to make another expedition, which resulted in the building of *ḥaṣba*'s at Adakhān (near Khnifra), Tādīā and Dīlā'. At the division of the provinces of Morocco in 1111 (1699—1700), Tādīā fell to the son of Mawlay Ismā'il, Mawlay Aḥmad, who lived in the *ḥaṣba* built by his father and called Kaṣba Tādīā on the Umm al-Rabī'.

In 1142 (1729—1730), Sulṭān Mawlay 'Abd Allāh had to take the field once again in the Tādīā against the Āit Yemmūr who were routed. In 1179 (1765—1766), Sulṭān S. Muḥammad b. 'Abd Allāh was forced to deport them for a time to the Djebel Selfāṭ near Fās. They were replaced provisionally by the Gīāya, Semget and Mejjāt, who were later sent back to the Gharb. In 1199 (1784—1785), the same ruler had to destroy the *Zāwiya* of Bajad and imprisoned its head, Muḥammad al-'Arabi al-Sharḳāwī. In 1222 (1807—1808), Sulṭān Mawlay Sulaimān sent a punitive expedition against the Bni Mūsā, the Āit 'Atīāh, the Rfāla and the Bni 'Aiyā. In 1224 (1809—1810), there was a

new expedition against the Berbers of Tādla (Āit Sū) and one against the Urdigha Arabs. It was Mawlay Salāmūn who built the mosque of Bujaḍ and the bridge over the Umm al-Rabi'.

In 1269 (1852—1853), Sulṭān 'Abd al-Rahmān b. Hishām punished the Bni Mūsā who had slain their governor Ahmad b. Zidh. In 1289 (1872—1873), Sulṭān S. Muḥammad b. 'Abd al-Rahmān sent an expedition against the Arab tribes of Tādla and Bni Mūsā, who had rebelled against their governor (Sūfī'a, Bni Zemmūr, Bni 'Umair).

In 1295 (1878—1879), Sulṭān Mawlay al-Ḥasan to pacify the region had to raid the Bni 'Umair and Bni Mūsā. Next year he returned to punish the Āit 'Atiāb. It was at Tādla, on the Umm al-Rabi' that he died in 1311 (June 1894).

The great religious centre of the district is the *zawiya* of Bujaḍ founded in the xvth century among the Bni Zemmūr by Muḥammad al-Sharḥī. His descendants form the important Marabout group of the Sharḥāwa [q. v.].

TADMUR [See PALMYRA.]

TAFDIL is the *nomen actionis* of the second formation of *faḍala*, it "exceeded", or "was", or "became redundant", or "superfluous". In grammar it is applied to the comparison of adjectives. *Ism al-tafdil*, "the noun of the attribution of excess, or excellence", is the noun adjective in the comparative and superlative, or, as it is now usually called, the elative degree. This is also called *af'al al-tafdil* because it is regularly of the measure *af'al*.

Bibliography: The standard Arabic lexica; Wright-deGoeje, *A Grammar of the Arabic Language*, Cambridge 1896—1898, i. 140—141; de Sacy, *Grammaire arabe*, Paris 1831. (T. W. HAIG)

AL-TAFF, the desert region that lies west of Kūfa along the alluvial plain of the Euphrates. It is higher than the low-lying ground by the river and forms the transition to the central Arabian plateau. According to the authorities quoted by Yāqūt (iii. 359), *al-taff* means an area raised above the surrounding country; the name is not found after the xiiith century. The district contains a number of springs, the waters of which run southwest (cf. Ibn al-Fakih, p. 187). The best known of these wells was al-Udhair. From its geographical position al-Taff was the scene of the first encounter between the Arabs and Persians (Tabari i. 2210, 2247; Ibn al-Athir, iii. 345, 351). The Sāsānian kings had stationed there feudal guardians of the frontier which was defended by forts (*maṣāḥib*) and a great ditch (*khandaq*) which began at Hit (Ibn Rosta, p. 107). On al-Taff lay al-Qādisiyya [q. v.] and also Karbala' famous as the scene of the death of al-Ḥusain (Yāqūt, *loc. cit.* and Bakrī, *Ma'ājam*, ii. 456). The latter is also referred to as *al-Maḥṣūl* *al-Taff* (cf. al-Mukhtār, Ibn al-Athir iv. 140; cf. also the poem quoted by Yāqūt, *loc. cit.* and Ibn al-Athir, iv. 267). In later centuries al-Taff is rarely mentioned (e.g. Ibn al-Athir, vii. 379 in connection with the Ḳarmanian troubles); and the majority of the Arab geographers make no mention of it. (J. H. KRAMERS)

TAFILALT, ethnic FILĀṬ, the name of a district in S.E. Morocco, formed by the broadening of the valley of the Wādī Ziz. It consists of an alluvial plain 12 miles long and 10 broad, over which are scattered 200 *ḥiṣār* (or fortified dwellings of clay) surrounded by gardens and cultivated fields. Where irrigation from wells is possible, the soil is wonderfully fertile. The chief product of Tafilalt is the palm-tree and the most developed industry is the preparation of goat-skins by the use of the bark of the mimosa which yields a tanning gall. Filali leather is famous and sought after throughout all north Africa. The population is dense, in the *ḥiṣār* of Tafilalt it was estimated in 1920 at 150—200,000. The historical capital of Tafilalt was Sidjilmāsa (q. v. for the political history of Tafilalt). Here we may simply state that the district was the cradle of the dynasty of the 'Alid Sharifs of Morocco, also called Filali Sharifs and still the ruling family. Many of these Sharifs after the accession of their family to the throne remained in or returned to settle in Tafilalt where they may be counted by thousands. A *ḥiṣār* of the Moroccan Sulṭān represents the authority of the *maḥṣūn* among them and in the valley of the Ziz. In addition to Sidjilmāsa of which only the ruins remain we may mention as small towns in Tafilalt the *ḥiṣār* of Bū'ām, the business centre of the district, and that of Tighmāst with defences built at the end of the xixth century by order of Sulṭān Mawlay al-Ḥasan.

Bibliography: cf. the article *SIDJILMĀSA*. A general description with a map will be found in P. Ricard, *Les Guides Bleus: Maroc*, Paris 1919, p. 285—288. (E. LÉVI-PROVENÇAL)

TAFSIR (أ.), pl. *tafsīr*, explanation, commentary, verbal form: *faṣara* to explain. The name is applied to commentaries on scientific and philosophical works and is an alternative to *sharḥ*; it is regularly applied to the Greek and Arabic commentaries on Aristotle: the following are examples taken from Ibn al-Kifī's *History of Scholars*: Banas al-Rūmī wrote a *Tafsīr* on the *Almagest* and another on the tenth book of Euclid; Abu 'l-Wafā' al-Būrdjānī, the famous astronomer, wrote a *tafsīr* on the works of Diophantes and of al-Khwārizmī on Algebra; Muḥammad b. Zakariyā al-Rāzī, the famous physician, wrote a commentary on the commentary (*tafsīr al-tafsīr*) of Plutarch on the Timaeus of Plato. The Christian scholar Ḥunain b. Ishāq excelled in translations and *tafsīr*. The majority of the famous works of Greek science and some of Arab science have had commentaries made on them, translated into or written in Arabic.

In Islām the word *tafsīr* means particularly the commentaries on the *Qur'ān* and the science of interpreting the sacred book. This branch of learning entitled "Knowledge of *Qur'ān* and of the commentary" is a special and important branch of *Ḥadīth*; it is taught in the madrasas and the universities. There are in *Tafsīr* a few general works on the *Qur'ān* not written in the regular style; but the majority are continuous commentaries, in which the text of the sacred book is explained in regular order, phrase by phrase and sometimes even word by word. These commentaries are numerous: the most famous are those of Tabari, Zamakhshari and Baiḍawī.

Tabari (d. 310) is the great historian; his com-

mentary, a very extensive work, contains a large number of traditions handed down by authoritative chains of transmitters (*isnād*). Zamakhsharī (d. 538) is a very keen brain, a moralist of delicate sensibility and a philologist of consummate skill. His commentary (*al-Kaṣṣab*) is much valued and has in turn been commented upon by important theologians like Tafāzānī (d. 792) and Saiyid Sharif Dīrdjānī (d. 816). The commentary of al-Raiḍāwī (d. 685) is the most popular and is the one taught in the schools; it has fixed the beliefs of the pious Muslim as regards the interpretation of the sacred book and has been several times annotated. Among the other commentaries we may mention that of Fakhr al-Dīn al-Rāzī (d. 606) which is called the great *Tafsīr* and that of Ismā'il Hakīmī of Brusa, an author much esteemed by the Turks (d. 1127). It is worth noting that the majority of these learned men belong to the Persian region.

The science of *tafsīr* is old and seems to date from the beginnings of Islam. Ibn 'Abbās for example (d. 68 A.H.) is said to have been an authority on the subject and a *tafsīr* is attributed to him (Hamidiya Library in Stambul). Recent criticism (Goldziher, Lammens etc.) has raised the question of the real value of the traditions contained in these enormous compilations. The answer so far has not been very favourable; the majority of the traditions seem to have been invented, either to settle a point of law or with some theological object or with a simple desire to explain or even merely as an amusement. There is, these critics say, no hope of finding much exact information in these commentaries about the circumstances under which the Qur'ān was composed and made public; they are nevertheless important for the minute study of Muslim law and theology as well as for the legends and philology. In our own day a learned Egyptian Shaikh Tanjawi has sought to rejuvenate the study of *tafsīr*; he is publishing a commentary into which he introduces many ideas borrowed from philosophy and modern science (cf. also TA'WIL).

Bibliography: The Catalogues of Arabic Books and Manuscripts under *tafsīr*: Goldziher, *Mohammedanische Studien*, Halle 1890, II, 206; do., *Die Richtungen der islamischen Koran-auslegung*, Leyden 1920, index; Carra de Vaux, *Les Peintures de l'Islam*, vol. III, Paris 1923, chap. XI.

TĀFTA (p. 'twisted'), a kind of silk, taffeta. Clavijo, ambassador of Henry III of Castile, found in the markets of Tabriz, of Sulṭāniya and of Samarkand, *taftanes* woven in the country itself. This material spread more and more in the West towards the end of the Middle Ages.

AL-TAFĀZĀNĪ (SA'D AL-DĪN MAS'UD B. 'UMAR), a celebrated authority on rhetoric, logic, metaphysics, theology, law and other subjects and the author of several text-books used to this day in the *madrasas* of the East, was born in Šafar 722 (Feb.-March 1322) at Tafāzān, a large village near Naš in Khurāsān. He is said to have been a pupil of 'Aḡud al-Dīn al-Idrī (see above, II, 447 and Brockelmann, *G.A.L.*, II, 208) and of Kutb al-Dīn al-Rāzī al-Tafāzānī presumably,

see Brockelmann, II, 209]. Lists of his chief works, giving, with variations, their dates and places of composition, are extant (*Mudjal-i Faṣṣḥ* under the year 787; *Rumāt al-Djannāt*, p. 309 (considerable variations in the dates); *al-Fawā'id al-bakiya*, p. 137; Ahlwardt, Berlin Catalogue, No. 1959), and provide some information concerning his migrations. His earliest work, the *Sharḥ al-Tafsīr al-faṣṣḥ*, was written by him at the age of sixteen, it is said, in Šahān 738 (1338) at Faryūd. The *Muparrat*, the *Mukhtasar al-Ma'āni* and the *Tahṭih* were completed in 748, 756 and 758 at Harāt; Ghudjuwān and Gulistan. According to Ibn 'Arabshāh al-Tafāzānī, like Kutb al-Dīn al-Rāzī, was one of the scholars attracted to the court of the Mongols of Western Kipčak, and the *Mukhtasar al-Ma'āni*, completed at Ghudjuwān in 756, is in fact dedicated to Maḥmūd Dīlī Beg. Khwāndamīr's statement that he settled at Khwāzizm is borne out by the fact that works completed by him in 768, 770 and 778 are said to have been written there. Khwāndamīr tells us that in 779 (1377-1378) he presented al-Djurdjānī [see above, I, 1066 and Brockelmann, *G.A.L.*, II, 216] to the Muḥaffarid ruler of Fārs, Shah Shudjā'. The same author states that when Timūr invaded Khwāzizm [in 780-781 (1379) presumably] Malik Muḥammad Sarakhsī, son of Malik Mu'izz al-Dīn Husain Kurt, asked his nephew, Pir Muḥammad b. Ghiyāth al-Dīn Pir 'Alī, who was then in the suite of Timūr, to obtain Timūr's consent and send al-Tafāzānī to Sarakhs. Timūr agreed, but subsequently on learning how eminent a scholar al-Tafāzānī was, he sent to Sarakhs a request that he should come to Samarkand. Al-Tafāzānī at first declined on the plea that he was about to visit the Hūjūz, but on receiving a second summons he transferred himself to Samarkand, where Timūr treated him with great honour. The conquest of Shīrāz by Timūr in 789 (1387) was followed by the arrival in Samarkand of his old acquaintance al-Saiyid al-Sharīf al-Djurdjānī. The rivalry between them led to controversies and to an estrangement, which is reflected in the criticisms of al-Tafāzānī's views to be found in some of al-Djurdjānī's works. Al-Tafāzānī died at Samarkand in 791 (1389) (*Bughyat al-Wu'at*) or on the 22nd of al-Muḥarram 792 (Jan. 10, 1390) (*al-Fawā'id al-bakiya*, p. 135), or on the 22nd of al-Muḥarram 793 (Dec. 30, 1390) (according to a chronogram ascribed to al-Djurdjānī, see the Khedivial Library Catalogue, II, 242), or in 797 (1394-1395) (*Ḥabīb al-Siyar*). The date 787 given by Faṣṣḥ is inconsistent with the alleged dates of some of his works and with the statement that he and al-Djurdjānī forgathered after the capture of Shīrāz in 789. He was buried at Sarakhs.

Al-Tafāzānī seems to have had no pupils of great distinction. The two mentioned in the *Rumāt al-Djannāt* are Husām al-Dīn al-Ḥasan b. 'Alī al-Ahlwardī, the author of a work entitled *Rabī' al-Djinnāt fī 'l-Ma'āni wa 'l-Bayān*, and Burhān al-Dīn Haidar (see Tashkōpūzāda, *al-Shakā'ik al-Nu'māniya*, transl. Rescher, p. 33 and *Id.*, XI, 61).

Al-Tafāzānī's merits impressed Ibn Khaldūn, who came across some of his works in Egypt and mentions him in his *Muḥaddims* (transl. de Slane, III, 129). He wrote both on Shāfi'i and on Hanafī law and has been described as a Shāfi'i by some authors (e.g. al-Kaffawī and Ḥasan Čelebi)

and as a Hanafi by others (e.g. Ibn Nujaim and 'Alī b. Sulṭān Muḥammad al-Kāfirī).

Among his works are the following (the dates assigned to these works in the *Rasāʾil al-Djannāt*, which in many cases differ considerably from those given elsewhere, are not always mentioned. For fuller information concerning the manuscripts, supercommentaries etc., Brockelmann, *G. A. L.*, should be consulted):

I. Grammar

1. *Sharḥ al-Taṣrif al-ʿaṣat* (in India often called the *Saʿdiya*), a commentary on the Arabic accidence of al-Zandī (ʿIzz al-Dīn ʿAbd al-Wahhīb b. Ibrāhīm, see Brockelmann, *G. A. L.*, i, 283) completed at Fayyūm in Shaʿbān 758 (1338) when the author was sixteen years of age. MSS. at Berlin (Ahlwardt, N^o. 6617—6618), Turin (Nallino, N^o. 39) and elsewhere. Editions: Constantinople 1253, Tihān 1270, 1884 (in a *muḥimma*), Delhi 1289, 1295 (with the *Miftāḥ al-Saʿdiya* of Ahmad b. Shāh Gul), 1886 (with the *Miftāḥ al-Saʿdiya*), 1319 (with the *Miftāḥ al-Saʿdiya*), Bombay 1292, Lucknow 1306, Cairo 1307. Of the supercommentaries, in addition to the *Miftāḥ al-Saʿdiya* mentioned above, that of Dede Khālifa has been printed (Bulāq 1255).

2. *al-ʿaṣad*, or (*al-ʿiṣṣad al-kūdi*), as Ḥādījī Khālifa calls it, an Arabic syntax written for his son and completed at Khawārim in 774 or 778 or 787. A manuscript exists at Vienna (Flügel, N^o. 206). Several commentaries are mentioned by Ḥādījī Khālifa, including those of Muḥammad b. ʿAlī al-Djurdjānī (a son of al-Sayid al-Sharīf) and Shams al-Dīn Muḥammad b. Muḥammad al-Bukhārī, which are preserved at Berlin (Ahlwardt, N^o. 6754—6755) and the Escorial (Derenbourg, N^o. 181) respectively.

II. Rhetoric

Al-Taftāzānī's three works on rhetoric are all connected directly or indirectly with the classical exposition of the subject contained in the third part (*ḥisn*) of the *Miftāḥ al-ʿUlūm* of al-Sakkāki (see below under al-Sakkāki and Brockelmann, *G. A. L.*, i, 294). Two of them are interwoven commentaries on the abridgment, *Talḥīṣ al-Miftāḥ*, written by al-Kazwīnī (Muḥammad b. ʿAbd al-Rahmān called the Khayb Dimashq; see Brockelmann, ii, 22).

1. *al-Mufaṣṣal*, as it is usually called, or *al-Sharḥ al-Mufaṣṣal*, or *Sharḥ al-Talḥīṣ al-Mufaṣṣal*, completed in Safar 748 (1347) at Harāt.

Editions: Constantinople 1260, 1289 (with al-Djurdjānī's glosses), Lucknow 1265 (first part only), 1287 (first part only), 1878, 1300, 1889 (with Turbī ʿAlī's *Sūlat al-Uḍal*, a commentary on the verses quoted), Tihān [?] 1270, Delhi 1326 (with *al-Mufaṣṣal*, a commentary by Muḥammad ʿAbd al-Rahmān). A Persian edition of 1274 (with commentaries by al-Fanārī, al-Djurdjānī, al-Samarḥāndī, and Muḥammad Riḍā Galpāyagānī) is mentioned in the catalogue of the Khedivial Library, iv, 153.

The glosses of al-Djurdjānī have moreover been published at Lucknow in 1312 and those of ʿAbd al-Hakīm Siyālkūtī at Constantinople in 1266.

2. *Mukhtaṣar al-Maʿnī*, as it is now commonly called, or *Mukhtaṣar Sharḥ Talḥīṣ al-Miftāḥ*, or *Mukhtaṣar Sharḥ al-Talḥīṣ*, or *al-Sharḥ al-Mukhtaṣar*, or simply *al-Mukhtaṣar* (the author having given

it no formal title), a shorter interwoven commentary, completed in 756 (1355—1356) at Ghudjduwan and dedicated to Maḥmūd Dīnī Bāg. Like the *Mufaṣṣal* this work is still studied in Eastern madrasas. Manuscripts are common and there are several supercommentaries.

Editions: Calcutta 1813, Lucknow 1261, 1312 (with al-Banānī's supercommentary), Bulāq 1271 (with al-Dasūqī's supercommentary) [1860?], 1285 (with al-Banānī's supercommentary), Cawnpore 1285—1286 (with al-Khatāʾī's [al-Khatṭāʾī's?] supercommentary), 1296 (with the same supercommentary), Meerut 1285, Constantinople 1301, 1301 (with al-Dasūqī's supercommentary), Lahore 1306—1307, Delhi 1286, 1324.

Extracts from this work have been published by Mehren in *Die Rhetorik der Araber* (Copenhagen and Vienna 1853).

3. *Al-Taftāzānī's* third rhetorical work, *Sharḥ al-Kism al-ḥalīth min al-Miftāḥ*, is a commentary on the third part of the *Miftāḥ al-ʿUlūm* itself. It is one of his latest works, having been completed at Samarkand in Shawwāl 787 (1385) or 789 (1387), and it has not enjoyed the same popularity as the *Mukhtaṣar al-Maʿnī* and the *Mufaṣṣal*. Manuscripts are preserved at the Escorial (Derenbourg, N^o. 26), the India Office (Loth, N^o. 847—848), Leyden (de Goeje and Houtsma, N^o. 298), Trinity College, Cambridge (Palmer, N^o. 18) and elsewhere.

III. Logic

1. *Sharḥ al-Risālat al-Shamīya*, or *Sharḥ al-Shamīya* (in India this work, like the *Sharḥ al-Taṣrif al-ʿaṣat*, is often called *Saʿdiya*), a commentary on the logical manual of al-Kātibī (Nadīm al-Dīn ʿAlī b. ʿUmar al-Kazwīnī; see Brockelmann, *G. A. L.*, i, 466) completed at Dījam in Djumādā II 752 (1351) (*Muḥimma*) or 757 (1356) (*al-Fawā'id al-bahiya*) or 762 (1361) (Ahlwardt, N^o. 1959) or 772 (1370—1371) (*Rasāʾil al-Djannāt*). MSS. are preserved at Berlin (Ahlwardt, N^o. 5266—5268) and elsewhere. Editions: Lucknow 1905 (1326).

2. *Tahdhīb al-Manṭiq wa ʿl-Kalām*, as it is usually called, or *Ghāyat Tahdhīb al-Kalām fi Tahrīr al-Manṭiq wa ʿl-Kalām*, as the author calls it in his preface, a manual of logic and scholastic theology completed in Rajab 789 (1387). Whereas the second part of this work, described by Ḥādījī Khālifa as an abridgment of the *Mafāḥid*, was evidently copied but rarely (and indeed no copies seem to be definitely recorded in the existing catalogues of manuscripts) the first part, on logic, became a favourite text-book and has often been published.

Editions: Calcutta 1243 (with al-Yazdī's commentary), 1328 (with an Urdu translation), 1333 (with the same Urdu translation), [Lucknow?] 1260 (preceded by the *Taḥḥīṣ*), Lucknow 1869 (in a *Madḥma-i Manṭiq*), 1288 (the introductory portion only with the commentary of al-Dawwānī and glosses by Mir Zāhid and ʿAbd al-Hayy Lakhnawī), 1293 (with the same), 1321 (with the same), 1290 (with al-Yazdī's commentary and glosses thereon by ʿAbd al-Hayy Lakhnawī), 1292 (with the same commentary and glosses), 1311 (with the same), 1877 (with Muḥammad b. Maḥmūd al-Shahrastānī's Persian commentary), 1323 (in a *Madḥma-i ḥisn Rasāʾil-i Manṭiq*), Delhi 1264, 1276, 1283—1284, [1869], 1286 (all these Delhi editions with

al-Yasdi's commentary), Cawnpore 1278—1279 (in a *Maḡmū'a-i Manṣūf*), 1291 (with al-Yasdi's commentary and glosses entitled *Tuhfa-i Shāh Dīlānī* by Hāshī Bakhsh Faizābādī), 1296 (with the same commentary and glosses), 1881 (in a *Maḡmū'a-i Manṣūf*), 1915 (with al-Shahristānī's Persian commentary), Benares [1899] (with an Urdu translation).

IV. Metaphysics and Theology

1. *al-Muḥṣid*, a compendium of metaphysics and theology, completed with the author's own commentary at Samarqand in Dhū l-Ḳa'da 784 (1383) (in 774 according to the *Rawḍat al-Dīwān*). A Constantinople edition of 1277 is mentioned in the catalogue of the Khedivial Library (ii. 26) and there are manuscripts in the British Museum (Ellis-Edwards, p. 9), the India Office (Loth, N^o. 461—464) and elsewhere. As has been said above, the second part (*ḥim*) of the *Tahdhīb al-Manṣūf wa l-Kalām* is described by Hādījī Khalifa as an abridgment of this work.

2. *Tahdhīb al-Manṣūf wa l-Kalām*. See above under Logic.

3. *Sharḥ al-'Aḥd al-Nasafiya*, completed in Shābān 768 (1367) at Khārizm, a commentary on the extremely brief statement of Muḥammadan belief written by 'Umar b. Muḥammad al-Nasafi (d. 537—1142—1143; see Brockelmann, i. 427). This work also is a favourite text-book and several supercommentaries have been written on it.

Editions: Calcutta 1244, Delhi [1870], 1904, Lucknow 1876, [1888], 1890, [1894], Constantinople 1297 (with the supercommentaries of al-Kastālī and al-Khayālī and the glosses of Bihishti on the latter), Cairo 1297 (with al-Khayālī's supercommentary and Kara Khalīf's glosses thereon), Cawnpore 1903, 1330. Extracts are translated into French in d'Ohsson's *Tableau général de l'Empire Ottoman*, vol. i. and there is a German translation in J. T. Plant's *Birgini Riale* [sic], oder *Elementarbuch der Muhammedanischen Glaubenslehre* (Istanbul and Geneva 1790).

Of the supercommentaries that of al-Khayālī has been published at Delhi in 1870(?) and 1329 (with 'Abd al-Ḥakīm Siyālkūtī's glosses), at Lucknow in 1876, 1313 (with 'Abd al-Ḥakīm Siyālkūtī's glosses), 1326 (with the same glosses), at Constantinople in 1297 (with al-Kastālī and Bihishti) and at Cairo in 1297 (with Kara Khalīf's glosses); that of Hasan Shahīd (Abū l-Ḥasan b. al-Aḥd) at Bihār in 1328, and that of Ramaḍān Efendi at Delhi in 1327.

4. An attack on the heresies of Ibn 'Arabī's *Fuṣūṣ al-Ḥikam* preserved in a Berlin manuscript (Ahlwardt, N^o. 2891), which bears on fol. 1^b the doubtful title *Faḥṣṣat al-Mulḥidīn*.

V. Principles of Jurisprudence

1. *al-Tawḥīd ilā Kaṣṣ Ḥaḍīṣ al-Tanṣīḥ*, completed 29th Dhū l-Ḳa'da 758 (1357) at Gūlistān, a commentary on the *Tanṣīḥ al-Uṣūl* of Ṣadr al-Sharī the Younger ('Uṣaid Allāh b. Ma'sūd al-Mahbūbī, d. 747 [1346—1347]; see Brockelmann, ii. 214).

Editions have been published at Delhi in 1267 (1851) (with Ṣadr al-Sharī's own commentary *al-Tawḥīd*), at Lucknow in 1281 (1864) (with the *Tawḥīd*), 1871 (with the *Tawḥīd*) and 1292 (1876) (with the *Tawḥīd*, and supercommentaries on the *Tawḥīd* by Ḥasan Ḍelebi, Mullā Khawraw and

Zakariyā' al-Anṣārī), and at Kazan in 1301 (1884) (with the *Tawḥīd*).

2. *Sharḥ Sharḥ al-Muḥṣid* fī 'Uṣūl, or *Sharḥ al-Sharḥ*, completed in Dhū l-Ḥijja 770 (1369) at Khārizm, a supercommentary on the commentary of al-Idrī (see above) on Ibn al-Jāzīb's *Muḥṣid al-Muntalā*, an abridgment of his own *Muntalā 'l-Su'āl wa l-'Aḥwāl fī 'Uṣūl al-Uṣūl wa l-Djadal*. A Bulaḡ edition of 1316—1319 is mentioned by Moh. Ben Cheneb in the article *IMN AT-JAZIRI*. MSS. are preserved at Berlin (Ahlwardt, N^o. 4376), the India Office (Loth, N^o. 302—4) and elsewhere.

VI. Law

1. *al-Miftāḥ*, on *Shāhī Furū*. A manuscript is preserved at Berlin (Ahlwardt, N^o. 4604).

In addition to this work a collection of Hanafī *Fatāwā* is mentioned by his biographers, but no copies seem to be recorded.

2. *Tahṭīq Sharḥ Talkhīṣ al-Dīwān al-Ḥabir*, an unfinished abridgment of the commentary of Ma'sūd b. Muḥammad al-Ghaddīdī on al-Khāṣṣī's abridgment of al-Shāhī's treatise on Hanafī *Furū* entitled *al-Dīwān al-Ḥabir* (see Brockelmann, G. A. L., i. 172 and H. Kh., ii. 401). According to the *Rawḍat al-Dīwān* this work was begun at Sarakhs in 785. A manuscript is preserved in the Veñī Dīwān (N^o. 428 *ḥi*).

At Delhi in 1870(?) was published an edition of the *Muḥaddimat al-Ṣalāt* or *Khulūṭa*, a treatise on the ritual prayers ascribed by some to al-Kāḍī (see Hādījī Khalifa, vi., p. 83), with commentaries alleged to be by al-Diyūdānī and al-Tafīṣānī, but it is not certain that the *Khulūṭa* existed in al-Tafīṣānī's time.

VII. Qur'anic Exegesis

1. *Kaṣṣ al-Abrūr wa l-Uddat al-Abrūr*, a Persian commentary on the Qur'ān (cf. H. Kh. v., N^o. 10674). A manuscript appears to be preserved in the Veñī Dīwān (see the catalogue, p. 80, N^o. 43).

2. *Sharḥ* (or *Ḥaḥṣiya 'alā*) *al-Kaṣṣ al-Abrūr*, H. Kh. v., N^o. 1872, annotations on the commentary of al-Zamakhsharī (see Brockelmann, G. A. L., i. 290), said to have been begun at Samarqand in Rabi' ii, 789 and left unfinished. These annotations embrace Sūras l.—x. 58 and xxxviii.—liv. Manuscripts are preserved at Berlin (Ahlwardt, N^o. 793), the British Museum (Ellis-Edwards, p. 3), the India Office and elsewhere.

VIII. Philology

1. *al-Nḥam al-mawābiḥ fī Sharḥ al-Kilām al-mawābiḥ*, a commentary on al-Zamakhsharī's collection of *sententiae* entitled *al-Kilām al-mawābiḥ*. Selections from this commentary were published by H. A. Schultens in his *Anthologia sententiarum arabicarum* (Leyden 1772) and it was printed at Cairo in 1287.

2. A Turkish versified translation of Sa'dī's *Būstān* made in 755 (see E. J. W. Gibb, *A History of Ottoman Poetry*, i. 202).

Bibliography: Ibn 'Arabī, *Adjāib al-Maḥdūr*, ed. Golius, iii. 422; Faṣṣṣ, *Muḥṣid* (under the year 787; see E. G. Browne, in *Le Muséon*, series iii., vol. i., p. 57); al-Suyūṭī, *Buḥārāt al-Wu'at*, p. 391; Sulṭān Ḥusain b. Ma'nūr, *Maḥṣūṣ al-Uṣūl*, p. 287; al-Kafawī, *l'Am al-Aḥyār*; Khāndamir, *Ḥaṣṣ al-Siyar*, iii. 3, 87; Muḥammad Bākir Khānsārī,

Rasūl al-Djannūt, p. 309; 'Abd al-Hayy, *Lakhanawī, al-Faṣṣal al-bakiya*, p. 128—130, 134—137; Brockelmann, *G. A. L.*, ii. 215; Browne, *Lit. Hist. of Persia*, iii. 353—354; Hidayat Husain, *Catalogue of the Arabic MSS. in the Dhār Library*, p. 436—438. (C. A. STORIE)

TAGHLAK, or, more properly, **TUGHLUQ**, the correct vocalization being given by Ibn Baṭṭūṭa, is the name of a dynasty which reigned at Dihli from 1320 until 1413, and is taken from the personal name of its founder, Ghiyāth al-Dīn Tughluq, a Ḳarawniya Turk, that is to say, the offspring of a Turkish father and an Indian mother. When Muḥarak, the last of the Ḳhaljis (q.v.), was murdered by his vile favourite, Khusrāw, Tughluq, who was employed on the north-western frontier, where his numerous successes against the Mughals had earned for him the title of Ghāzi Malik, marched on Dihli, defeated and slew the usurper in the neighbourhood of the city, and on September 8, 1320, ascended the throne. Early in 1325 the aged Tughluq, returning from an expedition to Bangāl, was murdered by Muḥammad, the ablest of his sons, who had already rebelled once, in the Dakan, and now contrived that a temporary pavilion, in which he welcomed his father, should be brought down on the old man's head. Muḥammad b. Tughluq (q.v.) was one of the greatest of the Muslim monarchs of India, but was eccentric to the verge of lunacy. Having extended his sway over the whole of India, he provoked his subjects to rebellion in almost every province, and when he died in Sind, in March, 1351, while endeavouring to suppress a rebellion in that province, the Dakan, Bangāl, and Sind had severed themselves from the empire. He was succeeded by his cousin Firūz b. Rāḍiyya (q.v.) who succeeded in recovering Sind, but failed to recover Bangāl, and did not even attempt to recover the Dakan, which became an independent and powerful kingdom. Firūz grew indolent towards the end of his reign and his kingdom fell into disorder. Before his death he associated his son Muḥammad with him on the throne, but the prince abused his authority, and when Firūz died, in 1388, he was succeeded by his grandson, Tughluq II, who, in attempting to remove possible rivals, alarmed his cousin, Abū Bakr. Abū Bakr rose in rebellion, and Tughluq fled, but was captured and put to death, and early in 1389 Abū Bakr ascended the throne. His uncle Muḥammad, who had been lurking in Sirmūr since the death of Firūz, invaded the kingdom, and in August 31, 1389, entered Dihli, where he was acknowledged as king after the flight of Abū Bakr. Muḥammad died at Djalesar on January 20, 1394, and was succeeded by his son, Humāyūn Khān, who took the title of 'Alā' al-Dīn Sikandar, but died within two months of his accession. The nobles raised to the throne his brother, Maḥmūd, who was at first entirely under the influence of Malik Sarwar (q.v.), a eunuch whom he appointed to the government of Djaunpūr. Here Malik Sarwar founded the Sharḳi dynasty of kings, and Maḥmūd fell under the influence of Mallu, entitled Ikbāl Khān. A party among the nobles raised Nusrat, a cousin of Maḥmūd, to the throne, and for some time there were two puppet kings in Dihli and its neighbourhood, each supported by his own faction. This was the state of affairs when the Amir Timūr (q.v.) in-

vaded India in 1398, but before he reached Dihli Nusrat Shāh had been driven from the capital, and Maḥmūd and Mallu were left to face the conqueror. They were defeated and fled, Maḥmūd to Guḍjarāt and Mallu to Baran, but returned after Timūr's departure. Maḥmūd retained the royal title, but was for the rest of his life a state prisoner, at first in the hands of Mallu, and, after Mallu's death in 1405, in those of Dawlat Khān Lodi, who succeeded Mallu as virtual ruler of the kingdom. Maḥmūd died at Kaithal in February, 1413, and with him ended the Tughluq dynasty. Within sixteen months of his death Dawlat Khān was overthrown by Khidr Khān (q.v.) who on May 28, 1414, entered Dihli and founded the Saiyid dynasty.

TAGHLIB [See WĀIL]

TAGUS, Arabic Wādī Tāḍjoh, Latin *Tagus*, Spanish *Tajo*, Portuguese *Téjo*, the longest river in the Iberian Peninsula, rises in the Serranía de Guadalupe at about 6,000 ft. Its length to its estuary at Lisbon is 550 miles (of which 190 are in Portuguese territory). Among the numerous places on its banks one may mention going down stream: Aranjuez, Algodor, Toledo and Talavera de la Reina, in Spain; Abrantes, Santarem and Lisbon, in Portugal.

The Arab geographers describe the Tagus as an important river and mention it especially in their descriptions of Toledo and Lisbon. They also mention the famous Roman bridge built of granite in 105 A.D. by order of the Emperor Trajan on the Tagus at Alcantara, the ancient 'Kantarat al-Saif' of the Arabs. Cf. above, i., p. 251. See also the articles on LISBON and TOLEDO.

TAHADJUD (A.), infinitive V from the root *ā-ḡ-ḡ* which is one of the roots with opposed meanings (*āḡḡad*), as it signifies "sleep" and also "to be awake", "to keep a vigil", "to perform the night ṣalāt or the nightly recitation of the Ḳur'ān". The latter two meanings have become the usual ones in Islām. The word occurs only once in the Ḳur'ān, Sūra xvii. 81: "And in a part of the night, perform a ṣalāt as a voluntary effort" etc., but the thing itself is often referred to. We are told of the pious (II. 17) that they sleep little by night and pray to Allāh for forgiveness at dawn. In Sūra xxv. 65, there is a reference to those who spend the night prostrating themselves and standing before their Lord.

From the Ḳur'ān it may be deduced that the old practice in Mecca was to observe two ṣalāts, by day and one by night (Sūra, xvii. 80-82); Sūra, lxxvi. 25: "And mention the name of thy Lord in the morning and in the evening [26] and in the night prostrate thyself before Him and praise Him the livelong night"; Sūra, xi. 116: "And perform the ṣalāt at both ends of the day and in the last part of the night". Tradition is able to tell us — and there is no real reason for scepticism — that

for a shorter or longer period (mention is actually made of a "period of ten years", Tabari, *Taṣīr*, xlii. 68), vigils were so ardently observed that Muḥammad and his companions began to suffer from swollen feet. The old practice is said to be based on Sūra lxxiii. 1: "O thou enfolded one, 2. stand up during the night, except a small portion of it, 3. the half or rather less, 4. or rather more and recite the Qur'ān with accuracy"; but its origin cannot be dissociated from the example of Christian ascetics. In the end however, this form of asceticism became too much for Muḥammad's companions. The revelation of verses 20 ff. of Sūra lxxiii. brought an alleviation: "See, thy Lord knoweth that thou standest praying about two thirds, or the half or a third of the night, thou and a part of thy companions. But Allāh measureth the night and the day; he knoweth that ye are not able for this; therefore he turneth mercifully to you with permission to recite as much of the Qur'ān as is convenient for you". By the institution of the five daily ṣalāts the obligatory character of the tahadjud was then abolished (cf. Abū Dāwūd, *Taṣawwuf*, B. 17 and Baiḥaqī on Sūra, lxxiii. 20).

Nevertheless Muḥammad is said not to have abandoned the vigils (Abū Dāwūd, *Taṣawwuf*, B. 18b); in Hadīth and Fiqh this is considered blameworthy for those who were wont to perform these ṣalāts (Muslim, *Ṣayam*, trad. 185; Nasa'i, *Kiṣām al-Lail*, B. 59; Bāḥiqī, *Ḥaṣṣiya*, I. 165). The performance is in general regarded as *sunna*. David is said to have spent a third of the night in these exercises (Muslim, *Ṣayam*, trad. 189; Abū Dāwūd, *Ṣayam*, B. 67); another reason given in justification of it is that the tahadjud loosens one of the knots which Satan ties in the hair of a sleeper (Abū Dāwūd, *Taṣawwuf*, B. 18). The tahadjud is particularly meritorious in Ramaḥān and in the night before each of the two feasts (Ibn Maḥjā, *Ṣayam*, B. 68; Nasa'i, *Kiṣām al-Lail*, B. 17 where the term *ḥayā' al-lail* is used [see also TAḤWĪṬ]).

Even at the present day the *mu'adhdhin* in some lands summons to a night ṣalāt (consisting of an even number of *rak'as* and therefore called *ṣalāt*; cf. WTR) shortly after midnight by an *adhān* to which special formulae are added (Lane, *Manners and Customs*, chapter iii. "Religion and Laws"; cf. Snouck Hurgronje, *Mekka*; Juynboll, *Handleiding*, p. 74).

TAHĀRA (A.): grammatically *tahāra* is a *maṣdar* and means purity; it has also the technical sense of ceremonial, levitical purity and purification. It holds an important place in Islam,

for "purity is half the faith", a saying attributed to Muḥammad. Theologians divide defilements into material and mental; lawyers divide them into actual (*ḥaṣṣ*) and religious (*ḡibṣ*). *Fiqh* deals with bodily, material impurity only. Sexual intercourse, menstruation, and child-birth are religious impurities. Actual impurities (*maḥṣur*, q. v.) have a perceptible body. They are wine, pigs and dogs and what is begotten of them, dead bodies (except those of men, animals used for food, fish, and creatures that have no blood, i. e. insects), and certain discharges from the body. There are five things that are not unclean: any dirt left after defecation, dust or mud on the roads, the soles of shoes, the blood squashed out of a full-fed flea, and the blood or pus from a boil or pimple or from cupping. Tears, sweat, spittle and mucus are clean. The laws of purity are not meant to be burdensome. The usual means of purification is cold water but after defecation stones are also used. Water is pure if running, if from a pool above 100 sq. cubits (*dhira'*) in area, or from smaller quantities so long as the colour, taste and smell are not changed. Elaborate rules are laid down for the various cases. After micturition or defecation there is a preliminary cleansing with stones or earth (*istighmār*) and one with water (*istinja'*). On ablutions and baths, see *WUḍū'*, *GHUṢṢ*. When no water is to be had or, by reason of illness or some other cause, the use of it is feared, sand or dust may be employed [see *TAYAMMUM*]. The rules of the Shī'a differ in detail from those of the Sunnis. After helping to carry a corpse to the grave an ablution is necessary, not merely approved; and according to them a quantity of water amounting to two *ḡalla* (the meaning is uncertain, but it is generally taken to be a large jar) is clean.

Popular practices do not always agree with canonical rules; it is said that round Aden the defilement of micturition can be removed by helping to carry a bier on its way to the cemetery.

These processes must not be just mechanical; purpose (*niya*) must come first, and they must be accompanied by the thought of God and special prayers, which vary at different times and places. The theologians develop this side of the idea and say that purification consists of four stages: purification of the body from physical dirt; of the members from offences; of the heart from evil desires; of the spirit (*siir*) from all that is not God.

Tahāra has become the common name for circumcision and the ceremonies that accompany it [see *KHATN*].

TAHĀWĪ, ABU DĪ'FAR AHMAD b. MUḤAMMAD b. SALĪMA b. 'ABD AL-MALIK AL-AZDĪ AL-TAHĀWĪ AL-HADHRĪ. His *nisba* Tahāwī is derived from the name of a village in Upper Egypt named Tahā. He is considered the greatest Ḥanafī lawyer which Egypt has produced. His ancestors had settled in Upper Egypt and his grandfather Salāma when the news of the rebellion

of Ibrahim b. al-Mahdi reached Egypt threw off, with others, the allegiance to the caliph al-Ma'mun. The rebels appointed 'Abd al-'Aziz b. 'Abd al-Rahman al-Azdi in place of al-Sari b. al-Hakam, who fled at first, but finally returned and captured 'Abd al-'Aziz. Salama offered resistance in Upper Egypt, but after fighting he was captured and sent to Fustat. After being released he fled and joined al-Djarawi in Alexandria; the rebels being successful there, Salama returned to Upper Egypt, collected many troops and drove out the governors. Finally in 203 (818) an army was sent against Salama, and after fighting he and his son Ibrahim were captured, sent to Fustat and executed. From this we may conclude that Tahawi belonged to one of the leading families of Egypt. He himself was born according to his own statement in the year 239 (853/854) and received his first instruction under his maternal uncle Abi Ibrahim Isma'il al-Muzani, who was one of the most celebrated pupils of al-Shafi'i. Tahawi however did not advance in his studies to the satisfaction of his uncle, who said to him one day that he would never make a name. The nephew left his uncle and took up the study of Hanafi law under Abi Dja'far b. Abi 'Imran (Ahmad b. Musa b. 'Isa; he came to Egypt when Aliyib was made Finance Minister and stayed there). Muzani died 264 (878) and it is from him that Tahawi received the *Musnad* of al-Shafi'i, which by Brockelmann is erroneously enumerated as a *Musnad* of Tahawi. This work Tahawi heard in 252 and read to his pupils again in 317, according to the *Imad's* found in the best manuscripts. In 268 (881/882) he went to Syria and met there the Hanafi chief *Qadi* Abi Khazim 'Abd al-Hamid b. Dja'far, and others in Jerusalem, Ghazza and Askalon, but returned the following year to Egypt. He was in his early years very poor, but found a protector in Muhammad b. 'Abda, who was chief judge of Egypt from 277 to 283. The biographers record how the latter bestowed favours upon him and on one occasion caused Tahawi to receive the rewards intended for the *Qadi* and the ten witnesses in addition to the share of Tahawi himself. The latter in return, with his natural tendency for legal precision, did everything to impress upon persons coming to court the importance of the office of his master. He came into prominence when Abu 'l-Dja'ish, son of Ahmad b. Tulun, when required a document to be witnessed. All witnesses signed after the customary form: "The Amir Abu 'l-Dja'ish etc. made me witness....". When it came to Tahawi's turn he wrote: "I witness that the Amir Abu 'l-Dja'ish.... agrees to everything in this deed....". The Amir was surprised and made Tahawi a suitable present to the envy of all other witnesses. The result was that his antagonists found some cause for accusing him of mismanagement of the properties held in him of mortmain (*awqaf*) and he was sent to prison. How long he was there we are not told, but we get another glimpse from a statement of Maslama b. Kaim al-Andalusi, that a friend of his returning from Egypt to Spain in 300 A.H. told him that the people of Egypt were very excited about the legal mismanagements of Tahawi, especially in regard to a legal decision he had given concerning black slaves in favour of the Amir Abu 'l-Dja'ish. Though never gaining the office of *Qadi* he was continuously employed by the chief judges, and it

was in this capacity that he served also under Abi 'Ubad 'Abi b. Humayn b. Harib, who was chief judge from 293 to 311. He had the habit of saying to Abi 'Ubad in cases of differences, that Ibn Abi 'Imran used to say so and so. The judge finally got tired of it and said that he had known Ibn Abi 'Imran well, but sparrows become eagles in Tahawi's country. This stopped Tahawi, and made the saying proverbial. In his later years he devoted himself, besides the composition of his numerous works, to the giving of legal decisions (*fatwa*), but he had always the courtesy, if the questions were brought forward in the presence of the judge, to state that it was the opinion of the judge, unless he was given special licence by the judge to give the decision upon his own authority. He died according to the historian Ibn Yunus on the 6th of Dhu 'l-Qa'da 321 A.H. (Oct. 31, 933). Ibn Khalikan says, in the night of Thursday the 1st of the same month, and that he was buried in the Karafa cemetery. The *Fihrist* has wrongly the year 322.

Tahawi was in the first place a lawyer, and is unanimously praised for his skill in the art of drawing up valid contracts, but he also is counted among the traditionists and as such transmitted the *Musnad* of al-Shafi'i, but more than one authority states that *hadith* was really not his business. However his larger works abound in citations of traditions, but these are always cited with a legal aim in view. His works are many and several have been preserved in manuscript and printed. Those mentioned by his biographers are: 1) *Ma'ani 'l-Athar*, his first work; printed with glosses in Lucknow in a large 4^o volume; 2) *Ihtilaf al-Ulama'* (MS. at Cairo); 3) *Ahlum al-Kur'an* in 20 *kur'ans*; 4) *Mukhtasar fi 'l-Fiqh*, a work which gave the author much pleasure and has been the subject of many commentaries the earliest of which is by Ahmad b. 'Ali al-Djassas (MS. at Cairo); 5) *Sharh al-Djamil al-Saghir*; 6) *al-Shuruf al-Kabir*, which is preserved in an incomplete MS. at Cairo from which Schacht has published a portion (Heidelberg 1926); 7) *al-Shuruf al-Awsat*; 8) *al-Shuruf al-Saghir*; 9) *Mahadir, Saqillat, Waqiyat* and *Fardid*, these are perhaps several treatises as the *Waqiyat* are mentioned by some biographers separately; 10) *Sharh al-Djamil al-Kabir*; 11) *Nahd Kitab al-Mudharim* against al-Karami; 12) *al-Turikh al-Kabir*, probably a kind of biographical dictionary of lawyers; 13) *Manalik Abi Hamisa* in one volume; 14) a book on the Kur'an mentioned by the *Qadi* Iyad in his work *al-Ismal*; it contained about a thousand leaves and is perhaps identical with the *Mukhtil al-Athar*; 15) *al-Nawadir al-Fikhiya* in over 20 *kur'ans*; 16) *Hukm Arad Makha wa-Kim al-Fal wa 'l-Ghan'im*; 17) *al-Radd 'ala 'Isa b. Aban*; against the latter's book called *Khatat al-Kutub*; 18) *al-Radd 'ala Abi 'Ubad fi-ma ohlat'a fi Kitab al-Narah*; 19) *Ihtilaf al-Riwayat 'ala Madhab al-Kufayn*; 20) *Mukhtil al-Athar*, his last work; it is the final deposit of his studies and has been printed in Haidarabad in four large 4^o volumes, 1333 A.H.; this book has been abbreviated by the Maliki lawyer Ibn Rushd; 21) *Risala fi Uqul al-Din* (also called *Ahl al-Sunna wa 'l-Djama'a*) printed in Kasan 1893 and in India; it is a short pamphlet of about ten leaves, setting out the Sunni con-

session of faith in clear legal language. This little book has also found a number of commentators (cf. Brockelmann); 22) *al-Nawādir wa 'l-Iftikār* (cf. Brockelmann); 23) some biographers attribute to him two books with the title of *Muḥḥaṭṭar* distinguished as *al-Kābir* and *al-Saghir*, but it appears that it is the smaller one which is the one generally commented; 24) in the *Djauḥir al-Muḥḥaṭṭar* is mentioned also a book, the basis of which are the books on dismissal from office (*Kutub al-'Aḥḥ*), but I am not clear if I understand this correctly.

In books on Hanafī law Tahāwī is cited continually and the number of his pupils or such who came to Egypt to gain information from him is very great, and many are enumerated in the biographies, especially in the *Djauḥir* and the *Lisān al-Millān*; among them are mentioned: 'Abd al-'Azīz b. Muḥammad al-Tamīmī, who became later Kādī of Egypt and superior to Tahāwī; Maslama b. al-Kāsim al-Kurṭubī; 'Abd Allāh b. 'Alī al-Dā'ūdī, who was considered the head of the Zāhirī's in his time; the celebrated Kādī Ibn Abī l-'Awwām; Sulaimān b. Ahmad al-Ṭabarānī, the author of the *Mafjām* and many others.

A. L., i. 173; Haddādī, Khalifa, *Kaḥf al-Zunūn*, passim, cf. N^o. 4131. — He is cited in almost all books on Hanafī law. (F. KERNKOW)

TAHERT (we also have **THERT**), a mediaeval town of Algeria, on the eastern border of the present département of Oran. According to Idriṣī there used to be two large towns of this name: the one, Old Tahert, an old Roman site, perhaps the capital of a native dynasty, vassals or allies of the Byzantines (Gsell), rose from its ruins in the modern period and became the capital of Taret; the other, New Tahert, lies 6 miles w. & w. of Taret, not far from Tagdemti which was one of the strongholds of the amir 'Abd al-Kādir [q. v.]. It no longer has more than a few almost obliterated traces of its past grandeur.

New Tahert was the capital of the Abādī Imāms (or Ibādī, q. v.) of the Rustamid family for 147 years. 'Abd al-Rahmān b. Rustam fled from Kairuān after the return of the Arab armies commanded by Ibn al-Ash'ath and sought refuge in this part of the central Maghrib where the Khāridjīs were numerous. He founded Tahert in 144 (761). The site was well chosen. The climate is severe (al-Bakrī tells us stories of the cold that prevails in Tahert) but the land around could be irrigated and produced excellent fruit. Tahert owed its wealth mainly to its trade. Placed at the foot of the Djabal Gersūl, at the end of the Tell on the northern border of the steppes in touch with the country of the nomads and settled lands, it was destined to become a great market like modern

Tiaret. The nomads flocked to it; the hope of making a fortune as well as attachment to Khāridjī doctrines brought many foreigners there, especially Persians. They had fine dwellings and silk and Tahert was known as "Little Irak". We also know how intense was the religious life of this capital of a theocratic kingdom and are told of the intellectual life of the Imāms and their entourage. It is no longer possible to know what the town and its buildings looked like; probably the latter were quite simple. Al-Bakrī speaks of four of its gates and its citadel commanding the marketplace.

Tahert taken in 296 (908) by the Shi'ī propagandist Abū 'Abd Allāh was utterly ruined. Henceforth it only plays a very minor role in the history of the Berbers. Taret inherited part of the economic prosperity of Tahert. This prosperity, which the Algerian centre, like the 13th century town, owes to its situation as the port of the steppes has increased again, since the plateau of Sersūl, which adjoins it, has become an important centre of colonisation.

TAHIR b. AL-HUSAIN, founder of the Tahirid dynasty [q. v.] in Khorāsān [q. v.], born in 159 (775—776), died in Djamāda II (Tabarī, l. 1065, 12) or Djamāda II (Ibn Khallikān) 207 (822). Tahir belonged to a family of Persian descent and also to the Arab tribe of Khuzā'a [q. v.]. His ancestor Rāfiq was a client of the governor of Sistān, Abū Muḥammad Ṭalḥa b. 'Abd Allāh al-Khuzā'i; Rāfiq's son Ma'ab took part in the fighting against the Umayyads under Abū Muslim as secretary (*kātib*) to the general Sulaimān b. Kathir al-Khuzā'i. The town of Būshandī [q. v.] in the district of Herāt [q. v.] was held by Ma'ab and afterwards by his son al-Husain (d. 199 = 814—815). Tahir himself took part in the fighting against the rebel Rāfiq b. Laith in Samarkand in the last years of the reign of Hārūn al-Rashīd (c. 193 = 808—809). In 194 (810), Ma'mūn's minister Faḍl b. Sahl [q. v.] gave him command of the army sent against al-Amin [q. v.]. In Sha'bān 195 (May 811) the enemy under 'Alī b. 'Isa was defeated; Tahir is said to have used his sword with both hands during the battle and for this to have been given the name *Dhu l-Yamain* (ambidextrous) by Ma'mūn. After the taking of Baghdad (198 = 813) Tahir was appointed governor of al-Djazīra [q. v.] with the supreme command over Syria and the west. When Ma'mūn went in 819 (203—204) from Khorāsān to the Irak, Tahir was ordered to leave Raḥḥa and come to meet the Caliph at Nahrāwān. In 205 (820—821) Tahir was given the governorship of all the lands east of Baghdad, especially of Khorāsān. There he died suddenly in his capital Merw, shortly after he had omitted the mention of the Caliph in prayer one Friday, and thus committed an act of open rebellion. The details are variously recorded

in the sources: cf. M. J. de Goeje in *Travaux de la 3^e Session du Congrès International des Orientalistes à St. Pétersbourg*, 1876, ii. 163 *sqq.*
